The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

Oracle, JD Edwards, PeopleSoft, and Siebel are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

Preface

The Search Sort Options component can expedite default search queries when the database is used as the search engine.

Audience

This document is intended for system administrators who are responsible for installing the Search Sort Options component. This document assumes that the component has been installed correctly and that you are familiar with Oracle products and the architecture of Oracle Content Server.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at <http://www.oracle.com/accessibility/>.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, 7 days a week. For TTY support, call 800.446.2398. Outside the United States, call +1.407.458.2479.

Related Documents

For more information, refer to the documents in the Oracle Content Server documentation set.

Conventions

The following text conventions are used in this document:

| Convention | Meaning |
|-----------------------------------|---|
| boldface | Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary. |
| <i>italic</i> | Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values. |
| <code>monospace</code> | Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter. |
| Forward slashes (/) | Forward slashes are used to separate the directory levels in a path to a UNIX server, directory, or file. Forward slashes are also used to separate parts of an Internet address. A forward slash will always be included at the end of a UNIX directory name and might or might not be included at the end of an Internet address. |
| Backward slashes (\) | Backward slashes are used to separate the levels in a path to a Windows server, directory, or file. A backward slash will always be included at the end of a Windows server, directory, or file path. |
| <code><install_dir>/</code> | This notation refers to the location on your system of the main product installation directory. |

Introduction

This chapter covers the following topics:

- ["Component Overview" on page 1-1](#)
- ["What's New" on page 1-1](#)
- ["Compatibility with Content Server" on page 1-1](#)

1.1 Component Overview

If Content Server is configured to use a database as the search engine, the Search Sort Options component can expedite search queries. As the number of content items increases, using the sort option default values on the Search page will significantly degrade search operations. To counteract this, the Search Sort Options component changes the behavior of the default sort options.

1.2 What's New

The 10gR3 version of the Search Sort Options component has the following new functionality or modifications:

- The component-related search options are not included on Content Server's home page.
- The Quick Search function no longer uses the sorting options.
- A Sort Result checkbox is added to Content Server's Search page that is used to enable or disable the search options (the sort metadata field and ascending or descending direction). See ["Using the Sort Result Checkbox" on page 3-1](#).
- The Search Sort Options component does not perform the enhanced sorting function unless the Sort Result checkbox is selected.
- The Search Sort Options component incorporates the rownum pseudo-column into search queries to accelerate the results return process.

1.3 Compatibility with Content Server

Currently, the Search Sort Options component is supported only on Oracle Content Server 10gR3.

2

Installation

This chapter covers the following topics:

- ["Installing the Search Sort Options Component" on page 2-1](#)
- ["Uninstalling the Search Sort Options Component" on page 2-2](#)

2.1 Installing the Search Sort Options Component

You can install the Search Sort Options component using either Component Manager or Component Wizard.

2.1.1 Installing using Component Manager

To install the Search Sort Options component using Component Manager:

1. Log in to Content Server as an administrator.
2. Select Admin Server from the Administration menu.
The Content Admin Server page is displayed.
3. Click the name of the Content Server instance where the component will be installed.
The Content Admin Server <instance_name> page is displayed.
4. Click the Component Manager link.
The Component Manager page is displayed.
5. Click Browse, navigate to the OracleCaseInsensitiveSearch.zip file, select it, and click Open.
The path is displayed in the Install New Component field.
6. Click Install.
A list of component items that will be installed is displayed.
7. Click Continue.
Component Manager asks if you want to immediately enable the Search Sort Options component or return to the Component Manager. Click the link to enable the component.
8. Restart the Content Server instance to apply the updated installation parameters.

2.1.2 Installing using Component Wizard

To install the Search Sort Options component using Component Wizard:

1. Log in to Oracle Content Server as an administrator.
2. Start the Component Wizard by selecting Start, All Programs, Oracle Content Server, <instance_name>, Utilities, Component Wizard (Windows) or by running the ComponentWizard script in the /bin directory (UNIX).
The Component Wizard main screen and the Component List screen are displayed.
3. On the Component List screen, click Install.
The Install screen is displayed.
4. Click Select.
The Zip File Path screen is displayed.
5. Navigate to the OracleCaseInsensitiveSearch.zip file, select it, and click Open.
The zip file contents that will be installed are added to the Install screen list.
6. Click OK.
Component Wizard asks if you want to enable the Search Sort Options component.
7. Click Yes.
The Search Sort Options component is listed as enabled on the Component Wizard's Resource Definition tab.
8. Exit the Component Wizard.
9. Restart the Content Server instance to apply the updated installation parameters.

2.2 Uninstalling the Search Sort Options Component

You can uninstall the Search Sort Options component using either Component Manager or Component Wizard.

2.2.1 Uninstalling using Component Manager

To uninstall the Search Sort Options component using Component Manager:

1. Log in to Oracle Content Server as an administrator.
2. Select Admin Server from the Administration menu.
The Content Admin Server page is displayed.
3. Click the name of the Content Server instance where the component will be uninstalled.
The Content Admin Server <instance_name> page is displayed.
4. Click the Component Manager link.
The Component Manager page is displayed.
5. Select the Search Sort Options component in the Enabled Components list and click Disable.
The component is moved to the Disabled Components list.
6. Click Start/Stop Content Server.

- The Content Server <instance_name> page is displayed.
7. Restart the Content Server instance.
 8. Click Component Manager.
- The Component Manager page is displayed.
9. Select the Search Sort Options component in the Uninstall Component drop-down list
 10. Click Uninstall.
- Component Manager asks if you want to uninstall the component.
11. Click OK.
- Component Manager displays a message that the Search Sort Options component was uninstalled successfully.
12. Click the link to return to the Component Manager.
- The Component Manager page is displayed.
13. Click Start/Stop Content Server.
- The Content Server <instance_name> page is displayed.
14. Restart the Content Server instance to apply the changes.

2.2.2 Uninstalling using Component Wizard

To uninstall the Search Sort Options component using Component Wizard:

1. Log in to Oracle Content Server as an administrator.
 2. Start the Component Wizard by selecting Start, All Programs, Oracle Content Server, <instance_name>, Utilities, Component Wizard (Windows) or by running the ComponentWizard script in the /bin directory (UNIX).
- The Component Wizard main screen and the Component List screen are displayed.
3. On the Component List screen, select the Search Sort Options component and click Disable.
 4. Restart the Content Server instance.
 5. On the Component List screen, select the Search Sort Options component and click Uninstall.
- Component Wizard asks if you want to uninstall the Search Sort Options component.
6. Click Yes.
- The Uninstall screen is displayed and lists the zip file contents that will be uninstalled.
7. Click OK.
- The Search Sort Options component is removed from the Component List screen.
8. Exit the Component Wizard.
 9. Restart the Content Server instance to apply the changes.

3

Using the Search Sort Options Component

This chapter covers the following topic:

- ["Using the Sort Result Checkbox" on page 3-1](#)

3.1 Using the Sort Result Checkbox

When the component is installed, a Sort Result checkbox is added to Content Server's Search page. The Sort Result checkbox acts as a toggle switch to enable or disable the sort options (Field and Dir).

The screenshot shows a portion of the Content Server search interface. At the top right, there is a checkbox labeled "Sort Result". Below it, there are two dropdown menus: "Field:" set to "Release Date" and "Dir:" set to "Descending". At the bottom, there are three buttons: "Search", "Reset", and "Save". To the left of the "Field" and "Dir" dropdowns, there is a label "Results Per Page:" followed by a text input field containing the value "20".

Note: By default, the sort options are disabled after the Search Sort Options component is installed. As a result, the component will not perform sorting unless the sort options are enabled and their values are specifically set.

Additionally, Content Server's Quick Search function will no longer use the sort options.
