
Oracle® Hyperion Strategic Finance

Release 9.3.1.1.00

Readme

Purpose.....	1
Installation Updates.....	1
Defects Fixed in this Release.....	2

Purpose

This document includes important, late-breaking information about this release of Hyperion Strategic Finance. Review this information thoroughly before installing Hyperion Strategic Finance.

This release has been created to address a specific issue(s). To ensure that this release is appropriate for your installation, or if you have questions regarding supported platforms, installation steps, addressed issues, or any other issues, please contact Customer Support before installing this release.

This release of Hyperion Strategic Finance is an English only release.

Important:

- This Service Fix addresses only the specific issues that are documented in this Readme.
- This Service Fix was released on specific Operating System platforms only.
- Because this Service Fix was specific to the customers who encountered the issues reported, our testing focused only on the scenarios specific to those customers.
- The defect corrections included in this Service Fix are rolled into a subsequent Service Pack; customers who were not included in the original distribution of this Service Fix should install the more broadly tested Service Pack, instead of the Service Fix.

Installation Updates

This service fix is intended for use with installations of Hyperion Strategic Finance Release 9.3.1.x.

Migrating Users from Standard NTLM to Hyperion® Shared Services

If you are upgrading from a previous version of Strategic Finance and you are migrating to Shared Services for the first time, you must migrate users from Standard NTLM to Shared Services *before* upgrading to this release of Strategic Finance, or migrate users manually. Migration is performed automatically during installation. For more information, see the *Oracle® Hyperion Enterprise Performance Management System Security Administration Guide*.

Changes to the Security Regime Migration Utility

When migrating the security regime from Native NTLM to External Authentication (using Hyperion Shared Services), Strategic Finance user groups are migrated to groups in the Shared Services Native Directory. The group names are prefixed with "HSF_" to avoid conflict with other groups that may

exist. After migration, the new groups are not provisioned for Strategic Finance. In order to honor any group-specific access control in Strategic Finance, you will have to provision the group.

Defects Fixed in this Release

- After the Strategic Finance server has migrated from Standard NTLM to Shared Services, the Administration utility no longer allows switching back from External Authentication to Standard NTLM on the Security Mechanism control of the Server Settings – General tab. (6574237)
- When creating new databases using the Create Database as a Copy Of feature, to fix Entity Change Manager and Assumptions Change Manager files, you can modify the files to reference the new database. (7016609)
- On the spreadsheet, an issue with deleting rows in reports has been fixed. (6999311)
- In Extended Analytics, SQL Server processes are closed when finished. (6999083)
- When upgrading, an issue with existing import and export maps not displaying in the new environment has been fixed. (6983297)
- When logging on, an issue with illegitimate passwords suspending the authentication process has been fixed. (6918788)
- In Freestyle Reports, an issue causing newly-created entities to abort abnormally has been fixed. (6743924)
- In Excel import, an issue with importing data into custom accounts has been fixed. (6711998)
- In Entity Change Manager, an issue with copying reports has been fixed. (6710793)
- When modifying dimensional accounts, the scenario is now flagged for recalculation. (6701357)
- In the uninstaller, an issue with not entirely removing files has been fixed. (6592002)
- On the Accounts spreadsheet and in reports tabs, an issue with the Search and Replace dialog remaining open after closing a file or entity and causing the system to abort abnormally has been fixed. (6588242)
- On the Strategic Finance server, a collision between the previous port number (1493) and the new port number (7750) has been fixed. (6581684)
