End-of-Life and Product Life Cycle Policy Information	6-4

1. Support for Spring Framework with WebLogic Server 8.1

Supported Configurations for WebLogic Server 8.1 SP5	1-1
Known Issues	1-2

WebLogic Platform 8.1 Supported Configurations

The following topics provide important information about BEA support, and list the supported hardware and software platforms for WebLogic Platform components:

- [List of Supported Operating System Configurations](#)
- [Summary of Supported Operating System Configurations, by Release Number](#)
- [Supported Web Servers, Browsers, and Firewalls](#)
- [Supported Database Configurations](#)
- [Supported Interoperability Tools](#)
- [Installation Information](#)
- [Product Support Information](#)
- [Support for Spring Framework with WebLogic Server 8.1](#)

BEA WebLogic Platform 8.1 includes: WebLogic Server, WebLogic Workshop, WebLogic Integration, WebLogic Portal.

List of Supported Operating System Configurations

The following table lists the operating system and hardware configurations that BEA supports for WebLogic Server 8.1 and WebLogic Platform 8.1 releases.

Select an operating system and hardware configuration to view all support information for that configuration.

WebLogic Platform 8.1 Supported Configurations

Note: WebLogic Platform 8.1 includes WebLogic Server 8.1 Service Pack 1 (SP1). The WebLogic Server 8.1 release was available before the full WebLogic Platform 8.1 release.

WebLogic Server Process Edition 8.1 is only supported on the same configurations supported by WebLogic Integration 8.1 SP3 and later versions. It is not supported on all the configurations supported by WebLogic Server. (WebLogic Server Process Edition first became available when WebLogic Platform 8.1 SP3 became available.)

Operating System and Hardware	Release
Asianux 1.0 on x86	8.1 SP3

BEA provides full support for these operating system and hardware configurations only. We are continuously working to provide support for more configurations. Please contact your sales representative for information about configurations not listed in this table.

Summary of Supported Operating System Configurations, by Release Number

The following table provides a summary of the operating system and hardware configurations on which BEA supports WebLogic Platform 8.1.

Note: WebLogic Platform 8.1 includes WebLogic Server 8.1 Service Pack 1 (SP1). The WebLogic Server 8.1 release was available before the full WebLogic Platform 8.1 release.

WebLogic Server Process Edition 8.1 is only supported on the same configurations supported by WebLogic Integration 8.1 SP3 and later versions. It is not supported on all the configurations supported by WebLogic Server. (WebLogic Server Process Edition first became available when WebLogic Platform 8.1 SP3 became available.)

Summary of Supported Operating System Configurations, by Release Number

Release	Operating System	Hardware	SDK	Databases
----------------	-------------------------	-----------------	------------	------------------

NOTE: This table provides summary information only, and does not include the detailed restrictions and limitations. For example, not all databases or WebLogic Platform components are supported on all operating system configurations. For information about restrictions and a detailed list of requirements for a particular configuration, select the name of the relevant operating system.

WebLogic Platform 8.1 Supported Configurations

WebLogic Platform 8.1 Supported Configurations

Supported Web Servers, Browsers, and Firewalls

This section lists configuration components that are supported by WebLogic Platform 8.1 and WebLogic Server 8.1:

- [Web Servers](#)
- [Browsers and Plug-Ins](#)
- [Firewalls](#)

Web Servers

This section lists Web servers supplied by third-party vendors that are supported by WebLogic Platform 8.1. Web server plug-ins, delivered with WebLogic Server, enable WebLogic Platform to communicate with applications that have been deployed on a different Web server. For details about the Web server plug-ins, see *Using Web Server Plug-Ins With WebLogic Server* at the following URL:

http://download.oracle.com/docs/cd/E13222_01/wls/docs81/plugins/index.html

Table 2-1 lists the supported Web servers and the operating systems on which they can be run. The Web server does not need to be running on the same machine as WebLogic Platform 8.1.

Note: The operating systems listed may not be supported on all releases of WebLogic Platform 8.1. To determine whether an operating system is supported for a particular release of WebLogic Platform or WebLogic Server 8.1, see “[List of Supported Operating System Configurations](#)” on page 1-1.

Table 2-1 Web Servers Supported by WebLogic Platform 8.1

Web Server	Version	Operating System
Apache	1.3.12 and higher versions of 1.3.x (32 bit)	<ul style="list-style-type: none"> • IBM AIX 5L Versions 5.1, 5.2, 5.3 on pSeries • Novell SUSE Linux[®] Enterprise Server (SLES) 8 on x86 • Novell SUSE Linux[®] Enterprise Server (SLES) 8 on IBM pSeries • Novell SUSE Linux[®] Enterprise Server (SLES) 8 on IBM zSeries/S390 • Red Flag Advanced Server 4.1 on x86 • Red Flag Advanced Server 4.1 on Itanium • Red Hat Enterprise Linux 4.0 AS, ES on x86 • Red Hat Enterprise Linux 4.0-1 AS, ES, WS on AMD64 and 64-bit Xeon • Sun Solaris 8 on SPARC
Apache	2.0.42 and higher versions of 2.0.x (32 bit)	<ul style="list-style-type: none"> • IBM AIX 5L Versions 5.1, 5.2, 5.3 on pSeries • Microsoft Windows 2000 Professional SP3 and higher on x86 • Microsoft Windows 2000 Server, Advanced Server, and Datacenter SP3 and higher on x86 • Microsoft Windows XP SP1 and higher on x86 • Microsoft Windows Server 2003 Enterprise x64 Edition on AMD64 and 64-bit Xeon • Microsoft Windows Server 2003 Standard, Enterprise, Datacenter on x86 • Novell SUSE Linux[®] Enterprise Server (SLES) 8 on x86 • Novell SUSE Linux[®] Enterprise Server (SLES) 8 on IBM pSeries

Table 2-1 Web Servers Supported by WebLogic Platform 8.1 (Continued)

Web Server	Version	Operating System
Apache	2.0.42 and higher versions of 2.0.x (32 bit)	<ul style="list-style-type: none"> • Novell SUSE Linux[®] Enterprise Server (SLES) 8 on IBM zSeries/S390 • Novell SUSE Linux[®] Enterprise Server (SLES) 9 on x86 • Novell SUSE Linux[®] Enterprise Server (SLES) 9 on AMD64 and 64-bit Xeon • Novell SUSE Linux[®] Enterprise Server (SLES) 10 on x86 • Novell SUSE Linux[®] Enterprise Server (SLES) 10 on AMD64 and 64-bit Xeon • Novell SUSE Linux[®] Enterprise Server (SLES) 9 on IBM pSeries • Novell SUSE Linux[®] Enterprise Server (SLES) 9 on IBM zSeries • Red Flag Advanced Server 4.1 on x86 • Red Flag Advanced Server 4.1 on Itanium • Red Hat Enterprise Linux 4.0 AS, ES on x86 • Red Hat Enterprise Linux 4.0 AS, ES on Itanium • Red Hat Enterprise Linux 4.0-1 AS, ES, WS on AMD64 and 64-bit Xeon • Red Hat Enterprise Linux 4.0 AS, ES on IBM pSeries • Sun Solaris 8, 9, 10 on SPARC • Sun Solaris 9, 10 on x86 • Sun Solaris 10 on AMD64
	2.0.49 and higher versions of 2.0.x (64 bit)	<ul style="list-style-type: none"> • Novell SUSE Linux[®] Enterprise Server (SLES) 9 on AMD64 and 64-bit Xeon (supported only on 8.1 SP6) • Red Hat Enterprise Linux 4.0-1 AS, ES, WS on AMD64 and 64-bit Xeon (supported only on 8.1 SP6)

Table 2-1 Web Servers Supported by WebLogic Platform 8.1 (Continued)

Web Server	Version	Operating System
<p>Apache</p> <p>Note: Apache 2.2 is supported for any WLS 8.1 release when using version 1.0.981935 or later of the WebLogic Server Web Server Plug-In. Web Server	Version	Operating System
Sun Java System Web Server (Formerly Sun ONE Web Server)	6.1 SP1 and all later service packs (32 bit only)	<ul style="list-style-type: none"> • HP-UX 11.0 and 11i on PA-RISC • IBM AIX 5L v5.1 on pSeries • IBM AIX 5L v5.2 on pSeries • IBM AIX 5L v5.3 on pSeries • Microsoft Windows 2000 Advanced Server SP3 and higher on x86 • Microsoft Windows 2000 Professional SP3 and higher on x86 • Microsoft Windows Server 2003 Enterprise x64 Edition on AMD64 and 64-bit Xeon (supported only on 32-bit Sun Java System Web Server) • Microsoft Windows Server 2003 Standard, Enterprise, and Datacenter on x86 • Microsoft Windows XP SP1 and higher on x86 • Red Hat Enterprise Linux 4.0 AS, ES on x86 • Sun Solaris 8, 9, 10 on SPARC • Sun Solaris 9, 10 on x86 (Solaris 10 supports only 6.1 SP4 and later service packs) • Sun Solaris 10 on AMD64

Browsers and Plug-Ins

Browsers are used for a variety of purposes, including:

- [“Accessing End-User Applications” on page 2-10](#)
- [“Accessing WebLogic Platform Consoles” on page 2-11](#)

Accessing End-User Applications

In general, WebLogic Platform supports the use of any browser to enable end-user access to applications with the following restrictions:

- You must follow best practices when implementing features targeted for use with the browser you choose to support

- Use of applets for end-user access to applications is more restricted. See [“Support Java Plug-ins for WebLogic Server” on page 2-12](#).

Accessing WebLogic Platform Consoles

Note: If you use a browser version that is not listed as a supported browser in the following sections, you may experience functional or formatting problems.

Browser support for WebLogic Platform is dependent on the browser version and the Java plug-in for applet support.

- [“Browser Support for WebLogic Platform Consoles” on page 2-11](#)
- [“Required Java Plug-In” on page 2-11](#)
- [“Support Java Plug-ins for WebLogic Server” on page 2-12](#)

Browser Support for WebLogic Platform Consoles

The following list summarizes browser support for the WebLogic Platform consoles:

- Microsoft Internet Explorer
 - 6.0 SP1 and later service packs
 - 7.0 and later service packs
- Mozilla 1.2.1 and 1.4 (Deprecated, Oracle recommends moving to a supported version of the browsers listed.)
- Netscape Navigator 7.0

Note: The WebLogic Integration Administration Console is supported only on Windows using either Netscape 7.0 or Microsoft Internet Explorer 6.0 SP1 and later service packs.

Required Java Plug-In

In the Online Help provided with the WebLogic Workshop IDE and the Configuration Wizard, the search function is provided by a Java applet. This applet requires a Java Plug-In. If you do not have such a Java Plug-In installed on your system and you want to use the search function with the Online Help for the Workshop IDE or Configuration Wizard, you must install the Java Plug-In.

If you are working on a Microsoft Windows platform, the first time you initiate a search in the Online Help for one of these tools, you are prompted to download and install the Plug-In. If you

are working on any other operating system, see the instructions in “Installing the Java Plug-In for Online Help Search” in the [WebLogic Platform Release Notes](#).

Note: When using Internet Explorer, Java plug-in 1.1 or higher must be installed to enable you to use the Administration Console.

Support Java Plug-ins for WebLogic Server

The following table summarizes browser support for applets.

- 1.1.x
- 1.3.x
- 1.4.x

Firewalls

WebLogic Platform 8.1 and any 8.1 service packs support network devices, such as firewalls, that properly support network protocols and the 7-Layer Network Model. BEA will perform root cause analysis on interaction problems between WebLogic Platform and network devices, and it will address WebLogic Platform product issues as appropriate, but it cannot address network address issues.

Supported Database Configurations

This section includes the following topics:

- [WebLogic Server Support for Databases](#)
 - [Driver Support for WebLogic Server](#)
 - [Databases Supporting WebLogic Server Features](#)
 - [Support for Oracle RAC in WebLogic Server 8.1 SP4](#)
- [WebLogic Platform Support for Databases](#)
 - [Database Access Requirements for WebLogic Platform](#)
 - [List of Supported Databases for WebLogic Platform 8.1, by Release](#)
 - [Database Support for WebLogic Platform 8.1 SP6](#)
 - [Database Support for WebLogic Platform 8.1 SP5](#)
 - [Database Support for WebLogic Platform 8.1 SP4](#)
 - [Database Support for WebLogic Platform 8.1 SP3](#)
 - [Database Support for WebLogic Platform 8.1 SP2](#)
 - [Database Support for WebLogic Platform 8.1 GA](#)

WebLogic Server Support for Databases

In addition to the support provided by all WebLogic Platform products described in “[WebLogic Platform Support for Databases](#)” on page 3-4, WebLogic Server provides support for application

Supported Database Configurations

connectivity and communication with any database management system using a JDBC driver that meets the following requirements:

- The driver *must* be threadsafe. WebLogic Server is a highly multithreaded application and there are drivers (the JDBC-ODBC bridge from Sun, for example) that cannot be used with WebLogic Server.
- The driver must implement standard JDBC transactional calls, such as `setAutoCommit()` and `setTransactionIsolation()`, when used in transactionally aware environments, such as for EJBs.

Note the following restrictions:

- Third-party JDBC drivers that do not implement serializable or remote interfaces cannot pass objects to an RMI client application.
- Certain features of WebLogic Server, such as Container Managed Persistence (CMP), may not be supported with particular databases. For more information, see the WebLogic Server documentation at <http://e-docs.bea.com/wls/docs81/index.html>.
- Not all JDBC drivers can be used with WebLogic Server and Oracle RAC. For a list of Oracle RAC requirements, see the detailed information about database versions and drivers supported by the appropriate service pack release. For example, if you want to run Oracle9i RAC with WebLogic Platform 8.1 SP5, check the list of supported drivers in [Table 3-5, “Database Types and Drivers Supported in WebLogic Platform 8.1 SP5,”](#) on page 3-19.
- Automatic database connection failover and load balancing with global transactions (XA) in a highly-available (HA) DBMS architecture is supported with Oracle RAC only, and is not supported with other HA DBMS technologies. Transaction behavior for HA DBMSs varies from vendor to vendor and among various HA technologies. Because of these differences in behavior, the WebLogic Transaction Manager may not be able to complete or continue transactions with connections to a database other than the database instance used to originate the transaction. Attempts to do so may result in data consistency errors without any indication of an error. See [Table 3-5, “Database Types and Drivers Supported in WebLogic Platform 8.1 SP5,”](#) on page 3-19 for details about Oracle RAC support.

Driver Support for WebLogic Server

For information on supported the database drivers that are installed with WebLogic Server, see:

- [WebLogic Type 4 JDBC Drivers](#).
- [Using Third-Party Drivers with WebLogic Server](#) in *Programming WebLogic JDBC*.
- WebLogic jDriver for Oracle. See *WebLogic jDriver for Oracle (Deprecated)* at <http://e-docs.bea.com/wls/docs81/oracle/index.html>.
- WebLogic jDriver for Microsoft SQL Server. See *WebLogic jDriver for SQL Server (Deprecated)* at <http://e-docs.bea.com/wls/docs81/mssqlserver4/index.html>.

For more information about configuring WebLogic Server with drivers from third-party vendors, see [Using Third-Party Drivers with WebLogic Server](#) in *Programming WebLogic JDBC*.

For more detailed information about using JDBC drivers in applications, see [Programming WebLogic JDBC](#).

Databases Supporting WebLogic Server Features

When WebLogic Server features use a database for internal data storage, database support requirements are more restrictive than for application connectivity. The following WebLogic Server features require internal data storage:

- Container Managed Persistence (CMP)
- Rowsets
- JMS/JDBC Persistence
- JDBC Session Persistence
- RDBMS Security Providers

See [List of Supported Databases for WebLogic Platform 8.1, by Release](#).

Support for Oracle RAC in WebLogic Server 8.1 SP4

For WebLogic Server 8.1 SP4, BEA provides a patch that supports Oracle9i RAC and Oracle 10g RAC for the use of MultiPools, with or without XA transactions.

Note: The MultiPool Patch is supported by WebLogic Server 8.1 SP4 only; it is not supported by any other WebLogic Platform component products.

The MultiPool Patch enables WebLogic JDBC MultiPools to be used with either Oracle9i RAC or 10g RAC to support connection pool failover and load balancing for applications using XA transactions and Oracle RAC.

This patch is compatible with non-XA usage, and incorporates support previously delivered in the WebLogic Platform 8.1 SP4 patch for Oracle9i RAC connect-time failover.

The MultiPool Patch is available for downloading at:

http://dev2dev.bea.com/wlserver/patch/wls81sp4_MP_OracleRAC_patch.html

Note: For information about configuring your system with Oracle9i or 10g RAC, see “Using WebLogic Server with Oracle RAC” in *Programming WebLogic JDBC*:
http://e-docs.bea.com/wls/docs81/jdbc/oracle_rac.html

WebLogic Platform Support for Databases

Certain WebLogic Platform products, specifically WebLogic Workshop, WebLogic Portal, WebLogic Integration, and WebLogic Server Process Edition use databases stores for product runtime data. WebLogic Platform and these products support only the databases and the database drivers specified in the “Database Support” sections in this document for this purpose. For example, see the supported database versions and drivers for WebLogic Platform 8.1 SP5 in “Database Support for WebLogic Platform 8.1 SP5” on page 3-17.

In addition, WebLogic Platform provides support for application connectivity and communication with databases as follows:

- Using JDBC drivers, as described in “WebLogic Server Support for Databases” on page 3-1.
Note: Some programming productivity features in the WebLogic Workshop IDE only support the databases and JDBC drivers specified in the “Database Support” sections in this document.
- Using a WebLogic Adapter for RDBMS to integrate with a custom application running on a database separate from the database on which WebLogic Integration is running. For information, see the BEA WebLogic Adapter for RDBMS 8.1.2 Documentation at <http://e-docs.bea.com/wladapters/rdbms/docs812/index.html>.

Database Access Requirements for WebLogic Platform

WebLogic Platform requires the following database-specific resources:

- Access to a database server installed on the local network. WebLogic Platform installs a local copy of the PointBase database solely for evaluation purposes, either in the form of custom trial applications or through packaged sample applications provided with WebLogic Platform. Non-evaluation development or other use of the PointBase Server requires that a separate PointBase Server license be obtained by the end user directly from DataMirror. WebLogic Integration, WebLogic Portal, and WebLogic Workshop do not support PointBase for production server deployments.
- Database server account with privileges sufficient for creating a database with tables must be available.
- For WebLogic Platform 8.1 SP2, BEA provides an SDK/Oracle10gdriver/Database patch that enables full WebLogic Platform support for the SQL Server and Sybase databases when using XA, and full WebLogic Platform DB2 support. This patch is available at the following URL:

http://commerce.bea.com/d2d/wlplat81sp2_patch.jsp

- For WebLogic Platform 8.1 SP4, BEA provides a patch for the IBM DB2 database. BEA recommends that you apply this patch to your system if you are using DB2 with WebLogic Platform 8.1 SP4. This patch, which includes JDBC drivers for DB2, is available at the following URL:

http://commerce.bea.com/d2d/wlplat81sp4_db2_patch.jsp

- For WebLogic Platform 8.1 SP4, BEA provides a patch for Oracle9i RAC support. BEA recommends that you apply this patch to your system if you are using Oracle9i RAC with WebLogic Platform 8.1 SP4. This patch is available at the following URL:

http://commerce.bea.com/d2d/wlplat81sp4_Oracle9iRAC_patch.jsp

List of Supported Databases for WebLogic Platform 8.1, by Release

The following table lists the databases supported by each release of WebLogic Platform 8.1.x.

Note: The following table is provided only to show which databases are supported by the various 8.1 releases of WebLogic Platform. *Details, including information about available patch levels, are provided in service pack-specific tables.* To access detailed information for a particular service pack, click the link for that service pack in the following table.

Table 3-1 Supported Databases, by Release

This Database . . .	Is Supported in This Release . . .
DB2 8.1 ¹	8.1 SP6 8.1 SP5 8.1 SP4 ² 8.1 SP3 8.1 SP2

	8.1 SP3
	8.1 SP2
	8.1
PointBase 5.1	8.1 SP6
Sybase 12.5	8.1 SP6
	8.1 SP5
	8.1 SP4
	8.1 SP3
	8.1 SP2

1. Support for DB2 in WebLogic Platform 8.1 SP2, 8.1 SP3, 8.1 SP4, and 8.1 SP5 applies only to IBM DB2 Universal Database (UDB) v8.1 for Linux, UNIX, and Windows.

2. For WebLogic Platform 8.1 SP4, BEA provides a patch for the IBM DB2 database. BEA recommends that you apply this patch to your system if you are using DB2 with WebLogic Platform 8.1 SP4. This patch, which includes JDBC drivers for DB2, is available at the following URL:

http://commerce.bea.com/d2d/wlplat81sp4_db2_patch.jsp

3. Supported only by WebLogic Server on HP NonStop Server configurations.

4. Supported by WebLogic Server and WebLogic Integration on HP NonStop Server configurations.

5. Supported by WebLogic Server on HP Integrity Nonstop Server on Itanium processors.

6. Supported only by WebLogic Server.

7. Oracle has announced the end of Error Correction Support for Oracle 8.1.7. For details, see “Oracle 8.1.7 End-of-Support-Announcement” at

<http://e-docs.bea.com/platform/supponfigs/configs/mature.html#oracle817>.

8. For WebLogic Platform 8.1 SP4, BEA provides a patch for Oracle9i RAC. BEA recommends that you apply this patch to your system if you are using Oracle9i RAC with WebLogic Platform 8.1 SP4. This patch is available at the following URL:

http://commerce.bea.com/d2d/wlplat81sp4_Oracle9iRAC_patch.jsp.

Note that the full WebLogic Platform 8.1 SP4 product components (specifically the WebLogic Workshop, WebLogic Portal, and WebLogic Integration products) do not support the WebLogic Server 8.1 SP4 MultiPool-based RAC support referenced in footnote 9.

9. For WebLogic Server 8.1 SP4, BEA provides a patch that supports Oracle9i RAC and Oracle 10g RAC for the use of MultiPools, with or without XA transactions. The MultiPool Patch is supported by WebLogic Server 8.1 SP4 only; it is not supported by any other WebLogic Platform component products.

The MultiPool Patch enables WebLogic JDBC MultiPools to be used with either Oracle9i RAC or 10g RAC to support connection pool failover and load balancing for applications using XA transactions and Oracle RAC.

This patch is compatible with non-XA usage, and incorporates support previously delivered in the WebLogic Platform 8.1 SP4 patch for Oracle9i RAC connect-time failover. It is available for downloading at

http://dev2dev.bea.com/wlserver/patch/wls81sp4_MP_OracleRAC_patch.html.

10. If you run WebLogic Platform with an Oracle 10g database (Oracle 10.1.0.2) on a 64-bit platform, and you see the error "ORA-00600: internal error code, arguments: [qctstc2o1]", contact Oracle support and get the patch for Bug ID 4010945.

11. WebLogic Platform 8.1 SP5 supports version 10.1.0.4 and later patch sets of 10.1 of Oracle 10g and Oracle 10g RAC.

12. Note to users of WebLogic Portal 8.1 SP5: As described in Oracle Note 317258.1, Oracle changed their use of predefined database roles in the 10g R2 version to provide more security. The CONNECT role now provides only CREATE SESSION privileges; the other associated privileges have been removed. Therefore, you must now explicitly grant the CREATE VIEW privilege for Oracle 10g R2 databases.(CR252362)

13. Supported only by WebLogic Server.

Database Support for WebLogic Platform 8.1 SP6

This section provides:

- [High-Level Summary of Supported Databases](#)
- [Supported Database Versions and Drivers](#)

High-Level Summary of Supported Databases

The following table identifies the databases for which full support, partial support, or no support are provided by the complete WebLogic Platform 8.1 product and its components in Service Pack 6 (SP6).

Note: For detailed information about supported versions and drivers for these databases, see [Table 3-3](#).

Table 3-2 Databases Supported by WebLogic Platform 8.1 SP6 and Components

Supported Database	Full Platform	WebLogic Server	WebLogic Workshop	WebLogic Portal	WebLogic Integration
DB2	●	●	●	●	●
MySQL 4.0.18	◐	●	●	○	○
Oracle 10g R1 (10.1.0.4)	●	●	●	●	●

KEY

- Full support
- ◐ Partial support
- No support

1. For WebLogic Platform 8.1 SP4, BEA provides a patch for the IBM DB2 database. BEA recommends that you apply this patch to your system if you are using DB2 with WebLogic Platform 8.1 SP4. This patch, which includes JDBC drivers for DB2, is available at the following URL:

http://commerce.bea.com/d2d/wlplat81sp4_db2_patch.jsp

2. Oracle has announced the end of Error Correction Support for Oracle 8.1.7. For details, see “Oracle 8.1.7 End-of-Support-Announcement” at

<http://e-docs.bea.com/platform/supponfigs/configs/mature.html#oracle817>.

Supported Database Configurations

3. In 8.1 SP4, the full WebLogic Platform product supports the use of Oracle9i RAC with connect-time failover. WebLogic Server, however, also supports the use of Oracle9i RAC with WebLogic JDBC MultiPools and XA transactions. If you plan to use the full Platform product with Oracle9i RAC, see footnote 4, below.⁴ If you plan to use WebLogic Server with Oracle9i RAC, see footnote 5, below.⁵

4. For WebLogic Platform 8.1 SP4, BEA provides a patch for Oracle9i RAC (for Oracle 9.2.0.4). BEA recommends that you apply this patch to your system if you are using Oracle9i RAC with WebLogic Platform 8.1 SP4. This patch is available at the following URL:

http://commerce.bea.com/d2d/wlplat81sp4_Oracle9iRAC_patch.jsp

5. For WebLogic Server 8.1 SP4, BEA provides a patch that supports Oracle9i RAC and Oracle 10g RAC for the use of MultiPools, with or without XA transactions. The MultiPool Patch is supported by WebLogic Server 8.1 SP4 only; it is not supported by any other WebLogic Platform component products. The MultiPool Patch enables WebLogic JDBC MultiPools to be used with either Oracle9i RAC or 10g RAC to support connection pool failover and load balancing for applications using XA transactions and Oracle RAC. This patch is compatible with non-XA usage, and incorporates support previously delivered in the WebLogic Platform 8.1 SP4 patch for Oracle9i RAC connect-time failover. It is available for downloading at:

http://dev2dev.bea.com/wlserver/patch/wls81sp4_MP_OracleRAC_patch.html

6. If you run WebLogic Platform with an Oracle 10g database (Oracle 10.1.0.2) on a 64-bit platform, and you see the error "ORA-00600: internal error code, arguments: [qctstc2o1]", contact Oracle support and get the patch for Bug ID 4010945.

7. PointBase Server is an all-Java DBMS product included in the WebLogic Platform distribution solely for evaluation purposes, either in the form of custom trial applications or through packaged sample applications provided with WebLogic Platform. Non-evaluation development or other use of the PointBase Server requires that a separate PointBase Server license be obtained by the end user directly from DataMirror. WebLogic Integration, WebLogic Portal, and WebLogic Workshop do not support PointBase for production server deployments.

8. Only WebLogic Server and WebLogic Integration offer partial support of databases not listed in this table.

9. The container-managed persistence (CMP) feature of WebLogic Server may not be supported with particular databases.

10. Supported only with the use of adapters.

Supported Database Versions and Drivers

The following table lists the types of databases and drivers supported for use with WebLogic Platform 8.1 SP4.

Note: For information about databases and drivers supported for use with *WebLogic Server*, see “[WebLogic Server Support for Databases](#)” on page 3-1.

About the WebLogic Platform 8.1 SP4 DB2 Patch

BEA has provided a patch for WebLogic Platform 8.1 SP4 that enables full WebLogic Platform support for the IBM DB2 database. This patch, which includes JDBC drivers for DB2, is available at the following URL:

http://commerce.bea.com/d2d/wlplat81sp4_db2_patch.jsp

Database Support for WebLogic Platform 8.1 SP3

This section provides:

- [High-Level Summary of Supported Databases](#)
- [Supported Database Versions and Drivers](#)

High-Level Summary of Supported Databases

The following table identifies the databases for which full support, partial support, or no support are provided by the complete WebLogic Platform 8.1 product and its components in Service Pack 3 (SP3).

Note: For detailed information about supported versions and drivers for these databases, see [Table 3-9, “Database Types and Drivers Supported in WebLogic Platform 8.1 SP3,”](#) on page 3-33.

Table 3-8 Databases Supported by WebLogic Platform 8.1 SP3 and Components

Supported Database	Full Platform	WebLogic Server	WebLogic Workshop	WebLogic Portal	WebLogic Integration
DB2 8.1 ¹	●	●	●	●	●
HP NonStop™ SQL/MX 2.0 ²	◐	●	○	○	○

KEY

- Full support
- ◐ Partial support
- No support

Supported Database Configurations

1. Support applies only to IBM DB2 Universal Database (UDB) v8.1 for Linux, UNIX, and Windows.
2. Supported only on HP Integrity NonStop Server on Itanium processors. For more information, see *8.1 Supported Configurations: HP Integrity NonStop Server on Itanium*:
http://e-docs.bea.com/platform/supponfigs/configs81/hpnonstop_itanium/81sp3.html
3. Oracle has announced the end of Error Correction Support for Oracle 8.1.7. For details, see “Oracle 8.1.7 End-of-Support-Announcement” at
<http://e-docs.bea.com/platform/supponfigs/configs/mature.html#oracle817>.
4. If you run WebLogic Platform with an Oracle 10g database (Oracle 10.1.0.2) on a 64-bit platform, and you see the error “ORA-00600: internal error code, arguments: [qctstc2o1]”, contact Oracle support and get the patch for Bug ID 4010945.
5. PointBase Server is an all-Java DBMS product included in the WebLogic Platform distribution solely for evaluation purposes, either in the form of custom trial applications or through packaged sample applications provided with WebLogic Platform. Non-evaluation development or other use of the PointBase Server requires that a separate PointBase Server license be obtained by the end user directly from DataMirror. WebLogic Integration, WebLogic Portal, and WebLogic Workshop do not support PointBase for production server deployments.
6. Only WebLogic Server and WebLogic Integration offer partial support of databases not listed in this table.
7. The container-managed persistence (CMP) feature of WebLogic Server may not be supported with particular databases.
8. Supported only with the use of adapters.

Supported Database Versions and Drivers

The following table lists the types of databases and drivers supported for use with WebLogic Platform 8.1 SP3.

Note: For information about databases and drivers supported for use with *WebLogic Server*, see “**WebLogic Server Support for Databases**” on page 3-1.

Table 3-9 Database Types and Drivers Supported in WebLogic Platform 8.1 SP3

Other databases	Any compliant driver supplied by WebLogic Server	Other databases may be used for data access through WebLogic Server.

About the WebLogic Platform 8.1 SP2 SDK/Database Patch

BEA has made available an SDK/Database patch for WebLogic Platform 8.1 SP2 that enables full WebLogic Platform support for the SQL Server and Sybase databases when using XA, and full WebLogic Platform DB2 support. This patch is available at the following URL:

http://commerce.bea.com/d2d/wlplat81sp2_patch.jsp

About the WebLogic Platform 8.1 SP2 Patch for Oracle Thin Driver 10g

WebLogic Platform 8.1 SP2 support for the Oracle Thin Driver 10g and Oracle Thin/XA Driver 10g requires the installation of the WebLogic Platform 8.1 SP2 Patch for Oracle Thin Driver 10g.

The patch is available at:

http://commerce.bea.com/d2d/wlplat81sp2_patch.jsp

The Oracle 10g drivers are bundled with the patch.

Known Issues

There is one known issue with the Oracle Thin Driver 10g: it has a batch size limit of 1682 operations. In previous versions of the Oracle Thin driver, there was no apparent limit to the size of batch operations. If your application runs very large batch operations, you may see batch failures. To work around this issue, limit your batch size to 1682 or use the 9.2.0 version of the Oracle Thin driver. Oracle recommends batch sizes of between 5 and 30.

Database Support for WebLogic Platform 8.1 GA

This section provides:

- [High-Level Summary of Supported Databases](#)
- [Supported Database Versions and Drivers](#)

Note: WebLogic Server 8.1 SP1 shipped with WebLogic Platform 8.1 GA.

High-Level Summary of Supported Databases

The following table specifies the level of support for the databases shown, for which full support, partial support, or no support are provided by the complete WebLogic Platform 8.1 product and its components in the General Availability (GA) version.

Note: For detailed information about supported versions and drivers for these databases, see [Table 3-13, “Database Types and Drivers Supported in WebLogic Platform 8.1—GA Release,”](#) on page 3-44.

KEY

- Full support
- ◐ Partial support
- No support

1. Support applies only to IBM DB2 Universal Database (UDB) v8.1 for Linux, UNIX, and Windows.
2. The container-managed persistence (CMP) feature of WebLogic Server may not be supported with particular databases.
3. Oracle has announced the end of Error Correction Support for Oracle 8.1.7. For details, see “Oracle 8.1.7 End-of-Support-Announcement” at <http://e-docs.bea.com/platform/supponfigs/configs/mature.html#oracle817>.
4. Not supported by WebLogic Integration.
5. PointBase Server is an all-Java DBMS product included in the WebLogic Platform distribution solely for evaluation purposes, either in the form of custom trial applications or through packaged sample applications provided with WebLogic Platform. Non-evaluation development or other use of the PointBase Server requires that a separate PointBase Server license be obtained by the end user directly from DataMirror. WebLogic Integration, WebLogic Portal, and WebLogic Workshop do not support PointBase for production server deployments.
6. Only WebLogic Server and WebLogic Integration offer partial support of databases not listed in this table.
7. Supported only with the use of adapters.

Supported Database Versions and Drivers

The following table lists the types of databases and drivers supported for use with WebLogic Platform 8.1 GA Release.

Note: For information about databases and drivers supported for use with *WebLogic Server*, see “[WebLogic Server Support for Databases](#)” on page 3-1.

Table 3-13 Database Types and Drivers Supported in WebLogic Platform 8.1—GA Release

Database Type	JDBC Driver	Notes
Microsoft SQL Server 2000 SP3	BEA WebLogic Type 4 JDBC Microsoft SQL Server Driver	Not supported by WebLogic Integration 8.1.
Oracle 8.1.7	<ul style="list-style-type: none"> Oracle Thin Driver 9.2.0 Oracle Thin/XA Driver 9.2.0 	<ul style="list-style-type: none"> Not supported by WebLogic Integration 8.1. If you are running Oracle 8.1.7 and you want to use WebLogic Portal, make sure you are running the Oracle 8.1.7.4 patch level. Oracle has announced the end of Error Correction Support for Oracle 8.1.7. For details, see “Oracle 8.1.7 End-of-Support-Announcement” at http://e-docs.bea.com/platform/suppconfigs/configs/mature.html#oracle817
Oracle 9i (9.2.0)	<ul style="list-style-type: none"> Oracle Thin Driver 9.2.0 	When distributed transactions are used in a configuration that includes the Oracle 9.2.0 DBMS (on any operating system), BEA recommends using the Oracle 9.2.0.3 server and Oracle 9.2.0.3 Thin/XA Driver.

Table 3-13 Database Types and Drivers Supported in WebLogic Platform 8.1—GA Release (Continued)

Database Type	JDBC Driver	Notes
PointBase 4.4	PointBase Type 4 Driver	PointBase Server is an all-Java DBMS product included in the WebLogic Platform distribution solely for evaluation purposes, either in the form of custom trial applications or through packaged sample applications provided with WebLogic Platform. Non-evaluation development or other use of the PointBase Server requires that a separate PointBase Server license be obtained by the end user directly from DataMirror. WebLogic Integration, WebLogic Portal, and WebLogic Workshop do not support PointBase for production server deployments.

Supported Database Configurations

Supported Interoperability Tools

This section describes the following interoperability tools that are supported for use with WebLogic Platform 8.1 and WebLogic Server 8.1:

- [Platform Support for Jolt](#)
- [Platform Support for WebLogic Enterprise Connectivity](#)
- [Platform Support for WebLogic Tuxedo Connector](#)

Platform Support for Jolt

Jolt is a Java-based client API that manages requests to BEA Tuxedo services via a Jolt Service Listener (JSL) running on the Tuxedo server. For more information on Tuxedo and Jolt, see [BEA Tuxedo Documentation](#).

The following table provides support information for Jolt releases when used with a WebLogic Server 8.1 client.

Jolt version	Not using Security	Using Security
8.0	Yes	No
8.1	Yes	Yes

Platform Support for WebLogic Enterprise Connectivity

WebLogic Enterprise Connectivity is deprecated. Tuxedo CORBA applications using WebLogic Enterprise Connectivity should migrate to WebLogic Tuxedo Connector. For more information, see [WebLogic Tuxedo Connector](#).

WebLogic Enterprise Connectivity is an optional component of WebLogic Server version 5.1 and later. It allows you to execute objects and EJBs in WebLogic Enterprise™ (WLE) 5.1, Tuxedo 8.0, or Tuxedo 8.1 domains from WebLogic Server applications using an Internet Inter-ORB Protocol (IIOP) connection pool and then writing server-side Java code to use the connection pool.

WebLogic Enterprise Connectivity supports the following Tuxedo releases:

- Tuxedo 8.1
- Tuxedo 8.0
- WebLogic Enterprise 5.1

Platform Support for WebLogic Tuxedo Connector

WebLogic Tuxedo Connector supports the following Tuxedo releases:

- Tuxedo 8.1 (ATMI and CORBA)
- Tuxedo 8.0 (ATMI and CORBA)
- Tuxedo 7.1 (ATMI)
- Tuxedo 6.5 (ATMI)

Installation Information

For the standard method of installing WebLogic Platform and WebLogic Server, appropriate for all operating systems except those listed in [Table 5-1](#), see *Installing BEA WebLogic Platform*. For information about distribution methods for WebLogic Platform and WebLogic Server, see [WebLogic Platform Distribution Methods](#).

Note: WebLogic Platform 8.1 includes WebLogic Server 8.1 Service Pack 1 (SP1). The WebLogic Server 8.1 release was available before the full WebLogic Platform 8.1 release.

Table 5-10 Operating System-Specific Installation Instructions

Operating System and Hardware	WebLogic Platform 8.1.x
HP Integrity NonStop™ Server H06.03 SUT on Itanium	8.1 SP3 (WebLogic Server only)
HP NonStop™ Server G06.20, G06.23 on MIPS	8.1 SP2

HP-UX 11.0, 11i on PA-RISC	8.1 SP6
HP-UX 11.0, 11i on PA-RISC with HP-UX SDK 1.4.2.01 (64-bit)	8.1 SP2
HP-UX 11i V2 on PA-RISC	8.1 SP6

Table 5-10 Operating System-Specific Installation Instructions

Operating System and Hardware	WebLogic Platform 8.1.x
HP-UX 11i v2 on Itanium	8.1 SP6
	8.1 SP4
	8.1 SP3
	8.1 SP2
	8.1 SP1 (WebLogic Server only)
HP-UX 11i v3 on Itanium	8.1 SP6
IBM AIX 5.1 on pSeries	8.1SP6
	8.1 SP5
	8.1 SP4
	8.1 SP3
	8.1 SP2
	8.1
IBM AIX 5.2 on pSeries	8.1SP6
	8.1 SP5
	8.1 SP4
	8.1 SP3
	8.1 SP2
	8.1
IBM AIX 5.3 on pSeries	8.1SP6
	8.1 SP5
	8.1 SP4
	8.1 SP3
Novell SUSE Linux [®] Enterprise Server 9 on AMD64 and 64-bit Xeon	8.1 SP6
Novell SUSE Linux [®] Enterprise Server 8 on IBM pSeries	8.1 SP2 (WebLogic Server only)
Novell SUSE Linux [®] Enterprise Server 8 on IBM zSeries/S390	8.1 SP1 (WebLogic Server only)
Novell SUSE Linux [®] Enterprise Server 9 on IBM pSeries	8.1 SP2 (WebLogic Server only)

Table 5-10 Operating System-Specific Installation Instructions

Operating System and Hardware	WebLogic Platform 8.1.x
Novell SUSE Linux [®] Enterprise Server 9 on IBM zSeries	8.1 SP4 (WebLogic Server only)
Novell SUSE Linux [®] Enterprise Server 9 on x86	8.1 SP6
Novell SUSE Linux [®] Enterprise Server 10 (SP1+) on x86	8.1 SP5 (WebLogic Server only)
Novell SUSE Linux [®] Enterprise Server 10 (SP1+) AMD64 and 64-bit Xeon	8.1 SP5 (WebLogic Server only)
Red Hat Enterprise Linux 4.0 AS, ES on AMD64 and 64-bit Xeon	8.1 SP6 8.1 SP5 8.1 SP4 (WebLogic Server only)
Red Hat Enterprise Linux 4.0 WS on AMD64 and 64-bit Xeon	8.1 SP6 8.1 SP5 8.1 SP4 (WebLogic Server only)
Red Hat Enterprise Linux 4.0 AS, ES on IBM pSeries	8.1 SP4 (WebLogic Server only)
SCO UnixWare 7.1.4 on x86	8.1 SP2 (WebLogic Server only)
Sun Solaris 9 on x86	8.1 SP6 8.1 SP5 8.1 SP4 8.1 SP3 8.1 SP2
Sun Solaris 10 on x86	8.1 SP6 8.1 SP5 8.1 SP4
Sun Solaris 10 on AMD64	8.1 SP6 8.1 SP5
Sun Solaris 10 on SPARC	8.1 SP6 8.1 SP5 8.1 SP4 (WebLogic Server only)

Installation Information

Product Support Information

The following sections provide product support information about WebLogic Platform and WebLogic Server 8.1:

- [Important Support Information](#)
- [End-of-Life and Product Life Cycle Policy Information](#)

Important Support Information

The following sections provides guidance about high-level support policies:

- [WebLogic Platform Support](#)
- [Supported Hardware](#)
- [Compatibility with Previous Releases](#)
- [Development Platforms](#)
- [Note About J2SE 1.4.2 Support](#)
- [Support Policy for Third-Party JVMs](#)

WebLogic Platform Support

BEA supports WebLogic Platform software on the configurations supported in this document. The supported configurations include multiple combinations of hardware, operating systems, SDKs, database systems, Web Servers, and browsers that can be used with WebLogic Platform

software. We are working to increase the number of configurations we support, and will update this information as new supported configurations are added.

Please contact your sales representative for information about configurations not listed in this document. Note that even using a supported configuration does not guarantee that you will never encounter operating system and JVM issues while running your application. We suggest that customers regularly check their operating system and JVM vendor Web Sites for information and patches recommended by those vendors.

Supported Hardware

This section provides information about BEA WebLogic Platform's:

- [“Support Policy for Compatible Hardware Architectures” on page 6-2](#)
- [“Support for Intel 64-bit Xeon Hardware” on page 6-2](#)
- [“Support for BladeFrame Architecture” on page 6-3](#)

Support Policy for Compatible Hardware Architectures

BEA products are certified for particular hardware chip architectures, as specified in [“List of Supported Operating System Configurations” on page 1-1](#). In some cases, a single chip architecture is provided by multiple vendors. BEA supports such implementations when they are certified for compliance by their respective owners. For example:

- Fujitsu offers a line of machines called Primepower. Because Sun has certified Primepower systems for SPARC compatibility, all Primepower computers are supported for any SPARC-based system listed in [“List of Supported Operating System Configurations” on page 1-1](#).
- The IA32-compatible (that is, x86/Xeon-compatible) architecture that is supported in the same manner by AMD.
- For information on supported non-Oracle Virtualization and Partitioning technologies, refer to http://www.oracle.com/technology/products/ias/hi_av/oracleas_supported_virtualization.html.

Support for Intel 64-bit Xeon Hardware

Intel's 64-bit Xeon hardware is capable of running in either of two modes: with 64-bit extended addressing or as an IA32 (x86/Xeon) machine:

- If 64-bit Xeon is explicitly listed in “[List of Supported Operating System Configurations](#)” on page 1-1, this architecture will support 64-bit extended addressing.
- If 64-bit Xeon is *not* listed in “[List of Supported Operating System Configurations](#),” this architecture will be supported only for use as an IA32 machine with the supported 32-bit operating systems and SDKs for x86-based systems listed in “[List of Supported Operating System Configurations](#)” on page 1-1.

Support for BladeFrame Architecture

WebLogic Platform supports BladeFrame architectures on any configuration of operating system, hardware chip architecture, and SDK that is listed in “[Summary of Supported Operating System Configurations, by Release Number](#)” on page 1-8.

Compatibility with Previous Releases

BEA attempts to support binary and source-level compatibility between the current version of WebLogic Server and all versions as far back as 6.1sp2 in the areas of persistent data, generated classes, API, and Protocol compatibility. For more detailed information, see [Compatibility Statement for BEA WebLogic Server 8.1](#).

Development Platforms

WebLogic Platform supports Development Platforms for the design, development, and verification of applications; they are not supported for production server deployments. Development Platforms are identified in the detailed Supported Configurations page for each platform.

Note About J2SE 1.4.2 Support

BEA has made available an SDK/Database patch that includes WebLogic Platform support for the Sun Java 2 1.4.2 SDK on Windows and Solaris platforms. This patch is required for WebLogic Workshop, WebLogic Portal, and WebLogic Integration support for this SDK. (This patch is not required for WebLogic Server 8.1 SP2-only configurations.) Configurations of WebLogic Platform 8.1 SP2 that have this patch applied will continue to support the Sun Java 2 1.4.1 SDK. This patch is available at the following URL:

http://dev2dev.bea.com/products/wlplatform81/patch/wlplat81sp2_patch.jsp

Note that WebLogic Platform 8.1 Service Pack 3 (SP3) will include and support JVMs at the Sun J2SE 1.4.2 level only. BEA Systems wishes to bring the impending 1.4.1-to-1.4.2 upgrade to your

attention because the JVM upgrade required in SP3 for WebLogic Platform 8.1 and WebLogic Server 8.1 will be larger than the JVM upgrade usually required in WebLogic Platform and WebLogic Server service packs. To make sure you are prepared for this change, you may want to consider a plan for regression testing your application and allocating resources.

Support Policy for Third-Party JVMs

A Java Virtual Machine (JVM) is required for both WebLogic Server and WebLogic Platform to run. For your convenience, in most cases the WebLogic installation program includes a JVM for creation of WebLogic domain configurations and use of WebLogic software. For details, see the installation guide for WebLogic Platform.

If the JVM used in your configuration is not the BEA JRockit JVM, but a JVM provided by a third party, BEA cannot directly resolve potential issues traced to the third-party JVM. Support for a third-party JVM must be provided by the JVM vendor.

The version of any third-party JVM bundled by BEA is recommended by the JVM vendor at the time BEA releases its product. Because the versions of JVMs supported by vendors change over time, please consult with your JVM vendor and confirm the latest configurations at http://e-docs.bea.com/platform/suppconfigs/configs81/81_over/overview.html to understand the latest JVM support information before using a third-party JVM.

End-of-Life and Product Life Cycle Policy Information

- For End-of-Life (EOL) information, see [BEA Product Life Cycle Policy](#).
- For notification of changes in the release life cycle for WebLogic Platform and related product components, as well as information about BEA support for third-party products reaching end-of-life, see [WebLogic Platform End-of-Life Announcements](#).
- For BEA's product life cycle policy, see [BEA Product Life Cycle Policy](#).

Support for Spring Framework with WebLogic Server 8.1

This section provides the following information:

- [Supported Configurations for WebLogic Server 8.1 SP5](#)
- [Known Issues](#)

Related Information

- For information about supported database configurations, Web servers, browsers, and interoperability tools, see [WebLogic Server 8.1 Supported Configurations](#).
- For information about Spring Framework, see the following Web sites:
 - <http://www.springframework.org>
 - <http://www.interface21.com>

Supported Configurations for WebLogic Server 8.1 SP5

BEA supports the Spring Framework 1.2.7, from Interface21, on the following configurations.

Vendor, Operating System, and Version	Chip Architecture
HP-UX 11i	PA-RISC
HP-UX 11i V2	

Support for Spring Framework with WebLogic Server 8.1

Microsoft Windows 2000 Professional	x86
Microsoft Windows 2000 Server, Advanced Server, Datacenter	
Microsoft Windows Server 2003 Standard, Enterprise, Datacenter	
Microsoft Windows XP	

Red Hat Enterprise Linux 4.0 AS, ES on x86	x86
Red Hat Enterprise Linux 4.0 WS on x86	

Sun Solaris 8	SPARC
Sun Solaris 9	
Sun Solaris 10	

Detailed requirements for these configurations are provided separately. To view the requirements for a particular configuration, click the appropriate entry in the preceding list.

Known Issues

For information about known issues with BEA products that support Spring Framework, see *BEA WebLogic Server Known and Resolved Issues at* <http://e-docs.bea.com/wls/docs81/notes/issues.html#spring>
