

# Sun GlassFish Web Space Server 10.0 Release Notes

Sun Microsystems, Inc.  
4150 Network Circle  
Santa Clara, CA 95054  
U.S.A.

Part No: 820-7052  
February 2009

Copyright 2009 Sun Microsystems, Inc. 4150 Network Circle, Santa Clara, CA 95054 U.S.A. All rights reserved.

Sun Microsystems, Inc. has intellectual property rights relating to technology embodied in the product that is described in this document. In particular, and without limitation, these intellectual property rights may include one or more U.S. patents or pending patent applications in the U.S. and in other countries.

U.S. Government Rights – Commercial software. Government users are subject to the Sun Microsystems, Inc. standard license agreement and applicable provisions of the FAR and its supplements.

This distribution may include materials developed by third parties.

Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and other countries, exclusively licensed through X/Open Company, Ltd.

Sun, Sun Microsystems, the Sun logo, the Solaris logo, the Java Coffee Cup logo, docs.sun.com, Java, and Solaris are trademarks or registered trademarks of Sun Microsystems, Inc. or its subsidiaries in the U.S. and other countries. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. in the U.S. and other countries. Products bearing SPARC trademarks are based upon an architecture developed by Sun Microsystems, Inc.

The OPEN LOOK and Sun Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

Products covered by and information contained in this publication are controlled by U.S. Export Control laws and may be subject to the export or import laws in other countries. Nuclear, missile, chemical or biological weapons or nuclear maritime end uses or end users, whether direct or indirect, are strictly prohibited. Export or reexport to countries subject to U.S. embargo or to entities identified on U.S. export exclusion lists, including, but not limited to, the denied persons and specially designated nationals lists is strictly prohibited.

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

---

Copyright 2009 Sun Microsystems, Inc. 4150 Network Circle, Santa Clara, CA 95054 U.S.A. Tous droits réservés.

Sun Microsystems, Inc. détient les droits de propriété intellectuelle relatifs à la technologie incorporée dans le produit qui est décrit dans ce document. En particulier, et ce sans limitation, ces droits de propriété intellectuelle peuvent inclure un ou plusieurs brevets américains ou des applications de brevet en attente aux Etats-Unis et dans d'autres pays.

Cette distribution peut comprendre des composants développés par des tierces personnes.

Certains composants de ce produit peuvent être dérivées du logiciel Berkeley BSD, licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays; elle est licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, le logo Solaris, le logo Java Coffee Cup, docs.sun.com, Java et Solaris sont des marques de fabrique ou des marques déposées de Sun Microsystems, Inc., ou ses filiales, aux Etats-Unis et dans d'autres pays. Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc.

L'interface d'utilisation graphique OPEN LOOK et Sun a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciés de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui, en outre, se conforment aux licences écrites de Sun.

Les produits qui font l'objet de cette publication et les informations qu'il contient sont régis par la législation américaine en matière de contrôle des exportations et peuvent être soumis au droit d'autres pays dans le domaine des exportations et importations. Les utilisations finales, ou utilisateurs finaux, pour des armes nucléaires, des missiles, des armes chimiques ou biologiques ou pour le nucléaire maritime, directement ou indirectement, sont strictement interdites. Les exportations ou réexportations vers des pays sous embargo des Etats-Unis, ou vers des entités figurant sur les listes d'exclusion d'exportation américaines, y compris, mais de manière non exclusive, la liste de personnes qui font objet d'un ordre de ne pas participer, d'une façon directe ou indirecte, aux exportations des produits ou des services qui sont régis par la législation américaine en matière de contrôle des exportations et la liste de ressortissants spécifiquement désignés, sont rigoureusement interdites.

LA DOCUMENTATION EST FOURNIE "EN L'ETAT" ET TOUTES AUTRES CONDITIONS, DECLARATIONS ET GARANTIES EXPRESSES OU TACITES SONT FORMELLEMENT EXCLUES, DANS LA MESURE AUTORISEE PAR LA LOI APPLICABLE, Y COMPRIS NOTAMMENT TOUTE GARANTIE IMPLICITE RELATIVE A LA QUALITE MARCHANDE, A L'APTITUDE A UNE UTILISATION PARTICULIERE OU A L'ABSENCE DE CONTREFACON.

# Sun GlassFish Web Space Server 10.0 Release Notes Overview

---

Sun GlassFish Web Space Server is the next-generation web aggregation and presentation platform created for an enterprise. This platform provides a virtual space where you can centralize, share, and collaborate. Moreover, the Sun GlassFish Web Space Server includes developer tools and an enterprise-grade presentation runtime based on Liferay Portal Server, GlassFish™ version 2 or version 3 software, and MySQL™ software.

## About These Notes

The *Sun GlassFish Web Space Server 10.0 Release Notes* contains the most current information about new features available in this release and known issues and limitations. Read this document before using Sun GlassFish Web Space Server 10.0 or reporting any bugs.

## Release Notes Revision History

This section lists the changes that have been made in these release notes since the Sun GlassFish Web Space Server 10.0 release.

Revision Date	Description
August 2008	Release of Sun GlassFish Web Space Server Milestone 2
October 2008	Release of Sun GlassFish Web Space Server Milestone 3
December 2008	Release of Sun GlassFish Web Space Server Milestone 4
February 2009	Release of Sun GlassFish Web Space Server 10.0

## Getting and Installing Sun GlassFish Web Space Server

The *Sun GlassFish Web Space Server 10.0 Getting Started Guide* provides information on the download location, platform requirements, installation instructions, and how to use Sun GlassFish Web Space Server.

## **Related Documentation About Sun GlassFish Web Space Server**

The Sun GlassFish Web Space Server documentation set is available on the [Sun GlassFish Web Space Server Document Collection](#) page.

You can also refer the documentation available on the [Liferay wiki](#) and [OpenPortal documentation web sites](#).

# What's New in the Sun GlassFish Web Space Server 10.0 Release

---

This chapter provides a brief overview of the new features that are bundled with Sun GlassFish Web Space Server 10.0 release.

---

**Note** – Future commercial releases of Sun GlassFish Web Space Server will offer customized support plans, and additional enterprise integrations (for example, OpenSSO Enterprise, OpenOffice plugin, SharePoint, and enhanced security features). For more information, please [contact us](#).

## Web Services for Remote Portlets 2.0 Features

The Web Services for Remote Portlets (WSRP) specification is defined by the WSRP Technical Committee at the Organization for the Advancement of Structured Information Standards (OASIS). OASIS recently approved the latest version of the WSRP specification, called WSRP version 2.0. The OASIS approved WSRP 2.0 version is available in the Sun GlassFish Web Space Server from the Control Panel in the Welcome menu.

The OASIS WSRP version 2.0 specification defines the following additional functionalities over the WSRP version 1.0 specification:

- Eventing
- Shared/Public Render Parameters
- Caching

- Leasing
- Resource Serving

The Sun GlassFish Web Space Server implements all the mandatory features and some of the major optional features that are defined in the WSRP version 2.0 specification. The WSRP 2.0 feature available in the Sun GlassFish Web Space Server builds on the [OpenPortal Portlet Container Project](#) that implements a fully compliant JSR286 specification. The OpenPortal Portlet Container is part of the Sun GlassFish Web Space Server and JSR286 is a specification from the Java Community Process (JCP), which defines Java Portlet Specification 2.0.

For more information, visit the WSRP project [web site](#).

## Simple API for Workflow Features

New features related to Simple API for Workflow (SAW) are:

- The Workflow portlet in this release is implemented using SAW and `saw-impl` classes for Java Business Process Management (JBPM).
- An Expense Report portlet is available in this release. This is a sample application built on top of SAW to showcase a custom workflow application.

For more information, visit the SAW project [web site](#).

## Presence Feature

The Presence infrastructure in Sun GlassFish Web Space Server provides communication mechanisms for a user who logs in to Sun GlassFish Web Space Server. The Presence infrastructure displays the online or offline status of a user and the chat communication mechanism, next to wherever the user profile is displayed on Sun GlassFish Web Space Server. Using the Presence infrastructure, developers can enable their widgets on Sun GlassFish Web Space Server with the availability information for a user.

For more information, visit the Presence project [web site](#).

## Content Management System Features

The new features related to Content Management System (CMS) is:

- You can use the Web Content tag library to access the content of an article from any portlet in Sun GlassFish Web Space Server.

For more information, visit the Content Management System/Mirage project [web site](#).

## Control Panel for Sun GlassFish Web Space Server Administration

In the Sun GlassFish Web Space Server 10.0 release, you can access all the administrator portlets by clicking Control Panel in the Welcome menu. In the previous releases, you were able to access these portlets by clicking Add Application.

## Sun GlassFish Web Space Server Samples

Default samples are available in Sun GlassFish Web Space Server 10.0. A number of users and a community are created and provided basic layouts with default public and private pages to demonstrate Sun GlassFish Web Space Server functions.

The default samples that are available to you are:

- Social Space Sample – Demonstrates the social networking features of the Sun GlassFish Web Space Server portal. The Social Space Sample is a user group. The users of this user group are provided with all the sample pages added to their My Community Public and Private pages.
- CMS Sample – Demonstrates the content management features available in the Sun GlassFish Web Space Server portal. This sample adds a community named "CMS".
- Enterprise Space Sample – Demonstrates the other features of an enterprise such as workflow management, inter widget, inter language widget communication and so on.

Every Sample has an Information page in the public page, which explains in detail about that particular sample. The guest page of the Evaluation bundle has a "Sample Users" portlet that can be used to express login different users of different samples. If you select a particular sample from the drop down list, all the users available in that sample appears. All the samples and this "Sample Users" portlet are a part of evaluation bundle of the Sun GlassFish Web Space Server.

## Portal Coordination Service

The Portal Coordination Service bridges portlet events to portal services. It allows portlets to publish standard JSR 286 portlet events to interact with Sun GlassFish Web Space Server services. The Portal Coordination Service available in the release, bridges to the Sun GlassFish Web Space Server social activity service.

The Roller Weblogger portlet makes use of the Portal Coordination Service to add Roller Weblog posts and edits to the set of social activities. These are summarized in the activities portlet.

## Developer Tools for Sun GlassFish Web Space Server

Sun GlassFish Web Space Server provides the following tools for developers to develop and deploy portlet applications.

### NetBeans Portal Pack 3.0 Milestone 2 Features

[Portal Pack 3.0 Milestone 2](#) modules support the complete life cycle of portlet application development. Using the Portal Pack modules, you can develop, package, deploy, and test portlet applications for deployment on Sun GlassFish Web Space Server. The new features in the Portal Pack for NetBeans 6.5 IDE are:

- Generic Portlets (JSR 168/286) – This plugin supports you to develop JSR 168/286 generic portlets in the NetBeans IDE.
- Visual Portlet Builder (JSF Portlet) – This module enables portlet developers to build JSF based portlet applications in NetBeans by dragging and dropping components on the WYSIWYG Visual Editor.
- Spring MVC Portlet Plugin – This module supports you to create portlets based on the Spring MVC Portlet Framework.
- OpenPortal Portlet Container Plugin – This plugin provides support to integrate the OpenPortal Portlet Container. You can deploy the portlets that you develop in the NetBeans IDE, directly to the OpenPortal Portlet Container by designating the portlet container as the run-time server for a portlet application. For more information, see the OpenPortal Portlet Container [website](#).
- Sun GlassFish Web Space Server/Liferay Plugin – This plugin supports the integration of Sun GlassFish Web Space Server/Liferay Server within the NetBeans IDE.
- Sun GlassFish Web Space Server Portlets (Ruby, PHP, and Groovy) – This plugin supports the development of Ruby, PHP, and Groovy portlets, which you can deploy on Sun GlassFish Web Space Server.
- Sun GlassFish Web Space Server/Liferay Service Builder Plugin – This plugin provides support to the Liferay Service builder within the NetBeans IDE.
- Sun GlassFish Web Space Server Tag Library Palette – This plugin provides a JSP tag library palette for Sun GlassFish Web Space Server/Liferay specific tag library.
- SAW Plugin – A NetBeans plugin for SAW.
- CMS Tag Library Plugin – A NetBeans plug-in for CMS.
- Sun Java System Portal Server 7.1/7.2 Plugin – This plugin provides support for the Sun Java System Portal Server 7.1 or 7.2 server integration within the NetBeans IDE.

For more information, visit the portal pack project [web site](#).

## Eclipse Portal Pack Software

The Eclipse Portal Pack provides a set of plugins to help you to develop JSR 168/286 portlets and deploy them on supported portlet containers. For more information, visit the Eclipse Portal Pack project [web site](#).

## ViewDesigner Plugin

The ViewDesigner plugin available in this release enables a web designer to design and customize the theme of a portal page. You can download the plugin from the ViewDesigner project [web site](#). For more information on designing and customizing a theme, see the Sun GlassFish Web Space Server *Sun GlassFish Web Space Server 10.0 Developer's Guide*.

# Sun GlassFish Web Space Server 10.0 Known Issues and Limitations

---

This chapter describes known issues and limitations for the Sun GlassFish Web Space Server 10.0 software.

- [“Installation Issues” on page 13](#)
- [“GlassFishRegistration Portlet Issue” on page 16](#)
- [“Localization Issues” on page 16](#)
- [“Other Issue” on page 17](#)
- [“For More Information About Sun GlassFish Web Space Server” on page 17](#)

## Installation Issues

The Sun GlassFish Web Space Server does not get installed when you use Application Server 9.1.1 Enterprise Edition as the web container.

**Description:** When you install Application Server 9.1.1 Enterprise Edition and run the `install.xml` file from `websynergy-for-gfv2.zip`, you will get the following exception.

```
install:
  [mkdir] Created dir: /var/tmp/root/websynergyinstall

update-glassfish:
  [exec] CLI168 Could not delete the following jvm options. Options do not exist:
  [exec] -client
  [exec] CLI137 Command delete-jvm-options failed.
  [exec] Result: 1
  [exec] CLI167 Could not create the following jvm options. Options exist:
  [exec] -server
  [exec] CLI137 Command create-jvm-options failed.
  [exec] Result: 1
  [exec] server.log-service.module-log-levels.property.debug.com.sun.portal.
  portletcontainer = WARNING
  [echo] Stopping GlassFish...
```

```
[echo] Execute /opt/SUNWappserver/bin/asadmin stop-domain if install hangs.
[exec] Domain domain1 stopped.
```

**Solution:** Perform the following steps to install Sun GlassFish Web Space Server on Application Server 9.1.1 Enterprise Edition.

1. Install the Application Server 9.1.1 Enterprise Edition.
2. Download `webspaces-for-gfv2.zip` and unzip the bundle.
3. Add the following code to the `server.policy` file.

```
grant codeBase "file:${com.sun.aas.instanceRoot}/lib/-" {
    permission java.security.AllPermission;
};
// permissions for WebSynergy
grant codeBase "file:${com.sun.aas.instanceRoot}/applications
/j2ee-modules/webspaces/-" {
    permission java.security.AllPermission;
};

grant codeBase "file:${com.sun.aas.instanceRoot}/applications
/j2ee-modules/saw-web/-" {
    permission java.security.AllPermission;
};
// Basic set of required permissions granted to all remaining code
grant {
    .....
    .....
    permission java.lang.reflect.ReflectPermission "suppressAccessChecks";
};
```

4. Update the `portal-ext.properties` file (available at `webspaces-for-gfv2/webspaces/application/distribution/deploy/webspaces/WEB-INF/classes/` with the following code.

```
auto.deploy.glassfish-tomcat.jee.dm.id=deployer:Sun:
AppServer::localhost:4848:https
```

---

**Note** – You need to add the above code in the `portal-ext.properties` file, only if the value of the `security-enabled` property is “true”.

---

5. Run the `ant -f install.xml` command from the `webspaces-for-gfv2/webspaces/application` directory.

Harmless warning messages appear when you run `install` Sun GlassFish Web Space Server on Application Server 9.1.1 Enterprise Edition.

**Description:** When you run the `install.xml` file from Sun GlassFish Web Space Server core bundle on Application Server 9.1.1 Enterprise Edition, you will get the following warning messages, which are not harmful to your installation.

`update-glassfish:`

```
[exec] CLI168 Could not delete the following jvm options. Options do not exist:
[exec] -client
[exec] CLI137 Command delete-jvm-options failed.
[exec] Result: 1
[exec] CLI167 Could not create the following jvm options. Options exist:
[exec] -server
[exec] CLI137 Command create-jvm-options failed.
[exec] Result: 1
[exec] server.log-service.module-log-levels.property.debug.com.sun.portal.
      portletcontainer = WARNING
[echo] Stopping GlassFish...
[echo] Execute /opt/SUNWappserver//bin/asadmin stop-domain if install hangs.
[exec] Domain domain1 stopped.
```

The reason for these harmless warning messages is that when the installer tries to update the JVM options in GlassFish, `asadmin` may output warnings about JVM options that it cannot change. For example, the installer tries to replace `-client` with `-server`. However, on Application Server 9.2 Enterprise Edition, `-client` has already been replaced with `-server`. So `asadmin` will output warning that it cannot find `-client` to remove and that it cannot add `-server` since it is already present.

Using the Apache Ant that ships with the GlassFish web container causes error while you run the `asadmin start-domain` command.

**Description:** If the version of the Apache Ant that ships with the GlassFish web container is in your installation path, then the `./asadmin start-domain` command will fail to execute and you cannot deploy the Sun GlassFish Web Space Server.

**Solution:** Download the Apache Ant 1.7 or later version and place it in the installation path. Moreover, you need to set `ANT_HOME` to the directory where you have placed the downloaded Apache Ant 1.7 or later version.

All the Sun GlassFish Web Space Server WAR files failed to deploy on Red Hat Enterprise Linux (RHEL) and SUSE Linux versions.

**Description:** When you install the Sun GlassFish Web Space Server with GlassFish web container on the RHEL and SUSE Linux operating system versions, all the WAR files are not deployed. This issue occurs when the maximum limit for open files is not sufficient to deploy the WAR files.

**Solution:** To increase the maximum limit for open files on the RHEL and SUSE Linux versions:

1. Add the following two lines to the `/etc/security/limits.conf` file.
  - `* soft nfile 5000`
  - `* hard nfile 5000`
2. Restart the system.

The existing parameters in the `input.properties` file prevents the installation of Sun GlassFish Web Space Server on a second web container instance.

**Description:** When you install the Sun GlassFish Web Space Server on the GlassFish web container and try to install again on another web container, you will not be prompted to enter new parameters for the second instance. The installation procedure in the second instance considers the parameters that are already provided in the first instance. This issue prevents the installation of Sun GlassFish Web Space Server on a second web container instance.

**Solution:** Remove the `input.properties` file from the `../etc/webpace/application/` directory and install the Sun GlassFish Web Space Server on a second web container instance.

## GlassFishRegistration Portlet Issue

The GlassFishRegistration portlet in Sun GlassFish Web Space Server does not work with JDK1.6

**Description:** When you register for a new account in the GlassFishRegistration portlet in the Sun GlassFish Web Space Server, you will get the following error message.

```
An error has occurred while processing your request
Error Details : java.security.cert.CertificateException:
The certificate chain from the server is not trusted
```

**Solution:** Restart the GlassFish server for the registration to work.

## Localization Issues

Multi Lingual version of GlassFish V2 needs to be shipped with the Sun GlassFish Web Space Server.

**Description:** The Image Packaging System (IPS) needs to be updated with the Multi Lingual package of GlassFish V2, which can be picked up by the Sun GlassFish Web Space Server. This allows a user to use the Administration console and other features in GlassFish V2 in the native language.

**Solution:** These are the two options to solve this issue.

- When the Multi Lingual packages are available in the GlassFish Update Centre, you can use the IPS update to update the GlassFish install with Multi Lingual features.

- You can download and install the Multi Lingual version of GlassFish V2 and then install Sun GlassFish Web Space Server.

Multi Lingual labels of Tag name and Search option are corrupted in the WebContent, Wiki, and Blog portlets.

**Description:** The Multi Lingual labels of Tag name and Categories that are available in the WebContent, Wiki, and Blog portlets are corrupted.

**Solution:** Create the Tag name and Categories in English language.

## Other Issue

To enable the Map and IPGeocoder portlets, you need to install MaxmindGeoIP city or GeoLite City.

**Description:** When you add the Map and IPGeocoder portlets to a portal page, a message appears in both the portlets to install and configure MaxmindGeoIP city or GeoLite City.

## For More Information About Sun GlassFish Web Space Server

Thanks for evaluating Sun GlassFish Web Space Server 10.0. For the most recent updates on this project, see the Sun GlassFish Web Space Server [home page](#). Visit the following web sites for more information about products that might be useful while you evaluate Sun GlassFish Web Space Server.

- [NetBeans](#) – An open source, free IDE that runs on the Solaris, Linux, Macintosh OS X, and Windows platforms.
- [Liferay Portal](#) – Sun™ Microsystems is part of the Liferay community. The Sun GlassFish Web Space Server 10.0 release is based on the Liferay portal server community edition 5.2.
- [MySQL](#) – The world's most popular open source database.
- [GlassFish](#) – An open source application server project led by Sun Microsystems<sup>SM</sup> for the Java Enterprise Edition (Java EE<sup>TM</sup>) platform.
