Preface

The *Sun StorEdge Configuration Service 1.0 Installation Guide* provides instructions for installing and uninstalling the Sun StorEdge™ Configuration Service software.

Before You Read This Book

For the latest information about the Sun StorEdge Configuration Service software, see the *Sun StorEdge Configuration Service 1.0 Release Notes*.

How This Book Is Organized

This document contains the following topics:

- “Sun StorEdge Configuration Service Software Requirements” on page 1
- “Preparing for Installation” on page 2
- “Installing the Software” on page 7
- “Configuring the Software” on page 12
- “Starting the Software” on page 17
- “Uninstalling the Software” on page 20

For subtopics, see each of the sections above, or the Table of Contents.

Using UNIX Commands

This document may not contain information on basic UNIX[®] commands and procedures such as shutting down the system, booting the system, and configuring devices.

See one or more of the following for this information:

- *Solaris Handbook for Sun Peripherals*
- AnswerBook2[™] online documentation for the Solaris[™] operating environment
- Other software documentation that you received with your system

Typographic Conventions

Typeface	Meaning	Examples
AaBbCc123	The names of commands, files, and directories; on-screen computer output	Edit your <code>.login</code> file. Use <code>ls -a</code> to list all files. % You have mail.
AaBbCc123	What you type, when contrasted with on-screen computer output	% su Password:
<i>AaBbCc123</i>	Book titles, new words or terms, words to be emphasized	Read Chapter 6 in the <i>User's Guide</i> . These are called <i>class</i> options. You <i>must</i> be superuser to do this.
	Command-line variable; replace with a real name or value	To delete a file, type <code>rm filename</code> .

Shell Prompts

Shell	Prompt
C shell	<i>machine_name%</i>
C shell superuser	<i>machine_name#</i>
Bourne shell and Korn shell	\$
Bourne shell and Korn shell superuser	#

Accessing Sun Documentation Online

A broad selection of Sun system documentation is located at:

<http://www.sun.com/products-n-solutions/hardware/docs>

A complete set of Solaris documentation and many other titles are located at:

<http://docs.sun.com>

Sun Welcomes Your Comments

Sun is interested in improving its documentation and welcomes your comments and suggestions. You can email your comments to Sun at:

docfeedback@sun.com

Please include the part number (816-4294-10) of your document in the subject line of your email.

Sun StorEdge Configuration Service 1.0 Installation Guide

This document contains the following topics:

- “Sun StorEdge Configuration Service Software Requirements” on page 1
- “Preparing for Installation” on page 2
- “Installing the Software” on page 7
- “Configuring the Software” on page 12
- “Starting the Software” on page 17
- “Uninstalling the Software” on page 20

Sun StorEdge Configuration Service Software Requirements

The Sun StorEdge™ Configuration Service software requires the following:

- Solaris 8 update 4 (or later), or Solaris 9 GA (or later) operating environment with the End User Package Cluster
- 100 to 200 Mbytes of memory, depending upon the number of Sun StorEdge T3 arrays being managed
- Netscape Navigator, version 4.76 or later, or Internet Explorer, version 6 or later
- Sun StorEdge™ T3 arrays with 1.16a or higher firmware and Sun StorEdge T3+ arrays with 2.00 or higher firmware

Preparing for Installation

It is important to verify the integrity of certain packages which may already exist on your system. If these packages don't exist on your system, the `install` script will install the correct ones for you.

- “Verifying Selected Packages Already on Your System” on page 2
- “Installing Required Solaris Packages” on page 5
- “Required Sun StorEdge T3/T3+ Array Firmware” on page 6

Verifying Selected Packages Already on Your System

This procedure insure existing software on your system remains unaffected by installing this software and that Sun StorEdge Configuration Service performs with maximum reliability.

▼ To Identify and Verify Pre-Installed Packages

1. Use the `pkginfo -l` command to check the package version and date.

```
% ksh
$ pkginfo -l package-name*
```

- For the Solaris 8 operating environment, check the packages listed in TABLE 1.

TABLE 1 Pre-Installed Solaris 8 Packages Requiring Verification

Package Name	Version
SUNWj3rt	1.3.1,REV=2001.11.13.18.27
SUNWj3dev	1.3.1,REV=2001.11.13.18.27
SUNWadmj	11.8,REV=2002.03.05.08.40
SUNWjsnmp	1.0,REV=2002.03.05.09.47

TABLE 1 Pre-Installed Solaris 8 Packages Requiring Verification

Package Name	Version
SUNWwbapi	2.5,REV=2002.03.05.09.47
SUNWwbcor	2.5,REV=2002.03.05.09.47
SUNWwbcou	2.5,REV=2002.03.05.09.47

- For Solaris 9 operating environment, check the packages listed in TABLE 2.

TABLE 2 Pre-Installed Solaris 9 Packages Requiring Verification

Package Name	Version
SUNWj3rt	1.4.0,REV=2002.03.04.22.20
SUNWj3dev	1.4.0,REV=2002.03.04.22.20
SUNWadmj	11.8,REV=2002.03.05.08.40
SUNWjsnmp	1.0,REV=2002.03.05.09.47
SUNWwbapi	2.5,REV=2002.03.05.09.47
SUNWwbcor	2.5,REV=2002.03.05.09.47
SUNWwbcou	2.5,REV=2002.03.05.09.47

2. Determine if the package version and date on your system match or exceed those listed in TABLE 1 or TABLE 2; if so, proceed with Step 3.

Be sure to match the latest package (that is, with the highest .x package name extension, with the packages listed in TABLE 1 or TABLE 2.

```
$ pkginfo -l SUNWj3rt*
  PKGINST:  SUNWj3rt
    NAME:    JDK 1.3 run time environment
  CATEGORY:  system
    ARCH:    sparc
  VERSION:   1.3.0,REV=2000.08.26.01.16
  BASEDIR:   /usr
    VENDOR:  Sun Microsystems, Inc.
    DESC:    Java virtual machine and core class libraries
  PSTAMP:    hotvmm30150502
  INSTDATE:  Mar 01 2002 17:53
  HOTLINE:   Please contact your local service provider
  STATUS:    completely installed
  FILES:     173 installed pathnames
             4 shared pathnames
             25 directories
             50 executables
             77825 blocks used (approx)

  PKGINST:  SUNWj3rt.2
    NAME:    JDK 1.3 run time environment
  CATEGORY:  system
    ARCH:    sparc
  VERSION:   1.3.1,REV=2001.11.13.18.27
```

For example, you would use `SUNWj3rt.2` for comparing the version with TABLE 1 or TABLE 2.

3. Verify package integrity by typing the following for each package you identified in Step 2 of “To Identify and Verify Pre-Installed Packages” on page 2.

```
# pkgchk package-name*
```

4. If any of the packages in Step 3 do not pass the packaging checks, reinstall the packages.

```
# pkgrm package-name
# pkgadd package-name
```

Installing Required Solaris Packages

The patches listed in TABLE 3 are not installed with the Solaris Operating Environment but are required by the Sun StorEdge Configuration Service Software.

TABLE 3 Required Packages

Package	Package Name
SUNWctpls	Portable layout services for Complex Text Layout
SUNWmfrun	Motif RunTime Kit
SUNWlibC	Sun Workshop Compilers Bundled libC
SUNWlibCx	Sun WorkShop Bundled 64-bit libC
SUNWzlib	The Zip compression library
SUNWzlibx	The Zip compression library (64-bit)

▼ To Install Solaris Packages Required by the Sun StorEdge Configuration Service Software

1. Check if package is already present.

```
# pkginfo SUNWlibC SUNWlibCx SUNWctpls SUNWmfrun
```

If using the Secure Shell (SSH), you must also check for the `SUNWzlib` package.

```
# pkginfo SUNWzlib SUNWzlibx
```

2. Install packages with the `pkgadd` command.

a. From the Solaris Software 1of2 CD install the following packages:

```
# pkgadd -d /cdrom/cdrom0/s0/Solaris_*/Product/SUNWlibC SUNWlibCx SUNWctpls \
SUNWmfrun
```

b. From the Solaris Software 2of2 CD install the following packages

If using the Secure Shell (SSH), you must install the SUNWzlib package.

```
# pkgadd -d /cdrom/cdrom0/s0/Solaris_*/Product/SUNWzlib SUNWzlibx
```

3. Follow the installation instructions in the README file contained in each package.

Required Sun StorEdge T3/T3+ Array Firmware

The Sun StorEdge Configuration Service software requires that the Sun StorEdge T3 arrays have the appropriate firmware. See sunsolve.sun.com to search for and download the latest Sun StorEdge T3 firmware indicated in TABLE 4. Follow the instructions provided in the patch README to insure proper installation.

TABLE 4 Sun StorEdge T3 Array Firmware Patches

Device	Minimum Firmware Level	Patch
Sun StorEdge T3 Arrays	1.16	109115
Sun StorEdge T3+ Arrays	2.0	112276

Installing the Software

Installing the software consists of performing the following procedure:

- “To Mount the CD-ROM and Run the Installation Script” on page 7

In this section, you will also find the following topics:

- “Sample Installation Session” on page 8
- “Options for the install Script” on page 11

▼ To Mount the CD-ROM and Run the Installation Script

A sample installation script session is provided in “Sample Installation Session” on page 8.

1. Place the Sun StorEdge Configuration Service CD-ROM in the CD-ROM drive.
2. Check to see if the Solaris Volume Manager daemon (`vold`) is running by typing:

```
# ps -elf | grep vold
```

3. Mount the CD-ROM as follows:

- If the Solaris Volume Manager daemon (`vold`) is running, and the CD-ROM drive is available at the `/cdrom/cdrom0` mount point, proceed to Step 4.
- If `vold` is *not* running, create the following mount point and mount the CD-ROM drive by typing:

```
# mkdir -p /cdrom/cdrom0
# mount -F hsfs -o ro /dev/dsk/cxtxdxsx/cdrom/cdrom0
```

The `cxtxdxsx` portion of the path is the device node of the CD-ROM (for example, `c0t6d0s0`), and `/cdrom` is the mount point.

4. Run the `install` script.

```
# cd /cdrom/cdrom0
# ./install
```

Sample Installation Session

CODE EXAMPLE 1 contains a sample installation session in which all the default values were accepted.

CODE EXAMPLE 1 Sample install Script Output in the Solaris 8 Operating Environment

```
# ./install

Options for the `install` Script

The `install` script has the options summarized in TABLE 6.

TABLE 5 `install` script options

Option	Description
-3	install Sun StorEdge T3 array agent layer (SUNWgrwt3)
-a	install all (default)
-A	install base agent layer (SUNWgrw)
-b	install base (SUNWdm)
-c	install core (SUNWgre, SUNWgrr)
-h	help
-i	interactive install
-j	install prerequisite Java Developer's Kit
-n	non-interactive install (default)
-x	install Java extensions
-s	install StorEdge Secure Shell (if installed)
-t	install Sun StorEdge T3 array logic layer (SUNWgret3)
-u	install UI layer (SUNWgrui)
-v	set verbose reporting (off by default)
-w	install WBEM services

Configuring the Software

To set up the Sun StorEdge Configuration Service software, you must run the `config` script. You also need to make sure the Sun StorEdge T3 arrays have the required HTML files.

This section contains the following topics:

- “To Run the Configuration Script” on page 12
 - “Sample Configuration Session Output” on page 13
- “Updating Sun StorEdge T3 Array HTML Files” on page 16

▼ To Run the Configuration Script

You must run the `config` script to make various Sun StorEdge Configuration Service features available.

1. **Type the following to run the `config` script:**

```
# cd /opt/SUNWdm/gre/bin
# ./config
```

Note – Make note of the HTTP and HTTPS port number if you changed the default value while running the `config` script.

2. If prompted, reconfigure Solaris WBEM Services default values by over-riding the script default.

```
Your previous selections for access to Solaris WBEM Services were

      cim username:    root
      cim host:       host.domain.Sun.COM

Would you like to reconfigure those values at this time ? (Default:
n) [y,n,?,q] y

Enter the hostname where the CIMOM is located (Current:
forechek.Central.Sun.COM, Default: host.domain.Sun.COM) [?,q]

Do you want to change your selection - host.domain.Sun.COM ?
(Default: n) [y,n,?,q]

Enter the CIM Username for accessing the CIMOM (Current: root,
Default: root) [?,q]

Do you want to change your selection - root ? (Default: n)
[y,n,?,q]
Please enter password for root:
Please confirm password for root:
```

Note – You must provide a password.

3. When prompted, answer any other questions.

Sample Configuration Session Output

CODE EXAMPLE 2 lists a sample configuration session.

CODE EXAMPLE 2 Sample Configuration Session

```
# ./config

Would you like to configure the Sun StorEdge(tm) Configuration
Service Console access to Solaris WBEM Services at this time ?
(Default: y) [y,n,?,q]

Your previous selections for access to Solaris WBEM Services were
```

CODE EXAMPLE 2 Sample Configuration Session (Continued)

```
        cim username:    root
        cim host:        computer.domain.Sun.COM

Would you like to reconfigure those values at this time ? (Default:
n) [y,n,?,q] y

Enter the hostname where the CIMOM is located (Current:
forechek.Central.Sun.COM, Default: computer.domain.Sun.COM) [?,q]

Do you want to change your selection - computer.domain.Sun.COM ?
(Default: n) [y,n,?,q]

Enter the CIM Username for accessing the CIMOM (Current: root,
Default: root) [?,q]

Do you want to change your selection - root ? (Default: n)
[y,n,?,q]
Please enter password for root:
Please confirm password for root:

Would you like to configure the Sun StorEdge(tm) Configuration
Service Console access to the Sun StorEdge(tm) Automated
Diagnostic
Environment (SADE) at this time ? (Default: y) [y,n,?,q]

Your previous selections for access to Sun StorEdge(tm) Automated
Diagnostic Environment were

        SADE URL:        http://msp0.central.sun.com:7654

Would you like to reconfigure those values at this time ? (Default:
n) [y,n,?,q]

Would you like to configure the Sun StorEdge(tm) Configuration
Service Console access to the Sun StorEdge(tm) 9900 Series Software
at this time ? (Default: y) [y,n,?,q]

Your previous selections for access to Sun StorEdge(tm) 9900 Series
Console were

        S9900 URL:       http://localhost:8081

Would you like to reconfigure those values at this time ? (Default:
```

CODE EXAMPLE 2 Sample Configuration Session *(Continued)*

```
n) [y,n,?,q]

Would you like to configure the login names of storage
administration
users for the Sun StorEdge(tm) Configuration Service at this time ?
(Default: y) [y,n,?,q]

Your previous selections for designated storage administration
users were

        users:  root,joeuser

Would you like to reconfigure those values at this time ? (Default:
n) [y,n,?,q]

Would you like to configure the Sun StorEdge(tm) Configuration
Service Console Web Server at this time ? (Default: y) [y,n,?,q]

        Your previous selections for configuration of the Configuration
        Service Web Server were

                hostname:      localhost
                http port:     8080
                https port:    9443
                keystore file:  ./keystore

Would you like to reconfigure those values at this time ? (Default:
n) [y,n,?,q]

Would you like to configure the Sun StorEdge(tm) Configuration
Service Console CLI Server at this time ? (Default: y) [y,n,?,q]

Your previous selections for configuration of the CLI Service
Telnet Daemon were

        telnet port:      8023

Would you like to reconfigure those values at this time ? (Default:
n) [y,n,?,q]

Your previous selections for configuration of the CLI Service
Secure
        Shell Proxy were
```

CODE EXAMPLE 2 Sample Configuration Session (Continued)

```
ssh proxy port: 8514

Would you like to reconfigure those values at this time ? (Default:
n) [y,n,?,q]

Would you like to configure the Sun StorEdge(tm) Configuration
Service Console SNMP Connector at this time ? (Default: y)
[y,n,?,q]

Configuration of the various components of the Sun StorEdge(tm)
Configuration Service has been done. Would you like to start the
Configuration Service at this time ? (Default: y) [y,n,?,q]
config: INFO: service is already running: Pseudo-Random Number

```

▼ Updating Sun StorEdge T3 Array HTML Files

The Sun StorEdge Configuration Service requires each Sun StorEdge T3 array have the required HTML files. Running the `update_html_files` script easily updates any arrays needing HTML files.

Note – To use the `update_html_files` script, you must have the IP addresses of all Sun StorEdge T3 arrays you intend to update.

- Type the following:

```
# /opt/SUNWdm/gre/bin
# ./update_html_files
```

Starting the Software

If you did not instruct the `config` script to start the Configuration Service (see CODE EXAMPLE 2 on page 13), you will need to manually start the daemons. Otherwise, you can just start the Sun StorEdge Configuration Service software in a browser.

- “To Manually Start the Sun StorEdge Configuration Service Daemons” on page 17
- “To Access the Sun StorEdge Configuration Service Software in a Browser” on page 17
- “To Start a Command-Line Interface (CLI) Session” on page 18

▼ To Manually Start the Sun StorEdge Configuration Service Daemons

- Type the following commands:

```
# /etc/init.d/prngd start # only on Solaris 8
# /etc/init.d/sshd start
# /etc/init.d/secs.wbem start # only on Solaris 8
# /etc/init.d/secs start
```

▼ To Access the Sun StorEdge Configuration Service Software in a Browser

Note – If you did not use the default value, you will need the HTTP or HTTPS port number you defined during the configuration process. (See CODE EXAMPLE 2 on page 13.)

1. **Open a web browser.**
See “Sun StorEdge Configuration Service Software Requirements” on page 1 for browser version requirements.
2. **If you are using Netscape Communicator, set the browser cache setting to Always (recommended), or Once Per Session, but not to Never.**
3. **Type one of the following URLs in the URL text field:**

- For a non-secure web server, type a URL with the following format in a browser:

```
http://nodename.domain:port-number
```

An example with the default port number is:

```
http://happy.eng:8080
```

- For a secure web server, type a URL with the following format in a browser:

```
https://nodename.domain:port-number
```

An example with the default port number is:

```
https://happy.eng:9443
```

4. **At the Login page, enter the User Name and Password provided by your system administrator.**
5. **Click the Log In button to log in.**

See the *Sun StorEdge Configuration Service 1.0 Administrator's Guide* for additional information on using the software.

▼ To Start a Command-Line Interface (CLI) Session

You can start a CLI session by using `telnet` or the Secure Shell. See the *Sun StorEdge Configuration Service 1.0 Administrator's Guide* for additional information on using the CLI.

- **Use `telnet`.**
 - a. **Telnet to the host with the specified CLI port.**

The default port is 8023.

```
$ telnet hostname.domain port-number
```

The login name can be `root` or any user name registered with the Sun StorEdge Configuration Service by way of the `config` script. For more information about the `config` script, see the “To Run the Configuration Script” on page 12.

b. To run device specific commands, navigate to /devices/array/sun/t3.

```
SeSh [1] cd devices/array/sun/t3
```

● **Use the Secure Shell.**

One way to access the command-line interface is by way of the Secure Shell client (ssh) available on Solaris 8 and 9. Depending upon how your SSH environment is configured, you may need to see the ssh.1m man page for additional information on starting a session.

a. To initiate a Secure Shell client session on a host, enter the following:

```
# ssh -c 3des hostname
```

This logs you into the Configuration Service command line interface (CLI).

b. To run device specific commands, navigate to /devices/array/sun/t3.

```
SeSh [1] cd devices/array/sun/t3
```

Uninstalling the Software

To stop and uninstall the Configuration Service software, perform the following procedure:

- “To Stop the Sun StorEdge Configuration Service Daemons” on page 20
- “To Run the uninstall Script” on page 20
- “Options for the uninstall Script” on page 21

▼ To Stop the Sun StorEdge Configuration Service Daemons

- **Stop the daemons with the following commands:**

```
# /etc/init.d/secs stop
# /etc/init.d/secs.wbem stop # only on Solaris 8
# /etc/init.d/sshd stop
# /etc/init.d/prngd stop      # only on Solaris 8
```

▼ To Run the uninstall Script

- **Run the `uninstall` script.**

```
# cd /cdrom/cdrom0
# ./uninstall -f
```

Options for the `uninstall` Script

The `uninstall` script has the options summarized in TABLE 6.

TABLE 6 `uninstall` script options

Option	Description
-f	force uninstall
-3	uninstall Sun StorEdge T3 array agent layer (SUNWgrwt3)
-a	uninstall all (default)
-A	uninstall base agent layer (SUNWgrw)
-b	uninstall base (SUNWdm)
-c	uninstall core (SUNWgre, SUNWgrr)
-h	help
-i	interactive uninstall
-j	uninstall prerequisite Java Developer's Kit
-n	non-interactive uninstall (default)
-x	uninstall Java extensions
-s	uninstall StorEdge Secure Shell (if installed)
-t	uninstall Sun StorEdge T3 array logic layer (SUNWgret3)
-u	uninstall UI layer (SUNWgrui)
-v	set verbose reporting (off by default)
-w	uninstall WBEM services
