Sun Java System Application Server Enterprise Edition 8.2 Error Message Reference

Sun Microsystems

Contents

Preface

The *Sun Java System Application Server Enterprise Edition 8.1 2005Q2 Error Message Reference* provides reference lists of all SEVERE messages that can be thrown by the Application Server. Messages are organized by functional category.

This guide describes error messages you may encounter when using the Sun Java™ System Application Server 8.2 Enterprise Edition and Platform Edition software. The error messages described here can also be viewed with the Application Server Log Viewer.

This preface contains information about how this book is organized, and about conventions for the entire Sun Java System Application Server documentation set.

How This Book Is Organized

This guide is a compilation of messages that you may encounter while running the Application Server. Each message begins with a message ID, which has a format like the following:

```
<Subsystem\><IntegerId\>:
```

The subsystem is identified by the initial characters in the message ID. For example, in JMS0001, the subsystem is JMS.

The error messages in this guide are organized alphabetically into chapters based on the subsystem prefix. For example, all messages with an ACT prefix are in one chapter, and all messages with a JMS prefix are in another.

The messages defined in this reference guide also include the following information:

- **Message** — The brief text description accompanying the numeric message ID when viewed in the Application Server Log Viewer.
- **Cause** — Meaning and likely cause of the message.
- **Solutions/Workarounds** — Instructions on how to address the condition that caused the message to be generated.

Application Server Documentation Set

The Application Server documentation set describes deployment planning and system installation. The Uniform Resource Locator (URL) for stand-alone Application Server documentation is `http://docs.sun.com/app/docs/coll/1310.4`. The URL for Sun Java Enterprise System (Java ES) Application Server documentation is `http://docs.sun.com/app/docs/coll/1310.3`. For an introduction to Application Server, refer to the books in the order in which they are listed in the following table.

TABLE P–1 Books in the Application Server Documentation Set

Book Title	Description
Release Notes	Late-breaking information about the software and the documentation. Includes a comprehensive, table-based summary of the supported hardware, operating system, Java Development Kit (JDK™), and database drivers.
Quick Start Guide	How to get started with the Application Server product.
Installation Guide	Installing the software and its components.
Deployment Planning Guide	Evaluating your system needs and enterprise to ensure that you deploy the Application Server in a manner that best suits your site. General issues and concerns that you must be aware of when deploying the server are also discussed.
Developer's Guide	Creating and implementing Java 2 Platform, Enterprise Edition (J2EE™ platform) applications intended to run on the Application Server that follow the open Java standards model for J2EE components and APIs. Includes information about developer tools, security, debugging, deployment, and creating lifecycle modules.
J2EE 1.4 Tutorial	Using J2EE 1.4 platform technologies and APIs to develop J2EE applications.
Administration Guide	Configuring, managing, and deploying Application Server subsystems and components from the Administration Console.
High Availability Administration Guide	Post-installation configuration and administration instructions for the high-availability database.
Administration Reference	Editing the Application Server configuration file, `domain.xml`.
Upgrade and Migration Guide	Migrating your applications to the new Application Server programming model, specifically from Application Server 6.x and 7. This guide also describes differences between adjacent product releases and configuration options that can result in incompatibility with the product specifications.
Performance Tuning Guide	Tuning the Application Server to improve performance.
Troubleshooting Guide	Solving Application Server problems.
Error Message Reference	Solving Application Server error messages.

TABLE P–1   Books in the Application Server Documentation Set   *(Continued)*

Book Title	Description
Reference Manual	Utility commands available with the Application Server; written in man page style. Includes the asadmin command line interface.

Related Documentation

Application Server can be purchased by itself or as a component of Java ES, a software infrastructure that supports enterprise applications distributed across a network or Internet environment. If you purchased Application Server as a component of Java ES, you should be familiar with the system documentation at http://docs.sun.com/coll/1286.2. The URL for all documentation about Java ES and its components is http://docs.sun.com/prod/entsys.5.

For other Sun Java System server documentation, go to the following:

- Message Queue documentation
- Directory Server documentation
- Web Server documentation

Additionally, the following resources might be useful:

- The J2EE 1.4 Specifications (http://java.sun.com/j2ee/1.4/docs/index.html)
- The J2EE 1.4 Tutorial (http://java.sun.com/j2ee/1.4/docs/tutorial/doc/index.html)
- The J2EE Blueprints (http://java.sun.com/reference/blueprints/index.html)

Default Paths and File Names

The following table describes the default paths and file names that are used in this book.

TABLE P–2 Default Paths and File Names

Placeholder	Description	Default Value

install-dir	Represents the base installation directory for Application Server.	Sun Java Enterprise System (Java ES) installations on the Solaris™ platform:
		
		`/opt/SUNWappserver/appserver`
		
		Java ES installations on the Linux platform:
		
		`/opt/sun/appserver/`
		
		Other Solaris and Linux installations, non-root user:
		
		user's home directory`/SUNWappserver`
		
		Other Solaris and Linux installations, root user:
		
		`/opt/SUNWappserver`
		
		Windows, all installations:
		
		SystemDrive`:\Sun\AppServer`

domain-root-dir	Represents the directory containing all domains.	Java ES installations on the Solaris platform:
		
		`/var/opt/SUNWappserver/domains/`
		
		Java ES installations on the Linux platform:
		
		`/var/opt/sun/appserver/domains/`
		
		All other installations:
		
		install-dir`/domains/`

domain-dir	Represents the directory for a domain. In configuration files, you might see *domain-dir* represented as follows: `${com.sun.aas.instanceRoot}`	*domain-root-dir*/*domain-dir*
instance-dir	Represents the directory for a server instance.	*domain-dir*/*instance-dir*

Typographic Conventions

The following table describes the typographic changes that are used in this book.

TABLE P–3 Typographic Conventions

Typeface	Meaning	Example
AaBbCc123	The names of commands, files, and directories, and onscreen computer output	Edit your `.login` file. Use `ls -a` to list all files. `machine_name% you have mail.`
AaBbCc123	What you type, contrasted with onscreen computer output	`machine_name%` **su** `Password:`
AaBbCc123	A placeholder to be replaced with a real name or value	The command to remove a file is `rm` *filename*.
AaBbCc123	Book titles, new terms, and terms to be emphasized (note that some emphasized items appear bold online)	Read Chapter 6 in the *User's Guide*. A *cache* is a copy that is stored locally. Do *not* save the file.

Symbol Conventions

The following table explains symbols that might be used in this book.

TABLE P–4 Symbol Conventions

Symbol	Description	Example	Meaning
[ ]	Contains optional arguments and command options.	`ls [-l]`	The `-l` option is not required.
{ | }	Contains a set of choices for a required command option.	`-d {y|n}`	The `-d` option requires that you use either the `y` argument or the `n` argument.
${ }	Indicates a variable reference.	`${com.sun.javaRoot}`	References the value of the `com.sun.javaRoot` variable.
-	Joins simultaneous multiple keystrokes.	Control-A	Press the Control key while you press the A key.
+	Joins consecutive multiple keystrokes.	Ctrl+A+N	Press the Control key, release it, and then press the subsequent keys.
→	Indicates menu item selection in a graphical user interface.	File → New → Templates	From the File menu, choose New. From the New submenu, choose Templates.

Documentation, Support, and Training

The Sun web site provides information about the following additional resources:

- Documentation (`http://www.sun.com/documentation/`)
- Support (`http://www.sun.com/support/`)
- Training (`http://www.sun.com/training/`)

Third-Party Web Site References

Third-party URLs are referenced in this document and provide additional, related information.

Note – Sun is not responsible for the availability of third-party web sites mentioned in this document. Sun does not endorse and is not responsible or liable for any content, advertising, products, or other materials that are available on or through such sites or resources. Sun will not be responsible or liable for any actual or alleged damage or loss caused or alleged to be caused by or in connection with use of or reliance on any such content, goods, or services that are available on or through such sites or resources.

Sun Welcomes Your Comments

Sun is interested in improving its documentation and welcomes your comments and suggestions. To share your comments, go to `http://docs.sun.com` and click Send Comments. In the online form, provide the full document title and part number. The part number is a 7-digit or 9-digit number that can be found on the book's title page or in the document's URL. For example, the part number of this book is 819-4739.

1

Unexpected Errors

This chapter provides general advice to help you deal with unexpected errors.

1.1 Analyze the System

Unexpected errors generally result from problems in the configuration (system configuration, JVM configuration, server configuration or application-level configuration). They can also occur when the system runs out of memory, or when there is a system crash, hardware failure, or power failure.

To find cases in which the error has been reported, search for occurrences of the error code (for example, `HADB99999`) at `http://www.sunsolve.sun.com`.

In the event of a general system failure, the error message can generally be ignored, because the error is unlikely to reoccur when the system is working properly.

If system memory is an issue, consult the Performance Tuning Guide for suggestions on optimizing your configuration. (Consider taking other actions to remedy the problem as well, such as adding memory or decreasing system load.)

When the system is not the cause, the problem may be due to the configuration settings. If you have recently made changes, consider backing them out.

When all else fails, you may need help analyzing your configuration. In that case, gather the following information and refer to the instructions in "Documentation, Support, and Training" on page 12:

- Detailed information from the body of the message
- Stack trace information
- System logs

◆ ◆ ◆ **CHAPTER 2**

2

ACC Error Messages

This chapter describes messages for errors with an ACC prefix.

2.1 ACC **Messages**

ACC001

```
Using ClientContainer file: [{0}].
```
Cause: TBD

ACC003

```
Application threw an exception.
```
Cause: TBD

ACC004

```
Login error: Incorrect login and/or password.
```
Cause: TBD

ACC005

```
Failed to load application client descriptors for: [{0}]
```
Cause: TBD

ACC006

```
No application client descriptor defined for: [{0}]
```
Cause: TBD

ACC007

Initiating Login ...
   Cause: TBD

ACC008

Using default callback ...
   Cause: TBD

ACC009

Load Application Class: [{0}]
   Cause: TBD

ACC010

Make sure the server port is not disabled and that you are looking up a valid
name
   Cause: TBD

ACC011

Duplicated display name in multiple application. Please try to use "-mainclass
<appClass-name>" option.
   Cause: TBD

ACC012

For multiple application, user must specify main class name or display name using
"-mainclass <appClass-name>" or "-name <display name>" option.
   Cause: TBD

ACC013

ORB port number: [{0}]
   Cause: TBD

ACC014

ORB host name: [{0}]
   Cause: TBD

ACC013

```
ORB port number: [{0}]
   Cause: TBD
```

ACC014

```
ORB host name: [{0}]
   Cause: TBD
```

ACC015

```
Error in XML file: [{0}]. Please check your XML and make sure that your XML and
DTD files exist in the correct location (refer to the user doc.) {1}
   Cause: TBD
```

ACC016

```
Client Container xml: [{0}] not found or unable to read.
   Cause: TBD
```

ACC017

```
Either SSL KeyStore and TrustStore are not specified or KeyStore and TrustStore
initialization failed.
   Cause: TBD
```

ACC018

```
Failed to create client side logger
   Cause: TBD
```

ACC019

```
Failed to load application client descriptors for: {0}
   Cause: TBD
```

ACC020

```
For applications containing multiple appclient jars, please specify -mainclass
or -name option.
   Cause: TBD
```

ACC021

```
Error from Handler with regards to DTD resolution {0}
```
   Cause: TBD

```
ACC022
```

```
Warning from Handler during DTD resolution {0}
```
   Cause: TBD

```
ACC023
```

```
The best practice in case of appclients is to set the endpoints as
<target-server> elements in sun-acc.xml. Please avoid using the
com.sun.appserv.iiop.endpoints property for appclients.
```
   Cause: TBD

3

ACT Error Messages

This chapter describes messages for errors with an ACT prefix.

3.1 ACT **Messages**

ACT5001

Error occured in image loading =[{0}]
   Cause: TBD

ACT5002

Invalid outputstream in TextEditor! not saving!.
   Cause: TBD

ACT5003

TextEditor Save Operation failed with Exception.
   Cause: TBD

ACT5004

Bad .mime.types entry: [{0}]
   Cause: TBD

ACT5005

Exception parsing mailcap file
   Cause: TBD

4

ADM Error Messages

This chapter describes messages for errors with a ADM prefix.

4.1 ADM **Messages**

ADM0001

MBeanServer initialized successfully
   Cause: TBD

ADM0002

System MBean initialized:[{0}]
   Cause: TBD

ADM0003

MBeanServer initialization failed
   Cause: TBD

ADM0004

MBeanServer method invocation:[{0}]
   Cause: TBD

ADM0005

Timestamp files for configuration created for:[{0}]
   Cause: TBD

ADM0006

```
Timestamp files not created - Detailed Message:
```
Cause: TBD

ADM0007

```
The folder [{0}] where admin server uploads the remote files for deployment
already exists. This is probably because admin-server could not delete this
folder during last shutdown. This should not be cause of any problem
```
Cause: TBD

ADM0008

```
Admin Server could not create the temporary folder for internal purposes at
[{0}]. This may cause problems with deployment etc. It is alright if some space
is freed at this location without shutting down the Admin Server. Also look at
the operating systems artefacts like file permissions etc. to resolve the
problem
```
Cause: TBD

ADM0009

```
Created temporary folder at [{0}] for internal purpose
```
Cause: TBD

ADM0010

```
Deleted temporary folder at [{0}] successfully
```
Cause: TBD

ADM0011

```
Could not reregister HttpListener with DomainRegistry.
```
Cause: TBD

ADM0012

```
A Domain Registry Exception occured. Details are:
```
Cause: TBD

ADM0013

```
A config exception occurred. Details are:
```
Cause: TBD

ADM0014

The temporary folder required by the administrative console (graphical user interface) could not be created at [{0}]. This will pose some problems while trying to deploy archives from the console. Some space can be freed at this location without restarting the administrative server to correct this probleme.
   Cause: TBD

ADM0015

The temporary folder required by the administrative console (graphical user interface) was created at [{0}]. This is where the archives to be deployed will be uploaded.
   Cause: TBD

ADM0016

Unable to determine java home. This suggests that you are using a version of J2EE plugin incompatible with administration server.
   Cause: TBD

ADM0017

Admin server could not be initialized with java home from j2ee plugin.
   Cause: TBD

ADM0018

Support for batched reconfiguration is disabled.
   Cause: TBD

ADM0019

Admin service is running without server context.
   Cause: TBD

ADM0020

Following is the information about the JMX MBeanServer used:
   Cause: TBD

ADM0021

MBeanServer Implementation Name:[{0}]
   Cause: TBD

ADM0022

MBeanServer Implementation Vendor:[{0}]
   Cause: TBD

ADM023

JMX Implementation Version:[{0}]
   Cause: TBD

ADM024

MBeanServer ID:[{0}]
   Cause: TBD

ADM025

MBeanServer Implementation Classname:[{0}]
   Cause: TBD

ADM026

Using HtmlAdaptorServer for viewing MBeans, its state is:[{0}]
   Cause: TBD

ADM027

Using HtmlAdaptorServer for viewing MBeans, its port is: [{0}]. Connect the
Browser to this port
   Cause: TBD

ADM028

The MBean with ObjectName[{0}] was created anew and registered with the
MBeanServer
   Cause: TBD

ADM029

The MBean with ObjectName[{0}] already exists, accessing its management
interface
   Cause: TBD

ADM030

The ObjectName [{0}] can't be registered as the configuration does not have it
    Cause: TBD

ADM031

Html Adaptor Server stopped
    Cause: TBD

ADM032

The System MBeanServer released
    Cause: TBD

ADM0033

Admin Service configuration could not be read and Admin Service type is being
defaulted to [{0}]
    Cause: TBD

ADM0034

Preinvoke failed for MBeanServer interceptor [{0}].
    Cause: TBD

ADM0035

Preinvoke exception for MBeanServer interceptor.
    Cause: TBD

ADM0036

Postinvoke failed for MBeanServer interceptor [{0}].
    Cause: TBD

ADM0037

Preinvoke exception for MBeanServer interceptor.
    Cause: TBD

ADM0038

A read-write version of configuration files could not be loaded. Server can not be administered. Root cause: [{0}]

   Cause: TBD

ADM0039

Read/Write version of configuration files not loaded because of exception.

   Cause: TBD

ADM0040

Config context for runtime initialized to [{0}]

   Cause: TBD

ADM0041

Config context for admin initialized to [{0}]

   Cause: TBD

ADM0042

Log Manager MBean could not be registered, the changes to logger log levels will be effective after server restart.

   Cause: TBD

ADM0043

Log Manager MBean registration aborted because of exception.

   Cause: TBD

ADM0044

Admin authentication using realm [{0}] did not work.

   Cause: TBD

ADM0045

Error in admin authentication.

   Cause: TBD

ADM0046

Error during callflow agent creation.
   Cause: TBD

ADM0101

Error getting manual changes
   Cause: TBD

ADM0102

Starting a thread for tracking manual changes
   Cause: TBD

ADM0103

Stopping the thread for tracking manual changes
   Cause: TBD

ADM1001

New Server Instance [{0}] created successfully
   Cause: TBD

ADM1002

Create Instance failed
   Cause: TBD

ADM1003

Deleted Server Instance [{0}] successfully
   Cause: TBD

ADM1004

Delete Instance failed
   Cause: TBD

ADM1006

Uploading the file to:[{0}]
   Cause: TBD

ADM1007

Uploaded the remote file at: [{0}]
   Cause: TBD

ADM1008

Upload falied for file at: [{0}]
   Cause: TBD

ADM1009

Can't get MBeanInfo for: [{0}]
   Cause: TBD

ADM1010

Preparing to download the file:[{0}]
   Cause: TBD

ADM1011

Starting the download ...
   Cause: TBD

ADM1012

Downloading the file to client failed
   Cause: TBD

ADM1021

Deploying the archive:[{0}]
   Cause: TBD

ADM1022

Deployment failed - Detailed Message:
   Cause: TBD

CIS Error Messages

This chapter describes messages for errors with an CIS prefix.

5.1 CIS **Messages**

CIS0001

EndPoint: [{0}]
   Cause: TBD

CIS0002

ConnectException thrown from the Acceptor constructor while creating
serverConnection
   Cause: TBD

CIS0003

Unable to obtain the Endpoint for host [{0}], port [{1,number,integer}]
   Cause: TBD

CIS0004

SecurityException thrown while waiting for the forked thread to join
   Cause: TBD

CIS0005

Going to wait mode since the main thread asked us to stop accepting
   Cause: TBD

CIS0006

Coming out from wait mode since the main thread asked us to wake up and start
accepting
   Cause: TBD

CIS0007

Thread [{0}], port [{1,number,integer}] going into indefinite accept
   Cause: TBD

CIS0008

Thread [{0}], port [{1,number,integer}] going into timedout accept
   Cause: TBD

CIS0009

ConnectException thrown while accepting on thread [{0}]
   Cause: TBD

CIS0010

TooManyTasksException thrown while adding to the queue
   Cause: TBD

CIS0011

QueueClosedException thrown while adding to the queue
   Cause: TBD

CIS0012

Host: [{0}] Port: [{1,number,integer}] ThreadCount: [{2,number,integer}]
Timeout: [{3,number,integer}]
   Cause: TBD

CIS0013

Error in closing derInputStream
   Cause: TBD

CIS0014

Unable to get Certificate factory of type X.509
   Cause: TBD

CIS0015

ChannelManager: Creating ServerChannel at local: [{0}] certname: [{1}]
sslVersion: [{2,number,integer}] ssl2Ciphers: [{3}] ssl3Ciphers: [{4}]
tlsRollback: [{5}] backlog: [{6,number,integer}]
   Cause: TBD

CIS0016

Exception in ChannelManager::poll()
   Cause: TBD

CIS0017

Creating SSL connection to remote: [{0}] certname: [{1}] sslVersion:
[{2,number,integer}] [{3,number,integer}] [{4,number,integer}] [{5}]
   Cause: TBD

CIS0018

Created SSL connection to remote: [{0}] certname: [{1}] sslVersion:

CIS0029

```
Closing connection: [{0}] timeStamp: [{1,number,integer}] clockTime:
[{2,number,integer}] interval: [{3,number,integer}]
```
   Cause: TBD

CIS0030

```
ConnectException thrown while closing the initiated Connection
```
   Cause: TBD

CIS0031

```
ConnectionException thrown while closing the intitated Connection
```
   Cause: TBD

CIS0032

```
Connection List at e1: [{0}] is [{1}]
```
   Cause: TBD

CIS0033

```
Connection List at e2: [{0}] is [{1}]
```
   Cause: TBD

CIS0034

```
InitiatedConnSetSize: [{0,number,integer}] AcceptedConnSetSize:
[{1,number,integer}] ConnectionListSize: [{2,number,integer}]
```
   Cause: TBD

CIS0035

```
Reaper thread created
```
   Cause: TBD

CIS0036

```
Reaper thread started
```
   Cause: TBD

CIS0037

InterruptedException thrown while the reaper thread was sleeping
   Cause: TBD

CIS0038

ConnectException thrown while closing the accepted connection socket
   Cause: TBD

CIS0039

Reaper thread kicking in
   Cause: TBD

CIS0040

Reaper going to sleep
   Cause: TBD

CIS0041

Reaper coming out of sleep
   Cause: TBD

CIS0042

Cleaning up the connection object [{0}] since the lastTimestamp on that object
was [{1,number,integer}] and the reaper's interval is [{2,number,integer}]
   Cause: TBD

CIS0043

ConnectException thrown while closing the connection
   Cause: TBD

CIS0044

Interrupted exception thrown from the Reaper Thread
   Cause: TBD

CIS0045

SSLBlocking server channel is created for: [{0}]
   Cause: TBD

CIS0046

```
ssl2ciphers.length: [{0,number,integer}] ssl3Ciphers.length:
[{1,number,integer}]
```
   Cause: TBD

CIS0047

```
Returning from SSLBlockingServerChannel for [{0}]
```
   Cause: TBD

CIS0048

```
Before accept in SSLBlockingServerChannel at [{0}]
```
   Cause: TBD

CIS0049

```
After accept in SSLBlockingServerChannel at [{0}]
```
   Cause: TBD

CIS0050

```
Creating ServerConnection at: [{0}] [{1}] [{2,number,integer}] [{3}] [{4}] [{5}]
[{6,number,integer}]
```
   Cause: TBD

CIS0051

```
Before Accept in tcp blocking server channel: [{0}] timeout:
[{1,number,integer}]
```
   Cause: TBD

CIS0052

```
NonBlockingChannel: timeout [{0,number,integer}]
```
   Cause: TBD

CIS0053

```
FLUSH: position: [{0,number,integer}] bytesSent: [{1,number,integer}]
```
   Cause: TBD

CIS0054

Creating TCP Connection from [{0}] to [{1}]
   Cause: TBD

CIS0054

Created TCP Connection from [{0}] to [{1}]
   Cause: TBD

CIS0056

Creating TCP ServerConnection at [{0}]
   Cause: TBD

CIS0057

Created TCP ServerConnection at [{0}]
   Cause: TBD

CIS0058

Creating SSL_MUTUALAUTH ServerConnection at [{0}] certname: [{1}] sslVersion:
[{2,number,integer}] ssl2Ciphers: [{3}] ssl3Ciphers: [{4}] tlsRollback: [{5}]
   Cause: TBD

CIS0059

Creating SSL ServerConnection at [{0}] certname: [{1}] sslVersion:
[{2,number,integer}] ssl2Ciphers: [{3}] ssl3Ciphers: [{4}] tlsRollback: [{5}]
   Cause: TBD

CIS0060

Created SSL_MUTUALAUTH ServerConnection at [{0}] certname: [{1}] sslVersion:
[{2,number,integer}] ssl2Ciphers: [{3}] ssl3Ciphers: [{4}] tlsRollback: [{5}]
   Cause: TBD

CIS0061

Created SSL ServerConnection at [{0}] certname: [{1}] sslVersion:
[{2,number,integer}] ssl2Ciphers: [{3}] ssl3Ciphers: [{4}] tlsRollback: [{5}]
   Cause: TBD

CIS0062

```
Waiting for accept at [{0}]
```
   Cause: TBD

```
CIS0063
```

```
Successful accept at [{0}]
```
   Cause: TBD

```
CIS0064
```

```
Before ServerConnection close() at [{0}]
```
   Cause: TBD

```
CIS0065
```

```
Successful ServerConnection close() at [{0}]
```
   Cause: TBD

```
CIS0066
```

```
Creating TCPBlockingServerChannel at [{0}]
```
   Cause: TBD

```
CIS0067
```

```
Created TCPBlockingServerChannel at [{0}]
```
   Cause: TBD

```
CIS0068
```

```
Successful Accept in TCPBlockingServerChannel at [{0}] timeout:
[{1,number,integer}]
```
   Cause: TBD

```
CIS0069
```

```
Creating TCPBlockingChannel from [{0}] to [{1}]
```
   Cause: TBD

```
CIS0070
```

```
Created TCPBlockingChannel from [{0}] to [{1}]
```
   Cause: TBD

```
CIS0071
```

Initializing NSS with [{0}] as cert directory and [{1}] as password
   Cause: TBD

CIS0072

Successfully initialized NSS with [{0}] as cert directory.
   Cause: TBD

CIS0073

Creating SSLBlockingChannel from [{0}] to [{1}] with certname [{2}] sslVersion
[{3,number,integer}]
   Cause: TBD

CIS0074

Created SSLBlockingChannel from [{0}] to [{1}] with certname [{2}] sslVersion
[{3,number,integer}]
   Cause: TBD

6

CMNUTL Error Messages

This chapter describes messages for errors with an CMNUTL prefix.

6.1 CMNUTL **Messages**

CMNUTL1000

Failed to process class {0} with bytecode preprocessor {1}
   Cause: TBD

CMNUTL1001

Class {0} is being reset to its original state
   Cause: TBD

CMNUTL1002

Class {0} is being reset to the last successful preprocessor.
   Cause: TBD

CMNUTL1003

The supplied preprocessor class {0} is not an instance of
com.sun.appserv.BytecodePreprocessor.
   Cause: TBD

CMNUTL1004

```
Bytecode preprocessor disabled.
```
   Cause: TBD

CMNUTL1005

```
Initialization failed for bytecode preprocessor {0}.
```
   Cause: TBD

CMNUTL1006

```
Error setting up preprocessor.
```
   Cause: TBD

CMNUTL9001

```
Error releasing URLClassLoader.
```
   Cause: TBD

CMNUTL9002

```
Error closing JAR file {0}.
```
   Cause: TBD

CMNUTL9003

```
Error getting information for field {0}.
```
   Cause: TBD

CMNUTL9004

```
Name not available.
```
   Cause: TBD

CMNUTL9005

```
Error releasing JAR file.
```
   Cause: TBD

DIAG Error Messages

This chapter describes messages for errors with an DIAG prefix.

9.1 DIAG **Messages**

DIAG9001

Could not copy {0} due to {1}
   Cause: TBD

DIAG9002

Could not copy config files to dir {0} due to {1}
   Cause: TBD

DIAG9003

Destination log file is {0}
   Cause: TBD

DIAG9004

domain.xml DTD file name is {0}
   Cause: TBD

DIAG9005

Generated report name is {0}
   Cause: TBD

DIAG9006

```
diagnostic-service Attribute Name is {0}
```
   Cause: TBD

DIAG9007

```
diagnostic-service Attribute value is {0}
```
   Cause: TBD

DIAG9008

```
diagnostic-service capture-app-dd value is {0}
```
   Cause: TBD

DIAG9009

```
diagnostic-service capture-hadb-info value is {0}
```
   Cause: TBD

DIAG9010

```
diagnostic-service capture-install-log value is {0}
```
   Cause: TBD

DIAG9011

```
diagnostic-service compute-checksum value is {0}
```
   Cause: TBD

DIAG9012

```
diagnostic-service min-log-level value is {0}
```
   Cause: TBD

DIAG9013

```
diagnostic-service max-log-entries value is {0}
```
   Cause: TBD

DIAG9014

```
Report Generation target is {0}
```
   Cause: TBD

DIAG9015

Error loading domain.xml due to {0}
   Cause: TBD

DIAG9016

Loading domain.xml at {0}
   Cause: TBD

DIAG9017

Error while collecting data due to {0}
   Cause: TBD

DIAG9018

Could not compute checksum of {0} due to {1}
   Cause: TBD

DIAG9019

Invalid target {0}
   Cause: TBD

DIAG9020

Target while validating local target : {0} & targetDir {1}
   Cause: TBD

DIAG9021

target {0}, targetDir {1} , type {2} ,instances {3}
   Cause: TBD

DIAG9022

Error initializing client pluggable factory {0}
   Cause: TBD

DIAG9033

While resolving target dir, instanceRoot = {0 } and targetDir = {1}
   Cause: TBD

DIAG9034

Execution Context is DAS
    Cause: TBD

DIAG9035

Execution Context is not DAS
    Cause: TBD

DIAG9036

DPL Error Messages

This chapter describes messages for errors with a DPL prefix.

10.1   DPL **Messages**

DPL5001

Class loader could not be made
  Cause: TBD

DPL5002

Cannot Add Icon
  Cause: TBD

DPL5003

SAX Parser cannot validate
  Cause: TBD

DPL5004

Cannot add jar to output stream
  Cause: TBD

DPL5005

Unexpected I/O Exception
  Cause: TBD

DPL5006

```
Error reading connector xml
```
   Cause: TBD

DPL5007

```
Error loading class [{0}]
```
   Cause: TBD

DPL5008

```
Error loading class
```
   Cause: TBD

DPL5009

```
Error loading the ejb class [{0}] in getFields on EjbDescriptor\n [{1}]
```
   Cause: TBD

DPL5010

```
Error loading ejb class in getFields on EjbDescriptor
```
   Cause: TBD

DPL5011

```
Error loading the ejb class in getFieldForName on EjbDescriptor [{0}]
```
   Cause: TBD

DPL5012

```
Error loading the ejb class in getFieldForName on EjbDescriptor [{0}]
```
   Cause: TBD

DPL5013

```
Mail Configuration Exception
```
   Cause: TBD

DPL5014

```
[{0}] not found in [{1}]
```
   Cause: TBD

DPL5015

Method not found
   Cause: TBD

DPL5016

Cannot instantiate implementation of [{0}]
   Cause: TBD

DPL5017

Cannot instantiate implementation
   Cause: TBD

DPL5018

Error while parsing
   Cause: TBD

DPL5019

Illegal Argument(s)
   Cause: TBD

DPL5020

SAX Parser cannot parse given stream
   Cause: TBD

DPL5021

No method found for XML query element
   Cause: TBD

DPL5022

Supplied External Descriptors are incorrect
   Cause: TBD

DPL5023

class not found
   Cause: TBD

DPL5024

Cannot expand jar archive
Cause: TBD

DPL5025

Error in SAX parser configuration
Cause: TBD

DPL5026

Exception in SAX parser
Cause: TBD

DPL5027

Cannot create package
Cause: TBD

DPL5028

Unexpected exception in MethodDescriptor.getMethod()
Cause: TBD

DPL5029

Cannot read runtime descriptor nodes
Cause: TBD

DPL5030

Cannot read EJB nodes
Cause: TBD

DPL5031

Cannot read method descriptor nodes
Cause: TBD

DPL5032

An authentication method was not defined in the web.xml descriptor. Using
default BASIC for login configuration.
Cause: TBD

DPL5033

```
Error parsing application.xml
```
   Cause: TBD

DPL5034

```
Rollback failed
```
   Cause: TBD

DPL5035

```
Error while running ejbc
```
   Cause: TBD

DPL5036

```
Duplicate entry in jar archive
```
   Cause: TBD

DPL5037

```
Error reading runtime descriptor nodes
```
   Cause: TBD

DPL5038

```
Verification Results: \n\tNumber of Failure(s): {0}\n\tNumber of Warning(s):
{1}\n\tNumber of Error(s): {2}
```
   Cause: TBD

DPL5039

```
Caught a Throwable in POST_DEPLOY Event
```
   Cause: TBD

DPL5040

```
Caught a Throwable in PRE_UNDEPLOY Event
```
   Cause: TBD

DPL5041

```
Unknown port-component-name {0} port, all sub elements will be ignored"
```
   Cause: TBD

DPL5100

EJBC - Could not generate new source
   Cause: TBD

DPL5101

EJBC - Could not invoke rmic
   Cause: TBD

DPL5102

EJBC - rmic compilation failed
   Cause: TBD

DPL5103

EJBC - compilation failed
   Cause: TBD

DPL5104

EJBC - code gen required check error
   Cause: TBD

DPL5105

EJBC - Start of CMP section for [{0}]
   Cause: TBD

DPL5106

EJBC - End of CMP section for [{0}]
   Cause: TBD

DPL5107

EJBC - Generated code for EJBLocalHOme, EJBLocalObject implementations for [{0}]
   Cause: TBD

DPL5108

EJBC - Generated code for remote home and EJBObject implementations for [{0}]
   Cause: TBD

DPL5109

```
EJBC - START of EJBC for [{0}]
```
   Cause: TBD

DPL5110

```
EJBC - END of EJBC for [{0}]
```
   Cause: TBD

DPL5150

```
Run time exception during R/O bean notifier initialization
```
   Cause: TBD

DPL5200

```
Could not invoke rmic
```
   Cause: TBD

DPL5201

```
rmic compilation failed...
```
   Cause: TBD

DPL5202

```
Exception occurred compiling ejb
```
   Cause: TBD

DPL5203

```
Output jarfile [{0}] already exists
```
   Cause: TBD

DPL5204

```
Exception occurred while loading class [{0}]
```
   Cause: TBD

DPL5205

```
Exception occurred while generating ejb
```
   Cause: TBD

DPL5206

Class not found
   Cause: TBD

DPL5207

Some IO exception occurred
   Cause: TBD

DPL5208

Some exception occurred
   Cause: TBD

DPL5209

Adding to generated files: [{0}]
   Cause: TBD

DPL5210

Error generating code: [{0}]
   Cause: TBD

DPL5211

Error in setting message status
   Cause: TBD

DPL5212

Error in notification
   Cause: TBD

DPL5212

Attempt to override reserved ejb interface method [{0}] in [{1}]. Override will
be ignored.
   Cause: TBD

DPL5300

Interrupted while waiting for execution of [{0}]
   Cause: TBD

DPL5301

Timeout [{0}] milliseconds reached, Interrupting execution of command [{1}].
   Cause: TBD

DPL5302

Process creation failed.
   Cause: TBD

DPL5303

Error in closing process output or error stream.
   Cause: TBD

DPL5303

Execution of command in a sub-process interrupted.
   Cause: TBD

DPL5304

Execution of process failed
   Cause: TBD

DPL5305

Error reading from process output or error stream
   Cause: TBD

DPL5306

{0} Web Service Endpoint [{1}] listening at address [{2}]
   Cause: TBD

DPL5400

Exception occurred : {0}.\
   Cause: TBD

DPL5401

Optional package {0} does not exist or its Specification-Version doesnot match!!
Unable to satisfy dependency for {1}
   Cause: TBD

DPL5402

```
Optional package dependency satisfied for {0}
```
   Cause: TBD

DPL5403

```
Either Extension-Name or Specification-Version for the optional package is not
specified for {0}.\
```
   Cause: TBD

DPL5404

```
Specification-Version for the optional package {0} is null!!! Please provide a
valid specification version for this optional package
```
   Cause: TBD

DPL8001

```
Event subsystem does not recognize the new implementation of the server context
found in runtime.
```
   Cause: The instance may not be of expected type

   Solution: Ensure that the descriptor type is set as expected. Set log level for deployment to view more details.

DPL8002

```
Copying of files failed.
```
   Cause: May be because of lack of space or permission.

   Solution: Ensure that the permissions are set as expected and that there is enough disk space.

DPL8003

```
ArchivistFactory.getArchivist() failed
```
   Cause: The module type may not be as expected.

   Solution: Ensure that the module type is one of the supported types.

DPL8004

```
Opening of files failed.
```
   Cause: May be because of lack of permission or wrong file name.

   Solution: Ensure that the file name is correct, and that the permissions are set as expected.

DPL8005

Error while parsing the deployment descriptor.
Cause: May be because of malformed descriptor or absence of all required descriptor elements.

Solution: Ensure that the descriptor is well formed and as per specification. Also ensure that the SAX parser configuration is correct and the descriptor has right permissions.

DPL8006

Adding or getting a descriptor failed.
Cause: May be because the node/information to be added is not valid; may also be because of the descriptor was not registered.

Solution: Ensure that the node to be added is valid, and that the permissions are set as expected.

DPL8007

Failed to find the resource specified in the deployment descriptor.
Cause: May be because of wrong specification in the descriptor.

Solution: Ensure that the resource specified is present, and that there is no typo in the resource specified in the descriptor.

DPL8008

Failed to load the class/method.
Cause: May be because of wrong class/method name.

Solution: Ensure that the class/method specified is present, and that the path information is correct.

DPL8009

Failed to load the deployment manager.
Cause: May be because of wrong URI specification or deployment factory not installed at all.

Solution: Ensure that the resource specified is present, and that there is no typo in the URI specified.

DPL8010

Failed in autodeployment.
Cause: May be because of failure in creating the autodeployer or while reading the autodeploy configuration info.

Solution: Ensure that the `autodeploy` is enabled properly, and that their `autodeploy` configuration is set properly.

DPL8011

Failed in autodeployment of applications.
Cause: Mostly because of application specific failure.

Solution: Ensure that the application can be deployed using CLI, and that there `autodeploy` configuration is set properly and the server is up and running.

DPL8012

Failed to rename directory.
Cause: May be because of lack of permissions.

Solution: Ensure that the permissions are set as expected, and that the there is no directory name clash.

DPL8013

Failed to create JAR file.
Cause: May be because of lack of permissions or lack of space.

Solution: Ensure that the permissions are set as expected, and that the there is enough space.

DPL8014

Failed to complete application deployment.
Cause: May be because of lack of permissions or lack of space or wrong application.

Solution: Ensure that the permissions are set as expected, and that the there is enough space.

DTX Error Messages

This chapter describes messages for errors with a DTX prefix.

11.1 DTX **Messages**

DTX5001

Exception occurred while enlisting the resource.
  Solution: Make sure that the resource usage is from a standard J2EE component or a life cycle
  component. If this exception occurs from a standard component, this is an Unexpected
  Internal Error and please contact Sun with the complete error log message.

DTX5002

Exception occurred while delisting the resource.
  Solution: Make sure that the resource usage is from a standard J2EE component or a life cycle
  component. If this exception occurs from a standard component, this is an Unexpected
  Internal Error and please contact Sun with the complete error log message.

DTX5003

Trying to register the sync object while transaction is marked for rollback.
  Solution: This is an Unexpected Internal Error. Please contact Sun with the complete error
  log message.

DTX5004

Exception occurred while enlisting the component resource.
  Solution: Make sure that the resource usage is from a standard J2EE component or a life cycle
  component. If this exception occurs from a standard component, this is an Unexpected
  Internal Error and please contact Sun with the complete error log message.

DTX5005

```
Exception occurred while delisting the component resources.
```
Solution: Make sure that the resource usage is from a standard J2EE component or a life cycle component. If this exception occurs from a standard component, this is an Unexpected Internal Error and please contact Sun with the complete error log message.

DTX5006

```
Exception occurred while delisting the component resources.
```
Solution: Make sure that the resource usage is from a standard J2EE component or a life cycle component. If this exception occurs from a standard component, this is an Unexpected Internal Error and please contact Sun with the complete error log message.

DTX5007

```
Exception :
```
Cause: TBD

DTX5008

```
Exception occurred while closing the connection.
```
Solution: Check if database is up and running.

DTX5009

```
Invalid integer passed to set the timeout.
```
Solution: Check the timeout that is being given in the server configuration file.

DTX5010

```
Could not register the JTA statistics for monitoring due to configuration
problem.
```
Solution: This is an Unexpected Internal Error. Please contact Sun with the complete error log message.

DTX5011

```
Requested attribute is not monitorable.
```
Solution: This is an Unexpected Internal Error. Please contact Sun with the complete error log message.

DTX5012

JTAStats implementation class is not found.
Solution: This is an Unexpected Internal Error. Please contact Sun with the complete error log message.

DTX5013

Attribute is not part of transaction monitoring
Cause: TBD

12

EEADM Error Messages

This chapter describes messages for errors with an EEADM prefix.

12.1   EEADM **Messages**

EEADM0069

```
Error while sending event to remote instance.
```
Cause: Most likely an error in the connection layer. User name, password, host name or port number of the remote server instance may be incorrect.

Solution: Verify that user name, password, host name, or port number of the remote server instance is correct.

13

EJB Error Messages

This chapter describes messages for errors with a EJB prefix.

13.1 EJB **Messages**

EJB5013

Problem occurred while deserializing stateful bean state.
   Solution: Check the application classpath to ensure that all classes needed during
   deserialization are available.

EJB5014

Exception resolving object
   Cause: TBD

EJB5015

Exception while adding method monitoring mbean
   Cause: TBD

EJB5016

Exception creating BaseContainer : [{0}]
   Cause: TBD

EJB5017

An error occurred during the removal of an entity bean. One common cause is when the application throws a system exception from the ejbRemove method of an entity bean.

Solution: Check the exception stack trace to see if the exception originated from the entity bean implementation class.

EJB5018

An exception was thrown during an ejb invocation on [{0}]
   Cause: TBD

EJB5019

Some application or system exception occurred : [{0}]
   Cause: TBD

EJB5020

Exception while unregistering monitormbean
   Cause: TBD

EJB5021

Session bean transaction is incomplete : [{0}]
   Cause: TBD

EJB5022

Messagedriven bean transaction is incomplete : [{0}]
   Cause: TBD

EJB5023

Exception while registering monitormbean
   Cause: TBD

EJB5024

Exception while registering child monitormbean
   Cause: TBD

EJB5024

Exception while unregistering child monitormbean : [{0}]
   Cause: TBD

EJB5025

Exception while releasing ejb context : [{0}]
   Cause: TBD

EJB5026

Exception in removing ejb local object : [{0}]
   Cause: TBD

EJB5027

Exception in removing ejb : [{0}]
   Cause: TBD

EJB5028

Exception in getting ejb local object : [{0}]
   Cause: TBD

EJB5029

Exception getting ejb context : [{0}]
   Cause: TBD

EJB5030

Exception while comparing ejbs : [{0}]
   Cause: TBD

EJB5031

An error occurred while looking up a Read Only Bean Notifier. The most common
cause for this failure is that the string supplied to the
getReadOnlyBeanNotifier method either does not refer to a read-only bean.
   Solution: Check the application code that calls this method to make sure the string passed in
   refers to a valid read-only bean.

EJB5032

Exception in creating new bean : [{0}]
   Cause: TBD

EJB5033

Illegal state exception occurred : [{0}]
   Cause: TBD

EJB5035

Some application or unchecked exception occurred : [{0}]
   Cause: TBD

EJB5039

Some runtime exception occurred : [{0}]
   Cause: TBD

EJB5041

Exception while running postinvoke : [{0}]
   Cause: TBD

EJB5042

Exception setting bean context : [{0}]
   Cause: TBD

EJB5043

Exception cleaning up ejb subclass : [{0}]
   Cause: TBD

EJB5044

Name not found exception : [{0}]
   Cause: TBD

EJB5045

Class cast exception : [{0}]
   Cause: TBD

EJB5048

Exception creating new attribute
   Cause: TBD

EJB5049

Exception obtaining attribute [{0}]
   Cause: TBD

EJB5050

Exception in printStackTrace
   Cause: TBD

EJB5051

Exception in printStackTrace of super
   Cause: TBD

EJB5052

Exception closing session : [{0}]
   Cause: TBD

EJB5053

Exception closing server session pool : [{0}]
   Cause: TBD

EJB5054

Exception closing topic session: [{0}]
   Cause: TBD

EJB5055

Exception in init of ejb : [{0}]
   Cause: TBD

EJB5056

Exception in undeploying the bean : [{0}]
   Cause: TBD

EJB5057

Exception creating session : [{0}]
   Cause: TBD

EJB5058

Exception creating sessionfilecachestore
   Cause: TBD

EJB5058

Exception while getting ejb stub : [{0}]
   Cause: TBD

EJB5059

Exception creating ejb object : [{0}]
   Cause: TBD

EJB5060

Exception creating ejb local object [{0}]
   Cause: TBD

EJB5061

Exception removing ejb : [{0}]
   Cause: TBD

EJB5062

Exception removing bean : [{0}]
   Cause: TBD

EJB5063

Some exception removing bean : [{0}]
   Cause: TBD

EJB5064

Exception in afterCompletion : [{0}]
   Cause: TBD

EJB5065

Exception in deserializing [{0}]
   Cause: TBD

EJB5066

Some generic ejb exception : [{0}]
   Cause: TBD

EJB5067

Exception activating ejb : [{0}]
   Cause: TBD

EJB5068

Exception in serializing : [{0}]
   Cause: TBD

EJB5069

The bean's Home or LocalHome does not define a no-arg create method.
   Solution: Check the Home or LocalHome interface for the appropriate create method
   signature. Running the verifier will help identify the error as well.

EJB5070

Exception creating stateless session bean : [{0}]
   Cause: TBD

EJB5071

Some problem occurred during the beforeCompletionphase of the transaction
lifecycle. This error often happens when application code throws a system
exception from its ejbStore method or if the transaction manager encounters a
system exception.
   Solution: Check the stack trace to see if the exception originated from the application's
   ejbStore method. Also check the resource configuration to ensure that all resource
   managers involved in the transaction are configured properly and are healthy.

EJB5072

Error initializing home of container: [{0}]
   Cause: TBD

EJB5083

```
Error -- invalid maxMsgs prop = [{0}]
```
   Cause: TBD

EJB5085

```
Error -- invalid msg bean pool size = [{0}]
```
   Cause: TBD

EJB5087

```
[{0}]: Invalid value [{1}] for [{2}] , use [{3}] instead
```
   Cause: TBD

EJB5088

```
Number format exception
```
   Cause: TBD

EJB5089

```
Error -- invalid cleanup interval prop = [{0}]
```
   Cause: TBD

EJB5090

```
Problem during EJB container runtime initialization. See stack trace for more
details. Some common causes are global JNDI name conflicts, classnotfound
errors, and configuration errors for resources needed by the EJB.
```
   Solution: If the EJB has a Remote view, check that its JNDIname does not clash with any other
   EJB's JNDI name or any other globalJNDI name. Check that all needed classes are available
   to the EJB. Also ensure that any resources needed by the EJB are available. If the EJB uses a
   data source make sure the corresponding database is running. If it uses a queue makes sure
   the physical queue has been created.

EJB5091

```
Exception occurred in postInvoke : [{0}]
```
   Cause: TBD

EJB5092

```
Exception occurred in postInvokeTx : [{0}]
```
   Cause: TBD

EJB5093

Exception occured in passiveIdleBeans
   Cause: TBD

EJB5094

container.getClassLoader() returned null
   Cause: TBD

EJB5095

Exception occured in selectVictims()
   Cause: TBD

EJB5096

Unable to lookup UserTransaction
   Cause: TBD

EJB5097

Exception during undeploy
   Cause: TBD

EJB5098

Exception in preInvokeTx
   Cause: TBD

EJB5099

Exception in checkUnfinishedTx
   Cause: TBD

EJB5100

Exception in useClientTx
   Cause: TBD

EJB5101

Transaction Aborted
   Cause: TBD

EJB5102

```
Unable to complete container-managed transaction
```
   Cause: TBD

```
EJB5103
```

```
Exception in releaseContext
```
   Cause: TBD

```
EJB5104
```

```
Exception in callEJBStore
```
   Cause: TBD

```
EJB5105
```

```
Exception in createContainer
```
   Cause: TBD

```
EJB5106
```

```
Exception in EntityContainer
```
   Cause: TBD

```
EJB5107
```

```
Exception while getting server session
```
   Cause: TBD

```
EJB5108
```

```
Unable to initialize EJB Timer Service. The likely cause is the database has not
been started or the timer database table has not been created.
```
   Cause: TBD

```
EJB5109
```

```
EJB Timer Service started successfully for datasource [{0}]
```
   Cause: TBD

```
EJB5110
```

Attempt to override reserved ejb interface method [{0}] in [{1}]. Override will
be ignored.
   Cause: TBD

EJB5111

This error indicates a mismatch in the required method signature rules between a
method defined on a [Home, Remote, LocalHome, Local] interface and the
corresponding bean implementation class. E.g., this would happen if a create
method in a Home interface did not have a matching ejbCreate method in the bean
class.
   Solution: Run the verifier tool to check that the methods defined on the bean class are correct
   with respect to the exposed interface.

EJB5112

Error cancelling timer with pkey [{0}]
   Cause: TBD

EJB5113

Error cancelling timers for container [{0}] and pkey [{1}]
   Cause: TBD

EJB5114

Error destroying timers for container [{0}]
   Cause: TBD

EJB5115

Error destroying timer [{0}]
   Cause: TBD

EJB5116

Delivering missed timer for timer id [{0}]. Timer should have fired at [{1}]
   Cause: TBD

EJB5117

Error while creating the persistent representation of an EJB timer. This
typically means there is some configuration error or runtime problem with the EJB
timer service data source.

Solution: Double-check the JDBC data source (and its associated connection pool) assigned
to the timer-data source element in domain.xml. Common causes are that the database is
not running, the timer table has not been created within that database, or that the
connection pool's JDBC driver URL information is incorrect.

EJB5118

Failure removing timer bean [{0}]
    Cause: TBD

EJB5119

Expunging timer [{0}] after [{1}] failed deliveries
    Cause: TBD

EJB5120

EJB Timer Service last shutdown at [{0}]
    Cause: TBD

EJB5121

EJB Timer Service shutdown info [{0}] not found. Shutdown time unknown.
    Cause: TBD

EJB5122

EJB Timer Service shutdown at [{0}]
    Cause: TBD

EJB5123

Rolling back timed out transaction [{0}] for [{1}]
    Cause: TBD

EJB5124

Commit Option A is not currently supported. Using Commit Option B for [{0}]
    Cause: TBD

EJB5125

Cannot add idle bean cleanup task
    Cause: TBD

EJB5126

Cannot add asynchronous task
    Cause: TBD

EJB5127

Error during passivation of [{0}]
    Cause: TBD

EJB5128

A problem occurred while the container was activating a stateful session bean.
One possible cause is that the bean code threw a system exception from its
ejbActivate method.
    Solution: Check the stack trace to see whether the exception was thrown from the
    ejbActivate method and if so double-check the application code to determine what caused
    the exception.

EJB5129

An error occurred during the afterCompletion phase of the transaction lifecycle.
    Solution: Check stack trace for details of error encountered by EJB container

14

HADB Error Messages

This chapter describes messages for errors with an HADB prefix.

14.1 HADB **Messages**

HADB001

Invalid argument value.
   Solution: The argument must match one of the allowed values documented in the SEVERE log message.

HADB002

The cluster does not exist
   Solution: Check if the cluster exists, e.g. asadmin list-clusters.

HADB003

Invalid devicesize argument
   Solution: The devicesize argument must be in the range documented in the severe message

HADB004

The property requires a directory path. The directory doesn't exist and can't be created.
   Solution: The parent directory of the desired path is read-only. There may be a regular file with the same name as the desired directory. Delete the file and run the command again.

HADB005

ConfigException caught while attempting to write Availability Service to
domain.xml
   Solution: Examine the nested ConfigException.

HADB006

hadbm create command failed
   Solution: Examine the message from hadbm

HADB011

hadbm delete command failed
   Solution: Examine the message from hadbm

HADB012

Unknown Exception was caught
   Solution: Examine the Exception in the message

HADB013

hadbm could not provide the JDBC URL for the database
   Solution: Examine the message from hadbm

HADB015

Unexpected internal error
   Solution: Please notify Sun Microsystems, Inc. with the log message details.

HADB016

The JDBC URL for the database that hadbm provided is malformed
   Solution: Check the status of the database with hadbm.

HADB018

com.sun.aas.hadbRoot is not set
   Solution: Check the asenv[.bat] file for AS_HADB.

HADB019

com.sun.aas.hadbRoot exists but points to a nonexistent directory
   Solution: Check the asenv[.bat] file for AS_HADB and make sure it is pointing to the HADB
   root directory.

HADB020

com.sun.aas.hadbRoot exists but points to a read-only directory
Solution: Check the permissions of the directory pointed to by AS_HADB in asenv[.bat].

HADB021

No hosts were specified
Solution: You must specify at least two HADB hosts.

HADB022

No hosts were specified
Solution: You must specify at least two HADB hosts.

HADB023

configure-ha-persistence was called with no arguments for things to change in
the configuration.
Solution: Add an argument to do something. This call ended up as a no-op.

HADB025

Schema creation failed
Solution: Examine the message from hadbm

HADB026

The cluster is shared
Solution: HA is only supported on standalone clusters. This cluster is shared. Try removing
the other cluster that is sharing the same configuration.

HADB027

Stale write error attempting to write Availability Service
Solution: Examine the ConfigException details in the log

HADB028

Cannot find hadbm executable
Solution: check the asenv[.bat] file for AS_HADB. In the directory it points to there should be
a subdirectory named bin with hadbm[.exe]

HADB029

```
Error running an external process
```
   Solution: Examine the Exception message for details

```
HADB030
```

```
Unexpected internal error
```
   Solution: Please notify Sun Microsystems, Inc. with the log message details.

```
HADB031
```

```
Wrong number of hosts specified
```
   Solution: The number of hosts must be at least two and must be an even number.

```
HADB037
```

```
HADB Management Agents are not reachable
```
   Solution: Start the HADB Management Agents

15

IOP Error Messages

This chapter describes messages for errors with an IOP prefix.

15.1 IOP **Messages**

IOP5001

Exception creating security tagged component: [{0}]
   Cause: TBD

IOP5002

Exception occurred in init of IIOPSSLSocketFactory
   Cause: TBD

IOP5003

Exception occurred in init of IIOPSSLSocketFactory client
   Cause: TBD

IOP5004

Exception occurred in ciphers
   Cause: TBD

IOP5005

Exception getting End point info: [{0}]
   Cause: TBD

IOP5006

Exception creating socket: [{0}, {1}]. Please make sure the port is not being used.
   Cause: TBD

IOP5008

Exception creating code base component: [{0}]
   Cause: TBD

IOP5009

Exception occurred in starting transaction service :[{0}]
   Cause: TBD

IOP5010

Exception creating POA: [{0}]
   Cause: TBD

IOP5011

Exception getting the servant: [{0}]
   Cause: TBD

IOP5012

Some runtime exception ocurred in IIOP: [{0}]
   Cause: TBD

IOP5013

Unable to create reference: [{0}]
   Cause: TBD

IOP5014

Some exception occurred in handling a BadServerId call from the ORB in J2EEServer
   Cause: TBD

IOP5015

Unable to read transaction.interoperability config property
   Cause: TBD

IOP5016

No Security Service registered. Exiting interception point
   Cause: TBD

IOP5017

No Security Service registered.Status not set
   Cause: TBD

IOP5018

Exception occurred in importing name
   Cause: TBD

IOP5019

Exception occurred in creating exported name
   Cause: TBD

IOP5020

Exception getting password
   Cause: TBD

IOP5021

Exception encoding
   Cause: TBD

IOP5022

Exception decoding
   Cause: TBD

IOP5023

Exception getting username and password
   Cause: TBD

IOP5024

IOexception in IIOP
   Cause: TBD

IOP5025

name exception in IIOP
   Cause: TBD

IOP5026

Found [{0}] instances of class([{1}])
   Cause: TBD

IOP5027

Invalid Security Mechanism!
   Cause: TBD

IOP5028

Some runtime exception ocurred in IIOP
   Cause: TBD

IOP5029

Exception occurred creating authentication token
   Cause: TBD

IOP5030

Exception occurred creating ID token
   Cause: TBD

IOP5031

Service Context exception
   Cause: TBD

IOP5032

Reply message not one of CompleteEstablishContext or ContextError.
   Cause: TBD

IOP5033

Unknown identity assertion type
   Cause: TBD

IOP5034

Received Message not an EstablishContext message.
   Cause: TBD

IOP5035

Error while creating a JAAS subject credential.
   Cause: TBD

IOP5036

Security exception in IIOP
   Cause: TBD

IOP5037

some generic exception occurred in IIOP
   Cause: TBD

IOP5038

Cannot propagate username/password required by target when using run as identity
   Cause: TBD

IOP5039

The given mechanism type is unsupported.
   Cause: TBD

IOP5040

Could not lookup the domain name of IP address = [{0}]
   Cause: TBD

IOP5041

Principal propagation: Cannot find principal information in subject
   Cause: TBD

IOP5042

Principal propagation: Cannot find credential information in subject.
   Cause: TBD

IOP5043

Exception creating ASContext
> **Cause:** TBD

IOP5044

Exception getting peer certificate chain
> **Cause:** TBD

IOP5045

Invalid security mechanism: [{0}]
> **Cause:** TBD

IOP5046

Invalid ID token: [{0}]
> **Cause:** TBD

IOP5047

Security mechanism exception: [{0}]
> **Cause:** TBD

IOP5048

Authentication exception: [{0}]
> **Cause:** TBD

IOP5049

Login exception: [{0}]
> **Cause:** TBD

IOP5050

Unknown message type
> **Cause:** TBD

IOP5051

More than one TAG_CSI_SEC_MECH_LIST tagged component found
> **Cause:** TBD

IOP5052

Error starting bootserver
   Cause: TBD

IOP5053

Received a locate request on a disabled connection. Locate requests are
permitted.
   Cause: TBD

IOP5054

Received a request on a disabled connection. Rejecting!
   Cause: TBD

IOP5056

Exception when creating listener
   Cause: TBD

IOP5055

Could not create listener on port [{0,number,integer}], host [{1}]
   Cause: TBD

IOP5058

Host unknown exception
   Cause: TBD

IOP5059

Problem processing monitored attribute [{0}]
   Cause: TBD

IOP5060

Exception when processing monitored attribute
   Cause: TBD

IOP5057

Unknown host [{0}] - Cannot create listener
   Cause: TBD

IOP5061

NameService did not start successfully
   Cause: TBD

IOP5062

Unable to read IMR database
   Cause: TBD

IOP5063

Unable to write to IMR database
   Cause: TBD

IOP5064

Could not invoke [{0}]
   Cause: TBD

IOP5065

Shutdown for server [{0,number,integer}] threw exception
   Cause: TBD

IOP5066

locateServer: server held down ---- [{0,number,integer}]
   Cause: TBD

IOP5067

ServerManagerImpl: handle throws OBJECT_NOT_EXIST exception
   Cause: TBD

IOP5068

Error in ServerTableEntry == method=[{0}], server=[{1,number,integer}],
state=[{2}], message=[{3}]
   Cause: TBD

IOP5069

Exception in BindingIterator.Destroy()
   Cause: TBD

IOP5070

Unable to find DynAnyFactory
   Cause: TBD

IOP5071

System exception in unknown_adapter call
   Cause: TBD

IOP5077

Bad threads inactivity timeout property
   Cause: TBD

IOP5072

Error in parsing ORBConstants.CLIENT_SSLVERSION
   Cause: TBD

IOP5073

Caught NumberFormatException while parsing port
   Cause: TBD

IOP5074

Bad disabled ports format
   Cause: TBD

IOP5075

Bad minimum threads property
   Cause: TBD

IOP5076

Bad maximum threads property
   Cause: TBD

IOP5078

Cannot get peer certificate
   Cause: TBD

IOP5079

Alias name {0} does not identify a key entry.
   Cause: TBD

IOP5080

The server port ''{0}'' is not specified in iiop listener for SSL.
   Cause: TBD

IOP5081

The cipher ''{0}'' is unknown or unsupported for given secure protocol.
   Cause: TBD

IOP5082

The cipher attribute ''{0}'' is invalid. It must start with ''+'' or ''-''.
   Cause: TBD

◆ ◆ ◆ **CHAPTER 16**

16

JBISE Error Messages

This chapter describes messages for errors with an JBISE prefix.

16.1 JBISE **Messages**

JBISE6015

JavaEEServiceEngine : Java EE Service Engine stopped successfully.
   Cause: TBD

17

◆ ◆ ◆ **C H A P T E R 1 7**

JDO Error Messages

This chapter describes messages for errors with a `JDO` prefix.

17.1 JDO **Messages**

`JDO7000`

```
Error loading the default mapping policy which is used by database schema
generation.
```
   Solution: Check that the classpath settings are not corrupted.

`JDO74003`

```
Internal error in CMP module.
```
   Solution: This is an Unexpected Internal Error. Please contact Sun with your application and
   the complete error log message.

`JDO74005`

```
CMR field is accessed in ejbCreate.
```
   Solution: Change bean code to access CMR fields in `ejbPostCreate`.

`JDO74006`

```
Parameter passed to Collection CMR set method is null.
```
   Solution: Use `Collection.remove()` method to remove all related beans from this
   Collection.

`JDO74019`

Possible error in EJB Container and CMR runtime life cycle.
Solution: This is an Unexpected Internal Error. Please turn on JDO and CMP logging and contact Sun with the complete error log message.

JDO74020

Possible error in EJB Container and CMR runtime life cycle.
Solution: This is an Unexpected Internal Error. Please turn on JDO and CMP logging and contact Sun with the complete error log message.

JDO74021

ejbRemove or ejbStore is called in an active transaction without bean being loaded in the same transaction. Possible error in EJB Container and CMR runtime life cycle.
Solution: This is an Unexpected Internal Error. Please turn on JDO and CMP logging and contact Sun with the complete error log message.

JDO74043

Create, remove, or update is called on a read-only bean.
Solution: Do not attempt to update read-only beans. If update is required, the bean must be deployed as two different EJBs: as a read-only bean, and as an updateable bean. All updates must be done on the second bean.

JDO74045

State class is not generated properly for this CMP bean.
Solution: This is an Unexpected Internal Error. Please contact Sun with your application and the complete error log message.

JDO75007

Internal error in CMP module.
Solution: This is an Unexpected Internal Error. Please contact Sun with your application and the complete error log message.

JDO76604

JNDI name for the CMP resource is misspelled.

CMP resource with this JNDI name is not registered with this instance.
Solution: Check JNDI name for the resource you plan to use. Check JNDI name of the CMP resource specified in the module.

JDO7704

Cannot identify related field.

Cannot identify related class.
   Solution: Verify that relationship definition is correct.

JDO82000

System was not able to create specified logger.

Error loading message bundle that corresponds to this logger.
   Solution: Check that the classpath settings are not corrupted. Check error log for the detailed
   reason.

18

JML Error Messages

This chapter describes messages for errors with an JML prefix.

18.1   JML **Messages**

JML5002

Unexpected exception occurred when encoding data
   Cause: TBD

JML5003

Unexpected exception occurred when flushing data
   Cause: TBD

JML5004

Unexpected IOException occurred when creating a new MimeMessage
   Cause: TBD

JML5005

Unexpected Messaging Exception occurred when creating a new MimeMessage
   Cause: TBD

JML5006

Unexpected Exception occurred while reading the server response line(s) and
adding them to the buffer
    Cause: TBD

JML5007

Illegal characters in QP encoded stream [{0}]
    Cause: TBD

JML5008

Failed to decode message
    Cause: TBD

19

JMS Error Messages

This chapter describes messages for errors with an JMS prefix.

19.1 JMS **Messages**

JMS5001

```
Starting JMS service...
```
   Cause: TBD

JMS5002

```
Binding [{0}]
```
   Cause: TBD

JMS5003

```
Couldn't start JMS service...
```
   Cause: TBD

JMS5004

```
Session cannot be closed
```
   Cause: TBD

JMS5005

```
resource handle could not be created
```
   Cause: TBD

JMS5006

resource handle could not be registered
   Cause: TBD

JMS5007

Illegal connection factory access to [{0}]. J2EE Components should access JMS
Connection Factories through a resource-ref in java:comp/env
   Cause: TBD

JMS5008

A resource-reference for JMS Connection Factory specifies container
authorization but no username/password is available [{0}]
   Cause: TBD

JMS5009

Calling createQueueConnection() on resource-ref with APPLICATION
authentication. Should use createQueueConnection(username, password) instead
   Cause: TBD

JMS5010

JMS Connection with container authentication cannot programmatically set
username and password
   Cause: TBD

JMS5011

Calling createTopicConnection() on resource-ref with APPLICATION
authentication. Should use createTopicConnection(username, password) instead
   Cause: TBD

JMS5012

Connection Factory [{0}] not found
   Cause: TBD

JMS5013

Connection Factory not found
   Cause: TBD

JMS5014

Unexpected pooling exception creating resource
   Cause: TBD

JMS5015

Install JMS resources ...
   Cause: TBD

JMS5016

Install JMS resources error: [{0}]
   Cause: TBD

JMS5017

Install JMS resources throw Exception
   Cause: TBD

JMS5018

Delete Connection factory resource error: [{0}]
   Cause: TBD

JMS5019

Delete connection factory resource got exception
   Cause: TBD

JMS5020

Delete destination resource error: [{0}]
   Cause: TBD

JMS5021

Delete destination resource got exception
   Cause: TBD

JMS5022

A Message Queue broker instance [{0}] is already running at port [{1}]. Please
configure a different port number for the JMS service.
   Cause: TBD

JMS5023

JMS service successfully started. Instance Name = {0}, Home = [{1}].
   Cause: TBD

JMS5024

JMS service startup failed.
   Cause: TBD

JMS5025

JMS service shutting down.
   Cause: TBD

JMS5026

JMS service shutdown complete.
   Cause: TBD

JMS5027

Exception in creating JMS destination administered object [{0}]: [{1}]
   Cause: TBD

JMS5028

Exception in creating JMS connection factory resource [{0}]: [{1}]
   Cause: TBD

JMS5029

Successfully attached to an existing Message Queue broker. Instance Name = {0}
   Cause: TBD

JMS5030

JMS resource {0} [Type: {1}] is disabled.
   Cause: TBD

JMS5031

Exception in creating JMS destination administered object
   Cause: TBD

JMS5032

Exception in creating JMS connection factory resource
    Cause: TBD

JMS5033

Could not attach to an existing JMS service broker process.
    Cause: TBD

JMS5034

Could not start the JMS service broker process.
    Cause: TBD

JMS5035

Timed out after {0} milliseconds while trying to verify if the JMS service
startup succeeded.
    Cause: TBD

JMS5036

More details may be available in the log file for the JMS service broker instance
{0}. Please refer to the JMS provider documentation for the exact location of
this log file.
    Cause: TBD

JMS5037

Check permissions of MQ instance directory {0}
    Cause: TBD

JMS5038

jms-service element in domain.xml is configured to have type={0}. JMS service
will be started locally only if type is LOCAL.
    Cause: TBD

◆ ◆ ◆   **C H A P T E R   2 0**

20

JTS Error Messages

This chapter describes messages for errors with a JTS prefix.

20.1 JTS **Messages**

JTS5001

Servant is already active.

Servant is not active.
   Solution: This is an Unexpected Internal Error. Please contact Sun with the complete error
   log message.

JTS5005

Recovery or resync process got interrupted.
   Solution: See the server log for more details. This is an Unexpected Internal Error. Please
   contact Sun with the complete error log message.

JTS5008

Transaction log directory is not accessible.
   Solution: Make sure that the Transaction log directory (transaction-service.tx-log-dir
   in server configuration file) is proper and has the read, write permissions for the user of the
   application server.

JTS5015

ORB may not be running.
   Solution: Make sure that ORB is running. If ORB is running, this is an Unexpected Internal
   Error. Please contact Sun with the complete error log message.

JTS5020

Configuration problem while giving the log path.
   Solution: Check the Transaction log path in server configuration file
   (`transaction-service.tx-log-dir`).

JTS5028

XAResource.recover has thrown an exception during recovery.
   Solution: See the exception Stack trace for more details.

JTS5032

Server could not communicate with the resource manager with in the retry limit.
   Solution: Make sure that resource manager is up and running or increase the retry limit
   (`transaction-service.retry-timeout-in-seconds` in the server configuration file).

JTS5040

ORB may not be running.
   Solution: See the server log for more details. This is an Unexpected Internal Error. Please
   contact Sun with the complete error log message.

JTS5041

Database driver or Resource Adapter has thrown XAException with the error
message The resource manager is doing work outside a global transaction
   Solution: Check if the application is using the same XA pool outside the transactional context
   as well as in the transactional context. Some drivers do not allow this scenario. Another
   scenario to verify is, two separate XA pools pointing to the same backend with the same
   credentials and the second connection is obtained with in the same transaction, without
   closing the first connection.

JTS5064

Unexpected exception thrown from XAResource.end.
   Solution: See the server log for more details.

JTS5065

Transaction Log directory path is not valid or proper permissions are not there.
   Solution: Make sure that transaction log directory is valid and files in that directory have read
   write permissions.

JTS5066

Possible cause is that transaction logs are corrupted.

Solution: Please clean up the `transaction-service.tx-log-dir/tx/*` files and restart the server.

21

LAUNCHER Error Messages

This chapter describes messages for errors with an LAUNCHER prefix.

21.1   LAUNCHER **Messages**

LAUNCHER001

The laucher wasn't able to execute due to the following Exception.
   Cause: TBD

LAUNCHER002

The launcher wasn't able to
   Cause: TBD

LAUNCHER003

The Launcher encountered a problem with the configuration data from either
domain.xml or processLauncher.xml. The launcher could not continue processing
the request.
   Cause: TBD

LAUNCHER004

The log file {0} can't be created and/or written to.
   Cause: TBD

LAUNCHER005

Spaces in your PATH have been detected. The PATH must be consistently formated (e.g. C:\\Program Files\\Java\\jdk1.5.0\\bin;) or the Appserver may not be able to start and/or stop. Mixed quoted spaces in your PATH can cause problems, so the launcher will remove all double quotes before invoking the process. The most reliable solution would be to remove all spaces from your path before starting the Appserver's components.

Cause: TBD

◆ ◆ ◆ **CHAPTER 22**

22 LCM Error Messages

This chapter describes messages for errors with an LCM prefix.

22.1 LCM **Messages**

LCM0101

Exception loading lifecycle module [{0}]; [{1}]
   Cause: TBD

LCM0103

Treating failure loading the lifecycle module [{0}] as fatal; please check your
classpath and the is-failure-fatal property.
   Cause: TBD

LCM0201

Lifecycle module [{0}] threw an Exception; please check your lifecycle module.
   Cause: TBD

LCM0203

Lifecycle module [{0}] threw ServerLifecycleException
   Cause: TBD

LCM0205

Treating the exception from lifecycle module event handler as fatal; please
check the is-failure-fatal property.
   Cause: TBD

23 LDR Error Messages

This chapter describes messages for errors with an LDR prefix.

23.1 LDR **Messages**

LDR5001

ApplicationLoader: Cannot convert [{0}] into a URL.
  Cause: TBD

LDR5002

UnExpected error occured while unloading ejb containers
  Cause: TBD

LDR5003

Duplicate unique id [{0}] found in ejb descriptor [{1}].
  Cause: TBD

LDR5004

UnExpected error occured while creating ejb container
  Cause: TBD

LDR5005

ApplicationLoader exception :
  Cause: TBD

LDR5006

Failed to load deployment descriptor
   Cause: TBD

LDR5007

Exception :
   Cause: TBD

LDR5008

ConfigException :
   Cause: TBD

LDR5009

UnExpected error occurred while creating URL. Check if filename and path is correct.
   Cause: TBD

LDR5010

All ejb(s) of [{0}] loaded successfully!
   Cause: TBD

LDR5011

Class not found exception occurred while loading the ejbs
   Cause: TBD

LDR5012

Jndi name conflict found in [{0}]. Jndi name [{1}] for bean [{2}] is already in use.
   Cause: TBD

LDR5013

Naming exception while creating EJB container:
   Cause: TBD

LDR5014

Cannot load policy file while loading EJB.
   Cause: TBD

LDR5015

Exception :
   Cause: TBD

LDR5016

Cannot load web service monitoring
   Cause: TBD

LDR5017

Cannot unload web service
   Cause: TBD

LDR5018

ERROR while initializing ConnectorResourcesLoader [{0}]
   Cause: TBD

LDR5100

Configuration exception encountered
   Cause: TBD

LDR5101

Could not get classpath
   Cause: TBD

LDR5102

Could not get classpath for appclient module
   Cause: TBD

LDR5200

MalformedURLException.
   Cause: TBD

LDR5201

Environment property [{0}] is not set. Unable to construct code source path for
[{1}] in ejb class loader.
   Cause: TBD

LDR5202

Exception in EJBClassLoader
   Cause: TBD

LDR5203

An error occurred while adding URL [{0}] to the EJB class loader. Please check
the content of this URL.
   Cause: TBD

LDR5204

Error : Request made to load class or resource [{0}] on an EJBClassLoader
instance that has already been shutdown. [{1}]
   Cause: TBD

LDR5205

Cannot load the foreign URL {0} using the stream handler for {1}
   Cause: TBD

LDR5206

EJBClassLoader {1} was requested to find resource {0} after done was invoked from
the following stack trace
   Cause: TBD

LDR5207

EJBClassLoader {1} was requested to find class {0} after done was invoked from
the following stack trace
   Cause: TBD

LDR5208

Invalid attempt to close JarFile managed by EJBClassLoader
   Cause: TBD

LDR5209

Error closing an open stream during loader clean-up
   Cause: TBD

LDR5210

Input stream has been finalized or forced closed without being explicitly
closed; stream instantiation reported in following stack trace
   Cause: TBD

LDR5211

Error checking for existing of {0} in {1}
   Cause: TBD

LDR5212

Error processing file with path {0} in {1}
   Cause: TBD

LDR5213

Error closing zip file for class path entry {0}
   Cause: TBD

LDR5214

Error closing zip file for duplicate class path entry {0}.
   Cause: TBD

◆ ◆ ◆ **CHAPTER 24**

24

MDB Error Messages

This chapter describes messages for errors with a MDB prefix.

24.1 MDB **Messages**

MDB0002

Could not get server session: [{0}]
Cause: TBD

MDB0003

Exception on getting server session
Cause: TBD

MDB0006

Get session failed: [{0}]
Cause: TBD

MDB0007

Get session throws exception
Cause: TBD

MDB0008

Session.run() throws Exception [{0}]
Cause: TBD

MDB0009

```
Session.run() throws Exception
```
   Cause: TBD

MDB00010

```
Exception while cleaning up ServerSession [{0}]
```
   Cause: TBD

MDB00011

```
Exception while cleaning up ServerSession
```
   Cause: TBD

MDB00012

```
ServerSession.getSession() must be called first before calling
ServerSession.start() !
```
   Cause: TBD

MDB00013

```
Create ServerSession error: [{0}]
```
   Cause: TBD

MDB00014

```
Exception while Creating ServerSession
```
   Cause: TBD

MDB00015

```
[{0}]: Message-driven bean destination name [{1}] not found
```
   Cause: TBD

MDB00016

```
[{0}]: Name not found exception: [{1}]
```
   Cause: TBD

MDB00017

```
An error occurred during the message-driven beancontainer initialization at
runtime.
```
   Cause: The most common cause for this is that the physical resource (e.g. Queue) from which
   the message-driven bean is consuming either does not exist or has been configured

incorrectly. Another common error is that the message-driven bean implementation class does not correctly implement the required `javax.ejb.MessageBean` or `MessageListener` interfaces.

Solution: Double-check that the JNDI name of the message-driven bean's resource in `sun-ejb-jar.xml` is correct. It is also useful to run the verifier to check that the code requirements for the message-driven bean class have been fulfilled.

MDB00018

```
[{0}]: Closing message-driven bean container connection
```
   Cause: TBD

MDB00019

```
[{0}]: Message-driven bean container connection closed
```
   Cause: TBD

MDB00020

```
[{0}]: Exception in closing message-driven bean container: [{1}]
```
   Cause: TBD

MDB00021

```
[{0}]: Message-driven bean destination type mismatch. Destination [{1}] is not
of type [{2}]
```
   Cause: TBD

MDB00022

```
[{0}]: Message-driven bean listening on JMS destination [{1}]
```
   Cause: TBD

MDB00023

```
[{0}]: Invalid max-messages-load [{1}]
```
   Cause: TBD

MDB00024

```
[{0}]: Message-driven bean container connection factory [{1}] not found: [{2}]
```
   Cause: TBD

MDB00025

[{0}]: Message-driven bean connection factory type mismatch. Connection factory [{1}] is not of type [{2}]
   Cause: TBD

MDB00026

[{0}]: Unable to start message-driven bean container connection: [{1}]
   Cause: TBD

MDB00027

[{0}]: Connection exception event for [{1}], [{2}], [{3}]
   Cause: TBD

MDB00028

[{0}]: Message-driven bean container using external connection factory object: [{1}]
   Cause: TBD

MDB00029

[{0}]: Register message-driven bean container bean-pool monitor failed: [{1}]
   Cause: TBD

MDB00030

[{0}]: Exception in setting up message-driven bean container: [{1}]
   Cause: TBD

MDB00031

[{0}]: Message-driven bean container connection factory [{1}] not found. Use default
   Cause: TBD

MDB00032

[{0}]: Message-driven bean container connection factory not specified. Use default
   Cause: TBD

MDB00033

[{0}]: Message-driven bean container reconnecting ...
   Cause: TBD

MDB00034

[{0}]: Message-driven bean container reconnected
   Cause: TBD

MDB00035

[{0}]: Exception on message-driven bean pool close: [{1}]
   Cause: TBD

MDB00036

[{0}]: Message-driven bean preInvoke() failed
   Cause: TBD

MDB00037

[{0}]: Message-driven bean invocation exception: [{1}]
   Cause: TBD

MDB00038

[{0}]: No message-driven bean context in message listener : [{1}]
   Cause: TBD

MDB00039

[{0}]: Message sent to a destroyed message-driven bean : [{1}] , [{2}]
   Cause: TBD

MDB00040

[{0}]: Message-driven bean CMT can not be supported.
   Cause: TBD

MDB00041

[{0}]: Message-driven bean onMessage error: [{1}]
   Cause: TBD

MDB00042

[{0}]: No invocation for message [{1}]
    Cause: TBD

MDB00043

[{0}]: Exception in reading mdb-container configuration: [{1}]
    Cause: TBD

MDB00044

Deploying message-driven bean [{0}], consuming from [{1}]
    Cause: TBD

MDB00045

Undeploying message-driven bean [{0}]
    Cause: TBD

MDB00046

Message-driven bean [{0}]: onMessage RuntimeException occurred: [{1}]. [{2}]
    Cause: TBD

MDB00047

Message-driven bean [{0}]: Some application or unchecked exception occurred :
[{1}]
    Cause: TBD

MDB00048

An error occurred during the pre-invocation processing before a message-driven
bean MessageListener method is called.
    Cause: This is often caused by some transaction-related errors.

    Solution: Double-check the transaction configuration for the message-driven bean and
    consult stack trace for additional details.

MDB00049

Message-driven bean [{0}]: Exception in postinvoke : [{1}]
    Cause: TBD

MDB00050

An error occurred during the lifecycle initialization of a message-driven bean instance.

> **Cause:** This typically means a system exception was thrown from the bean code during the execution of the no-arg constructor, the setMessageDrivenContext method, or the ejbCreate method. Common causes are failed naming service lookups coding errors, or ClassNotFound errors.
>
> **Solution:** Check the stack trace to see which method threw the exception. If the error was caused by a NamingException, double-check the environment configuration (ejb-refs, resource-refs, etc.) in the deployment descriptor against the coded names. It would also be useful to run the verifier.

MDB00051

An error occurred while the container was destroying an instance of a message-driven bean.

> **Cause:** The most common cause is that a message-driven bean class threw a system exception from its ejbRemove method.
>
> **Solution:** Check the message driven bean's ejbRemove implementation to determine what would result in an exception. Also consult the stack trace for more information.

MDB00052

An error occurred while the container was enabling the message flow into a message-driven bean.

> **Cause:** This is an internal error that typically means there is a problem with the messaging system from which the message-driven bean is consuming.
>
> **Solution:** Check the stack trace for more details.

MDB00053

Message-driven bean [{0}] container cleanup exception: [{1}]

> **Cause:** TBD

MDB00054

Message-driven bean [{0}]: Exception setting bean context : [{1}]

> **Cause:** TBD

MDB00055

Message-driven bean [{0}]: Exception in closing consumer : [{1}]
  Cause: TBD

MDB00056

Message-driven bean [{0}]: start cleanup for shutdown
  Cause: TBD

MDB00057

Message-driven bean [{0}]: finished cleanup for shutdown
  Cause: TBD

MDB00058

Message-driven bean [{0}]: connection exception [{1}] during server shutdown.
ignore.
  Cause: TBD

MDB00059

{0}]: Exception on unregistering monitor mbean: [{1}]
  Cause: TBD

MDB00060

[{0}]: Invalid value [{1}] for [{2}] , use [{3}] instead
  Cause: TBD

25

NAM Error Messages

This chapter describes messages for errors with an NAM prefix.

25.1 NAM **Messages**

NAM0002

Problem with serializing or deserializing of the object
  Solution: Check the class hierarchy to see if all the classes are Serializable.

NAM0003

Problem in creating a remote object for SerialContextProvider.
  Cause: Problem during publishing SerialContextProvider in CosNaming Service.

  Solution: Check if ORB CosNaming Service initialized. Check if ORB CosNaming Service initialized.

NAM0004

Application Server may not be running at port intended.
  Cause: Possible Network Error.

  Solution: Check to see if the Application Server is up and running on the port intended. The problem could be because of incorrect port. Check to see if you can access the host on which the Application Server is running.

NAM0005

The JMS Connection Factory may not be bound to a JNDI name.
  Solution: Check the list of JNDI bindings by clicking on the JNDI tree on the Administrator's console. Check the JMS resource references bindings.

NAM0006

```
The JMS destination may not be bound to a JNDI name.
```
Solution: Check the list of JNDI bindings by clicking on the JNDI tree on the Administrator's console. Check the JMS resource references bindings.

NAM0007

```
Unresolved Message Destination Reference
```
Solution: Check if the Message Destination has been linked to a Message Destination

NAM0008

```
Invalid Destination Name
```
Solution: Check Destination Name

NAM1000

```
No endpoints selected.
```
Solution: Check system property com.sun.appserv.iiop.endpoints.

NAM1001

```
No endpoints selected.
```
Solution: Check system property com.sun.appserv.iiop.endpoints.

NAM1002

```
Bad JNDI provider URL
```
Solution: Check system property java.naming.provider.url.

NAM1003

```
Bad host:port entry
```
Solution: Check system property com.sun.appserv.iiop.endpoints.

NAM1004

```
Unknown host
```
Solution: Check the host entry.

NAM1005

No endpoints selected.
Solution: Check system property `com.sun.appserv.iiop.endpoints`.

`NAM1008`

Please specify `ic-based` or `ic-based-weighted` as the LoadBalancing policy.
Cause: TBD

26

RAR Error Messages

This chapter describes messages for errors with a RAR prefix.

26.1   RAR **Messages**

RAR5003

Error loading J2EE resource file
   Cause: TBD

RAR5004

JDBC driver threw an exception while recovery.
   Cause: Resource Adapter threw an exception during recovery in case of connectors.

   Solution: Check database or EIS log for details. Check whether the connection pool configuration is proper. Check whether domain.xml is accessible.

RAR5005

The XA resource has been deleted before attempting recovery
   Cause: The XA resource is no longer referenced in domain.xml. The database server that the XA resource points to is no longer running.

   The configuration information for the XA Resource has been changed before attempting recovery.

   Solution: Check that the XA Resource and the pool it points to is still defined in domain.xml. Check that the XA Resource is present in the list of resource-refs in domain.xml. Check that the Database server is up and running. Check if the configuration info of the XA resource and the pool it points to is sane. In particular check that the datasourceclassname in the pool is correct and the XA resource points to the correct pool.

RAR5007

Exception while creating persistent manager resource.
Solution: Check whether the persistent manager factory class is configured properly and is available in the classpath. Check whether the JDBC resource name is correct and is configured properly.

RAR5008

Naming provider and port are not set in the initial context
Cause: The Naming provider is not up.

Solution: Check the jndi.properties file has the naming provider host and port specified. Check if the naming provider is up and listening on the port specified in domain.xml

RAR5009

Could not create an instance of factory-class.
Solution: Make sure that factory-class name is configured correctly. Make sure that factory-class is available in the classpath of the application server

RAR5010

External JNDI resource has a wrong factory-class configuration
Solution: Verify that factory class is an instance of javax.naming.spi.InitialContextFactory.

RAR5011

Could not create Initial Context.
Solution: Make sure that the external-jndi-resource configuration is sufficient to create an initial context.

RAR5012

Could not create Initial context factory.
Solution: Make sure that the external-jndi-resource configuration is sufficient to create an initial context factory.

RAR5013

Error in installing connection factories
Cause: TBD

RAR5014

Cannot load class [{0}].
   Cause: TBD

RAR5015

Classpath is not properly set in domain.xml
   Cause: The application server process does not have read permissions on the directory that holds the classes/jar.

   Solution: Check that the classpath attribute in the java-config includes a reference to the jar/package directory for the class. You do not have read permissions on the directory that holds the classes/jar.

RAR5016

Error accessing configuration file.
   Cause: TBD

RAR5017

Cannot locate connection descriptor by name
   Cause: TBD

RAR5018

Cannot create connection factory
   Cause: TBD

RAR5019

Unexpected exception in creating new file
   Cause: TBD

RAR5020

Could not configure persistent manager resource properly.
   Solution: Make sure that the JDBC resource name, you have configured is correct. Check whether the persistent manager factory class is proper. Check whether the persistent manager factory class has a setConnectionFactoryName method.

RAR5021

Error in installing resource adapters
   Cause: TBD

RAR5022

Error in binding to JNDI namespace
   Cause: TBD

RAR5023

Error removing connection factory
   Cause: TBD

RAR5024

Error adding J2EE resource
   Cause: TBD

RAR5025

Error removing J2EE resource
   Cause: TBD

RAR5026

Failed to complete transaction.Error Message: [{0}].
   Cause: TBD

RAR5027

Unexpected exception in resource pooling
   Cause: TBD

RAR5029

Unexpected exception while registering component
   Cause: TBD

RAR5030

Unexpected exception while registering synchronization
   Cause: TBD

RAR5031

```
System Exception
```
   Cause: TBD

RAR5032

```
Unexpected exception while returning resource to pool
```
   Cause: TBD

RAR5033

```
ASSERT FAILED!!!
```
   Cause: TBD

RAR5034

```
Failed to resize pools
```
   Cause: TBD

RAR5035

```
Error while closing the physical connection.
```
```
Error while destroying the connector managed connection.
```
   Solution: Examine the exception stack trace for details.

RAR5036

```
Resource reference is not defined for JNDI name [{0}]
```
   Cause: TBD

RAR5037

```
Username/password not specified for resource reference [{0}]. Defaulting to one
in the pool.
```
   Cause: TBD

RAR5038

```
Could not create a physical connection.
```
   Solution: Connection pool is configured incorrectly. Check that database is running properly. Check that EIS (in case of connectors) is running properly. Check that SJS MQ (in case of JMS) is running properly. Verify that network connection to Database/EIS/MQ is properly configured.

RAR5042

The XA resource has been deleted before attempting recovery.
Cause: The XA resource is not properly referenced because:

- The XA resource is no longer referenced in `domain.xml`. The database server that the XA resource points to is no longer running

- The configuration information for the XA Resource has been changed before attempting recovery

Solution: Check that the XA Resource and the pool it points to is still defined in `domain.xml`. Check that the XA Resource is present in the list of resource-refs in `domain.xml`. Check that the Database server is up and running. Check if the configuration info of the XA resource and the pool it points to is sane. In particular check that the `datasourceclassname` in the pool is correct and the XA resource points to the correct pool.

RAR5043

Exception while creating persistent manager resource.
Solution: Check whether the persistent manager factory class is configured properly and is available in the classpath. Check whether the JDBC resource name is correct and is configured properly.

RAR5044

Could not configure persistent manager resource properly.
Solution: Make sure that the JDBC resource name, you have configured is correct. Check whether the persistent manager factory class is proper. Check whether the persistent manager factory class has a `setConnectionFactoryName` method.

RAR5045

Naming provider and port are not set in the JNDI provider's property file
Cause: The Naming provider is not up

Solution: Check the `jndi.properties` file has the naming provider host and port specified. Check if the naming provider is up and listening on the port specified in `domain.xml`.

RAR5046

Classpath is not properly set in domain.xml
Cause: You do not have read permissions on the directory that holds the classes/jar.

Solution: Check that the classpath attribute in the `java-config` includes a reference to the jar/package directory for the class. Check that the directory where the classes/jars reside have read permission for the application server process.

RAR5047

Could not create Initial Context.
   Solution: Make sure that the external-jndi-resource configuration is sufficient to create an initial context.

RAR5048

The configuration for the JDBC resource could not be read from domain.xml
   Cause: This is an internal server error. Please contact Sun Microsystems with the complete error log

RAR5051

Jdbc pool monitoring bean registration failure
   Cause: TBD

RAR5052

Failed to look up connection pool resource name
   Cause: TBD

RAR5053

underlying connection not valid
   Cause: TBD

RAR5055

Missing parameter in properties file [{0}].
   Cause: TBD

RAR5058

Could not create physical connection during connection pool resizing.
   Solution: Check whether your network connection to the database or EIS is proper. Check your database/ EIS logs for possible connection creation errors.

RAR5059

Binding [JDBC DataSource Name: {0}, Pool Name: {1}]
   Cause: TBD

RAR5060

```
Install JDBC Datasources ...
```
    Cause: TBD

RAR5061

```
Exception caught and ignored : {0}
```
    Cause: TBD

RAR5062

```
Exception caught while getting Local Transaction
```
    Cause: TBD

RAR5062

```
Exception while closing connection
```
    Cause: TBD

RAR5063

```
The class specified in datasourceclassname attribute in the jdbc-connection-pool
is not of type javax.sql.XADataSource. Please consult your database vendor's
documentation to identify the class that implements the javax.sql.XADataSource
```
    Solution: Check if the datasourceclass implements the javax.sql.XADataSource
    interface. Try using the javap tool for this purpose.

RAR5065

```
The class specified in datasourceclassname attribute in the jdbc-connection-pool
is not of type javax.sql.ConnectionPoolDataSource. Please consult your database
vendor's documentation to identify the class that implements the
javax.sql.ConnectionPoolDataSource.
```
    Solution: Check if the datasourceclass implements the
    javax.sql.ConnectionPoolDataSource interface. Try using the javap tool for this
    purpose.

RAR5066

```
Exception while getting pooled connection.
```
    Cause: The Database server is not up and running. The connection pool is full and cannot
    allocate more connections. The Database server threw some unexpected exception. Please
    study the exception message for more details

RAR5067

Exception while getting XA Connection : {0}
    Cause: TBD

RAR5068

There are no managed connections in the connection pool at this time

There is an internal server error. Please contact Sun Microsystems with the complete log message.
    Solution: This is an internal server error. Please contact Sun Microsystems with the complete error log. This is an internal server error. Please contact Sun Microsystems with the complete error log.

RAR5069

The Connection object is now invalid due to database restart
    Cause: The connection object is now invalid since the database has either restarted or is not up and running. The JDBC driver cannot provide the required information.

    Solution: Switch on the connection validation property of the connection pool and try again. If the database has restarted, restart the application server as well or set the connection validation property in the pool to avoid this in the future. If the database server is not up, please bring it up. Check the server log and please contact Sun Microsystems with the complete error log.

RAR5070

The Connection object is now invalid due to database restart.
    Cause: The connection object is now invalid since the database has either restarted or is not up and running. The JDBC driver cannot provide the required information.

    Solution: Switch on the connection validation property of the connection pool and try again. If the database has restarted, restart the application server as well or set the connection validation property in the pool to avoid this in the future. If the database server is not up, please bring it up. Check the server log and please contact Sun Microsystems with the complete error log.

RAR5071

Exception creating CciInteraction object
    Cause: TBD

RAR5072

Exception while clearing warnings from Statement object
    Cause: TBD

RAR5073

Exception while getting warnings from Statement object
    Cause: TBD

RAR5074

The Connection object is now invalid due to database restart
    Cause: The connection object is now invalid since the database has either restarted or is not up and running. The JDBC driver cannot provide the required information.

    Solution: Switch on the connection validation property of the connection pool and try again. If the database has restarted, restart the application server as well or set the connection validation property in the pool to avoid this in the future. If the database server is not up, please bring it up. Check the server log and please contact Sun Microsystems with the complete error log.

RAR5075

Exception while setting up Statement according to Spec
    Cause: TBD

RAR5076

Exception while preparing statement
    Cause: TBD

RAR5077

Exception while closing statement
    Cause: TBD

RAR5078

Exception while beginning local transaction
    Cause: TBD

RAR5079

Exception while commiting local transaction
Cause: TBD

RAR5080

Exception while commiting xa transaction
Cause: TBD

RAR5081

Exception while rolling back local transaction
Cause: TBD

RAR5082

Exception while creating CciManagedConnection
Cause: TBD

RAR5083

Exception while destroying physical connection
Cause: TBD

RAR5084

Exception while creating physical connection
Cause: TBD

RAR5085

Exception while getting XA resource
Cause: TBD

RAR5086

Exception creating CciManagedConnectionMetaData
Cause: TBD

RAR5087

The Connection object is now invalid due to database restart
Cause: The connection object is now invalid since the database has either restarted or is not up and running. The JDBC driver cannot provide the required information.

Solution: Switch on the connection validation property of the connection pool and try again. If the database has restarted, restart the application server as well or set the connection validation property in the pool to avoid this in the future. If the database server is not up, please bring it up. Check the server log and please contact Sun Microsystems with the complete error log.

RAR5088

```
Exception while checking if ResultSet can detect deletes
```
Cause: TBD

RAR5089

```
Exception while checking if ResultSet can detect updates
```
Cause: TBD

RAR5090

```
Exception while checking if ResultSet can detect other deletes
```
Cause: TBD

RAR5091

```
Exception while checking if ResultSet can detect inserts
```
Cause: TBD

RAR5092

```
Exception while checking if ResultSet can detect other updates
```
Cause: TBD

RAR5093

```
Exception while checking if ResultSet can detect own updates
```
Cause: TBD

RAR5094

```
Exception while checking if ResultSet can detect other inserts
```
Cause: TBD

RAR5095

Exception while checking if ResultSet can detect own inserts
Cause: TBD

RAR5096

Exception while checking if ResultSet can detect own deletes
Cause: TBD

RAR5097

Exception while checking if RA supports concurrency in combo with give RS
Cause: TBD

RAR5098

Exception while checking if RA supports a type of RS
Cause: TBD

RAR5099

Classpath is not properly set in domain.xml
Cause: The application server process does not have read permissions on the directory that holds the classes/jar.

Solution: Check if the server classpath specified in the java-config element in domain.xml has an entry for the jar containing this class. Check that the directory where the classes/jars reside have read permission for the application server process.

RAR5100

Classpath is not properly set in domain.xml
Cause: The application server process does not have read permissions on the directory that holds the classes/jar.

Solution: Verify that the read permissions on the classes/jar directory are set properly.

RAR5101

The Application Server process does not have read access to the directory where this class resides.

The Application Server process does not have security permissions to access this code.
Solution: Check if the application server has read permissions on the directory where this class/jar containing this class resides. Check if your security manager policy is configured properly.

RAR5102

The application server process do not have permission to access the code base
where the class resides.

This is an internal server/JVM error. Please contact Sun Microsystems with the
complete error log.

> **Solution:** See if the application server process has permission to read the directory where the
> class/jar resides. Check if all relevant JVM patches are installed on your machine. Please
> contact Sun Microsystems with the complete error log.

RAR5103

Error configuring the DataSource object.

> **Cause:** The pool parameters in domain.xml are improper. The application server process
> does not have enough permissions to access the DataSource class.

> **Solution:** Check that the pool parameters specified in domain.xml are correct. For example,
> check that parameters that expect numeric values are numerals. Check that the application
> server process has permissions to read the directory where the class resides.

RAR5104

Error configuring the DataSource object.

> **Cause:** The pool parameters in domain.xml are improper. The application server process
> does not have enough permissions to access the DataSource class.

> **Solution:** Check that the pool parameters specified in domain.xml are correct. For example,
> check that parameters that expect numeric values are numerals. Check that the application
> server process has permissions to read the directory where the class resides.

RAR5105

The connection validation method is incorrect, it should be one of auto-commit,
meta-data, table.

The connection is no longer valid. It could have been rendered invalid due to
database restart/shutdown.

> **Solution:** Check if the connection validation is one of: auto-commit, meta-data, or table. If
> the method is table, check that the table name is correct. If the database has been restarted,
> restart the application server as well. If the database is down, start it up.

RAR5106

The database connection is invalid.

Cause: The cause can be either:

- The database has been shutdown or restarted.
- The network connection to the database has been lost.

Solution: If the database has been restarted, restart the application server as well. To avoid this in the future set the connection validation property in the pool. Check that the database is up and running and the network connection to the database is still alive.

RAR5107

The database connection is invalid.

Cause: The cause can be either:

- The database has been shutdown or restarted.
- The network connection to the database has been lost.

Solution: If the database has been restarted, restart the application server as well. To avoid this in the future set the connection validation property in the pool. Check that the database is up and running and the network connection to the database is still alive.

RAR5108

The database connection is invalid.

Cause: The cause can be either

- The database has been shutdown or restarted.
- The network connection to the database has been lost.

Solution: If the database has been restarted, restart the application server as well. To avoid this in the future set the connection validation property in the pool. Check that the database is up and running and the network connection to the database is still alive.

RAR5109

JDBC driver has thrown an SQLException while setting the isolation level.

Solution: Check your connection pool configuration and make sure that the isolation level is correct. Check whether your driver supports the isolation level you have specified in the connection pool.

RAR5110

```
The URL specified is incorrect.
```

```
The database server is not up and running.
```
Solution: Check if the URL specified in the `getConnection` call is correct. Consult the JDBC driver vendor's documentation for the correct URL format. Check that the Database server is up and running.

RAR5111

```
The class specified in datasourceclassname attribute in the jdbc-connection-pool
is not of type javax.sql.DataSource.
```
Solution: Please consult your database vendor's documentation to identify the class that implements `javax.sql.DataSource`. Try using the `javap` tool for this purpose.

RAR5112

```
The class specified in datasourceclassname attribute in the jdbc-connection-pool
is not of type javax.sql.XADataSource.
```
Solution: Please consult your database vendor's documentation to identify the class that implements the `javax.sql.XADataSource`. Try using the `javap` tool for this purpose.

RAR5113

```
Error creating a connection from the supplied information.
```
Cause: The connection pool is full and cannot allocate more connections. The Database server threw some unexpected exception. Please study the exception message for more details.

Solution: Check that the Database server is up and running. Check if the size of your connection pool is sufficiently large for serving all requests. Check the server log and please contact Sun Microsystems with the full error log.

RAR5114

```
Error creating a connection from the supplied info.
```
Cause: The Connection pool is full and incapable of serving more requests at this point. The database is down. Please try later. There is an internal server error. Please contact Sun Microsystems with the complete log message.

Solution: Check if the database server is correctly configured. Check if your pool size is sufficient to server all simultaneous connection requests. Check the server log and contact Sun Microsystems with the complete error message

RAR5115

Error cleaning up handles associated with this ManagedConnection
    Cause: TBD

RAR5116

Error creating a connection from the supplied info.
    Cause: The Database server is not up and running. The connection pool is full and cannot allocate more connections. The Database server threw some unexpected exception. Please study the exception message for more details.

    Solution: Check that the Database server is up and running. Check if the size of your connection pool is sufficiently large for serving all requests. Check the server log and please contact Sun Microsystems with the full error log.

RAR5117

Error while obtaining a connection from the pool.
    Solution: Check your connection pool configuration.

RAR6000

Illegal access Error while instantiating one of the resource adapter JavaBeans like ManagedConnectionFactory or ResourceAdapter JavaBean classes.
    Solution: Check whether the resource adapter has any specific security requirements.

RAR6001

Error while locating one of the resource adapter JavaBeans like ManagedConnectionFactory or ResourceAdapter JavaBean classes.
    Solution: Check if the resource adapter is bundled properly. Resource adapter jar file deployment descriptor specifies correct class names.

RAR6002

Error while instantiating one of the resource adapter JavaBeans like ManagedConnectionFactory or ResourceAdapter JavaBean.
    Solution: Check if the resource adapter is bundled properly with all the classes.

RAR6003

Could not access class : {0}
    Cause: TBD

RAR6004

Illegal access Error while instantiating one of the resource adapter JavaBeans
like ManagedConnectionFactory or ResourceAdapter JavaBean classes.
Solution: Check whether the resource adapter has any specific security requirements.

RAR6005

Error while creating ManagedConnectionFactory.
Solution: Check if the resource adapter is bundled properly. Check whether connection pool
configuration has correct properties for MCF. Check resource adapter documentation for
configuring correct properties of MCF.

RAR6006

Failed to get ResourcesUtil object : {0}
Cause: TBD

RAR6007

Runtime could not obtain list of resources of this resource adapter.
Solution: Check whether the resource adapter configuration is proper.

RAR6008

Resource Adapter threw an exception during ResourceAdapter.stop() method.
Solution: Check your resource adapter documentation about ResourceAdapter.stop()
method.

RAR6009

A resource (connection pool, connector resource or admin object) pertaining to
the resource adapter is existing.
Solution: Check whether the cascade option of undeploy is false.

RAR6010

Resource Adapter is already active in the connector runtime.
Solution: Check whether a previous resource adapter deployment is still available.

RAR6011

Failed to obtain the classloader : {0}
Cause: TBD

RAR6012

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message. Check whether resource adapter threw a null pointer exception.

RAR6013

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message.

RAR6014

Incomplete or erroneous resource adapter deployment.
Solution: Check whether the RA deployment is proper and complete.

RAR6015

Connection pool is not created properly.
Solution: Check your resource configuration, whether you are using correct connection pool name.

RAR6016

Resource Adapter is not yet initialized in the connector runtime.
Solution: Check whether the deployment of the resource adapter is complete.

RAR6017

Incomplete or erroneous connection pool creation.
Solution: Check whether connection pool is created and is proper.

RAR6018

Failed to add MCF to connector registry : {0}
Cause: TBD

RAR6019

Incomplete or erroneous resource adapter deployment.
Solution: Check whether the RA deployment is proper and complete.

RAR6020

Failed to publish connection pool object in JNDI : {0}
Cause: TBD

RAR6021

Error while creating `ManagedConnectionFactory`.
> **Solution:** Check if the resource adapter is bundled properly. Check whether connection pool configuration has correct properties for MCF. Check whether the resource adapter require security permissions to load the classes. Some adapters require `getClassLoader()` permission.

RAR6022

`NullPointerException` while creating `ManagedConnectionFactory`.
> **Solution:** Check whether resource adapter throws null pointer exception.

RAR6023
> **Solution:** There is an internal server error. Please contact Sun Microsystems with the complete log message.

RAR6024

Failed to bind connector resource in JNDI: {0}
> **Cause:** TBD

RAR6025

Could not read the deployment descriptor of the resource adapter.
> **Solution:** Check whether the resource adapter is packaged correctly. Check the correctness of deployment descriptor.

RAR6026

Could not parse the deployment descriptor of the resource adapter.
> **Solution:** Check whether the resource adapter is packaged correctly. Check the correctness of deployment descriptor.

RAR6027

Malformed URL to add to path of classloader : {0}
> **Cause:** TBD

RAR6028

Resource Adapter does not contain resource adapter JavaBean.
> **Solution:** Make sure that the resource adapter is 1.5 compliant.

RAR6029

Failed to delete admin object from jndi : {0}
   Cause: TBD

RAR6030

MCF cleanup in connector runtime failed.
   Solution: Check whether connection pool has already been deleted.

RAR6032

Connection Pool Name of the Resource configuration is wrong.
   Solution: Check whether the connection pool is created.

RAR6031

Failed to unbind connectionPool from jndi : {0}
   Cause: TBD

RAR6033

Wrong connector connection pool entry in the domain.xml. No corresponding
resource adapter deployed. Resource Adapter Name :
   Cause: TBD

RAR6034

Resource Adapter Name of the admin object configuration is wrong.
   Solution: Check whether the resource adapter is deployed.

RAR6035

Could not start the resource adapter instance.
   Solution: Check whether domain.xml is accessible. Check your resource adapter
   documentation for possible causes of failure during ResourceAdapter.start().

RAR6036

Resource Adapter throws exception during
ManagedConnectionFactory.setResourceAdapter().
   Solution: If you are using third party resource adapter, contact resource adapter vendor. If
   you are a resource adapter developer, please check the resource adapter code.

RAR6037

Resource Adapter threw an exception during ResourceAdapter.stop() method.
   Solution: Check your resource adapter documentation about ResourceAdapter.stop()
   method.

RAR7000

Check for a new version of MQ installation failed : {0}
   Cause: TBD

RAR7001

Could not unzip the MQ resource adapter archive from upgraded MQ.
   Solution: Check whether new MQ resource adapter archive in imq_home/lib is accessible.

RAR7002

MQ Resource adapter upgradation started.
   Cause: TBD

RAR7003

MQ Resource adapter upgradation completed.
   Cause: TBD

RAR7004

Resource Adapter is requesting endpoints to the MDB, before MDB deployment is
complete.
   Solution: There is an internal server error. Please contact Sun Microsystems with the
   complete log message.

RAR7005

Could not access the class loader specific to the MDB.
   Solution: There is an internal server error. Please contact Sun Microsystems with the
   complete log message.

RAR7006

ActivationSpec validation failed.
   Solution: Check your JMS related configuration in MDB deployment descriptor. Check your
   activation configuration in the MDB deployment descriptor.

RAR7007

Resource Adapter is trying to invoke an unknown method during message delivery.
Solution: Check your resource adapter documentation for possible issues during message delivery.

RAR7008

Initialized monitoring registry and listeners
Cause: TBD

RAR7009

Cannot set autocommit mode for physical connection
Cause: TBD

RAR7010

Could not find the connection pool specified.
Solution: Try the following:

- Check whether the connection pool creation was successful. Check whether the pool name used is correct.

- There is an internal server error. Please contact Sun Microsystems with the complete log message.

RAR7011

Unexpected exception determining whether resource is referenced.
Cause: TBD

RAR7012

J2EE Connector 1.5 specification compliant Resource Adapter stop() status
Cause: TBD

RAR7013

Resource Adapter stop() call successful
Cause: TBD

RAR7014

Could not read shutdown-timeout-in-seconds from domain.xml properly.
Solution: Make sure that domain.xml is configured correctly.

RAR7092

Wrong transaction-support connection pool attribute setting.

Cause: The connection pool specifies a `transaction-support` attribute value that is greater than the one specified in the pool according to this mathematical inequality: `NoTransaction` < `LocalTransaction` < `XATransaction`.

Solution: Change the `transaction-attribute` value in the pool to be less than or equal to the one specified in the resource adapter's `ra.xml`.

RAR7093

Error while cleaning up ManagedConnection
    Cause: TBD

RAR7094

{0} shutdown successful.
    Cause: TBD

RAR7095

{0} shutdown unsuccessful. Please refer the server and/or resource adapter logs
for more information.
    Cause: TBD

RAR7096

Error while trying to invoke the setter method for the specified property.
    Solution: Check if the value and the property name specified are valid.

RAR7097

Error in finding a mutator method for the specified property.
    Solution: Check if the property has been specified correctly and an appropriate public setter method [method] is available in the class.

RAR7099

The mcf being used to allocate the connection and the MCF in the pool are not
equal.
    Cause: TBD

RAR7099

Cannot unregister pool from monitoring registry: {0}
   Cause: TBD

RAR7100

Physical destination {0} is autocreated by application server.
   Cause: TBD

RAR7102

Default-jms-host of jms-service is not configured properly. Using the first jms-host as the
   Cause: TBD

RAR7103

The physical destination {0} is already created.
   Cause: TBD

RAR7104

Exception while stopping Derby :
   Cause: TBD

RAR7105

Derby Embedded Driver not found :
   Cause: TBD

RAR7106

Invalid property combination (LazyConnectionEnlistment-false, LazyConnectionAssociation-true) for pool : {0}
   Cause: TBD

RAR8000

The method {0} is not present in the class : {1}
   Cause: TBD

RAR8001

Error in executing the method : {0}
   Cause: TBD

27

SEC Error Messages

This chapter describes messages for errors with a SEC prefix.

27.1   SEC **Messages**

SEC1000

Caught exception.
   Cause: TBD

SEC1050

Certificate authentication requires certificate realm. Check server
configuration.
   Cause: TBD

SEC1100

Disabled realm [{0}] due to errors.
   Cause: TBD

SEC1101

No realms available. Authentication services disabled.
   Cause: TBD

SEC1102

Incomplete configuration, login module not specified.
   Cause: TBD

SEC1103

No AuthenticationHandler available for this realm.
   Cause: TBD

SEC1104

Error while obtaining private subject credentials.
   Cause: TBD

SEC1105

A PasswordCredential was required but not provided.
   Cause: TBD

SEC1106

Error during LDAP search with filter [{0}].
   Cause: TBD

SEC1109

Error reading file realm data.
   Cause: TBD

SEC1110

JAAS context requested from certificate realm. Configuration error is likely.
   Cause: TBD

SEC1120

Error reading audit configuration.
   Cause: TBD

SEC1122

Audit enabled.
   Cause: TBD

SEC1123

```
Audit: principal=
```
Cause: TBD

SEC1130

```
Code does not have permission to invoke programmatic login mechanism.
```
Cause: TBD

SEC1131

```
Code does not have permission to invoke programmatic logout mechanism.
```
Cause: TBD

SEC1132

```
Bad runtime object type. Programmatic login failed.
```
Cause: TBD

SEC1133

```
Application does not have permission to call web programmatic login.
```
Cause: TBD

SEC1140

```
Policy provider configuration overridden by property {0} with value {1}
```
Cause: TBD

SEC1141

```
Requested jacc-provider [{0}] is not configured in domain.xml.
```
Cause: TBD

SEC1142

```
Error while reading policy-provider in domain.xml.
```
Cause: TBD

SEC1143

```
Loading policy provider {0}.
```
Cause: TBD

SEC1144

Error while installing policy provider:
    Cause: TBD

SEC1145

No policy provider defined. Will use the default JDK Policy implementation.
    Cause: TBD

SEC1146

Policy configuration factory overridden by property {0} with value {1}
    Cause: TBD

SEC1147

Policy configuration factory not defined.
    Cause: TBD

SEC2000

Container-auth: ServletSystemHandlerDelegate: processRequest.
    Cause: TBD

SERVER Error Messages

This chapter describes messages for errors with a SERVER prefix.

28.1   SERVER **Messages**

SERVER0009

Pluggable features using class {0} could not be initialized. Server will run with
default features.
  Cause: TBD

SERVER5001

IOException :
  Cause: TBD

SERVER5002

Exception :
  Cause: TBD

SERVER5003

Exception :
  Cause: TBD

SERVER5004

```
j2eerunner.startupError.
```
   Cause: TBD

SERVER0001

```
A server context could not be created
```
   Cause: TBD

SERVER0002

```
An error occured during initialization
```
   Cause: TBD

SERVER0003

```
An error occured during startup/reconfig
```
   Cause: TBD

SERVER0004

```
Application server shutdown in progress
```
   Cause: TBD

SERVER0005

```
An error occured during shutdown
```
   Cause: TBD

SERVER0007

```
Your license is invalid. Please obtain a valid license. [{0}]

Unable to shutdown the J2EE server: [{0}]
> **Cause:** TBD

29

SGMT Error Messages

This chapter describes messages for errors with a SGMT prefix.

29.1 SGMT **Messages**

SGMT0005

Self Management Service on Shutdown
   Cause: TBD

SGMT0006

Self Management Service on Termination
   Cause: TBD

SGMT0008

Self Management Service not configured
   Cause: TBD

SGMT0013

Error in registring action : {1} in Rule : {0}. Possbile error with action, try
redeploying the application
   Cause: TBD

SGMT0017

Error creating and configuring the rule : {0} due to IlegalArguments specified for its event type : {1}. Create the rule with correct aruguments for the configured event.

    Cause: TBD

SGMT0018

Configured action name={1} for Rule name={0} is disabled. The action would not be executed till it is enabled.

    Cause: TBD

SGMT0019

Could not delete rule. No configured rule exists with name={0}

    Cause: TBD

SGMT0020

Error encountered while trying to delete rule={0}. Reason - {1}

    Cause: TBD

SGMT0021

Successfully deleted rule={0}, with description= {1}

    Cause: TBD

SGMT0201

Error in sending the alert for event : {0} as no configured mail recipients

    Cause: TBD

SGMT0200

Error in sending the alert me2sage for event : {0} due to : {1}

    Cause: TBD

SGMT0203

Error in sending the alert for event : {0} due to configured mail resource {1} not found

    Cause: TBD

SGMT0210

{0}- Cannot check for potential non-responsive requests/threads. This is because internal statistics are not available due HttpService monitoring being switched OFF. Set it to non-OFF value for successful checks to occur.
   Cause: TBD

SGMT0211

{0}- No http requests received
   Cause: TBD

SGMT0212

{0}- Could not send mail alert due to invalid ref, {1} ,configured. Please ensure that the configured mail alert application is available.
   Cause: TBD

SGMT0213

{0}- Error encountered while trying to send mail alert. Would proceed to log the detail.
   Cause: TBD

SGMT0214

{0}- Potential request/threads found to be non-responsive={1}.
   Cause: TBD

SGMT0215

{0}- Error encountered while trying to stop/interrupt the potential unrepsonsive request/thread/
   Cause: TBD

SGMT0216

{0}- Error encountered while trying to retrieve statistics to determine potential non-responsive requests/threads.
   Cause: TBD

SGMT0217

{0}- Found non-responsive http request/thread on listener port:{1}, for URI={2}
   Cause: TBD

SGMT0218

```
{0}- Stopped non-repsonsive http request/thread on listener port={1}, for
URI={2}
```
   Cause: TBD

SGMT0219

```
{0}- Cannot send mail alert on the check for non-responsive requests/threads, as
applicatoin ref for mail alert is not provided.
```
   Cause: TBD

SGMT0220

```
{0}- HttpService monitoring switched ON. Statistics for check for non-responsive
http request/threads would now be enabled.
```
   Cause: TBD

SGMT0221

```
{0}- HttpService monitoring switched OFF. It would not be possible to check for
non-responsive http requests/threads, due to non-availability of internal
statistics.
```
   Cause: TBD

SGMT0222

```
{0}- Due ThresholdWaitInMillis:{1} being less than load balancer default timeout
value of:{2}; resetting it to load balancer default.
```
   Cause: TBD

SGMT0223

```
{0}- Due ThresholdWaitInMillis:{1} being less than load balancer response
timeout:{2}, resetting it to load balancer response timeout.
```
   Cause: TBD

SGMT0224

```
Instance hang check - Listener: {1} of server :{0} is not responding to the for
instance hang check request. The request timeout occured for the timeout value
of={2}.
```
   Cause: TBD

SGMT0225

Instance hang check - Listener: {1} of server: {0} has not responded to the ping
request for instance hang check. However it still has scope to receive further
http requests, as it has not max'd out on threads. No. of busy http threads={2}.
   Cause: TBD

SGMT0226

Instance hang check - Listener: {1} of server: {0} has not responded to instance
hang check request. The listener has max'd out on threads. No. of busy http
threads={2}.
   Cause: TBD

SGMT0227

Instance hang check - Listener: {1} of server: {0} is healthy for the instance
hang check carried out.
   Cause: TBD

SGMT0228

Instance hang check - Server {0} is healthy.
   Cause: TBD

SGMT0229

Instance hang check - Server: {0} is not responding; is unhealthy.
   Cause: TBD

SGMT0230

Instance hang check - Invalid name : {0} specified in the check list of the rule.
Ignoring this value.
   Cause: TBD

SGMT0231

Instance hang check - The threshold timeout= {1} specified for cluster: {0} is
less than the load balancer health checker configured for it. Raising this
timeout to its load balancer health checker value of {2}.
   Cause: TBD

SGMT0232

Instance hang check - The threshold timeout= {1} specified for server: {0} is l
   Cause: TBD

SGMT0233

Instance hang check - There are no instances specified in the check list to check
for instance hang.
   Cause: TBD

SGMT0234

Started instance hang check for server: {0} in cluster: {1}
   Cause: TBD

SGMT0235

Started instance hang check for server: {0}
   Cause: TBD

SGMT0236

Instance hang check - Server: {0} in Cluster {1} is healthy.
   Cause: TBD

SGMT0237

Instance hang check - Server: {0} in Cluster {1} is unhealthy.
   Cause: TBD

SGMT0239

Instance hang check - Trying to restart non-responsive instance: {0}
   Cause: TBD

SGMT0240

Instance hang check - Trying to stop non-responsive instance: {0} in cluster: {1}
   Cause: TBD

SGMT0241

Instance hang check - Successfully stopped instance: {0}
   Cause: TBD

SGMT0242

Instance hang check - Successfully stopped instance: {0} in cluster: {1}
  Cause: TBD

SGMT0243

Instance hang check - Error in stopping non-responsive instance: {0}. Cannot
restart this instance.
  Cause: TBD

SGMT0244

Instance hang check - Error in stopping non-responsive instance: {0} in cluster:
{1}. Cannot restart this instance.
  Cause: TBD

SGMT0245

Instance hang check - Trying to restart instance: {0}
  Cause: TBD

SGMT0246

Instance hang check - Trying to restart instance: {0} in cluster: {1}
  Cause: TBD

SGMT0247

Instance hang check - Successfully restarted instance: {0}
  Cause: TBD

SGMT0248

Instance hang check - Successfully restarted instance: {0} in cluster: {1}
  Cause: TBD

SGMT0249

Instance hang check - Error in trying to restart non-responsive instance: {0}
  Cause: TBD

SGMT0259

Instance hang check - Error in trying to restart non-responsive instance: {0} in
cluster: {1}
    Cause: TBD

SGMT0260

Instance hang check cycle completed.
    Cause: TBD

SGMT0261

This action can only be deployed on a DAS instance.
    Cause: TBD

SGMT0262

Could not obtain MBeanServerConnection.
    Cause: TBD

SGMT0301

Reconfig notification received for creation
    Cause: TBD

SGMT0302

Reconfig notification received for updation
    Cause: TBD

SGMT0303

Reconfig notification received for deletion
    Cause: TBD

SGMT0304

Reconfig notification received for handling rules creation
    Cause: TBD

SGMT0305

Reconfig notification received for handling rules updation
    Cause: TBD

SGMT0306

Reconfig addition for rule - {0}
   Cause: TBD

SGMT0307

Reconfig notification received for handling rules deletion
   Cause: TBD

SGMT0308

Reconfig deletion for - {0}
   Cause: TBD

SGMT0309

Reconfig update on - {0}
   Cause: TBD

SGMT0310

Reconfig - Disabling self management service. All enabled rules would be
implicitly disableld.
   Cause: TBD

SGMT0311

Reconfig - Enabling self management service. All enabled rules would be
activated.
   Cause: TBD

SGMT0313

Reconfig - Error encountered while deleting rule, name= {0}. Reason for error :
{1}.
   Cause: TBD

SGMT0314

Reconfig - Successfully deleted management rule, Name= {0}, it's Description=
{1}.
   Cause: TBD

SGMT0315

Reconfig - Updating management rule attribute={0}. Old value= {1}, new value= {2}
   Cause: TBD

SGMT0316

Error encountered while disabling rule, name= {0}. Reason is : {1}.
   Cause: TBD

SGMT0317

Error encountered while enabling management rules. Reason is :{0}.
   Cause: TBD

SGMT0318

Reconfig - Cannot activate rule, name= {0}, Description= {1} as the management rules is disbaled. First enable the management rules to activate this rule.
   Cause: TBD

SGMT0319

Reconfig - Cannot disable rule, name= {0}, Description= {1} as it is already not active due to the management rules being disabled.
   Cause: TBD

SYNC Error Messages

This chapter describes messages for errors with a SYNC prefix.

30.1   SYNC **Messages**

SYNC002

```
User name, password, host name or port number may be incorrect.
```
Cause: DAS may be down or unreachable.

Solution: Check if User name, password, host name and port number are correct. Make sure DAS is running and can connect from the current instance(host).

SYNC006

```
Synchronization module subsystem's meta-data.xml file is corrupted.
```
Solution: There are several possible solutions:

- Check synchronization-meta-data.xml and na-synchronization-meta-data.xml exist in appserv-se.jar and is a valid XML file.

- Check if synchronization-meta-data.xml is not part of server classpath.

- synchronization-meta-data.xml is not valid.

- synchronization-meta-data.xml found in server classpath is not well formed.

SYNC029

```
This could be either a config Exception or IOException
```
Solution: Check domain.xml and das.properties. If the problem persists, you may backup and remove applications, generated, config, docroot and lib directories in the local repository and restart the server. The local repository will be synchronized again.

SYNC047

Connection problem during download.

File(s) could not be written to synchronization store.
Solution: Check if DAS is up. Check for connection errors during download. Check if synchronization repository has enough space and has permission. If the repository is on NFS, may be NFS is down.

SYNC049

File(s) could not be written to synchronization store.
Solution: Check if synchronization repository has enough space and has permission. If the repository is on NFS, may be NFS is down.

SYNC052

domain.xml is incorrect.
Solution: Make sure domain.xml errors are fixed. It may have been manually edited.

SYNC074

This could be a network communication error.
Solution: Please check domain.xml, das.properties and server log.

SYNC075

This could be a network communication error or Domain Administration Server is not running.
Solution: Please ensure that Domain Administration Server is running. If DAS is accessible and the problem persists, you may backup and remove applications, generated, config, docroot and lib directories in the local repository and restart the server. The local repository will be synchronized again.

31

UTIL Error Messages

This chapter describes messages for errors with an UTIL prefix.

31.1 UTIL **Messages**

UTIL5001

```
Some system exception occurred
```
   Cause: TBD

UTIL5002

```
Exception occurred getting property
```
   Cause: TBD

UTIL5003

```
Exception occurred setting property
```
   Cause: TBD

UTIL5004

```
Exception occurred getting config object
```
   Cause: TBD

UTIL5005

```
Exception occurred setting config object
```
   Cause: TBD

UTIL5006

Exception occurred getting config key
Cause: TBD

UTIL5007

Exception occurred getting or setting config key
Cause: TBD

UTIL5008

Exception occurred removing property
Cause: TBD

UTIL5009

Exception occurred removing object
Cause: TBD

UTIL5014

Exception in listing registered servers
Cause: TBD

UTIL5015

Could not load class: [{0}]
Cause: TBD

UTIL5016

Configuration exception
Cause: TBD

UTIL5017

Some exception occurred loading deployed applications
Cause: TBD

UTIL5024

IOException occurred in get server repository
Cause: TBD

UTIL5025

Exception occurred in file handling
   Cause: TBD

UTIL5026

Privileged Action Exception : [{0}]
   Cause: TBD

UTIL5027

Managed connection factory exception : [{0}]
   Cause: TBD

UTIL5028

Resource Exception: [{0}]
   Cause: TBD

UTIL5029

Exception in resource to raw info
   Cause: TBD

UTIL5030

Raw info to resource exception
   Cause: TBD

UTIL5031

Empty resource
   Cause: TBD

UTIL5032

Exception finding value from repository
   Cause: TBD

UTIL5033

Exception adding value in repository
   Cause: TBD

UTIL5034

Exception removing value from repository
   Cause: TBD

UTIL5035

Naming exception occurred
   Cause: TBD

UTIL5036

Exception loading resource mappings
   Cause: TBD

UTIL5036

Exception storing resource mappings
   Cause: TBD

UTIL5037

Could not connect to the naming .. lets use a local copy
   Cause: TBD

UTIL5038

Some exception occurred creating ConfigurationImpl
   Cause: TBD

UTIL5042

Error initing repository: [{0}]
   Cause: TBD

UTIL5043

Enterprise repository property error : [{0}]
   Cause: TBD

UTIL5046

Exception creating data source
   Cause: TBD

UTIL5047

Connection Pool does not exist: [{0}]
   Cause: TBD

UTIL5048

Error Loading Jdbc Resource: [{0}]
   Cause: TBD

UTIL5049

Resource named {0} [Type: {1}] is disabled. It was not loaded.
   Cause: TBD

UTIL6001

isJmsDestinationReference has been deprecated; Please use
isResourceEnvReference instead.
   Cause: TBD

UTIL6002

Exception in main().
   Cause: TBD

UTIL6003

MalformedURLException in addResourceAdapter().
   Cause: TBD

UTIL6004

IOException in load().
   Cause: TBD

UTIL6005

IOException in copyFile.
   Cause: TBD

UTIL6006

Exception in JarAccess create().
   Cause: TBD

UTIL6007

Exception in LegacyConfigConverter convert().
   Cause: TBD

UTIL6008

ConfigException in ORBManager.
   Cause: TBD

UTIL6009

Unexcpected Exception in createORB.
   Cause: TBD

UTIL6010

Error Cannot load library. [{0}]
   Cause: TBD

UTIL6011

'jms-client-id' is an obsolete property. Set client id on a JMS Connection
Factory and use the 'mdb-connection-factory' property instead.
   Cause: TBD

UTIL6012

message-driven beans with container-managed transactions can't have a jms
acknowledge mode.
   Cause: TBD

UTIL6013

You have chosen to make this bean manage its own transactions. This is illegal
for entity beans, and the (session) bean cannot specifiy any method level
container transactions.
   Cause: TBD

UTIL6014

error converting properties file.
   Cause: TBD

UTIL6015

Unexpected Exception in ResourceCache getResource().
   Cause: TBD

UTIL6016

Exception in ServerViewer refresh().
   Cause: TBD

UTIL6017

Excpetion in SimpleUniqueValueGenerator getGeneratorBackendId().
   Cause: TBD

UTIL6018

Excpetion in SimpleUniqueValueGenerator nextNumberInternal().
   Cause: TBD

UTIL6019

WARNING : runAsRole and runAsPrincipal cannot exist independent of each other.
Ignore...
   Cause: TBD

UTIL6020

Error in removing resource adapters
   Cause: TBD

UTIL6021

Error [{0}] occurred
   Cause: TBD

UTIL6022

Error connecting server viewer: [{0}]
   Cause: TBD

UTIL6023

Exception in DebugController setInfo.
   Cause: TBD

UTIL6024

Exception in FileUtil CountWords().
   Cause: TBD

UTIL6025

The main method is either not public or not static.
   Cause: TBD

UTIL6026

The main method's return type is not void.
   Cause: TBD

UTIL6027

Exception in invokeApplicationMain [{0}].
   Cause: TBD

UTIL6028

Exception in FileUtil
   Cause: TBD

UTIL6029

Exception in checkORBInitialHost
   Cause: TBD

UTIL6030

Exception in checkORBInitialPort
   Cause: TBD

UTIL6031

Number Format Exception, Using default value(s).
   Cause: TBD

UTIL6032

Could not initialize connection monitoring
   Cause: TBD

UTIL6033

Could not initialize Thread Pool monitoring
   Cause: TBD

UTIL6034

Could not initialize ORB monitoring
   Cause: TBD

UTIL6035

Exception converting to integer
   Cause: TBD

UTIL6036

System property reference missing trailing "'}'" at {0} in domain.xml.
   Cause: TBD

UTIL6037

System property reference missing starting "$'{'" at {0} in domain.xml.
   Cause: TBD

UTIL6038

Unknown property {0} found unresolving {1}.
   Cause: TBD

UTIL6039

Exception {0} resolving password alias {1} in property {2}.
   Cause: TBD

UTIL6040

Error attempting to delete {0}
   Cause: TBD

UTIL6041

Performing gc to try to force file closures
   Cause: TBD

UTIL6042

Attempt to delete {0} succeeded after {1} retries
   Cause: TBD

UTIL6043

Attempt to delete {0} failed after {1} retries
   Cause: TBD

UTIL6044

Error attempting to rename {0}
   Cause: TBD

UTIL6045

Attempt to rename {0} to {1} succeeded after {2} retries
   Cause: TBD

UTIL6045

Internal Error in Reporter -- couldn't find/make default reporter!
   Cause: TBD

UTIL6046

Attempt to rename {0} to {1} failed after {2} retries
   Cause: TBD

UTIL6047

Attempt to rename {0} to {1} succeeded without any retries
   Cause: TBD

UTIL6048

Attempt to delete {0} failed; now marked for delete-on-exit
   Cause: TBD

UTIL6100

Windows file path {0} is too long; consider shortening the module name or the installation directory path
   Cause: TBD

UTIL6101

Error preparing class loader
   Cause: TBD

UTIL6537

PropertyWrapper::PropertyWrapper() does not have security access to [{0}] >
[{1}]
   Cause: TBD

UTIL6538

Error creating filecachestore
   Cause: TBD

UTIL6539

Error doing lookup
   Cause: TBD

UTIL6540

Storing error
   Cause: TBD

UTIL6541

[{0}] : lookup failed for: [{1}]
   Cause: TBD

UTIL6542

Lookup failed for Key: [{0}]
   Cause: TBD

UTIL6543

Exception converting to array
   Cause: TBD

UTIL6544

CallerInfo Exception
   Cause: TBD

UTIL6546

Bad Location Exception
Cause: TBD

UTIL6547

Got exception in ReporterImpl.pr():
Cause: TBD

UTIL6548

Got some exception
Cause: TBD

UTIL6549

Some IOException occurred
Cause: TBD

UTIL6550

Error in local string manager - resource bundle is probably missing.
Cause: TBD

UTIL6551

Error while caching the local string manager - package name may be null.
Cause: TBD

UTIL6552

Error while constructing the local string manager object.
Cause: TBD

UTIL6553

Error while formating the local string.
Cause: TBD

32

VRFY Error Messages

This chapter describes messages for errors with an VRFY prefix.

32.1 VRFY **Messages**

VRFY5001

```
Could not instantiate class [{0}].
```
   Cause: TBD

VRFY5002

```
Class [{0}] not found.
```
   Cause: TBD

VRFY5003

```
Could not access class [{0}].
```
   Cause: TBD

VRFY5004

```
Verifier class [{0}] not found.
```
   Cause: TBD

VRFY5005

```
Verifier method not found.
```
   Cause: TBD

VRFY5006

Problem in initializing verifier.
> **Cause:** TBD

VRFY5100

About to get all test names from props file.
> **Cause:** TBD

VRFY5101

loadTestsFromPropsFile...IOException
> **Cause:** TBD

VRFY5102

loadTestsFromPropsFile...ParserConfigException
> **Cause:** TBD

VRFY5103

loadTestsFromPropsFile...SAXException
> **Cause:** TBD

VRFY5104

error while executing test
> **Cause:** TBD

VRFY5105

Server XML Verified Test Results are written in [{0}]
> **Cause:** TBD

VRFY5106

Error Writing File
> **Cause:** TBD

VRFY5107

Error getting LocalStringsManager
> **Cause:** TBD

VRFY5108

```
ERROR : Could not create a Server Object
```
   Cause: TBD

```
VRFY5109
```

```
Looking at file [{0}]
```
   Cause: TBD

```
VRFY5110
```

```
Could not find class
```
   Cause: TBD

```
VRFY5111

33

WEB Error Messages

This chapter describes messages for errors with a WEB prefix.

33.1 WEB **Messages**

WEB0100

Loading web module [{0}] in virtual server [{1}] at [{2}]
   Cause: TBD

WEB0101

Error loading web module [{0}] in virtual server [{1}]: {2}
   Cause: TBD

WEB0102

This web container has already been started
   Cause: TBD

WEB0103

This web container has not yet been started
   Cause: TBD

WEB0104

A web container has not been created for the server configuration
   Cause: TBD

WEB0105

An error occurred while starting the web container
   Cause: TBD

WEB0106

An error occurred while stopping the web container
   Cause: TBD

WEB0107

An error occurred while parsing the server configuration
   Cause: TBD

WEB0108

extra-class-path component [{0}] is not a valid pathname
   Cause: TBD

WEB0109

Property [{0}] is not yet supported
   Cause: TBD

WEB0110

Ignoring invalid property [{0}] = [{1}]
   Cause: TBD

WEB0111

Enabling file-based persistence for web module [{0}]''s sessions
   Cause: TBD

WEB0112

This web container was unable to load application [{0}]
   Cause: TBD

WEB0113

Virtual server [{0}] already has a web module loaded at [{1}]; therefore web
module [{2}] cannot be loaded at this context path on this virtual server.
   Cause: TBD

WEB0114

SSO is disabled in virtual server [{0}]
   Cause: TBD

WEB0115

Error in SSO configuration: {0}
   Cause: TBD

WEB0116

Using alternate deployment descriptor [{0}] for web module [{1}]
   Cause: TBD

WEB0117

Error loading web module [{0}] in virtual server [{1}]: {2}
   Cause: TBD

WEB0118

Error in Applications configuration.
   Cause: TBD

WEB0119

Error in HttpService configuration.
   Cause: TBD

WEB0120

Cannot load policy file.
   Cause: TBD

WEB0121

Enabled session ID reuse for web module [{0}] in virtual server [{1}]
   Cause: TBD

WEB0122

Cannot map admin application to virtual-server.
   Cause: TBD

WEB0123

WebModule [{0}] failed to deploy and has been disabled: [{1}].
   Cause: TBD

WEB0124

Property element in sun-web.xml has null 'name' or 'value'
   Cause: TBD

WEB0125

class-loader attribute dynamic-reload-interval in sun-web.xml not supported
   Cause: TBD

WEB0126

Failed to parse sun-web.xml singleThreadedServletPoolSize property value ({0})
of web module deployed at {1}, using default ({2})
   Cause: TBD

WEB0127

Web module [{0}] is not loaded in virtual server [{1}]
   Cause: TBD

WEB0128

Invalid Session Management Configuration for app [{0}] - defaulting to memory:
persistence-type = [{1}] / persistenceFrequency = [{2}] / persistenceScope =
[{3}]
   Cause: TBD

WEB0129

Invalid Session Management Configuration for non-distributable app [{0}] -
defaulting to memory: persistence-type = [{1}] / persistenceFrequency = [{2}] /
persistenceScope = [{3}]
   Cause: TBD

WEB0130

Enabling ha-based persistence for web module [{0}]''s sessions: persistence-type
= [{1}] / persistenceFrequency = [{2}] / persistenceScope = [{3}]
   Cause: TBD

WEB0131

Enabling no persistence for web module [{0}]''s sessions: persistence-type = [{1}]
   Cause: TBD

WEB0132

Error creating javax.management.ObjectName from {0}
   Cause: TBD

WEB0133

Failed to read attribute {0} from MBean {1}
   Cause: TBD

WEB0134

Host names specified in allowRemoteHost property of virtual server [{0}] will not be matched because DNS lookups have been disabled
   Cause: TBD

WEB0135

Host names specified in denyRemoteHost property of virtual server [{0}] will not be matched because DNS lookups have been disabled
   Cause: TBD

WEB0136

Virtual server [{0}] has a property with missing name or value
   Cause: TBD

WEB0137

Invalid redirect property value [{0}]: Contains more than one [{1}] element
   Cause: TBD

WEB0138

Invalid redirect property value [{0}]: Missing from element
   Cause: TBD

WEB0139

Invalid redirect property value [{0}]: Either url or url-prefix must be
specified
   Cause: TBD

WEB0140

Invalid redirect property value [{0}]: Contains both url and url-prefix elements
   Cause: TBD

WEB0141

Invalid redirect property value [{0}]: escape must be equal to yes or no
   Cause: TBD

WEB0142

Invalid send-error property value [{0}]: Contains more than one [{1}] element
   Cause: TBD

WEB0143

Invalid send-error property value [{0}]: Missing path element
   Cause: TBD

WEB0144

Invalid redirect URL [{0}]: Impossible to URL encode
   Cause: TBD

WEB0137

Schema updater error
   Cause: TBD

WEB0141

{0} Could not obtain viable connection to HADB
   Cause: TBD

WEB0142

{0} verify HADB is running and accessible over the network
   Cause: TBD

WEB0143

{0} verify session store is configured correctly in HADB
  Cause: TBD

WEB0144

Unable to open connection to HA Store: {0}
  Cause: TBD

WEB0145

HADB persistence operation failed
  Cause: TBD

WEB0146

HADB connection pool not defined or user, password or serverList are null
  Cause: TBD

WEB0150

HADB Health Check - Configuration Error - check configuration settings
  Cause: TBD

WEB0151

HADB Health Check - error configuring HADB agent connection url
  Cause: TBD

WEB0152

HADB Health Check - error configuring HADB agent password
  Cause: TBD

WEB0153

HADB Health Check - error configuring HADB agent port
  Cause: TBD

WEB0154

HADB Health Check - error configuring HADB agent hosts
  Cause: TBD

WEB0155

HADB Health Check - error configuring HADB database name
   Cause: TBD

WEB0156

HADB Health Check - Warning - HADB is non-operational
   Cause: TBD

WEB0157

HADB Health Check - Warning - HADB is now operational
   Cause: TBD

WEB0158

HADB Health Check - Warning - HADB tables missing - please recreate
   Cause: TBD

WEB0200

Configuration error in web module [{0}] (while initializing virtual server
[{1}])
   Cause: TBD

WEB0201

The web module [{0}] has been designated as the default web module for virtual
server [{1}]
   Cause: TBD

WEB0202

Error looking up the configuration information of virtual server [{0}]
   Cause: TBD

WEB0203

Error looking up the configuration information of the default web module [{0}] of
virtual server [{1}]
   Cause: TBD

WEB0204

The default web module [{0}] is either disabled or does not specify virtual
server [{1}]
   Cause: TBD

WEB0205

Configuration error in applications module (while initializing virtual server
[{1}])
   Cause: TBD

WEB0300

Creating VS {0} @docroot {1}
   Cause: TBD

WEB0301

Creating Listener @port {0} {1}
   Cause: TBD

WEB0302

Starting Sun-Java-System/Application-Server.
   Cause: TBD

WEB0303

Stopping Sun-Java-System/Application-Server.
   Cause: TBD

WEB0304

Unsupported http-service property ({0}) is being ignored
   Cause: TBD

WEB0305

HTTP listener's proxy port is not a numeric string
   Solution: Check to see if the value of the HTTP listener's server-name attribute contains a
   colon, and if so, make sure the name component following the colon is a numeric string.

WEB0306

Unable to parse redirect-port ({0}) attribute of http-listener {1}, using
default: {2}
   Cause: TBD

WEB0307

All SSL protocol variants disabled for http-listener {0}, using SSL
implementation specific defaults
   Cause: TBD

WEB0308

All SSL cipher suites disabled for http-listener {0}, using SSL implementation
specific defaults
   Cause: TBD

WEB0309

Unrecognized cipher: {0}
   Cause: TBD

WEB0310

Unable to parse acceptor-threads attribute ({0}) of http-listener {1}, using
default: {2}
   Cause: TBD

WEB0311

default-virtual-server ({0}) referenced by HTTP listener {1} does not match
virtual server ({2}) in whose http-listeners attribute the HTTP listener is
listed
   Cause: TBD

WEB0312

virtual server {0} does not have any docroot
   Cause: TBD

WEB0313

Unable to parse port number {0} of http-listener {1}
   Cause: TBD

WEB0314

virtual server {0} has an invalid docroot {1}
> **Cause:** TBD

WEB0315

Two or more virtual servers associated with the same HTTP listener share the same host name.
> **Solution:** Make sure that the sets of host names of all virtual servers associated with the same HTTP listener are disjunct.

WEB0316

Unable to convert timeout-in-seconds attribute value ({0}) of keep-alive element to int, using default: {1}
> **Cause:** TBD

WEB0317

Unable to convert max-connections attribute value ({0}) of keep-alive element to int, using default: {1}
> **Cause:** TBD

WEB0318

Unable to convert thread-count attribute value ({0}) of keep-alive element to int, using default: {1}
> **Cause:** TBD

WEB0318

Invalid max-pending-count attribute value: ({0}). Using default {1}.
> **Cause:** TBD

WEB0319

Invalid receive-buffer-size-in-bytes attribute value: ({0}). Using default {1}.
> **Cause:** TBD

WEB0320

Invalid send-buffer-size-in-bytes attribute value: ({0}). Using default {1}.
> **Cause:** TBD

WEB0321

```
http-file-cache element not supported
```
Cause: TBD

WEB0322

```
Unable to load ProxyHandler implementation class {0}
```
Cause: TBD

WEB0323

```
{0} not an instance of com.sun.appserv.ProxyHandler
```
Cause: TBD

WEB0324

```
Missing end delimiter in access log pattern: {0}
```
Cause: TBD

WEB0325

```
Invalid component: {0} in access log pattern: {1}
```
Cause: TBD

WEB0326

```
Access log buffer size ({0}) too small to hold single access log entry, doubling
buffer capacity
```
Cause: TBD

WEB0327

```
Unsupported http-listener property ({0}) is being ignored
```
Cause: TBD

WEB0328

```
Invalid request-processing thread-count ({0}) is being ignored
```
Cause: TBD

WEB0329

```
Invalid request-processing initial-thread-count ({0}) is being ignored
```
Cause: TBD

WEB0330

Invalid request-processing request-timeout-in-seconds ({0}) is being ignored
   Cause: TBD

Cause: TBD

WEB3003

Received unexpected exception while retrieving server config objects
Cause: TBD

WEB3004

The Application server could not initialize the native HTTP service. This could
be cause by a misconfiguration, or a internal failure.
Cause: It is also possible that the native library has been found missing.

Solution: Check that the `HttpService` configuration is valid. Examine the message reported
by the native HTTP service for clues. Verify that the following needed libraries are present
in the Application Servers's lib directory. If the problem persists, contact Sun with the
complete error log message.

WEB3005

The Application server could not start the native HTTP service. This could be
cause by a misconfiguration, or a internal failure.
Cause: It is also possible that the native library has been found missing.

Solution: Check that the `HttpService` configuration is valid. Examine the message reported
by the native HTTP service for clues. Verify that the following needed libraries are present
in the Application Servers's lib directory. If the problem persists, contact Sun with the
complete error log message.

WEB3006

The file is missing.
Solution: Check that the file is present in the Application Server's lib directory, or if enabled
in the Library Path. Please contact Sun with the complete error log message.

WEB3007

This is an Unexpected Internal Error. Please contact Sun with the complete error log message.

Solution: Please correct the format.

WEB3008

Initializing httpservice monitoring

WEB5006

Exception in SSLSocketFactory constructor [{0}]
   Cause: TBD

WEB5007

Exception during handling of {0} event
   Cause: TBD

WEB8074

Exception.
   Cause: TBD

WEB8080

Unable to register {0} with monitoring registry
   Cause: TBD

34

WSS Error Messages

This chapter describes messages for errors with a WSS prefix.

34.1 WSS **Messages**

WSS0126

Unsupported algorithm type. Only RSA supported.
Solution: Check that the signature algorithm is RSA.

WSS0129

Malformed message ds:Signature element missing from the wsse:Security header
block.
Solution: Check proper signature was generated while signing.

WSS0134

Unable to Initialize XMLCipher with the given Key.
Solution: Check that the XMLCipher was initialized properly.

WSS0137

An appropriate JCE provider is not configured in the JRE.
Solution: Look at root exception for more clues.

WSS0144

Base64Decoding exception is the root cause.
Solution: Check that the data is valid base64 encoded.

WSS0147

TransformationConfiguration exception while trying to use stylesheet to pretty print.
Solution: Make sure style sheet is valid.

WSS0148

Exception while trying to pretty print using transform.
Solution: Make sure the original SOAP Message and style sheet are both correct.

WSS0156

Error in certificate used for validation.
Solution: Check that the token contains a valid Certificate.

WSS0165

XPath does not correspond to a DOM element.
Solution: Check that the node represented by the XPath is a valid DOM element.

WSS0167

Invalid signature; verification failed.
Solution: Make sure the signature was not tampered with in transit.

WSS0168

Unable to generate a random symmetric key.
Solution: Verify that the KeyGenerator has been properly initialized.

WSS0169

Value of FilterParameterConstants.BINARY_SEC_TOKEN is not set.
Solution: Check that direct referencestrategy is set before exporting the certificate.

WSS0181

Subject not authorized; validation failed.
Solution: Check that the user is authorized.

WSS0182

`FilterParameterConstants.REFERENCE_LIST` parameter has a null value.
Solution: The reference list that needs to be decrypted usually set by `ImportEncryptedKeyFilter`.

WSS0183

Could not locate a valid symmetric key needed for decryption.
Solution: Value of symmetric key seems to be null. Check its value.

WSS0184

Could not retrieve security domain from the Securable SOAP message.
Solution: Make sure the `SecurityEnvironment` factory has set the right security environment.

WSS0185

Could not find the certificate associated with the direct reference strategy.
Solution: Check that the URI is valid and `subjectkeyidentifier` parameter is set in configuration.

WSS0189

Data decryption algorithm has to be either Triple-DES, AES128-CBC, AES256-CBC.
Solution: Check that the encryption algorithm used is either 3DES, AES128_CBC, AES256_CBC.

WSS0190

The number of elements encrypted is less than required/allowed.
Solution: Check that the data references for encryption (in message) match the requirements.

WSS0191

A SymmetricKey was not generated earlier that is set on the calling thread.

KeyName specified could not locate a key in the security environment.
Solution: Check that `ExportEncryptedKeyFilter` is called before. Check that a valid `KeyStore` URL is used to instantiate the `SecurityEnvironment` and it contains a matching `SecretKey`.

WSS0192

At least one target needs to be specified for encryption.
Solution: Check that a non-null target list is used to instantiate the filter.

WSS0193

Target specified does not correspond to a valid message part.
  Solution: Check that a valid XPath/QName/wsuId are specified.

WSS0194

SOAP-ENV:Header can not fully be encrypted.
SOAP-ENV:Body can not fully be encrypted.
  Solution: Check that a valid XPath/QName/wsuId are specified complying to the spec.

WSS0195

ReferenceListBlock not set on the calling thread.
  Solution: Check that ExportEncryptedKeyFilter is called before. Check that ExportReferenceListFilter is called before.

WSS0196

An instance of SecurityEnvironment class for the operating environment was not set on SecurableSoapMessage.
  Solution: Check that SetSecurityEnvironmentFilter processed the message before.

WSS0198

Only RSA_SHA1 Signature algorithm is supported.
  Solution: Check that RSA_SHA1 signature algorithm is specified.

WSS0199

Timestamp creation time can not be null.
  Solution: Check that non-null creation time is used to instantiate the filter.

WSS0203

Header block corresponding to the desired requirement not found.
  Solution: Check that the message meets the security requirements.

WSS0204

Illegal security header block found in the security header.
  Solution: Check that the message is SOAP Security specification compliant.

WSS0205

Requirement for `wsu:Timestamp` has not been met.
  Solution: Check that the message meets the security requirements.

WSS0206

Not all receiver requirements for security have been met.
  Solution: Check that the message meets the security requirements.

WSS0208

Extra security than required by the receiver side policy found in the message.
  Solution: Check that the message strictly meets the security requirements.

WSS0209

The message filter is incorrectly configured to process an inbound message.
  Solution: Check that the filters are correctly configured to process inbound messages.

WSS0210

Only RSAv1.5 Key Encryption Algorithm is supported.
  Solution: Check that the Key Encryption Algorithm used in the inbound message is `RSAv1.5`.

WSS0212

Receiver requirement for digested password in UsernameToken not met.
  Solution: Check that the message meets the security requirements.

WSS0213

Receiver requirement for nonce in UsernameToken not met.
  Solution: Check that the message meets the security requirements.

WSS0215

`handle()` call for a PropertyCallback on the handler threw exception.
  Solution: Check the handler implementation.

WSS0216

`handle()` call on the handler threw exception.
  Solution: Check the handler implementation.

WSS0217

handle() call on the handler threw exception.
   Solution: Check the handler implementation.

WSS0218

handle() call on the handler failed to set the Callback.
   Solution: Check the handler implementation for
   SignatureKeyCallback.DefaultPrivKeyCertRequest.

WSS0219

handle() call on the handler failed to set the Callback.
   Solution: Check the handler implementation for
   SignatureKeyCallback.DefaultPrivKeyCertRequest.

WSS0220

handle() call on the handler failed to set the Callback.
   Solution: Check the handler implementation for
   DecryptionKeyCallback.AliasSymmetricKeyRequest.

WSS0221

handle() call on the handler failed to set the Callback.
   Solution: Check the handler implementation for SignatureKeyCallback and/or
   EncryptionKeyCallback, check keystores and truststores.

WSS0222

handle() call on the handler failed to set the Callback.
   Solution: Check keystore path and ensure that the right keys are present.

WSS0301

Data malformed. Base 64 decoding error.
   Solution: Verify that data is base64 encoded.

WSS0302

Certificate parsing problem.
   Solution: Data stream used to create the x509 certificate maybe corrupted.

WSS0303

Certificate encoding exception.
   Solution: Check that the x509 data is valid. Could not extract raw bytes from it.

WSS0306

Invalid password type.
   Solution: Password type must match that specified by the WSS specification.

WSS0307

Nonce encoding namespace check failed.
   Solution: Nonce encoding type namespace seems invalid.

WSS0310

NoSuchAlgorithmException: Invalid algorithm.
   Solution: Check that the algorithm passed to SecureRandom is valid.

WSS0311

Password digest could not be created.
   Solution: Check that the algorithm passed to MessageDigest is valid.

WSS0316

BinarySecurity token's Encoding type is invalid.
   Solution: Check that encoding value for BinarySecurity token is valid as per spec.

WSS0317

Could not find X.509 certificate.
   Solution: Ensure certificate path is not empty and certificate type is correct.

WSS0318

Error while parsing and creating the KeyInfo instance.
   Solution: Check values passed to KeyInfo constructor.

WSS0319

Could not add key name to KeyInfo Header block.
   Solution: Check KeyInfo and KeyName have been instantiated without exceptions.

WSS0320

Could not get KeyName from KeyInfo.
> **Solution:** Make sure the KeyName exists in the KeyInfo.

WSS0321

Could not retrieve element from KeyInfo or could not import the node.
> **Solution:** Check the element to be converted to SOAPElement.

WSS0322

Exception while parsing and creating the Signature element.
> **Solution:** Check that a fully initialized XML Signature was passed.

WSS0323

Exception while trying to sign.
> **Solution:** Check the key used to sign.

WSS0324

Exception while adding a Reference with URI, transforms and Digest algorithm URI to SignedInfo.
> **Solution:** Verify the following:
>
> - Check getSignatureValue failure cause from underlying XML DSIG implementation.
> - Check that the message signed using corresponding private key, and has not been tampered with.
> - Check values passed to constructor of XMLSignature.addDocument passed to XML DSig implementation are correct.

WSS0327

Could not retrieve element from Signature or could not import the node.
> **Solution:** Check the element to be converted to SOAPElement.

WSS0328

Error parsing date.
> **Solution:** Check date format is in UTC. Check it is yyyy-MM-dd'T'HH:mm:ss'Z' or yyyy-MM-dd'T'HH:mm:ss'.'sss'Z'.

WSS0329

Expecting UsernameToken Element.
> **Solution:** Check that the next element is `UsernameToken`.

WSS0330

Username not first child of UsernameToken.
> **Solution:** Make sure first child of `wsse:UsernameToken` is `Username` in `wsse` namespace.

WSS0331

Element may not be a proper UsernameToken.
> **Solution:** Check that the `UsernameToken` matches the token schema.

WSS0332

Username was null.
> **Solution:** Check `UsernameToken` contains a valid `Username`.

WSS0333

Keystore URL is null.
> **Solution:** Check that the property `javax.net.ssl.keyStore` is set properly.

WSS0334

KeyIdentifier holds invalid ValueType.
> **Solution:** Check `KeyIdentifier` `ValueType`'s value.

WSS0335

KeyReference type not supported.
> **Solution:** `KeyReference` type should be one of `KeyIdentifier`, `Reference`, `X509Data`.

WSS0336

Can't locate public key.
> **Solution:** Check public key retrieved should not be null.

WSS0337

Could not resolve URI.
> **Solution:** Check `DirectReference`'s `ValueType`, it is not supported.

WSS0338

Key Reference Mechanism not supported.
Solution: Check reference is one of X509IssuerSerial, DirectReference, KeyIdentifier.

WSS0339

Support for processing information in the given ds:KeyInfo is not present.
Solution: Check ds:KeyInfo matches schema.

WSS0340

Creation time cannot be ahead of current UTC time.
Solution: Check system time and ensure it is correct.

WSS0341

Creation time is very old.
Solution: Check system time and ensure it is correct.

WSS0342

BinarySecurity Token's Value type is invalid.
Solution: Check that valueType for BinarySecurity token is valid as per spec.

WSS0343

Error in creating the BST due to {0}.
Solution: Check that all required values are set on the Binary Security Token, including TextNode value.

WSS0344

The binary data in the Security Token can not be decoded, expected Base64 encoding.
Solution: Check to see that the encoding format of the Binary Security Token is Base64Binary.

WSS0345

Error creating SOAPElement for EncryptedDataHeaderBlock.
Solution: If SOAPElement is used to create EncryptedData HeaderBlock, check to see that it is valid as per spec.

WSS0346

Invalid SOAPElement passed to EncryptedDataHeaderBlock constructor.
  Solution: Check that the SOAPElement passed to EncryptedDataHeaderBlock is valid as per
  spec.

WSS0347

SOAPElement used to initialize EncryptedType may not have CipherData element.

CipherData may not have been set on the EncryptedType.
  Solution: Check to see SOAPElement used to initialize EncryptedType has CipherData. Check
  to see setCipherData() is called on the EncryptedType.

WSS0348

Error creating SOAPElement for EncryptedKeyHeaderBlock.
  Solution: If SOAPElement is used to create EncryptedKeyHeaderBlock, check to see that it is
  valid as per spec.

WSS0349

Invalid SOAPElement passed to EncryptedKeyHeaderBlock().
  Solution: Check that the SOAPElement passed to EncryptedKeyHeaderBlock() is valid as per
  spec.

WSS0350

Error creating/updating CipherData SOAPElement (in EncryptedKeyHeaderBlock).
  Solution: Refer your SAAJ API Documentation.

WSS0351

Error creating EncryptionMethod SOAPElement.
  Solution: Refer your SAAJ API Documentation.

WSS0352

Error creating javax.xml.soap.Name for CipherValue.
  Solution: Refer your SAAJ API Documentation.

WSS0353

No CipherValue element(s) are present in CipherData.
  Solution: Check to see if setCipherValue() is called on EncryptedType.

WSS0354

An error may have occurred creating javax.xml.soap.Name for EncryptionMethod.
Cause: An error may have occurred creating javax.xml.soap.Name for KeyInfo. An error
may have occurred creating javax.xml.soap.Name for CipherData. An error may have
occurred creating javax.xml.soap.Name for EncryptionProperties.

Solution: Refer your SAAJ API Documentation.

WSS0355

Error creating
com.sun.org.apache.xml.security.keys.content.keyvalues.DSAKeyValue.
Error creating
com.sun.org.apache.xml.security.keys.content.keyvalues.RSAKeyValue. Error
creating com.sun.org.apache.xml.security.keys.content.KeyValue.
Solution: Check that a non-null SOAPElement is passed to addXXXKeyValue().

WSS0356

Error creating com.sun.org.apache.xml.security.keys.content.X509Data.
Solution: Check that a non-null SOAPElement is passed to addX509Data().

WSS0357

Error getting KeyValue from KeyInfo for the given index.
Solution: Check that the ds:KeyInfo element has ds:KeyValue elements. Check that the
index (beginning with 0) used to refer the ds:KeyValue element is valid.

WSS0358

Error getting X509Data from KeyInfo for the given index.
Solution: Check that the ds:KeyInfo element has ds:X509Data elements. Check that the
index (beginning with 0) used to refer the ds:X509Data element is valid.

WSS0359

Error adding com.sun.org.apache.xml.security.keys.content.X509Data to KeyInfo.
Solution: Check that a valid com.sun.org.apache.xml.security.keys.content.X509Data
(as per specs.) is passed to addX509Data().

WSS0360

An error may have occurred creating javax.xml.soap.Name for ReferenceList.
Solution: Refer your SAAJ API Documentation.

WSS0361

An error may have occurred creating org.w3c.dom.Element for ReferenceList.
   Cause: The org.w3c.dom.Document object passed ReferenceListHeaderBlock() may be null.

   Solution: Check that the Namespace specified does not contain any illegal characters as per XML 1.0 specification. Check that the QName specified is not malformed (Refer to the J2SE Documentation for more information). Check that a non-Null Document is passed to the ReferenceListHeaderBlock().

WSS0362

Invalid SOAPElement passed to ReferenceListHeaderBlock().
   Solution: Check that the SOAPElement passed to ReferenceListHeaderBlock() is valid as per spec.

WSS0363

Error creating javax.xml.soap.SOAPElement for xenc:DataReference.
   Cause: Error adding xenc:DataReference (SOAPElement) as child element of xenc:DataReference (SOAPElement). Error setting URI attribute on javax.xml.soap.SOAPElement for xenc:DataReference.

   Solution: Refer your SAAJ API Documentation.

WSS0365

Error creating javax.xml.soap.SOAPElement for namespace node.
   Solution: Refer your SAAJ API Documentation.

WSS0368

Error getting SOAPEnvelope from SOAPPart.
   Solution: Refer your SAAJ API Documentation.

WSS0369

Error getting SOAPHeader from SOAPEnvelope.
   Cause: Error creating SOAPHeader.

   Solution: Refer to your SAAJ API Documentation.

WSS0371

Error in getting the SOAPBody from the SOAPMessage.

Error in creating javax.xml.soap.Name for setting the fault on SOAPBody. Error in adding fault to SOAPBody.

Solution: Refer your SAAJ API Documentation.

WSS0376

Error importing the SOAPElement representing the header block to the document corresponding to the SOAPMessage to which the header is being added.

Solution: Check that the SecurityHeaderBlock can be transformed to a valid SOAPElement. Refer to the J2SE Documentation for more.

WSS0377

Error creating javax.xml.soap.SOAPElement for SecurityTokenReference.

Solution: Refer your SAAJ API Documentation.

WSS0378

Error creating javax.xml.soap.SOAPElement for SecurityTokenReference.

Solution: Check that the org.w3c.dom.Document object passed to SecurityTokenReference() is non-null. Refer your SAAJ API Documentation.

WSS0379

SOAPElement passed to SecurityTokenReference() is not a valid SecurityTokenReference element as per spec.

Solution: Check that a valid SOAPElement as per spec. is passed to SecurityTokenReference().

WSS0380

The ds:Reference would already have been set using the constructors.

Solution: Check that a SOAPElement with ds:Reference (child element) is not used to instantiate SecurityTokenReference.

WSS0381

Error in setting the passed ReferenceElement on SecurityTokenReference.

Solution: Refer your SAAJ API Documentation.

WSS0382

Error appending ds:Object element to ds:Signature.
> **Solution:** Check that a valid `ds:Object` SOAPElement (as per spec.) is passed to `appendObject()`. Check that a non-null SOAPElement is passed to `appendObject()`.

WSS0383

Owner document of ds:Signature SOAPElement is null.
> **Solution:** Check that the Document used to instantiate `SignatureHeaderBlock()` is not null.

WSS0384

Error creating javax.xml.soap.Name for Timestamp.
> **Solution:** Refer your SAAJ API Documentation.

WSS0385

The SOAPElement used to instantiate Timestamp() is not valid (as per specification).
> **Solution:** Check that the `Localname` and `NamespaceURI` of the SOAPElement used to create `Timestamp()` are correct as per spec.

WSS0386

Error creating javax.xml.soap.SOAPElement for Timestamp.

Error adding child SOAPElements to the Timestamp element.
> **Solution:** Refer your SAAJ API Documentation.

WSS0387

Username is not set.
> **Solution:** Check that a `Username` has been passed through the configuration file or through the callback handler.

WSS0388

Error creating javax.xml.soap.SOAPElement for UsernameToken.

Error adding child SOAPElements to the UsernameToken element.
> **Solution:** Refer your SAAJ API Documentation.

WSS0389

Base64 nonce encoding type has not been specified.

> **Solution:** Check that the nonce encoding type used to create `UsernameToken` is `Base64`.

WSS0390

UTF-8 Charset is unsupported for byte-encoding (a string).

> **Solution:** Refer your J2SE Documentation.

WSS0391

Invalid Localname and NamespaceURI of the SOAPElement used for creating the
token.

> **Solution:** Check that the `Localname` and `NamespaceURI` of the `SOAPElement` used to create
> `X509SecurityToken` are valid (as per specification).

WSS0393

The expiration time in Timestamp cannot be before current UTC time.

> **Solution:** Check system time and ensure it is correct.

WSS0394

Error parsing date.

> **Solution:** Check date format is in UTC. Check it is yyyy-MM-dd'T'HH:mm:ss'Z' or
> yyyy-MM-dd'T'HH:mm:ss'.'sss'Z'.

WSS0500

Classname not a recognized class name for a `MessageFilter`.

> **Solution:** Check that the class implements `MessageFilter`.

WSS0502

Element encountered does not match element expected.

> **Solution:** Check that the XML file follows schema for defining configuration.

WSS0503

Element encountered does not match valid element expected.

> **Solution:** Check that the XML file follows schema for defining configuration.

WSS0508

Default settings can not be specified after custom settings are specified.
   Solution: Check that no sender operations or receiver requirements are specified in a
   configuration. file. Check that no sender or receiver settings are programmatically added.

WSS0509

Custom settings can not be specified after default settings are specified.
   Solution: Check that no default settings are programmatically added.

WSS0511

Non-permissible boolean value string - valid strings are true and false.
   Solution: Check that the boolean value strings are either true or false.

WSS0512

Non-permissible attribute on a Security Configuration element.
   Solution: Check that the configuration file is consistent with the security configuration
   schema.

WSS0513

Non-permissible element on xwss:SecurityConfiguration.
   Solution: Check that the configuration file is consistent with the security configuration
   schema.

WSS0514

Non-permissible child element in a Security Configuration element.
   Solution: Check that the configuration file is consistent with the security configuration
   schema.

WSS0515

Impermissible value for key reference string.
   Solution: Check that the configuration file is consistent with the security configuration
   schema.

WSS0516

Non-permissible duplicate element on a Security Configuration Element.
   Solution: Check that the configuration file is consistent with the security configuration
   schema.

WSS0517

Non-permissible duplicate element on a Security Configuration Element.
Solution: Check that the configuration file is consistent with the security configuration schema.

WSS0519

Non-permissible/missing attribute value.
Solution: Check that the configuration file is consistent with the security configuration schema.

WSS0520

xwss:SymmetricKey is not permitted along with xwss:X509Token.
Solution: Check that the configuration file is consistent with the security configuration schema.

WSS0600

A Key can not be located in SecurityEnvironment for the Token Reference.
Solution: Check that the certificate referred to is valid and present in the Keystores.

WSS0601

A Key can not be located in SecurityEnvironment for the KeyValue.
Solution: Check that the certificate referred to is valid and present in the Keystores.

WSS0602

A Key can not be located in SecurityEnvironment for the X509Data.
Solution: Check that the certificate referred to is valid and present in the Keystores.

WSS0603

XPathAPI TransformerException in finding element with matching
wsu:Id/Id/SAMLAssertionID.
Solution: Refer your XPathAPI documentation.

WSS0606

Input Node Set to STR Transform is empty.
Solution: Check that the Referenced Node (to be STR transformed) in ds:SignedInfo is valid.

WSS0608

The Reference Mechanism in the SecurityTokenReference is not supported.
   Solution: Check that the Reference Mechanism is either
   Direct/KeyIdentifier/X509IssuerSerial.

WSS0609

The referenced security token is neither an XML token nor a raw binary token.
   Solution: Check the referenced security token.

WSS0650

Username/Password data file not found.
   Solution: Check that the system property com.sun.xml.wss.usersFile is set.

WSS0654

Error creating javax.xml.soap.Name for wsu:Id.
   Solution: Try the following:

   ■ Refer your SAAJ API Documentation.

   ■ Check that the Class object corresponds to the header block identified by the
      SOAPElement.

WSS0656

The Keystore URL is not specified/invalid in server.xml.

A Keystore file does not exist in $user.home.
   Solution: Check that the keystoreFile attribute is specified on SSL Coyote HTTP/1.1
   Connector element in server.xml and is valid. Check that a keystore file exists in
   $user.home.

WSS0700

An instance of SecurityEnvironment is not set on SecurableSoapMessage.
   Solution: Check that setSecurityEnvironment() is called on the SecurableSoapMessage.
   Check that SetSecurityEnvironmentFilter is applied on SecurableSoapMessage.

WSS0701

No X509v3 Certificate can be located for the alias in Keystore.
   Cause: If no alias has been specified for signing, no default certificate is available.

   Solution: Check that a default certificate is available and/or a valid alias is used.

WSS0702

The X509v3 Certificate for the given alias does not contain a subject key identifier.
   Solution: Check that a valid X509v3 certificate is present in Keystores.

WSS0704

Agreement name: SESSION-KEY-VALUE, has not been set on the SecurityEnvironment instance.
   Solution: Check that the agreement name SESSION-KEY-VALUE is set on SecurityEnvironment using setAgreementProperty().

WSS0750

Error creating javax.xml.soap.SOAPElement.
   Solution: Refer your SAAJ API Documentation.

WSS0751

The localname of the SOAPElement passed is not Reference.

The namespace URI of the SOAPElement passed does not conform to WSS Spec.
   Solution: Check that a SOAPElement conformant to spec. is passed.

WSS0752

The localname of the SOAPElement passed is not Embedded.

The namespace URI of the SOAPElement passed does not conform to WSS Spec.
   Solution: Check that a SOAPElement conformant to spec. is passed.

WSS0753

An embedded token in wsse:Embedded element is missing.
   Solution: Check that the token element is conformant to the WSS specification.

WSS0754

Token on EmbeddedReference has already been set.
   Cause: A SOAPElement representation of EmbeddedReference containing the Token is used to create the EmbeddedReference instance.

WSS0756

Error creating SOAPElement for wsse:KeyIdentifier.
   Solution: Check your SAAJ API Documentation.

WSS0757

Error adding KeyIdentifier value to wsse:KeyIdentifer.
   Solution: Check your SAAJ API Documentation.

WSS0758

Error creating javax.xml.soap.Name.
   Solution: Refer your SAAJ API Documentation.

WSS0759

An X509IssuerSerial instance can not be created.
   Solution: Check that the SOAPElement passed to the constructor is conformant to spec. (and has X509IssuerSerial child elements).

WSS0800

ds:KeyInfo in the message is not a valid one.
   Solution: Check if the ds:KeyInfo in the message is valid.
