This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are “commercial computer software” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

# Preface

This Release Notes provides an overview of new features and known issues in Oracle Utilities Analytics for Oracle Utilities Extractors and Schema and Oracle Utilities Analytics Dashboards, Release 2.5.0. Note that the product is referred to as Oracle Utilities Analytics v2.5.0 or OUA v2.5.0 in this document.

This preface contains the following topics:

- **Audience**
- **Related Documents**
- **Conventions**

## Audience

This Oracle Utilities Analytics Release Notes is intended for anyone installing or using Oracle Utilities Analytics v2.5.0.

## Related Documents

# Release Notes

This release notes contains the following sections:

- **What's New in Oracle Utilities Analytics v2.5.0**
- **Supported Upgrade Paths**
- **Known Issues**
- **Demo Data Information**

## What's New in Oracle Utilities Analytics v2.5.0

Oracle Utilities Analytics is a set of star schemas, graphic templates, and data processing programs allowing you to build a Business Intelligence (BI) solution to meet your organization's analytic requirements.

This section contains general information about this release of Oracle Utilities Analytics, including:

- **New Products**
- **Enhanced Products**
- **New Functionality**

**Note:** See the *Installation Guide* for information about the supported platforms and installation steps.

Visit My Oracle Support (<http://support.oracle.com>) for the most recent service packs and patches for this release to ensure you have the most current version of this product.

### New Products

This section describes the new products introduced in Oracle Utilities Analytics v2.5.0.

- **Oracle Utilities Operational Device Management Extractors and Schema**
- **Oracle Utilities Operational Device Analytics**

#### **Oracle Utilities Operational Device Management Extractors and Schema**

Oracle Utilities Operational Device Management Extractors and Schema is a collection of prebuilt transformation views, schema components, and load packages that can be used to extract, load and transform data from Oracle Utilities Operational Device Management. This collection comprises pre-configured Extract-Load-Transform (ELT) components, such as Oracle Data Integrator objects and transformation views to enable smooth transfer of the data from Oracle Utilities Operational Device Management to the data warehouse in Oracle Utilities Analytics.

#### **Oracle Utilities Operational Device Analytics**

Oracle Utilities Operational Device Analytics is a comprehensive collection of prebuilt Oracle Business Intelligence Enterprise Edition (OBIEE) based dashboards and answers that measure and monitor critical metrics related to Oracle Utilities Operational Device Management. This prebuilt analytics collection covers critical business areas, such as warranty compliance, inventory status, asset aging, repair status, rejection rates, etc.

### Enhanced Products

This section describes the products enhanced in Oracle Utilities Analytics v2.5.0.

- **Oracle Utilities Customer Care and Billing Extractors and Schema**
- **Oracle Utilities Credit & Collection Analytics**
- **Oracle Utilities Revenue Analytics**
- **Oracle Utilities Outage Analytics**

#### **Oracle Utilities Customer Care and Billing Extractors and Schema**

Until Oracle Utilities Analytics v2.5.0, Oracle Utilities Customer Care and Billing Extractors and Schema was based on the batch control based extractors on the source system and Oracle Warehouse Builder based load jobs on the target data warehouse. Oracle Utilities Analytics v2.5.0

only supports Oracle Data Integrator based Extract-Load-Transform (ELT) for Oracle Utilities Customer Care and Billing Extractors and Schema.

The new Oracle Data Integrator based ELT processes is a collection of prebuilt transformation views, schema components, and load packages that are used to extract, load, and transform data from Oracle Utilities Customer Care and Billing. This collection comprises pre-configured ELT components, such as Oracle Data Integrator objects and transformation views to enable smooth transfer of data from Oracle Utilities Customer Care and Billing to the data warehouse in Oracle Utilities Analytics.

Also, the star schemas for Oracle Utilities Customer Care and Billing have been enhanced to include new facts for pay plans, payment arrangements, and service agreement billing details.

See *Oracle Utilities Extractors and Schema for Oracle Utilities Customer Care and Billing Data Mapping Guide* for the Oracle Data Integrator ELT jobs and new/old fact details

## Oracle Utilities Credit & Collection Analytics

Oracle Utilities Credit & Collection Analytics is a comprehensive collection of prebuilt Oracle Business Intelligence Enterprise Edition (OBIEE) based dashboards and answers that measure and monitor critical metrics related to credit and collection processes in Oracle Utilities Customer Care and Billing System. The existing prebuilt analytics collection covers critical business areas, such as arrears, collectible process and write-off processes, etc.

In Oracle Utilities Analytics v2.5.0, Oracle Utilities Credit & Collection Analytics have been enhanced to provide additional metrics to support business cases for pay plans and payment arrangements.

## Oracle Utilities Revenue Analytics

Oracle Utilities Revenue Analytics is a comprehensive collection of prebuilt Oracle Business Intelligence Enterprise Edition (OBIEE) based dashboards and answers that measure and monitor critical metrics related to revenue in the Oracle Utilities Customer Care and Billing system. The existing prebuilt analytics collection covers critical business areas, such as billed usage and revenue distributions.

In Oracle Utilities Analytics v2.5.0, Oracle Utilities Revenue Analytics have been enhanced to provide additional metrics to support business cases for bill cycles, bill segments, and unbilled service agreements.

## Oracle Utilities Outage Analytics

Oracle Utilities Outage Analytics is a comprehensive collection of prebuilt Oracle Business Intelligence Enterprise Edition (OBIEE) based dashboards and answers that measure and monitor critical metrics related to Oracle Utilities Network Management System. The existing prebuilt analytics collection covers critical business areas, such as outages, restoration status, crew assignments, feeder performance, etc.

In Oracle Utilities Analytics v2.5.0, Outage Analytics have been enhanced to provide additional metrics to support business cases for critical customers, control zone level statistics on the outage event statuses, crew activity durations, and SAIDI trends.

## New Functionality

This section describes the new functionalities introduced in Oracle Utilities Analytics v2.5.0.

- **Oracle Data Integrator ELT Framework**
- **Oracle Golden Gate Based Change Data Capture**
- **Administration Tool**
- **Oracle Database Standard Edition Support**

## Oracle Data Integrator ELT Framework

Until release 2.5.0, Oracle Utilities Analytics used Oracle Warehouse Builder (OWB), along with the source application programs to Extract-Transform-Load (ETL) data from the source application to the data warehouse. With release 2.5.0, Oracle Utilities Analytics has started migrating from Oracle Warehouse Builder based ETL to Oracle Data Integrator (ODI) based Extract-Load-Transform (ELT). This migration is planned in a phased manner, spanning across a few releases. During this migration cycle, ETL for some of the source applications still continue using Oracle Warehouse Builder, while some start using Oracle Data Integrator.

In the release 2.5.0, the data extraction and loading activities are carried out by the Oracle Data Integrator ELT processes, for the below two source applications:

- Oracle Utilities Operational Device Management
- Oracle Utilities Customer Care and Billing

Below are some of the key features of the new Oracle Data Integrator ELT framework are:

- A completely automated framework for pulling in data from the source to the Business Intelligence (BI) data warehouse.
- A robust and configurable replication layer that can be used for data lineage and cleansing purposes.
- Automatic foreign key reprocessing for the late arriving dimensions.
- Support for near real time loads.

**Note:** For more details, see the **Oracle Data Integrator Based Extract, Load and Transform (ELT)** section of the **Overview of Oracle Utilities Analytics** chapter in *Oracle Utilities Analytics for Oracle Utilities Extractors and Schema and Oracle Utilities Analytics Dashboards Administration Guide*.

## Oracle Golden Gate Based Change Data Capture

The Oracle Data Integrator based ELT Framework uses Oracle Golden Gate to replicate selected tables from source system into a replication schema. Oracle Golden Gate processes capture any changes on the source tables and transfer them to the replicated tables. The changes are available in the replication layer within few seconds, and the data can be used to load the target data warehouse.

Below are some of the key features of the Golden Gate based Change Data Capture (CDC).

- Near real time replication
- Tracking history of master data changes
- Minimal overhead on the source system

## Administration Tool

The Oracle Utilities Analytics Administration tool is a simple utility based on Oracle Application Express (APEX), which comes along with the Oracle database. The Administration tool offers a simple graphical interface for maintaining the various metadata tables, which are a part of the Oracle Data Integrator based ELT Framework.

**Note:** For more details, see **Appendix B** in *Oracle Utilities Analytics for Oracle Utilities Extractors and Schema and Oracle Utilities Analytics Dashboards Administration Guide*.

## Oracle Database Standard Edition Support

As of release 2.5.0, the following products can be deployed on the Standard Edition of the Oracle database:

- Oracle Utilities Operational Device Management Extractors and Schema
- Oracle Utilities Customer Care and Billing Extractors and Schema

However, the other products would still require the Enterprise Edition of the Oracle database. If any of the above two mentioned products are used along with other products of Oracle Utilities Analytics, then the Enterprise Edition of the Oracle database is still required.

## Supported Upgrade Paths

The following table outlines the supported upgrade paths available for OUA v2.5.0.

Current Release Version	First Upgrade To	Target Release Version
Pre-v2.4.0	OUA v2.4.0	OUA v2.4.0 Service Pack 4 (OUA v2.4.0.4)
OUA v2.4.0 Service Pack 4 (OUA 2.4.0.4)	N/A	OUA v2.5.0

## Known Issues

There are no known issues in Oracle Utilities Analytics v2.5.0 at the time of this release.

## Demo Data Information

The Oracle Utilities Analytics v2.5.0 demo database contains sample data based on the application versions provided with this release.
