## ***Customer Support***

### **Customer Support hours:**

Customer Support is available 7x24x365 via e-mail, phone and Web access.

Depending on the Support option chosen by a particular client (Standard, Plus, or Premium), the times that certain services are delivered may be restricted. Severity 1 (Critical) issues are addressed on a 7x24 basis and receive continuous attention until resolved, for all clients on active maintenance.

### **Contact Method    Contact Information**

**Internet (ROCS)**    [www.retek.com/support](http://www.retek.com/support)  
Retek's secure client Web site to update and view issues

**E-mail**    support@rettek.com

**Phone**    US & Canada: 1-800-61-RETEK (1-800-617-3835)

Asia Pacific: 61 425 792 927

**Mail**    Retek Customer Support  
Retek on the Mall  
950 Nicollet Mall  
Minneapolis, MN 55403

### **When contacting Customer Support, please provide:**

- Product version and program/module name.
- Functional and technical description of the problem (include business impact).
- Detailed step by step instructions to recreate.
- Exact error message received.
- Screen shots of each step you take.

## Functional enhancements

The following are the new enhancements and features that have been added to Retek Customer Order Management (RCOM) 10.1. The focus for RCOM 10.1 is integration into the retail enterprise with pre-defined integration interfaces into Retek Merchandising System (RMS) and Retek Distribution Management (RDM). Other enhancements include improvements to managing customers and providing a single customer view across multiple channels.

There have been functional enhancements in the following areas:

- Integration to Retek Integration Bus (RIB)
  - Location maintenance
  - Carrier Service maintenance
  - Item maintenance
  - Fulfillment
  - Order status
  - Vendors
  - Differentiators
- Customer management improvements
  - Ability to support multiple channels
  - Ability to support multiple e-mail addresses, telephones and addresses for a single customer
- Pricing Improvements
  - Ability to price by concept and channels

## Integration

### Location maintenance

Virtual stores set up in RMS 10.1 are interfaced to RCOM, keeping virtual and physical stores separate. RCOM 10.1 also supports virtual warehouses and the physical warehouse it is associated to, so that RDM can manage warehouses at the physical level while inventory in RCOM and RMS is managed at the virtual warehouse level.

### Carrier service maintenance

Carrier services created in RCOM 10.1 are interfaced to RDM, allowing a single point of management of shipping methods and data integrity when customer order ship requests are sent to the warehouse.

### Item maintenance

The primary benefit to item maintenance in RCOM 10.1 is the single point of entry for the setup and maintenance for item data. For RCOM 10.1 all item maintenance is facilitated within the merchandising system (RMS), and then interfaced into RCOM for entering items for customer orders and item searches.

- Item Setup and Maintenance
- Packs – RMS sellable packs can now be added to customer orders
- Item Pricing
- Item Search

### Item setup & maintenance

All item setup and maintenance is completed in the merchandising system (RMS) that eliminates the need to maintain item data in two separate systems. Also new with RCOM 10.1, is support for item packs. RCOM now takes customer orders for sellable pack items setup within RMS. The promotional element of packs is not supported in the 10.1 release.

### Item pricing and search

The initial item price setup within RMS is brought over for pricing products within RCOM. The item differentiators are setup within the standard item setup function within RMS and interfaced into RCOM for item searches.

### Fulfillment

In RCOM 10.1, integration into the warehouse management system (RDM) has been created to fulfill customer orders. A certified interface between RCOM and RDM has been created and tested to create and fulfill customer orders. The interface supports visibility of order status at the order line level to determine status of individual lines.

This capability arms the retailer with the ability to provide superior customer service to their customers by providing visibility to what specific items have ship confirmations or have been back ordered.

For items that have shipped, the carrier information is available to track the status of an order from the warehouse to the customer address.

### Customer management improvements

RCOM 10.1 has improved the ability to create and maintain customers across the retail enterprise. The improvements are focused on enhancing customer maintenance to provide a single view of customer behavior across the enterprise 10.1. It also includes the introduction of table API's (TAPI's) that provide the ability to access customer information from outside of the application.

## Pending returns

Customer returns may be created in one of the following ways:

- Create a pending return in RCOM.

**Note:** The customer will call the CSR.

The CSR can use the Order History form to select the original customer order and click **Return Order**. The CSR has the option to return all or part of the original order. The return order should be put into review status and authorized to communicate over the RIB to RDM. Item receipt is communicated from RDM to RCOM to put the return order into Payment Pending status. Click the **Release Pay** button on the Return form to close the return the order and authorize payment for the customer.

- RDM receives returned goods with or without the associated RMA for the goods.

RDM receives the goods without having a previously created return order. The order receipt information from RDM causes RCOM to create a return order. The return order references the original customer order based on the RMA sent from the RDM. The new return order will be in Payment Pending status.

If the return order from RDM has an RMA unknown to RCOM, it is placed in the UNKNOWN\_RMA table for manual processing.

Although RDM does not validate which or how many items were sent to a customer associated with a particular RMA, RCOM does perform this validation. Therefore, if RDM sends return information to RCOM and the item not previously associated with an RMA is returned, RCOM records an error. The message is held in the RIB\_MESSAGE table for manual processing. Similarly, if a greater quantity of an item has been returned than was on the outgoing order, RCOM holds the return message.

## Pricing improvements

RCOM 10.1 has included a pricing functionality enhancement. The application can determine the price for an item on an order via the combination of a price list, inventory item number, and order date.

A price list represents a pricing vehicle for a given concept and channel combination. The enhancement provides flexibility to deploy different pricing strategies by channel. The functionality of price lists has not been changed in RCOM 10.1. A price list is associated with many different item numbers, and it identifies a selling price for each item.

Additional changes associated with the multi-channel pricing enhancement include the following:

- Require the customer to provide a price list at order entry time
- Limit the item search screen by the price list identified on an order

A customer is only allowed to associate a single price list to an order. A price list will be equivalent to a catalog code on the back of a catalog or a Web site build.

# Performance enhancements

N/A

# Technical enhancements

## Oracle 9i

RCOM has been upgraded to run on Oracle 9i. Oracle 9i is designed for efficient application development, superior content management, and successful application deployment on the Internet and therefore will allow Retek to further exploit the unlimited opportunities the Internet provides. Oracle 9i provides the advanced tools to manage all types of data that is found in today's most popular web sites and also the performance and scalability needed to support these large sites and other mission critical applications.

Oracle 9i is also introducing the Oracle Enterprise Manager, which is the comprehensive management framework for managing the Oracle database and application environment. Oracle Enterprise Manager includes an easy to-use centralized console, a rich set of management tools, and the extensibility to detect and solve problems that arise. It also includes several administrative applications for performing day-to-day tasks for databases and applications, such as scheduling and backup routines.

## Forms

Retek has also upgraded to Oracle Developer 6i. This version of Oracle Developer leverages the Internet platform to provide business solutions that automatically scale and perform with a minimum development effort.

Oracle developer provides the following benefits:

- Leverage the power of a rapid application development (RAD) environment that allows for an easy transition from a client/server environment to a three-tiered Internet environment.
- Deliver scalable enterprise-class applications around the world automatically allowing companies to meet the growing demands of their business, choose the most optimal deployment architecture, and deliver multilingual applications around the globe.
- Deliver solutions in web time to easily build complex database applications that automatically scale, realize benefits of optimized deployment platform tightly integrated with a modeling and declarative suite, promote standards-based, team development with reusable components, and build rich user interfaces.
- Protect your investment to provide support for emerging technologies and extend your pre-packaged applications
- Achieve open access to support multiple platforms and multiple databases
- Leverage the Internet platform to exploit the power of Oracle 9i.

## Integration enhancements

N/A

## Known issues

- When users are setup in the User Account form, they can only be assigned to a company that has a type of Banner.
- For company type uses, Customers can only be assigned to the Global Company for this release. This means that all customers will be visible across the entire organization. The values set up in this maintenance table should not be altered.
- Uncertified PaymentPlus interface due to no Oracle 9i support from PaymentPlus, this will be resolved in June patch.
- The language translation is not functional within 10.1. This is due to the Oracle views that handle the translation are causing the application to hang.

## Additional changes

- Dropped support for Global Commissioning
- Dropped support for Customer Balances
- Dropped support for Customer Stored Payment Methods
- Removed internal fulfillment functionality (replaced by integration to RDM)

## Dropped
