The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS

Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are “commercial computer software” or “commercial technical data” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software–Restricted Rights (June 1987). Oracle Corporation, 500 Oracle Parkway, Redwood City, CA 94065.

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee’s responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

Part 1 Country-Specific Functionality

Chapter 1

| | |
|---|----------|
| Getting Started With Country-Specific Setup and Processes..... | 3 |
| JD Edwards EnterpriseOne Country-Specific Setup and Processes Overview..... | 3 |
| Country-Specific Setup and Processes Implementation..... | 25 |

Chapter 2

| | |
|--|-----------|
| Setting Up the System for Country-Specific Functionality..... | 27 |
|--|-----------|

| | |
|---|----|
| Understanding Translation Considerations for Multilingual Environments..... | 27 |
| Understanding Translation Routines..... | 28 |
| Setting Up User Display Preferences..... | 29 |
| Understanding User Display Preferences..... | 29 |
| Form Used to Set Up User Display Preferences..... | 30 |
| Setting Processing Options for User Profile Revisions (P0092)..... | 30 |
| Setting Up User Display Preferences..... | 30 |

Part 2 Argentina

Chapter 3

| | |
|--|-----------|
| (ARG) Understanding Country-Specific Functionality for Argentina..... | 35 |
| Argentina-Specific Setup and Processes..... | 35 |

Chapter 4

| | |
|--|-----------|
| (ARG) Setting Up Country-Specific Functionality for Argentina..... | 53 |
| Setting Up UDCs for Argentina..... | 53 |
| Setting Up UDCs for Foreign Suppliers and Supplier Withholding for Argentina..... | 54 |
| Setting Up UDCs for Credit Invoice Processing for Argentina..... | 63 |
| Setting Up UDCs for SICORE for Argentina..... | 65 |
| Setting Up UDCs for Fixed Assets and Inventory Management for Argentina..... | 66 |
| Setting Up UDCs for the Perception Report for Argentina..... | 67 |
| (ARG, CHL, and PER) Setting Up UDCs for Accounts Receivable Drafts..... | 68 |
| Setting Up UDCs for Tax Processing for Argentina..... | 69 |
| Setting Up UDCs for Accounts Payable for Argentina..... | 72 |
| Setting Up UDCs for Shipment Notes for Argentina..... | 75 |
| Setting Up AAls for Argentina..... | 76 |
| AAls for Supplier Withholding for Argentina..... | 77 |
| Setting Up AAls for Deferred Payments..... | 78 |
| Setting Up AAls for Credit Invoice Processing for Argentina..... | 78 |
| Setting Up AAls for Draft Processing for Argentina..... | 78 |
| Setting Up AAls for Inventory Inflation Adjustments..... | 78 |
| Setting Up Next Numbers for Argentina..... | 79 |
| Setting Up Next Numbers for Withholding Taxes..... | 79 |
| Setting Up AAI Document Types for Argentina..... | 79 |
| Form Used to Set Up AAls in Document Types for Inventory Inflation Adjustment..... | 80 |

| | |
|---|----|
| Set Up AAI Document Types..... | 80 |
| Setting Up Corresponding Versions of Programs for Argentina..... | 80 |
| Setting Up Legal Numbering for Argentina..... | 82 |
| Understanding Legal Numbering..... | 82 |
| Prerequisites..... | 82 |
| Forms Used to Set Up Legal Numbering and Document Type Relationships..... | 83 |
| Establishing Relationships Between Document Types..... | 83 |
| Setting Up Next Numbers for Legal Numbering..... | 84 |
| Setting Up Print Authorization Codes for Argentine Suppliers..... | 84 |
| Understanding Print Authorization Code (CAI)..... | 84 |
| Forms Used to Set Up Print Authorization Codes..... | 85 |
| Entering the Autoprinter Company Status..... | 85 |
| Entering the CAI Number..... | 85 |
| Setting Up to Print Invoices and Shipment Notes for Argentina..... | 86 |
| Understanding Issue Places..... | 86 |
| Understanding Bar Codes for Argentina Invoices..... | 86 |
| Prerequisites..... | 88 |
| Forms Used to Set Up to Print Invoices and Shipment Notes..... | 89 |
| Adding the CIF Code..... | 89 |
| Adding Record Type \$C..... | 90 |
| Relating Issue Places to Address Book Records..... | 90 |
| Setting Up the System to Generate the Text Payments File for Argentina..... | 91 |
| Understanding the Text Payment File..... | 91 |
| Understanding the Required Bank Account Information for Text Payments..... | 91 |
| Prerequisite..... | 91 |
| Setting Up Payment Formats for Argentina..... | 91 |
| Understanding Payment Formats for Argentina..... | 92 |
| Setting Processing Options for Payment Formats for Argentina..... | 92 |
| Setting Up the System for Deferred Payments for Argentina..... | 92 |
| Understanding Payment Print Programs for Deferred Payments..... | 92 |
| Form Used to Set Up the Deferred Check Table..... | 93 |
| Setting Up the Deferred Check Table..... | 93 |
| Setting Processing Options for Additional A/B Information (P760101A)..... | 93 |
| Setting Up Suppliers for Argentina..... | 94 |
| Understanding Supplier Setup for Argentina..... | 94 |
| Forms Used to Set Up Autoprinter Numbers for Suppliers..... | 94 |
| Setting Up Autoprinter Numbers for Suppliers for Argentina..... | 94 |
| Setting Up Invoice Type M for Voucher Processing for Argentina..... | 95 |
| Setting Up Vouchers with Invoice Type M..... | 95 |
| Setting Up Credit Invoice Constants for Accounts Payable for Argentina..... | 97 |

| | |
|--|-----|
| Understanding Credit Invoice Constants for Accounts Payable Setup..... | 97 |
| Forms Used to Set Up Credit Invoice Constants for Accounts Payable..... | 97 |
| Setting Up Credit Invoice Constants for Accounts Payable..... | 98 |
| Setting Up Tax Area Relationships for Credit Invoices for Argentina..... | 99 |
| Setting Up Credit Invoice Status Rules for Argentina..... | 99 |
| Understanding the Setup of Credit Invoice Status Rules..... | 99 |
| Prerequisites..... | 101 |
| Forms Used to Set Up Credit Invoice Status Rules..... | 102 |
| Setting Up Credit Invoice Status Rules..... | 102 |
| Setting Up Credit Invoice Constants for Accounts Receivable for Argentina..... | 102 |
| Understanding Credit Invoice Constants for Accounts Receivable..... | 102 |
| Forms Used to Set Up Credit Invoice Constants..... | 103 |
| Setting Up Credit Invoice Constants..... | 103 |
| Setting Up Payment Instruments for Credit Invoices for Argentina..... | 104 |

Chapter 5

| | |
|--|------------|
| (ARG) Setting Up Withholding..... | 107 |
| Prerequisite..... | 107 |
| Common Fields Used in This Chapter..... | 107 |
| Setting Up Withholding for General SUSS, Security Services, and Cleaning Services for Argentina..... | 108 |
| Understanding Setup for General SUSS Withholding..... | 108 |
| Understanding Setup for Withholding for Security Services..... | 108 |
| Understanding Setup for Withholding for Cleaning Services..... | 109 |
| Prerequisites..... | 109 |
| Forms Used to Set Up General SUSS, Security Services, and Cleaning Services Withholding..... | 110 |
| Setting Up Withholding Percentages for S.U.S.S. and Cleaning Services Withholding..... | 110 |
| Setting Up Supplier Exemptions for S.U.S.S. and Cleaning Services Withholding..... | 111 |
| Setting Up Contractor Withholding for Argentina..... | 111 |
| Prerequisites..... | 111 |
| Forms Used to Set Up Contractor Withholdings..... | 112 |
| Setting Up Withholding Rate and Taxable Base Amounts..... | 112 |
| Setting Up Supplier Exemptions for Contract Withholdings..... | 112 |
| Entering Contract Withholdings Related to Advance Payments..... | 113 |
| Setting Up Gross Income Withholding for Argentina..... | 113 |
| Prerequisites..... | 113 |
| Forms Used to Set Up Gross Income Withholding..... | 114 |
| Setting Up Supplier Gross Income Agreements by State..... | 114 |
| Setting Up State Specifications..... | 115 |

| | |
|--|-----|
| Setting Up Gross Income Withholding Percentages..... | 115 |
| Setting Up Supplier Gross Income Withholding Exceptions..... | 116 |
| Setting Up VAT Withholding for Argentina..... | 117 |
| Prerequisites..... | 117 |
| Forms Used to Set Up VAT Withholding..... | 118 |
| Setting Up VAT Withholding Percentages..... | 118 |
| Setting Up VAT Withholding Exempt Percentages..... | 119 |
| Setting Up Profit Withholding for Argentina..... | 119 |
| Understanding the Setup for Profit Withholdings..... | 119 |
| Understanding UTE Membership..... | 120 |
| Forms Used to Set Up Profit Withholding..... | 121 |
| Setting Up Profit Withholding Percentages..... | 121 |
| Setting Up Fourth Category Profit Withholding Percentages..... | 122 |
| Setting Up Profit Withholding Exemptions by Supplier..... | 122 |
| Setting Up UTE Members..... | 122 |
| Setting Up VAT and Profit Legal Number Withholdings for Argentina..... | 123 |
| Understanding VAT and Profit Withholding Legal Numbers..... | 123 |
| Forms Used to Set Up VAT and Profit Withholding Legal Numbers..... | 124 |
| Setting Up Certificate Next Numbers..... | 124 |
| Setting Up Company Relationships..... | 125 |
| Setting Up VAT Withholdings by RG 726 or RG 615 for Argentina..... | 125 |
| Understanding VAT Withholdings by RG 726 or RG 615..... | 125 |
| Form Used to Set Up VAT Withholdings by RG 726 or RG 615..... | 126 |
| Setting Up VAT Withholdings by RG 726 or RG 615..... | 126 |

Chapter 6

| | |
|--|------------|
| (ARG) Processing Credit Invoices for Accounts Receivable and Sales Orders..... | 127 |
| Understanding How to Process Credit Invoices for Accounts Receivable and Sales Orders for Argentina..... | 127 |
| Prerequisites..... | 129 |
| Printing Credit Invoices for Argentina..... | 129 |
| Understanding the AR SOP Credit Invoice Print Program..... | 130 |
| Setting Processing Options for PO Invoice/Shipment Note Print (R76A565)..... | 130 |
| Setting Processing Options for PO – Invoice Print A/R (R76A03B5)..... | 133 |
| Running the AR SOP Print Credit Invoice Program..... | 134 |
| Setting Processing Options for AR SOP Print Credit Invoice (R76A0023)..... | 134 |
| Accepting Credit Invoices for Argentina..... | 134 |
| Prerequisite..... | 135 |
| Forms Used to Accept Credit Invoice..... | 135 |
| Setting Processing Options for AR SOP Acceptance (P76A21)..... | 135 |

| | |
|---|-----|
| Accepting Credit Invoices..... | 136 |
| Printing Credit Invoice Receipts for Argentina..... | 136 |
| Understanding Legal Document Numbers..... | 136 |
| Printing Credit Invoice Receipts..... | 136 |
| Processing Options for AR SOP Print Receipt (R76A0021)..... | 136 |

Chapter 7

| | |
|---|------------|
| (ARG) Processing Credit Invoices for Accounts Payable..... | 139 |
| Understanding Credit Invoices for Accounts Payable for Argentina..... | 139 |
| Prerequisites..... | 139 |
| Entering Vouchers for Credit Invoices for Argentina..... | 140 |
| Understanding Vouchers for Credit Invoices..... | 140 |
| Understanding How to Change the Status of a Credit Invoice..... | 141 |
| Understanding the Process to Accept Credit Invoices..... | 141 |
| Understanding the Process to Reject Credit Invoices..... | 143 |
| Prerequisite..... | 144 |
| Forms Used to Enter Vouchers for Credit Invoices..... | 144 |
| Entering Vouchers for Credit Invoices..... | 144 |
| Entering Credit Invoice Receipts for Argentina..... | 144 |
| Prerequisite..... | 145 |
| Form Used to Enter Credit Invoice Receipts..... | 145 |
| Entering Credit Invoice Receipts..... | 145 |
| Reclassifying Fiscal Credit for Argentina..... | 145 |
| Understanding the Process for Reclassifying Fiscal Credit..... | 145 |
| Running the AP Credit Invoice V.A.T. Restatement Report..... | 146 |
| Setting Processing Options for AP Credit Invoice V.A.T. Restatement (R76A0052)..... | 146 |

Chapter 8

| | |
|---|------------|
| (ARG) Working with Other Accounts Payable Functionality for Argentina..... | 147 |
| Understanding Deferred Check Payments for Argentina..... | 147 |
| Working with Voucher Entry and Review for Argentina..... | 149 |
| Understanding Vouchers for Argentina..... | 149 |
| Understanding CAI Numbers for Suppliers with Fiscal Controller..... | 152 |
| Understanding the Process for Revising Vouchers for Argentina..... | 153 |
| Prerequisites..... | 153 |
| Forms Used to Work With Vouchers for Argentina..... | 154 |
| Setting Processing Options for F0411 Tag File Maintenance (P760411A)..... | 154 |
| Entering Voucher Additional Information for Argentina..... | 155 |

| | |
|--|-----|
| Entering Withholding Information for Argentina..... | 156 |
| Maintaining CAI Numbers for Suppliers with Fiscal Controller..... | 156 |
| Setting Up Voucher Authorization Rules..... | 156 |
| Setting Processing Options for PO - A/P Speed Release - ARG (P76A115)..... | 157 |
| Working with Batch Vouchers for Argentina..... | 157 |
| Understanding the F0411Z1 Tag Table Generation..... | 157 |
| Prerequisite..... | 158 |
| Forms Used to Work with Batch Vouchers for Argentina..... | 158 |
| Adding or Revising Argentina-Specific Batch Voucher Information..... | 158 |
| Adding Withholding Information to a Batch Voucher..... | 158 |
| Working with Payments for Argentina..... | 159 |
| Understanding the Create Payment Control Groups Process for Argentina..... | 159 |
| Understanding Writing Payments for Argentina..... | 164 |
| Understanding Updating Payments for Argentina..... | 165 |
| Understanding Posting Automatic Payments for Argentina..... | 166 |
| Understanding Voiding Payments for Argentina..... | 166 |
| Understanding the Process for Entering Manual Payments with Voucher Match for Argentina..... | 166 |
| Prerequisites..... | 168 |
| (ARG) Setting Processing Options for PO - PCG process - ARG (P76A570)..... | 168 |
| Generating the TXT Payments File for Argentina..... | 169 |
| Understanding the TXT Payment File Process..... | 169 |
| Forms Used to Add Information for TXT Payments..... | 172 |
| Adding Information for TXT Payments..... | 172 |
| Running the TXT Payment Generation Program..... | 172 |
| Setting Processing Options for TXT Payment Generation (R76A0441)..... | 172 |
| Mapping Fields in the F0411Z1 Tag Table - ARG - 04 Table (F76A30) for Argentina..... | 173 |

Chapter 9

| | |
|--|------------|
| (ARG) Processing Withholding..... | 177 |
| Understanding VAT Withholding by RG 726 or RG 615 for Argentina..... | 177 |
| Prerequisites..... | 177 |
| Processing Withholding for Security Services for Argentina..... | 178 |
| Understanding Withholding for Security Services..... | 178 |
| Form Used to Generate the Security Services Withholding Certificate..... | 181 |
| Processing Withholding for General SUSS Taxes for Argentina..... | 181 |
| Understanding Withholding for General SUSS Services..... | 182 |
| Form Used to Generate the General SUSS Withholding Certificate..... | 184 |
| Generating the General SUSS Services Withholding Certificate..... | 184 |
| Generating the Flat File for SUSS Withholding..... | 184 |

| | |
|--|-----|
| Setting Processing Options for TXT File - SUSS and Contract WH Withholding (R76A4002)..... | 184 |
| Generating the Withholdings Ledger (R760465A)..... | 184 |
| Setting Processing Options for Withholdings Ledger (R760465A)..... | 184 |
| Requesting the Fiscal Situation for Suppliers for Argentina..... | 185 |
| Understanding the Generate CUIT Information for AFIP Program..... | 185 |
| Running the Generate CUIT Information for AFIP Program..... | 185 |
| Setting Processing Options for Generate CUIT Information for AFIP (R76A8090)..... | 185 |
| Uploading AFIP Information to the Accounts Payable System for Argentina..... | 186 |
| Understanding How to Upload AFIP Information to the Accounts Payable System..... | 186 |
| Prerequisite..... | 187 |
| Forms Used to Upload AFIP Information to the Accounts Payable System..... | 187 |
| Converting AFIP Information to JD Edwards EnterpriseOne Accounts Payable Information..... | 187 |
| Modifying AFIP Information..... | 187 |
| Correcting Withholdings for Argentina..... | 187 |
| Understanding Withholding Correction..... | 188 |
| Forms Used to Correct Withholdings..... | 188 |
| Entering a Correction..... | 188 |
| Reprinting Certificates for Argentina..... | 189 |
| Understanding Certificate Reprinting..... | 189 |
| Running the WH Certificate Reports..... | 189 |
| Setting Data Selection for the WH Certificate Report..... | 190 |
| Setting Processing Options for VAT WH Certificate (R7604521A) and Profit WH Certificate (R7604531A)..... | 190 |
| Running the Profit Accrual Integrity Test for Argentina..... | 190 |
| Understanding the Profit Accrual Integrity Test..... | 191 |
| Running the Profit Accumulate Integrity Test-Step I Report..... | 191 |
| Setting Data Selection for Profit Accumulate Integrity Test-Step I..... | 191 |
| Setting Processing Options for Profit Accumulate Integrity Test-Step I (R760455A)..... | 191 |
| Running the Profit Accumulate Integrity Test-Step II Report..... | 192 |
| Setting Processing Options for Profit Accumulate Integrity Test-Step II (R760456A)..... | 192 |

Chapter 10

| | |
|---|------------|
| (ARG) Working With Accounts Receivable Processing..... | 193 |
| Understanding Invoice Processing for Argentina..... | 193 |
| Argentine Invoices..... | 193 |
| Recurring Invoices..... | 194 |
| Processing Invoices with Legal Numbers for Argentina..... | 194 |
| Understanding Invoices with Legal Numbers..... | 194 |
| Understanding Related Credit Notes..... | 195 |

| | |
|--|-----|
| Prerequisites..... | 195 |
| Forms Used to Process Invoices with Legal Numbers..... | 196 |
| Setting Processing Options for PO - Invoice Entry (P03B11) - ARG (P76A03B1)..... | 196 |
| Entering Invoices with Automatic Legal Numbers..... | 197 |
| Entering Invoices with Manual Legal Numbers..... | 197 |
| Entering Related Credit Notes..... | 197 |
| Printing the Perception Report for Argentina..... | 198 |
| Understanding the Printing of Perception Certificates..... | 198 |
| Prerequisites..... | 198 |
| Setting Processing Options for Perception Report (R76A8050)..... | 198 |
| Processing Batch Invoices for Argentina..... | 199 |
| Understanding Invoice Batches for Argentina..... | 199 |
| Setting Processing Options for PO - Invoice Batch Processor - ARG (R76A03BZ)..... | 199 |
| Entering Manual Receipts for Argentina..... | 200 |
| Understanding Manual Receipts..... | 200 |
| Forms Used to Enter Manual Receipts..... | 201 |
| Setting Processing Options for PO Receipt Entry (P76A103D)..... | 201 |
| Entering Manual Receipts for Argentina..... | 201 |
| Reviewing Summarized Current Account Information for Argentina..... | 202 |
| Understanding Summarized Current Account Information..... | 202 |
| Forms Used to Review Account Information..... | 202 |
| Reviewing the Summarized Account Information..... | 203 |
| Reviewing the Results of Receipt Entry..... | 203 |
| Creating Receipt Records Automatically for Argentina..... | 203 |
| Understanding How to Upload Automatic Receipts for Argentina..... | 203 |
| Forms Used to Review and Revise Receipt Information..... | 203 |
| Setting Processing Options for PO - Update Receipt Register from Electronic Input (R76A551D)..... | 204 |
| Reviewing and Revising Receipt Information..... | 204 |
| Working With Delinquency Fees in Argentina..... | 204 |
| Understanding Interest for Delinquent Fees for Argentina..... | 204 |
| Setting Processing Options for PO Interest Invoice (R76A03B2)..... | 204 |
| Purging Invoice Transactions for Argentina..... | 205 |
| Understanding the Purge Invoice Transactions Program..... | 205 |

Chapter 11

| | |
|--|------------|
| (ARG, CHL, and PER) Processing Accounts Receivable Drafts for Argentina, Chile, and Peru..... | 207 |
| Understanding Drafts for Argentina, Chile, and Peru..... | 207 |
| Common Fields Used in This Chapter..... | 208 |

| | |
|---|-----|
| Entering Massive Drafts..... | 208 |
| Understanding Massive Drafts..... | 208 |
| Forms Used to Enter Massive Drafts..... | 210 |
| Entering Receipts and Drafts..... | 210 |
| Applying Draft Receipts to Invoices..... | 211 |
| Understanding the Application of Draft Receipts to Invoices..... | 211 |
| Understanding Type Input Codes..... | 212 |
| Forms Used to Apply Draft Receipts to Invoices..... | 217 |
| Applying a Draft Receipt to Selected Invoices..... | 217 |
| Applying a Draft Receipt to All Open Invoices for a Customer..... | 218 |
| Creating a Draft Register..... | 218 |
| Understanding Draft Registers..... | 218 |
| Forms Used to Create a Draft Register..... | 219 |
| Creating a Draft Register..... | 219 |
| Remitting Drafts..... | 220 |
| Understanding Draft Remittance..... | 220 |
| Running the Draft Remittance Program..... | 220 |
| Setting Processing Options for Draft Remittance (R76A8040)..... | 220 |
| Collecting Drafts..... | 222 |
| Understanding Draft Collection..... | 222 |
| Running the Draft Collection with Status Update Program..... | 223 |
| Setting Processing Options for Draft Collection (R76A680)..... | 223 |
| Deleting, Voiding, and Returning a Draft to Prior Status..... | 224 |
| Understanding Voids and Deletions..... | 224 |
| Understanding Draft Statuses..... | 225 |
| Forms Used to Delete, Void, or Return a Draft to Prior Status..... | 225 |
| Voiding a Draft Receipt..... | 225 |
| Voiding a Draft Receipt from the Draft Massive Entry Inquiry Program..... | 226 |
| Returning a Draft to Prior Status..... | 226 |
| Printing Receipts..... | 226 |
| Understanding the Drafts Printer Program..... | 226 |
| Running the Draft Printer Program..... | 226 |
| Setting Processing Options for Drafts Printer (R76A6270)..... | 226 |
| Reviewing and Revising Receipts..... | 227 |
| Forms Used to Review and Revise Receipts..... | 228 |
| Reviewing and Revising Drafts from the Draft Massive Entry Inquiry Program..... | 228 |
| Reviewing the Customer Ledger..... | 229 |
| Creating Credit Notes or Debit Notes for Exchange Rates Differences..... | 229 |
| Understanding Exchange Rate Differences for Accepted Drafts..... | 229 |
| Understanding Exchange Rate Differences for Collected Drafts..... | 230 |

| | |
|--|------------|
| Prerequisites..... | 231 |
| Running the Generate ND/NC Gain and Loss - ARG Program..... | 232 |
| Setting Data Selection for Generate ND/NC Gain and Loss - ARG (R76A8500)..... | 232 |
| Setting Processing Options for Generate ND/NC Gain and Loss - ARG (R76A8500)..... | 232 |
| Running the Generate ND/NC Gain and Loss Collection - ARG Program..... | 233 |
| Data Selection for Generate ND/NC Gain and Loss Collection - ARG (R76A8520)..... | 233 |
| Setting Processing Options for Generate ND/NC Gain and Loss Collection - ARG (R76A8520)..... | 233 |
| Working with Lecops..... | 234 |
| Understanding Lecops..... | 234 |
| Prerequisites..... | 235 |
| Forms Used to Work with Lecops..... | 235 |
| Entering Receipts with Lecops..... | 235 |
| Printing Receipts with Lecops..... | 235 |
| Chapter 12 | |
| (ARG) Working With Sales Order Processing for Argentina..... | 237 |
| Entering Sales Orders for Argentina..... | 237 |
| Understanding Sales Order Entry for Argentina..... | 237 |
| Prerequisites..... | 237 |
| Forms Used to Enter Sales Orders for Argentina..... | 238 |
| Setting Processing Options for PO Sales Order Entry (P76A4210)..... | 238 |
| Reviewing Sales Order Information for Argentina..... | 238 |
| Forms Used to Review Sales Order Information..... | 239 |
| Reviewing Sales Order Information for Argentina..... | 239 |
| Reviewing Tax Calculations for Argentina..... | 239 |
| Prerequisite..... | 239 |
| Forms Used to Review Tax Calculations..... | 240 |
| Reviewing Tax Calculations for Argentina..... | 240 |
| Printing Invoices for Argentina..... | 240 |
| Understanding the Invoice Print Program for Argentina..... | 240 |
| Prerequisites..... | 241 |
| Setting Processing Options for PO Invoice/Shipment Note Print (R76A565)..... | 242 |
| Printing Shipment Notes for Argentina..... | 245 |
| Understanding Shipment Note Print for Argentina..... | 245 |
| Understanding Shipment Note Print According to RG 889..... | 245 |
| Prerequisites..... | 246 |
| Working with Prenumbered Documents for Argentina..... | 246 |
| Understanding Prenumbered Documents..... | 247 |
| Forms Used to Work with Prenumbered Documents..... | 249 |

| Running the TXT Generation Program (R76A8082)..... | 286 |
| Setting Processing Options for TXT Generation Program (R76A8082)..... | 287 |
| Working with the Account Ledger Book for Argentina..... | 287 |
| Understanding Registration Information for the Account Ledger Book..... | 287 |
| Forms Used to Set Up the Legal Journal Book..... | 287 |
| Adding Registration Information..... | 287 |
| Generating the Account Ledger Legalized Book..... | 288 |
| Setting Processing Options for Account Ledger Legalized Book (R76A8020)..... | 288 |
| Working with the Fixed Asset Legalized Book for Argentina..... | 290 |
| Understanding the Fixed Asset Legalized Book..... | 290 |
| Prerequisite..... | 290 |
| Running the Fixed Asset Legalized Book Program (R76A1244)..... | 290 |
| Setting Processing Options for the Fixed Asset Legalized Book Program (R76A1244)..... | 290 |
| Generating the Gross Income Perception Report for Argentina..... | 291 |
| Understanding the Gross Income Perception (R76A93) Program..... | 292 |
| Prerequisites..... | 293 |
| Running the IIBB Perception Program (R76A93)..... | 293 |
| Setting Processing Options for the IIBB Perception Program (R76A93)..... | 293 |

Part 3 Australia

Chapter 15

| | |
|--|------------|
| (AUS) Understanding Country-Specific Functionality for Australia..... | 297 |
| Australia-Specific Setup and Processes..... | 297 |

Chapter 16

| | |
|--|------------|
| (AUS) Setting Up Country-Specific Functionality for Australia..... | 301 |
| Setting Up AAls for Australia..... | 301 |
| Setting Up Payment Formats for Australia..... | 301 |
| Understanding Payment Formats for Australia..... | 301 |
| Setting Processing Options for Create Australia EFT Payment File (R04572OZ)..... | 302 |

Part 4

Austria

Chapter 17

| | |
|--|------------|
| (AUT) Understanding Country-Specific Functionality for Austria..... | 305 |
| Austria-Specific Setup and Processes..... | 305 |

Chapter 18

| | |
|--|------------|
| (AUT) Setting Up Country-Specific Functionality for Austria..... | 309 |
| Setting Up Payment Formats for Austria..... | 309 |
| Understanding Payment Formats for Austria..... | 309 |
| Prerequisites..... | 310 |
| Setting Processing Options for Create A/P Bank Diskette - Austrian EFT (R04572A)..... | 311 |
| Setting Processing Options for Create A/P Bank Diskette - Austrian V3 PAYMUL (R04572A3)..... | 311 |
| Setting Up Automatic Debit Formats for Austria..... | 312 |
| Understanding Automatic Debit Formats for Austria..... | 312 |
| Setting Processing Options for Austrian Bank Diskette Format and Statement (R03B575AD)..... | 312 |

Part 5

Belgium

Chapter 19

| | |
|--|------------|
| (BEL) Understanding Country-Specific Functionality for Belgium..... | 317 |
| Belgium-Specific Setup and Processes..... | 317 |
| Tax ID Validation for Belgium..... | 322 |
| Bank Account Validation..... | 323 |
| Additional Supplier Information for Belgium..... | 324 |

Chapter 20

| | |
|---|------------|
| (BEL) Setting Up Country-Specific Functionality for Belgium..... | 325 |
| Setting Up UDCs for Belgium..... | 325 |
| Setting Up UDCs for Belgian Tax Processing..... | 325 |
| Setting Up UDCs for Accounts Payable..... | 326 |
| Setting Up Payment Formats for Belgium..... | 327 |
| Understanding Payment Formats for Belgium..... | 327 |
| Setting Processing Options for Create A/P Bank Diskette - Belgium Foreign (R04572L2)..... | 329 |
| Setting Processing Options for Create A/P Bank Diskette - Belgium Domestic/EURO (R04572L3)..... | 330 |

Part 6 Brazil

Chapter 21

| | |
|---|------------|
| (BRA) Understanding Country-Specific Functionality for Brazil..... | 335 |
| Understanding Tax Information for Address Book Records for Brazil..... | 335 |
| Brazil-Specific Setup and Processes..... | 336 |

Chapter 22

| | |
|---|------------|
| (BRA) Setting Up Country-Specific Functionality for Brazil..... | 353 |
| Understanding Advanced Pricing Setup for Repasse..... | 353 |
| Setting Up UDCs for Brazil..... | 354 |
| Setting Up UDCs for Supplier Withholding for Brazil..... | 354 |
| Setting Up UDCs for Electronic Banking for Brazil..... | 359 |
| Setting Up UDCs for Fiscal Books and Electronic GIAs for Brazil..... | 378 |

| Adding a Nota Fiscal Record for Fiscal Books..... | 569 |
| Maintaining ICMS and IPI Tax Information for Fiscal Books..... | 571 |
| Understanding ICMS and IPI Tax Information for Fiscal Books..... | 572 |
| Forms Used to Maintain ICMS and IPI Taxes..... | 572 |
| Adding ICMS and IPI Demonstrative Codes..... | 572 |
| Adding ICMS and IPI Collection Information for Fiscal Books..... | 573 |
| Adding Comments for ICMS and IPI Taxes for Fiscal Books..... | 574 |
| Maintaining GNRE Information for Fiscal Books..... | 574 |
| Understanding GNRE..... | 574 |
| Forms Used to Maintain GNRE Information..... | 574 |
| Adding GNRE Information..... | 574 |
| Generating ICMS Magnetic Files (Sintegra)..... | 575 |
| Understanding ICMS Magnetic Files (Sintegra)..... | 575 |
| Prerequisites..... | 579 |
| Running the Generate ICMS Magnetic Files - Sintegra Program..... | 579 |
| Setting the Processing Options for Generate ICMS Magnetic Files - Sintegra (R76B201)..... | 579 |
| Purging Incomplete Fiscal Book Records..... | 582 |
| Understanding Purging Incomplete Fiscal Book Records..... | 582 |
| Prerequisites..... | 582 |
| Purging Incomplete Fiscal Book Records..... | 583 |
| Printing Fiscal Books Reports..... | 583 |
| Prerequisites..... | 583 |
| Printing the Issuer Code List Report..... | 583 |
| Setting Processing Options for Issuer Codes List (R76B4004)..... | 584 |
| Printing the Product Codes List Report..... | 584 |
| Setting Processing Options for Product Codes List (R76B4005)..... | 584 |
| Printing the Retained ICMS Report..... | 584 |
| Setting Processing Options for Notas Fiscais With Retained ICMS (R76B4007)..... | 584 |
| Printing the Listing of Interstate Operations..... | 585 |
| Setting Processing Options for Interstate Operation Listing (R76B4008)..... | 585 |
| Printing the Interstate Operations for Inbound Transactions Report..... | 585 |
| Setting Processing Options for the Interstate Operation Form - Inbound (R76B4009)..... | 585 |
| Printing the Interstate Operations for Outbound Transactions Report..... | 586 |

| | |
|--|-----|
| Setting Processing Options for the Interstate Operation Form - Outbound (R76B4010)..... | 586 |
| Printing the Annual Declaration - IPM Report..... | 586 |
| Setting Processing Options for Annual Declaration - IPM (R76B4012)..... | 586 |
| Printing the DIPI Summaries and Statements..... | 587 |
| Understanding the DIPI Summaries and Statements Report..... | 587 |
| Prerequisite..... | 592 |
| Printing the DIPI Summaries and Statements Report..... | 592 |
| Setting Processing Options for DIPI Summaries and Statements (R76B4006)..... | 592 |
| Printing the DIPI Annual Movements Report..... | 593 |
| Understanding the DIPI Annual Movements Report..... | 593 |
| Prerequisite..... | 593 |
| Printing the DIPI Annual Movements Report..... | 593 |
| Setting Processing Options for DIPI Annual Movements (R76B4011)..... | 593 |
| Generating Fiscal Books..... | 594 |
| Understanding the Fiscal Books to Generate for Brazil..... | 594 |
| Printing the Inbound Registry Fiscal Book..... | 595 |
| Setting Processing Options for Inbound Registry (R76B4016)..... | 595 |
| Printing the Outbound Registry Fiscal Book..... | 597 |
| Setting Processing Options for Outbound Registry (R76B4001)..... | 597 |
| Printing the Outbound Registry for ISS Fiscal Book..... | 598 |
| Setting Processing Options for Outbound Registry - ISS (R76B4015)..... | 599 |
| Printing the IPI Verification Fiscal Book..... | 600 |
| Setting Processing Options for Verification of IPI (R76B4002)..... | 600 |
| Printing the Verification of ICMS..... | 601 |
| Setting Processing Options for Verification of ICMS (R76B4003)..... | 601 |
| Printing the Inventory Records Fiscal Book..... | 602 |
| Setting Processing Options for Inventory Record (R76B4013)..... | 602 |
| Printing the Manufacturing and Inventory Control Fiscal Book..... | 602 |
| Setting Processing Options for Record of Manufacturing Control and Inventory (R76B4014)..... | 602 |

Chapter 30

| | |
|---|------------|
| (BRA) Working with the Electronic GIA Workbench..... | 605 |
| Understanding the Electronic GIA Workbench for Brazil..... | 605 |
| Understanding GIA Record Types..... | 611 |
| Prerequisites..... | 615 |
| Adding Company Profiles..... | 615 |
| Understanding Company Profiles..... | 615 |
| Forms Used to Add a Company Profile..... | 615 |
| Adding a Company Profile..... | 615 |

| | |

| Modifying a GIA Exportation Record..... | 630 |
| Deleting GIA Records..... | 630 |
| Form Used to Delete GIA Records..... | 631 |
| Deleting GIA Records..... | 631 |
| Printing GIA Data..... | 631 |
| Prerequisite..... | 631 |
| Form Used to Print GIA Data..... | 631 |
| Printing GIA Data..... | 631 |
| Sending GIA Data..... | 631 |
| Understanding How to Send GIA Data..... | 632 |
| Prerequisites..... | 632 |
| Forms Used to Send GIA Data..... | 632 |
| Setting Processing Options for Send GIA (R76B132)..... | 632 |
| Sending GIA Data..... | 633 |
| Purging GIA Data..... | 633 |
| Forms Used to Purge GIA Data..... | 633 |
| Purging GIA Data..... | 633 |

Chapter 31

(BRA) Working With Procurement Processes for Brazil.....635

| | |
|--|-----|
| Understanding Purchase Order Returns for Brazil..... | 635 |
| Understanding PIS/PASEP and COFINS Processing..... | 636 |
| Understanding Setup Considerations for Purchase Order Returns..... | 637 |
| Entering Purchase Orders for Brazil..... | 638 |
| Understanding Purchase Order Entry in Brazil..... | 638 |
| Prerequisites..... | 639 |
| Forms Used to Enter Purchase Orders for Brazil..... | 640 |
| Setting Processing Options for P.O. Brazilian Additional Information - Brazil (P4310BR)..... | 640 |
| Entering Purchase Orders for Brazil..... | 641 |
| Entering and Reviewing Receipts for Procurement for Brazil..... | 643 |
| Understanding Receipts for Brazilian Procurement..... | 643 |
| Prerequisite..... | 643 |
| Forms Used to Enter and Review Receipts for Procurement for Brazil..... | 644 |
| Setting Processing Options for Nota Fiscal Receipts - Brazil (P4312BR)..... | 644 |
| Entering Receipts for Procurement for Brazil..... | 644 |
| Setting Processing Options for Nota Fiscal Maintenance - Brazil (P7610B)..... | 645 |
| Reviewing Inbound Nota Fiscal Header Information..... | 648 |
| Reviewing Inbound Nota Fiscal Detail Information..... | 649 |
| Entering Reversing Receipts for Brazilian Procurement..... | 649 |

| | |
|---|-----|
| Understanding Receipt Reversals for Brazilian Procurement..... | 649 |
| Form Used to Enter Reversing Receipts for Brazilian Procurement..... | 649 |
| Entering a Reversing Receipt for Brazilian Procurement..... | 649 |
| Working with Errors on Notas Fiscais for Brazil..... | 649 |
| Understanding Errors on Notas Fiscais..... | 649 |
| Forms Used to Work with Errors on Notas Fiscais..... | 650 |
| Comparing Nota Fiscal Amounts..... | 650 |
| Closing Inbound Notas Fiscais..... | 651 |
| Understanding the Nota Fiscal Check & Close Program (P76B900)..... | 651 |
| PIS/PASEP and COFINS Processing for Procurement Transactions..... | 652 |
| Prerequisites..... | 652 |
| Forms Used to Close an Inbound Nota Fiscal..... | 653 |
| Setting Processing Options for Nota Fiscal Check & Close (P76B900)..... | 653 |
| Closing an Inbound Nota Fiscal..... | 654 |
| Generating a Correction Letter for a Nota Fiscal..... | 654 |
| Prerequisite..... | 654 |
| Forms Used to Generate a Correction Letter for a Nota Fiscal..... | 655 |
| Generating a Correction Letter for a Nota Fiscal..... | 655 |
| Creating the Text for a Correction Letter..... | 655 |
| Entering Landed Costs and Freight Notes for Brazil..... | 656 |
| Understanding Landed Costs for Brazil..... | 656 |
| Understanding PIS/PASEP and COFINS Taxes for Freight Notes..... | 657 |
| Prerequisite..... | 657 |
| Forms Used to Enter Landed Costs and Freight Notes..... | 658 |
| Applying Landed Costs..... | 658 |
| Entering Freight Notes..... | 659 |
| Processing Purchase Order Returns for Brazil..... | 659 |
| Prerequisites..... | 659 |
| Forms Used to Process Purchase Order Returns for Brazil..... | 660 |
| Processing Purchase Order Returns..... | 660 |
| Generating the Nota Fiscal for a Purchase Return..... | 661 |
| Generating a Nota Fiscal..... | 661 |
| Printing the Nota Fiscal for Purchase Returns..... | 661 |
| Printing the Nota Fiscal..... | 661 |

Chapter 32

| | |
|--|------------|
| (BRA) Working With Inventory Management for Brazil..... | 663 |
| Adding Additional Item Master Information for Brazil..... | 663 |
| Understanding Additional Item Master Information for Brazil..... | 663 |

| | |
|--|------------|
| Prerequisite..... | 664 |
| Form Used to Add Additional Item Information for Brazil..... | 664 |
| Entering Additional Item Master Information..... | 664 |
| Adding Additional Branch/Plant Information for Brazil..... | 665 |
| Understanding Additional Branch/Plant Information for Brazil..... | 666 |
| Forms Used to Enter Additional Branch/Plant Information..... | 666 |
| Entering Additional Branch/Plant Information for Items for Brazil..... | 666 |
| Chapter 33 | |
| (BRA) Filtering Records for IN86 and IN89 Tax Reporting..... | 669 |
| Understanding IN86 and IN89 Tax Reporting for Brazil..... | 669 |
| Understanding IN86 and IN89 Filter Programs..... | 671 |
| Understanding How the System Populates the IN86-Work Table for Business Unit Table..... | 672 |
| Understanding How the System Populates the IN86-Work Table for Account Master Table..... | 672 |
| Understanding How the System Populates the IN86-Work Table for Individuals and Legal Entities Table..... | 673 |
| Understanding How the System Populates the IN86-Work Table for Transaction Nature Table..... | 674 |
| Understanding How the System Populates the IN86-Work Table for Item Number and Service Code Table..... | 674 |
| Purging IN86 and IN89 Work Tables..... | 675 |
| Understanding the Purge Program..... | 675 |
| Running the Purge Programs..... | 675 |
| Setting Processing Options for IN86-Purge Work Table (R76B8610) and INSS/IN89-Purge Work Table (R76B8610)..... | 676 |
| Populating the Work and Complementary Tables for Journal Entries for IN86 and IN89..... | 676 |
| Understanding the Work and Complementary Tables for Journal Entries..... | 677 |
| Running the IN86-Filter for Journal Entries (R76B911) and the INSS/IN89- Filter for Journal Entries (R76B911) Programs..... | 677 |
| Setting Processing Options for the IN86-Filter for Journal Entries (R76B911) and the INSS/IN89- Filter for Journal Entries (R76B911) Programs..... | 677 |
| Populating the Work and Complementary Tables for Account Balances for IN86 and IN89..... | 678 |
| Understanding Work and Complementary Tables for Account Balances..... | 678 |
| Running the IN86-Filter for Account Balance (R76B902) and the INSS/IN89-Filter for Account Balance (R76B902) Programs..... | 679 |
| Setting Processing Options for the IN86-Filter for Account Balance (R76B902) and the INSS/IN89-Filter for Account Balance (R76B902) Programs..... | 679 |
| Populating the Work and Complementary Tables for Supplier Vouchers and Payments for IN86 and IN89..... | 679 |
| Understanding Work and Complementary Tables for Supplier Vouchers and Payments..... | 679 |
| Prerequisite..... | 680 |

| | |
|--|-----|
| Running the IN86-Filter Supplier Vouchers/Payments (R76B8601) and INSS/IN89- Filter Supplier Vouchers/Payments (R76B8601) Programs..... | 680 |
| Setting Processing Options for the IN86-Filter Supplier Vouchers/Payments (R76B8601) and the INSS/IN89- Filter Supplier Vouchers/Payments (R76B8601) Programs..... | 680 |
| Populating the Work and Complementary Tables for Customer Receipts for IN86 and IN89..... | 680 |
| Understanding the Work and Complementary Tables for Customer Receipts..... | 681 |
| Running the IN86-Filter Customer Receipts (R76B8605) and INSS/IN89-Filter Customer Receipts (R76B8605) Programs..... | 681 |
| Setting Processing Options for the IN86-Filter Customer Receipts (R76B8605) and the INSS/IN89-Filter Customer Receipts (R76B8605) Programs..... | 681 |
| Populating the Work and Complementary Tables for Customer Invoices for IN86 and IN89..... | 682 |
| Understanding the Work and Complementary Tables for Customer Invoices..... | 682 |
| Running the IN86-Filter Customer Invoices (R76B8604) and INSS/IN89-Filter Customer Invoices (R76B8604) Programs..... | 683 |
| Setting Processing Options for the IN86-Filter Customer Invoices (R76B8604) and the INSS/IN89-Filter Customer Invoices (R76B8604) Programs..... | 683 |
| Populating the Work and Complementary Tables for Fixed Assets for IN86 and IN89..... | 683 |
| Understanding the Work and Complementary Tables for Fixed Assets..... | 683 |
| Running the IN86-Filter Fixed Assets (R76B5200) and INSS/IN89- Filter Fixed Assets (R76B5200) Programs..... | 684 |
| Setting Processing Options for the IN86-Filter Fixed Assets (R76B5200) and the INSS/IN89- Filter Fixed Assets (R76B5200) Programs..... | 684 |
| Populating the Work and Complementary Tables for Storage Control for IN86 and IN89..... | 684 |
| Understanding the Work and Complementary Tables for Storage Control..... | 685 |
| Running the IN86-Filter for Storage Control (R76B100A) and INSS/IN89-Filter for Storage Control (R76B100A) Programs..... | 685 |
| Setting Processing Options for the IN86-Filter for Storage Control (R76B100A) and the INSS/IN89-Filter for Storage Control (R76B100A) Programs..... | 686 |
| Populating the Work Tables for IN86-Filter for Inventory Records (R76B100B) and INSS/IN89-Filter for Inventory Records (R76B100B) for IN86 and IN89..... | 686 |
| Understanding the Work Tables for Inventory Records..... | 686 |
| Running the IN86-Filter for Inventory Records (R76B100B) and INSS/IN89-Filter for Inventory Records (R76B100B) Programs..... | 687 |
| Setting Processing Options for the IN86-Filter for Inventory Records (R76B100B) and the INSS/IN89-Filter for Inventory Records (R76B100B)..... | 687 |
| Populating the Work and Complementary Tables for Notas Fiscais for Services for IN86 or IN89.. | 687 |
| Understanding the Work and Complementary Tables for Notas Fiscais for Services..... | 688 |
| Running the IN86-Filter for Services Outbound NF (R76B100C) and INSS/IN89-Fltr -Services Outbound NF (R76B100C) Programs..... | 688 |
| Setting Processing Options for the IN86-Filter for Services Outbound NF (R76B100C) and the INSS/IN89-Fltr -Services Outbound NF (R76B100C) Programs..... | 688 |
| Populating the Work and Complementary Tables for Merchandise Notas Fiscais Issued by CO for IN86 and IN89..... | 689 |

| | |
|---|------------|
| Understanding the Work and Complementary Tables for Merchandise Notas Fiscais Issued by CO..... | 689 |
| Running the IN86-Filter for Mdse Nota Fiscal by CO (R76B100D) and INSS/IN89-Filter for Mdse Nota Fiscal by CO (R76B100D) Programs..... | 691 |
| Setting Processing Options for the IN86-Filter for Mdse Nota Fiscal by CO (R76B100D) and the INSS/IN89-Filter for Mdse Nota Fiscal by CO (R76B100D) Programs..... | 691 |
| Populating the Work and Complementary Tables for Merchandise Notas Fiscais Issued by Supplier for IN86 and IN89..... | 692 |
| Understanding the Work and Complementary Tables for Merchandise Notas Fiscais Issued by Supplier..... | 693 |
| Running the IN86-Filter for Mdse NF by Supplier (R76B100E) and INSS/IN89-Fltr-Msde NF issued by Supplier (R76B100E) Programs..... | 694 |
| Setting Processing Options for the IN86-Filter for Mdse NF by Supplier (R76B100E) and the INSS/IN89-Fltr-Msde NF issued by Supplier (R76B100E) Programs..... | 694 |
| Populating the Work and Complementary Tables for Inbound Service Nota Fiscal Third Parties for IN89..... | 694 |
| Understanding the Work and Complementary Tables for Inbound Service Nota Fiscal Third Parties..... | 695 |
| Running the INSS/IN89-Fltr-3rd Party Srvs-Inbound NF (R76B100H) Program..... | 696 |
| Setting Processing Options for the INSS/IN89-Fltr-3rd Party Srvs-Inbound NF Program (R76B100H)..... | 696 |
| Populating the Work and Complementary Tables for Bills of Material for IN86 and IN89..... | 696 |
| Understanding the Work and Complementary Tables for Bills of Material..... | 697 |
| Prerequisite..... | 699 |
| Running the IN86-Filter for Bill of Material (R76B3000) and INSS/IN89-Filter for Bill of Material (R76B3000) Programs..... | 699 |
| Setting Processing Options for the IN86-Filter for Bill of Material (R76B3000) and the INSS/IN89-Filter for Bill of Material (R76B3000) Programs..... | 699 |
| Chapter 34 | |
| (BRA) Maintaining Records for IN86 and IN89 Tax Reporting..... | 701 |
| Understanding Maintaining IN86 and IN89 Records..... | 701 |
| Maintaining IN86 and IN89 Records for Journal Entries..... | 704 |
| Understanding How to Maintain IN86 and IN89 Records for Journal Entries..... | 704 |
| Forms Used to Maintain Journal Entry Records..... | 705 |
| Adding or Revising Records for Journal Entries..... | 705 |
| Maintaining IN86 and IN89 Records for Account Balances..... | 706 |
| Understanding Maintaining IN86 and IN89 Records for Account Balances..... | 706 |
| Forms Used to Maintain Account Balances Records..... | 708 |
| Adding or Revising Records for Account Balances..... | 708 |
| Maintaining IN86 and IN89 Records for Suppliers and Customers..... | 708 |

| | |
|--|-----|
| Understanding IN86 and IN89 Records for Suppliers and Customers..... | 709 |

Understanding Invoice Dates for Chile.....944

Forms Used to Change the Invoice Date.....945

Changing the Invoice Date.....945

Setting Processing Options for Lot of Printing Date (P76H3B53).....945

Chapter 46**(CHL and PER) Calculating Inventory Adjustment and Actual Cost.....947**

(CHL and PER) Understanding the Inventory Adjustment and Actual Cost Calculation Process for Chile and Peru.....947

| | |
|--|-----|
| Prerequisites..... | 950 |
| Legal Requirement – Chile..... | 950 |
| Legal Requirement – Peru..... | 950 |
| Common Fields Used in This Chapter..... | 951 |
| (CHL and PER) Entering Indirect Costs, Bill of Material Information, and Actual Costs for Chile and Peru..... | 952 |
| Understanding Indirect Costs..... | 952 |
| Understanding Actual Bills of Material..... | 952 |
| Understanding Actual Costs..... | 953 |
| Prerequisites..... | 953 |
| Forms Used for Entering Indirect Costs, Bill of Material Information, and Actual Costs..... | 954 |
| Adding Indirect Costs..... | 954 |
| Generating the Actual Bill of Materials..... | 955 |
| Entering Actual Costs..... | 955 |
| (CHL and PER) Updating the Localized Cardex for Chile and Peru..... | 955 |
| Understanding the Localized Cardex..... | 955 |
| Form Used to Update the Localized Cardex..... | 956 |
| Updating the Localized Cardex..... | 956 |
| (CHL and PER) Inquiring on Localized Cardexes for Chile and Peru..... | 957 |
| Understanding Localized Cardex Inquiries..... | 957 |
| Forms Used to Inquire on the Localized Cardexes..... | 958 |
| Inquiring on Localized Cardexes..... | 958 |
| (CHL and PER) Printing the Inventory Ledger for Chile and Peru..... | 959 |
| Understanding the Inventory Ledger..... | 959 |
| Running the Inventory Ledger..... | 960 |
| Setting Processing Options for Inventory Ledger (R76H6540)..... | 960 |
| (CHL and PER) Calculating Inventory Inflation Adjustments for Raw Materials and Resale Goods for Chile and Peru..... | 960 |
| Understanding Inventory Adjustments for Raw Materials and Resale Goods..... | 960 |
| (CHL) Forms Used to Enter Indexes and Exchange Rates..... | 962 |
| Entering Indexes and Exchange Rates for Chile..... | 962 |
| Generating the Item Ledger As Of Record Generation Report..... | 962 |
| Setting Processing Options for Item Ledger As Of Record Generation (R76H6542)..... | 962 |
| Generating the Create Missing As-Of Record Report..... | 963 |
| Processing Options for Create Missing As-Of Record Report (R76H397)..... | 963 |
| (CHL) Calculating the Replacement Cost for WIP and FG for Chile..... | 963 |
| Understanding the Replacement Cost for WIPG and FG Process..... | 963 |
| Forms Used to Create the Replacement Cost Process Header..... | 966 |
| Setting Processing Options for Replacement Cost Process Header (P76H6201)..... | 966 |
| Creating the Replacement Cost Process Header..... | 966 |

| | |
|---|-----|
| Calculating Replacements Costs for Work in Process Goods and Finished Goods Produced for the Period..... | 966 |
| Calculating Replacement Costs for Work in Process Goods and Finished Goods With a Balance But Not Produced..... | 967 |
| Updating the Item Ledger and Generating Journal Entries..... | 967 |
| Setting Processing Options for Replacement Cost Journal Entry (R76H6396)..... | 967 |

Chapter 47

| | |
|---|------------|
| (CHL and PER) Working With General Ledger Functionality for Chile and Peru..... | 969 |
| Reviewing Ledgers by Legal Number for Chile and Peru..... | 969 |
| Form Used to Review Ledgers by Legal Number..... | 969 |
| Setting Processing Options for Journal Entries Inquiry by Legal Number (P76H9002)..... | 969 |
| Reviewing Ledgers by Legal Number..... | 970 |
| Reviewing Account Balances by Account and Category Code for Chile and Peru..... | 970 |
| Form Used to Review Account Balances by Account and Category Code..... | 970 |
| Setting Processing Options for Balance Inquiry by Account/Category Code (P76H9006)..... | 970 |
| Reviewing Balances by Account and Category Code..... | 971 |
| Reviewing Debit and Credit Balances by Month for Chile and Peru..... | 971 |
| Form Used to Review Debit and Credit Balances by Month..... | 971 |
| Setting Processing Options for Debit/Credit Inquiry by Month (P76H9007)..... | 972 |
| Reviewing Debit and Credit Monthly Balances..... | 972 |
| Reposting the Account Ledger Tag File for Chile and Peru..... | 972 |
| Running the Localization Account Repost Program..... | 972 |
| Setting Processing Options for Localization Account Repost (R76H9102)..... | 972 |

Chapter 48

| | |
|---|------------|
| (PER) Working with Accounts Payable Functionality for Peru..... | 975 |
| Understanding IGV Withholding Calculations for Peru..... | 975 |
| Understanding Payment Groups for Peru..... | 975 |
| Entering Vouchers for Peru..... | 976 |
| Understanding Voucher Entry for Peru..... | 976 |
| Prerequisites..... | 977 |
| Forms Used to Enter Voucher Information for Peru..... | 978 |
| Setting Processing Options for Peruvian Add Vouchers Set Up (P76P411T)..... | 978 |
| Entering Additional Information for Vouchers for Peru..... | 978 |
| Processing SPOT Vouchers for Peru..... | 979 |
| Understanding SPOT Vouchers..... | 979 |
| Forms Used to Enter Bank Information for SPOT Vouchers..... | 980 |

| | |
|--|-----|
| Generating SPOT Vouchers..... | 980 |
| Setting Processing Options for SPOT Voucher Generation (R76P4800)..... | 981 |
| Entering Bank Information for SPOT Vouchers..... | 981 |
| Processing Options for PO - PCG process - PER (P76P470)..... | 982 |

Chapter 49

| | |
|---|------------|
| (CHL and PER) Working With Other Functionality for Chile and Peru..... | 983 |
| (CHL) Understanding Voucher Entry for Chile..... | 983 |
| (CHL) Verifying Documents in Reports for Chile..... | 984 |
| Understanding How to Verify Documents in Reports..... | 984 |
| Form Used to Verify Documents..... | 984 |
| Verifying Legal Documents in Reports..... | 984 |
| Printing Purchase Invoices from the Accounts Payable System..... | 984 |
| Understanding How to Print Purchase Invoices..... | 985 |
| Understanding the Programs Used to Print Invoices..... | 986 |
| Prerequisites..... | 988 |
| Forms Used to Print Purchase Invoices for Chile..... | 989 |
| (CHL and PER) Processing Invoices for Chile and Peru..... | 989 |
| Understanding Invoice Requirements for Chile and Peru..... | 990 |
| Prerequisites..... | 990 |
| Forms Used to Process Invoices..... | 991 |
| Setting Processing Options for Chilean Add Invoices - PO (P76H3B11)..... | 991 |
| Entering Related Credit Notes..... | 992 |
| (CHL and PER) Voiding Invoices for Chile and Peru..... | 992 |
| Forms Used to Void Invoices..... | 992 |
| Voiding an Invoice..... | 992 |
| (CHL and PER) Working with Batch Invoices for Chile and Peru..... | 993 |

Part 9 **China**

Chapter 50

| | |
|--|------------|
| (CHN) Understanding Country-Specific Functionality for China..... | 997 |
| China-Specific Setup and Processes..... | 997 |

Chapter 51

| | |
|---|-------------|
| (CHN) Setting Up Country-Specific Functionality for China..... | 1003 |
| Understanding Supplier Information for China..... | 1003 |
| Understanding Category Code UDCs for Chinese Reports..... | 1003 |
| Setting Up UDCs for China..... | 1005 |
| Setting Up UDCs for Financial Reports for Beijing, Shanghai, and Guangzhou..... | 1005 |
| Setting Up UDCs for Accounts Payable for China..... | 1008 |
| Setting Up Next Numbers for China..... | 1009 |
| Setting Up Corresponding Versions for China..... | 1009 |
| Copying UDC Values for Financial Reports for China..... | 1009 |
| Understanding How to Copy UDC Values..... | 1010 |
| Copying UDC Values for Chinese Reports..... | 1011 |
| Setting Processing Options for Copy UDC from F0005 and F0005D (R090005)..... | 1011 |
| Associating Your Chart of Accounts to the Chinese Reporting Codes..... | 1012 |

Chapter 52

| | |
|--|-------------|
| (CHN) Generating Financial Reports for Beijing, Guangzhou, and Shanghai..... | 1015 |
| Understanding Financial Reports for Beijing, Guangzhou, and Shanghai..... | 1015 |
| Prerequisites..... | 1017 |
| Printing Account Master Reports for China..... | 1018 |
| Understanding the Account Master Reports..... | 1018 |
| Setting Processing Options for Account Master Report Cat. Code 24-33 (R75C0701) and Account Master Report Cat. Code 34-43 (R75C0702)..... | 1018 |
| Printing the Account Master Reports..... | 1018 |
| Generating Beijing Financial Reports..... | 1018 |
| Understanding the Beijing Statement of Value Added Tax Payable Report..... | 1019 |
| Print the Beijing Statement of Value Added Tax Payable Report..... | 1020 |
| Setting Processing Options for Beijing Statement of Value Added Tax Payable (R75C10001)..... | 1020 |
| Understanding the Beijing Balance Sheet Yearly Report..... | 1022 |
| Printing the Beijing Balance Sheet Yearly Report..... | 1028 |
| Setting Processing Option for Beijing Balance Sheet Yearly (R75C10002)..... | 1028 |
| Understanding the Beijing Income Statement (Industrial) Report..... | 1029 |
| Printing the Beijing Income Statement (Industrial) Report..... | 1032 |
| Setting Processing Options for Beijing Income Statement (Industrial) (R75C10004)..... | 1032 |
| Generating the Guangzhou Financial Reports..... | 1033 |
| Understanding the Guangzhou Balance Sheet..... | 1033 |
| Understanding the Guangzhou Income Statement..... | 1040 |
| Understanding the Guangzhou Supplemental Statement..... | 1044 |
| Running the Guangzhou Balance Sheet..... | 1050 |

| | |
|---|------|
| Setting Processing Options for Guangzhou Balance Sheet (R75C10005)..... | 1050 |
| Running the Guangzhou Income Statement..... | 1050 |
| Setting Processing Options for Guangzhou Income Statement (R75C10006)..... | 1051 |
| Running the Guangzhou Supplemental Statement..... | 1051 |
| Setting Processing Options for Guangzhou Supplemental Statement (R75C10007)..... | 1051 |
| Generating Shanghai Financial Reports..... | 1052 |
| Understanding the Shanghai Balance Sheet Monthly..... | 1052 |
| Understanding the Shanghai Detail Statement of Main Tax Payable Monthly Report..... | 1058 |
| Understanding the Shanghai Income Statement Monthly Report..... | 1061 |
| Understanding the Shanghai Income Statement (Commercial)..... | 1062 |
| Understanding the Shanghai Balance Sheet Yearly..... | 1065 |
| Understanding the Shanghai Income Statement (Industrial)..... | 1071 |
| Understanding the Shanghai Income Statement (Service)..... | 1076 |
| Running the Shanghai Balance Sheet Monthly Report..... | 1078 |
| Setting Processing Options for Shanghai Balance Sheet Monthly (R75C10008)..... | 1078 |
| Running the Shanghai Detail Statement of Main Tax Payable Monthly Report..... | 1078 |
| Setting Processing Options for Shanghai Detail Statement of Main Tax Payable Monthly (R75C10009)..... | 1079 |
| Running the Shanghai Income Statement Monthly Report..... | 1079 |
| Setting Processing Options for the Shanghai Income Statement Monthly (R75C10010)..... | 1079 |
| Running the Shanghai Income Statement (Commercial) Report..... | 1079 |
| Setting Processing Options for Shanghai Income Statement (Commercial) (R75C10011)..... | 1079 |
| Running the Shanghai Balance Sheet Yearly Report..... | 1079 |
| Setting Processing Options for the Shanghai Balance Sheet Yearly (R75C10012)..... | 1079 |
| Running the Shanghai Income Statement (Industrial) Report..... | 1079 |
| Setting Processing Options for Shanghai Income Statement (Industrial) (R75C10013)..... | 1079 |
| Running the Shanghai Income Statement (Service) Report..... | 1079 |
| Setting Processing Options for Shanghai Income Statement (Service) (R75C10014)..... | 1080 |

Chapter 53

| | |
|---|-------------|
| (CHN) Working with Other Chinese Functionality..... | 1081 |
| Generating a Balance Sheet and Income Statement..... | 1081 |
| Understanding the Balance Sheet and Income Statement for China..... | 1081 |
| Prerequisite..... | 1081 |
| Running the Sample Balance Sheet and Income Statement..... | 1081 |
| Processing JinSui Invoices for China..... | 1081 |
| Understanding Invoices for JinSui..... | 1082 |
| Prerequisites..... | 1082 |
| Forms Used to Process JinSui Invoices..... | 1083 |
| Running the Print Invoices from A/R Program..... | 1083 |

| | |
|---|------|
| Setting Processing Options for Create Chinese GUI interface file from A/R (R75C03B1)..... | 1083 |
| Running the Cancel Invoice Print Program..... | 1084 |
| Setting Processing Options for Cancel Invoice Print (R75C09Z1)..... | 1084 |
| Running the Download JinSui Return File into JDE Program..... | 1084 |
| Printing Invoices in China..... | 1084 |
| Understanding the Invoice Print Process for China..... | 1085 |
| Setting Processing Options for GUI Interface File from Sales Order (R75C421)..... | 1085 |
| Print Invoices from the Sales Order Management System..... | 1086 |

Part 10 Colombia

Chapter 54

| | |
|--|-------------|
| (COL) Setting Up Country-Specific Functionality for Colombia..... | 1089 |
| Colombia-Specific Setup and Processes..... | 1089 |

Chapter 55

| | |
|--|-------------|
| (COL) Setting Up Functionality for Colombia..... | 1091 |
| Setting Up UDCs for Colombia..... | 1091 |
| Setting Up UDCs for Tax Processing for Colombia..... | 1091 |
| Setting Up UDCs for Address Book Records and Accounts Payable for Colombia..... | 1093 |
| Setting Up Address Book Information for Colombia..... | 1095 |
| Understanding Address Book Information for Colombia..... | 1096 |
| Setting Processing Options for Address Book Colombian Additional Information (P76C0101)..... | 1096 |
| Setting Up Cost Accounts for Depreciation and Inflation Adjustments for Colombia..... | 1097 |
| Understanding Cost Inflation Adjustments..... | 1097 |
| Understanding Depreciation Inflation Adjustment Accounts..... | 1097 |
| Forms Used to Set Up Cost Accounts for Depreciation and Inflation Adjustments..... | 1098 |
| Setting Up Cost Accounts for Cost Inflation Adjustments..... | 1098 |
| Setting up Cost Accounts for Depreciation Adjustments..... | 1099 |
| Setting Up Payment Formats for Colombia..... | 1099 |
| Understanding Payment Formats for Colombia..... | 1100 |
| Setting Processing Options for Print Automatic Payments - COL (R76C572)..... | 1100 |

Chapter 56

| | |
|--|-------------|
| (COL) Working with Fixed Assets for Colombia..... | 1101 |
|--|-------------|

| | |
|--|------|
| Calculating Depreciation Adjustments for Inflation for Colombia..... | 1101 |
| Understanding Depreciation Adjustments for Inflation..... | 1101 |
| Prerequisites..... | 1102 |
| Calculating the Depreciation Inflation Adjustments..... | 1102 |
| Setting Processing Options for Adjustment by Inflation Depreciation/Amortization (R76C1202)..... | 1103 |
| Calculating the End of Useful Life for Colombian Assets..... | 1104 |
| Understanding the Life End Date (R76C1208) Program..... | 1105 |
| Prerequisites..... | 1105 |
| Calculating the End of Useful Life..... | 1106 |
| Setting Processing Options for Life End Date (R76C1208)..... | 1106 |
| Working With Cost Inflation Adjustments in Colombia..... | 1107 |
| Understanding Cost Inflation Adjustments..... | 1107 |
| Prerequisites..... | 1108 |
| Forms Used to Review and Revise Cost Accounts..... | 1109 |
| Reviewing and Revising Cost Accounts..... | 1109 |
| Calculating the Cost Inflation Adjustments..... | 1109 |
| Setting Processing Options for Adjustment by Inflation to Cost / Deferred Charge (R76C1201)..... | 1109 |

Part 11

Denmark, Finland, Norway, and Sweden

Chapter 57

| | |
|--|-------------|
| (DNK) Understanding Country-Specific Functionality for Denmark..... | 1113 |
| Denmark-Specific Setup and Processes..... | 1113 |

Chapter 58

| | |
|--|-------------|
| (FIN) Understanding Country-Specific Functionality for Finland..... | 1119 |
| Finland-Specific Setup and Processes..... | 1119 |

Chapter 59

| | |
|---|-------------|
| (NOR) Understanding Country-Specific Functionality for Norway..... | 1125 |
| Norway-Specific Setup and Processes..... | 1125 |

Chapter 60

| | |
|---|-------------|
| (SWE) Understanding Country-Specific Functionality for Sweden..... | 1131 |
|---|-------------|

| | |
|--|------|
| Sweden-Specific Setup and Processes..... | 1131 |
|--|------|

Chapter 61

| | |
|---|-------------|
| (DNK, FIN, NOR and SWE) Setting Up Functionality for Denmark, Finland, Norway, and Sweden..... | 1137 |
| Setting Up Bank Information for Suppliers for Denmark, Finland, Norway, and Sweden..... | 1137 |
| Setting Up Additional Bank Information for Foreign Suppliers..... | 1138 |
| Understanding Additional Bank Information for Foreign Suppliers..... | 1138 |
| Prerequisites..... | 1138 |
| Forms Used to Set Up Additional Bank Information for Foreign Suppliers..... | 1139 |
| Setting Up Additional Bank Information for Foreign Suppliers..... | 1139 |
| Overriding Additional Bank Information..... | 1140 |
| (DNK) Setting Up Payment Formats for Denmark..... | 1140 |
| Understanding Payment Formats for Denmark..... | 1140 |
| Setting Processing Options for Create A/P Bank Tape - Denmark DDB - Domestic (R04572DK1)..... | 1156 |
| Setting Processing Options for Create A/P Bank Tape - Denmark DDB Foreign (R04572DK2)..... | 1157 |
| Setting Processing Options for Create A/P Bank Tape - Denmark UNIBANK - Domestic (R04572DK3)..... | 1158 |
| Setting Processing Options for Create A/P Bank Tape - Denmark UNIBANK - Foreign (R04572DK4)..... | 1159 |
| Setting Processing Options for Create A/P Bank Tape - Denmark GiroBank (R04572DK5)..... | 1161 |
| (FIN) Calculating the Finnish Reference Number..... | 1162 |
| Understanding the Finnish Reference Number..... | 1162 |
| Setting Up the Reference Number Business Function..... | 1163 |
| (FIN) Setting Up Payment Formats for Finland..... | 1165 |
| Understanding Payment Formats for Finland..... | 1165 |
| Setting Processing Options for Create A/P Bank Tape - Finland - Domestic (R04572FI1)..... | 1165 |
| Setting Processing Options for Create A/P Bank Tape - Finland Foreign (R04572FI2)..... | 1166 |
| Setting Processing Options for Create A/P Bank Tape - Finland-Domestic LM03 (R04572FI3)..... | 1167 |
| (NOR) Setting Up Enterprise Information for Norway..... | 1168 |
| Understanding Enterprise Information for Norway..... | 1168 |
| Form Used to Set Up Enterprise Information for Norway..... | 1168 |
| Setting Up Enterprise Information for Norway..... | 1168 |
| (NOR) Setting Up Payment Formats for Norway..... | 1169 |
| Understanding Payment Formats for Norway..... | 1169 |
| Setting Processing Options for Create A/P Bank Tape - Norway DNB - Domestic (R04572NO1)..... | 1169 |
| Setting Processing Options for Create A/P Bank Tape - Norway DNB - Foreign (R04572NO2)..... | 1170 |
| (SWE) Setting Up Enterprise Information for Sweden..... | 1171 |

| | |
|---|------|
| Understanding Enterprise Information for Sweden..... | 1171 |
| Form Used to Set Up Enterprise Information for Sweden..... | 1171 |
| Setting Up Enterprise Information for Sweden..... | 1171 |
| (SWE) Setting Up Payment Formats for Sweden..... | 1172 |
| Understanding Payment Formats for Sweden..... | 1172 |
| Setting Processing Options for Create A/P Bank Tape - Sweden BG Domestic (R04572SE1)..... | 1172 |
| Setting Processing Options for Create A/P Bank Tape - Sweden BG-Foreign (R04572SE2)..... | 1173 |
| Setting Processing Options for Create A/P Bank Tape - Sweden PG - Domestic (R04572SE3)..... | 1174 |

Chapter 62

| | |
|--|-------------|
| (DNK, FIN, NOR and SWE) Working With Country-Specific Functionality for Denmark, Finland, Norway, and Sweden..... | 1177 |
| Understanding the Payment Processing for Denmark, Finland, Norway, and Sweden..... | 1177 |
| (DNK, FIN, NOR, and SWE) Understanding Additional Information for Vouchers..... | 1177 |
| Entering Foreign Payment Information for the Central Bank..... | 1177 |
| (FIN) Entering Reference Numbers for Finnish Domestic Payments..... | 1178 |
| (DNK, FIN, NOR and SWE) Working with Payment Groups..... | 1178 |
| Forms Used to Work With Payment Groups for the Nordic Countries..... | 1179 |
| Setting Processing Options for A/P Bank File Report - Nordic Countries (R0474N1)..... | 1179 |
| Setting Processing Options for Nordic Work with Payments (P0474N5)..... | 1179 |
| Revising the GL Date for Payments and Updating Payments from Different Control Groups..... | 1180 |
| (DNK, FIN, NOR, and SWE) Receiving Debit Advice Notices..... | 1180 |
| Understanding Debit Advice Note..... | 1180 |
| Form Used to Review Debit Advice Notes and Update or Reset Payments..... | 1183 |
| Running the Load Payment Return File Program..... | 1183 |
| Setting Processing Options for Load Payment Return File (R74W210)..... | 1183 |
| Setting Processing Options for Debit Advice Payment Driver (R74W211)..... | 1184 |
| Setting Processing Options for Debit Advice - Format, DNB (R74O212)..... | 1184 |
| Reviewing Debit Advice Notes, Updating Payments, and Resetting Payments..... | 1184 |
| (DNK, FIN, NOR and SWE) Uploading Customer Payment Information for the Nordic Countries..... | 1184 |
| (DNK, FIN, NOR, SWE) Understanding the Upload of Customer Payment Information for the Nordic Countries..... | 1185 |
| (DNK) Uploading Customer Payment Information for Denmark..... | 1186 |
| (DNK) Setting Processing Options for Automatic Receipts Denmark (R74M001)..... | 1186 |
| (FIN) Uploading Customer Payment Information for Finland..... | 1188 |
| (FIN) Setting Processing Options for Automatic Receipts Finland (R74V001)..... | 1188 |
| (NOR) Uploading Customer Payment Information for Norway..... | 1190 |
| (NOR) Setting Processing Options for Automatic Receipts Norway (R74O001)..... | 1190 |
| (SWE) Uploading Customer Payment Information for Sweden..... | 1192 |

| | |
|---|------|
| (SWE) Setting Processing Options for Automatic Receipts Sweden BG OCR (R74W001), Automatic Receipts Sweden PG OCR (R74W002), and Automatic Receipts Sweden BG AA (R74W003)..... | 1192 |
| (FIN) Uploading Electronic Bank Statements for Finland..... | 1194 |
| Understanding Electronic Bank Statements..... | 1195 |
| Uploading Transactions from Electronic Bank Statements..... | 1196 |
| Setting Processing Options for Automatic Debit Statements Input Finland (R74V002)..... | 1196 |
| (DNK, NOR, and SWE) Uploading Information to the F03B13Z1 Table..... | 1197 |
| Understanding the Copy Bank File to Interface File A/R Program..... | 1197 |
| Running the Copy Bank File to Interface File A/R Program..... | 1198 |
| Setting Processing Options for Copy Bank File to Interface File A/R (R74W0010)..... | 1198 |
| (DNK, FIN, NOR, and SWE) Printing Interest Invoices for Nordic Countries..... | 1199 |
| Understanding Interest Invoices..... | 1199 |
| Running the Invoice Print Sweden - 03B Program..... | 1199 |
| Setting Processing Options for Invoice Print Sweden - 03B (R74W0030)..... | 1199 |
| (DNK, FIN, NOR, and SWE) Preparing Vouchers and Credit Notes for Payment Processing..... | 1200 |
| Understanding the Process for Preparing Vouchers and Credit Notes for Payment Processing..... | 1200 |
| Running the Enhanced Due Date Processing Report..... | 1202 |
| Setting Processing Options for Enhanced Due Date Processing (R74W0020)..... | 1203 |
| Running the Enhanced Due Date Processing - Discounts Report..... | 1205 |
| Setting Processing Options for Enhanced Due Date Processing - Discounts (R74W0021)..... | 1205 |

Part 12 Ecuador

Chapter 63

| | |
|---|------|
| (ECU) Understanding Country-Specific Functionality for Ecuador..... | 1209 |
| Ecuador-Specific Setup and Processes..... | 1209 |

Chapter 64

| | |
|--|------|
| (ECU) Setting Up Country-Specific Functionality for Ecuador..... | 1211 |
| Understanding Tax Withholding Certificates for Ecuador..... | 1211 |
| Prerequisites..... | 1211 |
| Setting Up UDCs for Ecuador..... | 1211 |
| Setting Up UDCs for Address Book Records and Accounts Payable for Ecuador..... | 1212 |
| Setting Up Next Numbers for Ecuador..... | 1213 |
| Setting Up the Payment Format for Ecuador..... | 1213 |

| | |
|---|------|
| Understanding the Payment Format for Ecuador..... | 1213 |
| Setting Processing Options for Print Automatic Payments Check (R76E0001)..... | 1214 |

Part 13

European Union

Chapter 65

| | |
|--|-------------|
| (Europe) Setting Up European Union Functionality..... | 1217 |
| Understanding European Union Functionality..... | 1217 |
| Setting Up UDCs for European Union Functionality..... | 1222 |
| Setting Up UDCs for International Payment Instructions..... | 1222 |
| Setting Up UDCs for Intrastat Reporting..... | 1223 |
| Setting Up UDCs for European Companies..... | 1232 |
| Setting Up Commodity Code Information..... | 1232 |
| Prerequisite..... | 1232 |
| Form Used to Set Up Commodity Codes..... | 1233 |
| Setting Up Commodity Codes..... | 1233 |
| Entering Cross-References for Items and Suppliers..... | 1233 |
| Understanding Cross-References for Items and Suppliers..... | 1233 |
| Form Used to Enter Cross-References for Items and Suppliers..... | 1234 |
| Entering Cross-References..... | 1234 |
| Setting Up Layouts for the IDEP/IRIS Interface..... | 1235 |
| Setting Up Intracommunity VAT..... | 1238 |

Chapter 66

| | |
|--|-------------|
| (Europe) Working With European Union Functionality..... | 1239 |
| Understanding International Bank Account Numbers..... | 1239 |
| Understanding Bank ID and Bank Account Validation..... | 1240 |
| Understanding Tax ID Validation..... | 1243 |
| Understanding European Union Reporting..... | 1243 |
| Prerequisites..... | 1246 |
| Understanding EC Sales List Reports for European Reporting..... | 1247 |
| Printing Invoices with an Attached International Payment Instruction..... | 1247 |
| Understanding International Payment Instructions..... | 1248 |
| Prerequisites..... | 1248 |
| Running the Invoice Print with International Payment Instruction Program..... | 1249 |
| Setting Processing Options for Invoice Print with International Payment Instruction (R03B5053)..... | 1249 |

| | |
|---|------|
| Populating the Intrastat Workfile..... | 1252 |
| Understanding Work Table Generation for Intrastat..... | 1252 |
| Generating the Intrastat Workfile for Sales..... | 1256 |
| Setting Processing Options for Intrastat Workfile Generation - Sales (R0018I1)..... | 1256 |
| Generating the Intrastat Workfile for Procurement..... | 1258 |
| Setting Processing Options for Intrastat Workfile Generation - Procurement (R0018I2)..... | 1258 |
| Revising Intrastat Information..... | 1260 |
| Prerequisite..... | 1260 |
| Form Used to Revise Intrastat Information..... | 1261 |
| Revising Intrastat Information..... | 1261 |
| Purging Records from the Intrastat Table (F0018T)..... | 1265 |
| Understanding the Purge Process..... | 1265 |
| Running the Intrastat Workfile Purge Program (R0018TP)..... | 1265 |
| Setting Processing Options for the Intrastat Workfile Purge Program (R0018TP)..... | 1265 |
| Using the IDEP/IRIS Interface for Intrastat Reporting..... | 1266 |
| Understanding the IDEP/IRIS Interface for Intrastat Reporting..... | 1266 |
| Prerequisites..... | 1267 |
| Running the IDEP/IRIS Interface Program (R0018I3)..... | 1268 |
| Setting Processing Options for the IDEP CN8/IRIS Interface Program (R0018I3)..... | 1268 |
| (GBR) Using the SEMDEC Interface for Intrastat Reporting..... | 1270 |
| Understanding the SEMDEC Interface for Intrastat Reporting..... | 1270 |
| Prerequisites..... | 1272 |
| Running the UK SEMDEC Interface Program (R0018I4)..... | 1272 |
| Setting Processing Options for UK SEMDEC Interface (R0018I4)..... | 1272 |
| (DEU) Printing the German Intrastat Report..... | 1274 |
| Understanding the German Intrastat Report..... | 1274 |
| Running the Germany Electronic Submission (R0018IGF)..... | 1274 |
| Setting Processing Options for the Germany Electronic Submission (R0018IGF)..... | 1274 |
| Printing the EC Sales List Report (R0018L)..... | 1275 |

| Setting Processing Options for Print Automatic Payments - Check - Germany (R04572G3)..... | 1331 |
| Setting Processing Options for Create A/P Bank Diskette - Germany (R04572G5)..... | 1332 |
| Setting Up Automatic Debit Formats for Germany..... | 1332 |
| Understanding Automatic Debit Formats for Germany..... | 1332 |
| Setting Processing Options for German Bank File Format and Statement Diskette (R03B575DD)..... | 1333 |

Chapter 72

| | |
|---|-------------|
| (DEU) Working With Electronic Tax Reporting for Germany..... | 1335 |
| Understanding Electronic Tax Reporting for Germany..... | 1335 |
| Prerequisites..... | 1337 |
| Creating or Modifying Data Extraction Programs..... | 1337 |
| Running the Data Extraction Programs..... | 1338 |
| Understanding the Data Extraction Programs..... | 1339 |
| Running the F0018 GDPdU Data Extract Program (R89F0018G)..... | 1352 |
| Running the F03B11 GDPdU Data Extract Program (R89F03B11G)..... | 1352 |
| Running the F0411 GDPdU Data Extraction Program (R89F0411G)..... | 1352 |
| Running the F0911 GDPdU Data Extract Program (R89F0911G)..... | 1353 |
| Modifying the Index.XML File..... | 1353 |

Chapter 73

| | |
|---|-------------|
| (DEU) Working With Other German Functionality..... | 1357 |
| Understanding Vouchers for Z1 Payments for Germany..... | 1357 |
| Understanding Encashments for Germany..... | 1357 |
| Processing Z1 Payments for Germany..... | 1358 |
| Understanding Z1 Payments..... | 1358 |
| Prerequisites..... | 1361 |
| Forms Used to Process Z1 Payments..... | 1361 |
| Modifying Information at the Payment Group Level..... | 1361 |
| Modifying Information at the Payment Detail Level..... | 1363 |
| Working with the Z5a Sheet 2 Report for Germany..... | 1363 |
| Understanding the Z5a Sheet 2 Report..... | 1363 |
| Prerequisites..... | 1364 |
| Running the Foreign Payables Table Generation Program (R74900)..... | 1365 |
| Setting Processing Options for Foreign Payables Table Generation (R74900)..... | 1365 |
| Running the Foreign Receivables Table Generation Program (R74901)..... | 1366 |
| Setting Processing Options for Foreign Receivables Table Generation (R74901)..... | 1366 |
| Running the German Z5a Sheet 2 Report - Summary (R74414) Program..... | 1367 |
| Setting Processing Options for German Z5a Sheet 2 Report - Summary (R74414)..... | 1367 |
| Running the German Z5a Sheet 2 Report - Detail (R74415) Program..... | 1367 |
| Setting Processing Options for the German Z5a Sheet 2 Report - Detail (R74415)..... | 1367 |

Part 16

Great Britain

Chapter 74

| | |
|--|-------------|
| (GBR) Understanding Country-Specific Functionality for Great Britain..... | 1371 |
| Great Britain-Specific Setup and Processes..... | 1371 |

Chapter 75

| | |
|--|-------------|
| (GBR) Setting Up Functionality for Great Britain..... | 1377 |
| Setting Up UDCs for Great Britain..... | 1377 |
| Setting Up UDCs for CIS..... | 1377 |
| Setting Up UDCs for ACM for Great Britain..... | 1378 |
| Setting Up the System for BACS Payments for Great Britain..... | 1378 |
| Setting Up Payment Formats for Great Britain..... | 1381 |
| Understanding Payment Formats for Great Britain..... | 1381 |
| Writing Payments Using the BACS Format..... | 1383 |
| Setting Processing Options for Create A/P Bank Tape - BACS - UK (R04572B)..... | 1383 |
| Setting Processing Options for Print Automatic Payments - Cheque - UK (R04572U1)..... | 1384 |
| Setting Processing Options for Print A/P Payment Attachment - UK (R04573U)..... | 1384 |
| Setting Up Automatic Debit Formats for Great Britain..... | 1385 |
| Understanding Automatic Debits for Great Britain..... | 1385 |
| Setting Processing Options for Great Britain Bank File and Statement Diskette (R03B575GB)..... | 1386 |

Chapter 76

| | |
|--|-------------|
| (GBR) Setting Up CIS..... | 1387 |
| Understanding Setup for CIS Processing..... | 1387 |
| Setting Up CIS Constants for Great Britain..... | 1388 |
| Understanding CIS Constants..... | 1388 |
| Prerequisite..... | 1389 |
| Form Used to Set Up CIS Constants..... | 1389 |
| Setting Up CIS Constants..... | 1389 |
| Setting Up CIS Company Constants..... | 1391 |
| Prerequisites..... | 1391 |
| Form Used to Set Up CIS Company Constants..... | 1392 |
| Setting Up CIS Company Constants..... | 1392 |
| Setting Up CIS Payment Voucher Constants..... | 1393 |
| Understanding CIS Payment Voucher Constants..... | 1393 |
| Prerequisite..... | 1393 |
| Form Used to Set Up CIS Payment Voucher Constants..... | 1393 |
| Setting Up CIS Payment Voucher Constants..... | 1393 |
| Setting Up CIS Document Types..... | 1394 |

| | |
|--|------|
| Understanding CIS Document Types..... | 1394 |
| Form Used to Set Up CIS Document Types..... | 1394 |
| Setting Up CIS Document Types..... | 1394 |
| Setting Up CIS Subcontractor Documents..... | 1396 |
| Understanding CIS Subcontractor Documents..... | 1396 |
| Prerequisites..... | 1397 |
| Form Used to Set Up CIS Subcontractor Documents..... | 1398 |
| Setting Up CIS Subcontractor Documents..... | 1398 |

Chapter 77

| | |
|--|-------------|
| (GBR) Setting Up ACM..... | 1399 |
| Understanding ACM Status Codes..... | 1399 |
| Setting Up ACM Constants..... | 1400 |
| Understanding ACM Constants Setup..... | 1400 |
| Prerequisites..... | 1401 |
| Form Used to Set Up ACM Constants..... | 1401 |
| Setting Up ACM Constants..... | 1401 |
| Setting Up Order Activity Rules for ACM..... | 1403 |

Chapter 78

| | |
|---|-------------|
| (GBR) Processing CIS Vouchers..... | 1405 |
| Understanding the CIS..... | 1405 |
| CIS Rules..... | 1405 |
| Entering CIS Vouchers..... | 1406 |
| Understanding Voucher Entry for the CIS..... | 1406 |
| Prerequisites..... | 1409 |
| Form Used to Enter Vouchers for Subcontractors..... | 1409 |
| Entering Vouchers for Subcontractors..... | 1409 |
| Processing CIS Vouchers for Payment..... | 1409 |
| Understanding Payment of CIS Vouchers..... | 1410 |
| Prerequisites..... | 1412 |
| Running CIS Pre Withholding Validation..... | 1412 |
| Setting Processing Options for CIS Pre Withholding Validation (R74U0130)..... | 1412 |
| Running CIS Calculate Withholding..... | 1413 |
| Setting Data Selection for CIS Calculate Withholding..... | 1413 |
| Setting Processing Options for CIS Calculate Withholding (R74U04580)..... | 1413 |
| Completing the CIS23 and CIS25 Payment Vouchers..... | 1414 |
| Understanding Completion of the CIS23 and CIS25 Payment Vouchers..... | 1414 |

| | |
|--|------|
| Running the Gross Payment Voucher CIS23 Report..... | 1415 |
| Setting Processing Options for Gross Payment Voucher CIS23 (R74U0136) and Tax Payment Voucher CIS25 (R74U0135)..... | 1415 |
| Running the Tax Payment Voucher CIS25 Report..... | 1415 |
| Maintaining CIS Voucher History..... | 1416 |
| Understanding CIS Voucher History Maintenance..... | 1416 |
| Forms Used to Maintain CIS Voucher History..... | 1417 |
| Setting Processing Options for CIS Tax Payment Vouchers (P74U0119)..... | 1417 |
| Reviewing CIS Voucher History..... | 1417 |
| Reviewing Payments to Subcontractors..... | 1418 |
| Entering CIS Voucher Details..... | 1418 |
| Working with the CIS Tag Table..... | 1418 |
| Understanding the CIS Tag Table..... | 1418 |
| Forms Used to Work with the CIS Tag Table..... | 1420 |
| Adding CIS Document Information to the CIS Tag Table..... | 1420 |
| Correcting the CIS Tag Table..... | 1420 |
| Updating the CIS Status for One Voucher..... | 1421 |
| Running the CIS Tag File History Change Report..... | 1421 |
| Setting Processing Options for F0411 - CIS Tag File Status History Change (R74U0134)..... | 1421 |

Chapter 79

| | |
|---|-------------|
| (GBR) Using ACM..... | 1423 |
| Understanding Application and Certificate Management..... | 1423 |
| Entering an Application for Payment..... | 1424 |
| Understanding Applications for Payment..... | 1424 |
| Prerequisite..... | 1424 |
| Forms Used to Enter an Application for Payment..... | 1424 |
| Entering Applications for Payment..... | 1424 |
| Printing Pre-certificates for ACM..... | 1425 |
| Understanding Pre-certificates..... | 1425 |
| Printing a Pre-certificate..... | 1425 |
| Entering Certification Information..... | 1425 |
| Understanding Certification Information..... | 1425 |
| Form Used to Enter Certification Information..... | 1426 |
| Entering Certification Information..... | 1426 |
| Working with Non-Evaluated Certificates..... | 1427 |
| Understanding Non-Evaluated Certificates..... | 1427 |
| Printing Non-Evaluated Certificates..... | 1427 |
| Working with Evaluated Certificates..... | 1427 |

| | |
|--|------|
| Understanding Evaluated Certificates..... | 1428 |
| Prerequisite..... | 1428 |
| Settling Evaluated Receipts..... | 1428 |
| Printing Evaluated Certificates..... | 1428 |
| Understanding Evaluated Certificate Printing..... | 1428 |
| Prerequisite..... | 1428 |
| Printing an Evaluated Certificate..... | 1429 |
| Correcting Uncertified Applications..... | 1429 |
| Understanding Uncertified Application Correction..... | 1429 |
| Forms Used to Correct Uncertified Applications..... | 1429 |
| Correcting an Uncertified Application..... | 1429 |
| Superseding Uncertified Applications..... | 1429 |
| Understanding Superseded Uncertified Applications..... | 1430 |
| Forms Used to Supersede Uncertified Applications..... | 1430 |
| Superseding an Uncertified Application..... | 1430 |
| Reversing Certificates..... | 1430 |
| Understanding Certificate Reversal..... | 1430 |
| Prerequisites..... | 1431 |
| Forms Used to Reverse Certificates..... | 1431 |
| Reversing a Certificate..... | 1431 |

Part 17

Ireland

Chapter 80

| | |
|--|-------------|
| (IRL) Understanding Country-Specific Functionality for Ireland..... | 1435 |
| Ireland-Specific Setup and Processes..... | 1435 |

Chapter 81

| | |
|---|-------------|
| (IRL) Setting Up Functionality for Ireland..... | 1437 |
| Setting Up Automatic Debit Formats for Ireland..... | 1437 |
| Understanding Automatic Debit Formats for Ireland..... | 1437 |
| (IRL) Setting Processing Options for Ireland Domestic Debit Bank Format (R03B575IE)..... | 1437 |
| (IRL) Setting Up Payment Formats for Ireland..... | 1438 |
| Understanding Payment Formats for Ireland..... | 1438 |
| Setting Processing Options for Electronic Funds Transfer - Bank of Ireland (R04572IE1)..... | 1440 |

| Setting Up the Data Dictionary for Withholding in Italy..... | 1461 |
| Setting Up the 30/60/90 End-of-Month Invoice Date for Italy..... | 1461 |
| Setting Up Payment Formats for Italy..... | 1463 |
| Understanding Payment Formats for Italy..... | 1464 |
| Setting Processing Options for Create A/P Bank Tape - Italy (R04572I1)..... | 1464 |
| Setting Processing Options for Print Automatic Payments - Check - Italy (R04572I2)..... | 1465 |
| Setting Up Draft Remittance Formats for Italy..... | 1465 |
| Understanding Italian Draft Remittance Formats..... | 1465 |
| Setting Processing Options for A/R Magnetic RIBA Draft Remittance Tape Format (R03B672IT)..... | 1466 |
| Setting Processing Options for A/R Magnetic RID Draft Remittance Tape Format (R03B672IR)..... | 1466 |
| Setting Up Supplier Withholding Tax Information for Italy..... | 1467 |
| Understanding Supplier Withholding Tax Information for Italy..... | 1467 |
| Forms Used to Set Up Supplier Withholding Tax Information..... | 1468 |
| Setting Up Supplier Withholding Tax Information..... | 1468 |
| Setting Up Withholding Tax Codes..... | 1469 |
| Understanding Withholding Tax Codes..... | 1469 |
| Prerequisite..... | 1469 |
| Forms Used to Set Up Withholding Tax Codes..... | 1469 |
| Setting Up Withholding Tax Codes..... | 1469 |

Chapter 84

| | |
|--|-------------|
| (ITA) Working With Functionality for Italy..... | 1471 |
| Understanding Accounting for Petrol Card Expense Reports for Italy..... | 1471 |
| Understanding Prepayments for Notula in Italy..... | 1472 |
| Understanding the Process for Calculating Italian Withholding Taxes..... | 1473 |
| Understanding Manual Payments for Italy..... | 1474 |
| Understanding Draft Collection in Italy..... | 1474 |
| Understanding Invoices for Free Goods..... | 1474 |
| Understanding Bank Account and Bank ID Validation..... | 1475 |
| Verifying Account Balances in Italy..... | 1476 |
| Closing a Fiscal Year in Italy..... | 1478 |
| Understanding Tasks for Closing a Fiscal Year..... | 1478 |
| Preparing the Fixed Assets Legal Report in Italy..... | 1479 |
| Understanding the Fixed Assets Legal Report..... | 1479 |
| Preparing the Fixed Assets Legal Report..... | 1479 |
| Setting Processing Options for the Fixed Assets Legal Report (R7412100)..... | 1479 |
| Setting Up Bank Information in Italy..... | 1481 |
| Understanding Bank ID Information..... | 1482 |
| Understanding Italian Bank Number Conversions..... | 1482 |
| Form Used to Set Up Bank Accounts..... | 1482 |
| Uploading Italian Bank ID Information..... | 1482 |
| Revising Italian Bank ID Information Manually..... | 1482 |
| Converting Italian Bank Numbers..... | 1483 |
| Setting Processing Options for Italian Bank Number Conversion (R74800)..... | 1483 |
| Revising Withholding Taxes in Italy..... | 1484 |
| Understanding Withholding Tax Revisions..... | 1484 |
| Form Used to Revise Withholding Tax..... | 1484 |
| Revising Withholding Tax Information..... | 1484 |

Part 19

Japan

Chapter 85

| | |
|--|-------------|
| (JPN) Understanding Country-Specific Functionality for Japan..... | 1489 |
| Understanding the Wareki Date Format..... | 1489 |
| Japanese-Specific Setup and Processes..... | 1489 |

Chapter 86**(JPN) Setting Up Country-Specific Functionality for Japan.....1493**

| | |
|---|------|
| Setting Up UDCs for Japan..... | 1493 |
| Setting Up UDCs for Accounts Receivable Transactions for Japan..... | 1493 |
| Setting Up UDCs for Accounts Payable Transactions for Japan..... | 1494 |
| Setting Up UDCs for Bank Accounts for Japan..... | 1494 |
| Setting Up UDCs for Languages for Japan..... | 1495 |
| Setting Up Supplier Information for Japan..... | 1495 |
| Understanding Supplier Information for Japan..... | 1495 |
| Prerequisites..... | 1496 |
| Form Used to Set Up Supplier Information for Japan..... | 1496 |
| Setting Up Supplier Information for Japan..... | 1496 |
| Setting Up Withholding Schedules for Japan..... | 1497 |
| Form Used to Set Up Withholding..... | 1498 |
| Setting Up Withholding Schedules..... | 1498 |
| Setting Up the System for Hankin Hante Payments and Drafts for Japan..... | 1498 |
| Understanding the Required Setup for Hankin Hante Payments..... | 1498 |
| Understanding the Stamp Tax Table..... | 1499 |
| Prerequisites..... | 1499 |
| Forms Used to Set Up Payment Split and Draft Split Amounts and the Stamp Tax Table..... | 1500 |
| Setting Up Payment Split and Draft Split Amounts..... | 1500 |
| Setting Up the Stamp Tax Table..... | 1501 |
| Setting Up Payment Formats for Japan..... | 1502 |
| Understanding Payment Formats for Japan..... | 1502 |
| Setting Processing Options for Create A/P Bank Tape - Japan (R04572JP)..... | 1503 |
| Setting Processing Options for Japan Bank Transfer Paper (R04573JP)..... | 1503 |

Chapter 87**(JPN) Working with Other Functionality for Japan.....1505**

| | |
|---|------|
| Understanding Bank ID and Bank Account Validation..... | 1505 |
| Understanding Accounts Receivable Draft Processing in Japan..... | 1506 |
| Understanding the Create Payment Control Groups Process for Japan..... | 1507 |
| Working with Kagami Statements..... | 1508 |
| Understanding Kagami Statements..... | 1508 |
| Prerequisite..... | 1508 |
| Printing Kagami Statements..... | 1508 |
| Setting Processing Options for Kagami Invoice Statement - Japan (R03B5001JP)..... | 1508 |
| Calculating Withholding for Japan..... | 1510 |
| Understanding the Withholding Process..... | 1510 |

| | |
|--|------|
| Prerequisites..... | 1510 |
| Running the Calculate Withholding - Japan Report..... | 1511 |
| Setting Processing Options for Calculate Withholding - Japan (R7500090)..... | 1511 |
| Setting Processing Options for Country Specific Processing Options - Japan (P04580JP)..... | 1512 |
| Processing Hankin Hante Payments for Japan..... | 1512 |
| Understanding the Hankin Hante Split Payment Process..... | 1512 |
| Running the Automatic Payment Split - Hankin Hante Program..... | 1517 |
| Setting the Processing Options for Automatic Payment Split - Hankin Hante (R75J04PS)..... | 1518 |
| Processing Accounts Payable Drafts in Japan..... | 1518 |
| Understanding the Process to Split Drafts..... | 1519 |
| Understanding the Stamp Tax Calculation Report..... | 1521 |
| Understanding How to Enter Bank-Assigned Draft Numbers..... | 1521 |
| Prerequisite..... | 1522 |
| Forms Used to Process Drafts for Japan..... | 1522 |
| Manually Splitting Drafts..... | 1522 |
| Running the Automatic Draft Split - Hankin Hante Report..... | 1522 |
| Setting Processing Options for Automatic Draft Split - Hankin Hante (R75J04DS)..... | 1522 |
| Running the Stamp Tax Calculation Report..... | 1523 |
| Setting Processing Options for Stamp Tax Calculation Report - Japan (R750403)..... | 1523 |
| Entering Bank-Assigned Draft Numbers..... | 1524 |
| Processing Bank Information in Japan..... | 1524 |
| Understanding Japanese Bank Transfers..... | 1524 |
| Forms Used to Set Up Japanese Bank Information..... | 1526 |
| Uploading Japanese Bank and Branch Information..... | 1526 |
| Setting Processing Options for Bank/Branch Table Upload - Japan (R75010A)..... | 1527 |
| Revising Japanese Bank and Branch Information..... | 1527 |
| Entering Japanese Bank Charges..... | 1527 |

Part 20

Mexico

Chapter 88

| | |
|---|-------------|
| (MEX) Understanding Country-Specific Functionality for Mexico..... | 1531 |
| Mexico-Specific Setup and Processes..... | 1531 |

Chapter 89

| | |
|--|-------------|
| (MEX) Setting Up Country-Specific Functionality for Mexico..... | 1533 |
|--|-------------|

| | |
|--|------|
| Working with the Setup for Processing VAT on Payments and Receipts for Mexico..... | 1533 |
| Understanding VAT Processing and the General Ledger..... | 1534 |
| Reviewing Mexican VAT Transactions..... | 1534 |

Part 21 The Netherlands

Chapter 90

| | |
|--|-------------|
| (NLD) Understanding Country-Specific Functionality for the Netherlands..... | 1539 |
| Netherlands-Specific Setup or Processes..... | 1539 |

Chapter 91

| | |
|---|-------------|
| (NLD) Setting Up Functionality for the Netherlands..... | 1543 |
| Setting Up UDCs for the Netherlands..... | 1543 |
| Setting Up UDCs for Bank Accounts in the Netherlands..... | 1543 |
| Setting Up Payment Formats for the Netherlands..... | 1546 |
| Understanding Payment Formats for the Netherlands..... | 1546 |
| Prerequisite..... | 1547 |
| Setting Processing Options for Create A/P Bank Tape - CLIEOP2\CLIEOP3 - Holland (R04572H1)..... | 1547 |
| Setting Processing Options for Create A/P Bank Tape - Foreign ABN AMRO - Holland (R04572H2)..... | 1549 |
| Setting Up the Work With Payment Groups Program (P04571) for the Netherlands..... | 1549 |

| (RUS) Setting Up UDCs for Correspondence of Accounts for Russia..... | 1588 |
| (RUS) Setting Up UDCs for Financial Reports for Russia..... | 1590 |
| (RUS) Setting Up UDCs for Sales Order Processing for Russia..... | 1591 |
| (RUS) Setting Up UDCs for Fixed Assets for Russia..... | 1591 |
| (POL) Setting Up UDCs for Accounts Payable Processing for Poland..... | 1591 |
| (RUS) Setting Up Long Descriptions for Russia-Specific UDCs..... | 1592 |
| Understanding the Regional User-Defined Codes Program..... | 1592 |
| Forms Used to Set Up Long Descriptions..... | 1592 |
| Entering Long Descriptions..... | 1592 |
| (RUS) Setting Up AAls for Russian Taxes..... | 1593 |
| (POL and RUS) Setting Up Next Numbers for Poland and Russia..... | 1593 |
| (RUS) Setting Up Next Numbers for VAT and Cash Transactions..... | 1594 |
| (RUS) Setting Up Corresponding Versions for Russia..... | 1594 |
| (POL) Setting Up Corresponding Versions for Poland..... | 1595 |
| (POL and RUS) Setting Up Legal Companies for Russia and Poland..... | 1595 |
| Understanding Legal Companies..... | 1596 |
| Form Used to Set Up a Legal Company..... | 1596 |
| Associating Transactional Companies with a Legal Company for Poland and Russia..... | 1596 |
| (RUS) Setting Up Amount Difference Accounting..... | 1596 |
| (RUS) Setting Up Petty Cash Processing for Russia..... | 1597 |
| Understanding Petty Cash Setup for Russia..... | 1597 |

| | |
|--|------|
| Forms Used to Set Up Petty Cash..... | 1599 |
| Setting Processing Options the Petty Cash Next Number Set Up (P74R0002)..... | 1599 |
| Setting Up Next Numbers for Petty Cash..... | 1599 |
| Setting Processing Options for the Petty Cash Transactions Program (P74R0101)..... | 1599 |
| Adding Supplemental Information for Petty Cash Transactions..... | 1600 |
| (RUS) Setting Up General Ledger Report Formats for Russia..... | 1600 |
| Understanding General Ledger Report Setup..... | 1600 |
| Forms Used to Set Up General Ledger Reports..... | 1602 |
| Adding Report Formats..... | 1602 |
| Adding Row Details for Sections..... | 1603 |
| Specifying Columns for Changes in Equity Reports..... | 1603 |
| Associating Accounts with Rows in the Reports..... | 1604 |
| (RUS) Setting Up Correspondence of Accounts..... | 1604 |
| Understanding Correspondence of Accounts Setup..... | 1605 |
| Forms Used to Set Up Correspondence of Accounts..... | 1607 |
| Setting Processing Options for Correspondence Account Setup (P74R9001)..... | 1607 |
| Setting Up Accounts..... | 1607 |
| Setting Up Correspondence Methods..... | 1608 |
| Setting Up Correspondence Rules..... | 1609 |
| (RUS) Setting Up for Voucher Processing for Russia..... | 1609 |
| (POL) Setting Up Voucher Types..... | 1610 |
| Understanding Voucher Types..... | 1610 |
| Forms Used to Set Up AP Document Types..... | 1611 |
| Setting Up Voucher Types for Poland..... | 1611 |
| (POL) Setting Up the Exchange Rate Table Number..... | 1611 |
| Understanding Exchange Rate Table Setup..... | 1611 |
| Forms Used to Enter the Exchange Rate Table Number..... | 1612 |
| Entering the Exchange Rate Table Number..... | 1612 |

Chapter 95

| | |
|--|-------------|
| (POL and RUS) Setting Up Legal Numbering..... | 1613 |
| Understanding Legal Numbering..... | 1613 |
| Prerequisite..... | 1613 |
| Setting Up Legal Document Types..... | 1613 |
| Understanding Legal Document Types..... | 1614 |
| Forms Used to Enter Legal Document Types..... | 1614 |
| Entering Legal Document Types..... | 1614 |
| Associating Legal Document Types with Document Types..... | 1615 |
| Understanding How to Associate Document Types with Legal Document Types..... | 1615 |

| | |
|--|------|
| Forms Used to Associate Legal Document Types With Document Types..... | 1615 |
| Associating Legal Document Types..... | 1615 |
| Setting Up Legal Documents Issue Places..... | 1616 |
| Understanding Issue Places..... | 1616 |
| Forms Used to Enter Issue Places..... | 1616 |
| Entering Issue Places..... | 1616 |
| Setting Up Next Numbers for Legal Documents..... | 1616 |
| Understanding Legal Document Next Numbers..... | 1617 |
| Forms Used to Set Up Legal Document Next Numbers..... | 1617 |
| Setting Up Next Numbers for Legal Documents..... | 1617 |
| Setting Up Print Template Definitions for Legal Documents..... | 1618 |
| Understanding Print Template Definitions..... | 1618 |
| Forms Used to Set Up Print Template Definitions..... | 1618 |
| Setting Up Print Template Definitions..... | 1618 |
| Specifying Rows for Print Template Line Types..... | 1619 |
| Forms Used to Set Up Rows for Print Template Line Types..... | 1619 |
| Setting Up Rows..... | 1619 |
| Associating Legal Document Types with Print Templates..... | 1619 |
| Forms Used to Associate Legal Document Types with Print Templates..... | 1620 |
| Associating Legal Document Types with Templates..... | 1620 |
| Specifying Programs and Versions to Print Legal Documents..... | 1620 |
| Understanding Versions for Legal Documents..... | 1620 |
| Forms Used to Specify Versions and Print Programs..... | 1621 |
| Specifying Versions and Print Programs..... | 1621 |
| (RUS) Setting Up Legal Document Footer Signatures..... | 1621 |
| Understanding Legal Document Footer..... | 1622 |
| Forms Used to Set Up Footer Signatures..... | 1622 |
| Setting Up Footer Signatures..... | 1622 |
| Setting Up Versions for Legal Documents..... | 1623 |

Chapter 96

| | |
|--|-------------|
| (POL) Working with Poland-Specific Functionality..... | 1625 |
| Understanding Voucher Entry and Voucher Match for Poland..... | 1625 |
| Understanding Cash Transactions..... | 1626 |
| Printing Reports for Inbound and Outbound Cash Transactions..... | 1626 |
| Understanding How to Print Cash Desk Transaction Documents..... | 1626 |
| Prerequisites..... | 1627 |
| Form Used to Work with Cash Transactions..... | 1627 |
| Setting Processing Options for Cash Desk Transaction (P74P9101)..... | 1627 |

| | |
|--|------|

| Originating Drafts for Spain..... | 1719 |
| Understanding Spanish Draft Origination..... | 1720 |
| Understanding the Print Receipt with Letter Program..... | 1720 |
| Understanding the Print Drafts from Invoices Program..... | 1721 |
| Prerequisites..... | 1721 |
| Grouping Invoices for Drafts..... | 1722 |
| Setting Processing Options for Invoice Group by Draft (R03B5052)..... | 1722 |
| Printing Drafts with Letters..... | 1723 |
| Setting Processing Options for Print Receipt with Letter (R74S500)..... | 1723 |
| Printing Drafts from Invoices..... | 1724 |
| Setting Processing Options for Print Drafts from Invoices (R74S502)..... | 1724 |
| Reprinting Drafts for Spain..... | 1724 |
| Understanding Draft Reprinting..... | 1725 |
| Prerequisites..... | 1726 |
| Reprinting Drafts by Receipt with Letters..... | 1726 |
| Setting Processing Options for Print Draft (R1) by Receipt with Letter (R74S520)..... | 1726 |
| Reprinting Drafts by Receipt..... | 1726 |
| Setting Processing Options for Print Draft (R1) by Receipt (R74S521)..... | 1727 |
| Reprinting Drafts based on Stamp Fees..... | 1727 |
| Setting Processing Options for Print Drafts from R1 by Efecto (R74S522)..... | 1727 |
| Entering A.E.B. Customer and Supplier Bank Information for Spain..... | 1728 |
| Understanding A.E.B Bank Account Information..... | 1728 |
| Prerequisite..... | 1728 |
| Form Used to Enter A.E.B. Bank Account Information..... | 1728 |
| Entering A.E.B. Bank Account Information..... | 1728 |
| Uploading A.E.B. Bank Information..... | 1729 |

Part 25

Switzerland

Chapter 105

| | |
|---|------|
| (CHE) Understanding Country-Specific Functionality for Switzerland..... | 1733 |
| Switzerland-Specific Setup and Processes..... | 1733 |

Chapter 106

| | |
|--|-------------|
| (CHE) Setting Up Functionality for Switzerland..... | 1737 |
| Setting Up UDCs for Switzerland..... | 1737 |
| Setting Up UDCs for Payment Processing for Switzerland..... | 1737 |
| Setting Up Payment Formats for Switzerland for Switzerland..... | 1738 |
| Understanding Payment Formats for Switzerland..... | 1738 |
| Prerequisites..... | 1740 |
| Setting Processing Options for Create A/P Bank Diskette - Swiss (R04572S2)..... | 1740 |
| Setting Processing Options for Create A/P Post Office File - Swiss SOG (R04572S3)..... | 1741 |

Chapter 107

| | |
|---|-------------|
| (CHE) Working With Country-Specific Functionality for Switzerland..... | 1743 |
| Understanding ESR Payment Slips for Switzerland..... | 1743 |
| Understanding Automatic Payments for Switzerland..... | 1744 |
| Uploading ESR Payment Information for Switzerland to the F03B13Z1 Table..... | 1744 |
| Understanding the Upload ESR Payments Program..... | 1745 |
| Prerequisites..... | 1745 |
| Setting Processing Options for Upload ESR Payments (R03B803)..... | 1745 |
| Working With Automatic Debits for Switzerland..... | 1746 |
| Understanding Automatic Debits for Switzerland..... | 1746 |
| Setting Processing Options for Create Swiss Bank Diskette Format (R03B575SD)..... | 1746 |

Part 26 United States

Chapter 108

| | |
|--|-------------|
| (USA) Understanding Country-Specific Functionality for the United States..... | 1749 |
| Country-Specific Setup and Processes for the United States..... | 1749 |

Part 27 Venezuela

Chapter 109

| | |
|--|-------------|
| (VEN) Understanding Country-Specific Functionality for Venezuela..... | 1753 |
| Venezuela-Specific Setup and Processes..... | 1753 |

Chapter 110

| | |
|---|-------------|
| (VEN) Setting Up Country-Specific Functionality for Venezuela..... | 1757 |
| Understanding Venezuelan Address Book Information..... | 1757 |
| Setting Up UDCs for Venezuela..... | 1757 |
| Setting Up UDCs for Accounts Payable for Venezuela..... | 1758 |
| Setting Up UDCs for Supplier Withholding for Venezuela..... | 1758 |
| Setting Up Next Numbers for Venezuela..... | 1759 |
| Setting Up Corresponding Versions of Programs..... | 1759 |
| Setting Up Withholding for ISLR Taxes for Venezuela..... | 1760 |
| Understanding Setup for ISLR Taxes..... | 1760 |
| Prerequisites..... | 1760 |
| Forms Used to Enter Withholding Information for Income Taxes..... | 1761 |
| Entering Withholding Amount Information..... | 1761 |
| Entering Tributary Unit Information..... | 1762 |
| Setting Up Withholding for Municipal Taxes for Venezuela..... | 1762 |
| Understanding Setup for Municipal Taxes..... | 1762 |
| Prerequisites..... | 1763 |
| Forms Used to Enter Withholding Information for Municipal Taxes..... | 1763 |
| Entering Withholding Information for Municipal Taxes..... | 1763 |
| Setting Up Withholding Information for VAT for Venezuela..... | 1764 |
| Understanding Setup for VAT..... | 1764 |
| Prerequisite..... | 1764 |
| Forms Used to Setup Withholding Information for VAT..... | 1764 |
| Entering Withholding Information for VAT..... | 1764 |

Chapter 111

| | |
|---|-------------|

About This Documentation Preface

JD Edwards EnterpriseOne implementation guides provide you with the information that you need to implement and use JD Edwards EnterpriseOne applications from Oracle.

This preface discusses:

- JD Edwards EnterpriseOne application prerequisites.
- Application fundamentals.
- Documentation updates and printed documentation.
- Additional resources.
- Typographical conventions and visual cues.
- Comments and suggestions.
- Common fields in implementation guides.

Note. Implementation guides document only elements, such as fields and check boxes, that require additional explanation. If an element is not documented with the process or task in which it is used, then either it requires no additional explanation or it is documented with common fields for the section, chapter, implementation guide, or product line. Fields that are common to all JD Edwards EnterpriseOne applications are defined in this preface.

JD Edwards EnterpriseOne Application Prerequisites

To benefit fully from the information that is covered in these books, you should have a basic understanding of how to use JD Edwards EnterpriseOne applications.

You might also want to complete at least one introductory training course, if applicable.

You should be familiar with navigating the system and adding, updating, and deleting information by using JD Edwards EnterpriseOne menus, forms, or windows. You should also be comfortable using the World Wide Web and the Microsoft Windows or Windows NT graphical user interface.

These books do not review navigation and other basics. They present the information that you need to use the system and implement your JD Edwards EnterpriseOne applications most effectively.

Application Fundamentals

Each application implementation guide provides implementation and processing information for your JD Edwards EnterpriseOne applications.

For some applications, additional, essential information describing the setup and design of your system appears in a companion volume of documentation called the application fundamentals implementation guide. Most product lines have a version of the application fundamentals implementation guide. The preface of each implementation guide identifies the application fundamentals implementation guides that are associated with that implementation guide.

The application fundamentals implementation guide consists of important topics that apply to many or all JD Edwards EnterpriseOne applications. Whether you are implementing a single application, some combination of applications within the product line, or the entire product line, you should be familiar with the contents of the appropriate application fundamentals implementation guides. They provide the starting points for fundamental implementation tasks.

Documentation Updates and Printed Documentation

This section discusses how to:

- Obtain documentation updates.
- Order printed documentation.

Obtaining Documentation Updates

You can find updates and additional documentation for this release, as well as previous releases, on Oracle's PeopleSoft Customer Connection website. Through the Documentation section of Oracle's PeopleSoft Customer Connection, you can download files to add to your Implementation Guides Library. You'll find a variety of useful and timely materials, including updates to the full line of JD Edwards EnterpriseOne documentation that is delivered on your implementation guides CD-ROM.

Important! Before you upgrade, you must check Oracle's PeopleSoft Customer Connection for updates to the upgrade instructions. Oracle continually posts updates as the upgrade process is refined.

Oracle's PeopleSoft Customer Connection, http://www.oracle.com/support/support_peoplesoft.html

Ordering Printed Documentation

You can order printed, bound volumes of the complete line of JD Edwards EnterpriseOne documentation that is delivered on your implementation guide CD-ROM. Oracle makes printed documentation available for each major release of JD Edwards EnterpriseOne shortly after the software is shipped. Customers and partners can order this printed documentation by using any of these methods:

- Web
- Telephone
- Email

Web

From the Documentation section of Oracle's PeopleSoft Customer Connection website, access the PeopleBooks Press website under the Ordering PeopleBooks topic. Use a credit card, money order, cashier's check, or purchase order to place your order.

Telephone

Contact MMA Partners, the book print vendor, at 877 588 2525.

Email

Send email to MMA Partners at peoplebookspress@mmapartner.com.

Typographical Conventions and Visual Cues

This section discusses:

- Typographical conventions.
- Visual cues.
- Country, region, and industry identifiers.
- Currency codes.

Typographical Conventions

This table contains the typographical conventions that are used in implementation guides:

| Typographical Convention or Visual Cue | Description |
|--|---|
| Bold | Indicates PeopleCode function names, business function names, event names, system function names, method names, language constructs, and PeopleCode reserved words that must be included literally in the function call. |
| <i>Italics</i> | Indicates field values, emphasis, and JD Edwards EnterpriseOne or other book-length publication titles. In PeopleCode syntax, italic items are placeholders for arguments that your program must supply. We also use italics when we refer to words as words or letters as letters, as in the following: Enter the letter <i>O</i> . |
| KEY+KEY | Indicates a key combination action. For example, a plus sign (+) between keys means that you must hold down the first key while you press the second key. For ALT+W, hold down the ALT key while you press the W key. |
| Monospace font | Indicates a PeopleCode program or other code example. |
| “ ” (quotation marks) | Indicate chapter titles in cross-references and words that are used differently from their intended meanings. |

| Typographical Convention or Visual Cue | Description |
|--|--|
| ... (ellipses) | Indicate that the preceding item or series can be repeated any number of times in PeopleCode syntax. |
| { } (curly braces) | Indicate a choice between two options in PeopleCode syntax. Options are separated by a pipe (). |
| [] (square brackets) | Indicate optional items in PeopleCode syntax. |
| & (ampersand) | When placed before a parameter in PeopleCode syntax, an ampersand indicates that the parameter is an already instantiated object. Ampersands also precede all PeopleCode variables. |

Visual Cues

Implementation guides contain the following visual cues.

Notes

Notes indicate information that you should pay particular attention to as you work with the JD Edwards EnterpriseOne system.

Note. Example of a note.

If the note is preceded by *Important!*, the note is crucial and includes information that concerns what you must do for the system to function properly.

Important! Example of an important note.

Warnings

Warnings indicate crucial configuration considerations. Pay close attention to warning messages.

Warning! Example of a warning.

Cross-References

Implementation guides provide cross-references either under the heading “See Also” or on a separate line preceded by the word *See*. Cross-references lead to other documentation that is pertinent to the immediately preceding documentation.

Country, Region, and Industry Identifiers

Information that applies only to a specific country, region, or industry is preceded by a standard identifier in parentheses. This identifier typically appears at the beginning of a section heading, but it may also appear at the beginning of a note or other text.

Example of a country-specific heading: “(FRA) Hiring an Employee”

Example of a region-specific heading: “(Latin America) Setting Up Depreciation”

Country Identifiers

Countries are identified with the International Organization for Standardization (ISO) country code.

Region Identifiers

Regions are identified by the region name. The following region identifiers may appear in implementation guides:

- Asia Pacific
- Europe
- Latin America
- North America

Industry Identifiers

Industries are identified by the industry name or by an abbreviation for that industry. The following industry identifiers may appear in implementation guides:

- USF (U.S. Federal)
- E&G (Education and Government)

Currency Codes

Monetary amounts are identified by the ISO currency code.

Comments and Suggestions

Your comments are important to us. We encourage you to tell us what you like, or what you would like to see changed about implementation guides and other Oracle reference and training materials. Please send your suggestions to Documentation Manager, Oracle Corporation, 7604 Technology Way, Denver, CO, 80237. Or email us at documentation_us@oracle.com.

While we cannot guarantee to answer every email message, we will pay careful attention to your comments and suggestions.

Common Fields Used in Implementation Guides

Address Book Number

Enter a unique number that identifies the master record for the entity. An address book number can be the identifier for a customer, supplier, company, employee, applicant, participant, tenant, location, and so on. Depending on the application, the field on the form might refer to the address book number as the customer number, supplier number, or company number, employee or applicant ID, participant number, and so on.

| | |
|----------------------------|---|
| As If Currency Code | Enter the three-character code to specify the currency that you want to use to view transaction amounts. This code enables you to view the transaction amounts as if they were entered in the specified currency rather than the foreign or domestic currency that was used when the transaction was originally entered. |
| Batch Number | Displays a number that identifies a group of transactions to be processed by the system. On entry forms, you can assign the batch number or the system can assign it through the Next Numbers program (P0002). |
| Batch Date | Enter the date in which a batch is created. If you leave this field blank, the system supplies the system date as the batch date. |
| Batch Status | <p>Displays a code from user-defined code (UDC) table 98/IC that indicates the posting status of a batch. Values are:</p> <p><i>Blank</i>: Batch is unposted and pending approval.</p> <p><i>A</i>: The batch is approved for posting, has no errors and is in balance, but has not yet been posted.</p> <p><i>D</i>: The batch posted successfully.</p> <p><i>E</i>: The batch is in error. You must correct the batch before it can post.</p> <p><i>P</i>: The system is in the process of posting the batch. The batch is unavailable until the posting process is complete. If errors occur during the post, the batch status changes to <i>E</i>.</p> <p><i>U</i>: The batch is temporarily unavailable because someone is working with it, or the batch appears to be in use because a power failure occurred while the batch was open.</p> |
| Branch/Plant | Enter a code that identifies a separate entity as a warehouse location, job, project, work center, branch, or plant in which distribution and manufacturing activities occur. In some systems, this is called a business unit. |
| Business Unit | Enter the alphanumeric code that identifies a separate entity within a business for which you want to track costs. In some systems, this is called a branch/plant. |
| Category Code | Enter the code that represents a specific category code. Category codes are user-defined codes that you customize to handle the tracking and reporting requirements of your organization. |
| Company | Enter a code that identifies a specific organization, fund, or other reporting entity. The company code must already exist in the F0010 table and must identify a reporting entity that has a complete balance sheet. |
| Currency Code | Enter the three-character code that represents the currency of the transaction. JD Edwards EnterpriseOne provides currency codes that are recognized by the International Organization for Standardization (ISO). The system stores currency codes in the F0013 table. |
| Document Company | <p>Enter the company number associated with the document. This number, used in conjunction with the document number, document type, and general ledger date, uniquely identifies an original document.</p> <p>If you assign next numbers by company and fiscal year, the system uses the document company to retrieve the correct next number for that company.</p> |

If two or more original documents have the same document number and document type, you can use the document company to display the document that you want.

Document Number

Displays a number that identifies the original document, which can be a voucher, invoice, journal entry, or time sheet, and so on. On entry forms, you can assign the original document number or the system can assign it through the Next Numbers program.

Document Type

Enter the two-character UDC, from UDC table 00/DT, that identifies the origin and purpose of the transaction, such as a voucher, invoice, journal entry, or time sheet. JD Edwards EnterpriseOne reserves these prefixes for the document types indicated:

P: Accounts payable documents.

R: Accounts receivable documents.

T: Time and pay documents.

I: Inventory documents.

O: Purchase order documents.

S: Sales order documents.

Effective Date

Enter the date on which an address, item, transaction, or record becomes active. The meaning of this field differs, depending on the program. For example, the effective date can represent any of these dates:

- The date on which a change of address becomes effective.
- The date on which a lease becomes effective.
- The date on which a price becomes effective.
- The date on which the currency exchange rate becomes effective.
- The date on which a tax rate becomes effective.

Fiscal Period and Fiscal Year

Enter a number that identifies the general ledger period and year. For many programs, you can leave these fields blank to use the current fiscal period and year defined in the Company Names & Number program (P0010).

G/L Date (general ledger date)

Enter the date that identifies the financial period to which a transaction will be posted. The system compares the date that you enter on the transaction to the fiscal date pattern assigned to the company to retrieve the appropriate fiscal period number and year, as well as to perform date validations.

JD Edwards EnterpriseOne Country-Specific Setup and Processes Preface

This chapter discusses:

- JD Edwards EnterpriseOne products.
- JD Edwards EnterpriseOne application fundamentals.
- Common fields used in this implementation guide.

JD Edwards EnterpriseOne Products

This implementation guide refers to the following JD Edwards EnterpriseOne products from Oracle:

- JD Edwards EnterpriseOne Accounts Payable.
- JD Edwards EnterpriseOne Accounts Receivable.
- JD Edwards EnterpriseOne Address Book.
- JD Edwards Advanced Cost Accounting.
- JD Edwards EnterpriseOne Advanced Pricing.
- JD Edwards EnterpriseOne General Accounting.
- JD Edwards EnterpriseOne Fixed Assets.
- JD Edwards EnterpriseOne Job Cost.
- JD Edwards EnterpriseOne Inventory Management.
- JD Edwards EnterpriseOne Procurement.
- JD Edwards EnterpriseOne Sales Order Management.

JD Edwards EnterpriseOne Application Fundamentals

Additional, essential information describing the setup and design of your system appears in a companion volume of documentation called *JD Edwards EnterpriseOne Financial Management Application Fundamentals 8.12 Implementation Guide*.

JD Edwards EnterpriseOne Financial Management Application Fundamentals Implementation

Common Fields Used in This Implementation Guide

| | |
|--|--|
| 2nd Item Number, 3rd Item Number, and Item Number | <p>Enter a number that identifies the item. The system provides three separate item numbers plus an extensive cross-reference capability to alternative item numbers. The three types of item numbers are:</p> <p>Item Number (short). An 8-digit, computer-assigned item number.</p> <p>2nd Item Number. A 25-digit, user defined, alphanumeric item number.</p> <p>3rd Item Number. A 25-digit, user defined, alphanumeric item number.</p> <p>In addition to these three basic item numbers, the system provides an extensive cross-reference search capability. You can define numerous cross-references to alternative part numbers. For example, you can define substitute item numbers, replacements, bar codes, customer numbers, or supplier numbers.</p> <p>You can enter <i>*ALL</i> in the Item Number field to indicate that all items for the supplier come from the specified country of origin and original country of origin.</p> |
| Fixed Asset Number | <p>Enter an 8-digit number that uniquely identifies an asset.</p> |
| G/L Date (general ledger date) | <p>Enter a date that identifies the financial period to which the transaction will be posted. You define financial periods for a date pattern code that you assign to the company record. The system compares the date that you enter on the transaction to the fiscal date pattern assigned to the company to retrieve the appropriate fiscal period number, as well as to perform date validations.</p> |
| Main Fixed Asset Number | <p>Enter an identification code for an asset in one of these formats:</p> <p>Asset number (a computer-assigned, 8-digit, numeric control number)</p> <p>Unit number (a 12-character alphanumeric field)</p> <p>Serial number (a 25-character alphanumeric field)</p> <p>Every asset has an asset number. You can use unit number and serial number to further identify assets as needed. If this is a data entry field, the first character you enter indicates whether you are entering the primary (default) format that is defined for the system, or one of the other two formats. A special character (such as / or *) in the first position of this field indicates which asset number format you are using. You assign special characters to asset number formats on the Fixed Assets system constants form.</p> |
| Object Account | <p>Enter the portion of a general ledger account that refers to the division of the Cost Code (for example, labor, materials, and equipment) into subcategories. For example, you can divide the Cost Code for labor into regular time, premium time, and burden.</p> <hr/> <p>Note. If you use a flexible chart of accounts and the object account is set to 6 digits, it is recommended that you use all 6 digits. For example, entering 000456 is not the same as entering 456 because if you enter 456 the system enters three blank spaces to fill a 6-digit object.</p> <hr/> |
| Subledger | <p>Enter a code that identifies a detailed, auxiliary account within a general ledger account. A subledger can be an equipment item number or an address book number. If you enter a subledger, you must also specify the subledger type.</p> |

| | |
|-----------------------|--|
| Subledger Type | <p>Enter a user-defined code (00/ST) that is used with the Subledger field to identify the subledger type and how the system performs subledger editing. On the User-Defined Codes form, the second line of the description controls how the system performs editing. This is either hard-coded or user-defined. Values include:</p> <p><i>A</i>: Alphanumeric field, do not edit.</p> <p><i>N</i>: Numeric field, right justify and zero fill.</p> <p><i>C</i>: Alphanumeric field, right justify and blank fill.</p> |
| Subsidiary | <p>Enter a subset of an object account. Subsidiary accounts include detailed records of the accounting activity for an object account.</p> <hr/> <p>Note. If you are using a flexible chart of accounts and the object account is set to six digits, you must use all six digits. For example, entering 000456 is not the same as entering 456 because, if you enter 456, the system enters three blank spaces to fill a six-digit object.</p> <hr/> |
| Update Date | <p>Enter the date that identifies the financial period to which the transaction will be posted. You define financial periods for a date pattern code that you assign to the company record. The system compares the date that you enter on the transaction to the fiscal date pattern assigned to the company to retrieve the appropriate fiscal period number, as well as to perform date validations.</p> |

PART 1

Country-Specific Functionality

Chapter 1

Getting Started With Country-Specific Setup and Processes

Chapter 2

Setting Up the System for Country-Specific Functionality

CHAPTER 1

Getting Started With Country-Specific Setup and Processes

This chapter discusses:

- JD Edwards EnterpriseOne country-specific setup and processes overview.
- Country-specific setup and processes implementation.

JD Edwards EnterpriseOne Country-Specific Setup and Processes Overview

This guide is divided into parts to enable you to easily locate the countries for which country-specific setup or functionality exists. Each part is further divided into chapters that include either an overview of the functionality for a country or specific information about setting up or using the country-specific functionality.

Overview Chapters

An overview chapter exists for each country for which country-specific functionality exists unless the country-specific functionality is limited to:

- Payroll processing.
- Depreciation methods.
- The IDEP-CN8 interface for Intrastat reporting.

Overview chapters *do not* exist for these countries:

- Czechoslovakia
- Greece
- Korea
- Luxemburg
- New Zealand

Overview chapters for each country include a list of the setup and functionality for the country along with links to the location of the documentation. Use the overview chapters to identify the setup required and processes available, and then navigate to the documentation to review the details of the setup or process.

Documentation for Country-Specific Functionality

This table lists existing country-specific setup or program information and its location:

| Country | Functionality |
|-----------|---|
| Argentina | <p>Functionality for Argentina documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Supplier withholding. • Voucher processing. • Batch voucher processing. • Payment processing. • Invoice processing. • Credit invoice processing. • Batch invoice processing. • Automatic and manual receipt processing. • Accounts receivable draft processing. • Delinquency fee processing. • Sales order processing. • Item entry. • Fixed assets • Inventory management. • Legal reporting. <p>Additionally, this functionality exists for Argentina:</p> <ul style="list-style-type: none"> • Tax processing. <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “(ARG) Setting Up the System for Argentinian Taxes”.</i></p> <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “(ARG) Processing VAT Reports”.</i></p> <ul style="list-style-type: none"> • Additional supplier master information. <p><i>See JD Edwards EnterpriseOne Accounts Payable 8.12 Implementation Guide, “Entering Supplier Information,” (ARG) Entering Supplier Information for Argentina.</i></p> <ul style="list-style-type: none"> • Additional customer master information. <p><i>See JD Edwards EnterpriseOne Accounts Receivable 8.12 Implementation Guide, “Setting Up Customer Master Information,” (ARG) Entering Additional Customer Master Information for Argentina.</i></p> |

| Country | Functionality |
|-----------|---|
| Australia | <p>Functionality for Australia documented in this implementation guide includes setting up payment formats.</p> <p>Additionally, this functionality exists for Australia:</p> <ul style="list-style-type: none"> • Goods and services tax (GST). <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “(AUS) Setting Up Australian Goods and Services Tax”.</i></p> <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “(AUS) Entering Customer, Supplier, and Item Information for GST”.</i></p> <ul style="list-style-type: none"> • Payroll. <p><i>See JD Edwards EnterpriseOne Australia/New Zealand Payroll 8.12 Implementation Guide</i></p> <ul style="list-style-type: none"> • Rapid Start. <p><i>See JD Edwards EnterpriseOne Rapid Start 8.12 Documentation</i></p> |
| Austria | <p>Functionality for Austria documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Payment formats. • Debit format. • Printing invoices with attached International Payment Instructions (IPI). • Intrastat and other European Union reporting. <p>Additionally, functionality exists for intracommunity value-added tax (VAT) processing.</p> <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</i></p> |

| Country | Functionality |
|---------|--|
| Belgium | <p>Functionality for Belgium documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Bank account setup. • Bank account and tax ID validation. • Payment formats. • Printing invoices with attached International Payment Instructions (IPI). • Intrastat and other European Union reporting. • VAT reports. <p>Additionally, functionality exists for:</p> <ul style="list-style-type: none"> • Setting up tax rate areas. <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” (BEL) Setting Up Tax Rate Areas for Belgium.</i></p> <ul style="list-style-type: none"> • Intracommunity VAT. <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</i></p> <ul style="list-style-type: none"> • Additional customer master information. <p><i>See JD Edwards EnterpriseOne Accounts Receivable 8.12 Implementation Guide, “Setting Up Customer Master Information,” (BEL) Entering Customer Information for Parent Companies.</i></p> |

| Country | Functionality |
|---------|--|
| Brazil | <p>Functionality for Brazil documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Calculations for supplier withholding. • Automatic payment processing. • Automatic receipt processing. • Voucher processing. • Invoice processing. • Fiscal books. • Electronic GIA reporting. • Inventory management. • Sales order processing. • Procurement processing. • Fiscal reporting. • IN86/IN89 tax reporting. • IN68 tax reporting. <p>Additionally, this functionality exists for Brazil:</p> <ul style="list-style-type: none"> • Tax processing. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(BRA) Setting Up the System for Brazilian Taxes”.</p> <ul style="list-style-type: none"> • Additional address book information for suppliers. <p>See <i>JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide</i>, “Entering Address Book Records,” (BRA) Entering Tax Information for Address Book Records.</p> <p>See <i>JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide</i>, “Updating and Purging Address Book Records,” (BRA) Purging Brazilian Address Book Records.</p> |

| Country | Functionality |
|---------|--|
| Canada | <p>Functionality for Canada documented in this implementation guide includes GST/PST processing.</p> <p>Additionally, functionality exists for:</p> <ul style="list-style-type: none"> • Supplier bank accounts <p><i>See JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide, “Setting Up Bank Accounts,” (CAN, DEU, FIN, GBR, NOR, SWE, and USA) Setting Up Country-Specific Supplier Bank Account Information.</i></p> <ul style="list-style-type: none"> • Payroll <p><i>See JD Edwards EnterpriseOne Canadian Payroll 8.12 Implementation Guide.</i></p> <ul style="list-style-type: none"> • Rapid Start <p><i>See JD Edwards EnterpriseOne Rapid Start 8.12 Documentation.</i></p> |
| Chile | <p>Functionality for Chile documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Address book setup. • Batch processing for address book records. • Legal company setup. • Voucher processing. • Invoice processing. • Accounts receivable draft processing. • Fixed assets. • Sales order processing. • Inventory management. • General ledger reporting. • Financial reports. <p>Additionally, this functionality exists for Chile:</p> <ul style="list-style-type: none"> • Tax processing <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “(CHL and PER) Reporting Taxes”.</i></p> <ul style="list-style-type: none"> • Additional address book information <p><i>See JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide, “Entering Address Book Records,” (CHL) Entering Additional Address Book Information.</i></p> |

| Country | Functionality |
|----------------|---|
| China | <p>Functionality for China documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Voucher processing • Financial reports • JinSui invoice processing <p>Additionally, tax processing functionality exists for China.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (CHN) Setting Up VAT for China.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(CHN) JinSui Processing”.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Working With VAT Processing,” (CHN) Generating VAT on Free Goods Journal - China Report.</p> |
| Colombia | <p>Functionality for Colombia documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Payment processing • Tax processing • Fixed assets • Voucher processing • Invoice processing <p>Additionally, this functionality exists for Colombia:</p> <ul style="list-style-type: none"> • Tax processing <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(COL) Setting Up the System for Colombian Taxes”.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(COL) Reporting Taxes for Colombia”.</p> <ul style="list-style-type: none"> • Additional address book information <p>See <i>JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide</i>, “Entering Address Book Records,” (COL) Entering Additional Address Book Information.</p> |
| Czechoslovakia | <p>Functionality for Czechoslovakia includes a depreciation method.</p> <p>See <i>JD Edwards EnterpriseOne Fixed Assets 8.12 Implementation Guide</i>, “Understanding International Depreciation Methods”.</p> |

| Country | Functionality |
|---------|---|
| Denmark | <p>Functionality for Denmark documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Supplier setup. • Payment processing. • Voucher processing. • Invoice processing. • Printing invoices with attached International Payment Instructions (IPI). • Intrastat and other European Union reporting. <p>Additionally, functionality exists for intracommunity VAT processing.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</p> |
| Ecuador | <p>Functionality for Ecuador documented in this implementation guide includes payment processing.</p> <p>Additionally, this functionality exists for Ecuador:</p> <ul style="list-style-type: none"> • Tax processing <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (ECU, PER, and VEN) Understanding Tax Rate/Areas for Ecuador, Peru, and Venezuela.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (ECU) Setting Up Additional Pair Tax (P76E0002).</p> <ul style="list-style-type: none"> • Address book records <p>See <i>JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide</i>, “Entering Address Book Records,” (ECU) Entering Additional Address Book Information.</p> |

| Country | Functionality |
|---------|--|
| Finland | <p>Functionality for Finland documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Supplier setup. • Payment processing. • Bank statement processing. • Voucher processing. • Invoice processing. • Printing invoices with attached International Payment Instructions (IPI). • Intrastat and other European Union reporting. <p>Additionally, functionality exists for:</p> <ul style="list-style-type: none"> • Intracommunity VAT processing. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</p> <ul style="list-style-type: none"> • Supplier bank account setup. <p>See <i>JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide</i>, “Setting Up Bank Accounts,” (CAN, DEU, FIN, GBR, NOR, SWE, and USA) Setting Up Country-Specific Supplier Bank Account Information.</p> |

| Country | Functionality |
|---------|---|
| France | <p>Functionality for France documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Bank account and bank ID validation. • Alternate chart of accounts. • Reports for the closing of accounting periods. • Processes for closing a fiscal year. • Payment processing. • Automatic debit processing. • Invoice processing. • Processes for bad debts and unrecoverable losses. • Intrastat and other European Union reporting. • Printing invoices with attached International Payment Instructions (IPI). • Integrity reports. • Financial reporting. • Fixed assets. <p>Additionally, this functionality exists for France:</p> <ul style="list-style-type: none"> • Tax processing. <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</i></p> <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” (FRA) Setting Up the System for VAT Reporting.</i></p> <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Working With VAT Processing,” (FRA) Processing French VAT.</i></p> <ul style="list-style-type: none"> • Depreciation methods for fixed assets. <p><i>See JD Edwards EnterpriseOne Fixed Assets 8.12 Implementation Guide, “Understanding International Depreciation Methods”.</i></p> <ul style="list-style-type: none"> • Rapid Start <p><i>See JD Edwards EnterpriseOne Rapid Start 8.12 Documentation.</i></p> |

| Country | Functionality |
|---------|--|
| Germany | <p>Functionality for Germany documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Setup for bank accounts. • Voucher processing. • Payment processing. • Automatic debit processing. • Invoice processing. • Encashments. • Electronic tax reporting (GDPdU). • Intrastat reporting and other European Union reporting. • Printing invoices with attached International Payment Instructions (IPI). • Z5a Sheet 2 report. • Fixed assets. <p>Additionally, this functionality exists:</p> <ul style="list-style-type: none"> • Tax processing. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Working With VAT Processing,” (DEU) Processing German VAT.</p> <ul style="list-style-type: none"> • Depreciation methods for fixed assets. <p>See <i>JD Edwards EnterpriseOne Fixed Assets 8.12 Implementation Guide</i>, “Understanding International Depreciation Methods”.</p> <ul style="list-style-type: none"> • Supplier bank account setup. <p>See <i>JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide</i>, “Setting Up Bank Accounts,” (CAN, DEU, FIN, GBR, NOR, SWE, and USA) Setting Up Country-Specific Supplier Bank Account Information.</p> <ul style="list-style-type: none"> • Rapid Start. <p>See <i>JD Edwards EnterpriseOne Rapid Start 8.12 Documentation</i>.</p> |

| Country | Functionality |
|---------------|--|
| Great Britain | <p>Functionality for Great Britain documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Payment processing. • Automatic debit processing. • Voucher processing for the Construction Industry Scheme (CIS). • Application and certificate management for procurement. • Intrastat and other European Union reporting. <p>Additionally, this functionality exists for Great Britain:</p> <ul style="list-style-type: none"> • Supplier bank account setup <p><i>See JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide, “Setting Up Bank Accounts,” (CAN, DEU, FIN, GBR, NOR, SWE, and USA) Setting Up Country-Specific Supplier Bank Account Information.</i></p> <ul style="list-style-type: none"> • Tax processing <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Working With VAT Processing,” (GBR) Processing VAT for the United Kingdom.</i></p> <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</i></p> <ul style="list-style-type: none"> • Rapid Start <p><i>See JD Edwards EnterpriseOne Rapid Start 8.12 Documentation.</i></p> |
| Greece | <p>Functionality for Greece documented in this implementation guide includes the IDEP-CN8 interface for Intrastat reporting.</p> |
| Ireland | <p>Functionality for Ireland documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Payment formats • Debit formats |

| Country | Functionality |
|---------|---|
| Italy | <p>Functionality for Italy documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Bank account setup. • Supplier tax withholding processing. • Payment processing. • Invoice processing. • Accounts receivable draft processing. • Monthly and annual close. • Tax processing. • Fixed assets. • Printing invoices with attached International Payment Instructions (IPI). • Intrastat and other European Union reporting. • Integrity reports. <p>This additional functionality exists for Italy:</p> <ul style="list-style-type: none"> • VAT setup and processing. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (ITA) Setting Up Register Types and Classes for Summary VAT.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (ITA) Establishing an Initial VAT Balance.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(ITA) Processing VAT for Italy”.</p> <ul style="list-style-type: none"> • Depreciation methods for fixed assets. <p>See <i>JD Edwards EnterpriseOne Fixed Assets 8.12 Implementation Guide</i>, “Understanding International Depreciation Methods”.</p> |

| Country | Functionality |
|-----------|--|
| Japan | <p>Functionality for Japan documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Payment processing. • Draft processing for Accounts Payable and Accounts Receivable. • Bank account setup. • Supplier withholding. <p>Additionally, this functionality exists for Japan:</p> <ul style="list-style-type: none"> • Additional supplier information requirements <i>See JD Edwards EnterpriseOne Accounts Payable 8.12 Implementation Guide, “Entering Supplier Information,” (JPN) Setting Up Supplier Information for Japan.</i> • Fixed asset depreciation methods <i>See JD Edwards EnterpriseOne Fixed Assets 8.12 Implementation Guide, “Understanding International Depreciation Methods”.</i> • Rapid Start <i>See JD Edwards EnterpriseOne Rapid Start 8.12 Documentation</i> |
| Korea | <p>Functionality for Korea includes a fixed asset depreciation method.</p> <p><i>See JD Edwards EnterpriseOne Fixed Assets 8.12 Implementation Guide, “Understanding International Depreciation Methods”.</i></p> |
| Luxemburg | <p>Functionality for Luxemburg documented in this implementation guide includes the IDEP-CN8 interface for Intrastat reporting.</p> |
| Mexico | <p>Functionality for Mexico includes VAT calculations on payments and receipts.</p> <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” (MEX) Setting Up VAT on Payments and Receipts.</i></p> <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Working With VAT Processing,” (MEX) Processing VAT and the General Ledger.</i></p> |

| Country | Functionality |
|-------------|--|
| Netherlands | <p>Functionality for the Netherlands documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Payment processing • Automatic debit processing • Bank account setup • Printing invoices with attached International Payment Instructions (IPI). • Intrastat and other European Union reporting. <p>Additionally, functionality exists for VAT processing.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</p> |
| New Zealand | <p>Functionality for New Zealand includes:</p> <ul style="list-style-type: none"> • Payroll <p>See <i>JD Edwards EnterpriseOne Australia/New Zealand Payroll 8.12 Implementation Guide</i>.</p> <ul style="list-style-type: none"> • Rapid Start <p>See <i>JD Edwards EnterpriseOne Rapid Start 8.12 Documentation</i>.</p> |

| Country | Functionality |
|---------|--|
| Norway | <p>Functionality for Norway documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Bank account setup. • Payment processing. • Voucher processing. • Invoice processing. • Printing invoices with attached International Payment Instructions (IPI). • Intrastat and other European Union reporting. <p>Additionally, this functionality exists:</p> <ul style="list-style-type: none"> • Intracommunity VAT processing <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</i></p> <ul style="list-style-type: none"> • Supplier bank account setup <p><i>See JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide, “Setting Up Bank Accounts,” (CAN, DEU, FIN, GBR, NOR, SWE, and USA) Setting Up Country-Specific Supplier Bank Account Information.</i></p> |

| Country | Functionality |
|---------|---|
| Peru | <p>Functionality for Peru documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Batch processing for address book records. • Legal company setup. • Supplier withholding. • Voucher processing. • Invoice processing. • Accounts receivable draft processing. • Payment processing. • Fixed assets. • Sales order processing. • Inventory management. • General ledger reporting. • Financial reports. <p>Additionally, this functionality exists for Peru:</p> <ul style="list-style-type: none"> • Tax processing <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (ECU, PER, and VEN) Understanding Tax Rate/Areas for Ecuador, Peru, and Venezuela and <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(CHL and PER) Reporting Taxes”.</p> <ul style="list-style-type: none"> • Additional address book information <p>See <i>JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide</i>, “Entering Address Book Records,” (PER) Entering Additional Address Book Information.</p> |

| Country | Functionality |
|---------|---|
| Poland | <p>Functionality for Poland documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Setup for companies, customers, and suppliers. • Cash transactions. • Invoice processing. • Voucher processing. • Delinquency fee processing. • Tax processing. • Sales order processing. • Financial reporting. <p>Additionally, this functionality exists for Poland:</p> <ul style="list-style-type: none"> • Tax processing <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(RUS and POL) Setting Up the System for Russian and Polish Taxes,” Understanding System Setup for Russia and Poland Taxes.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(RUS and POL) Setting Up the System for Russian and Polish Taxes,” (POL) Working with Tax Processing for Poland.</p> <ul style="list-style-type: none"> • Additional address book information <p>See <i>JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide</i>, “Entering Address Book Records,” (POL) Entering Additional Address Book Information.</p> |

| Country | Functionality |
|-----------|--|
| Russia | <p>Functionality for Russia documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Setup for companies, customers, and suppliers. • Cash transactions. • Invoice processing. • Voucher processing. • Payment processing. • Amount difference accounting. • Correspondence of accounts. • General ledger reporting. • Tax processing. • Fixed assets. • Sales order processing. • Procurement processing. • Inventory management. <p>Additionally, functionality exists for:</p> <ul style="list-style-type: none"> • Tax processing <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “(RUS and POL) Setting Up the System for Russian and Polish Taxes”.</i></p> <ul style="list-style-type: none"> • Additional address book information <p><i>See JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide, “Entering Address Book Records,” (RUS) Entering Additional Address Book Information.</i></p> |
| Singapore | <p>Functionality for Singapore documented in this guide includes a payment format.</p> |

| Country | Functionality |
|---------|---|
| Spain | <p>Functionality for Spain documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Country-specific setup for bank accounts, customers, suppliers, and companies. • An alternate chart of accounts. • Invoice processing. • Accounts receivable draft processing. • Payment processing. • Printing invoices with attached International Payment Instructions (IPI). • Intrastat and other European Union reporting. • Integrity reports. • VAT and other tax reports. <p>Additionally, this functionality exists for Spain:</p> <ul style="list-style-type: none"> • VAT and other tax reporting <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</i></p> <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Working With VAT Processing,” (ESP) Processing Spanish VAT.</i></p> <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “(ESP) Processing the 347 Tax Declaration”.</i></p> <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “(ESP) Processing the 349 Tax Declaration”.</i></p> <ul style="list-style-type: none"> • Fixed asset depreciation method <p><i>See JD Edwards EnterpriseOne Fixed Assets 8.12 Implementation Guide, “Understanding International Depreciation Methods”.</i></p> |

| Country | Functionality |
|-------------|---|
| Sweden | <p>Functionality for Sweden documented in this implementation guide includes:</p> <ul style="list-style-type: none"> • Bank account setup. • Payment processing. • Voucher processing. • Invoice processing. • Printing invoices with attached International Payment Instructions (IPI). • Intrastat and other European Union reporting. <p>Additionally, functionality exists for:</p> <ul style="list-style-type: none"> • Intracommunity VAT processing. <p><i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” (Europe) Setting Up Intracommunity VAT.</i></p> <ul style="list-style-type: none"> • Supplier bank account setup. <p><i>See JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide, “Setting Up Bank Accounts,” (CAN, DEU, FIN, GBR, NOR, SWE, and USA) Setting Up Country-Specific Supplier Bank Account Information.</i></p> |

In addition to this guide, country-specific functionality is also described in these implementation guides:

- *JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide*.
- *JD Edwards EnterpriseOne Financial Management Application Fundamentals 8.12 Implementation Guide*.
- *JD Edwards EnterpriseOne Fixed Assets 8.12 Implementation Guide*.

- *JD Edwards EnterpriseOne Australia/New Zealand Payroll 8.12 Implementation Guide.*
- *JD Edwards EnterpriseOne Canadian Payroll 8.12 Implementation Guide.*
- *JD Edwards EnterpriseOne U.S. Payroll 8.12 Implementation Guide.*
- Rapid Start documentation.
- *JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide.*

Country-Specific Setup and Processes Implementation

In addition to the setup described in this guide, you must set up the base software for the particular process you implement. For example, you must follow the steps to set up the base software JD Edwards EnterpriseOne Accounts Payable system in addition to performing the setup for any country-specific functionality for the JD Edwards EnterpriseOne Accounts Payable system.

In the planning phase of your implementation, take advantage of all JD Edwards EnterpriseOne sources of information, including the installation guides and troubleshooting information. A complete list of these resources appears in the preface of *About This Documentation* with information about where to find the most current version of each.

When determining which electronic software updates (ESUs) to install for JD Edwards EnterpriseOne systems, use the EnterpriseOne and World Change Assistant. EnterpriseOne and World Change Assistant, a Java-based tool, reduces the time required to search and download ESUs by 75 percent or more and enables you to install multiple ESUs at one time.

See *JD Edwards EnterpriseOne Tools 8.96 Software Update Guide*

CHAPTER 2

Setting Up the System for Country-Specific Functionality

This chapter provides overviews of translation considerations for multilingual environments and translation routines, and discusses how to set up user display preferences.

Understanding Translation Considerations for Multilingual Environments

The system can display menus, forms, and reports in different languages. All software is shipped with the base language of English. You can install other languages as needed. For example, if you have multiple languages installed in one environment to enable different users to display different languages, each user can work in the preferred language by setting up user preferences accordingly.

In addition to the standard menus, forms, and reports, you might want to translate other parts of the software. For example, you might want to translate the names of the accounts that you set up for the company or translate the values in some user-defined codes (UDCs).

This table illustrates common software elements that you might want to translate if you use the software in a multinational environment:

| Common Software Elements | Translation Considerations |
|----------------------------|---|
| Business unit descriptions | <p>You can translate the descriptions of the business units that you set up for the system.</p> <p>The system stores translation information for business units in the Business Unit Alternate Description Master table (F0006D).</p> <p>Print the Business Unit Translation report (R00067) to review the description translations in the base language and one or all of the additional languages that the business uses.</p> |
| Account descriptions | <p>You can translate the descriptions of the accounts into languages other than the base language.</p> <p>After you translate the chart of accounts, you can print the Account Translation report. You can set a processing option to show account descriptions in both the base language and one or all of the additional languages that the business uses.</p> |

| Common Software Elements | Translation Considerations |
|---|---|
| Automatic accounting instruction (AAI) descriptions | You can translate the descriptions of the AAIs that you set up for the system. |
| UDC descriptions | You can translate the descriptions of the UDCs that you set up for the system. |
| Delinquency notice text | <p>Specify a language preference for each customer when you create customer master records. The language preference field on the Address Book - Additional Information form determines the language in which the delinquency notice and the text on the notice should appear when you use final mode. (In proof mode, the statements print in the language preference that is assigned to the client in the JD Edwards EnterpriseOne Address Book system.)</p> <p>The base software includes the delinquency notice translated into German, French, and Italian. You should translate any text that you add to the bottom of the notice. To do this translation, follow the instructions for setting up text for delinquency notices, and verify that you have completed the Language field on the Letter Text Identification form.</p> |

The translations that you set up for the system also work with the language that is specified in the user profile for each person who uses the system. For example, when a French-speaking user accesses the chart of accounts, the system displays the account descriptions in French, rather than in the base language.

Understanding Translation Routines

The system provides several translation routines to convert amounts to words. These translation routines are generally used by payment formats, draft formats, and check-writing programs that produce numerical output in both numeric and text form. You specify the translation routine that you want to use in the processing options for these programs.

The system provides these translation routines:

- X00500 - English.
- X00500BR - Brazilian Portuguese.
- X00500C - Including cents.
- X00500CH - Chinese.
- X00500D - German (mark).
- X00500ED - German (euro).
- X00500FR - French (franc).
- X00500EF - French (euro).
- X00500I - Italian (lira).
- X00500EI - Italian (euro).

- X00500S1 - Spanish (female).
- X00500S2 - Spanish (male).
- X00500S3 - Spanish (female, no decimal).
- X00500S4 - Spanish (male, no decimal).
- X00500S5 - Spanish (euro).
- X00500U - United Kingdom.
- X00500U1 - United Kingdom (words in boxes).

In some cases, the translation routine that you use depends on the currency that you are using. For example, if you are converting euro amounts to words, you should use a translation routine that has been set up to handle euro currencies. In Spanish, the gender of the currency determines the translation routine that you choose.

Setting Up User Display Preferences

This section provides an overview of user display preferences and discusses how to:

- Set processing options for the User Profiles program (P0092).
- Set up user display preferences.

Understanding User Display Preferences

Some JD Edwards EnterpriseOne localized software uses country server technology to isolate country-specific features from the base software. For example, if during normal transaction processing, you record additional information about a supplier or validate a tax identification number to meet country-specific requirements, you enter the additional information by using a localized program; the tax validation is performed by a localized program instead of by the base software. The country server indicates that this localized program should be included in the process.

To take full advantage of localized solutions for the business, you must set up the user display preferences to specify the country in which you are working. The country server uses this information to determine which localized programs should be run for the specified country.

You use localization country codes to specify the country in which you are working. The system supplies localization country codes in UDC table 00/LC. This table stores both two-digit and three-digit localization country codes.

You can also set up user display preferences to use other features. For example, you can specify how the system displays dates (such as DDMMYY, the typical European format) or specify a language to override the base language.

JD Edwards EnterpriseOne Tools 8.96 System Administration Guide.

Form Used to Set Up User Display Preferences

| Form Name | FormID | Navigation | Usage |
|------------------------|--------|---|--------------------------|
| User Profile Revisions | W0092A | JD Edwards EnterpriseOne Menu, My System Options On User Default Revisions, select User Profile Revisions. | Set display preferences. |

Setting Processing Options for User Profile Revisions (P0092)

Processing options enable you to set default values for processing.

A/B Validation

Address Book Number Enter 1 to enable editing on address book number against the Address Book Master table (F0101).

PIM Server Setup

PIM Server Enter D if you use an IBM Domino Server. Enter X if you use a Microsoft Exchange Server.

Setting Up User Display Preferences

Access the User Profile Revisions form.

My System Options - User Profile Revisions

OK Cancel Form Tools

User ID ★ VW6715015

Address Number 6715015

WhosWhoLineID

Menu Identification G

Display Preferences

Language

Justification ☒ Right To Left ☒ Left to Right

Visually Impaired ☐ Yes ☒ No

Date Format DMY Day, Month, Year (DDMMYY)

Date Separator Character System value

Decimal Format Character . Decimal indicator

Localization Country Code CL Chile

Universal Time

Time Format

User Profile Revisions form

Localization Country Code Enter a UDC (00/LC) that identifies a localization country. It is possible to attach country-specific functionality based on this code by using the country server methodology in the base product.

Language Enter a UDC (01/LP) that specifies the language to use on forms and printed reports. Before you specify a language, a code for that language must exist at either the system level or in the user preferences. Additionally, you must have the language CD installed.

Date Format Enter the format of a date as it is stored in the database.

If you leave this field blank, the system displays dates based on the settings of the operating system on the workstation. With NT, the Regional Settings in the Control Panel control the settings for the operating system of the workstation. Values are:

Blank: Use the system date format.

DME: Day, month, four-digit year

DMY: Day, month, year (DDMMYY)

EMD: Four-digit year, month, day

MDE: Month, day, four-digit year

MDY: Month, day, year (MMDDYY)

YMD: Year, month, day (YYMMDD)

- Date Separator Character** Enter the character to use when separating the month, day, and year of a given date. If you enter an asterisk (*), the system uses a blank for the date separator. If you leave the field blank, the system uses the system value for the date separator.
- Decimal Format Character** Enter the number of positions to the right of the decimal that you want to use. If you leave this field blank, the system value is used as the default.

(ARG) Understanding Country-Specific Functionality for Argentina

This chapter provides an overview of Argentina-specific setup and processes that you use in addition to the standard setup and processes provided in the base software.

Argentina-Specific Setup and Processes

This table lists the country-specific setup and functionality for Argentina:

| Setup or Process | Description |
|--|---|
| UDCs (user-defined codes) | <p>Set up base-software UDCs with Argentina-specific values, and set up Argentina-specific UDCs for:</p> <ul style="list-style-type: none">• Foreign suppliers• Supplier withholding• Credit invoice processing• SICORE• Fixed asset legalized book• Accounts receivable• Tax processing• Accounts payable• Shipment notes <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Argentina, page 51.</p> |
| AAIs (automatic accounting instructions) | <p>In addition to the base software AAIs, set up values that are Argentina-specific for AAIs for:</p> <ul style="list-style-type: none">• Supplier withholding• Deferred payments• Credit invoices• Accounts receivable draft processing <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAIs for Argentina, page 74.</p> |

| Setup or Process | Description |
|------------------|---|
| Next numbers | <p>Set up next numbering before processing legal documents, withholding taxes, and supplier withholding.</p> <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Next Numbers for Argentina, page 77.</p> |
| Companies | <p>In addition to the standard setup for companies, for Argentina:</p> <ul style="list-style-type: none"> • Set up the company CAI number, if applicable. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Print Authorization Codes for Argentine Suppliers, page 82.</p> <ul style="list-style-type: none"> • Set the processing options for the Additional A/B Information (P760101A) program. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Processing Options for Additional A/B Information (P760101A), page 91.</p> <ul style="list-style-type: none"> • Set up corresponding versions of the Address Book Revision (P01012) program and the Additional A/B Information (P760101A) program. |
| Customers | <p>In addition to the standard setup for customers, for Argentina:</p> <ul style="list-style-type: none"> • Set the processing options for the Additional A/B Information (P760101A) program. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Processing Options for Additional A/B Information (P760101A), page 91.</p> <ul style="list-style-type: none"> • Set up corresponding versions of the Address Book Revision (P01012) program and the Additional A/B Information (P760101A) program. |

| Setup or Process | Description |
|------------------|---|
| Tax processing | <p>In addition to the standard setup for tax processing, for Argentina:</p> <ul style="list-style-type: none"> • Set up UDCs. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Foreign Suppliers and Supplier Withholding for Argentina, page 52.</p> <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Tax Processing for Argentina, page 67.</p> <ul style="list-style-type: none"> • Tax constants • Tax areas • Tax definitions • Tax values • Define taxes by predecessor • Set up tax minimums • Tax groups • Exclusion percentages <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(ARG) Setting Up the System for Argentinian Taxes”.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(ARG) Setting Up the System for Argentinian Taxes,” Setting Up Tax Areas for Argentina.</p> |

| Setup or Process | Description |
|---------------------------|--|
| Suppliers (general setup) | <p>In addition to standard setup for suppliers, for Argentina:</p> <ul style="list-style-type: none"> • Set up UDCs to work with foreign suppliers. Set up the CUIT (<i>clave única de identificación tributaria</i>) numbers for the countries of origin in the Country's CUIT (76A/FJ) UDC table and set up the document type for foreign tax IDs in the ARG-A/B Legal Document Type (76A/A0) UDC table. <u>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Foreign Suppliers and Supplier Withholding for Argentina, page 52.</u> • Set up UDCs to work with supplier withholding. • Set up UDCs for SICORE reporting. <u>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for SICORE for Argentina, page 63.</u> • Set up supplier CAI numbers. <u>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Print Authorization Codes for Argentine Suppliers, page 82.</u> <u>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Autoprinter Numbers for Suppliers for Argentina, page 92.</u> • Set up corresponding version of the Address Book Revision (P01012) and the Additional A/B Information (P760101A) programs. • Set the processing options for the Additional A/B Information program (P760101A) to allow duplicate numbers. <u>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Processing Options for Additional A/B Information (P760101A), page 91.</u> • Create an address book record for the bank of each supplier for which you use the text payments file. Set up the address book record with a search type of V (Supplier), and specify the CUIT number of the bank account in the Tax ID field of the Bank Account Information program (P0030G). |

| Setup or Process | Description |
|--|--|
| Supplier withholding (setup and processes) | <p>To set up and calculate withholding for suppliers:</p> <ul style="list-style-type: none"> • Set up UDCs for supplier withholding. See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Foreign Suppliers and Supplier Withholding for Argentina, page 52. • Set up AAIs to account for value-added tax (VAT), gross income, contract, cleaning, and eventuals withholdings. See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAIs for Argentina, page 74. • Set up next numbers for withholding taxes. See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Next Numbers for Withholding Taxes, page 77. • Set up next numbers for VAT and Profit withholding certificates. See Chapter 5, “(ARG) Setting Up Withholding,” Setting Up VAT and Profit Legal Number Withholdings for Argentina, page 121. • Set up the system for these withholding types: <ul style="list-style-type: none"> - General SUSS. - Security services. - Cleaning services. - Contractors. - Gross income. - Profits. - VAT. - VAT according to regulation 726 or 615. <p>See Chapter 5, “(ARG) Setting Up Withholding,” page 105.</p> <p>To process supplier withholding for Argentina:</p> <ul style="list-style-type: none"> • Process withholding for security services. • Process security services withholding and withholding for general social security taxes (<i>sistema único de seguridad social</i> [SUSS]). • Request the fiscal situation for suppliers. • Upload AFIP information to the JD Edwards EnterpriseOne Accounts Payable system. • Correct withholding. • Reprint certificates. • Run the Profit Accrual Integrity Test programs. <p>See Chapter 9, “(ARG) Processing Withholding,” page 175.</p> |

| Setup or Process | Description |
|--------------------------------|--|
| Voucher processing | <p>In addition to the standard setup for voucher processing, for Argentina:</p> <ul style="list-style-type: none"> • Set up AFIP document type relationships. <u>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Legal Numbering for Argentina, page 80.</u> • Set up voucher authorization rules to authorize different users to change the status of vouchers up to a given amount. <u>See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Setting Up Voucher Authorization Rules, page 154.</u> • Set up corresponding versions of the Standard Voucher Entry (P0411), the Voucher Entry MBF Processing Options (P0400047), and the F0411 Tag File Maintenance (P760411A) programs. • Set up supplier CAI numbers. <u>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Print Authorization Codes for Argentine Suppliers, page 82.</u> • Set up invoice type M. <u>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Invoice Type M for Voucher Processing for Argentina, page 93.</u> |
| Voucher processing (continued) | <p>In addition to the standard voucher entry, for Argentina:</p> <ul style="list-style-type: none"> • Review the overview of voucher processing for Argentina. <u>See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Understanding Vouchers for Argentina, page 147.</u> • Review the overview of reviewing vouchers for Argentina. <u>See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Understanding the Process for Revising Vouchers for Argentina, page 151.</u> • Enter standard information and Argentina-specific voucher information. • Enter the CAI number for the supplier for voucher types A and B. • Enter withholding information. <u>See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Working with Voucher Entry and Review for Argentina, page 147.</u> |

| Setup or Process | Description |
|--------------------------|--|
| Batch voucher processing | <p>In addition to the standard processes for batch voucher processes, in Argentina you can:</p> <ul style="list-style-type: none"> • Add or revise Argentina-specific batch voucher information. • Add withholding information to a batch voucher. <p>See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Working with Batch Vouchers for Argentina, page 155.</p> <p>See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Mapping Fields in the F0411Z1 Tag Table - ARG - 04 Table (F76A30) for Argentina, page 171.</p> |
| Payment processing | <p>In addition to the standard setup for payment processing, for Argentina:</p> <ul style="list-style-type: none"> • Set up UDCs for deferred payments. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Accounts Payable for Argentina, page 70.</p> • Set up AAIs for deferred payments. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAIs for Deferred Payments, page 76.</p> • Set up the deferred check table. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up the System for Deferred Payments for Argentina, page 90.</p> • Set up payment formats. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Payment Formats for Argentina, page 89.</p> • Set up corresponding versions of Create Payment Groups (P04471) and: <ul style="list-style-type: none"> - Print PCG Detail - ARG (R760476A). - PO - PCG process - ARG (P76A570). <p>See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Understanding the Create Payment Control Groups Process for Argentina, page 157.</p> |

| Setup or Process | Description |
|--------------------------------|---|
| Payment processing (continued) | <p>Argentina-specific processes exist for:</p> <ul style="list-style-type: none"> • Creating payment groups. See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Understanding the Create Payment Control Groups Process for Argentina, page 157. • Writing payments. See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Understanding Writing Payments for Argentina, page 162. • Updating payments. See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Understanding Updating Payments for Argentina, page 163. • Posting automatic payments. See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Understanding Posting Automatic Payments for Argentina, page 164. • Voiding payments. See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Understanding Voiding Payments for Argentina, page 164. • Entering manual payments with voucher match. See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Understanding the Process for Entering Manual Payments with Voucher Match for Argentina, page 164. |

| Setup or Process | Description |
|---------------------------------|---|
| Credit invoice processing setup | <p>The AFIP (<i>Administración Federal de Ingresos Públicos</i>) issues credit invoices to provide companies with a payment instrument that can be negotiated and used as a credit. To work with credit invoices:</p> <ul style="list-style-type: none"> • Set up UDCs for credit invoice processing. • Set up AAIs for credit invoice processing. • Set up company constants for accounts payable credit invoices. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” <u>Setting Up Credit Invoice Constants for Accounts Payable for Argentina, page 95.</u></p> <ul style="list-style-type: none"> • Set up company constants for accounts receivable credit invoices. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” <u>Setting Up Credit Invoice Constants for Accounts Receivable for Argentina, page 100.</u></p> <ul style="list-style-type: none"> • Set up temporary tax areas and establish cross-references between the temporary and original tax areas. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” <u>Setting Up Tax Area Relationships for Credit Invoices for Argentina, page 97.</u></p> <ul style="list-style-type: none"> • Set up credit invoice status rules. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” <u>Setting Up Credit Invoice Status Rules for Argentina, page 97.</u></p> <ul style="list-style-type: none"> • Set up payment instruments. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” <u>Setting Up Payment Instruments for Credit Invoices for Argentina, page 102.</u></p> <ul style="list-style-type: none"> • Set up corresponding versions of Invoice Print (R03B505) and: <ul style="list-style-type: none"> - PO - Invoice Print A/R (R76A03B5). - AR SOP Print Credit Invoice (R76A0023). • Set up corresponding versions of Invoice Print (R42565) and: <ul style="list-style-type: none"> - AR SOP Print Credit Invoice (R76A0023). - PO Invoice/Shipment Note Print (R76A565). • Set up corresponding versions of Credit Invoice Acceptance (P04571) and: <ul style="list-style-type: none"> - A/P Auto Payment Register (R76A0476). - F0411 Tag File Maintenance (P760411A). |

| Setup or Process | Description |
|--|--|
| Credit invoice processing for accounts payable | <p>To work with credit invoices for accounts payables:</p> <ul style="list-style-type: none">• Enter vouchers for credit invoices. <p>See Chapter 7, “(ARG) Processing Credit Invoices for Accounts Payable,” Entering Vouchers for Credit Invoices for Argentina, page 138.</p> <ul style="list-style-type: none">• Enter credit invoice receipts. <p>See Chapter 7, “(ARG) Processing Credit Invoices for Accounts Payable,” Entering Credit Invoice Receipts for Argentina, page 142.</p> <ul style="list-style-type: none">• Reallocate to the final VAT credit tax account the VAT that is held in a temporary account. <p>See Chapter 7, “(ARG) Processing Credit Invoices for Accounts Payable,” Reclassifying Fiscal Credit for Argentina, page 143.</p> |

| Setup or Process | Description |
|---|---|
| Credit invoice processing for accounts receivable | <p>To work with credit invoices for accounts receivables:</p> <ul style="list-style-type: none"> • Print the credit invoices. <ul style="list-style-type: none"> - Set up the processing options for the PO - Invoice Print A/R (R76A03B5) program for Accounts Receivable transactions or the PO Invoice/Shipment Note Print (R76A565) program for Sales Order transactions to print credit invoices at the same time that you print the legal invoices. <p>See Chapter 6, “(ARG) Processing Credit Invoices for Accounts Receivable and Sales Orders,” Printing Credit Invoices for Argentina, page 127.</p> - Run the AR SOP Print Credit Invoice program (R76A0023) from the menu if you are issuing credit invoices after billing, for cash due, or if you are reprinting credit invoices. - Run the Invoice Print program (R03B505) for Accounts Receivable transactions or the Invoice Print (R43565) program for Sales Order transactions to have the system run the AR SOP Print Credit Invoice program when you print credit invoices at the same time that you print the legal invoices. • Enter credit invoice information in the system after the customer has approved the credit invoice. <p>See Chapter 6, “(ARG) Processing Credit Invoices for Accounts Receivable and Sales Orders,” Accepting Credit Invoices for Argentina, page 132.</p> • Print credit invoice receipts. <p>See Chapter 6, “(ARG) Processing Credit Invoices for Accounts Receivable and Sales Orders,” Printing Credit Invoice Receipts for Argentina, page 134.</p> • Use the AR SOP Credit Invoice Ledger program (R76A0024) to print a report that lists the credit invoices that you have issued for customers. <p>See Appendix C, “JD Edwards EnterpriseOne Country-Specific Reports,” (ARG) Reports for Argentina, page 1789.</p> |

| Setup or Process | Description |
|--------------------|---|
| Invoice processing | <p>In addition to the standard setup for invoice processing, for Argentina:</p> <ul style="list-style-type: none"> Set up the relationship between standard document types and legal document types, and set up next numbering for legal documents. See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Legal Numbering for Argentina, page 80. Set up the company CAI number, if applicable. See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Print Authorization Codes for Argentine Suppliers, page 82. Set up the CIF code, record type \$C, print program versions, and relate issue places to address book records. See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up to Print Invoices and Shipment Notes for Argentina, page 84. Set up corresponding versions of these programs: <ul style="list-style-type: none"> Perception Report (R76A8050) and PO Invoice/Shipment Note Print (R76A565) and PO - Invoice Print A/R (R76A03B5). See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Printing the Perception Report for Argentina, page 196. AR SOP Print Credit Invoice (R76A0023) and Invoice Print (R03B505) programs. AR SOP Print Credit Invoice (R76A0023) and Invoice Print (R42565) programs. PO - Invoice Print A/R (R76A03B5) and Invoice Print (R03B505) programs. PO Invoice/Shipment Note Print (R76A565) and Invoice Print (R42565) programs. See Chapter 6, “(ARG) Processing Credit Invoices for Accounts Receivable and Sales Orders,” Understanding How to Process Credit Invoices for Accounts Receivable and Sales Orders for Argentina, page 125. Set processing options for the perception report that the system prints when you run the PO - Invoice Print A/R (R76A03B5) or the PO Invoice/Shipment Note Print (R76A565). See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Setting Processing Options for Perception Report (R76A8050), page 196. |

| Setup or Process | Description |
|--------------------------------|---|
| Invoice processing (continued) | <p>In addition to the standard invoice processes, for Argentina:</p> <ul style="list-style-type: none"> • Review the overview of Argentine invoices. <p>See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Understanding Invoice Processing for Argentina, page 191.</p> <ul style="list-style-type: none"> • Enter invoices with automatic legal numbering. • Enter invoices with manual legal numbering. • Enter related credit notes. <p>See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Processing Invoices with Legal Numbers for Argentina, page 192.</p> <p>Argentina-specific processes exist for:</p> <ul style="list-style-type: none"> • Working with delinquency fees. <p>See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Working With Delinquency Fees in Argentina, page 202.</p> <ul style="list-style-type: none"> • Purging invoice records. <p>See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Purging Invoice Transactions for Argentina, page 203.</p> |
| Batch invoices | <p>Argentina-specific processes exist for batch invoice processing.</p> <p>See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Processing Batch Invoices for Argentina, page 197.</p> |

| Setup or Process | Description |
|-------------------------------|--|
| Automatic and manual receipts | <p>In addition to the standard setup for automatic receipts, for Argentina, set up corresponding versions of the PO-Update Receipt Register form Electronic Input - AR - 03B (R76A551D) and the Update Receipts Header (R03B551) programs.</p> <p>See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Understanding How to Upload Automatic Receipts for Argentina, page 201.</p> <p>Argentina-specific processes exist for:</p> <ul style="list-style-type: none"> • Entering manual receipts. <p>See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Entering Manual Receipts for Argentina, page 198.</p> <ul style="list-style-type: none"> • Reviewing a summarization of all of the documents that are associated with a receipt by document type. <p>See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Reviewing Summarized Current Account Information for Argentina, page 200.</p> <ul style="list-style-type: none"> • Automatically creating receipt records. <p>See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Creating Receipt Records Automatically for Argentina, page 201.</p> |

| Setup or Process | Description |
|--------------------------------------|--|
| Accounts receivable draft processing | <p>In Argentina, you can use the Drafts Entry program (P76A8000) to enter multiple payments (drafts) for a receipt.</p> <p>In addition to the standard setup for draft processing, for Argentina, set up UDCs for draft processing.</p> <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” (ARG, CHL, and PER) Setting Up UDCs for Accounts Receivable Drafts, page 66.</p> <p>To work with accounts receivable draft processing for Argentina:</p> <ul style="list-style-type: none"> • Enter massive drafts. • Apply draft receipts to invoices. • Create draft registers. • Remit drafts. • Collect drafts. • Delete or void drafts. • Print, review, and revise drafts. • Create credit or debit notes for exchange rate differences. • Enter receipts with the government-issued Provincial Obligation Letters (Lecops) as the payment instrument. • Use the Report Control Draft - ARG - 03B (R76A8510) program to print a list of all receipts with the Lecops payment instrument. <p>See Appendix C, “JD Edwards EnterpriseOne Country-Specific Reports,” (ARG) Reports for Argentina, page 1789.</p> <p>See Chapter 11, “(ARG, CHL, and PER) Processing Accounts Receivable Drafts for Argentina, Chile, and Peru,” page 205.</p> |
| Delinquency fees | <p>In addition to the standard setup for delinquency fees, for Argentina, set up corresponding versions of the PO Interest Invoice (R76A03B2) and Generate Delinquency Fees (R03B525) programs.</p> |

| Setup or Process | Description |
|------------------------|---|
| Sales order processing | <p>In addition to the standard setup for sales order processing, for Argentina:</p> <ul style="list-style-type: none"> • Set up UDCs to use Argentina-specific shipment notes. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Shipment Notes for Argentina, page 73.</p> <ul style="list-style-type: none"> • Set up corresponding versions of the Sales Order Entry (P4210) and the PO Sales Order Entry (P76A4210) programs. • Set the processing option for the PO Sales Order Entry program. <p>You must set the Invoice related to NC/ND processing option to <i>I</i> to enable the association of a credit or debit note to a sales order.</p> <p>See Chapter 12, “(ARG) Working With Sales Order Processing for Argentina,” Setting Processing Options for PO Sales Order Entry (P76A4210), page 236.</p> <p>In addition to the standard processes for sales order processing, Argentina-specific processes exist for:</p> <ul style="list-style-type: none"> • Associating a credit or debit note to a sales order. • Reviewing sales orders by legal number. • Reviewing tax calculations. • Printing invoices and shipment notes. • Working with prenumbered documents. • Updating customer sales. • Purging sales orders. <p>See Chapter 12, “(ARG) Working With Sales Order Processing for Argentina,” page 235.</p> |
| Item entry | <p>In addition to the standard processes for item entry, for Argentina, enter imported item information.</p> <p>See Chapter 13, “(ARG) Working with Item Information and Inventory Inflation Adjustment,” Entering Imported Item Information for Argentina, page 254.</p> |
| Fixed assets | <p>In addition to the standard setup and processes for fixed asset processing, for Argentina:</p> <ul style="list-style-type: none"> • Set up UDCs 76A/12 and 09/15. <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Fixed Assets and Inventory Management for Argentina, page 64.</p> <ul style="list-style-type: none"> • Generate the Fixed Asset Legalized Book report. <p>See Chapter 14, “(ARG) Generating Legal Reports,” Working with the Fixed Asset Legalized Book for Argentina, page 288.</p> |

| Setup or Process | Description |
|----------------------|--|
| Inventory management | <p>In addition to the standard setup for inventory management, for Argentina:</p> <ul style="list-style-type: none"> • Set up a relationship between document types and AAIs. See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAI Document Types for Argentina, page 77. • Set up AAIs for inventory inflation adjustments. See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAIs for Inventory Inflation Adjustments, page 76. <p>In addition to the standard processes for inventory management, functionality exists for Argentina make adjustments for inflated values of inventory.</p> <p>See Chapter 13, “(ARG) Working with Item Information and Inventory Inflation Adjustment,” page 253.</p> |
| Legal reporting | <p>In addition to standard reports, these Argentina-specific reports exist:</p> <ul style="list-style-type: none"> • CITI reports See Chapter 14, “(ARG) Generating Legal Reports,” Producing CITI Reports for Argentina, page 267. • SICORE reports See Chapter 14, “(ARG) Generating Legal Reports,” Processing SICORE Withholding Magnetic Report for Argentina, page 275. • Account ledger report See Chapter 14, “(ARG) Generating Legal Reports,” Working with the Account Ledger Book for Argentina, page 285. • Gross income perception report See Chapter 14, “(ARG) Generating Legal Reports,” Generating the Gross Income Perception Report for Argentina, page 289. |

CHAPTER 4

(ARG) Setting Up Country-Specific Functionality for Argentina

This section discusses how to:

- Set up user-defined codes (UDCs).
- Set up automatic accounting instructions (AAIs).
- Set up next numbers.
- Set up AAI document types
- Set up corresponding versions of base programs and Argentina-specific programs.
- Set up legal numbering.
- Set up print authorization codes for Argentine suppliers.
- Set up to print invoices and shipment notes.
- Set up the system to generate the text payments file.
- Set up payment formats.
- Set up the system for deferred payments.
- Set processing options for Additional A/B Information (P760101A).
- Set up suppliers.
- Set up invoice type M for voucher processing.
- Set up credit invoice constants for accounts payable.
- Set up tax area relationships for credit invoices.
- Set up credit invoice status rules.
- Set up credit invoice constants for accounts receivables.
- Set up payment instruments for credit invoices.

Setting Up UDCs for Argentina

Setting up Argentina-specific UDCs enables you to use Argentine functionality. You also set up some base software UDCs with Argentina-specific values.

Set up UDCs for:

- Foreign suppliers and supplier withholding.

- Credit invoice processing.
- SICORE.
- Fixed assets and inventory management.
- Perception reports
- Accounts receivable drafts
- Tax processing
- Accounts payable.
- Shipment notes.

Setting Up UDCs for Foreign Suppliers and Supplier Withholding for Argentina

Set up Argentina-specific values in the base software UDCs, and set up these Argentina-specific UDCs.

State & Province Codes (00/S)

The AFIP has established a special codification for each state. You must set up the special codification in the Special Handling Code field of UDC 00/S as shown in this table:

| Codes | Description 01 | Special Handling Code |
|-------|---------------------|-----------------------|
| CF | Capital Federal | 0 |
| BA | Buenos Aires | 1 |
| CA | Catamarca | 2 |
| CO | Córdoba | 3 |
| COR | Corriente | 4 |
| ER | Entre Ríos | 5 |
| JY | Jujuy | 6 |
| MZ | Mendoza | 7 |
| LR | La Rioja | 8 |
| SA | Salta | 9 |
| SJ | San Juan | 10 |
| SL | San Luis | 11 |
| SF | Santa Fe | 12 |
| SE | Santiago del Estero | 13 |
| TU | Tucumán | 14 |

| Codes | Description 01 | Special Handling Code |
|-------|------------------|-----------------------|
| CH | Chaco | 16 |
| CHU | Chubut | 17 |
| FOR | Formosa | 18 |
| MI | Misiones | 19 |
| NEU | Neuquen | 20 |
| LP | La Pampa | 21 |
| RN | Río Negro | 22 |
| SC | Santa Cruz | 23 |
| TF | Tierra del Fuego | 24 |

Note. Code 15 does not exist.

ARG - G.I. Agreement Code (76/01)

You set up gross income agreement codes to identify agreement types. The system uses these values when you process gross income withholding for suppliers.

For example, you might set up these gross income agreement codes:

| Codes | Description |
|-------|------------------------|
| 00 | Multilateral |
| 01 | Unilateral |
| 02 | Multilateral Agreement |
| 03 | Not Registered |
| 04 | Exempt |
| 05 | Special Regime |
| 99 | Without Agreement |

ARG - VAT Withholding Concept (76/02)

Set up value-added tax (VAT) withholding concepts to identify groups of items according to their withholding percentages. The system uses these values when you process VAT withholding for suppliers.

You must set up a code for invoice type M for voucher processing.

For example, you might set up these VAT withholding concepts:

| Codes | Description |
|-------|-----------------|
| BIE | Goods |
| CER | Cereals |
| FLT | Shipment |
| NO | No concept |
| SER | Services |
| IVM | Invoice M - VAT |

ARG - Profit WH Condition (76/03)

You set up profit withholding condition codes as provided by the AFIP to define different supplier conditions for profit withholding. The system uses these values when you process profit withholding for suppliers.

This table shows the AFIP condition codes:

| Code | Description |
|------|---|
| 1 | Registered |
| 2 | Not Registered |
| 3 | Not Categorized |
| 6 | Hourly or Daily Contract |
| 7 | Monthly Contract |
| 8 | Included in the Grains Fiscal Regime |
| 9 | Not Included in the Grains Fiscal Regime |
| 10 | Other Subjects Registered |
| 11 | Gas Stations Registered VAT Withholding |
| 12 | Public Services |
| 13 | General Rate - Sales or Rent Movable Things |
| 14 | Reduced Rate - Sales or Rent Movable Things |
| 15 | Substitute Withholding |

You might set up conditions codes in this UDC as shown in this example:

| Codes | Description 01 | Special Handling Code |
|-------|----------------|-----------------------|
| INS | Registered | 1 |
| NOI | Not Registered | 2 |
| NOR | No Withholding | 3 |

ARG - Profit WH Concept (76/04)

You set up profit withholding concepts to identify groups of items according to their profit withholding percentages. The system uses these values when you process withholding profits for suppliers.

You must set up a code for invoice type M.

For example, you might set up these codes:

| Codes | Description |
|-------|-------------------------|
| 10 | Services |
| 20 | Rental income |
| 30 | Goods |
| 40 | Professional |
| 50 | Service location |
| 60 | Invoice type M - profit |
| 70 | Professional fees |
| 80 | Decentralized regime |
| 99 | No withholding |

To meet the requirements of RG 830/00, you must set up UDC 76/04 to identify the concept that is used to withhold taxes for copyright, and set up the special handling code with the amount up to which no withholding will occur. According to RG 830, this amount is ten thousand pesos. For example, you might set up this concept code for RG 830/00:

| Codes | Description 01 | Description 02 | Special Handling Code |
|-------|-------------------|----------------|-----------------------|
| 60 | Derechos de Autor | NA | 10000 |

ARG - G.I. Concept - Source (76/05)

You set up gross income concept source codes to identify groups of items according to their gross income withholding percentages. The system uses the values in this UDC when you process gross income withholding for suppliers.

For example, you might set up these gross income concept source codes:

| Codes | Description |
|-------|----------------|
| BIE | Goods |
| FLT | Shipment |
| NOR | No withholding |
| SER | Services |

ARG - G.I. Concept - Destination (76/06)

You set up gross income concept destination codes to identify groups of items according to their gross income withholding percentages. The system uses the values in this UDC when you process gross income withholding for suppliers.

For example, you might set up these gross income concept destination codes:

| Codes | Description |
|-------|----------------|
| BIE | Goods |
| FLT | Shipment |
| NOR | No withholding |
| SER | Services |

ARG - Contract Concept (76/07)

You set up contract concept codes to identify groups of items according to their contract withholding percentages. Set up the values in this UDC before processing withholdings for contractors.

For example, you might set up these contract concept source codes:

| Codes | Description |
|-------|-----------------------------|
| 500 | More than 500 square meters |
| 600 | More than 600 square meters |
| 700 | More than 700 square meters |
| 999 | No withholding |

ARG - G.I. State - Source (76/09)

You set up gross income state source codes to identify the states that are the source of gross income taxes. The system uses the values that you set up in this UDC when you process gross income withholding for suppliers.

For example, you might set up these gross income state source codes:

| Codes | Description |
|-------|----------------------------|
| 01 | Cordoba |
| 02 | Mendoza |
| 03 | Catamarca |
| 04 | Neuguen |
| 05 | Santa Fe |
| 30 | Buenos Aires |
| 31 | Buenos Aires - Branch 0001 |
| 32 | Buenos Aires - Branch 0002 |
| 99 | No withholding |

ARG - G.I. State - Destination (76/10)

You set up gross income state destination codes to identify the states that are the destination of gross income taxes. The system uses these values when you process gross income withholding for suppliers.

For example, you might set up these gross income state destination codes:

| Codes | Description |
|-------|----------------------------|
| 01 | Cordoba |
| 02 | Mendoza |
| 03 | Catamarca |
| 04 | Neuguen |
| 05 | Santa Fe |
| 30 | Buenos Aires |
| 31 | Buenos Aires - Branch 0001 |
| 32 | Buenos Aires - Branch 0002 |
| 99 | No withholding |

ARG - Eventual Concept (76/11)

Set up codes for eventual concepts. Enter *1* in the Special Handling Code field for cleaning services concepts. The system uses the values that you establish when you process withholding for *sistema único de seguridad social* (SUSS) and cleaning services.

For example, you might set up these values:

| Codes | Description 01 | Special Handling Code |
|---------|-----------------------|-----------------------|
| (Blank) | (Blank) | N/A |
| ABC | Professional | N/A |
| DEF | Administrative | N/A |
| LIM | Cleaning Services | 1 |
| NOR | No withholding | 1 |
| SER | Servicios de Limpieza | 1 |

ARG-DGI Transaction Doc. Type (76/DT)

You use the values in the ARG-DGI Transaction Doc. Type (76/DT) UDC to associate SICORE document types with AFIP legal document types by specifying the AFIP legal document type in the Codes field and the associated SICORE document type in the Special Handling Code field.

The SICORE data structure defines the special codes shown in this table for document types that generate withholding:

| Special Handling Code | Description |
|-----------------------|----------------|
| 1 | Voucher |
| 2 | Receipt |
| 3 | Credit Note |
| 4 | Debit Note |
| 5 | Other Document |
| 6 | Payment Order |

In this example for RG 1415, the SICORE document type 1, shown in the Special Handling Code column, corresponds to type A and B vouchers:

| Codes | Description 01 | Special Handling Code |
|-------|----------------|-----------------------|
| 01 | Invoice A | 1 |
| 02 | Debit Note A | 4 |
| 03 | Credit Note A | 3 |
| 04 | Receipts A | 2 |
| 06 | Invoice B | 1 |

ARG - V.A.T. Legal Concept (76/L1)

Set up VAT legal concepts to identify different types of legal activities. VAT legal concept codes are defined by the *Administración Federal de Ingresos Públicos* (AFIP). The system uses these values when you process VAT withholding for suppliers.

You must set up code 499 for invoice type M.

For example, you might set up these VAT legal concepts:

| Codes | Description |
|-------|----------------------|
| 110 | Services |
| 12 | Goods |
| 250 | Shipment |
| 76 | Cereals |
| 499 | Invoice type M - VAT |

ARG - Gross Income Legal Conc. (76/L2)

Set up gross income legal concepts to identify different types of legal activities. Gross income legal concept codes are defined by the AFIP. The system uses the values in this UDC when you process gross income withholding for suppliers.

For example, you might set up these gross income legal concepts:

| Codes | Description |
|-------|-------------|
| 25 | Goods |
| 55 | Shipment |
| 77 | Services |

ARG - Profit Legal Concept (76/L3)

Set up profit legal concept codes to identify types of legal activities. Profit legal concept codes are defined by the AFIP. The system uses these values when you process profit withholding for suppliers and when you print the SICORE reports.

For example, you might set up these codes:

| Codes | Description |
|-------|------------------|
| 019 | Service location |
| 027 | Rental income |
| 110 | Services |
| 115 | Professionals |

| Codes | Description |
|-------|-------------------|
| 116 | Professional fees |
| 128 | Goods |

ARG - Contract Legal Concept (76/L4)

Set up contract legal concepts to identify types of legal activities. Contract legal concept codes are defined by the AFIP. The system uses the values that you enter in this UDC when you process withholding for contractors.

ARG - Eventual Legal Concept (76/L5)

Set up eventual legal concepts to identify types of legal activities. Eventual legal concept codes are defined by the AFIP. The system uses the values that you establish when you process withholding for SUSS and cleaning services.

ARG - A/B Legal Document Type (76A/A0)

Set up legal document types to classify tax ID numbers, including foreign tax IDs.

This table shows the AFIP valid document types:

| Code | Description |
|------|----------------|
| 80 | C.U.I.T. |
| 86 | C.U.I.L. |
| 87 | C.D.I. |
| 83 | Foreign Tax ID |
| 84 | Foreign ID |

This table provides an example of how you might set up UDC 76A/A0:

| Codes | Description 01 | Special Handling Code | Hard Coded |
|-------|------------------------|-----------------------|------------|
| 080 | CUIT | 1 | Y |
| 084 | CUIT prov del exterior | na | N |
| 085 | DNI | na | N |

Note. When you set up document type CUIT, you must enter *1* in the Special Handling Code field so that the system validates the CUIT (*clave única de identificación tributaria*) number when it is entered or modified.

Unchangeable Pay Status (76A/EI)

You set unchangeable pay status codes to specify the pay statuses at which vouchers cannot be changed.

This table provides an example of how you could set up UDC 76A/EI:

| Codes | Description 01 |
|-------|-----------------|
| # | Payment Process |
| A | Approved |
| P | Paid |

Country CUIT (76A/FJ)

Set up the CUIT numbers for the country of origin of foreign suppliers.

This UDC code is comprised of the country of origin and the person/corporation code. Use the Description 01 field to set up the country CUIT, as shown in this example:

| Codes | Description 01 |
|-------|----------------|
| FRC | 55-00000430-7 |
| FRP | 50-00000412-7 |
| USP | 50-0000301-5 |

Withholding Minimum (76A/WM)

The system uses these values to determine whether to compare the minimum amount to the taxable amount or the withholding amount. Required values are:

| Codes | Description 01 |
|-------|--|
| Blank | No minimum withholding. |
| 1 | Taxable amount is greater than or equal to the minimum amount. |
| 2 | Taxable amount is greater than the minimum amount. |
| 3 | Withholding amount is greater than or equal to the minimum amount. |
| 4 | Withholding amount is greater than the minimum amount. |

Setting Up UDCs for Credit Invoice Processing for Argentina

Before you process credit invoices, set up these UDCs.

Document Type - Invoices Only (00/DI)

You must specify a value of *1* in the Special Handling Code field for the document types that might require credit invoices.

Note. You should set up one or more new document types for vouchers that have credit invoices attached.

Document Type - Vouchers Only (00/DV)

You must specify a value of *I* in the Special Handling Code field for the document types that might require credit invoices.

Note. You should set up one or more new document types for vouchers that have credit invoices attached.

The document type that is used for voucher acceptance (for example, FX) must be set up in the Document Type (00/DT) and the Document Type - Vouchers Only (00/DV) UDCs.

Address Book Category Codes (01/01 through 01/30)

You must define an address book category code to identify the suppliers and customers who issue or receive credit invoices.

You can use any category code, but you must specify the number of the category code that you are using in the General Constants program (P76A20).

You must set up a code for the category code that you specify. You can use any code. If the supplier or customer has a code other than blank in this category code, the system assumes that a credit invoice must be issued.

Credit Invoice Valid Status (76A/CS)

Credit invoice status codes represent the current status of a credit invoice and determine the event to be processed. For example, you might set up these credit invoice status codes:

| Code | Description 01 | Special Handling Code |
|---------|----------------|-----------------------|
| (Blank) | (Blank) | N/A |
| 01 | Initial | N/A |
| 05 | To Accept | N/A |
| 10 | Accepted | A |
| 15 | Pay with Cash | N/A |

Note. The values in the Special Handling Code field do not apply to the JD Edwards EnterpriseOne Accounts Payable system; they are used by the JD Edwards EnterpriseOne Accounts Receivable and JD Edwards EnterpriseOne Sales Order Management systems, except in the case of a value of *I*, which is used to specify a reclassification of losses.

Credit Invoice A/P Events (76A/EV)

Events are the different points in the life cycle of a credit invoice. Use them to determine which valid status the invoice credit must have to pass through that event. JD Edwards EnterpriseOne software provides hard-coded values for this UDC.

Special Payment Instruments (76A/PY)

You use special payment instrument codes to identify the payment instruments (for example, X) that cancel the original voucher and automatically generate another voucher with the document type that is specified in this UDC (for example, FX) for the voucher amount less the withholding amount.

In the Description 02 field, specify the type of document to generate, followed by the credit invoice class and the payment term to assign to it. For example, you could specify *FXACEPCDO* in the Description 02 field, where:

- *FX* is the credit invoice document type.
- *ACEP* is the supplier classification that identifies the liability account for credit invoices.
You must set up the corresponding PCxxxx AAI.
- *CDO* is the payment term of the acceptance voucher.

You would set up this special payment instrument code like this:

| Code | Description 01 | Description 02 |
|------|-------------------------|----------------|
| X | Credit invoice accepted | FXACEPCDO |

Payment Terms Codes (76A/TP)

You use payment terms codes to specify the payment terms that do not require a credit invoice. When you enter a voucher for a credit invoice, you must specify a payment terms code that is *not* specified in this UDC.

Setting Up UDCs for SICORE for Argentina

Set up these UDCs before you run the Step III - Self Withholdings program (R76A96).

ARG - Profit WH Concept (76/04)

You must enter *1* in the Description 02 field on UDC 76/04 to allow the columns to appear in the SICORE, as shown in this table:

| Codes | Description 01 | Description 02 |
|-------|----------------------|----------------|
| None | . | None |
| 10 | Services | 1 |
| 20 | Rental Income | 1 |
| 30 | Goods | 1 |
| 40 | Professional | 1 |
| 50 | Service Location | 1 |
| 70 | Professional Fees | 1 |
| 80 | Decentralized Regime | 1 |
| 99 | No Withholding | None |

ARG - Profit Legal Concept (76/L3)

Set up profit legal concept codes to identify types of legal activities. Profit legal concept codes are defined by the AFIP. The system uses these values when you process profit withholding for suppliers, and when you print the SICORE reports.

You must set up code 099 for invoice type M.

For example, you might set up these codes:

| Codes | Description |
|-------|--------------------|
| 019 | Service location |
| 027 | Rental income |
| 099 | Invoice M - profit |
| 110 | Services |
| 115 | Professionals |
| 116 | Professional fees |
| 128 | Goods |

Setting Up UDCs for Fixed Assets and Inventory Management for Argentina

Set up these UDCs before processing fixed assets and inventory adjustments.

G/L Reporting Code 15 (09/15)

You must use Chart of Accounts Category Code 15 to specify the Asset Type for each account that is used in the JD Edwards EnterpriseOne Fixed Assets system. The transactions from the Account Ledger table (F0911) are grouped, and Annex A is generated based on the Asset Type from Category Code 15. You must define asset types in UDC 09/15 before you set up accounts.

Anexo A Column Type (76A/12)

You use UDC 76A/12 to set up the relationship between document types and the column on the Annex A report in which they will be printed. You might set up this UDC as shown in this table:

| Codes | Description 01 | Special Handling Code |
|-------|----------------|-----------------------|
| AD | Disposals | B |
| AT | Transfers | T |

Adjustment Codes (76A/CA)

Set up UDCs to identify adjustment indexes for inventory inflation adjustment. For example, you might set up the IPIM - Wholesaler Price Index code.

Setting Up UDCs for the Perception Report for Argentina

Set up these UDCs that the system uses when you produce the Perception report:

- ARG - Concept Code (76A/CI)
- ARG - Concept Code (76A/CR)
- Perception Code SICORE (76A/PE)

ARG-Concept Code (76A/CI)

Use UDC 76A/CI to set up tax category codes in conformity with General Resolution 738/99. The system uses these values when you run the Perception Report (R76A8050) program.

This table provides an example of how you might set up UDC 76A/CI:

| Codes | Description 01 |
|-------|-----------------------------------|
| 217 | <i>Impuesto a las ganancias</i> |
| 767 | <i>Impuesto al valor agregado</i> |

ARG- Concept Code (76A/CR)

Use UDC 76A/CR to set up the activity codes under which the company can operate. Enter the codes and corresponding descriptions in conformity with General Resolution 738/99. The system uses these values when you run the Perception Report (R76A8050) program.

Important! This description is the concept of the perception certificate.

This table provides an example of how you might set up UDC 76A/CR:

| Codes | Description 01 |
|-------|------------------------------|
| 493 | <i>Importaciones</i> |
| 663 | <i>Importación de carnes</i> |

Perception Code SICORE (76A/PE)

You must associate the tax codes from UDC 76A/TC with the perception activity codes from UDC 76A/CR and the tax categories from UDC 76A/CI. You set up this association in UDC 76A/PE. The system uses these values when you run the Perception Report (R76A8050) program.

You specify the tax codes in the Codes field, the activity code in the Description 01 field, and the tax category in the Description 02 field, as shown in this example:

| Codes | Description 01 | Description 02 |
|----------|----------------|----------------|
| FTIMP01 | 663 | 767 |
| IVA21PIA | 248 | 767 |
| IVAPERPA | 248 | 767 |

| Codes | Description 01 | Description 02 |
|---------|----------------|----------------|
| PER | 663 | 217 |
| PER1 | 265 | 767 |
| PER2 | 267 | 767 |
| PRU | 463 | 217 |
| REB-PER | 663 | 217 |

(ARG, CHL, and PER) Setting Up UDCs for Accounts Receivable Drafts

In addition to the standard UDCs for accounts receivable drafts, set up these UDCs before you process accounts receivable drafts for Argentina, Chile, or Peru:

- Payment Instrument (00/PY).
- ARG - Item ARGP - Allowed Values (76/B1).
- Bank Codes (76A/BK).
- Clearing Codes (76A/CL).
- Draft Status - Argentina (76A/DS).

Payment Instruments (00/PY)

Set up a payment instrument code for LECOP with a value of 2 in the Special Handling Code field to activate the Nominal Value field on the Draft Entry form.

For example, you might set up a code similar to this example:

| Codes | Description 01 | Special Handling Code |
|-------|----------------|-----------------------|
| L | LECOP | 2 |

ARG - Item ARGP - Allowed Values (76/B1)

When you set up this UDC, you must specify *Y* in the Special Handling Code field for document types A, B, E, and M. A value of *Y* indicates that the document type requires the system to print the bar code information.

When you work with credit invoices and receipt invoices, you enter a value that exists in this UDC to specify the legal number group.

The values of R (remito) and X (shipping note) must exist in this table to print shipment notes according to the requirements for RG 889.

Bank Codes (76A/BK)

If the payment instrument is cash, this UDC must have blank as a value.

Clearing Codes (76A/CL)

If the payment instrument is cash, this UDC must have blank as a value.

Draft Status - Argentina (76A/DS)

If the payment instrument is cash, this UDC must have blank as a value.

Setting Up UDCs for Tax Processing for Argentina

Set up these UDCs for standard tax processing and to meet the requirements of RG 1361 for sales and purchase transactions.

Foreign Currency Codes (00/CC)

Set up this UDC for the VAT Purchasing Ledger. You must add the currency code that is required by AFIP in the Description 02 field of this UDC, as shown in this example:

| Codes | Description 01 | Description 02 |
|-------|----------------|----------------|
| ARS | Argentine Peso | ARS |
| USD | U.S. Dollar | USD |

Document Type - Invoices Only (00/DI)

Set up this UDC for the for the Sales VAT Ledger. As established by general resolution, the fiscal authority (AFIP) states that the different invoices which are reported in the Sales VAT Ledger must have this codification:

- Document types that correspond to exempt operations must be listed in UDC (00/DI) with Z, X, or E in the second position of the Special Handling Code field.
- Document types that correspond to nontaxable operations must be listed in UDC (00/DI) with N in the second position of the Special Handling Code field.

This example shows a document type with Z in the second position of the Special Handling Code field:

| Codes | Description 01 | Special Handling Code |
|-------|----------------|-----------------------|
| RI | Invoice | 1Z |

Document types of printed invoices that originated in the JD Edwards EnterpriseOne Sales Order Management system or the JD Edwards EnterpriseOne Accounts Receivable system and that have an exempt concept must be configured in this UDC. Documents with VAT must have a blank value in the second position of the Special Handling Code field.

If the same invoice has a combination of different concepts (for example, a VAT rate with exempt or nontaxable concepts) and this UDC contains a Z, X, E, or N in the Special Handling Code field for the document type, the system writes a blank in the Sales VAT Ledger magnetic file.

If the Special Handling Code field in the UDC contains an invalid value or is blank and the invoice concept is exempt, the program generates a warning message in the Work Center and writes an E in the Sales VAT Ledger magnetic file.

If the Special Handling Code field in the UDC contains an invalid value or is blank and the invoice concept is nontaxable, the program generates a warning message in the Work Center and writes an N in the Sales VAT Ledger magnetic file.

If the Special Handling Code field in the UDC contains an invalid value or is blank and the invoice has both exempt and nontaxable concepts, the program generates a warning message in the Work Center and writes an E in the Sales VAT Ledger magnetic file.

In addition, the fiscal authority requires that the program validate that the tax amount is less than the taxable amount and that the taxable amount must be less than the gross amount of the invoice. If these conditions are not met and the invoice has lines with tax explanation code VT, the program generates a message in the Work Center.

Responsible Type (01/xx)

Set up this UDC for the VAT Purchasing Ledger and the Sales VAT Ledger. For the VAT Purchasing Ledger, use an Address Book category code (01/xx) to list the VAT condition of subjects. Enter these AFIP codes in the Special Handling Code field:

| AFIP Code | Description |
|-----------|---------------------|
| 01 | VAT inscript |
| 02 | Non-inscript VAT |
| 03 | Non responsible VAT |
| 05 | Final consumer |

This table is an example of UDC 01/24 for the VAT Purchasing Ledger:

| Codes | Description 01 | Special Handling Code |
|-------|----------------|-----------------------|
| . | . | . |
| INS | Registered | 01 |
| NOI | Not registered | 02 |
| NOR | No withholding | 03 |

You specify the address book category code that you are using in the processing options of the V.A.T Purchasing Ledger program (R760499A).

For the Sales VAT Ledger, use an address book category code (01/xx) to list the responsible types. Enter the values that are defined by AFIP in the Special Handling Code field as shown:

| Codes | Description 01 | Special Handling Code |
|-------|---------------------|-----------------------|
| . | . | . |
| INS | <i>Inscripto</i> | 01 |
| NOI | No <i>inscripto</i> | 02 |
| NOR | No <i>retener</i> | 03 |

You specify the address book category code that you are using in the processing options of the Sales VAT Tax Subsidiary program (R76A8060). The Sales VAT magnetic file lists the value from the Special Handling Code field for the responsible type.

Item ASIB Allowed Values (76A/B3)

Use Item ASIB codes to specify the allowed values that define the invoice buckets for tax codes. The invoice bucket is the line on which the invoice tax will be printed. All tax codes with the same invoice bucket number appear on the same invoice line.

You assign invoice buckets to tax codes when you set up tax definitions.

Fiscal Controller (76A/CF)

Set up this UDC for the VAT Purchasing Ledger. Set up this hard-coded value in UDC 76A/CF:

| Codes | Description 01 | Hard Coded |
|---------|-------------------|------------|
| (blank) | Default | N |
| C | Fiscal Controller | Y |

Destination Code (76A/DE)

Set up this UDC for the VAT Purchasing Ledger. Set up these hard-coded values in UDC 76A/DE:

| Codes | Description 01 | Hard Coded |
|---------|--------------------------------|------------|
| (blank) | Default | N |
| CORI | Rpt Deposit Earning Correction | Y |
| DIS4 | Simplified Import Destination | Y |
| DIS5 | DAP Simplified Import Dest. | Y |
| EC01 | Export to Consumption | Y |
| EC02 | Expt to Consmpn w/DIT | Y |
| EC03 | Exp to consmpn/minerals conc | Y |
| EC09 | Exp to Cons w/DIT wo/trnsfrm | Y |
| IG01 | Imp to cons ige ops wo/trans | Y |

Country's CUIT (76A/FJ)

Set up this UDC for the Sales VAT Ledger. List the external CUITs that are defined by AFIP for foreign countries in UDC (76A/FJ):

| Codes | Description 01 |
|-------|----------------|
| FRC | 55-00000430-7 |
| FRP | 50-00000412-7 |
| USP | 50-0000301-5 |

The system retrieves the CUIT from this UDC based on the Country and Person/Corporation Code of the supplier or customer in the JD Edwards EnterpriseOne Address Book system. For example, if the supplier's Country code is FR and the Person/Corporation Code is C, the system retrieves the CUIT for the FRC code in this UDC.

Operation Code (76A/OC)

Set up this UDC for the VAT Purchasing Ledger. Set up these hard-coded values in UDC (76A/OC):

| Codes | Description 01 | Hard Coded |
|---------|-----------------------------|------------|
| (blank) | Default | N |
| E | Exempt Opt | Y |
| X | Foreign Export/Import | Y |
| Z | Export/Import Tax Free zone | Y |

Doc Types Tax UOM (76A/UM)

Use document type codes to specify the document types for which you do not want to calculate taxes by unit of measure. For example, you might set up this document type tax code:

| Codes | Description 01 |
|-------|----------------|
| SO | Sales Order |

Setting Up UDCs for Accounts Payable for Argentina

In addition to the standard software UDCs for accounts payables, set up these Argentina-specific UDCs and these base UDCs with Argentina-specific values.

Foreign Currency Codes (00/CC)

Set up this UDC before you generate the text payments file. This UDC is used by RG 1547 and RG 1361. RG 1547 uses the value in the Code and the Special Handling Code fields, while RG 1361 uses the value in the Code and the Description 02 fields. This example illustrates possible values for UDC 00/CC:

| Codes | Description 01 | Description 02 | Special Handling Code |
|-------|--------------------------|----------------|-----------------------|
| ARA | <i>Pesoso Argentinos</i> | ARS | 002 |

| Codes | Description 01 | Description 02 | Special Handling Code |
|-------|----------------|----------------|-----------------------|
| ARS | <i>Pesos</i> | ARS | 123 |
| USD | <i>Dolares</i> | USD | 001 |

Document Type - All Documents (00/DT)

Set up document type P1 for deferred payments.

Document Type - Vouchers Only (00/DV)

Set up document type P1 for deferred payments.

Payment Instruments (00/PY)

Set up UDC 00/PY to include the deferred check payment instrument (D), entering *I* in the first position of the Special Handling Code field as illustrated in this example:

| Codes | Description 01 | Special Handling Code |
|-------|--------------------------------|-----------------------|
| D | Draft by Invoice (A/R and A/P) | 1 |

The system uses these values when you process deferred payments.

In addition to setting up payment instruments for standard payment processing, specify that no withholding takes place if withholding vouchers are written off when payments are made in bonds.

The system stores unfulfilled withholding in a table so that you can generate a report showing these amounts when required by the fiscal authority.

You specify whether withholding is saved in permanent files or in unfulfilled withholding tables by completing the Special Handling Code field for the payment instrument in UDC 00/PY. This UDC does not affect withholding calculations.

The value in the Special Handling Code field consists of these parts:

| | |
|-----------------|--|
| First Position | Specifies whether the payment is deferred. Values are: <ul style="list-style-type: none"> <i>I</i>: The payment is deferred. Blank: The payment is not deferred. |
| Second Position | Specifies whether VAT is withheld. Values are: <ul style="list-style-type: none"> <i>Y</i>: Withhold VAT. <i>N</i>: Do not withhold VAT. |
| Third Position | Specifies whether profit taxes are withheld. Values are: <ul style="list-style-type: none"> <i>Y</i>: Withhold profit taxes. <i>N</i>: Do not withhold profit taxes. |

| | |
|-----------------|---|
| Fourth Position | <p>Specifies whether taxable amounts and profit withholding is stored in the Profit Withholding - Payments Done table (F760406A). Values are:</p> <ul style="list-style-type: none"> • <i>Y</i>: Store amounts in the F760406A table. • <i>N</i>: Do not store amounts in the F760406A table. |
| Fifth Position | <p>Specifies whether the system applies withholding taxes for security services. Values are:</p> <ul style="list-style-type: none"> • <i>Y</i>: Apply withholding. • <i>N</i>: Do not apply withholding. <p>The system treats a blank value as a Y.</p> |
| Sixth position | <p>Specifies whether the system accumulates the withholding taxes in the F76A0456 table. Values are:</p> <ul style="list-style-type: none"> • <i>Y</i>: Accumulate taxes. • <i>N</i>: Do not accumulate taxes. <p>The system treats a blank value as a Y.</p> |

This table lists the results of various special handling code combinations. The underlined character represents a blank space:

| Special Handling Code | Explanation |
|-----------------------|---|
| <u>_</u> YYYY | All withholding is made and the profits are accrued. This code is the same as leaving the Special Handling Code field blank. |
| <u>_</u> YYN | VAT is withheld, but profits are not accrued. |
| <u>_</u> YNY | VAT is withheld, but profits taxes are not withheld. The taxable amount is accrued for the unfulfilled withholding calculation. |
| <u>_</u> YNN | VAT is withheld, but profits taxes are not; profits are not accrued. |
| <u>_</u> NYN | VAT is not withheld; but profit taxes are withheld, and profits are accrued. |
| <u>_</u> NNN | No taxes are withheld. The VAT and profit tax withholding are saved in temporary files, and profits are not accrued. |

Note. If you include a *I* in the first position in any of the preceding combinations, the payment is considered to be a deferred payment.

This table is an example of payment instruments for Lecops payments:

| Codes | Description 01 | Description 02 | Special Handling Code |
|-------|------------------------------|----------------------------------|-----------------------|
| J | <i>Lecops</i> | <i>No retiene ni acumula RET</i> | NNN |
| N | <i>Cheque dif con Lecops</i> | <i>No RET si acumula Gcias</i> | 1YNN |

Issue Place (76A/LE)

Use this UDC to identify the issue place of legal documents. For example, you might set up codes for each of your warehouses and for your main office.

Payment Types (76A/PT)

Set up this UDC before you generate the text payments file. You must set up these payment types:

| Codes | Description |
|-------|------------------------------------|
| 01 | Finance entities accounts deposits |
| 02 | Draft or bank transfers |
| 03 | Checks or cancellation checks |
| 04 | Credit cards |
| 05 | Credit invoice |
| 06 | Endorsable checks |
| 07 | Other |

Payment Terms Codes (76A/TP)

Set up this UDC before you generate the text payments file. You must set up two classifications of the operations:

- 01 - Cash
- 02 - Future Payment Term

The payment terms that are considered cash (01) must be listed in the UDC. Those that are not in the UDC are considered future payment terms (02).

Setting Up UDCs for Shipment Notes for Argentina

Set up standard software UDCs for sales order processing, and set up these Argentina-specific UDCs to print shipment notes.

ARG - Item ARGP-Allowed Values (76/B1)

Set up these values to work with shipment notes:

| Code | Description |
|------|---------------|
| R | <i>Remito</i> |
| X | Shipment note |

ARG-DGI Transaction Doc. Type (76/DT)

Set up this value to work with shipment notes:

| Code | Description |
|------|---------------|
| 91 | <i>Remito</i> |

ARG - Item ARBR Allowed Values (76A/B8)

Set up these values to work with shipment notes:

| Code | Description |
|------|----------------|
| R | <i>Remito</i> |
| X | Shipment group |

Setting Up AAls for Argentina

This section discusses how to set up AAls for:

- Supplier withholding
- Deferred payments
- Credit invoice processing
- Accounts receivable draft processing
- Inventory inflation adjustment

JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide, “Configuring the Sales Order Management System,” Setting Up AAIs for Sales Order Management

AAIs for Supplier Withholding for Argentina

You must set up these AAIs for VAT, gross income, contract, cleaning, and eventuals withholding and associate them with the appropriate accounts:

- \$I: VAT withholding account
- \$G: Profit withholding account
- \$Bxx: Gross income withholding account

The variable *xx* in this AAI specifies the state.

- \$\$: Contract withholding account
- \$A: Eventuals withholding account

As an alternative, you can set up \$ADEF (eventual services including the withholding concept).

- \$L: Cleaning services

As an alternative, you can set up \$LLIM (cleaning services including the withholding concept).

- \$Q: SUSS withholding
- PC\$I: VAT withholding control account
- PC\$G: Profit withholding control account
- PC\$L: Cleaning services control account
- PC\$Bxx: Gross income withholding control account

The variable *xx* in this AAI specifies the state.

- PC\$\$: Contract withholding control account
- PC\$A: Eventuals withholding control account

When setting up \$B and PC\$B for gross income, you must append the state number to the suffix. For example, if the state number is 01, the AAI becomes \$B01 and PC\$B01.

For VAT, profits, eventuales, and contract accounts, the system can associate current accounts by concept. For example, you might set up \$IEL. If the system does not find specific accounts, it uses the generic withholding codes (\$I, \$G, \$A, and \$S).

Setting Up AAIs for Deferred Payments

Set up AAI PD for the control account that will be charged for deferred checks, as illustrated in this example:

| Seq No. | Item. No. | Description | Co | Bus Unit | Obj Acct | Sub | Install System |
|---------|-----------|-------------------------------|-------|----------|----------|------|----------------|
| 4.041 | PD | Deferred Checks Control Acct. | 00028 | 28 | 1115 | CTRL | 04 |

Setting Up AAIs for Credit Invoice Processing for Argentina

You must set up the PT and PC AAIs to process credit invoices.

PT + Offset (Tax)

You must create a PTxxxx AAI for the original tax area and one for the temporary tax area. The PTxxxx AAI for the original tax area must specify the tax fiscal credit account. The PTxxxx AAI for the temporary tax area must specify a temporary tax account.

When vouchers that require a credit invoice are posted, the offset of the temporary tax area is charged.

The reclassification process uses the Credit Invoice Tax Area Relationship (F76A25) table to cancel the temporary fiscal credit and charge the final one.

PC + Offset (Credit Invoice Accepted)

The PCxxxx AAI identifies the supplier class that corresponds to the debts from credit invoices that are represented by the voucher that is defined for credit invoices. This AAI must use a liability account.

This offset is charged during acceptance and then canceled when the accepted credit invoice is paid.

Setting Up AAIs for Draft Processing for Argentina

When you process accounts receivable drafts, you can use the government-issued Provincial Obligation Letters (Lecops) as the payment instrument.

Set up these AAIs for Lecops:

- RDL (RD + payment instrument)
- RD1L (RD1 + payment instrument)
- RD2L (RD2 + payment instrument)

Setting Up AAIs for Inventory Inflation Adjustments

You must set up the following Distribution AAIs to process inflation inventory adjustment:

- 3910: Inventory Stock Valuation - Adjustment

Use this AAI to identify the inventory account for the inflation adjustment process.

- 3911: Expense or Cost of Goods Sold - Stock Valuation Adjustments

Use this AAI to identify the results account, which serves as the offset to the inventory adjustments account.

Setting Up Next Numbers for Argentina

This section discusses how to set up next numbering for withholding taxes. You also set up next numbering for legal document numbering and VAT and profit withholding certificates.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Legal Numbering for Argentina, page 80.](#)

See [Chapter 5, “\(ARG\) Setting Up Withholding,” Setting Up VAT and Profit Legal Number Withholdings for Argentina, page 121.](#)

Setting Up Next Numbers for Withholding Taxes

You must set up next numbers by company, fiscal year, or both, for the tax withholding document types \$A, \$G, \$I, \$L, and \$S. The system uses this setup to obtain the numbering for supplier tax withholding certificates.

This table includes examples of next numbering setup:

| Document Company | Document Type | Description | Check Digit | Next Number Range |
|------------------|---------------|-------------------------------|-------------|-------------------|
| 00028 | \$G | Profit Withholding | N/A | 115 |
| 00028 | \$I | VAT Withholding | N/A | 111 |
| 00028 | \$S | Contract Withholding | N | 5 |
| 00028 | \$A | Eventuals Withholding | N | 26 |
| 0028 | \$L | Cleaning Services Withholding | N | 40 |

Note. Next numbers for gross income withholding are assigned according to state specifications. Therefore, the only gross income document type for which you have to set up next numbers is gross income rectifications.

Setting Up AAI Document Types for Argentina

You must set up the document types and the corresponding AAIs that are used in the process of adjusting works in progress for inflation. You adjust for inflation to manage your inventory.

Form Used to Set Up AAI in Document Types for Inventory Inflation Adjustment

| Form Name | FormID | Navigation | Usage |
|-----------------------------|----------|---|----------------------------|
| Work with AAI Document Type | W76A395B | Work in Process (G76A391), AAI Document Type - Work in Process Adj. | Review AAI document types. |
| Set Up AAI Document Type | W76A395C | Click Add on the Work with AAI Document Type form. | Set up AAI document types. |

Set Up AAI Document Types

Access the Set Up AAI Document Type form.

| | |
|-------------------------|--|
| Document Type | Enter a value that exists in the Document Type (00/DT) UDC table. |
| Order Type | Enter a value that exists in the Document Type (00/DT) UDC table. |
| AAI Table Number | Enter a number used to specify sequence and retrieve accounting information. |

Setting Up Corresponding Versions of Programs for Argentina

Some country-specific functionality requires that you create versions of the same name for a country-specific program and a base software program. For example, to have the system access the processing options for a country-specific voucher program, you might need to set up a version named XYZ for the country-specific voucher program and a version named XYZ of the Standard Voucher Entry (P0411) program.

Set up corresponding versions for these programs:

| Argentina Program | Base Software Program |
|---|---|
| AR SOP Print Credit Invoice (R76A0023) | Invoice Print (R03B505) Invoice Print (R42565) See Chapter 6, “(ARG) Processing Credit Invoices for Accounts Receivable and Sales Orders,” Understanding How to Process Credit Invoices for Accounts Receivable and Sales Orders for Argentina, page 125. |
| PO - Update Receipt Register from Electronic Input (R76A551D) | Update Receipts Header (R03B551) See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Understanding How to Upload Automatic Receipts for Argentina, page 201. |
| PO Interest Invoice (R76A03B2) | Generate Delinquency Fees (R03B525) See Chapter 10, “(ARG) Working With Accounts Receivable Processing,” Working With Delinquency Fees in Argentina, page 202. |

| Argentina Program | Base Software Program |
|--|---|
| PO - Invoice Print A/R (R76A03B5) | <p>Invoice Print (R03B505)</p> <p>See Chapter 6, “(ARG) Processing Credit Invoices for Accounts Receivable and Sales Orders.” Understanding How to Process Credit Invoices for Accounts Receivable and Sales Orders for Argentina, page 125.</p> <p>See Chapter 10, “(ARG) Working With Accounts Receivable Processing.” Understanding Invoice Processing for Argentina, page 191.</p> |
| PO Invoice/Shipment Note Print (R76A565) | <p>Invoice Print (R42565)</p> <p>See Chapter 6, “(ARG) Processing Credit Invoices for Accounts Receivable and Sales Orders.” Understanding How to Process Credit Invoices for Accounts Receivable and Sales Orders for Argentina, page 125.</p> |
| Perception Report (R76A8050) | <p>PO Invoice/Shipment Note Print (R76A565)</p> <p>PO - Invoice Print A/R (R76A03B5)</p> <p>See Chapter 10, “(ARG) Working With Accounts Receivable Processing.” Understanding the Printing of Perception Certificates, page 196.</p> |
| F0411 Tag File Maintenance (P760411A) | <p>Standard Voucher Entry (P0411)</p> <p>Voucher Entry MBF Processing Options (P0400047)</p> <p>Note. The Standard Voucher Entry (P0411) program and the Voucher Entry MBF Processing Options (P0400047) program must also have identically named versions.</p> <p>See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina.” Understanding Vouchers for Argentina, page 147.</p> |
| Additional A/B Information (P760101A) | <p>Address Book Revisions (P01012)</p> <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina.” Understanding Supplier Setup for Argentina, page 92.</p> |

| Argentina Program | Base Software Program |
|--|------------------------------------|
| A/P Auto Payment Register (R76A0476) F0411 Tag File Maintenance (P760411A) See Chapter 7, “(ARG) Processing Credit Invoices for Accounts Payable,” Understanding Credit Invoices for Accounts Payable for Argentina, page 137. | Credit Invoice Acceptance (P04571) |
| Print PCG Detail - ARG (R760476A) PO - PCG process - ARG (P76A570) | Work With Payment Groups (P04571) |

Setting Up Legal Numbering for Argentina

This section provides an overview of legal numbering, lists prerequisites, and discusses how to:

- Establish relationships between document types.
- Set up next numbers for legal numbering.

Understanding Legal Numbering

Legal numbering complies with the legal requirements that are stipulated in General Resolution 1415.

Legal numbering can be set up for invoices and shipment notices, and is assigned by issue place and DGI (*Direccion General Impositiva*) document type.

The legal number has these parts:

- The document type assigned by the *Administracion Federal de Ingresos Publicos* (AFIP). For example, the document type might be 01-Invoice.
- The invoice letter (A, B, C, E, and so on).
- The issue place (where the voucher was issued).
- A next number.

To set up legal numbering, you set up a relationship between document types and you set up next numbers.

AFIP Document Types

Set up AFIP document type relationships to cross reference JD Edwards EnterpriseOne document types and legal invoice groups to legal document types. The AFIP defines both legal invoices groups and legal document types.

The JD Edwards EnterpriseOne document type and the legal invoice group (which is assigned based on the tax area that is used during voucher entry) determine the legal document type of the invoice by using the AFIP document type relationship that you set up.

Prerequisites

Before you complete the tasks in this section:

- Set up the Document Types - All Documents in UDC (00/DT).
- Set up the ARG-DGI Transaction Doc Type in UDC (76/DT).

Forms Used to Set Up Legal Numbering and Document Type Relationships

| Form Name | FormID | Navigation | Usage |
|---|----------|--|---|
| Work With Rel. Type Doc./Group/Doc.DGI | W76002AC | Legal Number Set Up (G76A00A), JD Edwards EnterpriseOne/AFIP Document Types Relationship Additional Features - Set up (G76A116), JD Edwards EnterpriseOne/AFIP Document Type Relationship | Access existing document type relationships. |
| Rel Type Doc./Group/Doc DGI Maintenance | W76002AE | Click Add on the Work With Rel. Type Doc./Group/Doc.DGI form. | Establish document types relationships used for next number setup and for AFIP document type relationships. |
| Next Number Maintenance | W76001AB | Legal Number Set Up (G76A00A), Legal Next Numbers On the Work with Next Numbers form, click Add. | Set up Next Numbers for legal numbering. |

Establishing Relationships Between Document Types

Access the Rel Type Doc./Group/Doc DGI Maintenance form.

Doc. Type (document type) Enter a user-defined code from 00/DT that identifies the origin and purpose of the transaction. The system reserves several prefixes for document types, such as vouchers, invoices, receipts, and time sheets. The reserved document type prefixes for codes are:

P: Accounts payable documents

R: Accounts receivable documents

T: Time and Pay documents

I: Inventory documents

O: Purchase order documents

S: Sales order documents

Invoice Group - Argentina Enter a code that identifies the invoice group. Values are:

A

B

C

A.F.I.P. Doc. Type Enter the legal document type given by DGI (Direccion General Impositiva) for documents.

Setting Up Next Numbers for Legal Numbering

Access the Next Number Maintenance form.

AFIP Doc. Type Enter the legal document type given by DGI for documents.

Issue Place Enter the location where the invoice or the shipment note is printed.
You must specify the issue place of the invoice or shipment note that you want to print in the Issue Place processing option of the PO - Invoice / Shipment Note Print program (R76A565) or in the PO - Invoice Entry (P03B11) - ARG - 03B program (P76A03B1).

Shipment Note (Y/N)
(shipment note [yes/no]) Indicates if it is a shipment note or another document.

Same-As Doc. Type
(same-as document type) If you set up next numbers by company or by company and fiscal year, a document type can share the same next number sequence as another document type. Same As Document Type refers to the document type that controls the next number the system uses.

For example, you create a document with a document type of RR. The document that you create should use the same next number sequence as regular invoices or RI document types. In this case, define the RR document type setup record with a Same As Document Type of RI.

Next Number Enter the number that the system will assign next. The system can use next numbers for voucher numbers, invoice numbers, journal entry numbers, employee numbers, address numbers, contract numbers, and sequential W-2s. You must use the next number types already established unless you provide custom programming.

Setting Up Print Authorization Codes for Argentine Suppliers

This section provides an overview of the Print Authorization Code (CAI) and discusses how to:

- Enter the autoprinter company status.
- Enter the CAI number.

Understanding Print Authorization Code (CAI)

General Resolution 100 (RG100) requires that a numerical Print Authorization Code (CAI) with an expiration date be printed on the bottom-right margin of type A and B vouchers that are issued by companies in the course of business. Type C vouchers are not affected by the regulation.

RG100 establishes that issuance of invoices or equivalent documents, as well as their printing by companies that are authorized to do so, is essential for tax purposes and also ensures the transparency of business principles. To work within RG100 parameters, you must indicate whether the company prints its own invoices.

Likewise, for taxpayers whose operations are significant in terms of volume and quality, the ability to print their own vouchers is beneficial because it helps facilitate their business operations and administrative tasks.

The CAI number is assigned by the AFIP, as stipulated in RG100. This number is assigned to all companies that print their own invoices. These companies must be registered and authorized by the fiscal authority to print their own invoices. Once registered and authorized, the company is given a CAI number, which must be printed on all legal invoices.

The CAI number is unique for each company.

Forms Used to Set Up Print Authorization Codes

| Form Name | FormID | Navigation | Usage |
|--|----------|--|--|
| Work with CAI | W76A043A | Set Up RG100 (G76A100), A/P RG100 Set Up | Review and select existing records. |
| CAI Definition | W76A043C | Click Add on the Work with CAI form. | Set up suppliers who work with autoprinters. |
| RG 100 - Autoprinter Supplier Control, | W76A004B | Set Up RG100 (G76A100), Work with RG100-Autoprinter Supp-AR/SOP On the Work with RG100 - Autoprinter Supplier Control - ARG - 00 form, click Add. | Enter the autoprinter company status. |
| RG 100 - CAI Company - ARG - 00 | W76A003A | Set Up RG100 (G76A100), Work with RG100 - CAI by Company-AR/SOP On the Work with RG100 - CAI by Company - ARG - 00 form, click Add. | Enter the CAI number. |

Entering the Autoprinter Company Status

Access the RG 100 - Autoprinter Supplier Control form.

Check for Autoprinter Specify whether the system verifies if the supplier is set up as an autoprinter.

Entering the CAI Number

Access the RG 100 - CAI Company - ARG - 00 form.

AFIP Document Type Enter the legal document type given by DGI for documents.

Issue Place Enter the location where the invoice or the shipment note is printed.

Autoprinter Inscription Number Enter a number assigned to a supplier by legal authorities in Argentina, as stated in General Resolution 100. It is a unique ID given to all the companies that are autoprinters (that is, companies that print their own invoices).

These companies must be registered and authorized by legal authorities to print their invoices. Once they are registered and authorized, they are given a CAI (autoprinter inscription number), which they must print on every invoice.

Date From and Date Thru Enter the date when a transaction, contract, obligation, preference, or policy rule becomes effective or ceases to be in effect.

Setting Up to Print Invoices and Shipment Notes for Argentina

This section provides overviews of issue places and bar codes, lists prerequisites, and discusses how to:

- Add the CIF code.
- Add record type \$C.
- Relate issue places to address book records.

Understanding Issue Places

Article 11 of General Resolution 3434 stipulates that the commercial address that appears on the invoice or equivalent document must be the business or physical location where the invoice is issued.

In the case of shipment notes or equivalent documents, the location where goods are issued (warehouse or depot) must be the business address. The address of the place where goods are dispatched must be the same as the issue place address.

CIF codes relate the issue place with an address book record, which stores the address and other data about the issue place.

Setting up this relationship causes the invoice printing programs to retrieve the issue place address instead of the company address.

If this relationship is not defined, the business address is printed instead of the issue place address.

To set up the issue place relationship:

1. Add the CIF code.
2. Add record type \$C.
3. Relate the issue place to the address book record.

Understanding Bar Codes for Argentina Invoices

When you generate a legal document with a document type of A, B, E, or M, you must print a bar code on the document. The bar code includes the

- C.U.I.T number
- AFIP legal document type
- Issue place
- C.A.I. number
- C.A.I. due date
- Check digit

When you set up the ARG - Item ARGP - Allowed Values UDC (76/B1), you must specify *Y* in the Special Handling Code field for document types A, B, E, and M. A value of *Y* indicates that the document type requires the system to print the bar code information.

When you run the Print Invoices (R42565) program or the Invoice Print (R03B505) program, the system calls the Print Invoice / Shipment Note - ARG - 42 (R76A566) program. The Print Invoice / Shipment Note - ARG - 42 program calls the N76A510 (Bar Code String Generator) business function to print the bar code as well as the numeric equivalent of the bar code.

Note. You must install the Interleaved 2 of 5 ITF font for the bar code. JD Edwards EnterpriseOne software does not provide this font.

Bar Code String Generator - ARG - 42 (N76A510)

The Bar Code String Generator - ARG - 42 business function obtains the data required for the bar code from these fields, and then generates a check digit:

- C.U.I.T number (11 numeric characters obtained from data item TAX in the F76AUI20 table).
- AFIP legal document type (two numeric characters obtained from the first two characters in data item VINV in the F76A09 table).
- Issue place (four numeric characters obtained from data item ACEM in the F76AUI20 table).
- C.A.I. number (14 numeric characters obtained from data item ACAI in the F76AUI20 table).
- C.A.I. due date (eight numeric characters obtained from data item CXPJ in the F76AUI20 table).

The business function concatenates the values of the five data fields in the order listed and then adds the check digit to the end of the string to produce the numeric value of the bar code. To calculate the check digit, the system:

1. Sums the characters in the odd number positions (positions 1, 3, 5, and so on), beginning from the left of the string of characters.
2. Multiplies the sum obtained in the first step by 3.
3. Sums the characters in the even number positions (positions 2, 4, 6, and so on), beginning from the left of the string of characters.
4. Sums the values obtained in steps 2 and 3.
5. Determines the check digit to be the lowest number which, when added to the value that was determined in step 4, equals a multiple of 10.

Example: Generation of Numeric Bar Code

Suppose the values for the five data fields are:

- C.U.I.T number: 23467812399
- AFIP legal document type: 03
- Issue place: 1222
- C.A.I. number: 65432165432111
- C.A.I. due date: 06062005

The business function concatenates the characters to produce this string:

234678123990312226543216543211106062005

The business function applies the algorithm:

1. Sums the characters in the odd positions to produce a value of 69.
2. Multiplies 69 by 3 to equal 207.
3. Sums the characters in the even positions to produce a value of 58.
4. Sums 207 and 58 to equal 265.
5. Determines the check digit to be five because five is the lowest number, which when added to 265, returns a number which is divisible by 10.
6. Produces a numeric value for the bar code that is equal to the original string with the check digit of five added to the end of the string for a value of: 2346781239903122265432165432111060620055.

Prerequisites

Before you complete the tasks in this section:

- Create a record for each issue place in the Address Book Revisions program (P01012).

See *JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide*, “Entering Address Book Records”.

- Add issue place codes to the Issue Place (76A/LE) UDC table.

Forms Used to Set Up to Print Invoices and Shipment Notes

| Form Name | FormID | Navigation | Usage |
|---------------------------------------|---------|--|--|
| Work With Supplemental Database Setup | W00091B | CIF Supplemental Data (G01312), Supplemental Data Setup | Locate supplemental data types. |
| Supplemental Database Setup | W00091A | On the Work With Supplemental Database Setup form, click Add. | Add the CIF code. |
| Data Type Revisions | W00091D | On Work the With Supplemental Database Setup form, select the address book record, and then select Work With Data Type from the Row menu. On the Work With Data Types form, click Add. | Add record type \$C. |
| General Description Entry | W00092C | CIF Supplemental Data (G01312), Supplemental Data On the Work With Supplemental Data form, enter the address book number of the issue place in the header area, and then click Find. Select the row with data type \$C, and then click Select. | Relate issue places to address book records. |

Adding the CIF Code

Access the Supplemental Database Setup form.

Supplemental Database Code

Enter *AB* in this field to specify the JD Edwards EnterpriseOne Address Book system.

Generic Alphanumeric Key 1

Select this option to use the data that you enter in the Generic Alphanumeric Key 1 field as a key field for supplemental data.

If you select this option, you must enter a valid data dictionary alias in the corresponding DD Alias (SAL1) field. Before you can use the data dictionary alias, you must set up the alias in UDC Valid Alphanumeric Aliases (00/S2).

When you select Generic Alphanumeric Key 1, and you enter a valid alias, the field appears with the data dictionary name as a key field on the Work With Supplemental Data form. If you enter data in the corresponding Row Description (SBD1) field, the data that you enter appears as the key field name on the Work With Supplemental Data form.

DD Alias (data dictionary alias)

Enter *AN8* in this field to specify the address number alias.

Adding Record Type \$C

Access the Data Type Revisions form.

| | |
|---------------------|---|
| Type Data | <p>Enter <i>\$C</i> in this field to group data by categories.</p> <p>This is a required field for setting up any data type. You can use an existing data type, or you can create a new data type by entering one or two characters for the code.</p> |
| Product Code | <p>Enter <i>76A</i> (Argentina) in this field to identify the system for the UDC that is related to the data type. This field works with the Record Type field to identify the code type table that the system uses to verify the data type. When you leave both fields blank, the system does not verify the data type.</p> <p>For example, a valid code for data type <i>SKILL</i> (skills) must exist in the table for system <i>08</i> and code type <i>SK</i>. If you enter a skill code that is not in the table, the system displays an error message.</p> <p>This field applies only to the code format (C) data types.</p> |
| Record Type | <p>Enter <i>LE</i> in this field.</p> <p>The Record Type and Product Code fields work together to associate a UDC table to the UDC (alias GDC1) field. The system uses the UDC table to verify data that you enter in the UDC (alias KY) field on the General Description Entry form.</p> <p>For example, if you enter <i>08</i> in the Product Code field and <i>SK</i> in the Record Type field, the data that you enter in the UDC (alias KY) field on the General Description Entry form must exist in UDC table <i>08/SK</i>.</p> <p>If you leave the Record Type and Product Code fields blank, you can enter any data in the data entry field for the UDC (alias KY) column on the General Description Entry form.</p> <p>This is an optional field for setting up supplemental data types in code format.</p> |

Relating Issue Places to Address Book Records

Access the General Description Entry form.

| | |
|--|---|
| User Def Code (user defined code) | Enter the issue place code for each issue place. |
| Effective Date | Enter the effective date for each issue place. |
| Remark | Enter the address book number for each issue place. |

Note. The data that you enter in the Remark (alias RMK) field depends on how you set up the Remark 1 (alias GDC2) and corresponding System Code (alias SY1) and Record Type (alias RT1) fields on the Data Type Revisions form. If you associated the Remark 1 (alias GDC3) field with a record, the data that you enter in the Remark (alias RMK) field must be a value in the associated record. If you did not associate the Remark 1 (alias GDC3) field with a record, the system accepts any data (within the size constraints) that you enter in the Remark (RMK) field.

Setting Up the System to Generate the Text Payments File for Argentina

This section provides overviews of the text (TXT) payment file and the required bank account information for text payments; and lists a prerequisite.

Understanding the Text Payment File

The AFIP, through RG 151, requires that companies provide documentation of payments greater than 10.000,00 ARS in the form of a check, automatic debit, credit card receipt, credit invoice acceptance, and so on. If you can't provide this documentation, you must prove the validity of the payment in another way to receive the fiscal credit.

If you use unauthorized documents as evidence of payments that are greater than 10.000,00 ARS, you cannot reduce your taxes by the fiscal credits from these transactions.

RG 1547 enables you to document the fiscal credit by the following means:

- Preserve information about the means of payment in the invoice or receipt.
- Submit a monthly record of payments that are made through computerized systems to the AFIP.

Understanding the Required Bank Account Information for Text Payments

You must associate the CUIT number of the bank account with the bank account information by creating an address book record for the bank account and entering the bank's address book number in the Bank Account Information program (P0030G).

Create an address book record for the bank of each supplier for which you use the text payments file. Set up the address book record with a search type of V (Supplier), and specify the CUIT number of the bank account in the Tax ID field. of the Bank Account Information program (P0030G).

JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide, "Setting Up Bank Accounts"

Prerequisite

Set up UDCs for bank processing.

See [Chapter 4, "\(ARG\) Setting Up Country-Specific Functionality for Argentina," Setting Up UDCs for Accounts Payable for Argentina, page 70.](#)

Setting Up Payment Formats for Argentina

This section provides an overview of payment formats for Argentina and discusses how to set processing options for payment formats for Argentina.

Understanding Payment Formats for Argentina

JD Edwards EnterpriseOne software provides these payment formats for Argentina:

| Format | Description |
|-----------|-------------------------------------|
| R760472A | Check and payment order. |
| R76A04722 | Deferred check and payment order. |
| R7604721A | Cash-payment order without a check. |

All three payment formats use the same processing options.

Setting Processing Options for Payment Formats for Argentina

Processing options enable you to specify the default processing for programs and reports.

General

| | |
|--------------------------------|--|
| Program ID (FUTURE USE) | This processing option is not used. |
| Form Type (FUTURE USE) | This processing option is not used. |
| Register Payment | Enter <i>1</i> to register the payment under the check number. Leave this processing option blank to register the payment under the payment order number. This processing option is valid when you print only the payment order. |
| GL Distribution Account | Enter <i>1</i> to suppress printing of the GL distribution account. |
| State (FUTURE USE) | This processing option is not used. |

Setting Up the System for Deferred Payments for Argentina

This section provides an overview of the payment print programs for deferred payments and discusses how to set up the deferred check table.

See Also

[Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Accounts Payable for Argentina, page 70](#)

[Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAIs for Deferred Payments, page 76](#)

Understanding Payment Print Programs for Deferred Payments

Set up these print programs for the deferred check-payment instrument (D):

| Format | Program |
|------------------|---|
| Payments | P76A04722 (Deferred check - ARG 04) |
| Payment Register | P04576N (Payment Register - Drafts) |
| Attachments | P760473A (Only payment order-ARG 04) |
| Debit Statements | P04574 (Print Dbt Statement - Standard) |

Form Used to Set Up the Deferred Check Table

| Form Name | FormID | Navigation | Usage |
|----------------------|-----------|---|--|
| Account Relationship | W76A0421C | Additional Features - Set Up (G76A116), Deferred Check Table Click Add on the Work With A/P Account Relationship form. | Specify the control account that is charged when the debt that is incurred with the supplier is written off and the final bank account from which the payment is made. |

Setting Up the Deferred Check Table

Access the Account Relationship form.

Control Account Enter the account number.

Final Account Enter the account number in the long account number format.

Setting Processing Options for Additional A/B Information (P760101A)

Set this processing option before you enter company, customer, and supplier information for Argentine companies and individuals. The system uses the values in this processing option for country-specific processing.

General

This processing option specifies whether the system allows duplicate tax identification.

PO Item Specify whether the system allows duplicate tax identification. Values are:
Blank: The system does not allow duplicate tax identification.
1: The system allows duplicate tax identification.

Setting Up Suppliers for Argentina

This section provides an overview of setup for suppliers and discusses how to set up autoprinter numbers for suppliers.

Understanding Supplier Setup for Argentina

In addition to the standard setup for suppliers, for Argentine suppliers:

- Set up the processing options for the Additional A/B Information program (P760101A) to allow duplicate CUIT numbers.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Processing Options for Additional A/B Information \(P760101A\), page 91.](#)

- If you are setting up foreign suppliers, set up the CUIT numbers for the countries of origin in the Country’s CUIT (76A/FJ) UDC table and set up the document type for foreign tax IDs in the ARG-A/B Legal Document Type (76A/A0) UDC table.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Foreign Suppliers and Supplier Withholding for Argentina, page 52.](#)

- Set up suppliers for withholding, if you process supplier withholding.

See [Chapter 5, “\(ARG\) Setting Up Withholding,” page 105.](#)

- Set up supplier autoprinter (CAI) numbers.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Suppliers for Argentina, page 92.](#)

Forms Used to Set Up Autoprinter Numbers for Suppliers

| Form Name | FormID | Navigation | Usage |
|----------------|----------|--|-----------------------------|
| CAI Definition | W76A043C | Set Up RG100 (G76A100), A/P RG100 Set Up Click Add on the Work with CAI form. | Set up the CAI by supplier. |

Setting Up Autoprinter Numbers for Suppliers for Argentina

Access the CAI Definition form.

| | |
|---------------------------------------|--|
| AFIP Document Type | Enter a value from the ARG-DGI Transaction Doc. Type (76/DT) UDC to specify the legal document type given by DGI for documents. |
| Issue Place | Enter the physical location where the invoice or the shipment note is printed. |
| Autoprinter Inscription Number | <p>Enter the number assigned to a supplier by legal authorities in Argentina, as stated in General Resolution 100. It is a unique ID given to all the companies that are autoprinters (that is, companies that print their own invoices).</p> <p>These companies must be registered and authorized by legal authorities to print their invoices. Once they are registered and authorized, they are given a CAI (autoprinter inscription number), which they must print on every invoice.</p> |

| | |
|------------------------|---|
| Effective Date | Enter the date when a transaction, contract, obligation, preference, or policy rule becomes effective. |
| Expiration Date | Enter the date when a transaction, contract, obligation, preference, or policy rule ceases to be in effect. |

Setting Up Invoice Type M for Voucher Processing for Argentina

This section discusses how to set up to work with invoice type M for vouchers.

Setting Up Vouchers with Invoice Type M

Invoice type M is used for the emission of documents with tax discrimination. General Resolution 1575 defines these withholding requirements for vouchers with invoice type M:

- The withholding is calculated when the taxable amount of the transaction is equal or greater than 1000 USD.
In this case, the transaction is excluded from other withholding or perception requirements that might be applied (except *Guía Fiscal Ganadera, Harinera*, or both).
- If the taxable amount of the transaction is less than 1000 USD and the payer is a withholding agent in any other regime that makes withholdings for less than 1000 USD, the withholding must occur.

The withholding amounts are calculated as follows:

- VAT

The net transaction amount multiplied by 100 percent of the corresponding tax rate. This amount is calculated for each payable voucher.

- Profit

The net transaction amount multiplied by three percent. This calculation does not consider the accumulated profit for the month. This calculation must be done for each payment.

To perform these calculations:

- Create a document type in UDC 00/DT and UDC 00/DV to identify type M vouchers.
- Create a tax area exclusively for type M vouchers.

Specify invoice group M for this tax area on the Additional Tax Information form.

- Add these legal withholding regimes, which are reported in the SICORE report and in the withholding certificate:

| UDC | Code | Description |
|-------|------|---|
| 76/L3 | 99 | Invoice M - Profit - Emission of documents with tax discrimination. |
| 76/L1 | 499 | Invoice M - VAT - Emission of documents with tax discrimination. |

Add these legal withholding concepts, which are used during voucher entry:

| UDC | Code | Description |
|-------|------|--|
| 76/04 | GAM | Invoice M - Profit - Emission of documents with tax discrimination. The code is just an example. |
| 76/02 | IVM | Invoice M - VAT - Emission of documents with tax discrimination. The code is just an example. |

Note. These concepts must be different from those already defined in the system. The existing concepts cannot be reused because they have different withholding calculations.

For VAT withholdings, set up a withholding percentage in the V.A.T WH - Percentages program (P760402A).

See [Chapter 5, “\(ARG\) Setting Up Withholding,” Setting Up VAT Withholding for Argentina, page 115.](#)

For profit withholdings, set up a withholding percentage in the Profit W/H - Percentages program (P760403A)

Note. You must specify *I* in the Misc Code field to indicate to the system that it doesn't have to consider the accumulated amounts from the month in the profit withholding calculation for the payment group.

See [Chapter 5, “\(ARG\) Setting Up Withholding,” Setting Up Profit Withholding for Argentina, page 117.](#)

When you enter a voucher into the system, assign the withholding concepts corresponding to the operation on the Withholdings tab of the Voucher Additional Information - Revision form, as shown in this example:

| Field | Code | Description |
|------------------------------|------|-----------------------------|
| VAT Withholding Concept | IVM | Invoice M - VAT |
| G.I. Agreement Code | 02 | Multilateral Agreement |
| G.I. Concept Source | BIE | Goods |
| G.I. State Source | 04 | Neuquen |
| G.I. Concept Destination | FLT | Shipment |
| G.I. State Destination | 02 | Mendoza |
| Profit Withholding Condition | INS | Registered |
| Profit Withholding Concept | GAM | Invoice M - Profit |
| Contract Concept | 500 | More than 500 square meters |
| S.U.S.S. Concept | LIM | Cleaning Services |

Note. When a transaction with invoice type M is less than 1000 USD, specify the appropriate profit withholding concept (regardless of the general withholding method). If the transaction is greater than 1000 USD, specify the withholding concept of RG 1575.

See Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Working with Voucher Entry and Review for Argentina, page 147.

- If you are adhering to General Resolution 1575, you generate certificates before you update the payment group in the same way as if you were not adhering to this resolution.
- For General Resolution 1575, you report withholdings using the SICORE report.

Setting Up Credit Invoice Constants for Accounts Payable for Argentina

This section provides an overview of credit invoice constants for the JD Edwards EnterpriseOne Accounts Payable system setup and discusses how to set up credit invoice constants for the JD Edwards EnterpriseOne Accounts Payable system.

Understanding Credit Invoice Constants for Accounts Payable Setup

You set up credit invoice constants by company. These constants control the credit invoice process.

You must specify this information when you set up credit invoice constants for the JD Edwards EnterpriseOne Accounts Payable system:

- The gross amount limit, below which a voucher does not require a credit invoice.
Any voucher with a gross amount in excess of this amount requires a credit invoice.
- The payment time limit in days, below which a voucher does not require a credit invoice.
Any due date that exceeds this limit requires a credit invoice.
- The category code that is used to identify suppliers that issue credit invoices.
- Whether the company accepts credit invoices.
- The payment instrument for vouchers that require credit invoices.
- The initial status that is assigned to the credit invoice when it is entered in the system.

Forms Used to Set Up Credit Invoice Constants for Accounts Payable

| Form Name | FormID | Navigation | Usage |
|------------------------------------|---------|---|---|
| Work With Credit Invoice Constants | W76A20A | Credit Invoice System setup (G76A00D), General Constants | Access existing records. |
| Enter Credit Invoice Constants | W76A20B | Click Add on the Work With Credit Invoice Constants form. | Set up credit invoice constants for the JD Edwards EnterpriseOne Accounts Payable system. |

Setting Up Credit Invoice Constants for Accounts Payable

Access the Enter Credit Invoice Constants form.

General Constants - Enter Credit Invoice Constants

OK Cancel Tools

Company 00000

General A/R and SOP A/P

Invoice Minimum Amount 1,000.00

Credit Invoice Limit Days 30

A/B Category Code Number 28

Enter Credit Invoice Constants form

| | |
|---|---|
| Invoice Minimum Amount | Enter the amount that the system adds to the account balance of the associated account number. Enter credits with a minus sign (–) either before or after the amount. |
| Credit Invoice Limit Days | Enter the number of days that the fiscal authority has established as a difference between the shipment confirmation date and the invoice due date. The specified number of days must pass before you can issue a credit invoice. If fewer than the specified number of days have passed between the shipment confirmation date and the invoice due date, then you cannot issue a credit invoice. |
| A/B Category Code Number (address book category code number) | Enter the code that specifies the Customer Category code number to use to determine the tax. |
| Company Issues Credit Invoice | Select to specify that a company must issue a credit invoice. |
| Credit Invoice Legal Nbr Group (credit invoice legal number group) | Enter a value that exists in the ARG - Item ARGP-Allowed Values (76/B1) UDC table to specify the legal number group for credit invoices. |
| Receipt Invoice Legal Nbr Group (receipt invoice legal number group) | Enter a value that exists in the ARG - Item ARGP - Allowed Values (76/B1) UDC table to specify the legal number group for receipt invoices. |
| Company Receives Credit Invoice | Select to specify that a company must receive credit invoices from its vendors. |
| Credit Invoice Status | Enter a value that exists in the Credit Invoice Valid Status (76A/CS) UDC table to specify the status of the credit invoice. |

Setting Up Tax Area Relationships for Credit Invoices for Argentina

You must set up a temporary tax area for each tax area that is used by your suppliers who issue credit invoices. The temporary tax areas must have the same percentage as the original tax area and an offset that uses the temporary fiscal credit account.

You cross-reference the original tax areas to the temporary tax areas by using the AP Tax Areas Relationship program (P76A25). You can cross-reference only one temporary tax area to each original tax area. The system stores area cross-references in the Credit Invoice Tax Area Relationship (F76A25) table.

Setting Up Credit Invoice Status Rules for Argentina

This section provides an overview of the setup of credit invoice status rules, lists prerequisites, and discusses how to set up credit invoice status rules.

Understanding the Setup of Credit Invoice Status Rules

Status rules establish a validation of the credit invoice status that is required for processing a particular event. You can also specify the next status that should be used when the event has been completed.

For example, for the ACCEPTANCE event, the credit invoice must have a status of TO ACCEPT. After processing, the credit invoice status is updated to ACCEPTED.

These rules should be set up by an advanced user and offer great flexibility for defining the steps that your company wants to follow to process credit invoices.

Important! You must define the status rules correctly when you install the credit invoice module because making changes other than adding additional steps to the process is difficult.

Status rules consist of these elements:

- Accounts Payable Event

These values are hard-coded in the Credit Invoice A/P Events (76A/EV) UDC table and represent different possible actions in the JD Edwards EnterpriseOne Accounts Payable system.

- Credit Invoice Status From

This is the initial valid status that is necessary for the event to run.

- Credit Invoice Status To (optional)

Some events require you to complete this field to change the credit invoice status manually or automatically. If the Credit Invoice Status To field is blank, no status change occurs for the event.

Note. You cannot leave the Credit Invoice Status To field blank for events that update the status automatically. Leaving this field blank for these events might cause the system to act erratically.

Regardless of the code system that you decide to use, you skip numbers or codes so that you can add intermediate status in the future, if necessary.

Credit Invoice Events

This list gives a detailed explanation of the significance and behavior of each event code (in alphabetical order):

- **ACCEPTANCE**

This event is used by the Create Payment Groups program (R04570) and represents acceptance of the credit invoice. The Create Payment Groups process verifies that the vouchers that are selected have credit invoices with the appropriate Credit Invoice Status From code. When the payment is updated, the credit invoice is updated with the status indicated in the Credit Invoice Status To field.

- **ACEPTAVOID**

This event is used when you void a payment that was made with the acceptance payment instrument. The system verifies that the invoice credit has the appropriate status in the Credit Invoice Status From field. If no errors are found and the voiding takes place, the credit invoice is updated with the status that is indicated in the Credit Invoice Status To field.

- **CHECK**

This event is used by the Create Payment Groups program when the acceptance payment instrument is *not* used. The Create Payment Groups process verifies that the selected vouchers have credit invoices with the appropriate Credit Invoice Status From code. When the payment is updated, the credit invoice is updated with the status that is indicated in the Credit Invoice Status To field.

- **CHECKVOID**

This event is used when you void a payment. When you void a payment that was made without the acceptance payment instrument, the system verifies that the invoice credit has the appropriate status in the Credit Invoice Status From field. If no errors are found and the voiding takes place, the credit invoice is updated with the status that is indicated in the Credit Invoice Status To field.

- **CITI**

This event is used by the CITI report to determine whether a credit invoice should be included. The status of the credit invoice must correspond to the status that is indicated in the Credit Invoice Status From field. When the credit invoice has been included in the CITI, the credit invoice is updated with the status that is indicated in the Credit Invoice Status To field.

- **FACCREDCHG**

This event is used by the AP Review Credit Invoice program (P76A24) when you change information on the credit invoice, including a manual change of status. The Credit Invoice Status From field indicates the status that the credit invoice must have for you to manually change some of its information. The Credit Invoice Status To field indicates the status to which the credit invoice can be changed manually.

- **FACCREDDEL**

This event is used by credit invoice review to eliminate information from a credit invoice. The Status From field indicates the status that the credit invoice must have to be able to eliminate it. The Status To field is not used by this event, so leave this field blank.

- **IVACOMPRAS**

This event is used by the V.A.T. Purchasing Ledger program (R760499A) to determine whether the credit invoice should be included in this ledger. The status of the credit invoice must correspond to the status in the Credit Invoice Status From field. When the credit invoice has been included in the V.A.T. Purchasing Report (R760499A), the credit invoice is updated with the status that is indicated in the Credit Invoice Status To field.

- **RECIBOFC**

This event is used when you set up information about the credit invoice receipt. The status of the credit invoice must correspond to the status in the Credit Invoice Status From field. When the information has been entered, the credit invoice is updated with the status that is indicated in the Credit Invoice Status To field.

- **RECIBOCHG**

This event is used when you modify the information of a previously recorded receipt. The status of the credit invoice must correspond to the status in the Credit Invoice Status From field. When the receipt information has been changed, the credit invoice is updated with the status that is indicated in the Credit Invoice Status To field.

- **RECLASIF**

This event is used when the temporary fiscal credit tax is reclassified to a definitive tax credit account. The credit invoice must have the status that is specified in the Credit Invoice Status From field for reclassification to take place. When the reclassification is complete, the credit invoice is updated with the status that is indicated in the Credit Invoice Status To field.

- **RECLAPERD**

This event is used when a temporary fiscal credit tax is not reclassified to a definitive tax account and, instead, is assigned to losses directly. The credit invoice must have the status specified in the Credit Invoice Status From field for this reclassification to occur. When the reclassification to losses is complete, the credit invoice status is updated to the status that is indicated in the Credit Invoice Status To field. This event is optional. If you do not set up the Credit Invoice Status From field, the reclassification process uses the relationship that is established for the RECLASIF event.

- **VOUCHERCHG**

This event is used when you modify a voucher that has credit invoice information. The system verifies that the status of the credit invoice is the same as the one that is specified in the Credit Invoice Status From field to allow the change. This event does not change status. You must leave the Credit Invoice Status To field blank.

- **VOUCHERDEL**

This event is used when you void a voucher that has credit invoice information. The system verifies that the status of the credit invoice is the same as the one that is specified in the Credit Invoice Status From field to allow the void. This event does not change status. You must leave the Credit Invoice Status To field blank.

Prerequisites

Before you complete the tasks in this section:

- Set up event codes in the Credit Invoice A/P Events (76A/EV) UDC table.
- Set up status codes in the Credit Invoice Valid Status (76A/CS) UDC table.

Forms Used to Set Up Credit Invoice Status Rules

- Credit Invoice Status To** Enter a value that exists in the Credit Invoice Valid Status (76A/CS) UDC table to specify the end of the range of status codes to which the event applies.

Setting Up Credit Invoice Constants for Accounts Receivable for Argentina

This section provides an overview of credit invoice constants for the JD Edwards EnterpriseOne Accounts Receivable system and discusses how to set up credit invoice constants.

Understanding Credit Invoice Constants for Accounts Receivable

You set up credit invoice constants by company. These constants control the issuance rules for the credit invoice documents.

You must specify this information when you set up credit invoice constants for the JD Edwards EnterpriseOne Accounts Receivable system:

- The invoice minimum amount, which is the invoice amount (included taxes) above which a credit invoice must be issued.
- The credit invoice limit days, which is the maximum number of days that an invoice must be overdue before it is considered to be expired, thus requiring issuance of a credit invoice.
- The category code is used to identify customers that accept credit invoices. For the credit invoice to be generated, the value of the address book category code must not be blank.
- Whether the company issues credit invoices.
- The status that the credit invoices will have after they are printed.
- The internal document type of credit invoices, which is used to assign legal numbers to credit invoices.
- The DGI letter that is used to assign legal numbers to credit invoices.
- The DGI letter that is used to assign legal numbers to receipts.

Forms Used to Set Up Credit Invoice Constants

| Form Name | FormID | Navigation | Usage |
|------------------------------------|---------|---|--|
| Work with Credit Invoice Constants | W76A20A | Credit Invoice System Set Up (G76A00D), General Constants | Review and select credit invoice constant records. |
| Enter Credit Invoice Constants | W76A20B | Click Add on Work with Credit Invoice Constants. | Add and revise credit invoice constant records. |

Company 00000

General A/R and SOP A/P

Invoice Minimum Amount 1,000.00

Credit Invoice Limit Days 30

A/B Category Code Number 28

Enter Credit Invoice Constants form

General

Select the General tab.

Invoice Minimum Amount Enter a number that identifies the amount that the system will add to the account balance of the associated account number. Enter credits with a minus sign (–) either before or after the amount.

Credit Invoice Limit Days Enter the number of days that the fiscal authority has established as a difference between the shipment confirmation date and the invoice due date. The specified number of days must pass before you can issue a credit invoice. If fewer than the specified number of days have passed between the shipment confirmation date and the invoice due date, then you cannot issue a credit invoice.

A/B Category Code Number(address book category code number) Enter a code that specifies the Customer Category code number to use to determine the tax.

A/R and SOP

Select the A/R and SOP tab.

Company Issues Credit Invoice Select to indicate you must print a credit invoice.

Credit Invoice Status Enter a value that exists in the Credit Invoice Valid Status (76A/CS) UDC table to specify the status of the credit invoice.

Credit Invoice Legal Nbr Group (credit invoice legal number group) Enter a value that exists in the ARG - Item ARGP-Allowed Values (76/B1) UDC table that identifies the invoice group. Values are: *A*, *B*, or *C*.

Receipt Invoice Legal Nbr. Group (receipt invoice legal number group) Enter a value that exists in the ARG - Item ARGP - Allowed Values (76/B1) UDC table that identifies the invoice group. Values are: *A*, *B*, or *C*.

Setting Up Payment Instruments for Credit Invoices for Argentina

You must set up the acceptance payment instrument (defined in the Special Payment Instruments [76A/PY] UDC table) in the Payment Instrument Defaults program, using these parameters:

| Payment Form | Print Program |
|------------------|--|
| Payments | P7604721A (Print Payment - Only Payment Order - ARG - 04 - 04) |
| Payment Register | P76A0476 (A/P Auto Payment Register) |

| Payment Form | Print Program |
|------------------|--|
| Attachments | P760473A (A/P Print Payment - Payment Order - ARG - 04 - 04) |
| Debit Statements | P04574 (Print A/P Payments Debit Statements) |

CHAPTER 5

(ARG) Setting Up Withholding

This chapter lists a prerequisite, lists the common fields used in this chapter, and discusses how to:

- Set up withholding for general SUSS (*sistema único de seguridad social*), security services, and cleaning services.
- Set up contractor withholding.
- Set up gross income withholding.
- Set up value-added tax (VAT) withholding.
- Set up profit withholding.
- Set up VAT and profit legal number withholdings.
- Set up VAT withholdings by RG 726 or RG 615.

Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” AAls for Supplier Withholding for Argentina, page 75

Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Next Numbers for Withholding Taxes, page 77

Prerequisite

Verify that document types \$A, \$G, \$I, and \$S are set up in the Document Types (00/DT) and Document Types - Vouchers Only (00/DV) user-defined code (UDC) tables.

Common Fields Used in This Chapter

| | |
|--------------------------|--|
| Amount to Compare | Enter a code that exists in the ARG - Item ABCN - allowed values (76/A1) UDC table to specify an amount type to compare against the minimum amount in the withholding calculation process. |
| Effective Date | Enter the first day on which the withholding term is effective. |
| Expiration Date | Enter the expiration date of the withholding terms. |

| | |
|------------------------|---|
| Legal Concept | Enter the withholding description code that is based on the tables from the tax authority (<i>Dirección General Impositiva [DGI]</i>). You set up legal concepts in various UDCs. |
| Minimum Amount | Enter the minimum amount for the withholding. |
| % (percentage) | Enter the percentage of the withholding. The maximum value that you can enter is 999,99. |
| Resolution Date | Enter the effective date of the resolution. |

Setting Up Withholding for General SUSS, Security Services, and Cleaning Services for Argentina

This section provides overviews of withholding for general SUSS, security services, and cleaning services; lists prerequisites; and discusses how to:

- Set up withholding percentages for SUSS and cleaning services withholding.
- Set up supplier exemptions for SUSS and cleaning services withholding.

Understanding Setup for General SUSS Withholding

To set up your system to withhold taxes for general SUSS services:

- In the Document Type (00/DT) and Document Type - Vouchers Only (00/DV) UDC tables, set up \$Q as the document type that identifies withholdings for security services.
- Enter 3 in the Special Handling Code field of the values that you establish in the SUSS Withholding Concept (76/11) UDC table to identify the SUSS withholding concept for general SUSS withholding.

Use position seven to enter *Y* (yes) or *N* (no) to specify whether the system withholds the tax for nonmonetary payments.

For general SUSS services, enter *N* in the seventh position. The system treats a blank value in the seventh position as a *Y*.

- Verify that the Withholding Minimum (76A/WM) UDC table includes the required values.
- Verify that other system setup, such as automatic accounting instructions (AAIs), next numbers, UDCs, and so on, are set up for the withholding of taxes for general SUSS.
- Add values for the withholding on general SUSS to:
 - S.U.S.S. W/H - Percentages (P760410A).
 - S.U.S.S. W/H - Exempt Percentages (P760416A).

Understanding Setup for Withholding for Security Services

To process withholding taxes for security services:

- In the Document Types (00/DT) and Document Types - Vouchers Only (00/DV) UDC tables, set up \$P as the document type that identifies withholdings for security services.

- Enter 2 in the Special Handling Code field of the values that you establish in the SUSS Withholding Concept (76/11) UDC table to identify the SUSS withholding concept for investigation and security services.
- Set up a payment instrument in the Payment Instrument (00/PY) UDC table for taxes for security services that you withhold from suppliers.

Specify in the fifth and sixth positions of the Special Handling Code field whether withholding applies and is accumulated.

Use position five to enter *Y* (yes) or *N* (no) for application of the withholding tax, and use position six to enter *Y* (yes) or *N* (no) to specify whether the system accumulates the withholding taxes in the F76A0456 table. The system treats blank values in the fifth and sixth positions as *Y*.

- Verify that other system setup, such as AAIs, next numbers, UDCs and so on, are set up for the withholding of taxes for security services.
- Add values for the withholding of taxes on security services to:
 - S.U.S.S. W/H - Percentages (P760410A).
 - S.U.S.S. W/H - Exempt Percentages (P760416A).

Understanding Setup for Withholding for Cleaning Services

AFIP (*Administración Federal de Ingresos Públicos*) General Resolution 1556 established a new withholding method for cleaning services, valid as of November 1, 2003. JD Edwards EnterpriseOne software meets this requirement by using the same programs that are used for eventual services withholdings. This section explains how to set up these programs for both types of withholdings.

You cannot apply both SUSS withholdings and eventual services withholdings at the same time because the combination of the two withholdings might create an undue burden. However, if a company that provides eventual services also provides personnel to carry out cleaning tasks, that company should not make withholdings for cleaning services under General Resolution 1556 because the company does not lose its position as provider of eventual services.

Add values for the withholding of taxes on cleaning services to:

- S.U.S.S. W/H - Percentages (P760410A).
- S.U.S.S. W/H - Exempt Percentages (P760416A).

Prerequisites

Verify that these UDCs are set up prior to processing withholding for cleaning services:

- ARG - Eventual Concept (76/11).
- ARG - Eventual Legal Concept (76/L5).

Access the Withholding Exempt Percentage Revision form.

Setting Up Profit Withholding for Argentina

This section provides overviews of profit withholding setup and temporary enterprise union (UTE) membership and discusses how to:

- Set up profit withholding percentages.
- Set up fourth category profit withholding percentages.
- Set up profit withholding exemptions by supplier.
- Set up UTE members.

Understanding the Setup for Profit Withholdings

For the system to calculate profit withholdings, you must set up:

- UDCs.
- Profit withholding percentages.
- Fourth category profit withholding percentages.
- Suppliers exempted from profit withholding, if needed.

To meet the requirements of RG 830/00, you must consider additional setup requirements. Article 28 of RG 830/00 stipulates:

"Profits stemming from copyright use and others derived from rights protected under Law No. 11.723 will only be taxed until earnings accrued reach the amount of TEN THOUSAND PESOS (\$10,000.-) during each fiscal period for each withholding agent."

"After the aforementioned amount is surpassed, payments are subject to withholdings in conformity with the calculation method set forth in articles 25 and 26. As per clause a) of said article 26, withholdings shall not be taken from payments before the previously mentioned sum was reached."

The system stores all of the taxable amounts of invoices in the Profit Withholding - Payments Done table (F76A8070) to determine when amounts surpass the annual upper limit amount.

The structure of table F76A8070 is identical to that of the Profit Withholding - Payments Done table (F760406A). Both tables are populated when payments are updated.

Understanding UTE Membership

When a supplier is a UTE member, profit withholding is calculated individually for each member of the UTE and withholding certificates are printed for each member. You specify the participation percentage for each member of the UTE.

If any member of the UTE is a direct supplier of the company, payments to that supplier are included in the profit withholding calculation when payments are made to the UTE.

You can add, change, or delete UTE members if no payment has been made to that UTE or if a payment has been made and has been voided. If any payments have been made to the UTE or any vouchers have been included in payment groups that have not yet been updated, no changes can be made to the UTE membership.

The UTE must be set up as a supplier in the JD Edwards EnterpriseOne Address Book system and must be identified as a UTE by a category code. You can use any category code and any value in that category code. You specify the category code that you are using in the RG 830/00 processing options of the PO - PCG process - ARG 04 program (P76A570). You must also set up UTE members as suppliers in the JD Edwards EnterpriseOne Address Book system, but you do not need to identify them using a category code.

Forms Used to Set Up Profit Withholding

| Form Name | FormID | Navigation | Usage |
|--|-----------|---|---|
| Profit Withholding Percentage Revision | W760403AC | Profit Withholding - Setup (G76A112), Profit W/H - Percentages Click Add on the Work With Profit Withholding Percentage form. | Specify the rate for each profit withholding concept. |
| Add Profit Withholding Percentage, 4th Category Concepts | W760404AC | Profit Withholding - Setup (G76A112), Profit W/H - Fourth Category Percentages Click Add on the Work With Profit Withholding Percentages - 4th Category Concepts form. | Specify fourth category profit withholding percentages. |
| Withholding Exempt Percentage Revision | W760416AB | Profit Withholding - Setup (G76A112), Profit W/H - Exempt Percentages Click Add on the Work With Withholding Exempt Percentage form. | Specify profit withholding exemption percentages by supplier. |
| Add UTE Members | W76A0110B | Profit Withholding - Setup (G76A112), Ute Composition Click Add on the Work with UTE Members form. | Specify the members of a UTE. |

Setting Up Profit Withholding Percentages

Access the Profit Withholding Percentage Revision form.

When you set up the concept for copyright withholdings using the Profit W/H - Percentages program (P760403A), enter 2 in the Misc Code (miscellaneous code) field and, because the withholdings for suppliers registered in the profits category depend on the scale that is specified in Attachment VIII of the Resolution, enter Y in the Profit Wh Category (profit withholding category) field.

| | |
|---|---|
| Profit Withholding | Enter a value that exists in the ARG-Profit WH Concept (76/04) UDC table. |
| Legal Concept | Enter a value that exists in the ARG-Profit Legal Concept (76/L3) UDC table. |
| Reg % (registered percentage) | Enter the generic percentage used in Argentinean localization that specifies the withholding exception percentage on taxes. The maximum valid amount is 999,99. |
| Non Reg (nonregistered) | Enter the nonregistered percentage. The maximum valid amount is 999,99. |
| Minimum Wh Amount (minimum withholding amount) | Enter the minimum amount for withholding. The calculated withholding amount must be greater than this minimum amount to take effect. |

| | |
|--|--|
| Profit Wh Category (profit withholding category) | Enter <i>Y</i> to use the profit withholding calculation for fourth category percentages. Enter <i>N</i> to use the profit withholding calculation algorithm for normal concept percentages. |
| Minimum Wh Amount N Reg. (minimum withholding amount nonregistered) | Enter the minimum withholding amount for nonregistered companies or vendors. This amount is optional and used to calculate profit withholding. |

Setting Up Fourth Category Profit Withholding Percentages

Access the Add Profit Withholding Percentage, 4th Category Concepts form.

Set up the appropriate scale of withholdings for those suppliers that are registered in the tax category.

Note. In the case of unregistered suppliers, the system uses the percentage set up in the Profit W/H - Percentages program (P760403A).

| Profit W/H - 4th. Category Percentages - Add Profit Withholding Percentage, 4th Category Concepts | | | |
|---|---------|--------------------|--------------------|
| Records 1 - 2 | | | |
| | Company | Profit Withholding | Upper Limit Amount |
| | 00028 | 40 | 8000 |
| | | | |

Add Profit Withholding Percentage, 4th Category Concepts form

| | |
|------------------------|--|
| Excess Percent | Enter the generic percentage that specifies the withholding exception percentage on taxes. The maximum valid amount is 999,99. |
| Expiration Date | Enter the date when a transaction, contract, obligation, preference, or policy rule ceases to be in effect. |

Setting Up Profit Withholding Exemptions by Supplier

Access the Withholding Exempt Percentage Revision form.

Setting Up UTE Members

Access the Add UTE Members form.

| | |
|-------------------------------------|---|
| UTE Number and Member Number | Enter the address book number of the UTE or UTE member. The UTE and UTE members must be set up as suppliers in the JD Edwards EnterpriseOne Address Book system. The UTE must be identified as a UTE by a category code. UTE members do not need to be identified by a category code. |
| UTE Member Percentage | Enter the participation percentage of each member of the UTE. The sum of the participation percentages of all members must be 100. |

Setting Up VAT and Profit Legal Number Withholdings for Argentina

This section provides an overview of VAT and profit withholding legal numbers and discusses how to:

- Set up certificate next numbers.
- Set up company relationships.

Understanding VAT and Profit Withholding Legal Numbers

As stipulated in article 21 of R.G. 738/99, numbering of VAT and profit withholding certificates that is performed by significant taxpayers must match the AFIP numbering when withholdings are recorded.

Note. One day before this regulation became effective, RG 814 was published in the Official Bulletin dated 03/30/00, making the use of this numbering optional.

The format of this new numbering consists of four digits for the issue place, four digits for the date, and six digits for the withholding number.

This numbering does not replace the numbering set up in the Next Numbers program (P0002); it only complements it. For this reason, both tables must be maintained.

If several companies are set up in your system but you want to base certificate next numbers on only one of them, you must set up company relationships. For example, if you set up company 00028 with company 00001 as its hub company, the next numbering is based on company 00001. In this example, you would set up company 00001 with company 00028 as a related company.

You set up company relationships for document types \$I (VAT withholdings) and \$G (profit withholdings) so that the system obtains the certificate next numbers from the related company's next numbers for those types of withholdings.

If you number the VAT and profit withholdings of one company by using the numbering of another company, you do not need to set up next numbers for the first company in the Certificate Next Number RG 738 (A/P) program (P76A8080).

Forms Used to Set Up VAT and Profit Withholding Legal Numbers

| Form Name | FormID | Navigation | Usage |
|--|-----------|--|--|
| Edit Certificate Next Number RG 738/99 | W76A8080B | SICORE RG 738/99 (G76A738), Certificate Next Number RG 738 (A/P) Click Add on the Work With Certificate Next Number RG 738/99 form. | Set up next numbers by company, issue place, and payment year. This numbering is used for both profit and VAT withholdings, therefore, numbering is consecutive for both withholding types. |

Setting Up VAT Withholdings by RG 726 or RG 615 for Argentina

This section provides an overview of VAT withholdings by RG 726 or RG 615 and discusses how to set up VAT withholdings by RG 726 or RG 615.

Understanding VAT Withholdings by RG 726 or RG 615

You can specify the withholding percentage to be used based on the supplier's classification (2 or 4) and the regulation in question (RG 726 or RG 615).

This VAT percentage table does not replace the VAT percentage set up for RG 18. Rather, this table complements the other. Both tables must be maintained.

When you follow RG 615 requirements for processing, you must also specify the substitute percentage to be applied to classification 1 if the total amount of the invoice is equal to or less than the minimum amount that is specified.

If the total amount of the invoice is greater than the minimum amount specified or if RG 726 is followed for suppliers for a classification of 1, the system uses the VAT withholding percentage set up in the V.A.T. WH - Percentages program (P760402A).

Form Used to Set Up VAT Withholdings by RG 726 or RG 615

| Form Name | FormID | Navigation | Usage |

CHAPTER 6

(ARG) Processing Credit Invoices for Accounts Receivable and Sales Orders

This chapter provides an overview of processing credit invoices, lists prerequisites, and discusses how to:

- Print credit invoices.
- Accept credit invoices.
- Print credit invoice receipts.

Understanding How to Process Credit Invoices for Accounts Receivable and Sales Orders for Argentina

The AFIP (*Administración Federal de Ingresos Públicos*) issues credit invoices to provide companies with a payment instrument that can be negotiated and used as a credit.

The process for issuing and managing credit invoices in the JD Edwards EnterpriseOne Sales Order Management and JD Edwards EnterpriseOne Accounts Receivable systems consists of these steps:

1. Issuance of credit invoices.
2. Acceptance or rejection of credit invoices.
3. Issuance of credit invoice receipts.

The issuance of credit invoices can occur at these times:

- During billing
- After billing
- For cash due
- During reprinting

Credit Invoice Issuance During Billing

Before you issue credit invoices during billing, complete these steps:

1. Verify that the company is set up in the General Constants program (P76A20) to issue credit invoices.
2. Verify that the customer is set up to accept credit invoices. You set up customers to accept credit invoices by specifying the category code that you set up in the General Constants program to identify customers who receive credit invoices.
3. Verify that the payment terms which you are using are *not* included in UDC 76A/TP, which lists payment terms that do not require a credit invoice.

4. In UDC 00/DI, specify a value of *I* in the Special Handling Code field for the document types for which credit invoices are generated.
5. Verify that the invoice amount, including taxes, is equal to or more than the minimum amount set up in the General Constants program.
6. Verify the legal number setup of the credit invoice, and enter the internal document type for credit invoices on UDC 00/DT.
7. Set up corresponding versions of the AR SOP Print Credit Invoice program (R76A0023) and the Invoice Print program (R03B505) for Accounts Receivable transactions, or the Invoice Print program (R42565) for Sales Order transactions.
8. Set up corresponding versions of the Invoice Print program (R03B505) and the PO - Invoice Print A/R program (R76A03B5) for Accounts Receivable transactions, or set up corresponding versions of the Invoice Print Program (R42565) and the PO Invoice/Shipment Note Print program (R76A565) for Sales Order transactions.

Credit Invoice Issuance After Billing

To issue credit invoices outside the billing process, you must manually run the AR SOP Print Credit Invoice program. To enter invoices for which you will issue credit invoices after billing, complete these steps before you issue credit invoices:

1. Verify that the company is set up in the General Constants program to issue credit invoices.
2. Verify that the customer is set up to accept credit invoices. You set up customers to accept credit invoices by specifying the category code that you set up in the General Constants program to identify customers who receive credit invoices.
3. Verify that the payment terms which you are using are *not* included in UDC 76A/TP, which lists payment terms that do not require a credit invoice.
4. In UDC 00/DI, specify a value of *I* in the Special Handling Code field for the document types for which credit invoices are generated.
5. Verify that the invoice amount, including taxes, is equal to or more than the minimum amount set up in the General Constants program.
6. Verify the legal number setup of the credit invoice, and enter the internal document type for credit invoices on UDC 00/DT.
7. Set up the AR SOP Print Credit Invoice program.

Issuing Credit Invoices for Cash Due

If you have entered invoices using payment terms that were set up in UDC 76A/TP, and those invoices have not been paid within the number of days that are legally allowed to pass between the shipment confirmation date and the invoice due date, you can issue credit invoices.

To issue credit invoices for cash due, you must manually run the AR SOP Print Credit Invoice program. To issue credit invoices for cash due, complete these steps:

1. Verify that the company is set up in the General Constants program to issue credit invoices.
2. Verify that the customer is set up to accept credit invoices. You set up customers to accept credit invoices by specifying the category code that you set up in the General Constants program to identify customers who receive credit invoices.
3. Verify that the payment term you are using is included in UDC 76A/TP.

4. In UDC 00/DI, specify a value of 1 in the Special Handling Code field for the document types for which credit invoices are generated.
5. Verify that the invoice amount, including taxes, is equal to or more than the minimum amount set up in the General Constants program.
6. Verify the legal number setup of the credit invoice, and enter the internal document type for credit invoices on UDC 00/DT.
7. Set up the AR SOP Print Credit Invoice program.
8. Verify that the amount of days past due is equal to or more than the Credit Invoice Limit Days specified in the General Constants program.

Prerequisites

Before you perform the tasks in this section:

- Set up UDCs.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Credit Invoice Processing for Argentina, page 61](#).

- Set up AAI.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAI for Credit Invoice Processing for Argentina, page 76](#).

- Set up company constants for accounts receivables.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Credit Invoice Constants for Accounts Receivable for Argentina, page 100](#).

- Set up corresponding versions of Invoice Print (R03B505) and
 - PO - Invoice Print A/R (R76A03B5).
 - AR SOP Print Credit Invoice (R76A0023).
- Set up corresponding versions of Invoice Print (R42565) and
 - AR SOP Print Credit Invoice (R76A0023).
 - PO Invoice/Shipment Note Print (R76A565).

See Also

[Chapter 6, “\(ARG\) Processing Credit Invoices for Accounts Receivable and Sales Orders,” Understanding How to Process Credit Invoices for Accounts Receivable and Sales Orders for Argentina, page 125](#)

Printing Credit Invoices for Argentina

This section provides an overview of the AR SOP Print Credit Invoice program (R76A0023) and discusses how to:

- Set processing options for PO Invoice/Shipment Note Print (R76A565).

- Set processing options for PO - Invoice Print A/R (R76A03B5).
- Run the AR SOP Print Credit Invoice program.
- Set processing options for AR SOP Print Credit Invoice (R76A0023).

Understanding the AR SOP Credit Invoice Print Program

You run the AR SOP Print Credit Invoice program from the menu if you are issuing credit invoices after billing, for cash due, or if you are reprinting credit invoices.

If you print credit invoices at the same time you print the legal invoices, the system runs the AR SOP Print Credit Invoice program when you run the Invoice Print program (R03B505) for Accounts Receivable transactions or the Invoice Print program for Sales Order transactions.

To print credit invoices at the same time that you print the legal invoices, you must set up the processing options for the PO Invoice Print program for Accounts Receivable transactions or the PO Invoice/Shipment Note Print program for Sales Order transactions.

Setting Processing Options for PO Invoice/Shipment Note Print (R76A565)

Use these processing options to set default values, control the information that prints when running the program, and define how the system processes data.

General

These processing options control whether the system prints shipment notes and invoice location, runs in final mode, prints lot numbers, and defines the maximum print lines per page.

- | | |
|---------------------------------|--|
| 1. Shipment Note (Y/N) | Specify whether the system prints shipment notes. Values are: <i>N</i> : Do not print shipment notes. <i>Y</i> : Print shipment notes. |
| 2. Proof Mode | Specify whether the system run in proof or final mode. Values are: Blank: Run in final mode. <i>Y</i> : Run in proof mode. |
| 3. Issue Place | Enter the issue place where the invoice or the shipment note is printed. |
| 4. Print Lot Number | Specify whether the system prints the lot number in domestic items. Values are: Blank: Do not print lot numbers in domestic items. <i>I</i> : Print Lot Number in Domestic Items (Not Imported). |
| 5. Detail lines per page | Enter the maximum number of detail lines per page. This is a line printer parameter that specifies the number of lines per page. For example, 60 or 66. |
| 6. Version | Enter the version of the routine to determine if there is a corresponding credit invoice. The default version is ZJDE0001. (This option is OBSOLETE) |

Default

These processing options specify the status codes used for invoices and shipment notes when an error is detected.

- Status Code - Next** Enter a value that exists in the Activity/Status Codes UDC table (40/AT) to indicate the next step in the order flow of the line type. Specify the next status code that the system uses for invoices when an error is detected. If you leave this processing option blank, the system uses the default value of 831.
- Status Code - Next** Enter a value that exists in the Activity/Status Codes UDC table (40/AT) to indicate the next step in the order flow of the line type. Specify the next status code that the system uses for shipment notes when an error is detected. If you leave this processing option blank, the system uses the default value of 832.

Receipt Invoice

These processing options control global print messages in the invoice receipt footer.

- 7. Print Message 1** Enter the first global print message to be printed in each Invoice Receipt footer. This is a code identifying the text message you want the system to print next to this order line on selected documents.
- 8. Print Message 2** Enter the second global print message to be printed in each Invoice Receipt footer. This is a user defined code that you assign to each print message. Examples of text used in messages are engineering specifications, hours of operation during holiday periods, and special delivery instructions.

Shipment Note

These processing options control the conversion units of measure for weight and volume.

- 9. Weight Unit of Measure** Enter the weight unit of measure to convert all the items. This is the unit of measure that indicates the weight of an individual item. Typical weight units of measure are: GM for gram, OZ for ounce, LB for pound, KG for kilogram, and so forth.
- 10. Volume Unit of Measure** Enter the volume unit of measure to convert all the items. This is the unit of measure for the cubic space occupied by an inventory item. Typical volume unit of measures are: ML for milliliter, OZ for fluid ounce, PT for pint, and so forth.

RG 100

This processing option controls whether the you are entering a voucher corresponding to RG 100.

- 1. Corresponding Voucher** Specify whether you are entering a voucher corresponding to RG 100. Values are:
- Blank: Vouchers do not correspond to RG 100.
- I*: You are entering a voucher corresponding to RG 100.

Perception

These processing options control whether to print the report and which version to use.

- 1. Print the Report** Enter *Y* to print the report. Enter *N* to suppress printing of the report. :
- 2. Version for R76A8050** Enter the version of the Perception Report (R76A8050) that the system uses. If you leave blank this processing option blank, the system uses version ZJDE0001.

Transportation

Transportation Specify whether the system should use transportation. Values are:
N: Do not use transportation.
Y: Use transportation.

Print Seals Specify whether the system prints seals. Values are:
N: Do not print seals.
Y: Print seals.

Bulk

This processing option controls the type of temperature information printed on the shipment note.

Bulk Specify whether the system prints temperature and density information on the shipment note or prints this information only if the invoice is in standard temperature. Values are:
Blank: Print temperature and density information in the shipment note.
1: Print this information only if the invoice is in standard temperature.
2: Prevent the system from printing this information.

RG 889

This processing option controls whether to print the Autoprinter information in the shipment note corresponding to RG 889.

Autoprinter Specify whether you want the system to print the Autoprinter information in the shipment note, corresponding to RG 889. Values are:
Blank or N: Do not print.
Y: Print the Autoprinter information in the shipment note, corresponding to RG 889.

Carrier

This processing option controls whether to print carrier information.

Carrier Information Specify whether the system prints the information carrier. Values are:
N: Do not print the information carrier.
Y: Print the information carrier.

Credit Invoice

These processing options control whether credit invoices are generated and the number of copies to print.

Credit Invoices Specify whether the system generates credit invoices. Values are:
Blank: Do not generate credit invoices.
1: Generate credit invoices.

| | |
|-------------------------|---|
| Issue Place | Enter the place where the invoice or the shipment note is printed. |
| Number of Copies | Enter the number of invoice copies required by the customer. The system prints the number of invoices specified in this field. The system always prints at least one invoice. |

Setting Processing Options for PO – Invoice Print A/R (R76A03B5)

Use these processing options to define printing parameters, enter global print messages, specify versions, and whether the system generates credit invoices.

General

- | | |
|---|--|
| 1. Invoice Copies | Enter the number of invoice copies required by the customer. The system prints the number of invoices specified in this field. The system always prints at least one invoice. |
| 2. Allow Reprint | Specify whether reprints are allowed. Values are: Blank: The system does not allow reprints. I: Allow reprints. |
| 3. Detail Lines Per Page | Enter the number of lines the system prints per page. For example, you might enter 60 or 66. |
| 4. Print an Invoice Corresponding to the RG100 | Specify whether the system prints an invoice corresponding to the RG 100 regulation. Values are: Blank: Do not print an invoice corresponding to RG 100. I: Print an invoice corresponding to the RG 100 regulation. |

Receipt Invoice

- | | |
|---------------------------|---|
| 4. Print Message 1 | Enter a value that exists in the Print Messages UDC table (40/PM) to specify the first global print message that the system prints in each Receipt Invoice Footer. |
| 5. Print Message 2 | Enter a value that exists in the Print Messages UDC table (40/PM) to specify the second global print message that the system prints in each Receipt Invoice Footer. Examples of text used in messages are engineering specifications, hours of operation during holiday periods, and special delivery instructions. |

Perception

- | | |
|------------------------------|---|
| 1. Print Report (Y/N) | Specify whether the system prints the report. Values are: N: Do not print a report. Y: Print the report. |
| 2. Report Version | Enter the version of the Perception Report (R76A8050) that the system uses for the report. If you leave this processing option blank, the system uses version ZJDE0001. |

Credit Invoices

These processing options control whether credit invoices are generated and the number of copies to print.

| | |
|------------------------------|---|
| Print Credit Invoices | Enter <i>1</i> to generate credit invoices. Leave this processing option blank to suppress the generation of credit invoices. |
| Number of Copies | Enter the number of invoice copies required by the customer. The system prints the number of invoices specified in this field. The system always prints at least one invoice. |
| Issue Place | Enter the place where the invoice or the shipment note is printed. |

Running the AR SOP Print Credit Invoice Program

Although there is a separate menu option for each program, the system runs the same program regardless of the menu option that you select.

Use one of these navigations:

Select Credit Invoice System Setup (G76A00D), AR SOP Print Credit Invoice Stand Alone.

Select Credit Invoice System Setup (G76A00D), AR SOP Print Credit Invoice Cash Due.

Select Credit Invoice System Setup (G76A00D), AR SOP Print Credit Invoice Reprint.

Setting Processing Options for AR SOP Print Credit Invoice (R76A0023)

Use these processing option to control the Generate Print Credit Invoice print program.

General

These processing options control the issue place printed on the document, number of copies to print, and

| | |
|--------------------------------|--|
| Issue Place - Argentina | Specify the place where the invoice or the shipment note is printed. |
| RG100 | Specify whether you are entering a voucher corresponding to RG 100. Values are: Blank: Vouchers do not correspond to RG 100. <i>1</i> : Vouchers correspond to RG 100. |
| Invoice Copies | Enter the number of invoice copies required by the customer. The system prints the number of invoices specified in this field. The system always prints at least one invoice. |

Accepting Credit Invoices for Argentina

You use the AR SOP Acceptance program (P76A21) to enter credit invoice information in the system after the customer has approved the credit invoice.

This section lists a prerequisite and discusses how to:

- Set processing options for AR SOP Acceptance (P76A21).
- Accept credit invoices.

Prerequisite

Before completing the tasks in this section, set up values in the Credit Invoice Valid Status (76A/CS) table to include the status codes for credit notes. For example, you might set up the code 10 for approved and the code 20 for rejected. The code for approved must have an *A* in the Special Handling Code field and the code for rejected must have an *R* in the Special Handling Code field.

See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” [Setting Up UDCs for Credit Invoice Processing for Argentina, page 61](#).

Forms Used to Accept Credit Invoice

| Form Name | FormID | Navigation | Usage |
|-------------------------------------|---------|--|---|
| Work with Credit Invoice Acceptance | W76A21A | Credit Invoice System Set Up (G76A00D), AR SOP Acceptance | Review and select credit invoices. You can reprint receipts that have already been issued but were modified if you have specified that modifications are allowed after printing in the processing options of the AR SOP Acceptance program (P76A21). Print credit invoice receipts by selecting the invoice record and selecting Print from the Row menu. |
| Credit Invoice Acceptance | W76A21B | Select an invoice on Work with Credit Invoice Acceptance. | Accept or reject the credit invoice. |
| Withholding | W76A21C | Select a record and select Withholding from the Row menu on Credit Invoice Acceptance. | Enter and revise withholding information for the credit invoice. |

Setting Processing Options for AR SOP Acceptance (P76A21)

Use these processing options to specify the version of the print program and whether modifications are allowed after printing.

General

These processing options control whether you can modify an invoice after printing and a default version of Receipt Credit Invoice Print program.

| | |
|--|---|
| Allow modify after print. | Enter a value to indicate that the system enables modification after printing. |
| Receipt Credit Invoice Print Version. | Enter a version of the Receipt Credit Invoice Print program that the system uses. |

Accepting Credit Invoices

Access the Credit Invoice Acceptance form.

| | |
|---------------------------------------|---|
| Advance Payment | Enter a value that specifies the total amount of the invoice or voucher pay item. The gross amount might include the tax amount, depending on the tax explanation code. The system does not decrease the gross amount when payments are applied. When you void a transaction, the system clears the gross amount field. |
| Status | Enter a code that represents the status of the credit invoice. |
| Reason of Rejection 1 | Enter a user defined name or remark. |
| Reason of Rejection 2 | Enter additional text that further describes or clarifies a field in the system. |
| Withholding Certificate Number | Enter the Withholding Certificate Number. |
| DGI Resolution Number | Enter the DGI (<i>Direccion General Impositiv</i>) resolution number. |
| Gross Amount | Enter a value that specifies the total amount of the invoice or voucher pay item. The gross amount might include the tax amount, depending on the tax explanation code. The system does not decrease the gross amount when payments are applied. When you void a transaction, the system clears the gross amount field. |

Printing Credit Invoice Receipts for Argentina

You can print a batch of receipts by running a version of the AR SOP Print Receipt program (R76A0021).

This section provides an overview of legal document numbers and discusses how to:

- Print credit invoice receipts.
- Set processing options for AR SOP Print Receipt (R76A0021).

Understanding Legal Document Numbers

For companies that are set up as autoprinter companies, the system prints the AFIP legal document number on all legal documents such as invoices, credit notes, debit notes, shipment notes, and so on when you run the Credit Invoice Receipt Print and Print Invoice/Shipment Note programs. The system also prints the AFIP legal number when autoprinter companies reprint legal documents.

For legal documents with AFIP document types of A, B, E, R, and M, the system prints the text “Code No” followed by the document type on each page of the legal document.

Printing Credit Invoice Receipts

Select Credit Invoice System Set Up (G76A00D), AR SOP Print Receipt.

Processing Options for AR SOP Print Receipt (R76A0021)

Use these processing options to control the printing options on the report.

General

These processing options control the issue place printed on the document, whether the vouchers correspond to regulation RG 100, and the number of copies to print.

Issue Place - Argentina

Specify the place where the invoice or the shipment note is printed.

RG100

Specify whether you are entering a voucher corresponding to RG 100. Values are:

Blank: Vouchers do not correspond to RG 100.

I: Vouchers correspond to RG 100.

Number of Copies

Enter the number of invoice copies required by the customer. The system prints the number of invoices specified in this field. The system always prints at least one invoice.

CHAPTER 7

(ARG) Processing Credit Invoices for Accounts Payable

This chapter provides an overview of credit invoices, lists prerequisites, and discusses how to:

- Enter vouchers for credit invoices.
- Enter credit invoice receipts.
- Reclassify fiscal credit.

Understanding Credit Invoices for Accounts Payable for Argentina

The AFIP (*Administración Federal de Ingresos Públicos*) issues credit invoices to provide companies with a payment instrument that can be negotiated and used as a credit. This need arises when banks do not borrow money and companies are faced with a lack of liquidity.

From an accounts payable standpoint, the credit invoice represents a documented debt with the supplier, which is canceled when due.

Credit invoices also modify the time when the fiscal credit is accepted. Ordinarily, the fiscal credit is accepted when the voucher is entered. If the voucher requires a credit invoice, the fiscal credit is accepted at a later date.

Prerequisites

Before performing the tasks in this section:

- Set up UDCs.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Credit Invoice Processing for Argentina, page 61.](#)

- Set up AAIs.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAIs for Credit Invoice Processing for Argentina, page 76.](#)

- Set up company constants for accounts payables.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Credit Invoice Constants for Accounts Payable for Argentina, page 95.](#)

- Set up temporary tax areas.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Tax Area Relationships for Credit Invoices for Argentina, page 97.](#)

- Set up credit invoice status rules.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Credit Invoice Status Rules for Argentina, page 97.](#)

- Set up payment instruments.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Payment Instruments for Credit Invoices for Argentina, page 102.](#)

Entering Vouchers for Credit Invoices for Argentina

This section provides overviews of vouchers for credit invoices, how to change the status of a credit invoice, the process to accept credit invoices, and the process to reject credit invoices; lists a prerequisite, and discusses how to enter vouchers for credit invoices.

Understanding Vouchers for Credit Invoices

Vouchers require a credit invoice when these conditions are met:

- The supplier has been classified (with an address book category code) as a credit invoice issuer.

You specify the address book category code to use to identify credit invoice issuers in the General Constants program (P76A20).

- The gross invoice amount exceeds the required minimum amount that is specified in the General Constants program.
- The payment terms are not listed in the Payment Terms code (76A/TP) UDC table.

This UDC lists payment terms that do *not* require a credit invoice.

When you enter a voucher that meets these requirements, the system modifies the tax area of the voucher and replaces it with a similar percentage tax area that charges a transitory account. You set up these tax areas using the AP Tax Areas Relationship program (P76A25).

After the voucher is entered, you can enter the credit invoice.

Modifying Vouchers with a Credit Invoice

You can modify only unposted vouchers.

When you modify the voucher information, the system verifies that the credit invoice requirements are met for amounts, payment terms, and tax area. The system also verifies that the AP Credit Invoice Status Rules program (P76A26) is set up to enable voucher modifications.

If a credit invoice is no longer required, the credit invoice information is deleted.

If the modified voucher still requires a credit invoice, you must enter the credit invoice. During payment processing, the system verifies that the credit invoice was entered.

Voiding Vouchers with a Credit Invoice

You can void only unposted vouchers with credit invoices that still have an initial status. When you void these vouchers, all of the information from the credit invoice is also deleted.

Understanding How to Change the Status of a Credit Invoice

Every credit invoice has a status that is associated with it. The status determines whether the credit invoice is available for processing different events in the credit invoice cycle.

The system stores the rules that it uses to perform these validations in the Credit Invoice Status Rules table (F76A26). Set up these rules to meet your needs.

Set up the initial status for credit invoices in the General Constants program (P76A20).

For example, you might create a rule that enables you to review a credit invoice before accepting it.

If the initial status is 01, you could set up these status rule to advance the status to 05 (To Accept) when you use the AP Review Credit Invoice program (P76A24) to review the credit invoice:

| Accounts Payable Event | Credit Invoice Status From | Credit Invoice Status To |
|------------------------|----------------------------|--------------------------|
| FACCREDCHG | 01 (Initial) | 05 (To Accept) |

After you review the credit invoice, this status rule advances the status when you run the acceptance process:

| Accounts Payable Event | Credit Invoice Status From | Credit Invoice Status To |
|------------------------|----------------------------|--------------------------|
| ACCEPTANCE | 05 (To Accept) | 10 (Accepted) |

Understanding the Process to Accept Credit Invoices

After the credit invoice information has been created, you must accept or reject the credit invoice in accordance with the AFIP general resolution.

Accepting credit invoices tells the supplier that you are in agreement with the credit invoices that you have received and documents the original debt. The system cancels the original vouchers and generates new ones to reflect the new obligations.

Vouchers that require a credit invoice must use the payment instrument that is specified in the General Constants program (P76A20).

To approve credit invoices:

1. Approve the voucher for payment.
2. Change the credit invoice status to the one that is required for its acceptance, as established in the status rules.
3. Run the Create Payment Group program (R04570), using the new credit invoice obligation account as the bank account.

This account must be set up as the bank account in the Bank Account Information program (P0030G). In the data selection of the Create Payment Group program, you must specify the payment instrument for credit invoices. The payment instrument must match the one that is specified in the General Constants program.

This process generates a new voucher, using the document type that is set up in the Description 02 field of the Special Payment Instruments (76A/PY) UDC table for the corresponding withholding net amounts of the voucher.

4. Use the Print function to issue a payment order for the payment group that you created in the previous step. This payment order is used as the acceptance detail that you give to the supplier.
5. To update the payments, create new matching versions of these programs (for example, you could set up a version named ACEPTA001 for each of these programs):
 - Credit Invoice Acceptance (P04571).
 - A/P Auto Payment Register (R76A0476).
 - F0411 Tag File Maintenance (P760411A).
6. For the F0411 Tag File Maintenance - A program, set up the processing options on the Validate tab in this manner:
 - For processing option 1, enter *I* to incorporate the legal document type in the duplicate-invoice legal-number validation.
 - For processing option 2, specify *H* as the pay status to use if the invoice legal number is duplicated.
7. Run the Update function using the version of the Credit Invoice Acceptance program (P04571) that you set up.

The update process:

- Generates a new type FX voucher for the new obligation that is incurred by the acceptance of the credit invoice.

The new FX voucher is created with an accepted status; it cannot be modified.

- Cancels the outstanding amount of the original voucher through an automatic PK payment voucher that has the same number as the payment order.

The number of the payment order is also assigned to the FX voucher.

- Issues the corresponding tax withholdings.
- Updates the credit invoice status in accordance with the status rules.

Note. To cancel the credit invoice, you must create a payment group for the FX voucher.

If the original voucher was made up of several items, you should create only one FX voucher for the net withholding total.

If you pay the credit invoice in allotments, you must split the voucher by using the Speed Status Change program (P0411S) at the time you make the payment.

8. Use the Payment With Voucher Match program (P0413M) to locate the payment by using its payment number, and then void the payment.

The system performs:

- Verifies that the FX voucher has not been paid.
- Updates the credit invoice status in accordance with the status rules.
- Returns the status of the original voucher to pending.
- Deletes the FX voucher.

Issuing Payments

When you use the Print function in the Credit Invoice Acceptance program (P04571) to issue payment orders, the system performs the validations that are based on the payment instrument.

If the payment instrument for acceptance is used, the system verifies that these conditions are met to correctly issue the payment:

- The supplier is set up to issue credit invoices.
- The voucher meets the conditions to require a credit invoice.
- The amount exceeds the minimum.
- The tax area has been set up for credit invoices.
- The payment terms generate a due date that exceeds the payment time limit that is specified in the General Constants program (P76A20).
- Credit invoice information has been recorded in the system.
- The credit invoice has the appropriate status for payment.

If the payment instrument corresponds to that of checks or another payment method, and the supplier is set up to issue credit invoices, the system verifies that these conditions are met to correctly issue the payment:

- The voucher meets the conditions to require a credit invoice.
- The amount exceeds the minimum.
- The tax area has been set up for credit invoices.
- The payment terms generate a due date that exceeds the payment time limit that is specified in the General Constants program (P76A20).
- Credit invoice information has been recorded in the system.
- The credit invoice status indicates that the credit invoice has been rejected due to cash payment.

If the payment instrument corresponds to that of checks or another payment method, and the supplier is *not* set up to issue credit invoices, the system issues the payment by using standard payment processing.

Understanding the Process to Reject Credit Invoices

You might reject a credit invoice if you decide to pay the original voucher within the established time limit that is stipulated in the AFIP general resolution or if the voucher has errors. You must change the credit invoice status to the status that is defined in the status rules to reject the credit invoice.

To reject credit invoices, complete these steps:

1. Use the AP Review Credit Invoice program (P76A24) to change the status of the credit invoice.
2. If you reject the credit invoice because you are paying cash, pay the voucher with a payment instrument that is different from the payment instrument that you use for credit invoice acceptance.
3. To take the fiscal credit that was originally assigned to the transitory account, run the AP Credit Invoice V.A.T. Restatement program (R76A0052).

See Also

Chapter 7, “(ARG) Processing Credit Invoices for Accounts Payable,” Reclassifying Fiscal Credit for Argentina, page 143

Prerequisite

Set up the FACCREDCHG status rule.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Credit Invoice Status Rules for Argentina, page 97.](#)

Forms Used to Enter Vouchers for Credit Invoices

| Form Name | FormID | Navigation | Usage |
|--|---------|---|---|
| Work with Credit Invoice Information | W76A24A | Credit Invoice System Set up (G76A00D), AP Review Credit Invoice | Locate vouchers and select pay items for which you enter a credit invoice. |
| Add, Change Credit Invoice Information | W76A24D | On the Work with Credit Invoice Information form, select a record and click Select. | Enter vouchers for credit invoices. Change the status of a credit invoice. |

Entering Vouchers for Credit Invoices

Access the Add, Change Credit Invoice Information form.

| | |
|----------------------------------|--|
| DGI Transaction Doc. Typ. | Enter the legal document type given by DGI for documents. |
| Invoice Group | Enter the code that identifies the invoice group. Values are: <i>A</i> <i>B</i> <i>C</i> |
| Issue Place | Enter the place where the invoice or the shipment note is printed. |
| Invoice Legal Next Number | Enter the legal number, which is composed of the shipment place (ACEM), the invoice group (AGRP), and the next number (AINW). You cannot assign the same invoice legal next number to different vouchers for the same supplier. |
| Invoice Date | Enter the date that either you or the system assigns to an invoice or voucher. This can be either the date of the supplier's invoice to you or the date of your invoice to the customer. |
| Credit Invoice Status | Enter the code that represents the status of the credit invoice. You can change the credit invoice status only to a status that is specified in the Credit Invoice Status To field of a FACCREDCHG status rule. |

Entering Credit Invoice Receipts for Argentina

After you have accepted (paid) a credit invoice, you should receive a receipt from the supplier, which you must enter into the system.

This section lists a prerequisite and discusses how to enter credit invoice receipts.

Prerequisite

Set up the RECIBOFC status rule.

Form Used to Enter Credit Invoice Receipts

| Form Name | FormID | Navigation | Usage |
|---------------------------|---------|---|--|
| Enter Receipt Information | W76A24A | <p>Credit Invoice System Set up (G76A00D), AP Review Credit Invoice</p> <p>On the Work with Credit Invoice Information form, select the credit invoice for which you enter a receipt, and click Select.</p> <p>On the Add, Change Credit Invoice Information form, select Receipt Information from the Form menu.</p> | Enter the number and date for the receipt. |

Entering Credit Invoice Receipts

Access the Enter Receipt Information form.

Receipt Number Enter the value that is used as a cross-reference or secondary reference number. Typically, this is the customer number, supplier number, or job number.

The system does not allow duplicate receipt numbers.

Receipt Date Enter the date of the receipt for the current valuation layer transaction.

Reclassifying Fiscal Credit for Argentina

This section provides an overview of the process for reclassifying fiscal credit and discusses how to:

- Run the AP Credit Invoice V.A.T. Restatement report.
- Set processing options for AP Credit Invoice V.A.T. Restatement (R76A0052).

Understanding the Process for Reclassifying Fiscal Credit

When you enter a voucher that requires a credit invoice, the system modifies the tax area of the voucher and replaces it with a similar percentage tax area that allocates the tax to a temporary value-added tax (VAT) credit tax account. The tax cannot be reported to the tax authority until the tax is reallocated to the final VAT credit tax account.

The AP Credit Invoice V.A.T. Restatement program (R76A0052) debits the temporary VAT credit tax account and credits the final VAT credit tax account. However, if the temporary and final VAT credit tax accounts are the same, no transferring entry is created.

Note. The original and replacement tax area must be set up in the AP Tax Areas Relationship program (P76A25). The system uses the PTxxxx AAIs that are associated with these tax areas to identify the temporary and final VAT credit tax accounts.

The AP Credit Invoice V.A.T. Restatement program also updates the status of the credit invoice using the RECLASIF event. The new status enables you to include these vouchers in the tax reports that are sent to the tax authority. You must accept or reject credit invoices either before or after you reclassify the fiscal credit.

The fiscal credit reclassification must occur within the fiscal period under which the voucher falls, or you lose the right to appropriate the money and must reclassify it to a loss account.

You should use data selection to select vouchers with a payment status that may be reclassified. For example, you might select vouchers with payment statuses for registered receipts or rejection due to cash payment.

Running the AP Credit Invoice V.A.T. Restatement Report

Select Credit Invoice System Set up (G76A00D), AP Credit Invoice V.A.T. Restatement.

Setting Processing Options for AP Credit Invoice V.A.T. Restatement (R76A0052)

Processing options enable you to specify the default processing for programs and reports.

General

| | |
|----------------------|---|
| Document Type | Enter a value that exists in the Document Type (00/DT) UDC table to identify the origin and purpose of the transaction. |
| Maximum Date | Enter the last date on which a fiscal credit can be claimed. After this date, the loss account is used. If you leave this processing option blank, no loss account is used. |
| Loss Account | Enter the account that is used for the loss of fiscal credit. |

CHAPTER 8

(ARG) Working with Other Accounts Payable Functionality for Argentina

This chapter provides an overview of deferred check payments and discusses how to:

- Work with voucher entry and review.
- Work with batch vouchers.
- Work with payments.
- Work with the TXT payments file.
- Map fields in the F0411Z1 tag table.

Understanding Deferred Check Payments for Argentina

The deferred check payment process enables you to write off your obligation to the supplier through the use of a deferred payment check.

A new document of type P1 is created to reclassify the debt. The payment is made against a control or temporary account; and at the due date of the check, the payment is made from the final bank account.

Making Deferred Check Payments

Keep the following considerations in mind when you process deferred check payments:

- When you enter the voucher, ensure that its pay instrument is deferred check (D).
- Before you create payment control groups, specify the final account that you set up in the Deferred Check Table program (P76A0421) in G/L Bank Account processing option of the Create Payment Control Groups program (R04570).
- When you print the payment, the system displays the Enter Draft Check Days form.

Enter the number of deferment days of the check on this form. The system adds the number of days that you enter to the latest due date of the vouchers belonging to that pay group to determine the due date of the check that will be issued.

- When you update the payment, the system generates a new voucher of type P1.

This new voucher represents the deferred check that still has to be charged. The P1 voucher has the following characteristics:

- An amount that is equal to the net amount of the payment made.
- A pay status of D.
- A due date that corresponds to the deferment days that are added to the latest due date of paid vouchers.

- The deferred check payment generates a batch of type K (A/P Checks [Automatic]).

Note. You can review deferred checks by using the Draft Inquiry/Selection program (P04260). You can use this program to modify the pay status of the deferred checks, which then enables you to select them by using data selection when they are charged.

- When the payment is due, you use the Post Outstanding Drafts program (R04803) to pay pending checks.
In the processing options of the Post Outstanding Drafts program, specify the due date of the payments as the pay through date in processing option 1 on the Dates tab. The system uses this date to select the checks that must be paid.
- The deferred check payment generates a batch of type G (General Accounting) and changes the pay status of the P1 voucher to paid.

Note. The Argentinian localization does not allow the use of multichecks. Therefore, to liquidate quotas by using deferred checks, you must create a payment group for each quota that is to be paid.

Considerations for Payments in Bonds

According to RG830 (Profits) and RG18 (VAT), when the payment of a voucher is made by using bonds, or quasi currency (such as Lecops, Patacones, and so on), no VAT or profits withholdings take place. Furthermore, a listing of profit withholdings that were not collected because they belonged to these concepts must be submitted to the fiscal authority.

Note. Payment in bonds must correspond to the total amount of the voucher.

To meet these requirements, you must specify that withholdings not be carried out if these types of vouchers are being written off. These unfulfilled withholdings are stored in a table so that they can be used to generate a report for the fiscal authority when needed.

You specify how withholdings should be carried out by using the special handling code for the payment instrument in UDC 00/PY. This UDC specifies only whether withholdings are saved in permanent files or in unfulfilled withholding tables. This UDC does not affect withholdings calculations.

Related Tables

After you have run the Create Payment Control Groups program (R04570) and before you have updated payments, the system save withholdings in the following tables:

- The F04573 table and PCG Detail Information Tag Table (F760473A) if taxes were withheld.
- A/P Payment Control Group File table (F76A81) if taxes were not withheld.

When a payment is updated, the voucher status is updated, the withholding certificates are generated, and the records are saved in the following final tables:

- The F0411, F0414, A/P Ledger Tag Table - ARG (F760411A), A/P Payment Detail Tag Table (F760414A), and F0911 tables if taxes were withheld.
- A/P Payment Control Group File (F76A82) if taxes were not withheld.

If the fourth position of the special handling code is a Y, earnings accruals are saved to the Profit Withholding - Payments Done table (F760406A) and the Profit Withholding - Payments Done table (F76A8070) (for copyrights). If the fourth position of the special handling code does not have a Y, no earnings accrual records are saved.

Considerations for Manual Payments

When you create manual payments, the system validates the payment instrument code. If it finds an *N*, the user is not allowed to enter withholding amounts.

Considerations for Writeoffs

Writeoffs are identified with a *V* in the VOD field of the F76A82 table. The process for withholding taxes is the same.

Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up the System for Deferred Payments for Argentina, page 90

Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Accounts Payable for Argentina, page 70

Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAI for Deferred Payments, page 76

Working with Voucher Entry and Review for Argentina

This section provides overviews of vouchers, CAI number for suppliers, and the process for revising vouchers for Argentina; lists prerequisites, and discusses how to:

- Set processing options for F0411 Tag File Maintenance (P760411A).
- Enter voucher additional information.
- Enter withholding information.
- Maintain CAI numbers for suppliers.
- Set up voucher authorization rules.

Understanding Vouchers for Argentina

You use the Standard Voucher Entry program (P0411) to enter vouchers for Argentina. When the user ID is set to Argentina, the system displays an additional form on which you enter information specific to Argentina.

For the system to access country-specific information, you must set up corresponding versions of:

- Standard Voucher Entry (P0411).
- F0411 Tag File Maintenance (P760411A).
- Voucher Entry MBF Processing Options (P0400047).

For example, if you use version ZJDE0001 of the Standard Voucher Entry program, the system uses version ZJDE0001 of the F0411 Tag File Maintenance - ARG program and version ZJDE0001 of the Voucher Entry MBF Processing Options program.

The system stores country-specific voucher information in the A/P Ledger Tag Table - ARG table (F760411A).

Note. When you create a voucher, the system assigns to the voucher the value from the Pay Status Code processing option in the Voucher Entry MBF Processing Options program (P0400047). If this processing option is blank, the system uses the default value from the Pay Status (PST) data item. You cannot override the system-assigned payment status.

Also, you cannot modify or delete a voucher if the pay status of any of its lines is listed in the Unchangeable Pay Status (76A/EI) UDC table.

Considerations for the Duplication of Invoice Legal Number

The system controls the duplication of invoice legal numbers with the same supplier and legal document type.

To activate the duplicate legal numbers control, you must set up the processing options on the Validate tab for the F0411 Tag File Maintenance program (P760411A).

After you click OK on the Voucher Additional Information - Revision form, if the invoice number is duplicated for the same type of legal document, the system displays the Duplicate Invoice Number form.

If the system displays this form, take one of these actions:

- Click Cancel.

When you click Cancel, the voucher is generated with the pay status that is designated in processing option 5 of the F0411 Tag File Maintenance - ARG program (P76A0411A). For the invoice to adopt the pay status from the Pay Status Code processing option for the Voucher Entry MBF Processing Options program (P0400047), you must re-enter the voucher and replace its legal number with one that is not a duplicate, or you must change its legal document type.

- Replace the legal number with one that is not a duplicate and click OK.

If duplicate number control is not achieved through legal document type (the processing options on the Validate tab for the F0411 Tag File Maintenance program (P760411A) are blank), the system uses the Duplicate Invoice Number Edit setting from the Accounts Payable constants. In this case, when you enter a duplicate number for the invoice, the system returns an error when the detail area of the Enter Voucher - Payment Information form is loaded.

If you receive this error, change the legal number to one that is not a duplicate so that you can continue with voucher creation.

Considerations for Entering Vouchers for Cleaning Services Withholding

Specify the SUSS withholding concept for the withholding on the Voucher Additional Information - Revision form as illustrated in this table:

| Field | Value | Description |
|--------------------------|-------|------------------------|
| VAT Withholding Concept | BIE | Goods |
| G.I. Agreement Code | 02 | Multilateral Agreement |
| G.I. Concept Source | BIE | Goods |
| G.I. State Source | 04 | Neuquen |
| G.I. Concept Destination | FLT | Shipment |

| Field | Value | Description |
|------------------------------|-------|-----------------------------|
| G.I. State Destination | 02 | Mendoza |
| Profit Withholding Condition | INS | Registered |
| Profit Withholding Concept | 30 | Goods |
| Contract Concept | 500 | More than 500 square meters |
| S.U.S.S. Concept | LIM | Cleaning Services |

Note. Values for the S.U.S.S. Concept field are defined in the SUSS Withholding Concept (76/11) UDC table. You can specify the required withholding in this field or leave this field blank if blank is a valid value in the UDC.

To enter an eventual personnel withholding concept, complete the origin jurisdiction as shown in this table, even though gross income is not being withheld:

| Field | Value | Description |
|------------------------------|-------|-----------------------------|
| VAT Withholding Concept | BIE | Goods |
| G.I. Agreement Code | 02 | Multilateral Agreement |
| G.I. Concept Source | BIE | Goods |
| G.I. State Source | 04 | Neuquen |
| G.I. Concept Destination | FLT | Shipment |
| G.I. State Destination | 02 | Mendoza |
| Profit Withholding Condition | INS | Registered |
| Profit Withholding Concept | 30 | Goods |
| Contract Concept | 500 | More than 500 square meters |
| S.U.S.S. Concept | DEF | Cleaning Services |

Entering Voucher Additional Information for RG 1361

The system displays the Voucher Additional Information - Revision form after you enter a voucher in the Standard Voucher Entry program (P0411), includes the fields that enable you to add the required imported operations information.

The system stores this information in the A/P Ledger Tag Table - ARG table (F760411A) and the additional importation information in the F760411A A/P Tag File - ARG table (F76A411T).

Considerations for Profit Gross Up

When you enter the voucher, add an additional line with the calculated gross up amount, a tax explanation code of E, and the tax area associated with 0 percent tax.

For example, suppose that the retention quota for payments to foreigners is 10 percent and that the amount to pay is 1000 USD.

If it had been agreed that the foreign payee would receive a tax-free amount of 1000 USD, the grossed up amount would be 1111 USD. Ten percent of 1000 USD is 111 USD (withholding), and the foreign payee thus receives 1000 USD (1111 USD – 111 USD). For this reason, the voucher must have two lines: one for 1000 USD with the amount's corresponding tax area, and another for 111 USD with a tax explanation code of E and a tax area defined in UDC 76A/AC, as shown in this example:

| Pay Item | Gross Amount | Tax Ex | Tax Rate/Area |
|----------|--------------|--------|---------------|
| 001 | 1.000,00 | V | EXENTO |
| 002 | 111,00 | E | ACRECENTA |

Note. If you need to exclude the gross up amount from the Purchase VAT Subledger, you must exclude the detail lines of vouchers with a tax area that is defined for gross ups. To do this exclusion, you must ensure that the supplier is set up with the most current data in the Country and Person/Corporation Code fields on the Address Book Revision form and in the A/B Legal Document Type - Argentina and Tax ID fields on the A/B Additional Information - Revision form.

Considerations for Purging Vouchers

When you run the Purge Closed A/P Records program (R04800), the system moves the data from the F76A411H table to the F76A411R table.

Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Invoice Type M for Voucher Processing for Argentina, page 93

Understanding CAI Numbers for Suppliers with Fiscal Controller

General Resolution 1492 modified the General Resolution 1361, requiring that, as of September 1, 2003, you must report the CAI number (autoprinter inscription number) and the expiration date of type A and type B invoices.

For vouchers that are issued by suppliers with the fiscal controller option, the CAI number is unique for each voucher.

In addition to maintaining and validating CAI numbers, the system handles suppliers with the fiscal controller option.

When you enter legal information for a voucher, the system displays the CAI number and the effective date for the supplier and the issuing place. If this information does not exist, the system issues a warning message. You can manually modify the CAI number and effective date.

Note. CAI information is mandatory on vouchers for suppliers with the fiscal controller option. This information can be omitted for other suppliers. Vouchers for suppliers without the fiscal controller option use the default value for the CAI number.

When you enter a voucher, the system creates a record of the CAI number for the voucher in the AP Header Tag File - ARG table (F76A411H). If the invoice group for the voucher is other than A or B, the CAI number is blank in this table.

You use the Work with CAI number program (P76A411H) to assign CAI numbers to vouchers with the fiscal controller option. You can modify the CAI number for vouchers that meet these conditions:

- The voucher's invoice group is A or B.
- The CAI number has 14 digits.
- The CAI number is not blank.
- The voucher is not voided.
- The voucher is not included in the VAT RG1361 magnetic file.

You cannot review vouchers without invoice group A or B, or vouchers that are not in the mode of General Resolution 100.

If you change the AFIP document type of a voucher during the voucher entry, the system validates the CAI information when you click OK, based on the original document type.

Understanding the Process for Revising Vouchers for Argentina

The processing option for the PO - A/P Speed Release - ARG program (P76A115) determines which information can be changed for a voucher using Speed Status Change. These user types are valid:

- Approver
Can modify the Pay Status and Remarks fields.
- Treasurer
Can modify the Pay Status, Remarks, and Payee Number fields.
- Payer
Can modify all fields.

Note. Each user's authority to modify vouchers from one status to another and up to a specific amount is defined in the Voucher Authorization Rules program (P760409A).

Prerequisites

Before performing the tasks in this section:

- Set up AFIP document type relationships.
See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Legal Numbering for Argentina, page 80.](#)
- Set up voucher authorization rules to authorize different users to change the status of vouchers up to a given amount.
See [Chapter 8, “\(ARG\) Working with Other Accounts Payable Functionality for Argentina,” Setting Up Voucher Authorization Rules, page 154.](#)
- Set up corresponding versions of the Standard Voucher Entry (P0411), the Voucher Entry MBF Processing Options (P0400047), and the F0411 Tag File Maintenance (P760411A) programs.
- Set up supplier CAI numbers.
See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Print Authorization Codes for Argentine Suppliers, page 82.](#)

- Set up to use invoice type M.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Invoice Type M for Voucher Processing for Argentina, page 93.](#)

Forms Used to Work With Vouchers for Argentina

| Form Name | FormID | Navigation | Usage |
|---|-----------|---|--|
| Enter Voucher - Payment Information | W0411A | Standard Voucher Entry (G0411), Standard Voucher Entry Click Add on the Supplier Ledger Inquiry form. | Enter basic voucher information. |
| Voucher Additional Information Revision | W760411AC | Click OK on the Enter Voucher - Payment Information form. | Enter general voucher information for Argentina as well as import information. The information you enter applies to the entire voucher. After you access this form, you must complete the transaction. You cannot cancel the transaction. |
| G/L Distribution | W0411K | Click OK on the Voucher Additional Information Revision form. | Enter GL distribution information for the voucher. |
| Withholding Additional Information Revision | W760411AE | Click OK on the Voucher Additional Information - Revision form. | Enter withholding information for each voucher pay item. You can specify different withholding concepts for different pay items. |
| Enter CAI Information | W76A411HB | Set Up RG100 (G76A100), Work With CAI Number Click Select on the Work With CAI Information form. | Assign CAI numbers to vouchers with the fiscal controller option. |
| Add Voucher Authorization Rules Maintenance | W760409AA | Additional Features – Set up (G76A116), Voucher Authorization Rules Click Add on the Work with Voucher Authorization Rules Maintenance form. | Specify the users who can change the status of vouchers up to a given amount. |

Setting Processing Options for F0411 Tag File Maintenance (P760411A)

Processing options enable you to specify the default processing for programs and reports.

General

These processing options let you set up default information for voucher entry.

| | |
|----------------------------|--|
| Default Cost Center | Enter the default cost center. |
| Number of Days | Enter the number of days to calculate the limit date for the vouchers. |

RG/100

This processing option lets you specify whether you are processing vouchers corresponding to RG 100.

| | |
|---------------|---|
| RG 100 | Enter <i>1</i> if you are processing vouchers corresponding to RG 100 or leave this processing option blank for vouchers not included in that regulation. |
|---------------|---|

Validate

These processing options let you set up legal number validation.

| | |
|----------------------------|---|
| Legal Document Type | Enter <i>1</i> to incorporate the legal document type in the duplicate invoice legal number validation. |
| Pay Status | Enter the pay status to assign to vouchers if the invoice legal number is duplicated. |

Entering Voucher Additional Information for Argentina

Access the Voucher Additional Information - Revision form.

General Information

Select the General Information tab.

| | |
|---------------------------------------|---|
| AFIP Transaction Document Type | Specify the legal document type given by DGI (<i>Direccion General Impositiv</i>) for documents. The system populates the Document Type and Invoice Group fields according to the tax area that is used in the voucher, and the relationship that is set up for JD Edwards EnterpriseOne internal documents and AFIP documents. |
| Invoice Group | Specify the code that identifies the invoice group. Values are: <i>A</i> <i>B</i> <i>C</i> |
| Voucher Pages | Enter the number of pages for the voucher. The number of pages must be reported in the Purchase VAT magnetic backup. |
| Autoprinter Inscription Number | Enter the unique ID given to all the companies that are autoprinters (that is, companies that print their own invoices). This number is assigned to suppliers by legal authorities in Argentina, as stated in General Resolution 100. These companies must be registered and authorized by legal authorities to print their invoices. Once they are registered and authorized, they are given a CAI number (autoprinter inscription number), which they must print on every invoice. |

Operation Code Enter a code that exists in the Operations Code (76A/OC) UDC table to specify the type of operation, such as exempt operation, import operation, export operation, and so on.

If the voucher has exempt lines, this field cannot be blank.

Fiscal Controller Enter a code that exists in the Fiscal Controller (76A/CF) UDC table to indicate whether the voucher was printed by a fiscal controller.

Import Information

Select the Import Information tab.

Customers Code If you complete this field, you must also complete the Customs Voucher Date, Customs Voucher Number, and Destination Code fields.

Customs Voucher Date Enter the date that is used for goods imports.

Customers Voucher Number Enter the voucher number given by customs for goods imports.

Destination Code Enter a code that identifies the type of destination. These codes are hard-coded.

Entering Withholding Information for Argentina

Access the Withholding Additional Information Revision form

Note. You must enter the same VAT withholding concept for all lines.

Maintaining CAI Numbers for Suppliers with Fiscal Controller

Access the Enter CAI Information form

Autoprinter Inscription Number-ARG-76A Enter the unique ID given to all the companies that are autoprinters (that is, companies that print their own invoices). This number is assigned to suppliers by legal authorities in Argentina, as stated in General Resolution 100.

These companies must be registered and authorized by legal authorities to print their invoices. Once they are registered and authorized, they are given a CAI (autoprinter inscription number), which they must print on every invoice.

Setting Up Voucher Authorization Rules

You set up voucher authorization rules to authorize different users to change the status of vouchers up to a given amount.

Access the Add Voucher Authorization Rules Maintenance form.

Voucher Authorization Rules - Add Voucher Authorization Rules Maintenance

OK Delete Cancel Tools

Records 1 - 2

| | | Co | User ID | Pay Stat | Next Pay Status |
|----------------------------------|--|-------|---------|----------|-----------------|
| <input checked="" type="radio"/> | | 00028 | | A | H |
| <input type="radio"/> | | | | | |

Add Voucher Authorization Rules Maintenance form

Max. Domestic Amount Enter the amount of an invoice or voucher pay item that is unpaid.
(maximum domestic amount)

Setting Processing Options for PO - A/P Speed Release - ARG (P76A115)

Processing options enable you to specify the default processing for programs and reports.

General

Enter User Type Enter 1 if the user is an approver. Enter 2 if the user is a treasurer. Leave this processing option blank if the user is the payer.

Working with Batch Vouchers for Argentina

This section provides an overview of the F0411A1 tag table, lists a prerequisite, and discusses how to:

- Add or revise Argentina-specific batch voucher information.
- Add withholding information to a batch voucher.

Understanding the F0411Z1 Tag Table Generation

The F0411Z1 Tag Table - ARG - 04 table (F76A30) saves additional information about vouchers that is different from the additional supplier information, which is stored in the A/B Tag Table - ARG table (F760101A).

After you have uploaded vouchers to the Voucher Transactions - Batch Upload table (F0411Z1), you must generate the F76A30 table by using the same process that you use to generate the F0411Z1 table.

When you process a batch of vouchers in the JD Edwards EnterpriseOne Accounts Payable system, the system processes the information obtained from the F76A30 table as follows for each voucher in the F0411Z1 table:

- If a corresponding record exists in table F76A30 with the same key, the system generates a record in the A/P Ledger Tag Table - ARG table (F760411A) by using the information from table F76A30.

- If no corresponding record exists in the F76A30 table, the system generates a record in the F760411A table by using supplier tax information from the F760101A table.

The F76A30 table does not need to include information pertaining to every supplier that is included in the F0411Z1 table. Only those vouchers for which the tax information differs from the supplier's tax information need to have a record in the F76A30 table.

The system does not validate the data in the F76A30 table. It assumes that the data is correct.

The system transfers all of the information from the F76A30 table, including those fields that are left blank. The system does not assign default values.

Prerequisite

Set up AFIP document type relationships to cross reference JD Edwards EnterpriseOne document types and legal invoice groups to legal document types.

Forms Used to Work with Batch Vouchers for Argentina

| Form Name | FormID | Navigation | Usage |
|---|---------|---|---|
| Work with voucher batch local information | W76A30B | Additional Features – Set up (G76A116), F0411Z1 Tag File Maintenance | Locate, select, and delete voucher additional information for Argentina in the F0411Z1 Tag Table - ARG - 04 table (F76A30). |
| Review voucher local information | W76A30D | Select a voucher on the Work with voucher batch local information form. | Review or revise Argentina-specific information for batch vouchers. You can also use this form to add Argentine information for a batch voucher. |
| Withholding Additional Information Revision | W76A30A | Click OK on the Review voucher local information form. | Review Argentine withholding information for a batch voucher. You can also use this form to add Argentine withholding information to a batch voucher. |

Adding or Revising Argentina-Specific Batch Voucher Information

Access the Review Voucher Local Information form.

Adding Withholding Information to a Batch Voucher

Access the Withholding Additional Information Revision form.

Working with Payments for Argentina

This section provides overviews of creating payment control groups, writing payments, updating payments, posting automatic payments, and voiding payments, and the process for entering manual payments with voucher match; lists prerequisites, and discusses how to set processing options for PO - PCG process - ARG (P76A570).

Understanding the Create Payment Control Groups Process for Argentina

The Work With Payment Groups program (P04571) selects all of the vouchers with an expiration date that is earlier or the same as the one which is specified in the processing options. If the Pay Through Date processing option is blank, the system uses the payment date from the processing options for the PO - PCG process - ARG program (P76A570), to calculate withholdings and exchange rates.

When you create payment groups, the system generates a standard report showing the vouchers that were selected for the payment. It also generates the Print PCG Detail - ARG report (R760476A), which lists the payment amount and corresponding tax withholdings.

The Print PCG Detail - ARG report lists payment group details:

- The bank account that is affected by the payment.
- The currency in which the payment is made.
- The total amount of the payment.
- The name of the payee.
- The type of document.
- The number of vouchers that are paid.
- The company that is assigned to the vouchers.
- The invoice number of the vouchers.
- The discount, if any.
- The vouchers that are selected for the payment and a record for each tax withholding.

These tax withholdings reduce the payment amount and constitute a debt with the *Administración Federal de Ingresos Públicos* (AFIP) on behalf of a third-party:

- Gross income withholding (document type \$B).
- Profit withholdings (document type \$G).
- Contractor withholdings (document type \$S).
- VAT withholdings (document type \$I).
- Eventual withholdings (document type \$A).

The Print PCG Detail - ARG report is not generated if:

- The payment amount is negative.
- Another payment group is waiting for processing or updating.
- The setup for RG 726 is missing.

Country-specific payment group information is saved in these tables:

- F04572 Tag Table – ARG (F760472A).

This table contains one record for each payment group payment.

- Detail Information Tag Table – ARG (F760473A).

This table contains one record for each tax withholding for individual payments.

For the standard Create Payment Control Groups program to access country-specific information, you must set up corresponding versions of:

- Print PCG Detail - ARG (R760476A).
- PO - PCG process - ARG (P76A570).

For example, if you are using version ZJDE0001 of the Create Payment Control Groups program, the system uses version ZJDE0001 of the PO - PCG process - ARG program.

Note. Payment accruals are stored in the Profit Withholding - Payments Done table (F760406A).

Legal Numbering Considerations for Argentina

A processing option on the PO - PCG process - ARG program (P76A570) enables you to enter the issue place that the program uses to obtain the legal numbers for the VAT and profit withholdings.

If you set up the issue place in the processing option but not in the Certificate Next Number RG 738 (A/P) program (P76A8080), or if the issue place has been set up for a different company or year, the Print PCG Detail - ARG report shows this error: Payment setup error in R.G. 738/99. Review company and issue place numbers.

When necessary, the Remark column indicates that the legal numbering setup for a withholding is missing.

After this error is issued, you must undo the payment group, correct the setup, and recreate the payment group. The same error is reissued if you try to rewrite the payment without carrying out this step.

If the processing option is blank, no validation occurs because the system does not generate legal numbers for withholdings.

The system generates profit and VAT withholding legal numbers when payments are updated and the numbers are printed on each of the certificates below the internal number.

Profit Withholding Calculations

Profit withholding must be deducted from payments made to suppliers. A withholding certificate is given to the supplier along with the payment to explain why the payment was made for a different amount than was requested on the supplier invoice. The system calculates profit withholding when you create the payment group and deducts the resulting amount from the total payment amount.

Using the first processing option for the PO - PCG process - ARG (P76A570) report, you can specify how the system accrues payments. The following list describes the three options:

- Independent Accrual by Company.

Profit concept withholding calculations are performed independently for each company, with no relationship established for payment accruals that exist for other companies or branches. For this reason, the system accrues completed payments for each of the companies that has been set up.

- Unique Accrual for All Companies.

The calculation for unique accrual profit withholding means that the system calculates the withholdings based on the sum of all of the accrued payments for all of the companies and branches which were previously set up. As a consequence, no unique accrual of completed payments occurs.

Suppose you have set up two companies, Company A with branch A, and Company B. In this example, the base for the calculation is the sum of payments that are accrued for Company A, its branch, and Company B.

- **Accrual by Related Company (Parent Number.)**

If you specify Accrual by Related Company for the same organizational structure (Company A with a subsidiary branch, and Company B), two scenarios are possible:

- If the profit withholdings are calculated when a voucher from Company A or its branch is paid, the base for the calculation is payments accrued for Company A and its branch.
- The Company B accrual is not part of the calculation.

If the voucher that is being paid belonged to Company B, only its payment accrual determines the withholding amount. Accruals for Company A and its branch are not a part of the withholding calculation.

Profit Withholding for UTEs

When a supplier is a temporary enterprise union (UTE), profit withholding is calculated individually for each member of the UTE and withholding certificates are printed for each member.

The system stores summary information by company, supplier, profit withholding concept, month, and year for each payment that is made. The system also stores summary information about taxable amounts and profit withholdings.

When a payment is made to a UTE, the voucher taxable amount is recorded for the UTE address number and not for the address numbers of the UTE members. For example, suppose that UTE A is paid with a voucher taxable amount of 10,000. Profit withholding amounts are calculated as follows for the UTE members:

| Supplier | Profit Withholding Amount |
|----------|---------------------------|
| 10 | 12 |
| 20 | 15 |
| 30 | 25 |

If this is the first payment of the month, the system updates the payments summary table:

| Supplier | Taxable Amount | Withholding Amount |
|----------|----------------|--------------------|
| A | 10000 | 0 |
| 10 | 0 | 12 |
| 20 | 0 | 15 |
| 30 | 0 | 25 |

Suppose that a second payment with a voucher taxable amount of 2,500 is made to UTE A during the same month. The system calculates profit withholding amounts as follows for the UTE members:

| Supplier | Profit Withholding Amount |
|----------|---------------------------|
| 10 | 3 |
| 20 | 4 |
| 30 | 6 |

The system updates the payments summary table:

| Supplier | Taxable Amount | Withholding Amount |
|----------|----------------|--------------------|
| A | 12500 | 0 |
| 10 | 0 | 15 |
| 20 | 0 | 19 |
| 30 | 0 | 31 |

Suppose that a payment without a voucher taxable amount of 3400 and a calculated profit withholding of 20 is made to supplier 10 during the same month. The system updates the payments summary table as follows:

| Supplier | Taxable Amount | Withholding Amount |
|----------|----------------|--------------------|
| A | 12,500 | 0 |
| 10 | 3,400 | 35 |
| 20 | 0 | 19 |
| 30 | 0 | 31 |

When a voucher for a UTE is selected for payment, if UTE member information doesn't exist for the UTE, the system prints a warning and the user can decide whether to make the payment anyway or undo the payment and include it in a payment group after the UTE member information has been entered.

If the user makes the payment without first entering the UTE member information, any previous payments that were made to the UTE are added to the current payment and the profit withholding amount that is calculated for the combined amount is recorded for the UTE.

When you create payment groups, the system checks whether the supplier is a member of one or more UTEs. If the supplier is a UTE member and another voucher exists in another payment group for the same supplier or to a UTE to which the supplier belongs, the system updates the voucher status to X and excludes the voucher from the payment group.

Profit Withholding Calculations for UTEs

When a voucher for a UTE member is selected for payment, the system uses these values to calculate profit withholding:

- A: Previous payments made to the UTE for the same concept, company, month, and year.
- B: Previous profit withholdings done for the UTE for the same concept, company, month, and year.

- C: UTE members and their participation percentages.
- D: Previous payments made to each UTE member for the same concept, company, month, and year.
- E: Previous profit withholdings done for each UTE member for the same concept, company, month, and year.
- F: Profit withholding exemption percentages for each UTE member.

For each UTE member, profit withholding is calculated as follows:

(Calculation Base) = ((A + (Current Payment Amount)) × (Member Participation Percentage)) + D – (Minimum Taxable Amount)

(Previous Withholdings Done) = (B × (Member Participation Percentage)) + E

(Withholding Amount) = ((Calculation Base) × (Withholding Percentage) × F) – (Previous Withholdings Done)

For example, suppose that UTE A has the following members:

| Supplier | Member Participation Percentage |
|----------|---------------------------------|
| 10 | 40 |
| 20 | 60 |

When a voucher for UTE A is selected for payment, the system uses these values to calculate profit withholdings:

- a: Previous payment amounts for UTE A.
- b: Previous withholding amounts for UTE A.
- c: Previous payment amounts for supplier 10.
- d: Previous withholding amounts for supplier 10.
- e: Previous payment amounts for supplier 20.
- f: Previous withholding amounts for supplier 20.
- g: The profit withholding exemption percentage for supplier 10.
- h: The profit withholding exemption percentage for supplier 20.

Using these values, the system calculates profit withholding amounts for supplier 10 as shown:

$$(((a \times 40\%) + ((\text{Current UTE Voucher Amount}) \times 40\%) + c - (\text{Minimum Taxable Amount})) \times (\text{Withholding Percentage}) \times g) - (b \times 40\%) - d$$

The system also calculates profit withholding amounts for supplier 20 as shown:

$$(((a \times 60\%) + ((\text{Current UTE Voucher Amount}) \times 60\%) + e - (\text{Minimum Taxable Amount})) \times (\text{Withholding Percentage}) \times h) - (b \times 60\%) - f$$

Considerations for Processing Automatic Payments for Withholdings for Cleaning Services

When you create the payment group, the system calculates the withholdings according to the information on the voucher and the SUSS setup.

Note. Withholdings for eventual personnel services and cleaning services cannot be calculated in the same voucher because the system calculates only one of the withholdings.

The system displays the results of the withholding calculations on the A/P Auto Payment Register - ARG report (R76A0476) for the following document types:

- Eventual Personnel Services Withholding (\$A).
- Cleaning Services Withholding (\$L).

Note. You must set up document types \$A and \$L in the Document Type - Vouchers Only (00/DV) and Document Type - All Documents (00/DT) UDC tables.

Follow the standard process to write and update the payment group. When you update the payment group, the system creates the Cleaning Withholding Certificate and the Eventuals Withholding Certificate.

After you update the payment group, you can reprint certificates using the S.U.S.S. WH Certificate program (R7604541A). You must create one version of this program to reprint Eventuals Withholding Certificates (document type \$A) and another version to reprint Cleaning Withholding Certificates (document type \$L).

Considerations for Processing Payments by RG 726 or RG 615

If you are processing payments following RG 726 or RG 615, complete these steps before running the Create Payment Control Groups program:

- Verify that the selected suppliers are included in the AFIP classification file for the payment month and year.
This step is not required if the supplier is an export supplier or the company is not a withholding agent.
- Set up the VAT withholding for RG 726 or RG615, whichever is appropriate.
- Complete the second processing option on the Process tab for the PO - PCG process - ARG program as follows:
 - Enter 1 in this processing option if you want RG 615 to apply, or leave this processing option blank if you want RG 726 to apply.
 - Enter 2 if you do not want the system to verify information following RG 726/615.

The value that is specified affects all of the suppliers in the payment group.
- The value in the second processing option on the Process tab for the PO - PCG process - ARG program determines how withholding calculations are performed.

Important! If the Supplier Information RG 726 (F76A8011) table does not contain information about a supplier, the system issues an error on the Print PCG Detail - ARG report, which specifies the company, supplier, month, and year for which information is missing in the F76A8011 table.

The system checks for information for the supplier but not for the alternate payee.

When supplier information is missing, the system does not generate a payment for the supplier.

Understanding Writing Payments for Argentina

The system uses two additional temporary work tables for payments for Argentina:

- F04572 Tag Table – ARG – 04 (F760472A).

- Detail Information Tag Table – ARG – 04 (F760473A).

When processing payments in Argentina, you should also consider:

- The payment GL date of the check must be for the same month and year as the tentative date that is set up in processing options of the PO - PCG process - ARG program. If this processing option is blank, the date must match the one that is set up in the Pay Through Date processing option of the Create Payment Control Groups program.
- If the payment instrument is a deferred check, you must enter the displacement days of the check, which the system adds to the latest due date of those vouchers that are included in the payment group.

Understanding Updating Payments for Argentina

The update process updates tables, prints certificates of withholdings that must be given to the supplier, and creates the batch that must be posted for the payment.

The system updates the following tables:

| Table | Description |
|---|--|
| F0411 (Accounts Payable Ledger) | Includes a record for each payment withholding. |
| F760411A (A/P Ledger Tag Table - ARG) | Includes a record for each tax withholding and its corresponding concept. |
| F760406A (Profit Withholding - Payments Done) | The accrued payments table that is used for future profit withholding calculations. Accruals are on a monthly basis. |
| F76A8070 (Profit Withholding – Payments Done) | The accrued payments table that is used to calculate copyright profit withholdings. Accruals are on an annual basis. |
| F0414 (Accounts Payable Matching Document Detail) | Includes detail records of paid vouchers, discounts, differences in exchange rates, and withholdings. |
| F0413 (Accounts Payable - Matching Document) | Includes the total amount of the payment (vouchers minus discounts, withholdings, and so on). |
| F760414A (A/P Payment Detail Tag Table - ARG) | Includes a record for each voucher and withholdings with their corresponding concept. |

To comply with General Resolution 738 regarding the information to be included in withholding certificates, take note of these considerations:

- VAT Withholdings Certificate.
The VAT WH Certificate program (R7604521A) includes a Tax field in the applied withholding detail area. The system uses this field to report the tax denomination.
- Profit Withholding Certificate for individuals residing in the country.
The Profit WH Certificate program (R7604531A) includes the Tax and Withholding Voucher fields. The system uses the Withholding Voucher field to report legal invoices numbers for which withholdings are collected.
- Profit Withholding Certificate for foreigners.

The Profit WH Certificate program includes the Country of Origin field, which the system uses to specify the foreign supplier's country.

As with profit withholding certificates for suppliers residing in the country, the Profit WH Certificate program includes the Tax and Withholding Voucher fields.

The Profit WH Certificate program also includes the Country CUIT field. To populate this field correctly, set up the Country's CUIT (76A/FJ) UDC table to include country CUITs (clave única de identificación tributaria) for individuals and companies.

- Profit Gross Up.

The Profit WH Certificate program includes a Gross Up field. When you print the certificate, the system verifies whether the voucher that is being paid includes a tax area that has been defined in UDC 76A/AC. If that condition is met, the certificate reports the profit gross up withholding. If not, the certificate shows that the withholding is not grossed up.

Understanding Posting Automatic Payments for Argentina

When you post automatic payments, the system debits a liability account (the same account that was charged when the voucher was entered) and charges the control accounts of the different tax withholdings. The difference is charged to a bank account.

When you post withholdings, the system debits the control accounts for withholdings (charged when the payment was posted) and charges the withholding accounts.

Note. For Argentina, the system creates journal entries by using document type PK only, not document type PT, to debit an AP trade account that was originally credited when the voucher was posted.

Understanding Voiding Payments for Argentina

When you void a payment, new legal numbers for withholdings are generated with the same issue place as the original withholdings, as well as the void year and the following next number.

If the original withholding did not have a legal number, the void will not have one. Therefore, if legal numbers must be generated, you must reprint VAT and profit withholding certificates for manual payments with voucher match and adjustments before they are voided.

Understanding the Process for Entering Manual Payments with Voucher Match for Argentina

In addition to the process described previously, entering manual payments with voucher match involves the additional step of entering withholding information.

After you enter the manual payment information and select pay items, the system displays the Withholding Registration Information form. Use this form to enter these amounts:

- Value-added tax (VAT) withholding.
- G.I. (gross income) source withholding.
- G.I. (gross income) destination withholding.
- Profit withholding.
- Contract withholding.
- *Sistema único de seguridad social* (SUSS) withholding.

Note. When you enter the manual payment amount, include the withholding amounts. Enter the withholding amounts as negative amounts.

Manual Payments with Voucher Match for Withholdings for Cleaning Services

When you generate manual payments with voucher match, enter the withholding amount and concept on the Work with Manual Payments, Withholding Registration form. Enter the withholding amount and concept for either eventual services or cleaning services, but not both. Manual payments accept only one withholding at a time.

The withholding concept and amount that you specify should be the same as the withholding concept and amount specified for the vouchers because they are used in the withholding calculation when you print the certificate.

Enter withholding information for cleaning services on the Work with Manual Payments, Withholding Registration form as shown in this example:

| | Concept | Amount |
|----------------------|---------|---------|
| S.U.S.S. Withholding | LIM | 600.00- |

Enter withholding information for eventual personnel services on the Work with Manual Payments, Withholding Registration form as shown in this example:

| | Concept | Amount | State |
|----------------------|---------|---------|-------|
| G.I. Concept Source | NA | NA | 04 |
| S.U.S.S. Withholding | DEF | 500.00- | NA |

If you do not specify a value for the G.I. Concept Source State, the system uses the concept from the paid voucher.

When you generate the payments, the system creates the Cleaning Withholding Certificate and the Eventuals Withholding Certificate.

After you generate manual payments, you can reprint the certificates using the S.U.S.S. WH Certificate program (R7604541A). You must create one version of this program to reprint Eventuals Withholding Certificates (document type \$A) and another version to reprint Cleaning Withholding Certificates (document type \$L).

Approving and Posting Manual Payments and Withholdings for Argentina

All withholdings that are generated for a payment have the same batch number. The withholding concept that is entered in the manual payment must be the same as the concept of the paid voucher. If the payment has a withholding concept and is made for several vouchers, the vouchers must each have the same concept.

When you post manual payments, the system typically debits a liability account (the same account that was charged during the voucher entry) and charges the control accounts of the different tax withholdings; the difference is charged to a bank account.

When you post withholdings, the system debits the control accounts for withholdings (charged when the payment was posted) and charges the withholding accounts.

Manual payment with voucher match information specific to Argentina is stored in the following tables:

| Table | Stored Information |
|---|--|
| Accounts Payable Ledger (F0411) | Includes a record for each payment withholding. |
| A/P Ledger Tag Table - ARG (F760411A) | Includes a record for each tax withholding and its corresponding concept. |
| Profit Withholding - Payments Done (F760406A) | The accrued payments table that is used for future profit withholding calculations. Accruals are on a monthly basis. |
| Profit Withholding - Payments Done (F76A8070) | The accrued payments table that is used to calculate copyright profit withholdings. Accruals are on an annual basis. |
| Accounts Payable Matching Document Detail (F0414) | Includes detail records of paid vouchers, discounts, differences in exchange rates, and withholdings. |
| Accounts Payable - Matching Document (F0413) | Includes the total amount of the payment (vouchers less discounts, withholdings, and so on). |
| A/P Payment Detail Tag Table - ARG (F760414A) | Includes a record for each voucher and withholdings with their corresponding concept. |

JD Edwards EnterpriseOne Accounts Payable 8.12 Implementation Guide, “Processing Manual Payments,” Entering Manual Payments with Voucher Match

Prerequisites

Before completing the tasks in this section:

- Set up AAIs for deferred payments.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAIs for Deferred Payments, page 76.](#)

- Set up payment formats.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Payment Formats for Argentina, page 89.](#)

(ARG) Setting Processing Options for PO - PCG process - ARG (P76A570)

Processing options enable you to specify the default processing for programs and reports.

General

Payment

Enter 1 or leave this processing option blank to specify that payments are accumulated for profit withholding calculations by company. Enter 2 to specify that payments are accumulated by related companies.

Payment Terms Code for Withholding

Enter the payment term code for withholding.

Process

Payment Date

Enter the date that the system uses to search for accumulated profits and exchange rates. If you leave this processing option blank, the system uses the date from the first processing option of the Create Payment Control Groups program.

After the payment group has been created, the system uses this date to validate that the check date corresponds to the same month.

Process According to RG 726

Specify the type of processing to use. Values are:

Blank: RG 726 applies to the payment. The system verifies that the AFIP classification for each supplier, month, and year combination exists in the F76A8011 table.

1: RG 615 applies to the payment. The system verifies that the AFIP classification for each supplier, month, and year combination exists in the F76A8011 table.

2: Neither RG 726 nor RG 615 applies. The system does not verify whether RG726 information exists for suppliers.

Payment Instrument Due Date

Enter the special payment instrument (draft Argentina) due date.

RG 738/99

Issue Place

Enter the code for the place from which the certificate's legal number was issued. If you leave this processing option blank, the system uses standard voucher numbering.

RG 830/00

Category Code

Specify the address book category code that you used to identify UTEs. If the address book category code contains any value, the supplier is assumed to be a UTE. If you leave this processing option blank, no UTE processing occurs.

Generating the TXT Payments File for Argentina

This section provides an overview of generating TXT payments and discusses how to:

- Add information for TXT payments.
- Run the TXT Payment Generation program.
- Set processing options for TXT Payment Generation (R76A0441).

Understanding the TXT Payment File Process

The process for generating the TXT payment file involves adding information for TXT payments and generating the TXT payment file.

Adding Information for TXT Payments

You can use the Additional Payment Information program (P76A0440) to add the information that is required for payments with endorsed checks. You can also use this program to enter payment detail information for payments that were made by other means.

The system uses information from the standard payment tables and information from the processing options of the TXT Payment Generation program (R76A0441) to generate the TXT payment report.

You can modify and delete information in the Additional Payment Information program until you have processed that information by running the TXT Payment Generation program in final mode.

To change the bank tax ID (type 03 or 06) for an existing check, you must delete the record and add a new one. You cannot change the bank tax ID.

The system saves information that you enter in the Additional Payment Information program to the Check Details RG1547 - ARG - 04 table (F76A0440).

Generating the TXT Payments File

The TXT Payment Generation program (R76A0441) writes records to the Text Processor Header (F007101) and Text Process Detail (F007111) tables. You use the Text File Processor (P007101) to copy the text files from the F007101 and F007111 tables to text files that you can submit for tax reporting. These records contain information about payments from the F76A0440 table.

When you run the TXT Payment Generation program in proof mode, the system generates a report of payments and errors found.

When you run the TXT Payment Generation program in final mode, the system generates a report that includes information about the total payment with information from the processing options and from the standard payments tables. The system marks records in table F76A0440 as processed. The system includes records that have errors.

The system retrieves the following payment data:

- Check number

The system retrieves check numbers from the F76A0440 table, if possible. If the information from the F76A0440 table does not equal the total amount of the payment, the system uses the document number from the payment as the check number for the remaining amount.

- Bank tax ID

The system retrieves the tax ID of the issuing bank from the F76A0440 table, if possible. If the information from the F76A0440 table does not equal the total amount of the payment, the system uses the CUIT number from the bank's address book record for the remaining amount.

- Payment instrument

The system retrieves the payment instrument from the F76A0440 table, if possible. Otherwise, the system uses the payment instrument that is specified in the processing options of the TXT Payment Generation program.

- Signer tax ID

The system retrieves the tax ID of the signer from the F76A0440 table, if possible. Otherwise, the system uses the signer tax ID from the processing options of the TXT Payment Generation program.

- Gross amount

The system uses the total of the checks that are associated with the payment in the F76A0440 table. If no checks are listed in F76A0440 table, the system uses the total payment amount. If the total of the checks is less than the total payment amount, the system records the difference using the document number from the payment.

- Currency code

The system uses the value from the Special Handling Code field of the Foreign Currency Codes (00/CC) UDC for the payment currency. If UDC 00/CC is not set up, the system issues an error message.

If you use multiple versions of the TXT Payment Generation program for different payment instruments, the first version that you run must be set to clear the file, and the subsequent versions must be set to write additional information to the file. You specify in a processing option whether to clear the file. The data selection of the different versions does not have to be superimposed to avoid duplicate records. You have to run everything from the beginning when a subsequent version runs incorrectly.

TXT Payments File Layout

You must export the data from the F76A0441 table to a flat file that conforms to a specific format. Complete numeric fields with zeros to the left and alphanumeric fields with blanks to the right. The format is:

| No | From | To | Length | Description | Type |
|----|------|-----|--------|--------------------------------------|---------------|
| 1 | 1 | 8 | 8 | Cancellation date | Numeric (N) |
| 2 | 9 | 10 | 2 | Payment type | N |
| 3 | 11 | 40 | 30 | Payment type identification (table) | Character (C) |
| 4 | 41 | 51 | 11 | CUIT original issuing endorsed check | N |
| 5 | 52 | 66 | 15 | Payment amount | N |
| 6 | 67 | 77 | 11 | Bank CUIT | N |
| 7 | 78 | 79 | 2 | Payment procedure (table) | N |
| 8 | 80 | 90 | 11 | Supplier CUIT | N |
| 9 | 91 | 120 | 30 | Supplier name | C |
| 10 | 121 | 122 | 2 | Legal document type | N |
| 11 | 123 | 134 | 12 | Invoice number | N |
| 12 | 135 | 149 | 15 | Invoice amount | N |
| 13 | 150 | 152 | 3 | Currency code | N |

Forms Used to Add Information for TXT Payments

| Form Name | FormID | Navigation | Usage |
|------------------------|-----------|--|-------------------------------------|
| Work With Payments | W76A0440A | Payment Information - RG 1547 (G76A1547), Additional Payment Information | Locate payments. |
| Work with check detail | W76A0440B | On the Work With Payments form, select a records and click Select. | Click Add. |
| Check detail entry | W76A0440C | On the Work With check detail form, click Add. | Enter information for TXT payments. |

Adding Information for TXT Payments

Access the Check Detail form.

Bank Tax ID

Enter the number that identifies your company to the tax authority. This number can include the tax ID number for an individual, a federal or state corporate tax ID, a sales tax number, and so on.

Do not enter hyphens (dashes), slashes, spaces, or other punctuation in the tax identification number.

The Bank ID is required if the payment type is 03 or 06.

Signer Tax ID

Enter the identification code that is required by various tax authorities. This can be a social security number, federal or state corporate tax ID, sales tax number, and so on. The system verifies the number and prints the separators in their correct format, according to the value of TAXC (Person/Corporation Code). If no value exists for TAXC, the system uses the Corporate Entity.

The Signer Tax ID is required if the payment type is 06.

Running the TXT Payment Generation Program

Select Payment Information - RG 1547 (G76A1547), TXT Payment Generation.

Setting Processing Options for TXT Payment Generation (R76A0441)

Processing options enable you to specify the default processing for programs and reports.

General

Payment Instrument

Specify the payment type to assign to amounts for which a payment type has not been assigned in the F76A0440 table. Values are stored in the Payment Types (76A/PT) UDC table. If you leave this processing option blank, the report produces an error.

Tax Identification Number

Specify the signer tax ID to assign to amounts for which a signer tax ID has not been assigned in the F76A0440 table. The signer tax ID is required if the payment type is 06.

Clear File

Specify *1* to clear the F76A0441 table before generating new records. If you leave this processing option blank, the system adds new records without erasing previously processed records.

Note. If you use multiple versions of the TXT Payment Generation program, run the first version with this processing option set to *1* and subsequent versions with the processing option blank. If a version produces incorrect results, you must clear the file and run all versions again.

Mode

Enter *1* to run the program in final mode. If you leave this processing option blank, the system runs the program in proof mode.

Mapping Fields in the F0411Z1 Tag Table - ARG - 04 Table (F76A30) for Argentina

This section contains a list of the fields in the F0411Z1 Tag Table - ARG table (F76A30) and the values to enter.

| Field | Description | Value to Enter |
|--------|---|---|
| V8EDUS | User ID | Enter the value that exists in the EDI - User ID (VLEDUS) field in the F0411Z1 table. |
| V8EDBT | Batch | Enter the value that exists in the EDI - Batch Number (VLEDBT) field in the F0411Z1 table. |
| V8EDTN | Transaction Number | Enter the value that exists in the EDI - Transaction Number (VLEDTN) field in the F0411Z1 table. |
| V8AINC | Voucher included in Sales VAT subledger | Enter <i>1</i> if the transaction is already reported on Sales VAT report. |
| V8AADJ | Customs Date | Enter the date in the Julian format. Complete this field if the voucher is an import voucher. |
| V8AADN | Dispatch Number | Complete this field if the voucher is an import voucher. The system aligns the value to the left. |
| V8ADGI | AFIP Document Type | Enter the value from the DGI table. |
| V8APFC | Voucher Pages | Enter the number of voucher pages. You must enter a value that is greater than 0. |
| V8ARED | Withholding Adjustment | Enter <i>1</i> if the withholding adjustment corresponds to a tax withholding adjustment. |

| Field | Description | Value to Enter |
|--------|------------------------------|--|
| V8A001 | GI Agreement Code | Enter a value that exists in the ARG-G.I. Agreement Code UDC (76/01). |
| V8A002 | VAT Withholding Concept | Enter a value that exists in the ARG-VAT Withholding Concept UDC (76/02). |
| V8A003 | Profit Withholding Condition | Enter a value that exists in the ARG-Profit WH Condition UDC (76/03). |
| V8A004 | Profit Withholding Concept | Enter a value that exists in the ARG-Profit WH Concept UDC (76/04). |
| V8A005 | GI Concept Source | Enter a value that exists in the ARG-G.I. Concept - Source UDC (76/05). |
| V8A006 | GI Concept Destination | Enter a value that exists in the ARG-G.I. Concept-Destination UDC (76/06). |
| V8A007 | Contract Withholding Concept | Enter a value that exists in the ARG-Contract Concept UDC (76/07). |
| V8A008 | Customs Code | Enter a value that exists in the ARG-Custom Code UDC (76/08). |
| V8A009 | GI Source - State | Enter a value that exists in the ARG-G.I. State - Source UDC (76/09). |
| V8A010 | GI Destination - State | Enter a value that exists in the ARG-G.I. State-Destination UDC (76/10). |
| V8A011 | Eventual Withholding Concept | Enter a value that exists in the SUSS Withholding Concept UDC (76/11). |
| V8A012 | Future use | Leave this field blank. |
| V8A013 | Future use | Leave this field blank. |
| V8A014 | Future use | Leave this field blank. |
| V8A015 | Future use | Leave this field blank. |
| V8URAB | Future use | Leave this field blank. |
| V8URAT | Future use | Leave this field blank. |

| Field | Description | Value to Enter |
|--------|----------------------|---|
| V8URDT | Date | Enter the date that is 15 days after the invoice is received. This field is used only as limiting criteria for speed release. This field is optional. |
| V8URC1 | RG 100 Box | Enter <i>I</i> if the records corresponds to RG 100. |
| V8URRF | Future use | Leave this field blank. |
| V8AGRP | Invoice Letter | Enter <i>A</i> , <i>B</i> , or <i>C</i> . |
| V8AOP | Payment order number | Enter the payment order number only if paid vouchers are being processed in batch. |

CHAPTER 9

(ARG) Processing Withholding

This chapter provide an overview of value-added tax (VAT) withholding, lists prerequisites, and discusses how to:

- Process withholding for security services.
- Process security services withholding and withholding for general social security taxes (*sistema único de seguridad social* [SUSS]).
- Request the fiscal situation for suppliers.
- Upload AFIP (*Administración Federal de Ingresos Públicos*) information to the JD Edwards EnterpriseOne Accounts Payable system.
- Correct withholdings.
- Reprint certificates.
- Run the Profit Accrual Integrity Test programs.

See Also

Chapter 8, “(ARG) Working with Other Accounts Payable Functionality for Argentina,” Understanding Vouchers for Argentina, page 147

Understanding VAT Withholding by RG 726 or RG 615 for Argentina

R.G. 726/99 stipulates that VAT withholdings for payments be calculated every month based on the information that is published on the internet by AFIP for each supplier.

Depending on the classification that AFIP gives the supplier, you must apply either a substitute percentage or the general percentage for RG 18.

Prerequisites

Before completing the tasks in this chapter:

- Set up UDCs for supplier withholding.

See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for Foreign Suppliers and Supplier Withholding for Argentina, page 52.

- Set up AAIs to account for VAT, gross income, contract, cleaning, and eventuals withholdings.

See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” AAI for Supplier Withholding for Argentina, page 75.

- Set up next numbers for withholding taxes.

See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Next Numbers for Withholding Taxes, page 77.

- Set up next numbers for VAT and Profit withholding certificates.

See Chapter 5, “(ARG) Setting Up Withholding,” Setting Up VAT and Profit Legal Number Withholdings for Argentina, page 121.

- Set up the system for these withholding types:
 - General SUSS.
 - Security services.
 - Cleaning services.
 - Contractors.
 - Gross income.
 - Profits.
 - VAT.
 - VAT according to regulation 726 or 615.

See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Suppliers for Argentina, page 92.

Processing Withholding for Security Services for Argentina

This section provides an overview of withholding for security services and discusses how to generate the security services withholding certificate.

Understanding Withholding for Security Services

The statutory regulation 1769 establishes a requirement that companies withhold taxes for vendors providing security services. The withholding requirements apply to amounts that exceed the threshold amount for a supplier during each month. Initially, the threshold is set at eight thousand pesos, so the withholding applies to amounts over eight thousand pesos.

The regulation does not require companies to withhold taxes for the payment of security services when the payments are made in a nonmonetary format. For example, if the supplier receives goods in exchange for security services, no withholding taxes are calculated on the value of the goods received.

The system calculates the withholding tax by subtracting the VAT and discount amounts from the gross amount. If the accumulated adjusted taxable amount for a month exceeds the threshold, the system applies the tax.

The system stores information about the withholding in the Security Withholding Payments (F76A0456) table. The stored information includes:

- Company
- Supplier

- Security withholding concept
- Month and year
- Taxable amount
- Withholding amount

When you use automatic payment processing to update payments, the system runs the Security Services Withholding Certificate program (R760457A) to issue a withholding certificate to each supplier for each month for which you withhold taxes for security services. The certificate includes:

- Issue date and next number.
- Name, address, and fiscal ID (*clave única de identificación tributaria [CUIT]*) of the withholding agent.
- Payment number.
- Name, address, denomination, and fiscal ID (CUIT) of the supplier.
- Legal number and legal document type for the document that originated the withholding.
- Amount on which the withholding was calculated.
- Withholding concept description from the *Administración Federal de Ingresos Públicos* (AFIP).
- Withholding amount.
- Signature lines for the signature of the withholding agent.

Use the Services Withholding Certificate program to reprint the certificate as necessary.

Voiding Payments

If you void or delete a manual or automatic payment, the system updates the amounts for the payment in the F76A0456 table.

Note. The Delete Unposted Automatic Payments and the Delete Unposted Manual Payments processing options in the A/P Manual Payments program (P0413M) are disabled for Argentina payments.

Payments to UTEs

If payments are made to members of a temporary enterprise union (UTE), the withholding is calculated for each member and a separate withholding certificate is issued to each member. The system stores the taxable amount for the UTE in the F76A0456 table using the address book number of the UTE, and stores the amount withheld using the address book number of each member of the UTE.

For example, suppose you make a payment of 10000 to a UTE (address book A). Three members of the UTE have address book numbers of 10, 20, and 30. The withholding amount is 300. The system would update the F76A0456 table with these entries:

| Address Book | Taxable Amount (data item ATXA) | Withholding Amount (data item AG1) |
|--------------|---------------------------------|------------------------------------|
| A | 10000 | NA |
| 10 | 0 | 100 |
| 20 | 0 | 100 |
| 30 | 0 | 100 |

For members of a UTE who are also direct vendors of the company, the system considers the payments that were made to the individual, regardless of whether the payments were made as a result of payments to the individual as a member of the UTE or as a direct vendor.

Example: Withholding Calculations

Suppose you make four payments to Supplier A in August, 2005.

The first payment consists of:

- Gross amount of 1210
- Tax of 210
- Taxable amount of 1000

Because the 1000 taxable amount is less than the 8000 minimum at which the tax is calculated, the system does not calculate the withholding. The system stores these values in the F76A0456 table:

- G/L Date - YR (data item DGY) = 05
- G/L Date - MO (data item DGM) = 08
- Taxable Amount (data item ATXA) = 1000
- Aging Amount 1 (data item AG1) = 0

The second payment consists of:

- Gross amount of 4420
- Tax of 420
- Taxable amount of 4000

The system adds the stored taxable amount from the F76A0456 table to the taxable amount of the second payment to determine whether taxes must be paid. Because the total of the taxable amount of the first payment (1000) plus the taxable amount of the second payment (4000) is less than the 8000 minimum, the system does not perform the tax calculations.

The system updates these values in the F76B0456 table:

- G/L Date - YR (data item DGY) = 05
- G/L Date - MO (data item DGM) = 08
- Taxable Amount (data item ATXA) = 5000
- Aging Amount 1 (data item AG1) = 0

The third payment consists of:

- Gross amount of 10220
- Tax of 1220
- Taxable amount of 9000

The system adds the stored taxable amount from the F76A0456 table to the taxable amount of the third payment to determine whether taxes must be paid. Because the stored amount (5000) plus the taxable amount for the third payment (9000) exceeds the 8000 minimum, the system calculates the tax:

$(5000 + 9000) \times \text{tax rate (6 percent for this example)} = 840 \text{ tax.}$

The system updates these values in the F76A0456 table:

- G/L Date - YR (data item DGY) = 05
- G/L Date - MO (data item DGM) = 08
- Taxable Amount (data item ATXA) = 14000
- Aging Amount 1 (data item AG1) = 840

The fourth payment consists of:

- Gross amount of 1210
- Tax of 210
- Taxable amount of 1000

The system adds the stored taxable amount from the F76A0456 table to the taxable amount of the fourth payment to determine whether taxes must be paid. Because the stored amount (14000) plus the taxable amount for the fourth payment (1000) exceeds the 8000 minimum, the system calculates the tax by making the calculation on the new total, then subtracting the amount of tax already withheld:

$(14000 + 1000) \times \text{tax rate (6 percent for this example)} = 900.$

$900 - 840$ (accumulated withholding) = 60 withholding for payment four.

The system updates these values in the F76B0456 table:

- G/L Date - YR (data item DGY) = 05
- G/L Date - MO (data item DGM) = 08
- Taxable Amount (data item ATXA) = 15000
- Aging Amount 1 (data item AG1) = 900

Form Used to Generate the Security Services Withholding Certificate

| Form Name | FormID | Navigation | Usage |
|--------------------------|---------|--|---|
| Work With Payment Groups | W04571A | Payment Processing (G0413), Work With Payment Groups Select Update from the Row menu. | Generate the Security Services Withholding certificate when you update the payment group. |

Processing Withholding for General SUSS Taxes for Argentina

This section provides an overview of withholding for general SUSS taxes and discusses how to:

- Generate the general SUSS services withholding certificate.
- Generate the flat file for general SUSS withholding for submission to AFIP.
- Set processing options for TXT File - SUSS and Contract WH Withholding (R76A4002).
- Generate the Withholdings Ledger (R760465A).
- Set processing options for Withholdings Ledger (R760465A).

Understanding Withholding for General SUSS Services

The statutory regulation 1784/04 requires that companies withhold general SUSS taxes when the supplier is an employer and is a registered VAT contributor. SUSS taxes are withheld when the calculated withholding on a payment exceeds the threshold that is set by the government. For example, if the threshold on a payment is 40 pesos, and the amount of the calculated tax is 50 pesos, the 50 pesos are withheld. If the calculated tax is 30 pesos, the tax will not be withheld because it is less than the 40 peso amount that is established as the minimum tax due.

The regulation does not require companies to withhold taxes when payments for general SUSS services is made in a nonmonetary format. For example, if the supplier receives goods in exchange for SUSS services, no withholding taxes are calculated on the value of the goods received.

The system calculates the withholding tax by subtracting the VAT and discount amounts from the gross amount. If the accumulated adjusted taxable amount for a month exceeds the threshold, the system applies the tax.

When you use automatic payment processing to update payments, the system runs the General SUSS Withholding Certificate program (R760458A) to issue a withholding certificate to each supplier for each payment for which you withhold taxes for general SUSS services. The certificate includes:

- Issue date and next number.
- Name, address, and fiscal ID (CUIT) of the withholding agent.
- Payment number.
- Name, address, denomination, and fiscal ID (CUIT) of the supplier.
- Legal number and legal document type for the document that originated the withholding.
- Amount on which the withholding was calculated.
- Withholding concept description from AFIP.
- Withholding amount.
- Signature lines for the signature of the withholding agent.

Use the General SUSS Withholding Certificate program to reprint the certificate as necessary.

Process for Withholding Taxes for General SUSS Services

To process withholding taxes for general SUSS services:

- Process payments using automatic payment processing or manual payments.

When you update payments using the automatic payment process, the system runs the General S.U.S.S Services Withholding Certificate program (R760458A) to issue a withholding certificate to each supplier.

- Use the TXT File - SUSS and Contract WH Withholding program (R76A4002) to generate a flat file that you send to the government to report the taxes that you withheld from suppliers.
- Run version ZJDE0009 of the Withholdings Ledger program (R760465A) to generate a report listing the social security taxes withheld

Voiding Payments

If you void or delete a manual or automatic payment, the system adds the voided records to the F760414A table.

Note. The Delete Unposted Automatic Payments and Delete Unposted Manual Payments processing options in the A/P Manual Payments program (P0413M) are disabled for Argentina payments.

Payments to UTEs

If payments are made to members of a UTE, the withholding is calculated for each member and a separate withholding certificate is issued to each member. If the members of the UTE are not identified, the system prints only one certificate.

Flat File for General SUSS Services Reporting

You run the TXT File - SUSS and Contract WH Withholding (R76A4002) program to generate a flat file to report withholdings of general SUSS services taxes. You send the flat file to the government.

The flat file includes:

| Record Name | Description | Position |
|---------------------------|---|----------|
| Withholding Legal Concept | The AFIP legal code. | 01–03 |
| Fiscal ID of Supplier | The CUIT of the supplier. | 04–14 |
| Excess Amount | The adjustment amount of an amount already withheld. | 15–25 |
| Withholding Date | The date that the tax was withheld. | 26–35 |
| Withholding Amount | The amount that was withheld. | 36–46 |
| Legal Certificate Amount | The legal number of the document for the withholding. | 47–60 |

When the system generates the flat file:

- Amounts are reported in domestic currency.
- Only nonvoided documents for the period are processed.
- Overpayments are reported in the Excess Amount record.
- The system processes records with document types of:
 - \$A (eventuals withholding)
 - \$L (cleaning services withholding)
 - \$P (security withholding)
 - \$S (contract withholding)
 - \$Q (SUSS withholding)
- The legal concept is obtained from the Contract Withholding Percentage (F760405A) table for contractor withholding.
- The legal concept is obtained from the Eventual Services Withholding (F760410A) table for eventual services withholding.
- The withholding date is equal to or less than the declaration period, and is always the date of the original invoice.
- A report listing the withholdings is also produced.

Form Used to Generate the General SUSS Withholding Certificate

| Form Name | FormID | Navigation | Usage |
|--------------------------|---------|---|--|
| Work With Payment Groups | W04571A | Select Automatic Payment Processing (G0413), Work With Payment Groups Select Update from the Row menu. | Generate the general SUSS withholding certificate when you update the payment group. |

Generating the General SUSS Services Withholding Certificate

Access the Work With Payment Groups form. Select a payment and select Update from the Row menu.

Generating the Flat File for SUSS Withholding

Select Monthly Records (G76A121), TXT File - SUSS and Contract WH Withholding (R76A4002).

Setting Processing Options for TXT File - SUSS and Contract WH Withholding (R76A4002)

Processing options enable you to specify the default processing for programs and reports.

Process

Date From Enter the beginning of the date range of the records processed.

Date To Enter the end of the date range of the records processed.

Process Mode Enter 1 to generate the flat file in final mode and update the F76A50 table.

Generating the Withholdings Ledger (R760465A)

Select Monthly Records (G76A121), Withholdings Ledger.

Select Version ZJDE0009 to process records for SUSS withholdings.

Setting Processing Options for Withholdings Ledger (R760465A)

Processing options enable you to specify the default processing for programs and reports. For reports, processing options enable you to specify the information that appears on reports.

General

Date From Enter the beginning of the date range of the records processed.

Date To Enter the end of the date range of the records processed.

Process Setup

Flag Process Enter 1 to print the last period. Leave this processing option blank to process actual accounting periods.

Requesting the Fiscal Situation for Suppliers for Argentina

This section provides an overview of the Generate CUIT Information for AFIP program and discusses how to:

- Run the Generate CUIT Information for AFIP program.
- Set processing options for Generate CUIT Information for AFIP (R76A8090).

Understanding the Generate CUIT Information for AFIP Program

Every month, the AFIP publishes the fiscal situation of each taxpayer on the internet. It does this by using a classification value from 1 to 4.

To request fiscal information about their suppliers, companies must send a text file with the CUIT (clave única de identificación tributaria) number of the company that requests the information, as well as the CUIT number of the suppliers for whom the company wants to find the classification, to the AFIP.

Use the Generate CUIT Information for AFIP program to generate the text file that you send to AFIP. The system writes records to the F007100 and F007101 tables and names the text file RG726_CUIT.txt. Use the Text File Processor program (P007101) to extract the file to send to the AFIP.

Note. You must create a folder called *Export* in the directory in which your system was installed. The name of the subdirectory under the installation directory is determined during installation, and might or might not correspond to the name of the package that was installed. The system saves the RG726_CUIT.txt file in the Export folder.

You must upload the RG726_CUIT.txt file to the AFIP internet site.

Note. You should set the data selection to include all suppliers.

When you send AFIP a list of the suppliers for which you want information, you must also include the names of responsible unregistered parties and single and VAT-exempt taxpayers because the system verifies that information exists for all of the suppliers that are selected, regardless of their tax condition (with the exception of foreign suppliers).

The Generate CUIT Information for AFIP program does not generate a printed report.

Running the Generate CUIT Information for AFIP Program

Select General Resolution 726 (G76A726), Generate CUIT Information for AFIP.

Setting Processing Options for Generate CUIT Information for AFIP (R76A8090)

Processing options enable you to specify the default processing for programs and reports.

General

Month Enter the month for which you process records.

Year (4 digits) Enter the year for which you process records.

Company Fiscal ID

Enter the identification code that is required by various tax authorities. This can be a social security number, federal or state corporate tax ID, sales tax number, and so on. The system verifies the number and prints the separators in their correct format, according to the value of TAXC (Person/Corporation Code). If no value exists for TAXC, the system uses the corporate entity.

Uploading AFIP Information to the Accounts Payable System for Argentina

This section provides an overview of how to upload AFIP information to the JD Edwards EnterpriseOne Accounts Payable system, lists a prerequisite, and discusses how to:

- Convert AFIP information to JD Edwards EnterpriseOne Accounts Payable information.
- Modify AFIP information.

Understanding How to Upload AFIP Information to the Accounts Payable System

After receiving a request for information, AFIP sends a text file with the classification of suppliers, the month and date when the information is current, and other data.

You use the Convert AFIP File to EnterpriseOne program (P76A8010) to upload the information from the AFIP file to the Supplier Information RG 726 - 04 table (F76A8011). In addition to the required information, the AFIP text file includes complementary information that the system stores in the F76A8011 table for future use.

Important! The AFIP information that you receive might or might not include the corporate name of the supplier. To process it in JD Edwards EnterpriseOne software, you must not include the supplier's corporate name.

This conversion process can be run as many times as needed for the same month and year.

If you request information from AFIP more than once, you should inquire only about the group of excluded suppliers.

The conversion process does not generate a printed report.

Note. The F76A8011 table stores a history of AFIP answers for all of the months that are queried.

Modifying AFIP Information

You can use the Work with AFIP Information program (P76A8011) to modify the AFIP-provided information for individual suppliers. You can also add supplier information.

You should modify AFIP information only when some information must be set up for a specific supplier that was not included in the previous process. For example, if you set up a supplier after requesting information from AFIP for that month, you can perform the setup for that supplier only with the data that is provided.

Prerequisite

Upload the text file that you receive from AFIP to the AS400 F76A8010 table. The system converts the information from this table to the F76A8011 table.

Forms Used to Upload AFIP Information to the Accounts Payable System

| Form Name | FormID | Navigation | Usage |
|----------------------------------|-----------|--|---|
| Convert AFIP File to OW - RG 726 | W76A8010A | General Resolution 726 (G76A726), Convert AFIP File to EnterpriseOne | Upload the information from the AFIP file to the Supplier Information RG 726- 04 table in the JD Edwards EnterpriseOne Accounts Payable system. |
| Add Information AFIP RG726 form | W76A8011A | General Resolution 726 (G76A726), Work with AFIP Information On the Work With AFIP Information RG 726 form, click Select. | Modify the company's tax ID, the supplier's tax ID, or both. |

Converting AFIP Information to JD Edwards EnterpriseOne Accounts Payable Information

Access the Convert AFIP File to OW - RG 726 form.

Click Convertir (convert) to convert the information to the JD Edwards EnterpriseOne Accounts Payable system.

Nombre de Archivo Enter the name of the flat file. This includes the directory path where the flat file exists.

Modifying AFIP Information

Access the Add Information AFIP RG726 form.

Supplier Type RG615 Enter the type of supplier, classified according to the information that the AFIP provides using the internet on a monthly basis. This classification corresponds to the supplier types that are specified in RG 726 and RG 615. Values are stored in the Supplier Type UDC table (76A/A4).

Correcting Withholdings for Argentina

This section provides an overview of withholding correction and discusses how to enter a correction.

Understanding Withholding Correction

Withholding taxes for Argentina are calculated during the automatic payment process. You can adjust faulty tax withholding calculations that result from problems with the setup.

You can correct gross income, VAT, profit, eventuals, and contract withholdings.

Forms Used to Correct Withholdings

| Form Name | FormID | Navigation | Usage |
|---|-----------|---|--|
| Enter Voucher - Payment Information | W0411A | Supplier & Voucher Entry (G0411), Standard Voucher Entry Click Add on the Supplier Ledger Inquiry form. | Enter voucher information for the correction. |
| Voucher Additional Information - Revision | W760411AD | Click OK on the Enter Voucher - Payment Information form. | Enter additional information for the correction. On the General tab, complete the following fields: AFIP Transaction Document Type Invoice Group Voucher Pages On the Withholdings tab, enter the withholding concept that is needed to report correctly in the SICORE report, specifying No Withholdings in all other withholding code fields. |
| G/L Distribution | W0411K | Click OK on the Voucher Additional Information - Revision form. | Enter the withholding amount to be deposited. |
| Rectification, | W760411AD | Additional Features - Set up (G76A116), F0411 Tag File Maintenance - A On the Work With Voucher Additional Information form, select Rectification from the Row menu. | Enter the document number and suffix from the original voucher. |

Entering a Correction

Access the Voucher Additional Information - Revision form.

Tax Ex (tax explanation) Enter a code that exists in the Tax Explanation Codes UDC table (00/EX) to identify the algorithm that the system uses to calculate tax and GL distribution amounts. The system uses the tax explanation code in conjunction with the tax

| | |
|---------------------------------------|---|
| | rate area and tax rules to determine how the tax is calculated. Each transaction pay item can be defined with a different tax explanation code. |
| Tax Rate/Area | Enter the code that identifies a tax or geographic area that has common tax rates and tax authorities. The system validates the code that you enter against the F4008 table. The system uses the tax rate area in conjunction with the tax explanation code and tax rules to calculate tax and GL distribution amounts when you create an invoice or voucher. Enter a tax explanation code of <i>E</i> and the tax area for nontaxable concepts. |
| AFIP Transaction Document Type | Enter the legal document type that is given by DGI (<i>Direccion General Impositiv</i>) for documents. |
| Voucher Pages | Specify the number of pages allowed for the voucher. |

Reprinting Certificates for Argentina

This section provides an overview of certificate reprinting and discusses how to:

- Run the appropriate withholding (WH) certificate program.
- Set data selection for the WH certificate report.
- Set Processing Options for VAT WH Certificate (R7604521A) and Profit WH Certificate (R7604531A).

Understanding Certificate Reprinting

You can use any of the following programs to reprint certificates:

- Gross Income WH Certificate (R76A04511A).
- VAT WH Certificate (R7604521A).
- Profit WH Certificate (R7604531A).
- S.U.S.S. WH Certificate (R7604541A).
- Contract WH Certificate (R7604851A).

The following programs have a processing option that enables you to specify the issue place that the program uses to obtain the next numbers for the VAT and profit withholdings:

- VAT WH Certificate (R7604521A).
- Profit WH Certificate (R7604531A).

For withholdings that do not have a legal number (such as manual payment with voucher match withholdings), you must use this processing option to specify the issue place to use to generate legal numbers.

If you specify an issue place that has not been properly set up in the Certificate Next Number RG 738 (A/P) program (P76A8080) or leave the processing option blank, the legal number is not generated.

Running the WH Certificate Reports

Select Monthly Reports (G76A121).

Select one of the following WH Certificate reports:

- Gross Income WH Certificate.
- VAT WH Certificate.
- Profit WH Certificate.
- S.U.S.S. WH Certificate.
- Contract WH Certificate.

Setting Data Selection for the WH Certificate Report

Specify the document type that corresponds to the withholding type in the data selection.

The following example shows a possible data selection for a VAT WH Certificate:

| Operator | Left Operand | Comparison | Right Operand |
|----------|--|-----------------|---------------|
| Where | BC Document Type - Matching (F0414) | is not equal to | "PO" |
| And | BC Document Type - Matching (F0414) | is not equal to | "PG" |
| And | BC Document Type (F0414) | is equal to | "\$I" |
| And | BC Document (Voucher, Invoice, and so on.) | is equal to | "1235" |

Setting Processing Options for VAT WH Certificate (R7604521A) and Profit WH Certificate (R7604531A)

Processing options enable you to specify the default processing for programs and reports.

RG 738/99

RG 738/99

Enter the issue place for which you set up the next numbering sequence for the VAT and profit withholding certificates. If you leave this processing option blank, the system does not use the next numbering schemes.

Running the Profit Accrual Integrity Test for Argentina

This section provides an overview of the profit accrual integrity test and discusses how to:

- Run the Profit Accumulate Integrity Test-Step I program.
- Set data selection for Profit Accumulate Integrity Test-Step I.
- Set processing options for Profit Accumulate Integrity Test-Step I (R760455A).
- Run the Profit Accumulate Integrity Test-Step II program.
- Set processing options for Profit Accumulate Integrity Test-Step II (R760456A).

Understanding the Profit Accrual Integrity Test

To calculate the amount withheld, the company that makes the payment must add the taxable base amounts that correspond to the amount that is paid to that supplier during that month, subtract the minimum, and then calculate the appropriate percentage.

The system records profit accruals in the Profit Withholding - Payments Done table (F760406A). Each time that you calculate profit withholdings, the system accesses this table by using the company, supplier, concept, and payment month to obtain the sum of the taxable base amounts and withholdings for the previous payments. After you calculate and generate the withholdings, the system updates the table, adding the amount withheld to the sum of withholdings for the month (AG1 field) and the taxable base amount for the payment to the sum of taxable base amounts for the month (ATXA field).

Performing Step I of the Profit Accrual Integrity Test

The Profit Accumulate Integrity Test-Step I report (R760455A) calculates the sum of all of the payments that are made in a given period of time from the F0411 table and the Accounts Payable Matching Document Detail table (F0414), and verifies that the accrual of profit withholdings matches the total withheld for each supplier in the F760406A table. The program produces a printed report if a difference exists.

You use the processing options to specify whether the system updates table F760406A.

The program selects data based on the supplier's current account.

Performing Step II of the Profit Accrual Integrity Test

The Profit Accumulate Integrity Test-Step II report (R760456A) verifies that the total amount withheld for each provider set up in the F760406A table matches at least one payment made in a given period of time. It verifies that the data is consistent.

You use the processing options to specify whether the system purges all of the records from the F760406A table. If you leave the processing option blank, the table is not purged and records with errors are not deleted.

The Profit Accumulate Integrity Test-Step II program produces a report of records that have errors.

Running the Profit Accumulate Integrity Test-Step I Report

Select Additional Features - Set up (G76A116), Profit Accumulate Integrity Test-Step I.

Setting Data Selection for Profit Accumulate Integrity Test-Step I

The data selection for the version that is created must include, at a minimum, the date range in which payment was made (RMVLDT). You can add to or modify the data selection.

Setting Processing Options for Profit Accumulate Integrity Test-Step I (R760455A)

Processing options enable you to specify the default processing for programs and reports.

Process

Update

Enter *I* to update records in the F7604 table.

Running the Profit Accumulate Integrity Test-Step II Report

Select Additional Features - Set up (G76A116), Profit Accumulate Integrity Test-Step II.

Setting Processing Options for Profit Accumulate Integrity Test-Step II (R760456A)

Processing options enable you to specify the default processing for programs and reports.

Process

Purge

Enter *I* to delete records from the F760406A table.

CHAPTER 10

(ARG) Working With Accounts Receivable Processing

This chapter provides an overview of invoice processing for Argentina and discusses how to:

- Process invoices with legal numbers.
- Print the perception report.
- Process batch invoices.
- Enter manual receipts.
- Review summarized receipts.
- Automatically create receipt records.
- Work with delinquency fees.
- Purge invoice transactions.

Understanding Invoice Processing for Argentina

In addition to the standard JD Edwards EnterpriseOne Accounts Receivable and JD Edwards EnterpriseOne Sales Order Management system processes for invoices, you use Argentina-specific processes for certain types of invoices.

Argentine Invoices

You can print one or more copies of previously generated invoices in national as well as foreign currency.

Printing of the copies is in accordance with the legal requirements that are stipulated in RG1415. The company, customer, JD Edwards EnterpriseOne internal number, legal number, voucher letter, and tax information must be printed.

After invoices have been printed, you cannot modify them.

For companies that are set up as autoprinter companies, the system prints the AFIP legal document number on all legal documents such as invoices, credit notes, debit notes, shipment notes, and so on when you run the Credit Invoice Receipt Print and Print Invoice/Shipment Note programs. The system also prints the AFIP legal number when autoprinter companies reprint legal documents. For legal documents with AFIP document types of A, B, E, R, and M, the system prints the text “Code No” followed by the document type on each page of the legal document.

Considerations for Printing Taxes on Invoices

When taxable amounts are included on the invoice, the Print Tax Amounts processing option on the Invoice Print program (R03B505) is not taken into consideration.

If this processing option is blank and was taken into consideration, the system would incorrectly calculate an invoice of 1000.00 with 210.00 tax as follows:

- The invoice amount is 1210.00.
- The tax amount is 210.00.
- Adding the invoice and tax amounts produces a total of 1420.00

With the processing option disregarded, the system correctly calculates an invoice of 1000.00 with 210.00 tax as follows, regardless of the processing option setup:

- The invoice amount is 1000.00.
- The tax amount is 210.00.
- Adding the invoice and tax amounts produces a total of 1210.00.

Recurring Invoices

The system saves information about recurring invoices with taxes in the Invoice Total - ARG table (F76A09) and the Taxes - Tax Amount by Invoice Suffix table (F76A19), just as it does for standard processing of invoices.

Processing Invoices with Legal Numbers for Argentina

This section provides an overview of invoices with legal numbers and related credit notes; lists prerequisites, and discusses how to:

- Set processing options for PO - Invoice Entry (P03B11) - ARG (P76A03B1).
- Enter invoices with automatic legal numbers.
- Enter invoices with manual legal numbers.
- Enter related credit notes.

Understanding Invoices with Legal Numbers

When you enter an invoice, the system assigns an internal number and a legal number to the invoice. Legal numbers can be generated automatically or manually.

Localized invoice information is stored in these tables:

- Invoice Total - ARG (F76A09)
- Taxes - Tax Amount by Invoice Suffix (F76A19)

The legal number is also stored in the Reference field (VR01) of the Customer Ledger table (F03B11).

Note. After invoices have been entered, they cannot be voided unless they are posted and reclassified.

For self-withholding to occur, you must run the Self Withholding per Receipt program (R76A96).

Understanding Related Credit Notes

Processing related credit notes lets you link a credit note to the original invoice, which makes it possible to track the current account. When you link a credit note to an original invoice, you must specify the internal document number or the legal document number from the original invoice.

The internal document number from the original invoices is stored in fields RPODOC, RPODCT, RPOKCO, and RPOSFY of the F03B11 table.

Prerequisites

Before you complete the tasks in this section:

- Review the steps for entering a standard invoice.
- Set up relationships between the base system and Argentina-specific document type and create legal next numbers.

See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Legal Numbering for Argentina, page 80.

- Set the Legal Number processing options on the PO Invoice Entry program (P76A03B1) to control whether legal numbers are generated automatically or manually.
- Set the Invoice related to NC/ND processing options on the PO - Invoice Entry (P03B11) - ARG - 03B program (P76A03B1) to control whether the NC/ND Related to Invoice form is displayed during invoice entry. If you are entering related credit notes, set the processing option to display the NC/ND Related to Invoice form.
- Set up a relationship between credit notes and invoices for the appropriate tax code to determine whether the same taxes can be calculated for the credit note as for the original invoice.

See *JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide*, “(ARG) Setting Up the System for Argentinian Taxes,” Setting Up Tax Values.

Forms Used to Process Invoices with Legal Numbers

| Form Name | FormID | Navigation | Usage |
|-----------------------------------|-----------|--|---|
| Work with Customer Ledger Inquiry | W03B2002A | Customer Invoice Entry (G03B11), Standard Invoice Entry. | Locate, review, and delete invoices. |
| Standard Invoice Entry | W03B11A | Click Add on the Work with Customer Ledger Inquiry form. | Add and revise invoices. |
| Invoice Number Entry | W76A0302A | <ul style="list-style-type: none"> On the Standard Invoice Entry form, complete the fields to enter a standard invoice and then click OK. <p>The system displays the Invoice Number Entry form only if you have set up user preferences with a Localization Country code of <i>AR</i> (Argentina).</p> <ul style="list-style-type: none"> Or, click OK on the NC/ND Related to Invoice form. | Enter invoice legal numbers. |
| G/L Distribution | W03B11C | Click OK on the Invoice Number Entry form. | Distribute the invoice amount to the G/L accounts. |
| NC/ND Related to Invoice | W76A0180A | <p>On the Standard Invoice Entry form, complete the fields to enter a standard invoice, specifying a negative amount, and click OK.</p> <p>If the processing options are set to relate credit notes to invoices, the system displays the NC/ND Related to Invoice form.</p> | Assign the credit note to the original invoice by using the internal number or the legal number of the invoice. |

Setting Processing Options for PO - Invoice Entry (P03B11) - ARG (P76A03B1)

Processing options enable you to specify the default processing for programs and reports.

Legal Number

These processing options are used to set up legal numbering for invoice entry.

| | |
|--------------------------------|--|
| Issue Place | Specify the issue place where invoices are printed. |
| Manual Assignment | Specify whether the system assigns legal numbers automatically, based on the legal number setup, or if the user assigns it manually. |
| Legal Number Duplicated | Specify whether the system generates documents with duplicate legal numbers. |

NC/ND Related

This processing option is used to specify whether documents related to NC/ND are entered.

Invoice related to NC/ND Specify whether the system generates documents related to NC/ND.

Credit Invoice

Version This processing option is obsolete.

RG100

Use this processing option to specify whether the system generates invoices under General Resolution 100.

RG100 (General Resolution 100) Specify whether the documents that the system generates are related to General Resolution 100.

Entering Invoices with Automatic Legal Numbers

Access the Invoice Number Entry form.

To enter invoices with automatic legal numbers:

1. (Optional) On Invoice Number Entry, change the value in the Auto Profit Withholding Concept field and then click OK.
The system retrieves the default value for this field from the A/B Withholding Information - Revision form.
2. On the G/L Distribution form, complete the Account Number and Amount fields in the detail area for each G/L distribution and then click OK.
The system displays the Invoice Legal Number form with the legal number that was automatically assigned.
3. On Invoice Legal Number, click OK.

Entering Invoices with Manual Legal Numbers

Access the Invoice Number Entry form.

To enter invoices with manual legal numbers:

1. On Invoice Number Entry, complete the Legal Number and Auto Profit Withholding Concept fields and click OK.
The system retrieves the default value for the Auto Profit Withholding Concept from the A/B Withholding Information - Revision form. You can change this value when you enter invoices if necessary.
2. On the G/L Distribution form, complete the Account Number and Amount fields in the detail area for each G/L distribution and click OK.

Entering Related Credit Notes

Access the NC/ND Related to Invoice form.

To enter related credit notes:

1. To relate the credit note to the original invoice, select either the JDE Internal Number option or the Legal Number option and complete the related fields, then click OK.

The system displays the Invoice Number Entry form.

2. On Invoice Number Entry, if the processing options are set for manual entry of legal numbers, complete the Legal Number field.
3. (Optional) Change the value in the Auto Profit Withholding Concept field if necessary.
4. Click OK.
5. On the G/L Distribution form, complete the Account Number and Amount fields in the detail area for each G/L distribution and click OK.

Printing the Perception Report for Argentina

This section provides an overview of the Perception Report, lists prerequisites, and discusses how to set processing options for Perception Report (R76A8050).

Understanding the Printing of Perception Certificates

The system runs the Perception Report program (R76A8050) when you run one of these programs:

- PO - Invoice Print A/R (R76A03B5).
- PO Invoice/Shipment Note Print (R76A565).

You must set up corresponding versions of the Perception Report program and the PO Invoice Print and PO Invoice/Shipment Note Print programs. If you do not set up corresponding versions, the system uses version ZJDE0001 of the Perception Report when you run the PO Invoice Print or PO Invoice/Shipment Note Print program.

The Perception Report program prints perception certificates without a legal number when you print the invoices that correspond to the perception certificates.

Prerequisites

Before you complete the task in this section:

- Set up these UDCs:
 - ARG- Concept Code (76A/CR).
 - ARG-Concept Code (76A/CI).
 - Perception Code SICORE (76A/PE).
- Complete the Perception tab of the processing options for the PO - Invoice Print A/R program (R76A03B5) or the PO Invoice/Shipment Note Print program (R76A565).

Setting Processing Options for Perception Report (R76A8050)

Processing options enable you to specify the default processing for programs and reports.

General

This processing option specifies the customer number of the invoice subscription.

**Suscriptor Address
Number**

Specify the customer number of the invoice subscription.

Processing Batch Invoices for Argentina

This section provides an overview of batch invoice processing for Argentina and discusses how to set processing options for PO - Invoice Batch Processor - ARG (R76A03BZ).

Understanding Invoice Batches for Argentina

In addition to transferring information from the F03B11Z1 and F0911Z1 tables to the F03B11 and F0911 tables, the Invoice Batch Processor program transfers information from the Taxes - Tax Amounts by Invoice Suffix Batch Entry table (F76A19Z1) to the Taxes - Tax Amount by Invoice Suffix table (F76A19).

When you create invoices using an external system, you can transfer them to the JD Edwards EnterpriseOne Accounts Receivable system using the Batch Invoice Processor program (R03B11Z1A). Before you perform batch invoice processing, you need to write a custom program to copy the data from the external system to these tables:

- Batch Invoices (F03B11Z1).
- Journal Entry Transactions - Batch File (F0911Z1).

You must also copy data to the Taxes - Tax Amounts by Invoice Suffix Batch Entry table (F76A19Z1).

The F76A19Z1 table can be populated manually, in which case the batch process does not verify that the data (such as tax minimums, tax code validation, and so on) matches the data entered in the F03B11Z1 table. However, the batch process does verify that a tax area exists.

If you do not populate the F76A19Z1 table manually, the Batch Invoice Processor program obtains information from the country-specific customer information and then processes the information from the F03B11Z1, F0911Z1, and F76A19Z1 tables. The program then uploads that data to the F03B11, F0911, and F76A19 tables; and then creates a record for each invoice in the Invoice Total - ARG table (F76A09).

To process invoices batches for Argentina, you must set the processing options on the PO - Invoice Batch Processor - ARG program (R76A03BZ).

See Also

JD Edwards EnterpriseOne Accounts Receivable 8.12 Implementation Guide, “Processing Batch Invoices”

Setting Processing Options for PO - Invoice Batch Processor - ARG (R76A03BZ)

Processing options enable you to specify the default processing for programs and reports.

General

These processing options specify how the system processes batch invoices.

Issue Place

Specify the place where the invoice or the shipment note is printed.

Version

This processing option is obsolete.

Legal Number Duplicated Specify whether the system allows duplicate legal numbers. Values are:
Blank: Do not allow duplicate legal numbers.
I: Allow duplicate legal numbers.

RG 100

This processing option specifies whether invoices correspond to RG 100 (General Resolution).

RG 100 Invoices Specify whether the invoices that are created correspond to RG 100. Values are:
Blank: Invoices do not correspond to RG 100.
I: Invoices correspond to RG 100.

Minimum Control

This processing option specifies whether a minimum control for taxes is activated.

Control Minimum Specify whether to control a minimum amount if taxes are informed in the F76A19Z1 table. Values are:
Blank: Control minimum amounts.
I: Do not control minimum amounts.

Entering Manual Receipts for Argentina

This section provides an overview of manual receipts and discusses how to:

- Set processing options for PO Receipt Entry (P76A103D).
- Enter manual receipts for Argentina.

See Also

JD Edwards EnterpriseOne Accounts Receivable 8.12 Implementation Guide, “Processing Manual Receipts,”
Entering Standard Receipts

Understanding Manual Receipts

When you enter manual receipts for Argentina, you can manually enter the receipt reference number or have the system assign it. The receipt reference number is stored in the Reference field (RREF) of the F03B13 table.

You use the processing options for the PO Receipt Entry program (P76A103D) to control whether the receipt reference number is entered manually or automatically.

Forms Used to Enter Manual Receipts

| Form Name | FormID | Navigation | Usage |
|------------------------|-----------|--|--|
| Receipt Entry | W03B102E | Manual Receipts Processing (G03B12), Standard Receipts Entry. Click Add on the Work with Customer Receipts Inquiry form. | Enter standard receipts. |
| Additional Information | W03B102I | On the Receipt Entry form, select Additional Info from the Form menu. | Assign a G/L offset other than UC to an unapplied receipt. |
| Receipt Information | W76A103DB | On the Receipt Entry form, complete the fields to enter a standard receipt and then click OK. The system displays the Receipt Information form only if you have set up user preferences with a Localization Country code of AR (Argentina). | Enter the receipt reference number or review the system-assigned receipt reference number. |

Setting Processing Options for PO Receipt Entry (P76A103D)

Processing options enable you to specify the default processing for programs and reports.

General

| | |
|--|---|
| Receipt Number Duplication | Specify whether the system verifies receipt number duplication by company. |
| Receipt Number Display | Specify whether the system displays the receipt number. |
| Receipt Values Protection | Specify whether receipt values are protected if the receipt has been printed. |
| Automatic Receipt Number Assignment | Specify whether the system assigns receipt number automatically. |

Entering Manual Receipts for Argentina

Access the Receipt Entry form.

To enter manual receipts for Argentina:

1. On Receipt Entry, complete the fields to enter a standard receipt and click OK.
The system displays the Receipt Information form.
2. If the processing options are set for manual entry of the receipt reference number, complete the Receipt Number field.

If the processing options are set for automatic entry of the receipt reference number, the system completes the Receipt Reference field.

- Click OK.

Receipt Number

Enter a number to use as secondary reference on the receipt.

Reviewing Summarized Current Account Information for Argentina

This section provides an overview of summarized account information and discusses how to:

- Review summarized account information.
- Review the results of receipt entry.

Understanding Summarized Current Account Information

The system summarizes all of the documents that are associated with a receipt by document type. For example, if you have two R1 documents and two RU documents with a specific Reference number, the system lists each of these four documents if the Receipt Summarization option is cleared. If the Receipt Summarization option is selected, the system lists one line with the total of the two R1 documents and another line with the total of the two RU documents.

JD Edwards EnterpriseOne Accounts Receivable 8.12 Implementation Guide, “Working with Customer Ledger Information”

Forms Used to Review Account Information

| Form Name | FormID | Navigation | Usage |
|-----------------------------------|-----------|--|---|
| Work with Customer Ledger Inquiry | W03B2002A | Customer Invoice Entry (G03B11), Customer Ledger Inquiry | Locate invoices. |
| Work with Customer Ledger Inquiry | W76A2002A | On the Work with Customer Ledger Inquiry form, select Regional Info from the Form menu. You must have the Localization Country Code in user preferences set to <i>AR</i> (Argentina) to access this form. | Review the sum of all the A/R Drafts (document type R1) and Unapplied Receipts (document type RU) that have the same receipt number. The receipt number is saved in the Reference field (RREF) of Receipts Header table (F03B13). |
| Receipt Details | W76A2002E | On the Work with Customer Ledger Inquiry form, select a paid invoice record and then select Receipt/Draft Dtls (receipt/draft details) from the Row menu. | Verify that you applied a receipt to the correct invoices or view the current open amount for the customer. |

Reviewing the Summarized Account Information

Access the Work with Customer Ledger Inquiry form.

To review summarized current account information, select the Receipt Summarization option and then click Find.

Reviewing the Results of Receipt Entry

Access the Receipt Detail form.

If more than one receipt is applied to a single invoice (for partial payments), the system displays all receipts.

Creating Receipt Records Automatically for Argentina

This section provides an overview of uploading automatic receipts and discusses how to:

- Set processing options for PO - Update Receipt Register from Electronic Input (R76A551D).
- Review and revise receipt information.

See Also

JD Edwards EnterpriseOne Accounts Receivable 8.12 Implementation Guide, “Processing Automatic Receipts,” Creating Receipt Records Automatically

Understanding How to Upload Automatic Receipts for Argentina

In addition to uploading information to the F03B13Z1 table, you must upload country-specific information about the receipts to the Receipt Header Argentine Tag File Batch Input table (F76A60Z1). To do this upload, create identically named versions of the Update Receipts Header program (R03B551) and the PO - Update Receipt Register from Electronic Input program (R76A551D).

Forms Used to Review and Revise Receipt Information

| Form Name | FormID | Navigation | Usage |
|-------------------------------------|-----------|---|---|
| Work with Electronic Receipts Input | W03B121A | Automated Receipts Processing (G03B13), Review Electronic Receipts. | Locate and delete electronic receipt records in the F03B13Z1 table. |
| Automatic Receipt Entry - ARG | W76A03B0A | On the Work With Electronic Receipts Input form, select a receipt in the detail area, and then select Regional Info from the Row menu. You must have the Localization Country Code in user preferences set to <i>AR</i> (Argentina) to access this form. | Review and revise country-specific receipt information for Argentina. |

Setting Processing Options for PO - Update Receipt Register from Electronic Input (R76A551D)

Processing options enable you to specify the default processing for programs and reports.

General

| | |
|------------------------------|---|
| Duplicated by Company | Specify whether the system allows you to enter duplicate receipt numbers by company. Values are: Blank: Do not allow duplicate receipt numbers by company. 1: Allow duplicate receipt numbers by company. |
| Automatic Assignment | Specify whether the system performs automatic assignment. |
| Document Type | Specify the document type for receipts. |

Reviewing and Revising Receipt Information

Access the Automatic Receipt Entry - ARG form.

Working With Delinquency Fees in Argentina

This section provides an overview of delinquency fees for Argentina and discusses how to set the processing options for PO Interest Invoice (R76A03B2).

See Also

JD Edwards EnterpriseOne Accounts Receivable 8.12 Implementation Guide, “Processing Delinquency Notices and Fees”

Understanding Interest for Delinquent Fees for Argentina

You can run the Generate Delinquency Fees program (R03B525) to generate debit memos for the interest that has accrued during the time that an invoice is delinquent. You must set up the Late Payment Delinquency Fees processing option on the Generate Delinquency Fees program to calculate late payment delinquency fees. You must also set up the PO Interest Invoice program (R76A03B2) with the same version name as the version of the Generate Delinquency Fees program that you are running.

Generating debit memos for interest fulfills the legal invoice issuance requirements of *Administración Federal de Ingresos Público* (AFIP).

Setting Processing Options for PO Interest Invoice (R76A03B2)

Processing options enable you to specify the default processing for programs and reports.

General

| | |
|-----------------------|--------------------------|
| 1. Issue Place | Specify the issue place. |
|-----------------------|--------------------------|

RG 100

1. RG 100 Processing

Specify whether the invoices that you enter correspond to general resolution 100 (RG 100) regulations. Values are:

Blank: Invoices do not correspond to RG 100 regulations.

1: Invoices correspond to RG 100 regulations.

Purging Invoice Transactions for Argentina

This section provides an overview of the Purge Invoice Transactions program.

Understanding the Purge Invoice Transactions Program

When you purge invoice transactions, the system uses this criteria when determining which invoices to purge:

- The invoice G/L date must be equal or prior to before the date entered in the processing options for the Purge Invoice Transactions program.
- The invoice must be posted.
- The invoice must be paid.
- The invoice must have no open amount.

After the system completes the purge process, you might want to defragment the affected tables and rebuild the table indices. Contact the database administrator for more information about this process.

JD Edwards EnterpriseOne Accounts Receivable 8.12 Implementation Guide, “Purging Invoices and Receipts”

CHAPTER 11

(ARG, CHL, and PER) Processing Accounts Receivable Drafts for Argentina, Chile, and Peru

This chapter provides an overview of drafts and discusses how to:

- Enter massive drafts.
- Apply draft receipts to invoices.
- Create a draft register.
- Remit drafts.
- Collect drafts.
- Delete, void, and return a draft to prior status.
- Print receipts.
- Review and revise receipts.
- Create credit notes or debit notes for exchange rate differences.
- Work with Lecops.

Understanding Drafts for Argentina, Chile, and Peru

Drafts are a type of payment instrument that implies a direct communication between the bank of the payer company and the bank of the company receiving payment.

In most countries, drafts are a promise of payment for an acquired debt. The use of drafts as payment of a debt affects the legal nature of the debt. Consequently, you must distinguish draft payments from other types of payments and submit legal reports for drafts separately from other types of payments and legal liabilities.

Tables Used for Draft Processing

These tables are used in the draft process:

- F03B11 (Customer Ledger).
- F03B13 (Receipts Header).
- F03B14 (Receipts Detail).
- F76A60 (Receipts Header Argentine Tag File - 03B).
- F0911 (Account Ledger).
- F76AUI81 (Draft - Invoices Work File - ARG - 03B).
- F76AUI82 (Draft - Drafts Work File - ARG - 03B).

- F76AUI83 (Draft - Application Drafts - Invoices Work File - ARG - 03B).
- F76A60Z1 (Receipt Header Argentine Tag File Batch Input - ARG - 03B).
- F76A7101 (Batch for Remittance - ARG - 03B).

Common Fields Used in This Chapter

| | |
|--------------------------------------|--|
| Business Unit | Enter the business unit of the transaction. |
| Clearing and Clearing Days | Enter the number of days that you must wait before funds from a deposited check are available. |
| Collection Bank | Enter the bank in which the check is deposited. |
| Draft Amount | Enter the amount of the draft. |
| Draft Bank | Enter the bank from which the check originated. You do not have to complete the Draft Bank field if the draft is not a check. |
| Draft Date | Enter the date of the draft. |
| Draft Due Date | Displays the date that the payment amount was debited or credited to the bank account. |
| Draft Number | Enter the draft number to identify the receipt. |
| Pay Inst (payment instrument) | Enter the payment instrument to identify drafts (<i>D</i>). |
| Payor | Enter the address number of the customer. |
| Receipt Number | Enter the receipt number of the transaction. This field is available only if the processing options are set to enter the receipt number manually. You can also complete the unlabeled Alternate Receipt Number field if the processing options are set to display it. |
| Unapplied G/L Offset | Displays the offset assigned to the customer master record. |

Entering Massive Drafts

This section provides an overview of massive drafts and discusses how to enter receipts and drafts.

Understanding Massive Drafts

You can use the Drafts Entry program (P76A8000) to enter more than one payment for each receipt.

Receipt entry for massive drafts is comprised of these steps:

1. Receipt general information entry.
2. Draft entry.

3. Invoice application.

In receipt general information entry, you enter information about the customer who made the payment and information about the financial institution that received the payment, as well as the currency of the payments that are being received. This information is unique by receipt.

In draft entry, you enter the drafts that you have received. Each draft type is identified through a payment instrument. You can manage different payment instruments, such as check to the day, deferred check, retentions, cash, and so on.

Note. Payment instruments are listed in UDC 00/PY.

A receipt can have multiple drafts associated with it. Those drafts can use the same payment instrument or use different payment instruments. You must enter specific information for each draft such as draft number, bank name, and so on.

After you enter detailed receipt information for a customer, you can cancel the invoices that are pending for that customer. You can cancel portions of pending invoices. If you enter drafts to register a cash advance, this step does not apply.

You can match drafts only to invoices that have the same currency code. For example, if you enter drafts in the domestic currency, you can match them only to invoices in the domestic currency.

When you add a receipt, the system creates a record with document type *RI* in the F03B11 table for each posted draft that you create. The system creates records with document type *RU* in the F03B11 table for any posted drafts that have not been matched to an invoice. The system creates one *RI* record for each posted draft and one *RU* record for the unmatched amount (if any).

When you match the receipt to an invoice, the invoice open amount is updated to 0 and the *RI* record retains the pending amount. The pending amount on the *RI* record is updated to 0 when the amount is collected.

All receipt draft information is stored in the F03B13 table.

Information that is used to match the draft to the invoice is stored in the F03B14 table.

The system updates the tables as follows.

F03B13 Table

The system creates one record for each draft and populates fields as follows:

- The Payment ID (Internal) field (PYID) contains a unique identifier for each draft.
- The draft number is stored in the Receipt Number field (CKNU).
- The receipt number is stored in the Reference field (RREF).
- The check amount in domestic currency is stored in the Amount - Check Amount field (CKAM).
- The check amount in foreign currency is stored in the Amount - Foreign Receipt field (FCAM).
- The check pending amount in domestic currency is stored in the Amount Open field (AAP).
- The check pending amount in foreign currency is stored in the Amount - Foreign Open field (FAP).

F03B14 Table

The system create these records:

- One record with document type *RU* for the advance cash or draft pending amount.

- One record for each payment that is applied to the invoices, including partial payments.
- One record without a document type and number to hold the draft portfolio amount.

F03B11 Table

The system generates one record with document type *RI* and one record with document type *RU* if a pending amount exists to apply. When the entire draft has been applied to a voucher, the system generates only a record with document type *RI* in the F03B11 table and does not generate a record with document type *RU* in the F03B14 table.

Note. The records in the F03B11 table are associated with the draft through the Payment ID (Internal) field (PYID).

Receipts Header Argentine Tag File - 03B table (F76A60)

This table stores the clearing, collection bank, draft bank, expiration date, draft status, business unit, and so on.

Forms Used to Enter Massive Drafts

| Form Name | FormID | Navigation | Usage |
|----------------------------|-----------|--|--|
| Work with Receipts | W76A8000A | (ARG) Drafts Processing (G76A00C), Drafts Entry. (CHL) Drafts Processing (G76H00C), Drafts Massive Entry. (PER) Drafts Processing (G76P00C), Drafts Massive Entry. | Locate existing receipts. |
| Application Draft-Invoices | W76A8003A | Click Add on the Work with Receipts form. | Enter receipts. |
| Draft Entry | W76A8002A | On the Application Draft-Invoices form, select Drafts from the Form menu. | Enter the drafts that correspond to the receipt. |

Entering Receipts and Drafts

Access the Application Draft-Invoices form.

To enter receipts and drafts:

1. On the Application Draft-Invoices form, complete the Receipt Number, Company, G/L Date, Payor, Draft Date, and Currency Code fields in the header area.
2. (Optional) Complete the Exchange Rate, Business Unit, and Unapplied G/L Offset fields.
3. Select Drafts from the Form menu.
4. On the Draft Entry form, complete the Draft Number, Pay Inst (payment instrument), Draft Due Date, Draft Amount, Draft Bank, Clearing Days, and Collection Bank fields and click OK.

The system displays the information that you entered on the Draft Entry form in the detail area of the Application Draft-Invoices form.

5. On the Application Draft-Invoices form, click OK.

The system saves the receipt as a cash advance. You can review and apply the receipt at another time.

Applying Draft Receipts to Invoices

This section provides an overview of the application of draft receipts to invoices and type input codes and discusses how to:

- Apply a draft receipt to selected invoices.
- Apply a draft receipt to all open invoices for a customer.

Understanding the Application of Draft Receipts to Invoices

When you apply draft receipts to invoices, the open amount of the invoices is reduced. The system creates a record with document type RU for any draft amount that is not applied to an invoice to represent the advanced cash that was given by the customer.

The drafts are represented in the F03B11 table by a record with document type *RI*, with payment status equal to *D* (draft accepted). You can select whether the RI documents are in the F03B11 table with an open amount until the due date of the draft. The draft remains at status *4* (Accepted).

For example, if you apply a 1000 CLP (Chilean Peso) draft to a 1000 CLP invoice, the system cancels the open amount of 1000 CLP on the invoice. You can select whether the draft is stored in the F03B11 table with an open amount until the draft is collected. If you store the draft without an open amount, you cannot select the draft for payment.

The system provides two methods for displaying open invoices that you want to match to drafts. In the Draft Entry program (P76A8000), after you complete the receipt header and the Draft Entry form, go to the Invoice Entry form. From there, you can select to Select or Load invoices.

Load Invoices

The system displays all of the open invoices for the specified payor that meet the additional search criteria specified:

- Company
- Payor
- Currency Code

The system uses the currency code of the draft. You cannot specify a different currency code.

The system displays the invoices in order by due date.

Select Invoices

The system displays all of the open invoices that meet the search criteria that you enter, such as :

- Company
- Payor or customer
- Currency code

Additionally, you can use the QBE (query by example) row to specify additional search criteria, such as the document type or statement number.

The system displays the invoices that meet the criteria that you specified. You then select each invoice pay item that you want to pay. After you select invoices, you can change the search criteria and select more invoices. The system returns all of the selected invoices on the Invoice Entry form in the order that you selected them.

Understanding Type Input Codes

When you apply receipts or drafts to invoices, you use type input (TI) codes to automatically calculate amounts to apply for payments, discounts, adjustments (write-offs), and chargebacks.

You can use these type input codes:

| Type Input Code | Calculations |
|---|---|
| 10 (Simple Invoice Match) | <ul style="list-style-type: none"> Applied amount = pending amount – discount Discount taken = discount available Cancellation; optional Chargeback; optional |
| 15 (Invoice Match with Manual Cancellation) | <ul style="list-style-type: none"> Applied amount = pending amount – discount Discount taken = discount available Cancellation = pending amount – applied amount less discount taken and chargeback amount Chargeback; optional |
| 16 (Invoice Match with Chargeback) | <ul style="list-style-type: none"> Applied amount = pending amount – discount Discount taken = discount available Cancellation; optional Chargeback = pending amount – applied amount less discount and cancellation |

Examples: Using Type Input Codes

These examples show how input type codes can be used. For each example, the invoice amount is 1000.00 ARS and the payment term is 1/10.

Simple Invoice Match (Type Input 10)

The system applies 990.00 ARS and creates a discount of 10.00 ARS:

| TI Code | Applied Amount | Discount | Gross Amount | Document Number | Document Type |
|---------|----------------|----------|--------------|-----------------|---------------|
| 10 | 990.00 | 10.00 | 1000.00 | 123 | RI |

Invoice Match with Manual Calculation (Type Input 15)

The system applies 970.00 ARS, creates a discount of 10.00, and cancels 20.00 ARS:

| TI Code | Applied Amount | Discount | Cancellation | Gross Amount | Document Number | Document Type |
|---------|----------------|----------|--------------|--------------|-----------------|---------------|
| 15 | 970.00 | 10.00 | 20,00 | 1000.00 | 123 | RI |

Invoice Match with Chargeback (Type Input 16)

The system applies 600.00 ARS, creates a discount of 10.00, and creates a chargeback of 390.00 ARS:

| TI Code | Applied Amount | Discount | Chargeback | Gross Amount | Document Number | Document Type |
|---------|----------------|----------|------------|--------------|-----------------|---------------|
| 15 | 600.00 | 10.00 | 390.00 | 1000.00 | 123 | RI |

Invoice Match with Chargeback (TI Code 16)

When applying a payment to an invoice, you might create a chargeback if the amount that you receive is less than the open amount for the invoice. For example, you receive a payment from a customer less the shipment expenses, and you dispute the shipment expense with the chargeback.

When you create a chargeback, the system creates these documents:

- *RB* (Chargeback invoice)

The chargeback document stores the amount in dispute. You can print an invoice for this amount and send it to the customer.

- *RC* (Receipt)

This document closes the old invoice and creates a cross-reference to the *RB* document.

Depending how you set the processing options, the system uses this information to generate the chargeback:

- Paid status.
- Chargeback reason code for the amount in dispute (UDC 03/CB).

Example: Invoice with Chargeback

In this example, the customer payment is less than the amount of the invoice. The company has the policy to close the origin invoice and create a chargeback.

The receipt has the amount of 1,000.00 ARS and is applied to invoice 3135 for the amount of 800.00 ARS:

| TI | Document Number | Document Type | Document Company | Payment Amount | Open Amount | Gross Amount | Chargeback Amount | CB CD |
|----|--------------------|------------------|---------------------|-------------------|----------------|-----------------|----------------------|-------|
| 16 | 3135 | RI | 00001 | 800.00 | | 1260.00 | 460.00 | DA |

The system displays invoice 3135 without a pending amount and with pay status *P* and the chargeback invoice for the amount in the F03B11 table:

| Document Number | Doc Type | Doc Co | Invoice Date | Gross Amount | Open Amount | Date Closed | Pay Status |
|-----------------|----------|--------|--------------|--------------|-------------|-------------|------------|
| 9017 | RB | 00001 | 16/2/05 | 460.00 | 460.00 | | A |
| 3135 | RI | 00001 | 16/2/05 | 1,260.00 | | 11/7/05 | P |
| | | | | 1,720.00 | 460.00 | | |

Manual Write-Off (TI Code 15)

When you apply a receipt to an invoice and a small open amount remains on the invoice, you can make a manual write-off to close the invoice. For example, if you receive a payment from a customer that is less than the invoice amount, instead of creating a chargeback or leaving the invoice pending, you can cancel the invoice to close it.

You must enter a reason for the cancellation, which determines the G/L account that the system debits when you post the receipt. You set up reason codes in UDC 03B/RC. You must also set up AAIs for those reason codes. For example, you might set up these reason codes:

- BD (bad debt)
- MW (minor amount write-off)
- DC (damage credit adjustment)
- TF (disputed tax or freight)

You can set up the maximum amount that is allowed for cancellations and a default reason code in the processing options of the Draft Entry program (P76A8000).

Forms Used to Apply Draft Receipts to Invoices

| Form Name | FormID | Navigation | Usage |
|----------------------------|-----------|---|--|
| Work with Receipts | W76A8000A | (ARG) Drafts Processing (G76A00C), Drafts Entry (CHL) Drafts Processing, (G76H00C), Drafts Massive Entry (PER) Drafts Processing, (G76P00C), Drafts Massive Entry | Locate draft receipts. |
| Application Draft-Invoices | W76A8003A | On the Work with Receipts form, select a receipt in the detail area and click Select. | Review applied, unapplied, and pending amounts for a draft receipt. |
| Invoice Entry | W76A8001A | On the Application Draft-Invoices form, select Invoices from the Form menu. | Review the invoices that have been applied to a draft receipt. |
| Select Invoices | W03B602E | On the Invoice Entry form, select Select from the Form menu. | Select the invoices in the detail area to which you want to apply the receipt. |
| Load Invoices | W03B602I | On the Invoice Entry form, select Load from the Form menu. | Apply a draft receipt to all open invoices for a customer. |

Applying a Draft Receipt to Selected Invoices

Access the Invoice Entry form.

To apply a draft receipt to selected invoices:

1. On Invoice Entry, select Select from the Form menu.
2. On Select Invoices, click Find to locate invoices for the customer, company, and currency specified on the receipt.
3. Select the invoices in the detail area to which you want to apply the receipt and then select Select/Deselect from the Row menu.
4. Click Close.

The system loads the selected invoices in the Invoice Entry form. The Open Amount from the invoices and the Unapplied Amount from the draft are adjusted, based on the Payment Amount.

If you set a processing option to use a default type input code, when the system loads invoices, it populates the TI field with the value that you specified in the processing option.

5. On Invoice Entry, click OK.
6. On Application Draft - Invoices, click OK to apply the receipt to the invoices.

Applying a Draft Receipt to All Open Invoices for a Customer

Access the Invoice Entry form.

To apply a draft receipt to all open invoices for a customer:

1. On Invoice Entry, select Load from the Form menu.
2. On Load Invoices, complete the Company and Payor fields and then click OK.

The system searches for all invoices for the specified company and customer in order by due date, and applies them to the draft in the receipt until the system has applied as much of the receipt amount as possible.

If you set a processing option to use a default type input code, when the system loads invoices, it populates the TI field with the value that you specified in the processing option.

3. On Invoice Entry, if you do not apply the entire amount of the draft, change the value in the Payment Amount field for any of the detail lines.

The Open Amount from the invoices and the Unapplied Amount from the draft are adjusted, based on the Payment Amount.

4. Click OK.

Creating a Draft Register

This section provides an overview of draft registers and discusses how to create a draft register.

Understanding Draft Registers

You use a draft register to group drafts by bank account and to submit the drafts to the bank so that the bank can collect the funds from the customer's bank. When you create the draft register, you select the drafts that you want to remit to the bank for collection.

When you enter a draft, you specify the bank of deposit. You can specify a different bank of deposit when you create the draft register, if necessary. This ability enables you to specify one bank account for several drafts that are sent to the bank.

You can also specify the clearing days for checks when you enter drafts. However, when you create the draft register, you enter the clearing days that apply to all of the drafts in the draft register so that the draft register does not contain drafts with different clearing days.

Creating a manual draft register is an optional step. If you do not create a manual draft register, you can use data selection to select drafts when you run the Draft Remittance program (R76A8040).

Forms Used to Create a Draft Register

| Form Name | FormID | Navigation | Usage |
|---------------------------------------|----------|---|---|
| Work With Draft Registers for Payment | W03B675C | (ARG) Drafts Processing (G76A00C), Drafts Register. (CHL) Drafts Processing (G76H00C), Drafts Register. (PER) Drafts Processing (G76P00C), Drafts Register. | Locate draft registers. |
| Draft Register Details | W03B675D | On the Work With Draft Registers for Payment form, click Add. | Create a new draft register. |
| Argentine Draft Selection | W76A675A | On the Draft Register Details form, select Regional Info from the Form menu. | Select the individual drafts that you want the bank to collect. |
| Entry Draft Bank Information | W76A675B | On the Draft Register Details form, click OK. | Specify how long you must wait before funds from a deposited check are available. |

Creating a Draft Register

Access the Draft Register Details form.

To create a draft register:

1. Complete the Account Number and Currency Code fields.
2. (Optional) Complete the Amount Requested field.
3. Select Regional Info from the Form menu.
4. On Argentine Draft Selection, select the individual drafts that you want the bank to collect, and then click Select.
5. On Draft Register Details, click OK.
6. On Entry Bank Draft Information, complete the Clearing field and then click OK.

The system saves the draft register and updates the clearing days for all of the drafts in the register.

Account Number Enter the account number of the G/L bank account.

Amount Requested Enter the total amount of the drafts to verify that the amount of the drafts that you select equals the amount that you expected by completing this field.

Draft Bank Enter the bank from which the check originated.

Invoice Printed

Displays a value that specifies whether a receipt has been printed. If this field contains a *Y*, the receipt has been printed.

Remitting Drafts

This section provides an overview of draft remittance and discusses how to:

- Run the Draft Remittance program.
- Set processing options for Draft Remittance (R76A8040).

Understanding Draft Remittance

You remit drafts to the bank so that the bank can collect the funds from the customer's bank. You can remit the drafts that you selected when you created a draft register, or you can use data selection to select the drafts to remit. You must specify whether you are using a draft register in the processing options.

If you are not using a draft register, create a version of the Draft Remittance program. In the processing options for this version, specify the G/L bank account to which the drafts are remitted. Use the data selection for this version to select the drafts to be remitted to that bank account.

The remittance process creates a batch in the Batch Control Records table (F0011). When you post this batch, the system creates journal entries to debit the drafts remitted account that is specified by AAI RD2 and to credit the drafts receivable account that is specified by AAI RD1.

When you run the Draft Remittance program, the system changes the draft status of the draft records in the F03B13 table to 3 (Remitted - Cash or Discount) and changes the pay status of the R1 records in the F03B11 table to *G* (Draft Deposited not Due).

Note. The Argentine Draft Remittance program (R76A8040) replaces the standard Draft Remittance program (R03B672).

The draft remittance step is optional. You can run draft collection without having first run draft remittance.

Running the Draft Remittance Program

Select Drafts Processing (G76A00C), Draft Remittance.

Setting Processing Options for Draft Remittance (R76A8040)

Processing options enable you to specify the default processing for programs and reports.

Proof/Final

This processing option specifies the mode in which the system runs the program.

1. Mode

Specify in which mode the program is run. Values are:

Blank: Proof mode. The system prints a report and does not update tables.

/: Final mode. The system updates the draft status in the F03B13 table to 3 (Remitted - Cash or Discount) and prints a report.

As Of Date

This processing option specifies

- 2. As Of Date** Specify the date as of which the system processes drafts. The system processes all drafts due on or before this date. The system uses the current date as the default if you leave this processing option blank.

Bank

These processing options specify whether you are using a draft register or are processing draft remittances.

- 3. Draft Register** Specify whether you are using a draft register. Values are:
Blank: Do not use a draft register.
1: Use a draft register.
- 4. Remittance Bank Account** Specify the G/L bank account to which the drafts are remitted.

Note. If you specify a bank account in this processing option, leave the Draft Register processing option blank to indicate that you are not using a draft register.

G/L Remittance

These processing options specify what accounts the system uses to process drafts.

- 5. AAI's (automatic accounting instructions)** Specify which AAI that the system uses for drafts. Values are:
Blank: Use RD2x.
1: Use RD3x.
2: Use RD4x.
- 6. Override Account for Drafts Remitted** Specify an override G/L account that the system uses for drafts remitted. If you enter an account in this processing option, the system does not use AAIs.
- 7. Override AAI** Specify an account number to override the account defined by AAI RD4x. If you leave this processing option blank, the system uses the account defined by AAI RD4x.

G/L Date

This processing option specifies the G/L date that the system uses to create journal entries.

- 8. G/L Date** Specify the G/L date that the system uses to create journal entries. If you leave this processing option blank, the system uses the current date as the default.

Maximum

This processing option specifies the maximum amount of accumulated drafts.

- 9. Maximum Amount** Specify the maximum amount of the accumulated drafts.

Minimum

This processing option specifies the minimum amount of the accumulated drafts.

- | | |
|---------------------------|--|
| 10. Minimum Amount | Specify the minimum amount that must be met for the system to process remittance drafts. |
|---------------------------|--|

Paper/Tape

This processing option specifies the version and program that the system uses to process draft remittances.

- | | |
|--------------------------------|---|
| 11. Program and Version | Specify the program ID and version that the system uses to process draft remittances. |
|--------------------------------|---|

Custom Report

This processing option specifies the version and program ID of the custom draft remittance program to use.

- | | |
|---------------------------------------|--|
| 12. Custom Program and Version | Specify the program ID and version of the custom remittance program that the system uses to process draft remittances. |
|---------------------------------------|--|

Collecting Drafts

This section provides an overview of draft collection and discusses how to:

- Run the Draft Collection with Status Update program.
- Set processing options for Draft Collection with Status Update (R76A680).

Understanding Draft Collection

Draft collection represents the deposit of funds in the bank account.

The system records the deposits as having occurred on the journal entry G/L date that is specified in the processing options of the Draft Collection with Status Update program (R03B680). If you leave this processing option blank, the system uses the current date. However, if you specify a *I* in the G/L Date from Bank Account Float Day processing option, the system calculates the G/L date by adding the number of float days that the bank has set to the due date. To calculate the G/L date in this way, you must set up identically named versions of the Draft Collection with Status Update program (R03B680) and the Draft Collection program (R76A680).

You must run the Draft Collection with Status Update program in final mode so that all of the files are updated and the correct date for the collection of the drafts is used.

When you run the Draft Collection with Status Update program, the system changes the draft status of the draft records in the F03B13 table to *0* (Collected) and the draft is closed. If the R1 document had an open amount, the system removes the open amount and sets the pay status to *P* (paid).

Note. If you are using draft remittance, you must select only drafts with a draft status of 3 (Remitted - Cash or Discount).

Example: Collected Drafts without Remittance

When you post a draft that has been accepted, the system creates these journal entries:

| Document Type | Account Number and Description | Debit | Credit | Explanation Remark |
|---------------|--------------------------------|----------|-----------|--------------------|
| R1 | 28.1222 Drafts Receivable | 1.000,00 | | Draft Receipt |
| AE | 28.1210.UC Unapplied Cash | | 1.000,00– | |
| | Ledger Type Totals | 1.000,00 | 1.000,00– | |

When you post the same draft after the collection step, omitting the remittance step, the system creates these journal entries:

| Document Type | Account Number and Description | Debit | Credit | Explanation Remark |
|---------------|--|----------|-----------|--------------------|
| RC | 28.1110.BEAR Bear Creek National Bank | 1.000,00 | | Bank Deposit |
| R1 | 28.1222 Drafts Receivable | | 1.000,00– | Draft Receipt |
| | Ledger Type Totals | 1.000,00 | 1.000,00– | |

Running the Draft Collection with Status Update Program

Select Draft Remittance and Collection (G03B162), Draft Collection with Status Update.

Setting Processing Options for Draft Collection (R76A680)

Processing options enable you to specify the default processing for programs and reports.

G/L Date

G/L Date Calculation

Specify whether the system calculates the G/L date using the Work Day Calendar or using the standard calculation. Values are:

Blank: Standard calculation.

I: Work Day Calendar. The system retrieves the clearing days from the second description of UDC 76A/CL and adds those dates to the G/L date to calculate the date that the system uses. This option counts only business days that are set up in the Work Day Calendar.

Work Day Calendar Business Unit

Specify the business unit for which to retrieve the work day calendar. If you leave this processing option blank, the system uses business unit *ALL*.

Deleting, Voiding, and Returning a Draft to Prior Status

This section provides an overview of voids and deletions and an overview of draft statuses, and discusses how to:

- Void a draft receipt.
- Void a draft receipt using the Draft Massive Entry Inquiry program.
- Return a draft to prior status.

Understanding Voids and Deletions

You can delete or void drafts and receipts. When you delete or void a receipt or draft, the system reopens any invoices that the draft paid.

You can delete only when:

- The drafts are not posted.
- The draft are at status 4 (Accepted) or 0 (Collected).

Note. If a draft is at a remittance or collection status, you cannot delete it; you must collect the draft and then void it.

You can void a receipt only when the drafts are at status 4 (Accepted) or 0 (Collected).

Voiding a receipt increases the open amount of the R1 document and changes the invoice payment status of the receipt.

When you void a receipt, you must enter the date to post the void and the reason code for the void.

Note. When you delete a draft on the Draft Entry form, the delete is recorded when you click OK on the Draft Entry form. However, the deletion does not actually take place in the table until you click OK on the Application Draft-Invoices form. If you click Cancel on this form, the delete operation is canceled.

Examples: Voided Drafts

When you post the void of a receipt for which drafts have been accepted, the system creates these journal entries:

| Document Type | Account Number and Description | Debit | Credit | Explanation Remark |
|---------------|--------------------------------|----------|-----------|--------------------|
| R1 | 28.1222 Drafts Receivable | | 1.000,00– | Draft Receipt |
| AE | 28.1210.UC Unapplied Cash | 1.000,00 | | |
| | Ledger Type Totals | 1.000,00 | 1.000,00– | |

When you post the void of a receipt for which drafts have been collected, the system creates these journal entries:

| Document Type | Account Number and Description | Debit | Credit | Explanation Remark |
|---------------|--------------------------------|----------|-----------|--------------------|
| RO | 28.1110.BEAR | | 1.000,00— | Bank Deposit |
| AE | 28.1210.UC Unapplied Cash | 1.000,00 | | |
| | Ledger Type Totals | 1.000,00 | 1.000,00— | |

Understanding Draft Statuses

If you remit or collect a draft in error, you can return the draft to its prior status rather than completely processing the draft and then voiding it.

If you return posted drafts to prior status, the system:

1. Updates the F03B13 table with the prior status of the batch.
2. Updates the records in the F03B14 table with the prior status.

If you return unposted drafts to prior status, the system:

1. Updates the F03B13 table with the prior status of the batch.
2. Deletes the records from the F03B14 table.

Forms Used to Delete, Void, or Return a Draft to Prior Status

| Form Name | FormID | Navigation | Usage |
|---------------------------|-----------|---|---|
| Work with Receipts | W76A8000A | Drafts Processing (G76A00C), Drafts Entry | Void a draft. |
| Void/NSF Draft | W76A8004A | On the Work with Receipts form, select the receipt and then select Void/Delete from the Row menu. | Specify the date for the void and the reason code. |
| Draft Inquiry - ARG - 03B | W76A8005A | Drafts Processing (G76A00C), Draft Massive Entry Inquiry | Review drafts and return a draft to prior status or void a draft. |

Voiding a Draft Receipt

Access the Work with Receipts form.

To void a draft receipt:

1. On Work with Receipts, select the receipt in the detail area and then select Void/Delete from the Row menu.
If the receipt has been partially or totally posted, you must specify the date for the void and the reason code. If the receipt has not been posted, you need only to confirm the deletion.
2. On the Void/NSF Draft form, complete the Void G/L Date and Void Reason Code fields and click OK.

Void G/L Date

Enter the date to which the voided transaction is posted. Financial periods are set up in the F0010 table.

Void Reason Code Enter a code that explains why a receipt was voided.

Voiding a Draft Receipt from the Draft Massive Entry Inquiry Program

Access the Draft Inquiry - ARG - 03B form.

Select a draft and select NSF from the Row menu.

Returning a Draft to Prior Status

Access the Draft Inquiry - ARG - 03B form.

To return a draft to prior status:

1. Select the receipt record in the detail area, and then select Return Prior Status from the Row menu.
2. On the Void/NSF Draft form, complete the Void G/L Date and Void Reason Code fields and click OK.

Printing Receipts

This section provides an overview of the Drafts Printer program and discusses how to:

- Run the Drafts Printer program.
- Set processing options for Drafts Printer (R76A6270).

Understanding the Drafts Printer Program

The Drafts Printer program (R76A6270) prints receipts that have been entered through the Drafts Entry program (P76A8000) as well as drafts entered by other JD Edwards EnterpriseOne Accounts Receivable system programs. The printed receipt shows information about the drafts and the invoices to which they have been applied.

The receipts can be in domestic or foreign currency.

Running the Draft Printer Program

Select Drafts Processing (G76A00C), Drafts Printer.

Setting Processing Options for Drafts Printer (R76A6270)

Processing options enable you to specify the default processing for programs and reports.

Currency

- 1. Foreign Currency** Specify whether the system prints amounts in foreign currency. Values are:
Blank: Do not print foreign currency amounts.
1: Print foreign currency amounts.

Print

- | | |
|--------------------------------|--|
| 2. Issue Place | Specify the draft issue place. |
| 3. Receipt Type | Specify the draft receipt type. |
| 4. Number of Copies | Specify how many copies to print. |
| 5. Maximum Detail Lines | Specify the maximum number of lines to print on a page. |
| 6. Print Message | Enter <i>1</i> to print the message <i>Nonvalid Document as Invoice</i> on the receipts. |

Reviewing and Revising Receipts

This section discusses how to:

- Review and revise drafts from the Draft Massive Entry Inquiry program.
- Reviewing the Customer Ledger.

Forms Used to Review and Revise Receipts

| Form Name | FormID | Navigation | Usage |
|---|-----------|--|---|
| Application Draft-Invoices | W76A8003A | Drafts Processing (G76A00C), Drafts Entry. On the Work with Receipts form, select a receipt and then click Select. | Review applied, unapplied, and pending amounts for a draft receipt. |
| Draft Entry | W76A8002A | On the Application Draft-Invoices form, select Drafts from the Form menu. | Review draft data. |
| Invoice Entry | W76A8001A | On the Application Draft-Invoices form, select Invoices from the Form menu. | Review the invoices to which the drafts have been applied. |
| Draft Inquiry - ARG - 03B | W76A8005A | Drafts Processing (G76A00C), Draft Massive Entry Inquiry. | Review draft information. |
| Draft Inquiry - Change | W76A8005C | On the Draft Inquiry - ARG - 03B form, select a draft and then select Detail Update from the Row menu, or select a draft and select Global Update from the Row menu. | Revise a single draft or revise multiple drafts. |
| Work with Customer Ledger Inquiry | W03B2002A | Customer Invoice Entry (G03B11), Customer Ledger Inquiry | Review customer ledger information. |
| Work With Customer Ledger Inquiry (ARG) | W76A2002A | On the Work with Customer Ledger Inquiry form, select Regional Info from the Form menu. | Review the customer ledger to see the RU and R1 documents. You can review individual documents or summarize them by receipt number. The receipt number is stored in the Reference field (RREF) in the F03B13 table. |

Reviewing and Revising Drafts from the Draft Massive Entry Inquiry Program

Access the Draft Inquiry - ARG - 03B form.

To review drafts from the Draft Massive Entry Inquiry program:

1. On Draft Inquiry - ARG - 03B, locate the receipt for the drafts that you want to review or revise.
2. Review draft information in the detail area.
3. To revise a single draft, select that draft in the detail area, and then select Detail Update from the Row menu.
4. To revise multiple drafts, select those drafts in the detail area, and then select Global Update from the Row menu.

5. On Draft Inquiry - Change, complete any of the available fields.
6. If you select Global Update from the Row menu, select the Global Up option for the values that you are changing.

Note. The Global Update options are not displayed if you select Detail Update from the Row menu.

7. Click OK.

The system updates the values that you changed for the selected drafts.

Draft Status Displays the current status of the draft.

Reviewing the Customer Ledger

Access the Work With Customer Ledger Inquiry (ARG) form.

To see all of the documents for a specific receipt, enter the receipt number in the Reference field of the QBE (query by example) line and then click Find.

To see one record for each document type that is associated with the receipt, enter the receipt number in the Reference field of the QBE line, select the Receipt Summarization option, and then click Find.

Creating Credit Notes or Debit Notes for Exchange Rates Differences

This section provides an overview of exchange rate differences for accepted drafts and an overview of exchange rate differences for collected drafts and discusses how to:

- Run the Generate ND/NC Gain and Loss - ARG program.
- Set data selection for Generate ND/NC Gain and Loss - ARG (R76A8500).
- Set processing options for Generate ND/NC Gain and Loss - ARG (R76A8500).
- Run the Generate ND/NC Gain and Loss Collection - ARG program.
- Set data selection for Generate ND/NC Gain and Loss Collection - ARG (R76A8520).
- Set processing options for Generate ND/NC Gain and Loss Collection - ARG (R76A8520).

Understanding Exchange Rate Differences for Accepted Drafts

The law allows you to create a credit note or debit note when you collect payment in pesos for invoices in foreign currency and the change in the exchange rate between the time when the invoice was issued and when the payment was received causes a gain or loss.

You can use the Generate ND/NC Gain and Loss - ARG program (R76A8500) to generate credit notes or debit notes for the gain or loss that is created when you create a receipt and match it to an invoice.

You create the receipt in the foreign currency, apply the receipt to an invoice, post the receipt batch, and then run the Generate ND/NC Gain and Loss - ARG program.

When you run the Generate ND/NC Gain and Loss - ARG program in final mode, the system creates an invoice in pesos for the gain or loss and a receipt that closes the invoice. You use the processing options to control whether the new invoice is taxable and, if so, how the tax is calculated.

When you run the Generate ND/NC Gain and Loss - ARG program, the system performs these actions:

1. Creates a new invoice batch header in the Batch Control Records (F0011) table.
2. Updates these tables with information about the new invoice:
 - (Customer Ledger) F03B11.
 - Account Ledger (F0911).
 - Invoice Total - ARG - 03B (F76A09).
 - Taxes - Tax Amount by Invoice Suffix (F76A19).
3. Creates a new receipt batch header in the F0011 table. This batch does not contain a draft.
4. Updates these tables with information about the new receipt:
 - Receipts Header (F03B13).
 - Receipts Detail (F03B14).
 - Receipts Header Argentine Tag File - 03B (F76A60).
5. Updates the Tag File F03B14 - ARG - 03B (F76A8500) to mark the record as processed.

After you run the Generate ND/NC Gain and Loss - ARG program, you must complete these steps:

1. Post the new invoice batch and the new receipt batch.

Note. The new invoice and receipt are posted to the account that is specified in AAI RG or AAI RL, depending on whether the invoice represents a gain or a loss.

2. Print the invoice.
3. Run the Tax Split program (R76A8900).

Voiding Debit Notes or Credit Notes for Exchange Rate Differences

If you void the invoice that was created by the Generate ND/NC Gain and Loss - ARG program (R76A8500), the system creates a journal entry with the opposite sign when you post the void. You should then run the Generate ND/NC Gain and Loss - ARG program again to create a new invoice and receipt to reverse the previous transaction.

Understanding Exchange Rate Differences for Collected Drafts

You can use the Generate ND/NC Gain and Loss Collection - ARG program (R76A8520) to generate credit note or debit note for the gain or loss that is created between the time when you accept the draft and when you collect the draft.

When you run the Generate ND/NC Gain and Loss Collection - ARG program in final mode, the system creates an invoice in pesos for the gain or loss and a receipt that closes the invoice. You use the processing options to control whether the new invoice is taxable and if so, how the tax is calculated.

When you run the Generate ND/NC Gain and Loss Collection - ARG program, the system performs these actions:

1. Creates a new invoice batch header in the F0011 table.

2. Updates these tables with information about the new invoice:
 - F03B11
 - F0911
 - F76A09
 - F76A19
3. Updates the Tag File F76A60 - ARG - 03B table (F76A8510) to mark the record as processed.

After you run the Generate ND/NC Gain and Loss Collection - ARG program, you must complete these steps:

1. Post the new invoice batch and the new receipt batch.

Note. The new invoice and receipt are posted to the account that is specified in AAI RG or AAI RL, depending on whether the invoice represents a gain or a loss.

2. Print the invoice.
3. Run the Tax Split program (R76A8900).

Voiding Debit Notes or Credit Notes for Exchange Rate Differences between Receipt and Collection

Voiding the receipt or the collection does not void the invoice that reflects the difference in the exchange rate. You must void the new invoice manually.

Prerequisites

If you are running the Generate ND/NC Gain and Loss - ARG program:

- Create a draft receipt and match it to the invoice. Specify the foreign currency on the Application Draft-Invoices form, and specify either payment instrument *F* for drafts in pesos or payment instrument *C* for drafts in a foreign currency on the Draft Entry form.
- Post the receipt batch.

If you are running the Generate ND/NC Gain and Loss Collection - ARG program:

- Add the payment instrument that is set aside for payments made in pesos for invoices in foreign currency to UDC 00/PY.
- Add the payment instrument that you set aside to UDC 76A/PI for payments made in pesos for invoices in foreign currency.

This action prevents the exchange rate difference from being generated during draft collection so that it can be generated by the Generate ND/NC Gain and Loss Collection - ARG program (R76A8520) instead.

- Create a draft receipt and match it to the invoice. Specify the foreign currency on the Application Draft-Invoices form and specify the payment instrument that you set aside for payments made in pesos for invoices in foreign currency on the Draft Entry form.
- Post the receipt batch.
- Run the Draft Collection with Status Update program (R03B680).
- Post the batch that was generated by the draft collection process.

Running the Generate ND/NC Gain and Loss - ARG Program

Select Drafts Processing (G76A00C), Generate ND/NC Gain and Loss- ARG.

Setting Data Selection for Generate ND/NC Gain and Loss - ARG (R76A8500)

Specify the payment instrument that you used for the receipt in the data selection of the Generate ND/NC Gain and Loss - ARG program.

Setting Processing Options for Generate ND/NC Gain and Loss - ARG (R76A8500)

Processing options enable you to specify the default processing for programs and reports.

Default

These processing options specify the mode in which the system processes records as well as values that the system assigns to invoices created by the program.

- | | |
|--|---|
| 1. Processing Mode | Specify the mode in which the system processes records. Values are: Blank: Proof mode. 1: Final mode. |
| 2. Taxes | Specify whether the system calculates taxes. Values are: Blank: Do not calculate taxes. 1: Calculate taxes on the gross amount. 2: Calculate taxes on the taxable amount. |
| 3. Tax Rate/Area and Tax Explanation Code | Specify the tax rate/area and the tax explanation code that the system uses for invoices that it creates. Or, specify whether the system uses the tax rate/area from the original invoice or the customer master record. Values are: Blank: Use the values specified in the processing option. 1: Use the tax rate/area on the original invoice. 2: Use the tax rate/area on the customer master record. |
| 4. Document Types | Specify the document types that the system uses for credit invoices and debit invoices. |
| 5. Payment Terms | Specify the payment terms that the system assigns to invoices. |

General

These processing options specify information that the system uses to process records.

- | | |
|-----------------------|--|
| 6. Issue Place | Specify the issue place for drafts. |
| 7. RG 100 | Specify whether you are entering invoices that correspond to RG 100. Values are: Blank: Invoices do not correspond to RG 100. |

I: Invoices correspond to RG 100.

8. R03B11Z1I Version Specify the version of R03B11Z1I that the system uses.

Receipt

These processing options specify information that the system uses to process records.

9. Payment Instrument Specify the receipt payment instrument.

10. Document Type Specify the document type that the system uses to assign next numbers to receipts.

11. Version of Receipt Print Specify the version of the receipt print program that the system uses. If you leave this processing option blank, the system uses version XJDE0001.

Running the Generate ND/NC Gain and Loss Collection - ARG Program

Select Drafts Processing (G76A00C), Generate ND/NC Gain and Loss Collection - ARG.

Data Selection for Generate ND/NC Gain and Loss Collection - ARG (R76A8520)

Specify the payment instrument that you used for the receipt in the data selection of the Generate ND/NC Gain and Loss Collection - ARG program.

Setting Processing Options for Generate ND/NC Gain and Loss Collection - ARG (R76A8520)

Processing options enable you to specify the default processing for programs and reports.

Default

These processing options specify how the system processes records.

1. Mode Specify the mode in which the system processes records. Values are:

Blank: Proof mode.

I: Final mode.

2. Taxes Specify whether the system calculates taxes. Values are:

Blank: Do not calculate taxes.

I: Calculate taxes on the gross amount.

2: Calculate taxes on the taxable amount.

3. Tax Rate/Area and Tax Explanation Code Specify the tax rate/area and the tax explanation code that the system uses for invoices that it creates. Or, specify whether the system uses the tax rate/area from the original invoice or the customer master record. Values are:

Blank: Use the values specified in the processing option.

I: Use the tax rate/area on the original invoice.

2: Use the tax rate/area on the customer master record.

- 4. Document Types** Specify the document types that the system uses for credit invoices and debit invoices.
- 5. Payment Terms** Specify the payment terms that the system assigns to invoices.

General

These processing options specify how the system processes records.

- 6. Issue Place** Specify the issue place for drafts.
- 7. RG 100** Specify whether you are entering invoices that correspond to RG 100. Values are:
Blank: Invoices do not correspond to RG 100.
1: Invoices correspond to RG 100.
- 8. Version** Specify the version of the Invoice Entry MBF that the system uses to process records.
- 9. Currency** Specify the currency in which the system creates the invoice. Values are:
Blank: Receipt currency.
1: Company currency.
- 10. Process Date** Specify the date on which records are processed.
- 11. AAI** Specify the AAI that the system uses to create G/L entries. If you leave this processing option blank, the system uses AAIs RG and RL.

Working with Lecops

This section provides an overview of Lecops and discusses how to:

- Enter receipts with Lecops.
- Print receipts with Lecops.

Understanding Lecops

You can enter receipts with the government-issued Provincial Obligation Letters (Lecops) as the payment instrument. You can also create a report of receipts paid with Lecops and their nominal values.

When you enter a receipt by using the Lecops payment instrument, the system selects the Nominal Value field on the Draft Entry form.

If the receipt uses dollars as the currency, you can enter the receipt in dollars and the draft value in pesos, and the system converts the draft amount to dollars.

When you print receipts with the Lecops payment instrument, the Drafts Printer program (R76A6270) includes the nominal value of the receipt.

Prerequisites

Before you complete the tasks in this section:

- Verify that a value for Lecops exists in the Payment Instrument (00/PY) UDC table that includes the value 2 in the Special Handling Code field.
- Verify that the appropriate AAIs are set up for Lecops.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAIs for Draft Processing for Argentina, page 76.](#)

Forms Used to Work with Lecops

| Form Name | FormID | Navigation | Usage |
|----------------------------|-----------|---|--|
| Application Draft-Invoices | W76A8003A | Drafts Processing (G76A00C), select Entry. On the Work with Receipts form, click Add to enter a receipt. | Enter a receipt with Lecops. |
| Draft Entry | W76A2002A | On the Application Draft-Invoices form, select Drafts from the Form menu. | Enter the drafts that correspond to the receipt. You specify the Lecops payment instrument and enter the nominal value of the Lecops documents. |

Entering Receipts with Lecops

Access the Application Draft-Invoices form.

To enter receipts with Lecops:

1. On Application Draft-Invoices, complete the Receipt Number, Company, G/L Date, Payor, Draft Date, and Currency Code fields in the header area.
2. Complete the Exchange Rate, Business Unit, and Unapplied G/L Offset fields.
3. Select Drafts from the Form menu.
4. On Draft Entry, complete the Draft Number, Pay Inst (payment instrument), Draft Due Date, Draft Amount, Nominal Value, Clearing Days, Draft Bank, and Collection Bank fields and then click OK.

The system loads the information that you entered on the Draft Entry form in the detail area of the Application Draft-Invoices form.

5. On Application Draft-Invoices, click OK.

Printing Receipts with Lecops

Select Drafts Processing (G76A00C), Drafts Printer.

CHAPTER 12

(ARG) Working With Sales Order Processing for Argentina

This chapter discusses how to:

- Enter sales orders for Argentina.
- Review sales order information.
- Verify tax calculations.
- Print invoices.
- Print shipment notes.
- Work with prenumbered documents.
- Update customer sales.
- Purge sales orders for Argentina.

Entering Sales Orders for Argentina

This section provides an overview of entering sales orders for Argentina, lists prerequisites, and discusses how to set processing options for PO Sales Order Entry (P76A4210).

See Also

JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide, “Entering Sales Orders”

Understanding Sales Order Entry for Argentina

In some situations, you might need to enter a credit order or another sales order that corresponds to a previous sales order which has already been associated with an invoice. For example, you might need to create an invoice for something that was missing from the original sales order, or you might need to create an invoice for a larger amount. In this situation, you can enter a new sales order and associate it with an existing invoice by using either the internal number or the legal number of the invoice, which enables the system to consider the tax calculations from the previous invoice.

Note. Any changes made to the order affect the whole order. All documents that are associated with the order are affected by the change. You are responsible for any changes made.

Prerequisites

Before you complete the tasks in this section:

- Review the steps for entering a standard sales order.
- Set up corresponding versions of the Sales Order Entry (R4210) program and the PO Sales Order Entry (P76A4210) program.

Forms Used to Enter Sales Orders for Argentina

| Form Name | FormID | Navigation | Usage |
|-------------------------------|-----------|---|---|
| Work With Sales Order Headers | W4210H | Sales Order Processing (G4211), Enter Orders Header | Review and select sales order header records. |
| Sales Order Header | W4210G | Click Add on Work With Sales Order Headers. | Add and revise sales order header information. |
| Sales Order Detail Revisions | W4210A | Click OK on Sales Order Header. | Add and revise item information in the detail portion of the form. Enter line default information in addition to item information when you do not enter sales order headers. |
| Order Acceptance | W42232A | Click OK on Sales Order Detail Revisions. | Click the appropriate button to place the order or to revise the order. |
| NC/ND Related to Invoice | W76A0180A | Click Place Order on Order Acceptance. | Assign the sales order to the original invoice by using either the internal number or the legal number of the invoice. |

Setting Processing Options for PO Sales Order Entry (P76A4210)

Processing options enable you to specify the default processing for programs and reports.

NC/ND Related

Invoice related to NC/ND Enter *I* to enter an invoice related to a credit note or debit note.
(invoice related to note credit/note debit)

Reviewing Sales Order Information for Argentina

This section discusses how to review sales order information.

Forms Used to Review Sales Order Information

| Form Name | FormID | Navigation | Usage |
|--------------------------------------|-----------|---|---|
| Customer Service Inquiry | W4210E | Sales Order Inquiries (G42112), Customer Service | Review sales order, customer, and item information in the Sales Order Detail File (F4211) or Sales Order History File (F42119) tables. For Argentinian sales orders, the system displays the legal number in the Customer PO field (VR01). |
| Sales Orders Inquiry by Legal Number | W76A8240A | Select a record and then select Regional Info (information) from the Form menu on Customer Service Inquiry. Or select a record and then select Regional Info (information) from the Form menu on Work With Sales Ledger Inquiry. | Review and select Argentinian sales orders based on the invoice or shipment note's legal number. |

Reviewing Sales Order Information for Argentina

Access the Sales Orders Inquiry by Legal Number form.

Note. The system displays this form only if you have set up the user preferences with a Localization Country code of AR (Argentina).

Shipment Note Legal Number

Enter a 15 position code that is reserved for the user.

Invoice Legal Number

Record reference numbers, such as the supplier's bid document number, quote document, sales order, work order, or job number.

Reviewing Tax Calculations for Argentina

This section lists a prerequisite and discusses how to review tax calculations.

Prerequisite

For the tax calculations to appear, the Sales Order Taxes at Order Level option on the Tax Rules Revisions form must be turned on.

Forms Used to Review Tax Calculations

| Form Name | FormID | Navigation | Usage |
|--------------------------|----------|--|---|
| Work With Online Invoice | W42230A | Sales Order Inquiries (G42112), Online Invoice | Review invoice information about an order that has not been invoiced or that has been only partially invoiced. |
| Legal Tax Amount Detail | W76A230B | Select Regional Info from the Form menu on Work With Online Invoice. | Review the tax calculations that are based on the fiscal setup for Argentina. Review detailed tax calculations by tax code and order line. |

Reviewing Tax Calculations for Argentina

Access the Legal Tax Amount Detail form.

Important! For the tax calculations to appear, the Sales Order Taxes at Order Level option on the Tax Rules Revisions form must be turned on.

See *JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide*, “Setting Up Tax Information,” Setting Up Tax Rules.

Printing Invoices for Argentina

This section provides an overview of the Invoice Print program, lists prerequisites, and discusses how to set processing options for PO Invoice/Shipment Note Print (R76A565).

In the JD Edwards EnterpriseOne Sales Order Management system, the process of printing invoices has been modified to comply with Argentine legal requirements.

See Also

JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide, “Invoicing”

Understanding the Invoice Print Program for Argentina

You can use the Invoice Print program (R42565) to print invoices that comply with the legal requirements for printing, numbering, and taxes as stipulated on General Resolution 1415.

Note. The F4211 table contains the legal number of the invoice in the Reference 2 field (VR02).

The Invoice Total - ARG - 03B table (F76A09) contains one record for each invoice and contains the legal number of the invoice in the Supplier Invoice Number field (VINV). This table also contains the tax total; the invoice total with taxes; and, depending on the order line type, the accounts receivable self-withholding tax code in the Category Code - Address Book 18 field (AC18).

The Taxes - Tax Amounts By Sales Order Line - ARG - 03B table (F76A18) contains one record for each line and tax code.

Table F76A09 controls the reprinting process.

The invoice format shows the taxes in the body of the document, one below the other and in accordance with tax code definitions. The description of the invoice taxes is obtained from the Description 01 field of UDC 76A/B3.

During invoice printing, the system prints an error report if it detects that mandatory parameters, such as legal numbering, are missing.

Note. Do not select invoice summarization.

Printing Pro Forma Invoices

Printing pro forma invoices enables you to print invoices in proof mode so that you can see a printed copy of all the invoices that are generated before the current billing without updating tables or legal numbers.

Printing pro form invoices differs from the standard invoice print process in these ways:

- No legal number is generated.
- Next numbers for accounts receivable are not updated.
- No records are generated in the F76A09 table or the F76A18 table.

To print pro forma invoices, set the first processing option on the PO Invoice/Shipment Note Print program to run in proof mode, and set the processing options on the Invoice Print program to prevent next status update and accounts receivable number assignment.

Prerequisites

Before you complete the tasks in this section:

- Set up identically named versions of the Print Invoices program and the PO Invoice/Shipment Note Print program, and set up the processing options for these programs.
- Verify that the XJDE0001 version of the Print Invoice/Shipment Note - ARG - 42 program (R76A566) exists. Do not modify the data selection of this version.
- Verify that the ZJDE0001 version of the Generate Invoice/Shipment Note WF - ARG - 42 program (R76A567) exists. Do not modify the data selection of this version.
- Verify that the sales orders have a status code for invoice printing.
- Verify the next legal number setup for companies and issue places in the Legal Next Numbers program (P76001A).
- Verify the configuration of RG100.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up Print Authorization Codes for Argentine Suppliers, page 82.](#)

- Verify the tax setup.

See Also

JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide, “Invoicing,” Running the Print Invoices Program

JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide, “Invoicing,” Setting Processing Options for Print Invoices (R42565)

Setting Processing Options for PO Invoice/Shipment Note Print (R76A565)

Processing options enable you to specify the default processing for programs and reports.

General

These processing options control whether the system prints shipment notes and invoice location, runs in final mode, prints lot numbers, and defines the maximum print lines per page.

- | | |
|---|--|
| 1. Enter 'Y' to print Shipment Notes. | Specify whether the system prints shipment notes. Values are: Y: Print shipment notes. N: Do not print shipment notes. |
| 2. Enter Y to run in proof mode | Specify whether the system runs in proof or final mode. Values are: Blank: Run in final mode. Y: Run in proof mode. |
| 3. Enter the Issue Place. | Enter the place where the invoice or the shipment note is printed. |
| 4. Enter '1' to print Lot Number in Domestic Items (Not Imported). | Specify whether the system prints the lot number in domestic items. Values are: Blank: Do not print the lot number. Y: Print the lot number in domestic items. |
| 5. Enter the maximum number of detail lines per page. | Enter a line printer parameter that specifies the number of lines per page. For example, 60 or 66. |

Default

These processing options specify the status codes used for invoices and shipment notes when an error is detected.

- | | |
|---------------------------|--|
| Status Code - Next | Enter the next status code to be used for invoices when an error is detected. If you leave this processing option blank, the system uses the default value of 831. |
| Status Code - Next | Enter the next status code to be used for shipment notes when an error is detected. If you leave this processing option blank, the system uses the default value of 832. |

Receipt Invoice

These processing options control global print messages in the invoice receipt footer.

- | | |
|---------------------------|--|
| 7. Print Message 1 | Enter the first global print message to be printed in each invoice receipt footer. This is a code identifying the Text Message you want the system to print next to this order line on selected documents. |
| 8. Print Message 2 | Enter the second global print message to be printed in each invoice receipt footer. This is a user defined code that you assign to each print message. Examples of text used in messages are engineering specifications, hours of operation during holiday periods, and special delivery instructions. |

Shipment Note

These processing options control the conversion units of measure for weight and volume.

- | | |
|-----------------------------------|--|
| 9. Weight Unit of Measure | Enter the weight unit of measure to convert all the items. This is the unit of measure that indicates the weight of an individual item. Typical weight units of measure are: GM for gram, OZ for ounce, LB for pound, KG for kilogram, and so forth. |
| 10. Volume Unit of Measure | Enter the volume unit of measure to convert all the items. This is the unit of measure for the cubic space occupied by an inventory item. Typical volume unit of measures are: ML for milliliter, OZ for fluid ounce, PT for pint, and so forth. |

RG 100

This processing option controls whether the you are entering a voucher corresponding to RG 100.

- | | |
|---|--|
| 1. Voucher corresponding to RG 100 | Specify whether you are entering a voucher corresponding to RG 100. Values are: Blank: Vouchers are not included in RG 100. I: You are entering a voucher corresponding to RG 100. |
|---|--|

Perception

These processing options control whether to print the report and which version to use.

- | | |
|---|--|
| 1. Do you want to print the report? (Y/N) | Specify whether the system prints the report. Values are: N: Do not print the report. Y: Print the report. |
| 2. Enter the version for R76A8050 (default value ZJDE0001) | Enter the version for R76A8050. If you leave this processing option blank, the system uses version ZJDE0001. |

Transportation

These processing options control whether to use transportation and if you want to print Seals.

Do you use transportation Y/N Specify whether the system should use transportation. Values are:
N: Do not use transportation.

Y: Use transportation.

Do you print Seals Y/N Specify whether the system prints seals. Values are:

N: Do not print seals.

Y: Print seals.

Bulk

This processing options controls the type of temperature information printed on the shipment note.

Print temperature and density information in Shipment Note Specify whether the system print temperature and density information on the shipment note or print this information only if the invoice is in standard temperature. Values are:

Blank: Print temperature and density information in the shipment note.

1: Print this information only if the invoice is in standard temperature.

2: Prevent the system from printing this information.

RG 889

This processing options controls whether the Autoprinter information in the shipment note corresponding to RG 889.

Print the Autoprinter information Specify whether you want the system to print the Autoprinter information in the shipment note, corresponding to RG 889. Values are:

Blank or *N*: Do not print.

Y: Print the Autoprinter information in the shipment note, corresponding to RG 889.

Carrier

This processing option controls whether to print carrier information.

Print the information carrier Specify whether the system prints the information carrier. Values are:

N: Do not print information carrier.

Y: Print the information carrier.

Credit Invoice

These processing options control whether credit invoices are generated and the number of copies to print.

Generate Credit Invoices Specify whether the system generate credit invoices. Values are:

Blank: Do not generate credit invoices.

1: Generate credit invoices.

Issue Place Enter the place where the invoice or the shipment note is printed.

Number of Copies

Enter the number of copies required by the customer. The system prints the number of invoices specified in this field. The system always prints at least one invoice.

Printing Shipment Notes for Argentina

This section provides overviews of printing shipment notes and printing shipment notes according to RG 889; and lists prerequisites. ,

In the JD Edwards EnterpriseOne Sales Order Management system, the process of printing shipment notes has been modified to comply with Argentine legal requirements.

Understanding Shipment Note Print for Argentina

You can use the Invoice Print program to print shipment notes that include legal numbering and printing formats that comply with General Resolution 1415.

Note. The F4211 table contains the legal number of shipment notes in the User Reserved Reference field (URRF) and the date of the shipment note in the User Reserved Date field (URDT).

You can reprint shipment notes.

The total weight and volume of items to be shipped is printed on the shipment note. The units are converted to the units of measurement that are specified in the processing options, which requires that all possible and required conversions be set in the general units of measurement table (UDC 00/UM).

If some of these conversions have not been included in the table, the affected item is printed on the shipment note with asterisks in the weight and volume fields, and the item is not added to the shipment note's total.

During shipment note printing, the system prints an error report if it detects that mandatory parameters, such as legal numbering, are missing.

Understanding Shipment Note Print According to RG 889

General Resolution 889/00 implements changes to the way shipment notes are printed by the responsible registered parties. The letter X that is used to identify the shipment note is replaced by the letter R, and the legal document type 39 changes to 91. The Print Authorization Code (CAI) must also appear on shipment notes.

According to Art. 3, those shipment notes, equivalent documents, or both, that were printed on or before September 30th, 2000, and issued by the registered parties on the VAT can be used until the 28th of February, 2001, or until none is left, whichever happens sooner. After this time, unused shipment notes must be clearly marked with VOID to discontinue their use.

To set up RG 889, complete these tasks:

1. Add these values to UDC 76/B1:
 - R: Remito
 - X: Shipping Note
2. Add these values to UDC 76A/B8:
 - R: Remito

X: Shipment Group

3. Add this value to UDC 76/DT:

9I: Remito

4. Relate the desired document type with legal document type 91 and the letter R.
5. Define the numbering for legal document type 91 for the issue place and company.
6. Enter the CAI for legal document type 91 for the desired company and issue place.
7. Assign the letter *R* for shipment groups to the tax groups.
8. Complete the processing option on the RG 889 tab for the PO - Invoice/Shipment Note Print - ARG - 42 program to specify that the shipment note being generated falls under RG 889 and that the CAI number should be printed.

Prerequisites

Before you complete the tasks in this section:

- Set up identically named versions of the Print Invoices program and the PO Invoice/Shipment Note Print program, and set up the processing options for these programs.
- Verify that the processing options for the PO Invoice/Shipment Note Print program are set to print shipment notes.
- Verify that the processing options for the Print Invoices program are set so that status is not updated and accounts receivable numbers are not generated.
- Set up the XJDE0001 version of the Print Invoice/Shipment Note - ARG - 42 program. Do not modify the data selection of this version.
- Set up the ZJDE0001 version of the Generate Invoice/Shipment Note WF - ARG - 42 program. Do not modify the data selection of this version.
- Verify that the sales orders have a status code for shipment note printing.
- Verify the next legal number setup for companies and issue places in the Legal Next Numbers program (P76001A).

Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Legal Numbering for Argentina, page 80

Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Entering the CAI Number, page 83

JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “(ARG) Setting Up the System for Argentinian Taxes,” Setting Up Tax Groups

Working with Prenumbered Documents for Argentina

This section provides an overview prenumbered documents and discusses how to:

- Set processing options for Invoice Print (P76A715).

- Set processing options for Invoice Void (P76A725).
- Verify legal numbers.
- Void printed invoices.
- Unlock legal numbering.
- Void a shipment note.
- Reprint documents.

Understanding Prenumbered Documents

The JD Edwards EnterpriseOne Sales Order Management system enables companies that are not autoprinters to work with prenumbered invoices and shipment notes.

When prenumbered documents are required, you can:

- Hide data that already exists in the preprinted form.
- Generate voided legal numbers for pages other than the first page.
- Void a printed invoice (new billing) for open orders.
- Void a shipment note.
- Unlock legal numbering.

Verifying Legal Numbers

You can use the Invoice Print program to verify that the legal number which the system assigns to the invoice and shipment notes matches the preprinted form.

Note. If the printing company is an autoprinter, do not run the process twice at the same time for the same company, issue place, and document type.

Printing on Preprinted Forms with Page Breaks

The system uses the next legal number of an invoice (for the same company, issue place, and document type) when the invoice program detects a page break. This situation ensures that the legal numbers that are assigned by the system and the preprinted forms match.

You can also hide some of the fields, such as company information, invoice letter, and other data that are already included in the preprinted invoice.

The system creates a record in the F76A09 that contains the invoice internal number and type of document for each invoice, as well as a record for each legal number that is void. The Processed (Y/N) field (PRCS) of these records has a value of *Y* (for reclassified). A legal number is used for shipment notes; no records are created in the table.

The S.O. Detail Ledger File table (F42199) also saves the legal numbers of shipment notes as a backup.

Voiding Printed Invoices

You can void invoices if they are still open and are not records of voids. You can query the F76A09 table to determine which invoices can be voided.

When you void an invoice, the system makes these table changes for each of the voided records:

- In the F4211 table, the system clears these fields:

- Document (Voucher, Invoice, and so forth) (DOC).
- Document Type (DCT).
- Document Company (KCO).
- Reference 2 (VR02).
- Date - Invoice (IVD).
- In table F4211, the value from Status Code - Next field (NXTR) is moved to the Status Code - Last (LTTR), and the Status Code - Next field (NXTR) is populated with the value from the Status Code - Next - Invoice processing option from the Invoice Void program.
- In table F76A09, the invoice has a void status and the amounts are zero. The value in the Document Type field (DCT) is changed to # and the Date - For G/L and Voucher - Julian field (DGJ) is populated with the date on which the invoice was voided. The Processed (Y/N) field (PRCS) is changed to Y.
- The corresponding tax records are cleared from the F76A18 table.

After you void an invoice, you can print the invoice for the sales order again on a preprinted form.

Unlocking Legal Numbering

You unlock the invoicing process whenever a failure occurs in the system, or when you want to invoice a company or issue place more than once.

Voiding Shipment Notes

You can use the Shipment Note Void program (P76A725) to void shipment notes that have been previously generated.

After you void a shipment note, you can print the shipment note for the sales order again on a preprinted form and re-issue it.

When you void a shipment note, the system makes these table changes for each of the voided records:

- In the F4211 table, the system clears these fields:
- User Reserved Reference (URRF)
- User Reserved Date (URDT)
- In table F4211, the Status Code - Next field (NXTR) is populated with the value from the Status Code - Next - Shipment processing option from the Shipment Note Void program (P76A725).

Reprinting Documents

You can reprint invoices, shipment notes, and perception certificates.

The word Reprint appears at the bottom of the reprinted invoices and the shipment notes. The reprinted documents are exact copies of the original documents.

Forms Used to Work with Prenumbered Documents

| Form Name | FormID | Navigation | Usage |
|---|-----------|--|--|
| Prenumbered Invoice/Shipment Note Print | W76A715A | Prenumbered Setup (G76A101), Invoice Print | Verify that the legal number on the preprinted form matches the value in the Next Legal Number field. |
| Work With Invoice Reprint | W76A725A | Prenumbered Setup (G76A101), Invoice Void | Locate the invoice to void and select Reprint from the Form menu. |
| Work With Prenumbered Invoice/Shipment Note Print | W76A715BA | Prenumbered Setup (G76A101), Unlock Prenumbered Invoice/Shipment | Locate and select the invoice to unlock, and then select Unlock from the Row menu. |
| Work With Shipment Note Reprint | W76A725D | Prenumbered Setup (G76A101), Shipment Note Void | Locate and select the shipment note record to void, and then select Reprint from the Form menu. |
| Reprint Invoice Print WF - ARG | W76A0209A | Processes (G76A421), Invoice Reprint | Locate and select the documents to reprint. When you select the document, the text of the selected line changes to the color red. After selecting all of the documents to reprint, select Reprint from the Form menu. |

Setting Processing Options for Invoice Print (P76A715)

For programs, you can specify options such as the default values for specific transactions, whether fields appear on a form, and the version of the program that you want to run.

Legal Number

These processing options control default information used for transaction entries, the DGI (*Direccion General Impositiv*) transaction document type, whether you are printing a shipment note, and whether legal numbers can be changed before printing.

- 1. Company** Specify the company that you use for transaction entries. The company name must identify a reporting entity that has a complete balance sheet.
- 2. Issue Place** Specify the issue place that you use for the transaction entries.
- 3. DGI Transaction Document Type** Specify the type of legal document given by DGI (*Direccion General Impositiv*) for documents.
- 4. Shipment Note (Y/N)** Specify whether the shipment note you are printing is a shipment note or other document such as an invoice. Values are:
Y: This is a shipment note.
N: This is not a shipment note.

- 5. Legal Number.** Specify whether to allow a legal number change prior to printing the invoice or shipment note. Values are:
- Blank: Do not allow a legal number change.
- /: Allow a legal number change.

Invoice Print

This processing option controls the version of the Invoice Print program used by the system.

- 1. Invoice Print Version (R42565)** Specify the version of the Invoice Print program to use. If you leave this processing option blank, the system uses the version of the Invoice Print program that has the same name as the current version of the Prenumbered Invoice/Shipment Note Print - ARG - 42 program.

Setting Processing Options for Invoice Void (P76A725)

Processing options enable you to specify the default processing for programs and reports.

Status

These processing options control the next step in the order process for the invoice and shipment.

- 1. Status Code - Next - Invoice** Enter a UDC (40/AT) to specify the next step in the order process. You must enter a code (UDC 40/AT) that has been set up in the order activity rules based on the order type and the line type that you are using.
- 2. Status Code - Next - Shipment** Enter a UDC (40/AT) to specify the next step in the order process. You must enter a UDC (40/AT) that has been set up in the order activity rules based on the order type and the line type that you are using.

Verifying Legal Numbers

Access the Prenumbered Invoice/Shipment Note Print form.

- Next Legal Number** Displays the number that the system will assign next. The system can use next numbers for voucher numbers, invoice numbers, journal entry numbers, employee numbers, address numbers, contract numbers, and sequential W-2s. You must use the next number types already established unless you provide custom programming.

Voiding Printed Invoices

Access the Work With Invoice Reprint form.

- Invoice Date - From** Displays the date that either you or the system assigns to an invoice or voucher. This can be either the date of the supplier's invoice to you or the date of the invoice to the customer.
- Invoice Date - To** Displays the date that either you or the system assigns to an invoice or voucher. This can be either the date of the supplier's invoice to you or the date of the invoice to the customer.
- Legal Number - From** Displays the legal document type given by DGI for documents.

To Displays the number that the system will assign next. The system can use next numbers for voucher numbers, invoice numbers, journal entry numbers, employee numbers, address numbers, contract numbers, and sequential W-2s. You must use the next number types already established unless you provide custom programming.

Unlocking Legal Numbering

Access the Work With Prenumberd Invoice/Shipment Note Print form.

Issue Place Enter the place where the invoice or the shipment note is printed.

Voiding a Shipment Note

Access the Work With Shipment Note Reprint form.

Shipment Note Number - From Displays the legal document type given by DGI for documents.

Reprinting Documents

Access the Reprint Invoice Print WF - ARG form.

Updating Customer Sales for Argentina

This section provides an overview of updating customer sales and discusses how to update customer sales.

See Also

JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide, “Running the End of Day Processes,” Updating Customer Sales

Understanding Updating Customer Sales for Argentina

You run Update Customer Sales as the last step in sales order processing to update, verify, and post daily sales information. When you run this program, the system transfers the legal numbers of the invoices and the taxes that are generated during the billing process in the JD Edwards EnterpriseOne Sales Order Management system to the JD Edwards EnterpriseOne Accounts Receivable system.

The Update Customer Sales program updates the Taxes - Tax Amount by Invoice Suffix table (F76A19). The accounts receivable invoice taxes are saved in the Taxes - Tax Amounts by Sales Order Line (F76A18) table.

Note. Detailed end of day processing is not supported. Verify that the processing options are set to summarize entries.

Data Selection for Update Customer Sales

This data selection prevents the system from processing any unbilled lines and ensures that all of the lines of the invoice are included, regardless of their status:

| Operator | Left Operand | Comparison | Right Operand |
|----------|--|-----------------|---------------|
| Where | BC Company (F4201) (CO) | is equal to | "00028" |
| And | BC Document (Voucher, Invoice, and so forth) (F4211) (DOC) | is not equal to | <Blank> |
| And | BC Document Type (F4211) (DCT) | is not equal to | <Blank> |

Updating Customer Sales for Argentina

Select End of Day Processing (G4213), Update Customer Sales.

Purging Sales Orders for Argentina

This section provides an overview of the purge process for Argentinean sales orders and discusses how to run the Invoice Total Purge - Argentine program.

See Also

JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide, "Running the End of Day Processes," Purging Data

Understanding the Purge Process for Argentinean Sales Orders

The Invoice Total Purge -Argentine program (R76A09P) purges the localized tables and saves their information in new tables. The program first verifies that the records in the Invoice Total table (F76A09) correspond to records with a next status of 999 in the F4211 table. The program then purges the records from these tables:

- Invoice Total (F76A09).
- Taxes - Tax Amounts by Sales Order Line (F76A18).
- Credit Invoice Header (F76A21).
- Credit Invoice Detail (F76A22).
- Credit Invoice Withholding (F76A23).
- Header & Footer Invoice/Shipment Note History WF (F76A0209).
- Detail Lines Invoice/Shipment Note History WF (F76A0219).

The program saves the purged information to these tables:

- Invoice Total Purge (F76A09P).
- Taxes - Tax Amounts Sales Order Line Purge (F76A18P).
- Credit Invoice Header Purge (F76A21P).
- Credit Invoice Detail Purge (F76A22P).
- Credit Invoice Withholding Purge (F76A23P).

- Header/Footer Inv./Shipment Note History WF Purge (F76A020P).
- Detail Lines Inv./Shipment Note History WF Purge (F76A021P).

Note. If the program does not find records in the F4211 table that correspond to records in the F76A09 table, the program assumes that these records have been moved to the Sales Order History File table and eliminates the records.

After you run the Invoice Total Purge -Argentine program (R76A09P), run these purge programs:

- Sales Header Purge (F4201) (R4201P).
- Sales Order Detail (F4211) (R4211P).

Note. The purge processes always run in final mode.

Running the Invoice Total Purge - Argentine Program

Select Processes (G76A03B1), Invoice Total Purge - Argentine.

CHAPTER 13

(ARG) Working with Item Information and Inventory Inflation Adjustment

This chapter provides an overview inventory inflation adjustment and discusses how to:

- Enter imported item information.
- Work with beginning balances for inventory inflation adjustments.
- Create an inflation adjustment index.
- Enter the market value of an item.
- Calculate the price of the last adjusted purchase.
- Review and adjust prices.
- Generate journal entries for inflation adjustments.
- Void an adjustment journal entry.
- Adjust works in process for inflation.

Understanding Inventory Inflation Adjustment for Argentina

In the JD Edwards EnterpriseOne Inventory Management system, one important factor to consider is the value that is assigned to the inventory.

Inventory valuation can be done in different ways, depending on the company's industry or market as well as the legal and fiscal requirements of the country in which it operates.

Inflation is also a significant factor when determining the value of the inventory.

In an inflationary environment, the results that are provided by valuation methods that are used to determine inventory valuation vary considerably. The differences in valuation that occur when using different methods are marked clearly by fluctuations in inflation levels.

This is the reason that, in a stable economy that is unaffected by inflationary changes, a valuation method such as the Weighted Average Price (WAP) does not indicate significant differences in the value of the stock if compared with another method such as the Price of Last Adjusted Purchase (PLAP).

The PLAP method is one of the most accepted methods because it calculates the stock value by using the price of the last item purchased. This method includes not only the price of the last purchase, but also the costs that are incurred in the purchasing process.

If this purchase does not take place within the valuation month, an index that reflects the fluctuation of the inflation is used to adjust it.

This guide explains in detail the process that should be followed to calculate the value of the stock using the PLAP method.

Entering Imported Item Information for Argentina

This section provides an overview of imported item information, lists prerequisites, and discusses how to enter imported item information.

Understanding Imported Item Information

You use the standard programs to enter item information for Argentina, then use the Imported Items Data Entry (P76A4108) program to enter information for imported items. The dispatch date, and customs and dispatch information for imported items must be entered so that they appear on the legal invoice. You use the JD Edwards EnterpriseOne Inventory Management system to enter the imported items and their respective lots into the system; then customs and dispatching data, as well as the dispatch and lot expiration dates, are updated. The printed invoice shows the import data for the lot.

Prerequisites

Before you complete the tasks in this section:

- Verify that codes for the origin of imported items is set up in the Lot Reporting Code 09 (41/L9) UDC table.
- Verify that code for customs are set up in the Lot Reporting Code 09 (41/L0) UDC table.
- Complete the Country of Origin field on the Item Branch/Plant Info. form when you enter standard information for imported items.

See *JD Edwards EnterpriseOne Inventory Management 8.12 Implementation Guide*, “Entering Item Inventory Information,” Entering Branch/Plant Information.

Forms Used to Enter Imported Item Information for Argentina

| Form Name | FormID | Navigation | Usage |
|-------------------------------|-----------|--|--|
| Work With Imported Data Entry | W76A4108A | Imported Items (G76A41), Imported Items Data Entry. | Enter imported item information for Argentina. |
| Imported Data Entry | W76A4108B | Select an item in the Detail area on the Work With Imported Data Entry form, and click Select. | Enter imported item information for Argentina. |

Entering Imported Item Information for Argentina

Access the Imported Data Entry form.

| | |
|----------------------|--|
| Shipment Nbr | Enter the commodity code number for the item. |
| Customs Code | Enter one of ten classification codes available primarily for lot purposes. |
| Shipping Date | Enter the last date that a particular activity occurred. You determine the type of activity that the category represents (for example, inventory completions). |

This field represents date category 4. You specify the document types that update this category in user-defined codes (40/LD).

Origin

Enter one of ten classification codes available primarily for lot purposes.

Working with Beginning Balances for Inventory Inflation Adjustments for Argentina

This section discusses how to:

- Generate beginning balances for inventory inflation adjustments.
- Set processing options for Create Missing AS OF record (R76A397).

Generating As Of Beginning Balances for Inventory Inflation Adjustments

Select Inventory Inflation Adjustment (G76A39), Create missing AS OF record.

When a new fiscal year begins and stock movement occurs in the first period, you run the Item Ledger As Of Record Generation program (R41542) for the first period, and then run the Create missing AS OF Record program (R76A397) for the current period to generate records for the fiscal year in the F41112 table.

Setting Processing Options for Create Missing AS OF Record (R76A397)

Processing options enable you to specify the default processing for programs and reports.

General

Century Enter the calendar century associated with the year.

Fiscal Year Specify the fiscal year.

Creating an Inflation Adjustment Index for Argentina

This section provides an overview of the inflation adjustment index and discusses how to create an inflation adjustment index.

Understanding the Inflation Adjustment Index

An inflation adjustment index reflects price evolution in an inflationary market or indicates how inflation fluctuates in the market. In the PLAP method, the indexes are used to adjust those purchases that did not occur within the valuation period.

The indexes that should be applied are published monthly by the National Institute of Statistics and Censuses (INDEC).

The indexes are identified by adjustment codes.

You use the Adjustment Indexes program (P76A391) to maintain the inflation adjustment indexes.

Form Used to Create an Inflation Adjustment Index

| Form Name | FormID | Navigation | Usage |
|--------------------|----------|---|---------------------------------------|
| Adjustment Indexes | W76A391B | Inventory Inflation Adjustment (G76A39), Adjustment Indexes. Select the Add button on the Work with Adjustment Indexes form. | Create an inflation adjustment index. |

Creating an Inflation Adjustment Index

Access the Adjustment Indexes form.

| | |
|-------------------------|---|
| Adjustment Code | Enter a code used in the adjustment process, such as for an inflation stock adjustment. |
| Calendar Year | Enter the calendar year for this calendar. |
| Calendar Month | Enter a number that corresponds to the month in a calendar year. |
| Adjustment Index | Enter an index used in the adjustment process, such as for an inflation stock adjustment. |

Entering the Market Value of an Item for Argentina

This section provides an overview of market values of items and discusses how to enter the market value of an item.

Understanding the Market Value of an Item

The market value reflects the current price of the item. Following accounting norms, this value is used as a comparative value with regard to any inventory measurement method.

The market value acts as an upper limit. It is also used for the routine comparison called *Cost or market, whichever is less*.

You can compare the market value and the price resulting from the PLAP method. You activate this comparison in the processing options for the Inflation Inventory Adjustment program (R76A395).

Form Used to Enter the Market Value of an Item

| Form Name | FormID | Navigation | Usage |
|----------------------------|----------|---|------------------------------------|
| Item Pool Cost Maintenance | W76A396B | Inventory Inflation Adjustment (G76A39), Market Value. Select the Add button on the Work With Item Pool Cost form. | Enter the market value of an item. |

Entering the Market Value of an Item

Access the Item Pool Cost Maintenance form.

| | |
|----------------------------|---|
| Unit Cost | Enter the amount per unit, calculated by dividing the total cost by the unit quantity. |
| Effective Thru Date | Enter the date on which the item, transaction, or table becomes inactive, or through which you want transactions to appear. This field is used generically throughout the system. It could be a lease effective date, a price or cost effective date, a currency effective date, a tax rate effective date, or whatever is appropriate. |

Calculating the Price of Last Adjusted Purchase for Argentina

This section provides an overview of the price of the last adjusted purchase, lists prerequisites, and discusses how to:

- Run the Inflation Inventory Adjustment Process program.
- Set processing options for Inflation Inventory Adjustment Process (R76A395).

Understanding the Price of the Last Adjusted Purchase

You use the Inflation Inventory Adjustment Process program (R76A395) to calculate the PLAP. The PLAP reflects the fluctuation of inventory prices in an inflationary market.

The Inflation Inventory Adjustment Process program obtains the price adjustment value for the last inventory receipt, calculates the new stock valuation by using the price adjustment value, and compares the original or historical price of the stock to the price adjustment value. The difference that results from this calculation is indicated in an accounting entry, thus reflecting the new stock value, given the effect of inflation.

The PLAP that is calculated by the Inflation Inventory Adjustment Process program considers the price variations that exist between the price when items were received and the price when the invoice is entered in the system (matching variations). The related costs incurred during the purchasing process are also considered in the PLAP.

To generate the price adjustment, the system searches the F43121 table by general ledger (GL) date, using the parameters that are set up in the processing options and data selection, to find the last item receipt.

The price that is calculated by the system is never zero if stock is available because the logic that is used for the calculation contains a search hierarchy:

- The system searches for the last receipt before the period end date of the year and month that is to be adjusted, and then applies the inflation index (As of Date Index / As Of GL Receipt Date index).
- If no receipt exists, the system calculates the WAP, searching for it in the As Of table with the fiscal year and period that is less than or equal to the process date, obtains the first positive balance, and then applies the inflation index (As of Date Index / the Base Date index that is specified in the Date Beginning Adjustment processing option).

Data selection defines the search for the price in the receipt table, indicating what must be selected for the process: branch, company, GL class, item category codes, and so on.

The costing level that is used to obtain the price of the last receipt is determined by the Adjustment Cost Level processing option. Values are:

Blank: Item master's cost level

A: Item

B: Item and company

C: Item and branch

D: Item, branch, and lot location

Example: Price of Last Adjusted Purchase

If you have chosen costing method C, item and branch, the process searches for the last item receipt by using item by deposit, regardless of its location.

For example, these records exist in table F43121:

| Date | Receipt | Item | Branch | Location | Price |
|----------|---------|------|--------|----------|-------|
| 12/01/05 | 10 SO | 001 | BR01 | A1 | 45 |
| 15/01/05 | 11 SO | 001 | BR01 | B3 | 42 |
| 15/01/05 | 12 SO | 001 | BR02 | C1 | 47 |

Item 001/BR01

The process selects these receipts to determine the price:

| Date | Receipt | Item | Branch | Location | Price |
|----------|---------|------|--------|----------|-------|
| 15/01/05 | 11 SO | 001 | BR01 | B3 | 42 |

Item 001/BR02

The process selects these receipts to determine the price:

| Date | Receipt | Item | Branch | Location | Price |
|----------|---------|------|--------|----------|-------|
| 15/01/05 | 12 SO | 001 | BR02 | C1 | 47 |

The value that is calculated by the process for the price of the last purchase can also be subjected to the market value validation, which is activated through a processing option. This validation does not enable for the value that is calculated by the system to be greater than the value specified as the market value.

Note. The cost level from the F4101 table and the cost level that is specified in the processing options of the Inflation Inventory Adjustment Process program (R76A395) are related.

The cost level from the F4101 table, defined with the values 1-Item, 2-Item/Branch and 3-Item/Branch/Location, determines the level that is used to adjust the inventory, whereas the cost level from the processing options determines the search level that is used to find the price in the receipt table.

To obtain the price of the last purchase, the minimum cost level that is specified is used, whether it is the one specified in the processing option or the one from the F4101 table.

Prerequisites

Before you complete the tasks in this section:

- Set up an inflation adjustment index.
- Enter the market value of the items with prices that you are adjusting for inflation.
- Run the Item Ledger As Of Record Generation program (R41542) to create the balance forward records for item transactions.

See *JD Edwards EnterpriseOne Inventory Management 8.12 Implementation Guide*, “Reviewing Item and Quantity Information,” Updating Balance Forward Records for Inactivity in the Fiscal Year.

- Set up Distribution AAI 3910 and 3911.

Running the Inflation Inventory Adjustment Process Program

Select Inventory Inflation Adjustment (G76A39), Inflation Inventory Adjustment Process.

Setting Processing Options for Inflation Inventory Adjustment Process (R76A395)

Processing options enable you to specify the default processing for programs and reports.

General

| | |
|----------------------------------|--|
| Adjustment Code | Enter a value that exists in the Adjustment Code (76A/CA) UDC table to specify which inflation adjustment index to use. |
| Year | Specify the year for which to process transactions. |
| Month | Specify the month for which to process transactions. |
| Date Beginning Adjustment | Specify the date on which the adjustment index becomes effective. |
| Adjustment Cost Level | Specify the level at which the price of the last receipt search takes place. The level that you specify in this processing option can be different from the costing method that is specified in the F4101 table. The F4101 table specifies the detail level that is used to adjust inventory. Values are: |

Blank: By item master

A: By item

B: By item and company

C: By item and branch

D: By item, branch, and location

| | |
|--------------------------------|---|
| Adjust Document Type | Specify a value that exists in the Document Type (00/DT) UDC table that is used to obtain the automatic accounting instructions (AAI) accounts. |
| Market Value Validation | Enter <i>I</i> to validate the market value. If you enter 1 for this processing option and the market value is missing or has a value of zero, the Market Value field displays a value of zero, and the process uses the last purchase price adjustment that is calculated by the system for the adjustment. |
| Alternative GL Class | <p>Enter <i>I</i> to retain the item's GL class when these circumstances exist:</p> <ul style="list-style-type: none"> • A different GL class is used. • The item balance amount is other than zero. • The quantity is zero. <p>Review records in the F4111 table to view cases where purchase order-related costs have a GL class that is different from the one that is defined of the item in the F41021 table. In these cases, the GL class becomes significant because it defines the adjustment entry; the Market Value Validation processing option enable the system to charge generated adjustments to the inventory account where they originated.</p> |

Reviewing and Adjusting Prices for Argentina

This section discusses how to:

- Review and adjust prices.
- Set processing options for Calculated Costs (P76A392).

Forms Used to Review and Adjust Prices

| Form Name | FormID | Navigation | Usage |
|----------------------------|----------|--|---------------------------|
| Work with Calculated costs | W76A392B | Inventory Inflation Adjustment (G76A39), Inquiry Calculated Costs. | Review and adjust prices. |
| Work with Adjustments | W76A392D | Select a record in the detail area of the Work with Calculated costs form, and select Adjustments from the Row menu. | Review and adjust prices. |

Reviewing and Adjusting Prices

Access the Work with Calculated costs form.

Price For Adjustment Enter the list or base price to be charged for one unit of this item. In sales order entry, all prices must be set up in the F4106 table.

Setting Processing Options for Calculated Costs (P76A392)

Processing options enable you to specify the default processing for programs and reports.

General

Market Value Enter 1 to prevent the value that is entered from being greater than the market value.

Version R76A396 Specify the version of the Inflation Adjustment Journal Entry program (R76A396) to run.

Generating Journal Entries for Inflation Adjustments for Argentina

The Inflation Adjustment Journal Entry program (R76A396) creates the journal entries for the results that are generated by the Inflation Inventory Adjustment Process program (R76A395).

You can run the journal entry generation in final or proof mode; in both cases, the system creates a detailed report for the entry.

This section discusses how to:

- Run the Inflation Adjustment Journal Entry program.
- Set processing options for Inflation Adjustment Journal Entry (R76A396).

Running the Inflation Adjustment Journal Entry Program

Select Inventory Inflation Adjustment (G76A39), Inflation Adjustment Journal Entry.

Setting Processing Options for Inflation Adjustment Journal Entry (R76A396)

Processing options enable you to specify the default processing for programs and reports.

Defaults

1. **GL Date** Specify the GL date for the report.
2. **Batch Type** Specify the batch type (98/IT) for the report.
3. **Document Type** Specify the document type (00/DT) for the report.
4. **Ledger Type** Specify the ledger type (09/LT) for the report.

- 5. Journal Entry** Enter *R* if you want the journal entry to be automatically reversed.
- 6. Mode** Enter *I* to run in final mode.

Voiding an Adjustment Journal Entry in Argentina

You can void journal entries that are generated by the Inflation Adjustment Journal Entry program (R76A396).

Important! You must use the Calculated Costs program (P76A392) to void entries that are created by the Inflation Adjustment Journal Entry program.

Do not perform the void by using the JD Edwards EnterpriseOne General Accounting system.

This section discusses how to void an adjustment journal entry.

Form Used to Void an Adjustment Journal Entry

| Form Name | FormID | Navigation | Usage |
|-----------------|----------|--|-----------------------------------|
| Enter Void Date | W76A392E | Inventory Inflation Adjustment (G76A39), Inquiry Calculated Costs. Select a record in the detail area on the Work with Calculated costs form, and select Void from the Row menu. | Void an adjustment journal entry. |

Voiding an Adjustment Journal Entry

Access the Enter Void Date form.

To void an adjustment journal entry, complete the Void GL Date field, and select OK.

Adjusting Works in Process for Inflation for Argentina

This section provides an overview of adjusting works in process for inflation, lists prerequisites, and discusses how to:

- Create the journal entries for work in process inflation adjustments.
- Set processing options for Work in Process Adj. Journal Entry (R76A398).
- Void a work in process adjusting journal entry.
- Group transaction types.

Understanding Adjusting Works in Process for Inflation

Inventory valuation can be done in different ways, depending on the company's industry or market as well as the legal and fiscal requirements of the country in which the company operates.

In an inflationary economy, the valuation of works in progress is as important as the valuation of stock. The Work in Process - Inflation Adjustment process is designed to reflect the effects that inflation has over works in process. The system calculates the value of stock issues, which are considered works in progress within work orders, and then revalues the stock issues with prices that are calculated by using the PLAP method.

Journal Entries for Work in Process Inflation Adjustments

The Work in Process Adj. Journal Entry program (R76A398) creates journal entries that reflect the effect of inflation on works in process. The system first revalues stock issues (document type WO) by using the price that is calculated through the PLAP process. The system then generates a journal entry for the differences between the historic amounts from the F4111 table and the PLAP adjusted amounts.

Using the data selection that you specify (document types, branch, items, and so on), the system searches table F4111 by post date and calculates the adjustment for each of the transactions that are found. The adjustment amount is based on the PLAP that is calculated for the year and period being processed, and the item cost level that is specified in the F4101 table.

The system generates journal entries by using the Work in Progress accounts of the original transactions. The system searches the AAI tables that created the transaction by company, transaction document type, and GL class.

The system uses this search hierarchy to obtain the business unit of the account:

- The system obtains the business unit from the AAI table, using the AAI that is set up for the document type in the AAI Document Type - Work in Process Adjustment program (P76A395).
- The system obtains the business unit from the work order, searching the F4801 table to determine whether the business unit from the AAI is blank.

The system uses AAI table 3911 (Expense or Cost of Goods Sold - Stock Valuation Adjustments) to create journal entries in the offset account and summarizes journal entries by current account.

You can run the Work in Process Adj. Journal Entry program in proof or final mode, and you can run it as many times as necessary.

The Work in Process Adj. Journal Entry program produces a report that lists the processed data. The report includes these fields:

- Branch
- Business Unit
- Item
- Document Type
- Document Number
- Quantity
- UM
- Original Amount
- Adjusted Amount
- Future Adjustment

Information on the report is grouped by company, fiscal year, fiscal period, GL date, and batch type and number. At the end of the report, under each transaction detail, the report indicates the journal entry.

When run in final mode, the Work in Process Adj. Journal Entry program generates journal entries in the F0911 table and indicates which transactions were processed in the F76A4111 table.

Note. The price that is calculated by using the PLAP method must exist for the period for which you are processing the inventory adjustment. The system uses both the calculated price and the inventory journal entries to calculate the final adjustment.

Voiding a Work in Process Adjusting Journal Entry

You use the Void Work in Process Adj. Journal Entry program (P76A398) to void an entry that is generated by the Work in Process Adj. Journal Entry program (R76A398) so that the entry can be reprocessed.

In addition to voiding the journal entry, the Void Work in Process Adj. Journal Entry program deselects transactions that have already been processed so that they can be processed again.

You must specify the post date on which the entry should be voided.

Important! You must use the Void Work in Process Adj. Journal Entry program to void entries that are created by the Work in Process Adj. Journal Entry program.

Do not use the JD Edwards EnterpriseOne General Accounting system to perform the void.

Inventory Turn Report

The Inventory Turn report (R41116) enables you to analyze:

- Trends in the inventory environment.
- Inventory turnover in amount.

Transaction Type Grouping

Before you run the Inventory Turn report, you must group the transaction types by document codes.

For example, you can group the transaction codes for inventory adjustments (IA), inventory issues (II), and inventory transfers (IT) into a transaction type for inventory transactions (I). You can then run the Inventory Turn report using I as a transaction family document type in the processing options.

Prerequisites

Before you complete the tasks in this section:

- Calculate prices using the PLAP method.
- Generate inflation adjustment journal entries.
- Set up AAI document types.
- Set up document type codes.

Forms Used to Void a Journal Entry and Group Adjustment Types

| Form Name | FormID | Navigation | Usage |
|----------------------------|----------|---|---|
| Enter Void Date | W76A392E | Works in Process (G76A391), Void Work in Process Adj. Journal Entry. Select a record in the detail area on the Work with Inflation Adjustment Journal Entries form, and select Void from the Row menu. | Void a work in process adjusting journal entry. |
| Work with Transaction Type | W43115A | Inventory Reports (G41111), Transaction Family Documents. | Group transaction types. |

Creating Journal Entries for Work in Process Inflation Adjustments

Select Work in Process (G76A391), Work in Process Adj. Journal Entry.

Setting Processing Options for Work in Process Adj. Journal Entry (R76A398)

Processing options enable you to specify the default processing for programs and reports.

General

| | |
|------------------------|---|
| Adjustment Code | Specify the adjustment code (76A/CA). |
| Calendar Year | Specify the year in which to run the report. |
| Calendar Month | Specify the month in which to run the report. |

Defaults

| | |
|-------------------------|--|
| 1. GL Date | Specify the GL date for the report. |
| 2. Batch Type | Specify the batch type (98/IT) for the report. |
| 3. Document Type | Specify the document type (00/DT) for the report. |
| 4. Ledger Type | Specify the ledger type (09/LT) for the report. |
| 5. Journal Entry | Enter <i>R</i> if you want the journal entry to be automatically reversed. |
| 6. Mode | Enter <i>I</i> to run in final mode. |

Voiding a Work in Process Adjusting Journal Entry

Access the Enter Void Date form.

To void a work in process adjusting journal entry, complete the Void GL Date field.

Grouping Transaction Types

Access the Work with Transaction Type form.

| | |
|-------------------------------------|--|
| Tran Type (transaction type) | Inquire on different document transaction types, such as <i>I</i> for inventory transaction documents, <i>O</i> for purchase order documents, and <i>S</i> for sales order documents. |
| Doc Ty (document type) | <p>Enter a user defined code (00/DT) that identifies the origin and purpose of the transaction. The system reserves several prefixes for document types, such as vouchers, invoices, receipts, and timesheets. The reserved document type prefixes for codes are:</p> <p><i>P</i>: Accounts payable documents</p> <p><i>R</i>: Accounts receivable documents</p> <p><i>T</i>: Time and Pay documents</p> <p><i>I</i>: Inventory documents</p> <p><i>O</i>: Purchase order documents</p> <p><i>S</i>: Sales order documents</p> |

CHAPTER 14

(ARG) Generating Legal Reports

This chapter discusses how to:

- Produce CITI reports.
- Process the SICORE withholding magnetic report.
- Work with the account ledger book.
- Work with the Fixed Asset Legalized Book report.
- Generate the Gross Income Perception report.

Producing CITI Reports for Argentina

This section provides overviews of the CITI (*Cruzamiento Informático de Transacciones Importantes*) report, the Split Tax Validation program, the Process Purchase Documents program, the Company's Credit Notes program, and the CITI Report Text File program; and discusses how to:

- Run the Split Tax Validation report.
- Set processing options for Split Tax Validation (R76A8900).
- Run the Process Purchase Documents program.
- Set processing options for Process Purchase Documents (R76A8092).
- Run the Process Own Credit Notes report.
- Set processing options for Process Own Credit Notes (R76A8093).
- Run the Generate Text File program.
- Set processing options for Generate Text File (R76A8094).

See Also

Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” Setting Up Credit Invoice Status Rules for Argentina, page 97

Chapter 7, “(ARG) Processing Credit Invoices for Accounts Payable,” Reclassifying Fiscal Credit for Argentina, page 143

Understanding the CITI Report

The Public Income Federal Agency (AFIP), through General Resolution 781/00, established the need for companies to report their fiscal credit on a monthly basis.

You must report fiscal credit information for these transactions:

- Purchase transactions, including credit notes whose fiscal credit has been reclassified as final.
- Credit notes issued by the company.

You submit fiscal credit information to the fiscal authority using the CITI (*Cruzamiento Informático de Transacciones Importantes*) Purchase V2.0 application provided by the AFIP, which allows you to import data from a personal computer.

Considerations for Credit Notes

The system determines which vouchers should be included in the CITI report. Only those transactions whose fiscal credit has been considered final for the month being considered are included in the report.

Not all credit invoices are included in the monthly CITI report because some may have been sent to a loss account instead of to the final fiscal credit account.

Note. It is recommended that you run the AP Credit Invoice V.A.T. Restatement program (R76A0052) to reclassify all the vouchers for the month that you are processing before you generate the CITI report.

It is also recommended that you run the V.A.T. Purchasing Ledger program (R760499A) in final mode before you generate the CITI report.

You must set up a credit invoice status rule for the CITI event, with the status in the Credit Invoice Status From field that is required to include the credit invoices in the CITI, and the status in the Credit Invoice Status To field to which the credit invoices are changed after being included in the CITI report. The Credit Invoice Status From status is applied after the credit invoices have been reclassified.

The CITI report verifies that credit invoices have the required status defined in the Credit Invoice Status From field. Credit invoices without this status are excluded and are listed in the Work Center.

When you generate the CITI report in final mode, the status of the credit invoice is updated. If you need to regenerate the CITI report, you must create a new status rule to include credit invoices that have already been processed.

Considerations and Limitations of the AFIP CITI Application

You can import data in the AFIP CITI application in either of these modes:

- File with no processing
- Grouping and ledgering file

The AFIP CITI application considers the file to be a file with no processing if the information that is being imported was generated in detail. That is, the import file contains a record for each transaction, regardless of the amount of fiscal credit. This option requires more processing time because the AFIP CITI application has to summarize those transactions with a fiscal credit lower than 500.

The AFIP CITI application considers the file to be a grouping and ledgering file if the information that is being imported was generated from the summary of the transactions with fiscal credit does not exceeding 500. This option uses less processing time because the AFIP CITI application imports the information only.

You can choose which of these two options to use by completing the processing options for the minimum amount of fiscal credit for the Process Purchase Documents program (R76A8092) and the Process Own Credit Notes program (R76A8093). If you specify 0 in these processing options, the AFIP CITI application processes the file with no processing. If you specify 500,00 in these processing options, the AFIP CITI application processes the file as a grouping and ledgering file.

Beginning and Final Positions

This table shows the beginning and final positions of the information in the text file that you must indicate the first time that you import data in the AFIP CITI application:

| Denominación del campo | Desde | Hasta |
|---|-------|-------|
| <i>Tip de Comprobante</i> | 001 | 002 |
| <i>Nº de Comprobante</i> | 003 | 014 |
| <i>Fecha del Comprobante</i> | 015 | 022 |
| <i>C.U.I.T. del Informado</i> | 023 | 033 |
| <i>Apellido y Nombre o Denominación</i> | 034 | 058 |
| <i>Impuesto Liquidado</i> | 059 | 070 |
| <i>C.U.I.T. Vendedor</i> | 071 | 081 |
| <i>Denominación Vendedor</i> | 082 | 106 |
| <i>IVA Comisión</i> | 107 | 118 |

Fiscal Credit Determination

Tax percentages to be taken are defined as indicated:

- For purchases, the tax percentage to be taken corresponds to bucket 1 of the voucher tax area.
This tax is also reported on the V.A.T. Purchasing Ledger as fiscal credit. Other kinds of taxes that are connected to the voucher, such as perceptions, internal taxes, and nonregistered VAT, are not reported.
- For the company's credit notes, the tax percentage to be taken corresponds to the tax codes for which a *I* is entered in the Sales Report Group Column field (ASGC) in the Tax Definitions program (P76A10).

Frequency and Number of Presentations

Resolution RG 781/00 established that each company (taxpayer) should submit the CITI report for every month, including January, February, and March. Therefore, you must run the complete process (process purchase documents, process the company's credit notes, and generate the text file) before beginning the process for the next month.

Processing Option to Delete the Output File

The Process Purchase Documents program (R76A8092) allows the CITI Report - ARG - 04 table (F76A8014) to be purged and then regenerated. The Process Own Credit Notes program (R76A8093) adds information to the transactions that were created by the Process Purchase Documents program. Therefore, you must run the Process Purchase Documents program first and the Process Own Credit Notes program second.

Error Messages

The error messages that might appear on the report act as warnings; they do not stop the process of importing the file from a personal computer. However, if the errors continue to appear, the application does not import the file successfully. You must correct the errors and reprocess the entire cycle.

Understanding the Split Tax Validation Program

You must run the tax split process before running any legal report in the JD Edwards EnterpriseOne Accounts Receivable or JD Edwards EnterpriseOne Sales Order Management system.

Tax rates have one or more tax codes that are associated with them and are used to calculate the tax amounts for specific taxes. These tax codes each have a defined account, and the tax rate has a global account.

The tax total is calculated when the voucher is generated and is assigned to the global account. You run the Split Tax Validation program (R76A8900) to reclassify the tax amounts from the global account to the accounts of the corresponding tax codes.

When you split taxes, the system updates the Business Unit (MCU), Object Account (OBJ), Subsidiary (SUB), Account ID (AID), and Processed (Y/N) (PRCS) fields in the Taxes - Tax Amount by Invoice Suffix table (F76A19) and the Processed (Y/N) (PRCS) field in the Invoice Total - ARG - 03B table (F76A09).

Understanding the Process Purchase Documents Program (R76A8092)

The Process Purchase Documents program (R76A8092) selects the purchase transactions for the period and processes them according to the rules established by RG 781 and the specifications of the AFIP CITI Purchase V2.0 application.

The Process Purchase Documents program generates the CITI Report - ARG - 04 table (F76A8014), which contains the selected transactions and the detail of the fiscal credits for the period. The system selects records from this table when you run the Generate Text File program (R76A8094) to create the CITI file that you process with the AFIP CITI application.

The Process Purchase Documents program includes credit invoices in the CITI report. Not all of the credit invoices are included because some of them might have been assigned to losses instead of to the final tax credit account and should not be included in the monthly CITI figures.

The credit invoices that are included must have the appropriate status. An error report lists vouchers that were not included because they had a different status.

When you run the Process Purchase Documents program in final mode, the system updates the credit invoice status. If you want to rerun the Process Purchase Documents program, you must create a new CITI rule that includes credit invoices which have already been processed.

This process runs in batch mode and uses data selection that is based on the supplier's current account.

You can run the Process Purchase Documents program in summary or detail mode, depending on how you want to process the report in the CITI application.

The Process Purchase Documents program generates a report containing information about the transactions that will be included in the CITI file.

Any errors that occur during processing are listed in the report:

- Invalid Company CUIT
- Invalid Supplier CUIT
- Check Transaction Sign

This error indicates that a transaction with a legal document type of 42 and a positive sign has been processed. The AFIP uses legal document type 42 to identify transactions that deduct fiscal credit. The legal document type or the transaction sign cannot be corrected. In this case, correct the mistake and reprocess the transaction.

- Salesperson Data is Missing

If a transaction with a legal document of 60 or 63 (transactions with middlemen) is being used, the AFIP requires that information about the salespersons who are related to the middlemen be included. No established and standard method exists about how each company records this information. Each company should obtain the relevant information according to its own process.

Note. You must run the Split Tax Validation program before you run the Process Purchase Documents program.

Data Selection for Process Purchase Documents (R76A8092)

This table shows the minimum data selection to include:

| Where | Left Operand | Comparison | Right Operand |
|-------|---|-----------------|---|
| Where | BC Document Type (F0411) (DCT) | is not equal to | "\$A,\$B,\$G,\$I,\$S,\$P1,PP" |
| And | BC G/L Posted Code (F0411) (POST) | is equal to | "D" |
| And | BC A/R - A/P - Miscellaneous Code 1 (F0411) (RP1) | is not equal to | "1" |
| And | BC Date - For G/L (and Voucher) - Julian (F0411) (DGJ) | is equal to | <Specify the appropriate date range.> |
| And | BC Company (F0411) (CO) | is equal to | <Specify the appropriate companies. The CITI application enables only one taxpayer a time. Therefore, all of the selected companies must have the same CUIT.> |
| And | BC Voucher included in VAT report - ARG (F760411A) (AINC) | is equal to | "Y" |

You can add to or change this data selection, if necessary.

Understanding the Company's Credit Notes Program

The Process Own Credit Notes program (R76A8093) selects the credit notes that add fiscal credit to include them in the CITI report. These credit notes are taken from JD Edwards EnterpriseOne Accounts Receivable. The selected information is added to the CITI Report - ARG - 04 table (F76A8014).

This process runs in batch mode and uses data selection that is based on the supplier's current account.

You can run the Process Own Credit Notes program in summary or detail mode, depending on how you want to process the report in the CITI application.

The Process Own Credit Notes program generates a report containing information about the transactions that will be included in the CITI file.

Any errors that occur during processing are listed in the report. The report lists these errors:

- Invalid Company CUIT
- Invalid Customer CUIT
- Check Transaction Sign

This error indicates that a transaction with a positive sign has been processed. According to the AFIP, only those sales operations that increase fiscal credit should be included. The problem might be that other kinds of transactions, in addition to credit notes, have been selected or the sign on a credit note is wrong. Correct the mistake and reprocess the transactions.

Note. You must run the Split Tax Validation program before running the Process Own Credit Notes program.

Data Selection for Process Own Credit Notes (R76A8093)

This table shows the minimum data selection to include:

| Where | Left Operand | Comparison | Right Operand |
|-------|--|-------------|---|
| Where | BC G/L Posted Code (F0411) (POST) | is equal to | "D" |
| And | BC Date - For G/L (and Voucher) - Julian (F0411) (DGJ) | is equal to | <Specify the appropriate date range.> |
| And | BC Company (F0411) (CO) | is equal to | <Specify the appropriate companies. The CITI application allows only one taxpayer a time. Therefore, all selected companies must have the same CUIT.> |
| And | BC Processed (Y/N) (F76A09) (PRCS) | is equal to | "Y" |

This table shows the minimum data selection to include to process voided transactions:

| Where | Left Operand | Comparison | Right Operand |
|-------|---|-------------|---------------------------------------|
| Where | BC G/L Posted Code (F0411) (POST) | is equal to | "D" |
| And | BC Void Date - For G/L - Julian (F03B11) (VDGJ) | is equal to | <Specify the appropriate date range.> |

| Where | Left Operand | Comparison | Right Operand |
|-------|------------------------------------|-------------|--|
| And | BC Company (F0411) (CO) | is equal to | <Specify the appropriate companies. The CITI application allows only one taxpayer a time. Therefore, all of the selected companies must have the same CUIT.> |
| And | BC Processed (Y/N) (F76A09) (PRCS) | is equal to | "Y" |

You can add to or change this data selection, if necessary.

Understanding the CITI Report Text File

The Generate Text File program (R76A8094) writes records to the Text Processor Header (F007101) and Text Process Detail (F007111) tables. You use the Text File Processor (P007101) to copy the text files from the F007101 and F007111 tables to text files that you can submit for tax reporting.

The Generate Text File program also creates a report containing information about the transactions that are included in the text file.

You can run the Generate Text File program in summarized or detail mode. The mode that you choose should correspond to the mode you will use in the AFIP Purchasing application.

Note. You must run the Split Tax Validation program before you run the Generate Text File program.

Running the Split Tax Validation Program (R76A8900)

Select Legal Reports (G76A03B2), Split Tax Validation.

Setting Processing Options for the Split Tax Validation Program (R76A8900)

Processing options enable you to specify the default processing for programs and reports.

Default

Mode Enter *1* to run the program in final mode. Leave this processing option blank to run the process in proof mode.

Running the Process Purchase Documents Program (R76A8092)

Select CITI - General Resolution 781 (G76A781), Process Purchase Documents.

Setting Processing Options for the Process Purchase Documents Program (R76A8092)

Processing options enable you to specify the default processing for programs and reports.

General

- 1. Enter Company** Specify the company that is submitting the report. This information is included in the CITI report.
- 2. Minimum Amount** Specify the minimum amount of fiscal credit. If an amount exceeds the minimum, the transaction is listed in detail. If an amount is below the minimum, the transaction is included in a global register where all transactions not reaching the minimum are listed.
- 3. AFIP Document Type** Specify the AFIP document type that is used to generate the summarized register. The RG 781 indicates that the document type should be 00. Therefore, you should specify 00 in this processing option. If its value does not exist in UDC 76/DT, the system displays an error message. This situation does not produce subsequent problems; but if you do not want the error message to display, add the value to UDC 76/DT.
- 4. Tax Explanation Code** Specify the tax explanation code. Enter *I* if you are processing transactions with tax explanation code S. Otherwise, leave this processing option blank.
- 5. Mode** Specify whether the system runs the report in proof or final mode. Enter *I* to run the report in final mode or leave it blank to run the report in proof mode.

Output

- 1. Delete the Output File** Specify whether the system deletes the output file. Specify *I* if you want to purge the contents of the CITI Report - ARG - 04 table (F76A8014) before the transactions. Leave this processing option blank to add additional information to table F76A8014.

Running the Process Own Credit Notes Program (R76A8093)

Select CITI - General Resolution 781 (G76A781), Process Own Credit Notes.

Setting Processing Options for the Process Own Credit Notes Program (R76A8093)

Processing options enable you to specify the default processing for programs and reports.

General

- 1. Company** Specify the company that is submitting the report. This information is included in the CITI report.
- 2. Minimum Amount** Specify the minimum amount of fiscal credit. If an amount exceeds the minimum, the transaction is listed in detail. If an amount is below the minimum, the transaction is included in a global register where all of the transactions not reaching the minimum are listed.
- 3. Legal Document Type** Specify the legal credit note type A if you want the process to select the records. If you want to process all of the records that are based on the data selection, leave this processing option blank.
- 4. Processing Mode** Specify whether the system processes the records in proof or final mode. If you specify *I* in this processing option, the system updates the Processing Flag

field (PFLG) in the Invoice Total - ARG - 03B table (F76A09) to indicate that the transaction has been included on a report. If you leave this processing option blank, the field is not updated.

Dates

- 5. Month** Specify the month for which you are submitting the CITI report.
- 6. Year** Specify the year for which you are submitting the CITI report. Enter the year as a four-digit number (for example, 2005).

Running the Generate Text File Program (R76A8094)

Select CITI - General Resolution 781 (G76A781), Generate Text File.

Setting Processing Options for the Generate Text File (R76A8094)

Processing options enable you to specify the default processing for programs and reports.

Default

- 1. Path** Specify where the system writes the text file. If you leave this processing option blank, the system places the text file in the root directory. If you specify a directory, format the directory path according to DOS rules. For example, if you want to save the text file in a folder named RG781 in the C directory, specify C:\RG781\.
- 2. Filename** Specify the name for the text file. Verify that the filename which you specify does not already exist in the folder that you specified in the previous processing option.

Processing SICORE Withholding Magnetic Report for Argentina

This section provides overviews of SICORE processing, required data for accounts payable withholdings, required data for accounts receivable data, the Numeration by Payment Order for Profit Withholding requirement, the Step I – A/P Transaction program, the Step III – Self Withholding program, the Final Step (RG 738) program, and the SICORE text file; lists a prerequisite, and discusses how to:

- Run the Step I – A/P Transaction (RG 738) program.
- Set processing options for Step I – A/P Transaction (RG 738) (R76A8081).
- Run the Step II – A/R Transactions (RG) 738) program.
- Set processing options for Step II – A/R Transactions (RG) 738) (R76A94).
- Run the Step III – Self Withholdings program.
- Set processing options for Step III – Self Withholdings (R76A96).
- Run the Final Step (RG 738) program.
- Set processing options for Final Step (RG 738) (R76A8002).

- Run the Text File Processor (P007101) program.

Understanding SICORE Processing

AFIP General Resolution 738/99, which was published on December 20, 1999, in the Argentinean Legal Newspaper, establishes a new application through which withholdings, perceptions, or both, are reported. This AFIP SICORE application also provides the ability to print withholding certificates.

Companies must use the AFIP SICORE application to report their withholdings and perceptions to submit a sworn declaration on a monthly or per semester basis, and to generate payment forms and certificates. The AFIP SICORE application allows you to submit a file on a diskette or through electronic transmission.

Article II of RG 738/99 establishes required data that is related to perception certificates and must be submitted.

Note. You do not use the AFIP SICORE application to print perception certificates. You print perception certificates in JD Edwards EnterpriseOne along with the vouchers that originated them. You can substitute another document (for example, the legal invoice) for a perception certificate, if the other document contains the information that is required in RG 750.

Complete these general steps to generate SICORE:

1. If you are using the JD Edwards EnterpriseOne Accounts Payable system, run the Step I - A/P Transactions (RG 738) program (R76A8081).
2. If you are using the JD Edwards EnterpriseOne Accounts Receivable system, run the Step II - A/R Transactions (RG 738) program (R76A94).
3. If you make self withholdings, run the Step III - Self Withholdings program (R76A96).
4. Run the Final Step (RG 738) program (R76A8002).
5. Run the Text File Processor program (P) to create the flat file.
6. Use the Text File Processor (P007101) program to copy files from the F007101 and F007111 tables to text files that you submit for tax reporting.

Understanding Required Data for Accounts Payable Withholdings

This table shows the data that is required when reporting Accounts Payable withholdings to the fiscal authority:

Required Data Existing in UDC Tables

Set up these UDC table to supply required data:

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for SICORE for Argentina, page 63.](#)

| UDC | Description |
|-------------------------------|---|
| State & Province Codes (00/S) | The city, state, and postal code of the supplier must be set up in the JD Edwards EnterpriseOne Address Book system for correct exposition in SICORE. |

| UDC | Description |
|---------------------------------------|---|
| ARG-DGI Transaction Doc. Type (76/DT) | You use the values in the ARG-DGI Transaction Doc. Type (76/DT) UDC to associate SICORE document types with AFIP legal document types by specifying the AFIP legal document type in the Codes field and the associated SICORE document type in the Special Handling Code field. |
| ARG-Profit WH Condition (76/03) | Add condition codes to the Special Handling Code field in the ARG-Profit WH Condition (76/03) UDC table. |
| Address Book Category Code (01/01-30) | To correct report VAT condition codes in the SICORE, set VAT Condition Codes in an Address Book Category Code (UDC 01/01-30). Set up the AFIP Condition Codes in the Special Handling Code field of the category code UDC that you choose. |
| ARG-A/B Legal Document Type (76A/A0) | You must set up these AFIP document types in the ARG-A/B Legal Document Type (76A/A0) UDC table. |
| Country's CUIT (76A/FJ) | For profit withholdings that are made to foreign beneficiaries, you must report the CUIT for the supplier's country. The system retrieves the CUIT from UDC 76A/FJ where they are set up for physical persons or entities. |

Voucher Emission Date

The voucher emission date is the date of the voucher that generates the withholding. For profit withholdings that are generated by the payment of more than one voucher, you can use the date from any of the vouchers.

Document Number

The document number is the invoice legal number from the voucher that generates the withholding. For profit withholdings that are generated by the payment of more than one voucher, use the payment order number.

Voucher Amount

This data is the amount from the vouchers that generate the withholding.

Withholding Code

This table shows the AFIP withholding codes that are used in the JD Edwards EnterpriseOne Accounts Payable system:

| Code | Description |
|------|--|
| 217 | Profit Withholding |
| 218 | Profit Withholding - Foreign Beneficiaries |
| 767 | VAT Withholding |

Regime Code

The regime code is required in the SICORE and is validated when the data is imported in the application.

Regime codes are derived from the legal concepts, which are connected to the withholding concepts that you set up for VAT and profit withholdings percentages. Therefore, you must verify the setup for VAT and profit withholdings.

Operation Code

For all withholdings, the operation code is 1.

Calculation Base

This data is the withholding calculation base.

For the credit note document type, report the difference between the original withholding and the proper withholding. With this document type, you must report:

- Credit note withholdings
- Withholdings that are generated by adjustment payments which were entered by documents that discount the withholding generated

For example, if the original withholding value was 100 ARS and the user entered a withholding adjustment value of 20 ARS, the withholding value would have been 80 ARS. In the Calculation Base field, specify 20 ARS (100 - 80).

Condition Code

In addition to setting up UDCs for condition codes, specify the category code that you are using for VAT condition codes for suppliers in the Code of VAT Withholding processing option on the Final Step (RG 738) program (R76A8002).

Withholding Amount

This withholding amount is made to the supplier. For the credit note document type, this field contains the withholding amount that should have been reported. For example, for a withholding of 100 ARS followed by a rectification of 20 ARS, the withholding amount to be reported is 80 ARS.

Excluded Percentage and Bulletin Date

After the withholding has been made, you must report the supplier excluded percentage for the tax. To report the excluded percentage correctly, you must set up an exempt percentage in the V.A.T WH - Exempt Percentages program (P760416A).

When you run the Step I - A/P Transactions (RG 738) program (R76A8081), the system verifies, based on the withholding type, that the withholding date is between the effective date and the expiration date to get the official bulletin emission date.

Supplier Document Type and Number

Set up AFIP document types in the ARG-A/B Legal Document Type (76A/A0) UDC table; and then you must specify both the AFIP document type and the document number on the A/B Additional Information - Revision form when you set up address book records for suppliers.

For foreign suppliers, specify the foreign document number that is defined by AFIP for each country. Do not enter the CUIT from the country to which the supplier belongs.

Original Certification Number

This field must be completed only for rectifications that increase or decrease a withholding made, or for withholdings from credit notes. The certification number that corresponds to the one given to the withheld subject must be reported.

You must correctly report the original certification number because the system uses this number to retrieve the legal invoice, the taxable amount, and the gross amount of the voucher that generated the original withholding.

You can review the relationship between the original withholding certificate and the rectification by choosing Rectification from the Row menu on the Work with Voucher Additional Information form of the F0411 Tag File Maintenance program (P760411A).

Increase Growth

Enter 0 in the Increase Growth field if a growth increase does not exist. Enter 1 if the voucher that originated the profit withholding was made to a foreign supplier who has a fiscal area defined in UDC 76A/AC.

Supplier Number and Document Type

The number and document type from the supplier for whom the withholding amount was retained must be reported.

Trade Name

This data is the trade name of the supplier. The system retrieves the alpha name from the supplier's address book record.

Understanding Required Data for Accounts Receivable Self Withholdings or Perceptions

This data is required when reporting Accounts Receivable self withholdings or perceptions to the fiscal authority.

Required Data Existing in UDC Tables

The system retrieves some required data from UDC tables.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for the Perception Report for Argentina, page 65.](#)

| UDC | Description |
|---------------------------------------|---|
| State & Province Codes (00/S) | You must include the state when supplying data about the perceived client. You specify the state in the client's address book record. AFIP has established a special codification for each state. You set up the special codification in the Special Handling Code field of UDC 00/S. |
| ARG-DGI Transaction Doc. Type (76/DT) | Set up values to associate SICORE document types with AFIP legal document types by specifying the AFIP legal document type in the Codes field and the associated SICORE document type in the Special Handling Code field. |
| ARG-Concept Code (76A/CI) | The general resolution includes a categorization of taxes. List these categories in the ARG-Concept Code (76A/CI). |
| ARG- Concept Code (76A/CR) | Use UDC 76A/CR to set up the activity codes under which the company can operate. Enter the codes and corresponding descriptions in conformity with General Resolution 738/99. The description is the concept of the perception certificate. |
| Perception Code SICORE (76A/PE) | You must associate the tax codes for the tax areas with the regime codes and the DGI tax code in the Perception Code SICORE (76A/PE) UDC table. |

Percentage of Exclusion

You must include the percentage of exclusion for perceptions and the date of the government report when they were published. You set up this information in the Perception Exempt Percentages program (P76A8050).

See *JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide*, “(ARG) Setting Up the System for Argentinian Taxes,” Setting Up Exclusion Percentages.

Understanding Numeration by Payment Order for Profit Withholding (RG 814/00)

The implementation of RG 738 - Phase III requires that certificates of tax withholding and profit withholding be numbered by issue place and fiscal year.

The new resolution impacts RG 814 as indicated:

1. AFIP provided a new software application to read the SICORE. This application is called SICORE - Withholding System Control - Version 3.0 - Update and can be downloaded from the internet.
Resolution 814/00 does not require the use of this version, although you should always use the latest version which, at this time, is Version 4.0. This version meets the requirements of resolution 814/00.
2. The new numeration is optional so the tax withholding and profit withholding can be reported in the SICORE with the JD Edwards EnterpriseOne internal number. If you choose to use the JD Edwards EnterpriseOne internal number in the SICORE, you must use Version 3.0 - Update or Version 4.0. If you choose to use the numeration established by Phase III, you can use Version 3.0, Version 3.0 - Update, or Version 4.0. It is recommended that you use the latest version of the software.
3. A new valid value of Payment Order has been added to the Voucher Type field to the import file for SICORE. This value is used when a withholding includes several invoices (such as profit). This new value is optional.

JD Edwards EnterpriseOne software includes these modifications to meet these new requirements:

- The RG814 - Profit Withholding & Payment Order - ARG - 04 table (F76A8015) now stores the payment order number corresponding to profit withholding by supplier and company in the Payment Order Number - Argentina field (AOP).
- Step I of SICORE now populates the Payment Order field with the payment order number in the Payment Order Number - Argentina field (AOP) of the A/P Payment Detail Tag Table - ARG - 04 table (F760414A).

Understanding the Step I - A/P Transactions Program

The Step I - A/P Transactions (RG 738) program (R76A8081) generates the Company Relation RG 738/99 - ARG - 04 table (F76A8081) with information about the withholdings made to suppliers. The F76A8001 table, which conforms to the structure that is required by AFIP for the SICORE, is also generated and contains this information:

- Invoice letter.
- JD Edwards EnterpriseOne internal supplier.
- Withholding number.
- Company.

This information is not supplied during this step because this information is retrieved during the final step:

- Supplier document type.

- Supplier document number.
- Supplier country CUIT.
- Withholding condition of the subject for VAT tax.

The Step I - A/P Transactions (RG 738) program generates an error report and a report that lists the selected records.

After you run this program for purchase transactions, you must run a version for voids. When you run the version for voids, set up the processing options in the same way as you did on the version for purchase transactions, with these exceptions:

- Specify *I* in processing option 4 to process voids.
- Leave processing option 5 blank to avoid erasing the exit file.
- Specify *3* in processing options 9 and 10 on the Adjustment tab to process voids.

Data Selection for Step I - A/P Transactions (RG 738) (R76A8081)

Set the data selection for the Step I - A/P Transactions (RG 738) program as shown in this table:

| Operator | Left Operand | Comparison | Right Operand |
|----------|--|-----------------|---------------|
| Where | BC Document Type (F0414) (DCT) | is equal to | "\$G,\$I" |
| And | BC Document Type - Matching (F0414) (DCTM) | is not equal to | "PG" |

Understanding the Step III - Self Withholdings Program

You run the Step III - Self Withholdings program (R76A96) if you make self withholdings. This program adds records to the Generation SICORE's - Last Step -RG 738/99 - ARG - 04 table (F76A8001).

General Resolution 830/00 established in Anexo VII, point D, that companies subject to the exceptional regime must report an amount that is equal to the withholding amount which would have been made to them if they were not part of the exceptional regime. This information and amount must be reported according to the procedures, terms, and conditions that are defined by General Resolution 738/99 and its modifications (SICORE).

If the company is subject to the exceptional regime, you must run the Step III - Self Withholdings program.

Understanding the Final Step (RG 738) Program

The TXT Generation program (R76A8082) writes text files to the Text Processor Header (F007101) and Text Process Detail (F007111) tables. You use the Text File Processor (P007101) to copy the text files from the F007101 and F007111 tables to text files that you can submit for tax reporting.

See *JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide*, "Working with the Text File Processor".

Prerequisite

Run the Split Tax Validation program (R76A8900).

Running the Step I - A/P Transactions (RG 738) Program (R76A8081)

Select SICORE RG 738/99 (G76A738), Step I - A/P Transactions (RG738).

Setting Processing Options for the Step I - A/P Transactions (RG 738) Program (R76A8081)

Processing options enable you to specify the default processing for programs and reports.

General

- | | |
|--|--|
| 1. Date from: and 2. Date to: | Enter the beginning and ending dates for the date range. |
| 3. Proof or Final Mode | Enter <i>1</i> to run the report in final mode. Leave this processing option blank to run the report in proof mode. |
| 4. Enter '1' if you want to process void withholdings | Enter <i>1</i> to process voided withholdings. Leave this processing option blank to prevent the system from processing voided withholdings. |
| 5. Enter '1' if you want delete all withholding records of output file. | Enter <i>1</i> to delete all records in the output file. Enter <i>2</i> to delete withholding records for the range of dates specified in the Date From and Date To processing options. Leave this processing option blank to preserve the records in the output file. |

Tax AP

- | | |
|--|--|
| 6. Enter the VAT Tax Code. | Enter the VAT tax code. |
| 7. Enter the Profit Tax Code for Local Suppliers | Enter the profit tax code for local suppliers. |
| 8. Enter the Profit tax Code for Foreign Suppliers. | Enter the profit tax code for foreign suppliers. |

Adjustment

- | | |
|--------------------------------------|--|
| Document Type of Invoices | Specify the document type for adjusted or voided invoices. |
| Document Type of Credit Notes | Specify the document type for adjusted or voided credit notes. |

Legal Number

- | | |
|---------------------------------|--|
| Withholding Legal Number | Enter <i>1</i> to use the withholding legal number. |
| Voids | Enter <i>1</i> to generate in the work file the voids from the same month. |

Running the Step II - A/R Transactions (RG 738) Program

Select SICORE RG 738/99 (G76A738), Step II - A/R Transactions (RG 738).

Setting Processing Options for the Step II - A/R Transactions (RG 738) Program (R76A94)

Processing options enable you to specify the default processing for programs and reports.

General Option

- | | |
|------------------------------------|--|
| 1. Column of VAT | Enter a value that exists in the ARG - Item ASGC Allowed Values (76A/B4) UDC table to specify the column to which VAT amounts are written. Generally, VAT amounts are written to column 3. |
| 2. Initial Date | Enter the beginning of the range of dates for which you process records. |
| 3. Final Date | Enter the final date of the range of dates for which you process records. |
| 4. AR or AP Final Mode | Specify whether the system processes both accounts receivable and accounts payable records in final mode. Specify <i>1</i> if you are processing accounts receivable records only in the final process. Leave this processing option blank if you are including accounts payable records in the final process. |
| 5. Final Mode or Proof Mode | Specify whether the system processes records in proof or final mode. Enter <i>1</i> to run the process in final mode. When you run the process in final mode, the system enters a 1 in the Processing Flag field (PFLG) in the Invoice Total - ARG - 03B table (F76A09). |
| 6. RG 738 | Enter <i>Y</i> to run the process according to RG 738. |
| 7. Deleting Records | Specify whether the system deletes all of the existing records between the initial and final dates before running the process. Enter <i>Y</i> to delete records within the processing date range. Leave this processing option blank to delete all existing records. |

Running the Step III - Self Withholdings Program

Select SICORE RG 738/99 (G76A738), Step III - Self Withholdings.

Setting Processing Options for the Step III - Self Withholdings Program (R76A96)

Processing options enable you to specify the default processing for programs and reports.

General

- | | |
|--------------------------------------|--|
| 1. Date From and 2. Date Thru | Specify the date from or the date through which transactions should be included for processing. |
| 3. Final Mode or Proof Mode | Specify whether the system processes records in proof or final mode. Enter <i>1</i> to run the process in final mode. When you run the process in final mode, the system updates the User Reserved Amount field (URAT) in the Receipts Header table (F03B13), which prevents the records from being processed again. |

RG 830**4. RG 830 - SICORE Generation**

Specify whether the system runs the process as part of SICORE. Enter *Y* to run the process as part of SICORE. Leave this processing option blank to run it as an independent process.

5. Add Rows or Delete

Specify whether the system adds rows to existing records or deletes existing records. Enter *I* to add to the existing records. Leave this processing option blank to delete existing records before adding new ones.

6. Tax Code

Specify 217, which is the profit code.

Running the Final Step (RG 738) Program

Select SICORE RG 738/99 (G76A738), Final Step (RG 738).

Setting Processing Options for the Final Step (RG 738) Program (R76A8002)

Processing options enable you to specify the default processing for programs and reports.

General**1. Add Records or Delete**

Specify whether the system adds to existing records. Enter *I* to add to the existing records. Leave this processing option blank to delete existing records before adding new ones.

2. Category Code

Specify the address book category code in which you define the AFIP supplier or customer condition.

3. Tax ID

Specify the generic Tax ID for taxpayers who have not provided a tax ID number.

Default Codes A/P**1. Code of VAT Withholding**

Specify the VAT withholding code.

2. With Address in the Country

Enter the VAT code for a domestic supplier.

3. With Address in the exterior

Enter the VAT code for a foreign supplier.

Default Codes A/R**1. Enter V.A.T. Perception Code and 2. Profit Perception**

Specify the tax code that is defined in the system.

Running the TXT Generation Program (R76A8082)

Select SICORE RG 738/99 (G76A738), TXT Generation.

Setting Processing Options for TXT Generation Program (R76A8082)

Processing options enable you to specify the default processing for programs and reports.

General

1. **Path for the output file.**
Default C:\ Specify the path used for client based menus. The path describes where the application is located on the computer or network. A path includes the drive, folders, and subfolders that contain the application to be executed.
2. **Name of output file for records of F76A801T. and**
3. **Name of output file for records of F76A802T. (Suppliers/Customers).**
Default "F76A802T.txt" Specify the file that data is being transferred "to" in the file conversion process.

Working with the Account Ledger Book for Argentina

This section provides an overview of registration information and discusses how to:

- Add registration information for the Account Ledger Book.
- Generate the Account Ledger Legalized Book (R76A8020).
- Set processing options for the Account Ledger Legalized Book program (R76A8020).

Understanding Registration Information for the Account Ledger Book

The Legal Journal Book lists the general ledger transactions for a period of time. You run the Account Ledger Legalized Book program (R76A8020) to generate the Legal Journal Book.

You must set the general ledger registration information before you generate the Legal Journal Book. The general ledger registration information includes the beginning credit and debit balances for each period.

Forms Used to Set Up the Legal Journal Book

| Form Name | FormID | Navigation | Usage |
|----------------------------|----------|--|--|
| Work With G/L Registration | W094041A | Account Ledger Legalized Book (G76A09), Registration Number | Verify that the registration information exists for the company. |
| G/L Registration Revision | W094041B | On the Work With G/L Registration form, click Add. | Add registration information for the company. |

Adding Registration Information

Access the G/L Registration Revision form.

| | |
|----------------------------|---|
| Calendar Year | Enter the calendar year for this calendar. |
| Century | Enter the calendar century associated with the year. Enter is the first two digits of the year. For example, 19 indicates any year beginning with 19 (1998, 1999), 20 indicates any year beginning with 20 (2000, 2001), and so on. |
| Registration Number | Enter the number of the last Legal Journal Book that you generated. The system assigns the next number when you generate the Legal Journal Book for the next period. |
| Debit and Credit | Enter the debit amounts or the credit amounts that are the balances at the beginning of the periods that are defined in the Date Fiscal Patterns table (F0008). |

Generating the Account Ledger Legalized Book

Select Account Ledger Legalized Book (G76A09), Account Ledger Legalized Book.

Setting Processing Options for Account Ledger Legalized Book (R76A8020)

Processing options enable you to specify the default processing for programs and reports.

Mode

| | |
|--|---|
| 1. Processing Mode | <p>Leave this processing option blank to generate the report in proof mode. When run in proof mode, the report does not update any tables.</p> <p>Enter <i>1</i> to generate the report in final mode and update the page numbers, journal entries, and balances in the G/L Registration Balance table (F70404), and to print the report with titles and page numbers.</p> <p>Enter <i>2</i> to generate the report in final mode and update the page numbers, journal entries, and balances in table F70404, and to print the report without page numbers.</p> |
| 2. Pending transactions | <p>Enter <i>1</i> to check for transactions that are dated before the current period and do not have journal numbers assigned. If you leave this processing option blank, the system does not check for pending transactions.</p> <hr/> <p>Warning! The system verifies pending transactions in proof mode only.</p> <hr/> |
| 3. Process by Batch Number | <p>Specify whether the system processes by batch number. Values are:</p> <p>Blank: Does not process by batch number.</p> <p><i>1</i>: Processes by batch number.</p> <hr/> <p>Important! If you have summarized batches, you must set this processing option to <i>1</i>.</p> <hr/> |
| 3. Ledger Type Check Pending Transactions | <p>Enter a value that exists in the Ledger Type (09/LT) UDC table to specifies the type of ledger. You can set up multiple, concurrent accounting ledgers within the general ledger to establish an audit trail for all transactions.</p> |

Dates

- 1. From Date and 2. Thru Date** Specify the beginning or the end of a range of dates that the system uses to select records to process.

Company

- Legal Company** Specify the company that is generating the report. This company must be set up in the Registration Number program (P094041). The report assigns the journal number, based on information that is set up in this program.
- If you leave this processing option blank, the report uses the information for company 00000 in the Registration Number program.

Options

- 1. Select Account Number Category Code** Specify the Account Number Category Code to print on the report. The only values are 21, 22 and 23. Leave this processing option blank to print the account number.

Registration

- Registration Number Assignment** Leave this processing option blank to assign a registration number for each document. Enter *1* to assign registration numbers for each journal entry line.

Adjustments

- Registration Date** Specify the date to use to complete the Date - Updated field (UPMJ) in the Account Ledger table (F0911) when the report is run in final mode. If you leave this processing option blank, the report does not update this field.
- Registration Number** Specify the method the system uses to assign registration numbers. Values are:
- Blank: Use the next available registration number for the current fiscal year.
- 1*: Number the adjustments starting with the next available number for the previous fiscal year. This method is not recommended.

Page

- 1. Page Numbering** Specify the method the system uses for page numbering. Values are:
- Blank: Number pages using the next number setup.
- 1*: Number pages from 1 to N.
- 2. Document Type** Enter a value that exists in the Document Type (00/DT) UDC table to specify the document type setting for the page number.
- 3. Number Pages by Company** Specify whether the page number setting is by company. Values are:
- Blank: Company and fiscal year.
- 1*: Company.
- 4. Enter Lines Per Page** Specify the printer parameter for the number of lines per page. The default is 46 lines for paper size A4.

Working with the Fixed Asset Legalized Book for Argentina

This section provides an overview of the Fixed Asset Legalized Book, lists a prerequisite, and discusses how to:

- Run the Fixed Asset Legalized Book program.
- Set processing options for the Fixed Asset Legalized Book program (R76A1244).

Understanding the Fixed Asset Legalized Book

You use the Fixed Asset Legalized Book program (R76A1244) to generate the Annex A report.

Technical Resolution 9 and the General Inspection of Justice require a monthly presentation of the accumulated depreciation or appreciation of goods of use. The report must include different fixed assets groups, including the advance payments to vendors by purchase of goods of use and works in progress. For each of these items, the report must list the beginning balance, additions, disposals, transfers of works in progress, transfers of fixed assets, and the accumulated depreciations.

The Annex A is a legal report that lists, by fixed assets group (lands, machineries, vehicles, works in progress, and so on), the beginning balance for the fiscal year and a summary of the movements of the year through the report date, classified in columns by additions, disposals, receipted transfers, completed transfers. These columns are grouped by movements on original value/asset cost accounts and accumulated depreciation accounts.

Prerequisite

Before completing the tasks in this section, set up the Anexo A Column Type (76A/12) UDC table.

Running the Fixed Asset Legalized Book Program (R76A1244)

Select Fixed Asset Legalized Book (G76A12), Fixed Asset Legalized Book.

Setting Processing Options for the Fixed Asset Legalized Book Program (R76A1244)

Processing options enable you to specify the default processing for programs and reports.

Dates

1. Beginning Date for Report and 2. End Date for Report

Specify the beginning or the end of a range of dates that the system uses to select records from the Account Ledger table (F0911).

Accounts

In the first two ranges (original value), specify the range of the original value accounts to use to select transactions from the F0911 table. In the second two ranges (depreciation value), specify the range of accumulated depreciation accounts to use to select transactions from the F0911 table. In both cases, specify the object accounts.

3. First Range Original Value - From Account

Specify the beginning of the first range for the original value accounts.

- | | |
|--|--|
| 3. First Range Original Value - Thru Account | Specify the end of the first range for the original value accounts. |
| 3. First Range Depreciation - From Account | Specify the beginning of the first range for the depreciation accounts. |
| 3. First Range Depreciation - Thru Account | Specify the end of the first range for the depreciation accounts. |
| 3. Second Range Original Value - From Account | Specify the beginning of the second range for the original value accounts. |
| 3. Second Range Original Value - Thru Account | Specify the ending of the second range for the original value accounts. |
| 3. Second Range Depreciation - From Account | Specify the beginning of the second range for the depreciation accounts. |
| 3. Second Range Depreciation - Thru Account | Specify the ending of the second range for the depreciation accounts. |

Participation

Specify the participate percentage for the company.

- | | |
|---------------------------------------|---|
| 4. Percentage of Participation | Specify the percentage the system uses to multiply the amounts. The default value is <i>1</i> . |
|---------------------------------------|---|

Outfile

- | | |
|--------------------------------|---|
| 5. Save data to outfile | Enter <i>1</i> to have the system save the data in the F76A1244 table to a file. Leave this processing option blank to prevent the system from saving the data to a file. |
|--------------------------------|---|

Ledger Type

- | | |
|-----------------------|--|
| 6. Ledger Type | Enter a value that exists in the Ledger Type (09/LT) UDC table to specify the type of ledger. If you leave this processing option blank, the system uses ledger type AA. You can set up multiple, concurrent accounting ledgers within the general ledger to establish an audit trail for all transactions. |
|-----------------------|--|

Business Unit

- | | |
|-------------------------|--|
| 7. Business Unit | Specify the business unit that is submitting the report. |
|-------------------------|--|

Generating the Gross Income Perception Report for Argentina

This section provides an overview of the Gross Income Perception (R76A93) program, lists prerequisites, and discusses how to:

- Run the Gross Income Perception program.
- Set processing options for the IIBB Perception program (R76A93).

Understanding the Gross Income Perception (R76A93) Program

The IIBB Perception program (R76A93) generates a list of vouchers that is issued with gross income (IIBB) perception. This report lists the amounts that have been deposited in AFIP accounts for the trimester.

The IIBB Perception program generates a printed report and an optional flat file named F76A93.

Structure of the F76A93 Flat File

This table describes the structure for record type 1:

| Record | Content |
|--------------------------------|--|
| cRecordNumber | Record code (1) |
| szIIBBCompanyNumber | Informant company gross incomes number |
| mnInformedYear | Year to be informed |
| mnInformedMonth | Month to be informed |
| mnWithholdingAmount | Withholding amount |
| mnIIBBDocNumbMonth | Voucher number |
| cFortnightNumber | Quarter |
| cCheckDigit | Voucher security digit |
| szIIBBPerceptionTapeArgentina0 | Filler (white spaces) |

This table describes the structure for record type 2:

| Record | Content |
|----------------------|--|
| cRecordNumber | Record code (2) |
| szIIBBCompanyNumber | Informant company gross incomes number |
| mnInformedYear | Year to be informed |
| mnInformedMonth | Month to be informed |
| cFortnighNumber | Quarter |
| szIIBBCustomerNumber | Customer gross incomes number |
| szVATNumber | Address book CUIT number |

| Record | Content |
|--------------------------------|------------------------|
| mnWithholdingAmount | Amount total perceived |
| szIIBBPerceptionTapeArgentina0 | Filler (white spaces) |

Prerequisites

Before completing the tasks in this section, set up these UDCs:

- State & Province Codes (00/S).
- ARG-DGI Transaction Doc. Type (76/DT).
- ARG-Concept Code (76A/CI).
- ARG- Concept Code (76A/CR).
- Perception Code SICORE (76A/PE).

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up UDCs for the Perception Report for Argentina, page 65.](#)

Running the IIBB Perception Program (R76A93)

Select Legal Reports (G76A03B2), IIBB Perception.

Setting Processing Options for the IIBB Perception Program (R76A93)

Processing options enable you to specify the default processing for programs and reports.

General Option

- | | |
|--|--|
| 1. Enter the Tax Code corresponding to IIBB perception. | Specify the tax code UDC 76A/TC that corresponds to IIBB perception. |
| 2. Enter the fortnight number. | Specify the fortnight number. |
| 3. IIBB D.G.I. voucher number including security digit., 5. IIBB D.G.I. voucher number including security digit., and 7. IIBB D.G.I. voucher number including security digit. | Specify the IIBB D.G.I. voucher number (including security digit) for the first through third months of the quarter to be processed. |
| 4. Security deposit Amount., 6. Security deposit Amount., and 8. Security deposit Amount. | Specify the security deposit amount for the first through third months of the quarter to be processed. |

9. Enter '1' if you want to generate both report and output file.

Specify *1* to generate both a flat file and a printed report. The flat file is named F76A93. If you leave this processing option blank, the program generates a printed report only.

10. Enter the quarter number that is processed.

Specify the number of the quarter that the system processes for the report.

PART 3

Australia

Chapter 15

Chapter 16

(AUS) Setting Up Country-Specific Functionality for Australia

CHAPTER 15

(AUS) Understanding Country-Specific Functionality for Australia

This chapter provides an overview of Australia-specific setup and processes that you use in addition to the standard setup and processes provided in the base software.

Australia-Specific Setup and Processes

This table lists the country-specific setup and functionality for Australia.

| Setup or Process | Description |
|--|--|
| UDCs (user-defined codes) | There is no country-specific setup for UDCs for Australia. |
| AAIs (automatic accounting instructions) | Set up AAIs to account for GST (goods and service tax). <i>See JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “(AUS) Setting Up Australian Goods and Services Tax,” Setting Up Automatic Accounting Instructions for GST.</i> |

| Setup or Process | Description |
|-----------------------------|---|
| Goods and service tax setup | <p>To work with GST in Australia, set up:</p> <ul style="list-style-type: none"> • Tax authorities • Tax rates and areas • Tax explanation codes • Tax rules • General ledger accounts • AAIs <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(AUS) Setting Up Australian Goods and Services Tax”.</p> <p>Before processing GST for Australia:</p> <ul style="list-style-type: none"> • Review the overview of GST. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(AUS) Entering Customer, Supplier, and Item Information for GST,” Understanding Australian Goods and Services Tax (GST).</p> <ul style="list-style-type: none"> • Set up customer master and supplier master records to includes required information for GST processing. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(AUS) Entering Customer, Supplier, and Item Information for GST,” Adding GST Information to Customer and Supplier Records.</p> <ul style="list-style-type: none"> • Add item/branch information for GST. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(AUS) Entering Customer, Supplier, and Item Information for GST,” Adding Item Branch/Plant Information for GST.</p> <ul style="list-style-type: none"> • Add order line types for nonstock items. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(AUS) Entering Customer, Supplier, and Item Information for GST,” Adding Order Line Types (Nonstock Only) for GST.</p> |

| Setup or Process | Description |
|---|--|
| Goods and service tax setup (continued) | <ul style="list-style-type: none"> • Set processing options for these programs: <ul style="list-style-type: none"> - Enter Purchase Orders (P4310) - Print Purchase Orders (R43500). - Voucher Entry MBF Processing Options (P0400047). - Post Vouchers to GL (R09801). - Post Manual Payments to GL (R09801). - Post Payments to GL (R09801). - Invoice Print (R42565). - Speed Invoice Entry (P03B11SI). - Standard Invoice Entry (P03B11). - Invoice Entry MBF Processing Options (P03B0011). • REMOVE <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(AUS) Entering Customer, Supplier, and Item Information for GST,” Setting Processing Options for JD Edwards EnterpriseOne Procurement and JD Edwards EnterpriseOne Accounts Payable.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(AUS) Entering Customer, Supplier, and Item Information for GST,” Setting Processing Options for JD Edwards EnterpriseOne Sales Order Management and JD Edwards EnterpriseOne Accounts Receivable.</p> |

| Setup or Process | Description |
|------------------------------------|---|
| Goods and service tax (processing) | <p>When working with GST, you can:</p> <ul style="list-style-type: none"> • Use the Print Tax Invoice/Adjustment Note program (R75A0210) to print tax invoices or adjustments to tax invoices that you send to the customers. • Use the Print Withholding Tax Summary Report (R75A0220) to print a summary of tax withhold from a supplier who has not provided an ABN number. • You use the Print Recipient Created Tax Invoice program (R75A0230) to print recipient-created tax invoice (RCTIs) for suppliers. This customer-produced tax invoice is considered a legal document that complies with the Australian Tax Reform requirements. • You use the Print RCTI Adjustment Notes program (R75A0240) to print RCTI adjustment notes for suppliers. You must create an adjustment note to reflect changes to RCTIs. <p>See Appendix C, “JD Edwards EnterpriseOne Country-Specific Reports,” (AUS) Reports for Australia, page 1790.</p> <p>Use these inquiry programs to view information about the reports run previously:</p> <ul style="list-style-type: none"> • Enquire Tax/Adjustment Print Control (R75A0200). • Enquire RTCI Print Control (R75A0201). • Enquire RTCI Adjustments Print Control (R75A0202). <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(AUS) Entering Customer, Supplier, and Item Information for GST,” Locating Report Information.</p> |
| Payment formats | <p>Use the Create Australia EFT Payment File program (R04572OZ) to generate EFT files for Australia in the standardized format.</p> <p>See Chapter 16, “(AUS) Setting Up Country-Specific Functionality for Australia,” Setting Up Payment Formats for Australia, page 299.</p> |
| Rapid Start | <p>The JD Edwards EnterpriseOne Rapid Start solution from Oracle is available for Australia, as well as other countries. The preconfigured data that is part of the Rapid Start solution is based on business processes that have been designed according to the best business practices for a specific country and industry.</p> <p>See <i>JD Edwards EnterpriseOne Rapid Start 8.12 Documentation</i></p> |
| Payroll | <p>See <i>JD Edwards EnterpriseOne Australia/New Zealand Payroll 8.12 Implementation Guide</i></p> |

CHAPTER 16

(AUS) Setting Up Country-Specific Functionality for Australia

This chapter discusses how to set up:

- Automatic accounting instructions (AAIs)
- Payment formats

Setting Up AAIs for Australia

Set up AAIs for goods and service tax (GST).

See *JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide*, “(AUS) Setting Up Australian Goods and Services Tax,” Setting Up Automatic Accounting Instructions for GST.

Setting Up Payment Formats for Australia

This section provides an overview of payment formats for Australia and discusses how to set processing options for the payment format for Australia.

Understanding Payment Formats for Australia

The Australian Payment Clearing Association (APCA) established a standardized electronic funds transfer (EFT) format for all Australian banks. You use the Create Australia EFT Payment File program (R04572OZ) to generate EFT files for Australia in the standardized format.

The Create Australia EFT Payment File program (R04572OZ) writes only credit transactions; it does not write debit transactions.

Required Setup for EFT Payments

Processing EFT payments in Australia involves these additional setup tasks:

- Verify that the value P04572OZ exists in the Produce Bank File UDC table (04/PP).
- Use the Payment Instrument Defaults program (P0417) to assign P04572OZ to a payment instrument.
Assign this payment instrument to the suppliers that use EFT.
- Set up supplier bank information.

Enter the bank/state/branch (BSB) number in the Bank Transit Number field and the reference number that is requested by your supplier in the Reference/Roll Number field. The system writes the value from the Reference/Roll Number field to the Lodgement Reference field in the flat file. If you do not complete the Reference/Roll Number field, the system writes the document number of the payment as the value for the Lodgement Reference.

Note. When you write payments that use the EFT format for Australia, the system generates the EFT flat file in the format that is required by the Australian Payment Clearing Association (APCA) and stores the data in the Text Processor Header (F007101) and Text Processor Detail (F007111) tables.

Setting Processing Options for Create Australia EFT Payment File (R04572OZ)

Processing options enable you to specify the default processing for programs and reports.

EFT

- | | |
|---------------------------------|---|
| 1. Financial Institution | Specify the value for the financial institution. The system writes the value that you enter to positions 21 through 23 of the EFT header record (Record Type 0). The Australian Payments Clearing Association (APCA) provides approved financial institution abbreviations in its publications. |
| 2. File Description | Enter the text that the system writes to positions 63 through 74 of the EFT header record (Record Type 0). The text that you enter should accurately describe the contents of the file. |
| 3. Indicator | <p>Enter the one-character code that the system writes to position 18 of the EFT detail record (Record Type 1). The APCA standards specify valid values for this code. Values are:</p> <p>Blank: New or varied BSB (bank/state/branch) number or name details.</p> <p><i>T</i>: A drawing under a Transaction Negotiation Authority.</p> <p><i>W</i>: Dividend paid to a resident of a country where a double tax agreement is in force.</p> <p><i>X</i>: Dividend paid to a resident of any other country.</p> <p><i>Y</i>: Interest paid to all nonresidents.</p> |
| 4. Remitter Name | Specify the name of the person or company that sends the EFT file. The system writes the value that you enter to positions 97 through 112 of the EFT detail record (Record Type 1). The APCA standards state that you must provide this information. |

Print

- | | |
|---------------------------------|---|
| 1. Payment Print Program | Specify the payment print program that the system uses when the payee prenote status is set to <i>P</i> . If you leave this processing option blank, the system uses the Auto Payment Write/Reset payment print program (P04572). |
|---------------------------------|---|

PART 4

Austria

Chapter 17

(AUT) Understanding Country-Specific Functionality for Austria

Chapter 18

(AUT) Setting Up Country-Specific Functionality for Austria

CHAPTER 17

(AUT) Understanding Country-Specific Functionality for Austria

This chapter discusses Austria-specific setup and processes that you use in addition to the standard setup and processes provided in the base software.

Austria-Specific Setup and Processes

This table lists the country-specific setup and functionality for Austria:

| Setup or Process | Description |
|-------------------------|--|
| Payment formats | <p>To process payments for Austria, set up these payment formats:</p> <ul style="list-style-type: none">• Create A/P Bank Diskette - Austrian EFT (R04572A).• Create A/P Bank Diskette - Austrian V3 PAYMUL (R04572A3). <p>See Chapter 18, “(AUT) Setting Up Country-Specific Functionality for Austria,” Setting Up Payment Formats for Austria, page 307.</p> |
| Automatic debit formats | <p>In addition to the standard setup for debit processing for Austria, set up these automatic debit formats:</p> <ul style="list-style-type: none">• R03B575AD (Austrian Bank Diskette Format and Statement).• R03B575AD1 (Austrian Format Diskette Cover Page Auto Debit). <p>See Chapter 18, “(AUT) Setting Up Country-Specific Functionality for Austria,” Setting Up Automatic Debit Formats for Austria, page 310.</p> |

| Setup or Process | Description |
|---------------------------|--|
| User-defined codes (UDCs) | <p>In addition to the base software UDCs:</p> <ul style="list-style-type: none"> Set up UDCs for European Union reporting. See Chapter 65, “(Europe) Setting Up European Union Functionality,” Setting Up UDCs for Intrastat Reporting, page 1221. Set up UDCs to print invoices with an attached International Payment Instruction (IPI). See Chapter 65, “(Europe) Setting Up European Union Functionality,” Setting Up UDCs for International Payment Instructions, page 1220. Set up these UDCs for companies: <ul style="list-style-type: none"> Affiliated Companies (74/AC) Code Number (74/30) See Chapter 65, “(Europe) Setting Up European Union Functionality,” Setting Up UDCs for European Companies, page 1230. |
| Bank accounts | <p>When setting up bank accounts for Austria, review the overview about using international bank account numbers (IBAN).</p> <p>See Chapter 66, “(Europe) Working With European Union Functionality,” Understanding International Bank Account Numbers, page 1237.</p> |
| Invoice processing | <p>In addition to standard invoice processing, you can print invoices with an attached IPI. To print these invoices and attachments:</p> <ul style="list-style-type: none"> Set up UDCs for IPIs. See Chapter 65, “(Europe) Setting Up European Union Functionality,” Setting Up UDCs for International Payment Instructions, page 1220. Set processing options for the invoice print program. See Chapter 66, “(Europe) Working With European Union Functionality,” Setting Processing Options for Invoice Print with International Payment Instruction (R03B5053), page 1247. Print invoices with attached IPIs. See Chapter 66, “(Europe) Working With European Union Functionality,” Printing Invoices with an Attached International Payment Instruction, page 1245. |

CHAPTER 18

(AUT) Setting Up Country-Specific Functionality for Austria

This chapter discusses how to:

- Set up payment formats for Austria.
- Set up automatic debit formats for Austria.

Setting Up Payment Formats for Austria

This section provides an overview of payment formats for Austria, lists prerequisites, and discusses how to set up processing options for:

- Create A/P Bank Diskette - Austrian EFT (R04572A).
- Create A/P Bank Diskette - Austrian V3 PAYMUL (R04572A3).

Understanding Payment Formats for Austria

JD Edwards EnterpriseOne software provides these payment formats for Austria:

| Format | Description |
|----------|--|
| R04572A | Create A/P Bank Diskette - Austrian EFT. |
| R04572A3 | Create A/P Bank Diskette - Austrian V3 PAYMUL. |

V3 Payment Format for Austria

Austrian banks use the V3 payment format to implement the U.N. EDIFACT standard. JD Edwards EnterpriseOne software provides the V3 payment format so that the banks can use this Austrian-specific version of the EDIFACT PAYMUL (MULTiple PAYments) message.

The V3 PAYMUL file that you create using the Create A/P Bank Diskette – Austrian V3 PAYMUL program can include two optional segments. Generally, you include these segments if your bank does not provide an alternate method of including the information in the segments.

You specify in the processing options whether the system includes the UNB (header) and UNZ (trailer) segments. When you specify that the system include these segments, the UNB segment becomes the first segment in the flat file and the UNZ segment becomes the last segment in the flat file.

The UNB segment includes fixed text (UNB+UNOC:3+) followed by the sender identifier, the recipient identifier, the date of preparation, the time of preparation, and an interchange control number. The sender and recipient identifiers are determined by agreement between the sender and recipient. You specify the sender identifier and the recipient identifier in processing options. The system generates the date, time, and interchange control number.

The UNZ segment includes fixed text (UNZ+) followed by the number of messages and the interchange control reference. The number of messages is always 1 because the system sends only one PAYMUL message per file. The interchange control reference is generated by the system.

The V3 version of the PAYMUL format enables these domestic payment options:

| Option | Description |
|--|---|
| Transfers to a Beneficiary Account Held by a Domestic Bank | <p>Use the European Monetary Union's euro (EUR) denominate for transfer amounts. When you transfer a payment that is in a currency other than the transfer currency of the account, the amount of the payment is automatically converted into the account currency.</p> <p>For example, if the payment is denominated in EUR and the recipient's account is denominated in JPY, the transfer is converted to JPY automatically.</p> |
| Instructions for PostBar | <p>The beneficiary is paid in cash by the postal service.</p> <p>Note. JD Edwards EnterpriseOne software does not support PostBar payment.</p> |
| Priority Payments | <p>Priority payments are credited to the beneficiary account as soon as possible and prioritized by the assigned bank using the multibank standard (MBS).</p> <p>Note. JD Edwards EnterpriseOne software does not support priority payments.</p> |

Note. In Austria, the PAYMUL might also direct the postal service to delivery payments directly to customers, a practice known as *payment with allonge*. To take advantage of *allonge*, an additional document must be automatically created and used to collect a signature at the time that the payment is delivered to the customer. JD Edwards EnterpriseOne software does not support payment with *allonge*.

Prerequisites

Before you complete the tasks in this section:

- Enter a bank type code in the processing options for the Create A/P Bank Diskette-Austrian V3 PAYMUL (R04572A3) program.
- Enter an address book type code in the processing options for the Create A/P Bank Diskette-Austrian V3 PAYMUL (R04572A3) program.
- Set up a unique bank type code in the 00/BT UDC table, which the program uses to determine banking information.
- Set up address book type codes in the 01/W0 UDC table, which the program uses to determine contact information.

Setting Processing Options for Create A/P Bank Diskette - Austrian EFT (R04572A)

Processing options enable you to specify the default processing for programs and reports.

Transfer

Tape Payment Detail Enter the tape payment detail (10 pos.) description. For example, you might enter *EXP REIMB* for expense reimbursements. This description may be used by the bank and printed on the supplier's bank account statement.

Tape

Use these processing options to specify the default values for the bank tape.

Devise Name Enter the devise name.
Tape Density Enter the tape density.
Label Name Enter the label name.
Block Size Enter the block size.
New Volume Enter the new volume.
New Owner ID Enter the new owner ID.
File Name Enter the file name.

Setting Processing Options for Create A/P Bank Diskette - Austrian V3 PAYMUL (R04572A3)

Process

- 1. Tape Payment Detail** Specify the tape payment detail description (10 characters). This description may be used by the bank and printed on the supplier's bank account statement. For example, you might enter *EXP REIMB* for expense reimbursements.
- 2. Address Book Type Code** Specify the address book type code that the system uses to process the payment. Values exist in the Type Code (01/W0) UDC table.

Print

- 1. Print Report (Y/N)** Enter *Y* to print a report.

Bank Tape

Use these processing options to specify the default values for the bank tape.

Device Name Specify the name of the tape drive.
Tape Density Specify the density of the tape to be created.
Label Name Specify the label name to be used when copying data to tape.
Block Size Specify the block length to be used when copying data to tape.

| | |
|------------------------------------|---|
| New Volume | Specify the new volume name to be used when copying data to tape. |
| New Owner ID | Specify the new owner ID to be used when copying data to tape. |
| File Name | Specify the file name for the bank tape. |
| Interchange | |
| Insert UNB and UNZ Segments | Enter Y to insert the UNB and UNZ segments into the F04572OW table. If you leave this processing option blank, the system does not insert the segments into the table or the flat file. |
| Sender Identifier | Enter the code that identifies the sender of the file. You can enter up to 35 characters. The system inserts the code that you enter into the UNB segment of the flat file. |
| Recipient Identifier | Enter the code that identifies the recipient of the file. You can enter up to 35 characters. The system inserts the code that you enter into the UNB segment of the flat file. |

Setting Up Automatic Debit Formats for Austria

This section provides an overview of automatic debits for Austria and discusses how to set processing options for Austrian Bank Diskette Format and Statement (R03B575AD).

See Also

JD Edwards EnterpriseOne Accounts Receivable 8.12 Implementation Guide, “Processing Automatic Debits”

Understanding Automatic Debit Formats for Austria

In addition to the standard software setup and process, you must set processing options for the Austrian debit format.

The JD Edwards EnterpriseOne system provides these Austrian automatic debit formats:

- R03B575AD (Austrian Bank Diskette Format and Statement).
- R03B575AD1 (Austrian Format Diskette Cover Page Auto Debit).

These programs generate a bank table that adheres to the banking standards for automatic debits in Austria.

Note. The Austrian Bank Diskette Format and Statement program calls the Austrian Format Diskette Cover Page Auto Debit program automatically.

Setting Processing Options for Austrian Bank Diskette Format and Statement (R03B575AD)

Processing options enable you to specify the default processing for programs and reports.

| | |
|------------------------|--|
| Statement Print | Specify whether the system prints invoices that are included in the automatic debits batch as customer statements. Values are: |
|------------------------|--|

Blank: Print customer statements only when the number of invoice detail lines exceeds the maximum number that is allowed by the format.

I: Print statements for automatic debits.

PART 5

Belgium

Chapter 19

(BEL) Understanding Country-Specific Functionality for Belgium

Chapter 20

(BEL) Setting Up Country-Specific Functionality for Belgium

CHAPTER 19

(BEL) Understanding Country-Specific Functionality for Belgium

This chapter discusses:

- Belgium-specific setup and processes that you use in addition to the standard setup and processes provided in the base software.
- Tax ID validation for Belgium.
- Bank account validation.
- Additional supplier information for Belgium.

Belgium-Specific Setup and Processes

This table lists the country-specific setup and functionality for Belgium:

| Setup or Process | Description |
|---------------------------|---|
| User-defined codes (UDCs) | <p>In addition to the standard software UDCs, set up UDCs to work with:</p> <ul style="list-style-type: none"> • Tax processing. See Chapter 20, “(BEL) Setting Up Country-Specific Functionality for Belgium,” Setting Up UDCs for Belgian Tax Processing, page 323. • Accounts payable. See Chapter 20, “(BEL) Setting Up Country-Specific Functionality for Belgium,” Setting Up UDCs for Accounts Payable, page 324. • European Union reporting. See Chapter 65, “(Europe) Setting Up European Union Functionality,” Setting Up UDCs for Intrastat Reporting, page 1221. • Invoices with an attached International Payment Instruction (IPI). See Chapter 65, “(Europe) Setting Up European Union Functionality,” Setting Up UDCs for International Payment Instructions, page 1220. • Set up these UDCs for companies: <ul style="list-style-type: none"> - Affiliated Companies (74/AC) - Code Number (74/30) See Chapter 65, “(Europe) Setting Up European Union Functionality,” Setting Up UDCs for European Companies, page 1230. |
| Payment processing | <p>Before processing payments, Set up the Belgium-specific payment formats.</p> <p>See Chapter 20, “(BEL) Setting Up Country-Specific Functionality for Belgium,” Setting Up Payment Formats for Belgium, page 325.</p> |
| Customer bank accounts | <p>Before you assign bank accounts to customers, verify that your customers have a country code that is equal to BE (Belgium) in the Address Book Master table (F0101). The validation of the online bank account information is activated based on this key.</p> <p>See <i>JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide</i>, “Setting Up Bank Accounts”.</p> |

| Setup or Process | Description |
|------------------------|--|
| Supplier bank accounts | <p>Before you assign bank accounts to customers, verify that your customers have a country code that is equal to BE (Belgium) in the Address Book Master table (F0101). The validation of the online bank account information is activated based on this key.</p> <p>See <i>JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide</i>, “Setting Up Bank Accounts,” Setting Up Supplier Bank Accounts.</p> |
| Customer setup | <p>The Belgian authorities allow only one value-added tax (VAT) listing per VAT registration number for the Quarterly and Yearly VAT report. If multiple customers have identical VAT registration numbers within the JD Edwards EnterpriseOne system, a parent company must report the consolidated information for all its customers to the Belgian authorities.</p> <p>See <i>JD Edwards EnterpriseOne Accounts Receivable 8.12 Implementation Guide</i>, “Setting Up Customer Master Information,” (BEL) Entering Customer Information for Parent Companies.</p> |
| Tax rate areas | <p>Before entering taxable transactions for Belgium, set up tax rate areas for Belgium.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (BEL) Setting Up Tax Rate Areas for Belgium.</p> |
| Tax ID validation | <p>Set up the VAT or RNPM (<i>Registre National des Personnes Morales</i>) tax ID number for each company, customer, or supplier.</p> <p>See Chapter 19, “(BEL) Understanding Country-Specific Functionality for Belgium,” Tax ID Validation for Belgium, page 320.</p> |
| Bank accounts | <p>When setting up bank accounts for Belgium:</p> <ul style="list-style-type: none"> Review the overview about bank account validation. <p>See Chapter 19, “(BEL) Understanding Country-Specific Functionality for Belgium,” Bank Account Validation, page 321.</p> <p>See Chapter 66, “(Europe) Working With European Union Functionality,” Understanding Bank ID and Bank Account Validation, page 1238.</p> <ul style="list-style-type: none"> Review the overview about using international bank account numbers (IBAN). <p>See Chapter 66, “(Europe) Working With European Union Functionality,” Understanding International Bank Account Numbers, page 1237.</p> |

| Setup or Process | Description |
|--------------------|---|
| Invoice processing | <p>In addition to standard invoice processing, you can print invoices with an attached IPI. To print these invoices and attachments:</p> <ul style="list-style-type: none"> • Set up UDCs for IPIs. See Chapter 65, “(Europe) Setting Up European Union Functionality,” Setting Up UDCs for International Payment Instructions, page 1220. • Set processing options for the invoice print program. See Chapter 66, “(Europe) Working With European Union Functionality,” Setting Processing Options for Invoice Print with International Payment Instruction (R03B5053), page 1247. • Print invoices with attached IPIs. See Chapter 66, “(Europe) Working With European Union Functionality,” Printing Invoices with an Attached International Payment Instruction, page 1245. |

| Setup or Process | Description |
|---------------------|--|
| Intrastat reporting | <p>To set up Intrastat reporting:</p> <ul style="list-style-type: none"> Review the overview about European Union reporting. See Chapter 66, “(Europe) Working With European Union Functionality,” Understanding European Union Reporting, page 1241. Set up UDCs. See Chapter 65, “(Europe) Setting Up European Union Functionality,” Setting Up UDCs for Intrastat Reporting, page 1221. Set up commodity codes. See Chapter 65, “(Europe) Setting Up European Union Functionality,” Setting Up Commodity Code Information, page 1230. Set up cross-references between suppliers and items to show the country of origin. See Chapter 65, “(Europe) Setting Up European Union Functionality,” Entering Cross-References for Items and Suppliers, page 1231. Set the processing options for the Intrastat workfiles programs and populate the workfiles. See Chapter 66, “(Europe) Working With European Union Functionality,” Populating the Intrastat Workfile, page 1250. Revise the workfiles as necessary. See Chapter 66, “(Europe) Working With European Union Functionality,” Revising Intrastat Information, page 1258. Use the IDEP/IRIS Interface program (R0018I3) to generate an electronic Intrastat declaration in the format required for Belgium. See Chapter 66, “(Europe) Working With European Union Functionality,” Using the IDEP/IRIS Interface for Intrastat Reporting, page 1264. Purge records from the Intrastat table (F0018T). See Chapter 66, “(Europe) Working With European Union Functionality,” Purging Records from the Intrastat Table (F0018T), page 1263. |

| Setup or Process | Description |
|--------------------------------|---|
| Other European Union Reporting | <p>In addition to Intrastat reporting, you can generate these reports:</p> <ul style="list-style-type: none"> • EC Sales List Reports • EC Sales A/R Report <p>See Chapter 66, “(Europe) Working With European Union Functionality,” Understanding EC Sales List Reports for European Reporting, page 1245.</p> <p>See Chapter 66, “(Europe) Working With European Union Functionality,” Printing the EC Sales List Report (R0018L), page 1273.</p> <p>See Chapter 66, “(Europe) Working With European Union Functionality,” Printing the EC Sale List - AR Report (R0018S), page 1276.</p> |
| VAT reporting | <p>These reports exist for Belgium:</p> <ul style="list-style-type: none"> • Monthly VAT Payable Report - Belgium (R74B100). • Monthly VAT Recoverable Report (R74B110). • Yearly VAT Report (Paper) (R74B150). • Yearly VAT Report (Flat File) (R74B200). • Quarterly VAT Report (Flat File) (R74B250). • Quarterly VAT Report (Paper) (R74B300). <p>See Appendix C, “JD Edwards EnterpriseOne Country-Specific Reports,” (BEL) Reports for Belgium, page 1795.</p> |

Tax ID Validation for Belgium

A tax ID is the identification number that you use when you report information to the various tax authorities. For every transaction that can occur with a company, a customer, or a supplier, you must enter an associated tax identification number. Tax IDs are also called VAT codes, VAT registration numbers, or fiscal codes.

When you create an address book record for each company, customer, or supplier, enter the tax ID number in the Tax ID field on the Address Book Revision form. To ensure that the tax ID that you enter is checked for authenticity, enter a country code from the Country Codes (00/CN) UDC table in the Country field on the Mailing tab on the Address Book Revision form. When a country code exists in this field, the system validates tax IDs for that country. Additionally, the country code that you specify in the Country Code field must exist in the Tax ID Validation (70/II) UDC table.

Belgian Tax IDs

Beginning January 1, 2006, businesses in Belgium can use the VAT or RNPM (*Registre National des Personnes Morales*) number as the tax ID for reporting to the government, or they can use the unique enterprise number (*numero unique d'entreprise*) as the tax ID for reporting. Beginning January 1, 2007, the unique enterprise number must always begin with the character 0; until then, the use of the leading 0 is optional.

You can enter the VAT, RNPM, or unique enterprise number into the system with the preceding characters *BE* or without these preceding characters. VAT and RNPM number strings are either 9 or 11 characters, depending on whether the preceding *BE* is entered. The unique enterprise number string is either 10 or 12 digits, depending on whether the preceding *BE* is entered. For example, these character string structures are valid:

- BE 12345679 (VAT or RNPM with preceding *BE* and with a space between *BE* and the VAT or RNPM).
- BE12345679 (VAT or RNPM with preceding *BE* and without a space between *BE* and the VAT or RNPM).
- 123456789 (VAT or RNPM without preceding *BE*).
- BE0987654321 (unique enterprise number with preceding *BE*).

The maximum number of characters allowed by the system is 12. Therefore, if you enter a preceding *BE* with the 10-digit unique enterprise number, you cannot include a space between *BE* and the 10-digit number.

- 0987654321 (unique enterprise number without preceding *BE*).

When you enter a VAT, RNPM, or unique enterprise number, the system verifies that the length of the string is valid and that the characters are valid, such as the unique enterprise number beginning with 0 (zero). The system also compares and validates the check digits. If any of the validations fails, the system displays an error.

JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” Validating Tax ID Numbers

Bank Account Validation

To process bank transactions for Belgium, the account information that you enter must be accurate to avoid service charges from the bank and possible rejection of electronic funds transfers. Electronic funds transfers can be rejected for payments and receipts because of incomplete or incorrect account information.

The JD Edwards EnterpriseOne system automatically validates the bank account information for Belgian suppliers and customers, including the bank account numbers, according to the standards set by the Belgian banking authority. The Modulus 97 algorithm validates the bank account number when you add or change a bank account number. If you enter an invalid bank account number, you receive an error message stating that the bank account is invalid.

Note. When you add bank account information in the Bank Account Number field, ensure that the Control Digit is included, in addition to the Bank Account number in the Bank Account Number field. The Control Digit field is considered part of the bank account number in Belgium.

Chapter 66, “(Europe) Working With European Union Functionality,” Understanding Bank ID and Bank Account Validation, page 1238

JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide, “Setting Up Bank Accounts”

Additional Supplier Information for Belgium

JD Edwards EnterpriseOne software provides an option for reporting I.B.L.C./B.L.W.I (*Institut Belgo-Luxembourgeois Du Change/Belgisch-Luxemburgs Wisselinstitut*) codes for foreign payments. The I.B.L.C./B.L.W.I. is a Belgian governmental authority that requires reporting codes for all foreign payment orders. You must set up your suppliers and individual vouchers correctly before the Create A/P Bank Diskette - Belgian Foreign (R04572L2) payment format will use these codes.

Use the Category Code 07 field on the Supplier Master Revision form to enter the reporting code. When you enter vouchers for your suppliers, the system will assign the value in the Category Code 7 field to all vouchers for this supplier. If you leave the Category Code 07 field blank, the flat file for the Create A/P Bank Diskette - Belgian Foreign report (R04572L2) contains a value of 000.

If you add the reporting code to your supplier after you have already entered vouchers for that supplier, you must run the Update Approver/Cat Code 7 report (R04802) to update existing vouchers with the reporting code.

You can also enter the Category Code 07 value at the time of voucher entry.

JD Edwards EnterpriseOne Accounts Payable 8.12 Implementation Guide, “Entering Supplier Information,” Updating the Approver and Category Code 7 Fields

CHAPTER 20

(BEL) Setting Up Country-Specific Functionality for Belgium

This chapter discusses how to:

- Set up user-defined codes (UDCs).
- Set up payment formats.

Setting Up UDCs for Belgium

Setting up Belgian-specific UDCs enables you to use Belgian-specific functionality. You also set up some base software UDCs with Switzerland-specific values. This section discusses how to set up UDCs for:

- Tax processing
- Accounts payable

See Also

JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide, “Setting Up Tax Information,” Setting Up Tax UDCs

Setting Up UDCs for Belgian Tax Processing

Set the VAT Report Code (74B/TA) for Belgian tax processing.

VAT Report Code (74B/TA)

You must set up the UDC (74B/TA) with the correct legal codes to configure the Set up TAX Rate Area / Document Type program (P74B500). Typical Belgian tax codes are contained in the Codes field.

The Codes column is a numeric two-position field. The Description 01 column lists the category of the value added tax (VAT) being reported and contains standard Belgian categories. The Description 02 column contains the type of VAT.

Your VAT Report Code (74B/TA) user-defined code table should be set up as:

| Codes | Description 01 | Description 02 |
|-------|----------------|----------------|
| 00 | Zero tax | Outgoing |
| 01 | 6 pct. tax | Outgoing |
| 02 | 12 pct tax | Outgoing |

| Codes | Description 01 | Description 02 |
|--------------|----------------------------------|-----------------------|
| 03 | 21 pct. tax | Outgoing |
| 45 | VAT paid by co-contractor | Outgoing |
| 46 | Free from VAT: Intracomm. goods | Outgoing |
| 47 | Free from VAT: non EU Export | Outgoing |
| 48 | Credit Notes for code 46 | Outgoing |
| 49 | Credit Notes for A, B and C | Outgoing |
| 54 | VAT Payable on A | VAT payable |
| 55 | Intracomm. goods and services | VAT payable |
| 56 | Co-contractor goods and services | VAT payable |
| 57 | Non EU import, VAT domestic | VAT payable |
| 59 | VAT recoverable | VAT recoverable |
| 61 | Corr.: total VAT payable | VAT payable |
| 62 | Corr.: total VAT recoverable | VAT recoverable |
| 63 | VAT on credit notes received | VAT payable |
| 64 | VAT on credit notes send | VAT recoverable |
| 81 | Goods and Services | Incoming |
| 82 | Services and Other | Incoming |
| 83 | Goods for internal use | Incoming |
| 84 | Credit Notes for 86 | Incoming |
| 85 | Other Credit Notes | Incoming |
| 86 | Intracomm. Goods and Services | Incoming |
| 87 | Services on real estate | Incoming |
| 98 | Not in VAT Report | Outgoing |
| 99 | Not in VAT Report | Incoming |

Setting Up UDCs for Accounts Payable

Set Category Code 7 to process accounts payable payments for Belgium.

Category Code 07 (01/07)

Set up values in UDC table 01/07 to identify foreign payment reporting categories for the Belgian authorities. When entering supplier master records, enter the code in the Category Code 7 field so that Belgian payments are processed correctly.

For example, you might set up these codes:

- 090: Export credits
- 09: International business credits

Verify all codes with the Belgian authorities before entering them.

Setting Up Payment Formats for Belgium

This section provides an overview of payment formats for Belgium and discusses how to:

- Set processing options for Create A/P Bank Diskette - Belgium Foreign (R04572L2).
- Set processing options for Create A/P Bank Diskette - Belgium Domestic/EURO (R04572L3).

Understanding Payment Formats for Belgium

JD Edwards EnterpriseOne software supports these country-specific automatic payment formats for Belgium:

| Format | Description |
|---|---|
| Create A/P Bank Diskette - Belgium Foreign (R04572L2) | This payment format is based on the current Belgian banker association standard and enables clients to write electronic funds transfers to foreign suppliers. This format supports the International Bank Account Number (IBAN); the output records contain the IBAN number and other related IBAN information if you set up IBAN information for your company and your supplier. |
| Create A/P Bank Diskette - Belgium Domestic/EURO (R04572L3) | The Belgian domestic-compliant and euro-compliant payment format. This payment format is based on the current Belgian banker association standard. This format enables clients to write EFT to domestic suppliers. |

Using the Foreign Payment Format

The Create A/P Bank Diskette - Belgium Foreign payment format is used for payments to foreign suppliers. When you run the Create A/P Bank Diskette - Belgium Foreign program, the system produces a cover page in the standard printed format.

The system also generates a standard bank formatted output file in these tables:

| Table | Description |
|-----------------------------|--|
| A/P Payment Tape (F04572OW) | The standard electronic funds transfer table in the JD Edwards EnterpriseOne payment processing cycle. |

| Table | Description |
|---------------------------------------|--|
| Text Processor Header (F007101) | The header record for the Text File Processor program (P007101). |
| Text Processor Detail Table (F007111) | The detail record for the Text File Processor program (P007101). |

Note. You can use either the A/P Payment Tape table (F04572OW) or Text Processor tables to extract payment details from the JD Edwards EnterpriseOne system.

The cover page includes:

| Information | Description |
|------------------------------------|---|
| Principal | The name and address of the company that is remitting the payment. |
| Registration Number | The file ID for the A/P Payment Tape table (F04572OW). |
| Ordering Customer's Account Number | The bank transit number that is associated with the company account which is being used for payment. This information is found in the Bank Transit Master table (F0030) that is associated with that account. |
| Name of Medium File | The name of the report that creates the file. |
| Creation Date | The date when the file is created. |
| Number of Data Records | The number of data records created in the A/P Payment Tape table (F04572OW). |
| Number of Payment Orders | The number of separate payments that are included in the file. |
| Total of Amounts | The total amount of the payments added together. |

When you run the Create A/P Bank Diskette - Belgium Foreign program, the payment attachment program that is associated with this payment group produces a standard payment attachment. As with standard payment processing, the payment attachment contains the invoice numbers that are included in the payment.

Considerations for the Foreign Payment Format

To correctly populate the bank's address in the output file from the Create A/P Bank Diskette - Belgium Foreign program, you must complete either of these fields:

- SWIFT Code on the Set Up Bank Accounts by Address form.
- Address Number on the Set Up Bank Transit Address form.

When you complete the SWIFT Code field, the SWIFT Code and the supplier's account number create a unique bank/bank account number combination in the bank file. When you complete the Address Number field for the bank, the bank's mailing address and the supplier's account number create a unique bank address/bank account number combination in the bank file.

Important! It is recommended that you complete the SWIFT Code field and leave the Address Number field blank. If you complete both fields, the system uses the value in the SWIFT Code field.

The Domestic Belgium Payment Format

The Create A/P Bank Diskette - Belgium Domestic/EURO (R04572L3) payment format is used for payments to domestic suppliers. When you run the Create A/P Bank Diskette - Belgium Domestic/EURO program, it generates a cover page and a reference list in the standard printed format.

The system also generates a standard bank formatted output file in these tables:

| Table | Description |
|---------------------------------------|--|
| A/P Payment Tape (F04572OW) | The standard electronic funds transfer table in the JD Edwards EnterpriseOne payment processing cycle. |
| Text Processor Header (F007101) | The header record for the Text File Processor program (P007101). |
| Text Processor Detail Table (F007111) | The detail record for the Text File Processor program (P007101). |

Note. You can use either the A/P Payment Tape table (F04572OW) or Text Processor tables to extract payment details from the JD Edwards EnterpriseOne system.

The reference list includes:

| Detail | Description |
|---------------------|--|
| Registration Number | This number identifies the file in A/P Payment Tape table (F04572OW). |
| Payment From | The bank transit number that is associated with the company account which is being used for payment. This information is found in the Bank Transit Master table (F0030) that is associated with that monetary account. |
| Payment To | This line identifies the payee's bank account number. |
| Detail Section | This section includes the document type, document number, invoice number, invoice date, payment amount, and due date. |

In addition to the reference list and cover page, an additional report is generated by the domestic payment program. The Bank Payment Detail Belgium program (R74GHP70), or Remittance letter, generates a hard copy of detail information that is included in the electronic file. It contains additional detail information about the electronic payment.

Setting Processing Options for Create A/P Bank Diskette - Belgium Foreign (R04572L2)

Processing options enable you to specify the default processing for programs and reports.

Bank Info

| | |
|------------------------------|--|
| Bank's Payment Method | Specify the bank's payment method. Enter <i>TLX</i> to specify Urgent SWIFT. Leave this processing option blank to specify Normal SWIFT. You bank might provide other codes. |
| Cost Code | Specify how the bank's charges are applied. Values are: <i>NOR</i> : Normal costs. <i>BEN</i> : All costs to beneficiary. <i>OUR</i> : All costs to orderer. |

Diskette

Use these processing options to specify the default values for the bank tape.

| | |
|----------------------|--------------------------|
| Devise Name | Enter the devise name. |
| Tape Density | Enter the tape density. |
| Label Name | Enter the label name. |
| Block Size | Enter the block size. |
| New Volume ID | Enter the new volume ID. |
| New Owner ID | Enter the new owner ID. |
| File Name | Enter the file name. |

Setting Processing Options for Create A/P Bank Diskette - Belgium Domestic/EURO (R04572L3)

Processing options enable you to specify the default processing for programs and reports.

Diskette

Use these processing options to specify the default values for the bank tape.

| | |
|-----------------------|--|
| Execution Date | Specify the execution date. If you leave this processing option blank, the system uses the current date. |
| Duplicate | Enter <i>I</i> if this is not the first time that the diskette is generated. The system places a <i>D</i> in the Header Record of the diskette when you enter <i>I</i> . |
| Devise Name | Enter the devise name. |
| Label Name | Enter the label name. |
| New Volume ID | Enter the new volume ID. |
| New Owner ID | Enter the new owner ID. |
| File Name | Enter the file name. |

Reference List

Print Reference List Enter *1* to always print the reference list. If you leave this processing option blank, the system prints the reference list only for the payees for which the value in the Bank Message field reaches the maximum amount of invoices.

Print Bank Payment Detail List Enter *1* to print the bank payment detail list.

Currency

EURO Currency Code Specify the currency code that exists in your system for the euro. If the code that you enter is the same as the currency code of the payment, the system uses the Euro Bank Payment Format. If the currency code of the payment is different from the code that you enter, they system uses the BEF Bank Payment Format.

CHAPTER 21

(BRA) Understanding Country-Specific Functionality for Brazil

This chapter provides an overview of tax information for address book records for Brazil and discusses the Brazil-specific setup and processes that you use in addition to the standard setup and processes provided in the base software.

Understanding Tax Information for Address Book Records for Brazil

To process business transactions accurately in Brazil, the government requires companies to maintain detailed tax information and specifications for all customers, suppliers, and tax authorities. To maintain this information, you access the Address Book Additional Information - Brazil program (P01012BR) when you add a new address book record or when you change the information for an existing record.

The system uses the value in the Person/Corporation Code field of an address book record to determine the tabs to activate on the Address Book Additional Information - Brazil form. The Person/Corporation Code field must contain one of the following hard-coded values from UDC table H00/TA:

- 1: Individual.
- 2: Corporate entity.
- 3: Both an individual and a corporate entity.

State Tax ID Numbers

The Address Book Additional Information - Brazil program validates state tax ID numbers if you set the processing options to do so.

If you set the processing options accordingly, the system runs the validation routine when you click OK on the Address Book Additional Information - Brazil form. The system validates the data in the State Tax ID field (TX2) when all of the following conditions are met:

- The processing option for Duplicate State Tax ID Numbers is set to blank.
- The processing option for Duplicate State Tax ID Error or Warning is set to a valid value.
- A valid state is entered in the State field in the address book record and the value of the Country Codes UDC (00/CN) for the address book record is set to BR (Brazil).
- A valid state code exists in the State field (ADDS) in the address book record.

The validation routine does the following:

- To validate, the system strips out alpha and special characters (!, @, #, \$, %, ^, &, *, (,), _, +, ., /) but displays the ID number in the State Tax ID field with the characters. For example, if you enter *011-445-22.5*, the validation routine changes the ID number to 011445225.

If the ID number in the State Tax ID number is an Agricultural Producer Tax ID for São Paulo, the system allows the letter P in the first position of the ID number. For example, if you enter *P100-444-8*, the system changes the ID number to P1004448.

Note. If an address book record does not have a tax ID number, you can enter the word *INSENTO* (uppercase) in the State Tax ID field and the system will not validate the tax ID number.

- Stores the ID number with the special characters so that the ID number appears in reports with the special characters.
- Recognizes that the special characters are a value that makes the number unique. For example, the system recognizes that these numbers are different:
 - 12345
 - 123.45
 - 12/345

Brazil-Specific Setup and Processes

This table describes the country-specific setup and functionality for Brazil:

| Setup or Process | Description |
|---------------------------|--|
| User-defined codes (UDCs) | <p>Set up base-software UDCs with Brazil-specific values, and set up Brazil-specific UDCs for:</p> <ul style="list-style-type: none"> • Supplier tax processing. • Fiscal books and electronic GIA. • Tax processing. • Procurement processing. • IN86 and IN89 reporting. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Brazil, page 352.</p> |

| Setup or Process | Description |
|--|--|
| Automatic accounting instructions (AAIs) | <p>Set up these AAIs to work with Brazilian transactions:</p> <ul style="list-style-type: none"> • Brazilian localization uses AAIs 4220 and 4240 in the JD Edwards EnterpriseOne Sales Order Management system; and AAIs 4385 and 4390 in the JD Edwards EnterpriseOne Procurement system to account for Brazilian taxes, freights, expenses, insurance, and discounts. • You must set up these AAIs for ICMS, ICMS Substitution, and IPI tax calculations: 4210, 4220 4240, 4285, 4290, 4310, 4385, and 4390. • For sales transactions, the system uses AAI 4220 to generate a debit to the posting account and uses AAI 4240 to generate a credit to the posting account when you update the general ledger with PIS/PASEP and COFINS tax credits. • For procurement transactions, the system uses AAI 4385 to generate a debit to the posting account and uses AAI 4390 to generate a credit to the posting account when you update the general ledger with PIS/PASEP and COFINS tax credits. • Set up the Cost/Expense Adjustments AAI (4385) and the Cost/Liability Adjustments AAI (4390) prior to closing <i>notas fiscais</i>. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up AAIs for Tax Processing for Brazil, page 399.</p> |
| Next numbers | <p>In addition to the base software next numbering requirements, set up next numbering schemes for:</p> <ul style="list-style-type: none"> • <i>Notas fiscais</i>. • Electronic GIAs (<i>Guia de Informação e Apuração</i>). • Fiscal books. • <i>Remessa</i>. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up Next Numbers for Brazil, page 400.</p> |
| Companies | <p>In addition to the base software setup for companies, for Brazil:</p> <ul style="list-style-type: none"> • Set up corresponding versions of the Address Book Additional Information - Brazil (P01012BR) and the Address Book Revisions (P01012) programs. • Set the processing options for the Address Book Additional Information - Brazil program. • Set up cross-references between companies and branch/plants to assure that each business unit is associated with only one fiscal company. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up Company and Branch/Plant Cross-References for Brazil, page 408.</p> |

| Setup or Process | Description |
|-------------------|---|
| Customers | <p>In addition to the base software setup for customers, for Brazil:</p> <ul style="list-style-type: none"> • Set up corresponding versions of the Address Book Additional Information - Brazil (P01012BR) and the Address Book Revisions (P01012) programs. • Set the processing options for the Address Book Additional Information - Brazil program. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up Company and Branch/Plant Cross-References for Brazil, page 408.</p> |
| Suppliers (setup) | <p>In addition to the base software setup for suppliers, for Brazil:</p> <ul style="list-style-type: none"> • Set up corresponding versions of the Address Book Additional Information - Brazil (P01012BR) and the Address Book Revisions (P01012) programs. • Set the processing options for the Address Book Additional Information - Brazil program. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up Company and Branch/Plant Cross-References for Brazil, page 408.</p> |

| Setup or Process | Description |
|------------------------------|--|
| Supplier withholding (setup) | <p>JD Edwards EnterpriseOne supplier withholding for Brazil includes calculations for <i>Imposto de Renda</i> (IR), <i>Imposto sobre Serviços</i> (ISS), <i>Instituto Nacional do Seguro Social</i> (INSS), <i>Fundo de Assistência e Previdência do Trabalhador Rural</i> (FUNRURAL), <i>Programa de Integração Social/Programa de Formação do Patrimônio do Servidor Público</i> (PIS/PASEP), <i>Contribuição para Financiamento da Seguridade Social</i> (COFINS), and <i>Contribuição Social sobre o Lucro Líquido</i> (CSLL).</p> <p>To set up to work with supplier withholding for Brazil:</p> <ul style="list-style-type: none"> • Set up UDCs. See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Supplier Withholding for Brazil, page 352. • Set up AAIs to account for taxes. See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up AAIs for Tax Processing for Brazil, page 399. • Set up the IR, INSS, PIS/PASEP, COFINS, CSLL, and FUNRURAL tax codes that you need. See Chapter 23, “(BRA) Setting Up Supplier Withholding,” Setting Up Withholding Tax Codes, page 415. • Set up the income range, percentage of funds to be withheld, and the amount of the deduction for IR taxes for individuals. See Chapter 23, “(BRA) Setting Up Supplier Withholding,” Setting Up the Income Tax Schedule for Individuals, page 419. • Set up associations between purchase use codes and tax codes for PIS/PASEP, COFINS, and CSLL contributions. See Chapter 23, “(BRA) Setting Up Supplier Withholding,” Setting Up Purchase Use Codes for PIS/PASEP, COFINS, and CSLL Contributions, page 417. • Set up date ranges, due date rules, and payment terms in the Advanced Payment Terms module in the JD Edwards EnterpriseOne Accounts Payable system. See Chapter 23, “(BRA) Setting Up Supplier Withholding,” Setting Up Payment Due Dates for Taxes, page 420. <p>See <i>JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide</i>, “Understanding Payment Terms,” Advanced Payment Terms.</p> |

| Setup or Process | Description |
|--|---|
| Supplier withholding setup (continued) | <p>To set up to work with supplier withholding for Brazil:</p> <ul style="list-style-type: none"> • Complete the appropriate fields for every vendor for which you calculate supplier withholding taxes on the Tax Information tab on the Address Book Additional Information - Brazil form in the Address Book Additional Information - Brazil program (P01012BR). <p>See <i>JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide</i>, “Entering Address Book Records,” (BRA) Entering Tax Information for Address Book Records.</p> <ul style="list-style-type: none"> • For INSS taxes, enter the <i>Código Brasileiro de Operações</i> (CBO) code for the supplier in the Complementary ID field on the Address Book Additional Information - Brazil form in the Address Book Additional Information - Brazil program. • Complete these fields in the Item Master program for every item for which you will calculate supplier withholding taxes: <ul style="list-style-type: none"> - Retention of IR - Reduction IR • Complete these fields in the Branch/Plant Master program for every item for which you will calculate supplier withholding taxes: <ul style="list-style-type: none"> - Retention of IR - Reduction IR • For INSS taxes, enter in the Service Taxes Paid Externally program (P76B0403) the INSS contribution amounts that are held by others. <p>See <u>Chapter 27, “(BRA) Processing Supplier Withholding,” Working with Service Taxes Paid Externally for Brazil, page 498.</u></p> |
| Supplier withholding (processes) | <p>To work with supplier withholding for Brazil:</p> <ul style="list-style-type: none"> • Update the general ledger with PIS/PASEP and COFINS tax credits. • Run the programs to calculate the taxes. • Print INSS withholding certificates. • Maintain ISS and INSS tax records. • Generate the text file for taxes. • Generate withholding tax reports. <p>See <u>Chapter 27, “(BRA) Processing Supplier Withholding,” page 493.</u></p> |

| Setup or Process | Description |
|--------------------|---|
| Electronic banking | <p>You set up electronic banking so that you can work with automatic payments and automatic receipts. To set up your system for electronic banking:</p> <ul style="list-style-type: none"> • Set up UDCs. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Electronic Banking for Brazil, page 357.</p> <ul style="list-style-type: none"> • Set up the monthly late fee rate. <p>See Chapter 24, “(BRA) Setting Up Electronic Banking,” Setting Up the Monthly Late Fee Rate, page 425.</p> <ul style="list-style-type: none"> • Set up bank layouts. <p>See Chapter 24, “(BRA) Setting Up Electronic Banking,” page 425.</p> |
| Voucher processing | <p>In addition to the base software process for vouchers, for Brazil:</p> <ul style="list-style-type: none"> • Some voucher processing functions work differently for Brazilian transactions. <p>See Chapter 26, “(BRA) Working with Vouchers and Payments for Brazil,” Understanding Voucher Processing for Brazil, page 478.</p> <p>See Chapter 26, “(BRA) Working with Vouchers and Payments for Brazil,” Understanding Voucher Entry and Voucher Match for Brazil, page 477.</p> <ul style="list-style-type: none"> • Add bar code information to vouchers. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up Company and Branch/Plant Cross-References for Brazil, page 408.</p> |

| Setup or Process | Description |
|--------------------|--|
| Payment processing | <p>In addition to the base software functionality, to work with payment processing in Brazil:</p> <ul style="list-style-type: none"> • Review how the system validates conditions for tax processing and restricts the voiding of payments. <p>See Chapter 26, “(BRA) Working with Vouchers and Payments for Brazil,” Understanding Automatic Payment Processing for Brazil, page 478.</p> <ul style="list-style-type: none"> • Set up payment formats. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up Payment Formats for Brazil, page 409.</p> <ul style="list-style-type: none"> • Add bar code information to vouchers. <p>See Chapter 26, “(BRA) Working with Vouchers and Payments for Brazil,” Adding Bar Code Information to Vouchers for Brazil, page 480.</p> <ul style="list-style-type: none"> • Set up corresponding versions of the Create Payment Control Groups (R04570) and the Brazilian Payment Process - PO (P76B470) programs. • Use Brazil-specific programs to process inbound and outbound payments. <p>See Chapter 26, “(BRA) Working with Vouchers and Payments for Brazil,” Processing Inbound and Outbound Payments for Brazil, page 483.</p> <ul style="list-style-type: none"> • Enter tax amounts for IR, PIS/PASEP, COFINS, and CSLL taxes when you enter manual payments. <p>See Chapter 26, “(BRA) Working with Vouchers and Payments for Brazil,” Entering Manual Payments for Brazil, page 490.</p> |
| Invoice processing | <p>In addition to the standard processes for working with invoices, purge the A/R Additional Information – Brazil table (F7603B1) after you run the Invoice Transaction Purge program (R03B800).</p> <p>See Chapter 25, “(BRA) Working With Accounts Receivable Processes for Brazil,” Understanding Invoice Processing for Brazil, page 464.</p> <p>See Chapter 25, “(BRA) Working With Accounts Receivable Processes for Brazil,” Purging Invoice Transactions for Brazil, page 474.</p> |

| Setup or Process | Description |
|------------------------------|--|
| Automatic receipt processing | <p>In addition to the base software processes for automatic receipt processing, you can use a Brazil-specific outbound automatic receipts process to send files to banks so that the bank collects payments from your customers, and use a Brazil-specific inbound automatic receipts process to import files from your bank to JD Edwards EnterpriseOne tables.</p> <p>To work with automatic receipt processing for Brazil:</p> <ul style="list-style-type: none"> Review the overview of automatic receipts for Brazil. See Chapter 25, “(BRA) Working With Accounts Receivable Processes for Brazil,” Understanding Automatic Receipts for Brazil, page 463. Set up bank layouts. See Chapter 24, “(BRA) Setting Up Electronic Banking,” page 425. Process outbound automatic receipts by running the program to create the bank tape and creating the outbound text file. See Chapter 25, “(BRA) Working With Accounts Receivable Processes for Brazil,” Processing Outbound Automatic Receipts, page 465. Process inbound automatic receipts by importing and uploading files from your bank and updating credit groups. See Chapter 25, “(BRA) Working With Accounts Receivable Processes for Brazil,” Processing Inbound Automatic Receipts, page 469. |

| Setup or Process | Description |
|------------------|---|
| Fiscal books | <p>Fiscal books are required by the Brazilian government to report information about taxable transactions and the taxes due on those transactions. To set up your system to work with fiscal books:</p> <ul style="list-style-type: none"> • Set up UDCs. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Fiscal Books and Electronic GIAs for Brazil, page 376.</p> <ul style="list-style-type: none"> • Set up next numbers for fiscal books. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting up Next Numbers for Fiscal Books, page 402.</p> <ul style="list-style-type: none"> • Set up opening and closing terms for fiscal books. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up Opening and Closing Terms for Fiscal Books for Brazil, page 405.</p> <p>To process fiscal books:</p> <ul style="list-style-type: none"> • Generate the fiscal books workfiles. • Maintain <i>nota fiscal</i> and tax records. • Maintain GNRE information. • Generate the ICMS magnetic files. • Purge incomplete fiscal books. • Print reports and generate the fiscal books. <p>See Chapter 29, “(BRA) Processing Fiscal Books,” page 561.</p> |

| Setup or Process | Description |
|--------------------------|---|
| Electronic GIA reporting | <p>GIA is the ICMS Assessment and Information form. Taxpayers use the GIA to report their economic activities, such as the selling and purchasing of goods within a state and between states.</p> <p>To work with electronic reporting using the GIA:</p> <ul style="list-style-type: none"> • Set up UDCs. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Fiscal Books and Electronic GIAs for Brazil, page 376.</p> <ul style="list-style-type: none"> • Set up next numbers for GIA. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up Next Numbers for Electronic GIAs, page 402.</p> <ul style="list-style-type: none"> • Run the Nota Fiscal Conversion program (R76B200A) to populate required JD Edwards EnterpriseOne tables. <p>See Chapter 29, “(BRA) Processing Fiscal Books,” Generating the Fiscal Books Workfiles, page 563.</p> <ul style="list-style-type: none"> • Use the Electronic GIA Workbench programs to maintain or add records and generate the flat file that you send to the government. <p>See Chapter 30, “(BRA) Working with the Electronic GIA Workbench,” page 603.</p> |
| Inventory management | <p>In addition to the standard item and branch/plant setup, for Brazil, set up information about:</p> <ul style="list-style-type: none"> • Fiscal classification. • Tax code (IPI or ICMS). • Whether the item is subject to tax substitution markup. • Item origin. • Purchase use. • Messages to print. • Retention of IR. • Reduction of IR. • Whether the item is a part of retention or reduction of INSS. <p>See Chapter 32, “(BRA) Working With Inventory Management for Brazil,” page 661.</p> |

| Setup or Process | Description |
|--------------------------------|---|
| Sales order processing (setup) | <p>In addition to the standard setup for sales order processing, for Brazilian transactions:</p> <ul style="list-style-type: none"> • Set up corresponding versions of: <ul style="list-style-type: none"> - Sales Order Brazilian Additional Information - Brazil (P4210BR) and Sales Order Entry (P4210) - Sales/Purchase Returns - Brazil (P76B805), Sales Order Entry (P4210) and Sales Ledger Inquiry (P42025) - Stand Alone Nota Fiscal (P7611B) and Generate Nota Fiscal (R76558B) • Set up AAIs for sales transactions to account for taxes. See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up AAIs for Tax Processing for Brazil, page 399. • Set up next numbers for <i>notas fiscais</i>. See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up Next Numbers for Notas Fiscais, page 401. • Set up transaction nature codes. See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up a Cross-Reference for Transaction Nature Codes for Brazil, page 406. • Set up branch/plant cross-references to assure that each business unit is associated with only one company. See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up Company and Branch/Plant Cross-References for Brazil, page 408. • Set up the system to process Brazilian taxes. See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(BRA) Setting Up the System for Brazilian Taxes”. |

| Setup or Process | Description |
|------------------------------------|--|
| Sales order processing (processes) | <p>In addition to the standard processes for sales order processing, Brazil-specific processes exist to:</p> <ul style="list-style-type: none"> • Enter transaction nature codes and suffixes and additional detail information. See Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Entering Additional Sales Order Information for Brazil, page 523. • Generate a <i>nota fiscal</i> with a temporary <i>nota fiscal</i> number and calculate taxes. See Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Generating Outbound Notas Fiscais, page 525. • Enter freight, insurance, and other charges. See Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Entering Additional Charges, page 531. • Work with messages that print on <i>notas fiscais</i>. See Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Working with Print Messages for Notas Fiscais, page 532. • Review outbound <i>notas fiscais</i>. See Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Reviewing Outbound Notas Fiscais, page 535. • Print outbound <i>notas fiscais</i> with the official <i>nota fiscal</i> numbers. See Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Printing Outbound Notas Fiscais, page 537. • Update sales. See Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Updating Sales in Brazil, page 539. • Enter transfer orders. See Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Entering Transfer Orders for Brazil, page 542. • Generate a <i>nota fiscal</i> when not generating a purchase order or sales order transaction. See Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Entering Stand-Alone Notas Fiscais, page 543. • Work with ship-to and ship-from returns, sales order reverses, and cancellations. See Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Working With Returns, Reverses, and Cancellations in Brazil, page 550. |

| Setup or Process | Description |
|--|---|
| Tax processing for IPI, ICMS, and PIS/COFINS | <p>You can set up the system to perform calculations for these taxes:</p> <ul style="list-style-type: none"> • IPI (<i>Imposto sobre Produtos Industrializados</i>). • ICMS (<i>Imposto sobre Circulação de Mercadorias e Serviços</i>). • ICMS Substitution. • ISS (<i>Imposto sobre Serviços</i>). • PIS/PASEP (<i>Programa de Integração Social/Programa de Formação do Patrimônio do Servidor Público</i>). • COFINS (<i>Contribuição para Financiamento da Seguridade Social</i>). <p>In addition to the base set up for tax processing, for Brazil:</p> <ul style="list-style-type: none"> • Review the overview for setup for repasse. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Understanding Advanced Pricing Setup for Repasse, page 351.</p> <ul style="list-style-type: none"> • Set up UDCs. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Tax Processing for Brazil, page 383.</p> <ul style="list-style-type: none"> • Set up AAI. <p>See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up AAI for Tax Processing for Brazil, page 399.</p> <ul style="list-style-type: none"> • Set up transaction nature codes. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(BRA) Setting Up the System for Brazilian Taxes,” Setting Up Transaction Nature Codes.</p> <ul style="list-style-type: none"> • Set up tax codes for ICMS and IPI. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(BRA) Setting Up the System for Brazilian Taxes,” Setting Up Tax Codes for ICMS and IPI.</p> <ul style="list-style-type: none"> • Set up ICMS and IPI. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(BRA) Setting Up the System for Brazilian Taxes,” Setting Up ICMS (Imposto sobre Circulação de Mercadorias e Serviços) Tax Calculations and IPI (Imposto sobre Produto Industrializado) Tax.</p> |

| IN68 tax reporting | <p>IN68 refers to legal reporting requirements. To work with IN68 tax reporting for Brazil:</p> <ul style="list-style-type: none"> • Generate the workfiles. • Maintain the work file tables. • Generate the reports. <p>See Chapter 36, “(BRA) Processing IN68 Records for Tax Reporting,” page 771.</p> |

CHAPTER 22

(BRA) Setting Up Country-Specific Functionality for Brazil

This chapter provides an overview of advanced pricing setup for repasse and discusses how to:

- Set up user-defined codes (UDCs).
- Set up automatic accounting instructions (AAIs).
- Set up next numbers.
- Set processing options for Address Book Additional Information - Brazil (P01012BR).
- Set up corresponding versions.
- Set up opening and closing terms for fiscal books.
- Set up cross-references for transaction nature codes.
- Set up company and branch/plant cross-references.
- Set up payment formats.

Understanding Advanced Pricing Setup for Repasse

The JD Edwards EnterpriseOne Advanced Pricing system from Oracle is integrated with the Brazil sales order tax calculator to compute:

- Trade discounts.
- Pricing rule discounts.
- ICMS repasse discounts.
- Free port zone discounts.

The system does not consider interest on installment payments when generating *notas fiscais*.

To work with advanced pricing for *repasse*, you must:

- Verify that a master record exists for the preference hierarchy.
- Verify that customer information is set up in the Address Book Master table (F0101) and the Customer Ledger table (F03B11).
- Verify that customer billing instructions are set up for customers.
- Verify that item information is set up in the F4101, F4102, and F41021 tables.
- Verify that you have set up customer and item price group names in the UDC 40/PC.

- Set up the Adjustment/Preference Name (40/TY) UDC table with special handling codes that the system uses to locate *repassé* discounts.

See [Chapter 22, “\(BRA\) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Tax Processing for Brazil, page 383.](#)

Setting Up UDCs for Brazil

Setting up Brazil-specific UDCs enables you to use Brazil-specific functionality. You also set up some base software UDCs with Brazil-specific values.

Set up UDCs for:

- Supplier tax withholding.
- Electronic banking.
- Fiscal books and electronic GIA.
- Tax processing for IPI, ICMS, ICMS substitution, PIS/COFINS.
- Procurement processing.
- IN86 and IN89 tax reporting.

Setting Up UDCs for Supplier Withholding for Brazil

Set up these UDCs before you process supplier withholding for Brazil:

- Document Type (00/DT).
- Purchase Use (76/PU).
- Retired IR-PF (Income Tax) (76B/AP).
- Dependence Reduction IR-PF (76B/DP).
- Document Type INSS - Brazil (76B/DT).
- INSS Code (76B/IN.)
- Recieta Code (76B/IR).
- Service Code (76B/IS).
- Explanation of Installments.
- Tax Code A/P (76B/TR).
- Maximum Monthly INSS Amount (76B/TX).
- Cross Reference - Due Date Tax (76B/VE).
- Doc Types Unaffected Withholding (76B/UW).

Document Type - All Documents (00/DT)

You set up document types so that you can identify, group, and process similar transactions.

In addition to the hard-coded document types that are used throughout the software, you can set up document types that are based on your specific business needs. For example, you might set up these document types for Brazil:

| Codes | Description 01 |
|-------|------------------------------|
| NF | Purchasing Nota Fiscal |
| NI | Non Stock Nota Fiscal |
| NS | Nota Fiscal Sales |
| NR | Ship From Nota Fiscal Return |

To process INSS taxes, you must set up special handling codes for the Brazil-specific document types to specify an operation type and to create a cross-reference between the two-character document types that JD Edwards EnterpriseOne software uses and the three-character Brazilian document types.

Set up the special handling code with three or four characters. The system uses the first character to determine the operation type of the transaction, and uses characters 2, 3, and 4 to determine the Brazil-specific document type.

For example, you might set up a document type for a *nota fiscal* with a special handling code of CDUP in which *C* represents the operation type for an accounts payable voucher or an accounts receivable invoice and the characters *DUP* represent a document type that exists in the Document Type INSS - Brazil (76B/DT) UDC table. You must assign as characters 2, 3, and 4 a document type that appears in the 76B/DT UDC table.

This example illustrates a possible document type and special handling code:

| Codes | Description 01 | Special Handling |
|-------|------------------------|------------------|
| NF | Purchasing Nota Fiscal | CDUP |

Note. When you assign a code for a Nota Promissória, enter *NP* for characters 2 and 3, and leave character 4 blank.

If you do not set up special handling codes for Brazil-specific document types, the system uses these values when you process records for INSS taxes:

Operation Type

The system assigns these values:

- *C*: Accounts payable vouchers and accounts receivable invoices.
- *P*: Accounts payable payments.
- *R*: Accounts Receivable receipts.

INSS Document Type

The system assigns these values:

- The second, third, and fourth positions of the Special Handling Code of the Nota Fiscal Document Type (00/DT).
- If the second, third, and fourth positions of the Special Handling Code are blank, the system assigns the Nota Fiscal Document Type.

Important! The system does not validate the characters that you enter in the Special Handling Code field. To ensure accurate data for INSS tax reporting, you must ensure that the characters are valid and enter the four characters in the correct order.

Purchase Use (76/PU)

You set up purchase use codes for these supplier withholding taxes and contributions:

- INSS
- PIS/PASEP
- COFINS
- CSLL

You set up purchase use codes for INSS contributions in the Purchase Use (76/PU) UDC table to specify whether individuals and cooperatives are subject to INSS aggregation and retention contributions. You might set up different codes for different circumstances under which an individual or cooperative is subject to INSS aggregation and retention contributions. For example, set up different purchase use codes when the INSS contribution rate for one group of individuals differs from another group.

The system uses the values that you specify in the Description 02 field to determine the INSS contribution rate for aggregation and retention. The values that you enter for the Description 02 field must exist in the Tax Code table (F76B0401). You can enter a value for retention, for aggregation, or for both. You must enter a / (slash) after a value for retention and before a value for aggregation, even when you enter only one code.

This table includes examples of values for the Description 02 field:

| Tax codes for retention and aggregation | Description 02 |
|---|----------------|
| Retention = INSR | INSR/ |
| Aggregation = INSA | /INSA |
| Retention = INSR Aggregation = INSA | INSR/INSA |

When you run the Tax Calculation ISS, INSS, FUNRURAL program (R76B4310), the system uses the purchase use code that you enter in the Purchase Use Code processing option to determine how to apply INSS contribution rates. The system compares the purchase use code to the values in the F76B0401 table to obtain the contribution rate. If the purchase use code has two values in the Description 02 field, the system accesses the F760401 table twice:

- Once to obtain the rate for aggregation.
- Once to obtain the rate for retention.

If you do not complete the Purchase Use processing option, the system uses the purchase use code from the Purchase Order Detail Tag File - Brazil table (F76432) or the tax code for the supplier in the Address Book Brazilian Tag Table (F76011).

You also set up purchase use codes for PIS/PASEP, COFINS, and CSLL contributions in the 76/PU UDC table, and then use the Purchase Use Tax Setup program (P76B003) to create associations between the purchase use codes for PIS/PASEP, COFINS, and CSLL and the tax codes that exist in the F76B0401 table.

See Chapter 23, “(BRA) Setting Up Supplier Withholding,” Setting Up Purchase Use Codes for PIS/PASEP, COFINS, and CSLL Contributions, page 417.

See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Procurement Processing for Brazil, page 391.

Retired IR-PF (Income Tax) (76B/AP)

Set up codes for income tax deductions for retired persons. Enter the amount of the deduction in the Description 01 field. The system uses the schedule to calculate income taxes for persons who are retired and who have provided a service that is included on a *nota fiscal*.

Dependence Reduction IR-PF (76B/DP)

Set up codes for the income tax deductions for the dependents of an individual. Enter the amount of the deduction in the Description 01 field. The system uses the codes when it calculates income tax for an individual who has provided a service that is included on a *nota fiscal*.

Document Type INSS - Brazil (76B/DT)

You use the values in the Document Type INSS - Brazil (76B/DT) UDC table to populate the Document Type INSS field in the INSS/IN89 Mntn 3rd Party Svcs Inbound NF program (P76B200H). The system prints the value in the Observations column for the cover letter that accompanies the text file, which is generated by the Services Third Parties Notas Fiscais Flat File - Header program (R76B300H). These values are hard-coded in the system:

| Codes | Description 01 |
|-------|------------------|
| DUP | Duplicata |
| REC | Recibo |
| NP | Nota Promissória |

You must set up these values in the Document Type - All Documents (00/DT) UDC table and assign valid special handling codes to the codes in the 00/DT UDC table.

INSS Code (76B/IN)

Set up codes for the schedule of INSS taxes. The system uses these codes when calculating taxes for services that are on a *nota fiscal*.

Recieta Code (76B/IR)

The system uses the values in the Recieta Codes UDC table when it calculates the income tax for an individual or corporate entity that has provided a service that is included on a *nota fiscal*. For individuals, the system uses the DIPAM Table (76/DP) and the Retired IR-PF (Income Tax) (76B/AP) UDCs to reduce the amount of the income tax in this UDC, if applicable.

These values are hard-coded for Brazilian localization:

| Codes | Description 01 |
|-------|----------------|
| 0000 | Default |

| Codes | Description 01 |
|-------|----------------------|
| 0561 | Salaried Individuals |
| 1708 | Legal Entity (PJ) |

Service Code (76B/IS)

Set up codes that identify the type of service for a city.

Explanation of Installments (76B/OB)

The system prints the codes in the 76B/OB UDC table on vouchers to identify taxes.

The descriptions that you associate with the codes appear on the voucher. Values 00 through 07 are hard-coded in Brazilian localization, but you can change the descriptions to suit your needs.

The Tax Code A/P UDC (76B/TR) uses specific codes for the various taxes. You can set up the codes for the 76B/OB UDC in the same way to make it easier to remember the description that goes with each code.

Tax Code A/P (76B/TR)

The system uses the codes in UDC 76B/TR to identify taxes.

These values are hard-coded for this UDC:

| Codes | Description 01 |
|-------|----------------|
| 01 | IRRF |
| 02 | ISS |
| 03 | INSS |
| 04 | FUNRURAL |
| 05 | PIS |
| 06 | COFINS |
| 07 | CSLL |

Maximum Monthly INSS Amount (76B/TX)

You set up the 76B/TX UDC table with the maximum withholding amounts for INSS taxes for each job type. You must set up a percentage and corresponding amount in the 76B/TX UDC table for each INSS retention tax percentage that exists in the Tax Code (F76B0401) table. Enter the INSS retention percentage from the F76B0401 table in the Codes field in the UDC table, and enter the maximum withholding amount in the Description 01 field.

Note. Enter the percentage amount as an integer with three decimals. For example, for 10 percent, enter 10.000 instead of .10.

When you run the Tax Calculation ISS, INSS, FUNRURAL program, the system compares the calculated INSS retention to the values that you specify for the INSS maximum amount to determine the amount of INSS retention.

Cross-Reference - Due Date Tax (76B/VE)

The system uses the Cross-Reference - Due Date Tax code when it calculates the due date for IR taxes. The code comprises four digits. The first two digits are the month, and the second two digits are the year. You should set up codes for each month/year combination for which you have *notas fiscais*. You enter a payment term for the description of the code.

Doc Types Unaffected Withholding (76B/UW)

Use this UDC to specify the document types for which the system does *not* calculate taxes. The system ignores the specified document types when you run the Tax Calculation ISS, INSS, FUNRURAL program (R76B4310) or the Create Payment Groups program (R04570).

Setting Up UDCs for Electronic Banking for Brazil

Before using electronic banking, you must set up UDCs that the system uses to process inbound and outbound automatic receipts.

Record Type (00/RD)

Record types identify the components in the flat files that you use to electronically transfer banking data.

For example, you might set up these record types:

| Codes | Description 01 |
|-------|----------------|
| 1 | Header |
| 2 | Detail |
| 3 | Header Detail |
| 5 | Trailer Detail |
| 9 | Trailer |

Transaction Type (00/TT)

The two transaction type UDCs that are hard-coded for use with the Brazil electronic banking applications are listed in this table:

| Codes | Description 01 |
|---------|----------------------------|
| BRPAGEL | Electronic Payment Brazil |
| BRCOBES | Electronic Receipts Brazil |

Bank Codes (76/BC)

Set up UDCs for the banks with which you do business. The system relates a three-digit code to a bank you set up. For example, you can set up these codes:

| Codes | Description 01 |
|-------|-----------------|
| 001 | Banco do Brasil |
| 237 | Banco Bradesco |
| 241 | Banco Itau |

Bank Record Status (76/BS)

Set up UDCs for bank status to track the status of the accounts receivable information that you send to the bank for processing.

For example, you can set up these codes:

| Codes | Description 01 |
|---------|-----------------|
| (blank) | Not processed |
| R | Record received |
| S | Record sent |

Bank Receive Code (76/RC)

Set up receive transaction status codes to indicate the status of the *duplicata* that you receive from the bank that is responsible for collecting the Accounts Receivable invoices. When the bank sends a file to you to confirm the receipt of the transmission, the system processes the files that contain a *1* in the Special Handling field of this UDC. If the system does not find a *1* in the Special Handling field, it does not process the return transaction.

Note. You should establish these codes with the bank.

Bank Send Code (76/SC)

Set up send transaction status codes to indicate the status of the *duplicata* that you send to the bank that is responsible for collecting the Accounts Receivable invoices. For example, you can set up these document types:

| Codes | Description 01 |
|-------|-------------------------------|
| | Not Sent |
| 01 | Remittance |
| 02 | Cancel Collection of Payment |
| 04 | Abatement (Correction) |
| 05 | Cancel Abatement (Correction) |
| 06 | Change Due Date |
| 09 | Litigation |

| Codes | Description 01 |
|-------|------------------------|
| 10 | Discontinue Litigation |
| 18 | Suspend Litigation |

You should establish these codes with the bank.

Dynamic Formatter Attributes (76B/F1)

You define layout attributes for electronic banking in the Dynamic Formatter Attributes UDC table (76B/F1). Attributes that begin with an S are constants. For example, S0002 is the attribute for zeros; and S0003 is the attribute for blanks. Attributes that begin with a Z are defined by each transaction application. For example, Z0002 is the Company Tax ID and Z0009 is the Company Name.

Some of the hard-coded attributes have a value in the Special Handling field. A value of 1 means that information originating in the JD Edwards EnterpriseOne system is cross-referenced to information provided by the bank. A value of 2 means that information originating with the bank is cross-referenced to information in the JD Edwards EnterpriseOne system.

This table describes the predefined attributes:

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|---------------|---|
| S0001 | UDV - User Defined Value | | A value that completes the places between two attributes with a character that you select. You define this value when you set up the layout details. |
| S0002 | Blanks | | A value that completes the places between two attributes with blanks. |
| S0003 | Zeros | | A value that completes the places between two attributes with zeros. |
| Z0001 | Company Person/Corp Code | F0101 - TAXC | The value for the Person/Corporation Code field in the Address Book Master table (F0101) for the address book number that appears in the Company Constants table (F0010). If PO Unique Payment is On in the company constants, the system uses the Parent Address Number Person/Corporation Code. |

| Value | Description | Description 2 | Explanation |
|-------|---------------------|---------------|--|
| Z0002 | Company Tax ID | F0101 - TAX | The value for the Tax ID field in the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is On in the company constants, the system uses the Parent Address Number Tax ID. |
| Z0003 | Company Bank Agency | F0030 - TNST | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process.</p> <ul style="list-style-type: none"> • For the Payment process, the system parses information from the G/L Bank Account that is defined in the Payment Group and pulls the value before the separator (/) in the Bank Transit Number field in the Bank Transit Master table (F0030). • For the Receipt process, the system parses information from the G/L Bank Account that is defined in the processing options and pulls the value before the separator (/) in the Bank Transit Number field in the F0030 table. |

| Value | Description | Description 2 | Explanation |
|-------|-----------------------------|---------------|--|
| Z0004 | Company Bank Account Number | F0030 - CBNK | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the system parses information from the G/L Bank Account that is defined in the Payment Group and pulls the value in the Bank Account Number field in the F0030 table. For the Receipt process, the system parses information from the G/L Bank Account that is defined in the processing options and pulls the value in the Bank Account Number field in the F0030 table. |
| Z0005 | Company Bank Agency Digit | F0030 - TNST | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the system parses information from the G/L Bank Account that is defined in the Payment Group and pulls the value before the separator (-) in the Bank Transit Number field in the F0030 table. For the Receipt process, the system parses information from the G/L Bank Account that is defined in the processing options and pulls the value before the separator (-) in the Bank Transit Number field in the F0030 table. |

| Value | Description | Description 2 | Explanation |
|--------------|-------------------------------------|-------------------------------|--|
| <i>Z0006</i> | Company Bank Account Digit | F0030 - CHKD | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the system parses information from the G/L Bank Account that is defined in the Payment Group and pulls the value in the Control Digit field in the F0030 table. • For the Receipt process, the system parses information from the G/L Bank Account that is defined in the processing options and pulls the value in the Control Digit field in the F0030 table. |
| <i>Z0007</i> | Company Bank Agency Number + Digit | F0030 - TNST | The values for attributes <i>Z0003</i> and <i>Z0005</i> ; they are separated by a dash (-). |
| <i>Z0008</i> | Company Bank Account Number + Digit | F0030 - CBNK + CHKD | The values for attributes <i>Z0004</i> and <i>Z0006</i> ; they are separated by a dash (-). |
| <i>Z0009</i> | Company Name | F0101 - ALPH | The address book number in the F0010 table. If PO Unique Payment is On in the company constants, the system uses the Parent Address Number Alpha Name. |
| <i>Z0010</i> | Formatted File Date Created | UBE B9800100 - Get Audit Info | The date from the Get Audit Information field in the UBE. |
| <i>Z0011</i> | Formatted File Time Created | UBE B9800100 - Get Audit Info | The Time from the Get Audit Information field in the UBE. |
| <i>Z0012</i> | Company Bank Number | F0030 - TNST | The system parses information from the G/L Bank Account that is defined in the Payment Group and uses the first three digits in the Bank Number field in the F0030 table. |

| Value | Description | Description 2 | Explanation |
|-------|-------------------------------|---------------|--|
| Z0013 | Company Bank Name | F0030 - DL01 | The system parses information from the G/L Bank Account that is defined in the Payment Group and uses the first three digits in the Bank Account Number field in the F0030 table and the value in the Description field from the Bank Codes UDC (76/BC). |
| Z0014 | Payment Instrument | F0411 - PYIN | |
| Z0015 | Company Street Name | F0101 - ADD1 | The value for the Address 1 field in the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is <i>On</i> in company constants, the system uses the Parent Address Number Address 1. |
| Z0016 | Company Street Number | None | |
| Z0017 | Company Street Complement | None | |
| Z0018 | Company City | F0101 - CTY1 | The value for the City field in the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is <i>On</i> in company constants, the system uses the Parent Address Number City. |
| Z0019 | Company Postal Code - No Mask | F0101 - ADDZ | <p>The value for the Postal Code field in the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is <i>On</i> in company constants, the system uses the Parent Address Number Postal Code.</p> <p>The system uses the value in the Postal Code field without the separator (-).</p> |

| Value | Description | Description 2 | Explanation |
|-------|----------------------------------|-----------------------|--|
| Z0020 | Company State Code | F0101 - ADDS | The value for the State field in the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is <i>On</i> in company constants, the system uses the Parent Address Number State. |
| Z0021 | Bank Return Message | Bank | |
| Z0022 | Formatted File Line Count | UBE R76B047E Variable | This UBE counts the number of lines that are created inside the flat file. |
| Z0023 | Payment Group Sequence | UBE R76B047E Variable | The sequence number from the A/P Payment Processing - Summary table (F04572), which is required to identify the payment in the return process in the client use code. |
| Z0024 | Bank Return Code | Bank | |
| Z0025 | Payee Bank Number | F04572 - BNST | The first three digits from the Bank Transit Number field in the F04572 table. |
| Z0026 | Payee Bank Agency No | F04572 - BNST | The numbers before the separator (/) from the Bank Transit Number field in the F04572 table. |
| Z0027 | Payee Bank Account Number | F04572 - CBNK | The value for the Bank Account Number field in the A/P Payment Processing - Summary table (F04572). |
| Z0028 | Payee Bank Agency Digit | F04572 - BNST | The value for the numbers before the separator in the Bank Transit Number field in the A/P Payment Processing - Summary table (F04572). |
| Z0029 | Payee Bank Account Digit | F04572 - CBNK | The value from the Control Digit field in the F04572 table. |
| Z0030 | Payee Bank Agency Number + Digit | F04572 - BNST | The values for the Z0026 and Z0028 attributes, separated by a dash (-). |

| Value | Description | Description 2 | Explanation |
|-------|-----------------------------------|---------------|---|
| Z0031 | Payee Bank Account Number + Digit | F04572 - CBNK | The values for the Z0027 and Z0029 attributes, separated by a dash (-). |
| Z0032 | Payee Name | F0101 - ALPH | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the value for the Alpha Name field in the F0101 table for the address book number that appears in the Payee Number field in the F04572 table. For the Receipt process, the value for the Alpha Name field in the F0101 table for the address book number that appears in the Address Number field in the Customer Ledger table (F03B11). |
| Z0033 | Document Number | None | |
| Z0034 | Payment Date | F04572 - DGJ | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the value for the G/L Date field in the F04572 table. For the Receipt process, the value for the Payment Date field in the F04572 table. |
| Z0035 | Payment Amount | F04572 - PAAP | The value for the Payment Amount field in the F04572 table. |
| Z0036 | Bank Document Number | Bank | |
| Z0037 | Bank Return Payment Date | Bank | |
| Z0038 | Bank Return Payment Amount | Bank | |
| Z0039 | Bank Return Payment Document | Bank | |

| Value | Description | Description 2 | Explanation |
|-------|-------------------------------|-----------------------|---|
| Z0040 | Form File Recs without Header | UBE R76B047E Variable | |
| Z0041 | Total Payment Amount | UBE R76B047E Variable | This UBE sums all of the payments in the file. |
| Z0042 | Payee Person Corporation Code | F0101 - TAXC | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the value for the Person Corporation Code in the F0101 table for the address book number that appears in the Payee Address Number field in the F04572 table. You must create a bank cross-reference. • For the Receipt process, the value for the Person Corporation Code in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. |
| Z0043 | Payee Tax ID | F0101 - TAX | <p>The data for the attributes varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the value from the Tax ID field in the F0101 table for the address book number that appears in the Payee Address Number field in the F04572 table. • For the Receipt process, the value for the Tax ID field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. |

| Value | Description | Description 2 | Explanation |
|-------|------------------------------|----------------------|--|
| Z0044 | Bar Code - Payee Bank Number | R76B0411 - BBRCD | Parses the Bank Code from the Bar Code field in the Voucher Additional Information - Brazil table (F76B04BC) for the first Voucher found in A/P Payment Processing - Detail table (F04573). |
| Z0045 | Bar Code - Currency Code | R76B0411 - BBRCD | For the first voucher in the F04573 table, pulls the currency code from the Bar Code field in the F76B04BC table. |
| Z0046 | Bar Code - Control Digit | R76B0411 - BBRCD | Parses the currency code from the Bar Code field in the F76B04BC table for the first voucher found in the F04573 table. |
| Z0047 | Bar Code - Payment Amount | R76B0411 - BBRCD | Parses the payment amount from the Bar Code field in the F76B04BC table for the first voucher found in the F04573 table. |
| Z0048 | Bar Code - Bar Code All | R76B0411 - BBRCD | The system identifies the first voucher in the F04573 table. It then locates that voucher in the F76B04BC table and writes the value from the Bar Code field to the layout. |
| Z0049 | Due Date | F04572 - DGJ | The data for the attribute varies, depending on whether you are using the Payment or Receipt process: <ul style="list-style-type: none"> • For the Payment process, the value from the G/L Date field in the F04572 table. • For the Receipt process, the value from the Due Date field in the F03B11 table. |
| Z0050 | Open Amount | F04572 - PAAP + ADSA | The sum of the values of the Payment Amount and Discount Amount fields in the F04572 table. |

| Value | Description | Description 2 | Explanation |
|--------------|--------------------------|---------------|---|
| <i>Z0051</i> | Discount Taken | F04572 - ADSA | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the value from the Discount Amount field in the F04572 table. • For the Receipt process, the value from the Discount Amount field in the F03B11 table. |
| <i>Z0052</i> | Abatement Amount | Zero | |
| <i>Z0053</i> | Discount + Rebate Amount | F04572 - ADSA | The value from the Discount Amount field in the F04572 table. |

| Value | Description | Description 2 | Explanation |
|-------|--------------------|---------------|--|
| Z0054 | Fee Amount | Zero | <p>The fee amount that the system uses is determined by the processing options for the Process Return A/R Bank Tape Diskette - Dynamic Formatter process (R76B03ZR).</p> <p>Fee Invoice Creation processing option:</p> <ul style="list-style-type: none"> Blank The amount is ignored. 1 The system creates an RF invoice with the amount of the fee paid. 2 The system creates an RF invoice with a calculated fee amount that is based on the Daily Late Fee amount in the F76B03B1 table. 3 The system creates two RF invoices: one for the amount paid to the bank, and other with to the bank with fee amount difference <p>PO Fee Process Order processing option:</p> <ul style="list-style-type: none"> Blank The system performs a receipt first on original invoice, and then the difference on fee invoice. 1 The system performs receipt first on fee invoice, and then the difference on the original invoice. |
| Z0055 | Rebate Amount | Zero | |
| Z0056 | Fee + Fee 2 Amount | Zero | |

| Value | Description | Description 2 | Explanation |
|-------|-----------------------------------|------------------------|---|
| Z0057 | Company Postal Code with Mask | F0101 - ADDZ | The value for the Postal Code field from the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is On in company constants, the system uses the Parent Address Number Postal Code. The attribute uses the value in the Postal Code field with the separator (-). |
| Z0058 | Payment Group Next Number | UBE R76B047ES NN 04/06 | This UBE generates a unique identifier for the flat file and assigns a next number from 04/06 for each file. |
| Z0059 | Bank Agency Digit + Account Digit | F0030 - TNST + CNBK | |
| Z0060 | Company Bank Swift Code (Conv.) | F0030 - SWFT | The bank accord/agreement number for the bank that is defined in the Dynamic Formatter G/L Account File Numbers table (F76B477) for the BRPAGEL transaction type and the specified G/L bank account. |
| Z0061 | Payee Address Book No | F04572 - AN8 | For the Payment process, the value from the Payee Address Number field in the F04572 table. This information is required to identify payment in return process in client use code. |
| Z0062 | Payment Sequence | UBE R76B047ES Variable | This UBE identifies the sequence of the number of payments for a payment group in the F04572 table. |
| Z0063 | Line Sequence in Segment EP | UBE R76B047ES Variable | For each segment in a line sequence, this UBE resets the counter to zero. |

| Value | Description | Description 2 | Explanation |
|-------|---------------------------|------------------------|--|
| Z0064 | Bar Code - Free Field | R76B0411 - BBRCD | The value from the Bar Code field in the F76B04BC table for the first voucher founded in the Accounts Payable Matching Document Detail table (F0414). |
| Z0065 | File Formatter Line Type | UBE R76B047ER Variable | |
| Z0066 | Bar Code - Date Due Facto | F76B0411 - BBRCD | |
| Z0067 | Bank Duplicata Number | F7603B1 -- BBDN | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the processing option is set to Bank (1), the value is 00000000000. • If the processing option for Boletto Emitter is set to Company (2), the attribute value is determined as follows: • If a value exists in the Bank Duplicata Number field in the A/R Additional Information - Brazil table (F7603B1), the attribute value is the value in the field. • If the Bank Duplicata Number field is blank, the attribute value is the Bank Duplicata next number for the BRCOBES transaction in the F76B477 table. |
| Z0068 | Document Number | F7603B1 - BBDN | The value in the Invoice Number field in the F03B11 table. |
| Z0069 | Invoice Date | F03B11 - DIVJ | The value in the Invoice Date field in the F03B11 table. |

| Value | Description | Description 2 | Explanation |
|-------|---------------------------|----------------|--|
| Z0070 | Client Use Code | | <p>The identifier sent during the outbound process and returned during the inbound process.</p> <p>The Client Use Code is a concatenation of the Document Company + Document Type + Document Number, Pay Item/suffix, and Address Number in the F03B11 table. This process is the first process to find an invoice. If this field is blank, the system uses the Bank Duplicata Number.</p> |
| Z0071 | Bank Send Code | F7603B1 - BSCB | <p>The value for the attribute varies, depending on the processing options for R76B03ZS:</p> <ul style="list-style-type: none"> • If the Bank processing option has a value, that value is used. • If the Bank processing option does not have a value, 01 is used. |
| Z0072 | Boleto Creation | | |
| Z0073 | Protest Instructions Code | | The value in the Protest Instructions Code field in the F7603B1 table. |
| Z0074 | Protest Instructions | | The value in the Protest Instructions Days field in the F7603B1 table. |
| Z0075 | Amount Fee by Day | | The value in the Daily Late Fee Amount field in the F7603B1 table. |
| Z0076 | Due Date AR | F03B11 - DDJ | The value in the Discount Due Date field in the F03B11 table. |

| Value | Description | Description 2 | Explanation |
|-------|----------------------|----------------|--|
| Z0077 | Payee Address Line 1 | F0116 - - ADD1 | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the Customer Address option is blank, uses the value for the Address 1 field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. • If the Customer Address option is set to 1, uses the value in the Send Invoice To field in the Customer Master by Line of Business table (F03012). |
| Z0078 | Customer Postal Code | 3 digit | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the Customer Address option is blank, uses the first five digits of the Postal Code field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. • If the Customer Address option is set to 1, uses the value in the Send Invoice To field in the F03012 table. |

| Value | Description | Description 2 | Explanation |
|-------|------------------------------|---------------|---|
| Z0079 | Customer Postal Code | 5 digit | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the Customer Address option is blank, uses the last three digits of the Postal Code field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. • If the Customer Address option is set to 1, uses the value in the Send Invoice To field in the F03012 table. |
| Z0080 | Message Code | | The value in the Message Code field in the F7603B1 table. |
| Z0081 | Message Description | | The value in the message code attachment for the Message Code field in the F7603B1 table. |
| Z0085 | Discount Available by Day | | The value in the Discount Available/30 field in the F03B11 table. |
| Z0086 | Boleto Creation | | The value in the Boleto Emitter option for the R76B03ZS processing options. |
| Z0087 | Payment Group Control Number | F7603B1 - HDC | The value in the Carteira Number option for the R76B03ZS processing options. |
| Z0088 | Payee City | F0116 - CYT1 | |
| Z0089 | Payee State Code | F0116 - ADDS | |

| Value | Description | Description 2 | Explanation |
|-------|----------------------|---------------|---|
| Z0090 | Payee Address Line 2 | F0016 - ADD2 | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the Customer Address option is blank, uses the value for the Address 2 field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. • If the Customer Address option is set to <i>I</i>, uses the value in the Send Invoice To field in the F03012 table. |
| Z0091 | Payee Address Line 3 | F0016 - ADD3 | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the Customer Address option is blank, uses the value for the Address 3 field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. • If the Customer Address option is set to <i>I</i>, uses the value in the Send Invoice To field in the F03012 table. |
| Z0092 | Payee Address Line 4 | F0016 - ADD4 | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the Customer Address option is blank, uses the value for the Address 4 field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. • If the Customer Address option is set to <i>I</i>, uses the value in the Send Invoice To field in the F03012 table. |
| Z0093 | Bank Return Code 2 | Bank | |

| Value | Description | Description 2 | Explanation |
|-------|--------------------|---------------|-------------|
| Z0094 | Bank Return Code 3 | Bank | |
| Z0095 | Bank Return Code 4 | Bank | |
| Z0096 | Bank Return Code 5 | Bank | |

Decimal Format (H98/DE)

The system uses the Decimal Format UDC to separate a string of numbers when the Data Type for a field is Math Numeric. You must set up codes to specify the acceptable separators for decimals. For example, you can set up these codes:

| Code | Description |
|---------|-------------------|
| (blank) | Use system value |
| , | Comma indicator |
| . | Decimal indicator |

Date Separator (H98/DS)

The system uses the Date Separator UDC to format a string of numbers that the system will use as a date. You must set up codes to specify the acceptable separators for dates.

For example, you can set up these codes:

| Code | Description |
|---------|-----------------------|
| (blank) | System value |
| * | Blank separator |
| , | Comma date separator |
| - | Hyphen date separator |
| / | Slash date separator |

Setting Up UDCs for Fiscal Books and Electronic GIAs for Brazil

The JD Edwards EnterpriseOne system provides several UDCs that are specifically for fiscal books and electronic GIAs (*Guia de Informação Apuração de ICMS*). You must set up these UDCs for the system to produce accurate fiscal books.

Activity/Status Codes (40/AT)

To advance an order line through the order process, you must create order activity rules to establish a sequence of processing steps.

Note. You must set up codes 997 for canceled *notas fiscais*.

The system processes an order line based on the order activity rules that you set up for the order type and line type combination. For example, you can set up these order activity rules for Brazil:

| Codes | Description 01 | Description 02 |
|-------|-------------------------------|-------------------|
| 425 | Freight, Insurance & Expenses | Brazil Purchasing |
| 430 | Close Nota Fiscal | na |
| 595 | Generate Nota Fiscal | |
| 597 | Freight, Insurance & Expenses | Brazil Sales |
| 598 | Print Nota Fiscal | na |
| 617 | Generate Tax Lines | na |
| 998 | Reversed Nota Fiscal | na |

Documents Using Text Messages (40/OR)

Set up codes to identify programs that use text messages. The system uses these codes when you use the Preference Profiles Inquiry by Customer/Item program (P40300).

Fiscal Book Code (76/FB)

The system uses the Fiscal Book Code UDC to identify types of fiscal books. It also includes a code that you use to identify text for a correction request to a *nota fiscal*.

These codes are hard-coded:

| Codes | Description 01 |
|-------|---|
| CC | Correction Letter. |
| DG | Transaction Journal. |
| IS | ISS (<i>Imposto sobre Serviços</i>) Outbound Registry. |
| L3 | Production and Stock Control. |
| RC | ICMS (<i>Imposto sobre Circulação de Mercadorias e Serviços Substituto</i>) Verification. |
| RE | Inbound Registry. |
| RI | Inventory Registry. |
| RP | IPI (<i>Imposto sobre Produtos Industrializados</i>) Verification. |
| RS | Outbound Registry. |

Flag - Free Port Zone (76/FR)

Set up free port zone codes to indicate whether a company is located in a free port zone. For example, you can set up these free port zone codes:

| Codes | Description 01 |
|-------|--------------------|
| 0 | Non-Free Port |
| 1 | Free Port Zone |
| 2 | Free Commerce Zone |

Sales Reverse - Brazil (76/RD)

Set up receive document types for sales reverse to indicate which line types you use to reverse a sale. For example, you can set up document type: VC - Sales Reverse - Brazil

Sales Return - Brazil (76/SR)

Set up return document types for sales return to indicate which line types you use for sales returns. For example, you can set up these document types:

| Codes | Description 01 |
|-------|--------------------------|
| VR | Sales Return - Brazil |
| VS | Purchase Return - Brazil |

DIPI Annual Movements Report (76B/DA)

The system uses the DIPI Annual Movements Report UDC table (76B/DA) to determine how to write data to the DIPI Annual Movements report (R76B4011). The DIPI Annual Movements report lists the customers who comprise the top 80 percent of the sales that are generated for a company.

The value in the Codes field in the UDC table is the transaction nature code (data item BRNOP). The values in the Description 01 and the Description 02 fields are the *Ficha* numbers (section numbers within the DIPI Annual Movements report) to which the system writes the customer information.

The system reads the value in field BRNOP in the F76111B table and compares it to the values in the 76B/DA UDC table. It then determines the *Ficha* section where data about the customer is included.

This table lists examples of codes:

| Codes | Description 01 | Description 02 |
|-------|----------------|----------------|
| 111 | 25 | 26 |
| 211 | 25 | 26 |
| 521 | 27 | 28 |
| 699 | 27 | 28 |
| 717 | 27 | 28 |

Decendio (76B/DE)

Use these codes to group IPI taxes for a 10-day period. Several fiscal book programs use these codes.

DIPI Inbound Report Line Definitions (76B/DI)

The system uses the DIPI Inbound Report Line Definitions UDC table (76B/DI) to determine how to write data to the *FICHA 23 - Entradas e Créditos* report that is produced by the DIPI Resumes and Statements program (R76B4006).

The value in the Codes field in the UDC table is the transaction nature code (data item BRNOP). The value in the Description 01 field is the Fichas (report), and the value in the Description 02 field is the line number of the report.

When you run the DIPI Summaries and Statements program, the system reads the value in the Transaction Nature Code field from the F76111B table and compares it to the values in the 76B/DI UDC table. It then determines the report and line for which to print the data.

This table lists examples of codes:

| Codes | Description 01 | Description 02 |
|-------|----------------|----------------|
| 111 | 23 | 01 |
| 114 | 23 | 05 |
| 211 | 23 | 01 |
| 235 | 23 | 04 |
| 312 | 23 | 08 |
| 394 | 23 | 10 |

DECLAN Codes (76B/DM)

Use these codes to group tax amounts for the DECLAN Annual Report (R76B4015). In the Codes field, enter a code that is a concatenation of each transaction nature, plus a suffix. You must enter the demonstrative code, by which the tax amounts are summed, in the Description 01 field. To sum the tax amounts by more than one demonstrative code, enter all of the codes in the Description 01 field and separate them with spaces.

This table shows an example of DECLAN codes:

| Codes | Description 01 |
|-------|----------------|
| 11100 | 001 006 |
| 21100 | 002 008 |

DIPI Outbound Report Line Definitions (76B/DO)

The system uses the DIPI Outbound Report Line Definitions UDC table (76B/DO) to determine how to write data to the *FICHA 24 - Saidas e Débitos* report that is produced by the DIPI Summaries and Statements program.

The value in the Codes field in the UDC table is the transaction nature code (data item BRNOP). The value in the Description 01 field is the Ficha (report), and the value in the Description 02 field is the line number of the report.

The system reads the value in the Transaction Nature Code field from the F76111B table and compares it to the values in the 76B/DO UDC table. It then determines the report and line for which to print the data.

This table lists examples of codes:

| Codes | Description 01 | Description 02 |
|-------|----------------|----------------|
| 511 | 24 | 01 |
| 517 | 24 | 02 |
| 688 | 24 | 05 |
| 711 | 24 | 07 |
| 712 | 24 | 08 |
| 799 | 24 | 10 |

Invoice Type (76B/IT)

You use the Invoice Type codes to specify whether a transaction was completed as a cash or an installment transaction. The values are hard-coded:

| Code | Description |
|------|--------------------------|
| 1 | Cash Transactions |
| 2 | Installment Transactions |

Related to Energy and Petroil (76B/NS)

The system uses the codes in the Related to Energy and Petroil UDC table to accumulate amounts on *notas fiscais* that are related to energy and petrol. The Codes field contains a code that is a concatenation of a transaction nature code plus a suffix. The system uses these codes in the Inbound Interstate Operation form (R76B4009) and the Outbound Interstate Operation form (R76B4010) programs.

These values are hard coded for Brazilian localization:

| Codes | Description 01 |
|-------|-------------------------|
| 11100 | Procurement Transaction |
| 11101 | Procurement Transaction |
| 51105 | Sales Transaction |
| 51108 | Sales Transaction |

Resumes and Demonstratives (76B/RD)

Use these codes to group tax amounts for the DIPI - Resumes and Demonstratives program. In the Code field, enter a code that is a concatenation of each transaction nature plus a suffix. You must enter the demonstrative code by which the tax amounts are summed in the Description 1 field. If you need to sum the tax amounts by more than one demonstrative Code, enter all of the codes in the Description 1 field and separate them with spaces.

This table shows examples of resumes and demonstratives codes:

| Code | Description 01 |
|-------|----------------|
| 11100 | 101 |
| 12100 | 102 |
| 21100 | 103 |

Demonstration Codes - Verification (76B/TD)

Use demonstration codes to identify debit and credits for the Verification of IPI report (R76B4002) and the Verification of ICMS report (R76B4003). For example, you could set up these codes as indicated in the table:

| Codes | Description 01 |
|-------|------------------------------|
| 001 | Inbound from national market |
| 002 | Inbound from external market |
| 003 | Outbound to external market |

Fiscal Tax Type (76B/TI)

Use this code to specify the type of fiscal book information that the system processes when you add information in the inbound or outbound Nota Fiscal Maintenance program (P76B1001).

Sintegra CFOP Cross-Reference (76B/TN)

Use these codes to associate a transaction nature/suffix combination with a *nota fiscal* model. The Generating ICMS Magnetic Files - Sintegra (*Systema Integrado de Informacoes*) program (R76B201) uses the codes that you set up, or the program uses 01 if the transaction nature/suffix combination is not in this UDC table.

The system calculates the ICMS Tax Situation code by displaying a one-digit value from the Item Origin UDC (76/IO) along with a calculated two-digit value that is based on the ICMS tax criterion of the item. The three-digit value is the ICMS Tax Situation Code.

The algorithm for calculating the ICMS Tax Situation code uses the special handling code in the Transaction Nature UDC (76/TN) to determine the ICMS Tax Situation code when an item is not taxed or has deferred tax. The algorithm then populates the Tax Situation field (data item BST1) with a three-digit tax situation code.

The system uses the ICMS Tax Situation code for the accounting of deferred ICMS taxes in the fiscal books.

For example, you could set up these codes:

| Codes | Description 01 | Description 02 |
|-------|----------------|----------------------|
| 11199 | 22 | NF Telecommunication |
| 51199 | 07 | NF Freight |
| 99999 | 01 | NF Normal |

State & Province Codes (00/S)

You set up the State & Province Codes (00/S) UDC so that system associates a two-digit code to the state or province. When you use the Print GIA program (R76B131) and the Send GIA program (R76B132) to create the flat file to send for ICMS tax reporting, the State & Province Codes UDC table must also include a special handling code so that the system can provide numeric characters for the state.

For example, you can set up these state and province codes for Brazil:

| Codes | Description 01 | Special Handling Code |
|-------|----------------|-----------------------|
| AM | Amazonas | 04 |
| RJ | Rio de Janeiro | 22 |
| SP | São Paulo | 26 |

GIA Taxation Rules (76B/G1)

You associate taxation rules to the companies that you include in company profiles that you create for ICMS tax reporting. You set up values in the GIA Taxation Rules UDC (76B/G1) to specify how a company is taxed. For example, you might set up these codes:

| Codes | Description 01 |
|-------|--------------------------------|
| 01 | RPA - Released from Assessment |
| 02 | RES - Assessment by Estimate |

GIA Type (76B/G2)

You use the GIA Type UDC (76B/G2) to specify whether a GIA is a substitute submission. For example, you might set up these codes:

| Codes | Description 01 |
|-------|----------------|
| 01 | Normal |
| 02 | GIA Substitute |

GIA CFOP for Oil & Energy (76B/G3)

Set up this UDC with the transaction nature codes that you use for the oil and energy industries. The system uses the codes that you set up when it processes ICMS Tax Substitution amounts for transactions involving oil and energy. For example, you might set up these codes:

| Codes | Description 01 |
|-------|-------------------|
| 1111 | In-state purchase |

GIA Occurrence Type (76B/G4)

You use the GIA Occurrence Type UDC (76B/G4) to specify whether a transaction is assessed by tax substitution. For example, you might set up these codes:

| Codes | Description 01 |
|-------|--------------------------------|
| 0 | Assessment on own transaction |
| 1 | Assessment by tax substitution |

GIA Record Type (76B/G6)

The electronic GIA must be sent in a government-required layout that contains specified record types. The data for each record type is sent to the government in a flat file. The record types for the electronic GIA are:

| Record Type | Description |
|-------------|------------------------|
| 01 | Master Record |
| 05 | Fiscal Document Header |
| 10 | CFOP Detail |
| 14 | Interstate Detail |
| 18 | ZFM/ALC |
| 20 | Occurrences |
| 25 | Ship from State Tax ID |
| 26 | Substitute Tax ID |
| 27 | Substituted Tax ID |
| 30 | DIPAM-B |
| 31 | Exportation Record |

Setting Up UDCs for Tax Processing for Brazil

You set up UDCs to define the taxes that apply to items and services, the rate of the taxes, and other information required by the system.

Person Corporation Code (H00/TA)

These values in H00/TA are valid for Brazil localizations only. These value represent the nature of an address book entity and are hard coded in UDC table H00/TA.

- 1: Individual
- 2: Corporate Entity
- 3: Both an Individual and Corporate Entity

Adjustment/Preference Name (40/TY)

You must set up the Adjustment/Preference Name (40/TY) UDC table with price adjustment names and a special handling code that corresponds to the price adjustment name that the JD Edwards EnterpriseOne Advanced Pricing system uses. The tax calculator uses these adjustment names to determine which category codes to use. In this list, the first name is the UDC and the second name is the special handling code.

Note. The special handling code names are identical to names found in UDC table 76/CN, but the system uses them for different purposes.

This table lists and describes the codes:

| Codes | Description 01 | Special Handling |
|----------|---|------------------|
| CLIENTE | Percentage discount for a customer. | PTRADE |
| REGRAS | Percentage discount payable due to rules of advanced pricing. | PRULES |
| LOSEASON | Low season percentage discount. | PRULES |
| REPASSE | Percentage discount on ICMS. | PREPAS |
| ZONAFRC | Percentage discount on Free Zone or Free Trade. | PZONE |

The names of the pricing adjustments are found in the Adjustment/Preference Name (40/TY) UDC table. You must manually add this special handling code name after setting up a new adjustment. For example, for the tax calculator to find the repasse discount (REPASSE), you must enter *PREPAS* as a special handling code in the special handling column of UDC 40/TY.

Code - Taxpayer (76/CC)

In Brazil, different tax rules apply to different types of taxpayers. To identify the types of taxpayers in your system, you use the codes in UDC table 76/CC. These codes are hard coded for Brazil localization:

| Codes | Description 01 |
|-------|-----------------------|
| 1 | Taxpayer |
| 2 | Consumer |
| 3 | Taxpayer and Consumer |

Category Code Name/Code (76/CN)

You can set up address book and item category codes for use in Brazilian tax calculations. Brazilian localization reserves seven category codes in the JD Edwards EnterpriseOne Address Book system and the item tables. To avoid conflicting with the category codes that are already in use, localization dynamically allocates the category codes that it requires.

Brazilian localization requires that seven category codes be set up. In UDC table 76/CN, each category code has a hard-coded name that the program uses to establish a relationship with the category code variable in the tables.

You set up UDCs for:

- Address book category codes.
- Item Nature and Item Branch/Plant category codes.
- Identification of category codes that store information which is specific to Brazil.

These category codes in UDC table 76/CN are hard-coded for Brazil localization:

| User-Defined Code | Description |
|------------------------------|--|
| MARKUP - AC30 (Address Book) | Address Book ICMS Substitution Markup Level Indicator Set up to indicate the ICMS Substitution Markup level of a customer or supplier. <i>N</i> : Do not print markup. <i>Y</i> : Print free-zone markup. |
| NATUR - SRP6 (Item/Branch) | Item Nature Indicator Set up to link the item category code that is selected to represent the item nature in the Brazilian localization. <i>1</i> : Manufactured product (Brazil) <i>2</i> : Purchased product (Brazil) |
| AZONE - SRP8 (Item/Branch) | Free-Zone Discount Indicator Set up to indicate whether free-zone discounts apply to an item. <i>*</i> : Default Markup (Brazil) <i>///</i> : Supermarket (BR) |

Tax Code (76/CT)

Set up tax codes to identify the taxes that apply to the specific business needs. For example, you can set up these codes:

| Codes | Description 01 |
|---------|------------------|
| (blank) | Nonstock |
| 01 | Pay ICMS and IPI |

| Codes | Description 01 |
|-------|----------------------|
| 02 | Pay ICMS, exempt IPI |
| 03 | Exempt ICMS, pay IPI |
| 04 | Exempt ICMS and IPI |

These codes should match the codes in the F7617B table.

GL/Class Code Cross-Reference (76/GL)

You must set up UDC table (76/GL) for Brazilian tax accounting. When you set up the GL/Class Code Cross-Reference UDC, complete the Codes field by entering the first three characters of the tax name followed by four characters that represent the GL class of the item or service at the branch/plant level.

This table displays examples of GL cross-reference codes that use GL class code IN30:

| Codes | Description 01 | Description 02 |
|---------|----------------|-------------------------------|
| DIFIN30 | DF30 | ICMS Differential |
| DIF*** | DF30 | ICMS Diff - Default |
| ICMIN30 | IC30 | ICMS Tax Amount |
| ICRIN30 | IM30 | ICMS Recoverable |
| IPIIN30 | IP30 | IPI Tax Amount |
| IPRIN30 | IR30 | IPI Recoverable |
| REPIN30 | RE30 | ICMS Repasse Discount |
| SBRIN30 | SB30 | ICMS Substitution Recoverable |
| SUBIN30 | ST30 | ICMS Substitution Tax Amount |
| TDCIN30 | TD30 | Trade Discount |
| EXP**** | EX30 | Expenses - Default |
| FRT**** | FR30 | Freight - Default |
| SEG**** | SE30 | Insurance - Default |
| ICM**** | IC30 | ICMS Tax - Default |
| IPI**** | IP30 | IPI Tax - Default |
| SUB**** | ST30 | ICMS Subs Amt - Default |
| ICR**** | IM30 | ICMS Recov - Default |
| IPR**** | IR30 | IPI Recov - Default |

| Codes | Description 01 | Description 02 |
|---------|----------------|--------------------------|
| REP**** | RE30 | ICMS Repasse - Default |
| SBR**** | SB30 | ICMS Subs - Default |
| TDC**** | TD30 | Trade Discount - Default |
| PISGL30 | PI30 | PIS/PASEP Tax |
| COFGL30 | CO30 | COFINS Tax |
| PIS**** | PI99 | PIS Tax - Default |
| COF**** | CO99 | COFINS Tax - Default |

GL/Class Code Cross-Reference (76/GL)

For PIS/PASEP and COFINS tax credits, you set up codes in the GL/Class Code Cross-Reference (76/GL) UDC table to create a cross-references between GL offset accounts and GL classes for suppliers, fiscal companies, and tax codes instead of setting up a cross-reference between the GL offset account and the GL class for an item or service.

When you set up the GL/Class Code Cross-Reference UDC for PIS/PASEP and COFINS tax credits:

- Complete the Codes field by entering the first three characters of the tax name followed by four characters that represent the GL category code that is associated with the company/transaction type/account combination for the AAI.

Note. For PIS/PASEP tax credits, you must enter PIS for the first three characters of the code COF for the first three characters for COFINS tax credits.

The first three characters of the codes must be completed as:

| Tax, Cost, or Discount | Code |
|------------------------|------|
| COFINS | COF |
| ICMS Differential | DIF |
| Expenses | EXP |
| Freight | FRT |
| ICMS | ICM |
| ICMS Recoverable | ICR |
| IPI | IPI |
| IPI Recoverable | IPR |
| PIS/PASEP | PIS |
| ICMS Repasse Discount | REP |

| Tax, Cost, or Discount | Code |
|-------------------------------|-------------|
| ICMS Substitution Recoverable | SBR |
| Insurance | SEG |
| ICMS Substitution Tax | SUB |
| Trade Discount | TDC |

- Create codes for default AAIs that point to a specific default account. The system first searches for a code with a specific GL class in the last four characters (for example, COFGL30, where GL30 is the supplier's GL class). If a specific code that includes the item's GL class does not exist, then the system locates the default code (for example, COF****).
- Complete the Description 01 field with the GL category code that is associated with the GL offset account for the JD Edwards EnterpriseOne Distribution system AAI to which the system posts the transaction.

See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Procurement Processing for Brazil, page 391.

ICMS Code - Fiscal Value (76/II)

The fiscal value codes for ICMS tax indicate whether transactions are taxable, exempt, or eligible for a reduced tax rate. You can also use this code to indicate whether the tax can be recovered for a transaction. ICMS fiscal value codes for taxable transaction have a 1 in the Special Handling field.

This table displays the ICMS fiscal value codes that are hard coded for Brazilian localization:

| Codes | Description 01 | Special Handling |
|--------------|-----------------------|-------------------------|
| 1 | Taxable | 1 |
| 2 | Exempt or Not Taxable | 0 |
| 3 | Other | . |

Item Origin (76/IO)

The origin flag represents the origin of the item. These values are hard-coded for Brazil:

| Codes | Description 01 |
|--------------|--------------------------------|
| 0 | Domestic Goods |
| 1 | Foreign Goods - Imported |
| 2 | Foreign Goods - Local Purchase |

IPI Code - Fiscal Value (76/IP)

The fiscal value codes for IPI tax indicate whether transactions are taxable, exempt, or eligible for a reduced tax rate. You can also use this code to indicate whether the tax can be recovered for a transaction. IPI fiscal value codes for taxable transactions have a 1 in the Special Handling field.

This table displays the IPI fiscal value codes that are hard coded for Brazilian localization:

| Codes | Description 01 |
|-------|-----------------------|
| 1 | Taxable |
| 2 | Exempt or Not Taxable |
| 3 | Other |

States That Add IPI/Imported (76/SI)

Set up this UDC to identify which Brazilian states do not add IPI to the ICMS basis of imported products. The UDC codes consists of a two-character abbreviation of the state in the Code field and the full name of the state in the Description 01 field.

ICMS Tax Substitution Markup (76/SM)

Set up this UDC to identify the items to which ICMS Substitution applies. These values are hard-coded in Brazilian localization:

| Codes | Description 01 |
|-------|---------------------|
| N | No |
| Y | Yes, Use List Price |
| Z | Yes, Use Net Price |

Tax Summary (76/ST)

The codes in the Tax Summary UDC (76/ST) represent the type of tax payment that is applied to an item. These values are hard-coded.

This table displays the codes for the Tax Summary UDC:

| Codes | Description 01 |
|-------|--|
| 00 | Pay full tax |
| 10 | Pay ICMS and ICMS Sub. Mark Up |
| 20 | Reduced base for tax calculation |
| 30 | Exempt/Not ICMS; pay ICMS substitution |
| 40 | Exempt |
| 41 | Not taxed |
| 50 | Suspended |
| 51 | Deferred |

| Codes | Description 01 |
|-------|--|
| 70 | With reduction of base of calculation and ICMS charged previously for substitution tax |
| 90 | Others |

Transaction Nature (76/TN)

The algorithm for calculating the ICMS Tax Situation code uses the special handling code in the Transaction Nature UDC (76/TN) to determine the ICMS Tax Situation code when an item is not taxed or has deferred tax. The algorithm then populates the Tax Situation field (data item BST1) with a three-digit tax situation code. You must set up a special handling code of 10 for items that are not taxed, and a code of 01 for items that have deferred tax.

See *JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide*, “(BRA) Setting Up the System for Brazilian Taxes,” Setting Up Transaction Nature Codes.

Fiscal Amount Codes - ICMS (76B/CV)

Use these codes to specify how ICMS tax applies to an item. The JD Edwards EnterpriseOne system provides these codes for this UDC table:

| Codes | Description 01 |
|-------|-------------------------------|
| . | Default |
| 1 | Taxable |
| 2 | Exempt or not taxable |
| 3 | Others |
| 4 | Reduced ICMS (Taxable/Exempt) |
| 5 | Reduced ICMS (Taxable/Exempt) |

Fiscal Value Codes - IPI (76B/CW)

Use these codes to specify how IPI tax applies to an item. The JD Edwards EnterpriseOne system supplies these codes for this UDC table:

| Codes | Description 01 |
|-------|----------------|
| . | Default |
| 1 | Taxable |
| 2 | Not taxable |
| 3 | Others |

| Codes | Description 01 |
|-------|------------------------------|
| 4 | Reduced IPI (Taxable/Exempt) |
| 5 | Reduced IPI (Taxable/Others) |

Services Code (76B/IS)

Set up codes for *Imposto sobre Serviços* (ISS) taxes. You must set up codes for each type of service for each city of origin for services that appear on a *nota fiscal*.

Setting Up UDCs for Procurement Processing for Brazil

Before you use the JD Edwards EnterpriseOne Procurement system, set up these UDCs.

Average Cost Calculation (40/AV)

Set up this UDC with the programs that the system runs to process taxes during purchase order processing.

This UDC links the base software for the JD Edwards EnterpriseOne Procurement system to the Brazil localization. You must add this codes to the UDC table:

| Code | Description 01 | Description 02 |
|----------|-------------------|----------------|
| N76B9003 | Close nota fiscal | Y |

Item Category Code 06 (41/06)

JD Edwards EnterpriseOne software provides hard-coded values that the system uses to indicate whether an item is manufactured or purchased. The system uses these values to determine the transaction nature of the item.

G/L Posting Category (41/9)

Set up codes for the general ledger class descriptions for the distribution AAIs. The G/L Posting Category UDC table (41/9) controls which general ledger accounts receive the currency amount of inventory transactions for an item.

Example of codes for Brazil are:

| Codes | Description 01 |
|-------|-------------------|
| DF30 | ICMS Differential |
| IC30 | ICMS Tax/IN30 |
| IM30 | ICMS Rec/IN30 |
| IP30 | IPI Tax/IN30 |
| IR30 | IPI Rec/IN30 |
| RE30 | Repasse/IN30 |
| SB30 | Subs.Rec/IN30 |

| Codes | Description 01 |
|-------|-----------------|
| ST30 | ICMS Subs/IN30 |
| TD30 | Trade Disc/IN30 |

Category Code Name/Code (76/CN)

JD Edwards EnterpriseOne software provides hard-coded values for this UDC. The system uses the NATUR value in the JD Edwards EnterpriseOne Procurement system.

GL/Class Code Cross-Reference (76/GL)

Set up UDC table 76/GL for Brazilian tax accounting. Brazilian localization uses AAIs 4220 and 4240 in the JD Edwards EnterpriseOne Sales Order Management system; and AAIs 4385 and 4390 in the JD Edwards EnterpriseOne Procurement system to account for Brazilian taxes, freights, expenses, insurance, and discounts. The system uses these four key fields to associate these AAIs with an account:

- Company
- AAI
- Document type
- GL class code

When you set up the G/L Code Cross-Reference UDC, complete the fields as follows:

- Complete the Codes field by using the first three characters of the tax name followed by four characters that represent the general ledger class of the item or service at the branch/plant level.

The first three characters of the codes must be completed as illustrated in this table:

| Tax, Cost, or Discount | Code |
|-------------------------------|------|
| ICMS Differential | DIF |
| Expenses | EXP |
| Freight | FRT |
| ICMS | ICM |
| ICMS Recoverable | ICR |
| IPI | IPI |
| IPI Recoverable | IPR |
| ICMS Repasse Discount | REP |
| ICMS Substitution Recoverable | SBR |
| Insurance | SEG |
| ICMS Substitution Tax | SUB |
| Trade Discount | TDC |

- Create codes that for default AAIs that point to a specific default account.

The system first searches for a code with a specific general ledger class in the last four fields (for example, EXPIN30, where IN30 is the item general ledger class). If a specific code that includes the item's general ledger class does not exist, then the system locates the default code (for example, EXP****).

- Complete the Description 01 field with the general ledger offset account for the JD Edwards EnterpriseOne Distribution system AAI to which the system posts the transaction.

Nota Fiscal Source (76/NF)

The JD Edwards EnterpriseOne software provides hard-coded values that identify different *notas fiscais* in the system.

Setting Up UDCs for IN86 and IN89 Tax Reporting

Set up the UDCs described in this section before you process IN86 or IN89 tax reporting.

Document Type - All Documents (00/DT)

You set up document types so that you can identify, group, and process similar transactions.

In addition to the hard-coded document types that are used throughout JD Edwards EnterpriseOne software, you can set up soft-coded document types that are based on the specific business needs. For example, you can set up the document types shown in this table for Brazil:

| Codes | Description 01 |
|-------|-------------------------------------|
| NF | Purchasing <i>nota fiscal</i> |
| NI | Non Stock <i>nota fiscal</i> |
| NS | <i>nota fiscal</i> Sales |
| NR | Ship From <i>nota fiscal</i> Return |

You set up special handling codes for the Brazil-specific document types to specify an operation type and to create a cross-reference between the two-character document type that JD Edwards EnterpriseOne software uses and the three-character Brazilian document types. The system uses the operation type and the cross-reference when processing records for IN86 and IN89 tax reporting.

You set up the special handling code with three or four characters. The system uses the first character to determine the operation type of the transaction; and uses characters 2, 3, and 4 to determine the Brazil-specific document type. For example, you might set up a document type and special handling codes as shown in this table:

| Codes | Description 01 | Special Handling Code |
|-------|-------------------------------|-----------------------|
| NF | Purchasing <i>nota fiscal</i> | CDUP |

For IN89 tax processing, you must assign as characters 2, 3, and 4 a document type that appears in the Document Type INSS - Brazil (76B/DT) UDC table.

Note. When you assign a code for a Nota Promissória, you enter *NP* for characters 2 and 3; leave character 4 blank.

This table describes the values the system uses when you process records for IN86 or IN89 tax reporting if you do not set up special handling codes for Brazil-specific document types:

| Code | Description |
|--------------------|--|
| Operation Type | <p>The system assigns these values:</p> <ul style="list-style-type: none"> • C for accounts payable vouchers and accounts receivable invoices • P for accounts payable payments • R for accounts receivable receipts |
| INSS Document Type | <p>The system assigns these values:</p> <ul style="list-style-type: none"> • The second, third, and fourth positions of the special handling code of the <i>nota fiscal</i> Document Type (00/DT). • If the second, third, and fourth positions of the special handling code are blank, the system assigns the <i>nota fiscal</i> document type. |

Important! The system does not validate the characters that you enter in the Special Handling Code field. To ensure accurate data for IN86 and IN89 tax reporting, you must ensure that the characters are valid and enter the four characters in the correct order.

Codes - IN68 (76/IN)

Set up the codes that the Codes Table - IN68 (F76B80) uses to validate records in the IN68 work files. When you run any of the IN68 workfile generation programs, the system writes the appropriate code to the Codes Table - IN68 only if the code exists in the 76/IN UDC.

Purchase Use (76/PU)

Set up purchase use codes to identify how the item being purchased will be used, or in some instances, to specify the type of transaction. The purchase use of the item determines the tax recoverability of the item. For example, you can set up codes to identify purchases as:

| Codes | Description 01 | Description 02 | Special Handling Code |
|---------|--|----------------|-----------------------|
| (blank) | (blank) | | 0000 |
| AF | Fixed Assets | | 0100 |
| CON | Purchase Internal Consumption | | 0000 |
| EMB | Packaging Products | | 1101 |
| IN1 | Individual - Retention and Aggregation | INSR/INSA | 0000 |
| IN2 | Individual - Retention only | INSR/ | 0000 |
| RAW | Raw Materials | INSS/INSA | 0101 |

| Codes | Description 01 | Description 02 | Special Handling Code |
|-------|---------------------|----------------|-----------------------|
| RES | Purchase for Resale | | 1102 |
| SVC | Services | INSS/INSA | 0000 |

Note. These codes are user-defined, except for *CON* and *AF*. Both *CON* and *AF* are hard-coded in the system.

The system uses the first four characters in the Special Handling Code field to determine the tax recoverability of the purchased item. Use position 1 for IPI tax and position 2 for ICMS tax. Position 3 is reserved for future use. For positions 1, 2, and 3, enter *1* for recoverable and *0* (zero) for nonrecoverable taxes.

The system uses position 4 of UDC table (76/PU) for items that are purchased for manufacturing or purchased for resale. The fourth position determines the suggested Transaction Nature code for those companies to which ICMS Substitution applies. Enter *1* in position 4 when buying or transferring items for manufacturing purposes. Enter *2* in position 4 when buying or transferring items for resale purposes.

See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Supplier Withholding for Brazil, page 352.

Cancel Situation (76B/CS)

You use the Cancel Situation UDC (76B/CS) to specify whether a transaction was canceled. The values shown in this table are hard-coded:

| Code | Description |
|------|--------------|
| N | Not canceled |
| S | Canceled |

Packing Materials (76B/EM)

Set up codes to identify the packing materials that appear on *notas fiscais*. For example, you can set up the codes shown in this table:

| Code | Description |
|------|-------------|
| BX | Box |
| PAP | Paper |
| PAL | Pallet |

Freight Mode (76B/FM)

You use the Freight Mode UDC (76B/FM) to specify the method of freight. The values shown in this table are hard-coded:

| Code | Description |
|------|--------------------------|
| CIF | Cost, Insurance, Freight |
| FOB | Free on Board |

Inventory Status (76B/IV)

You use the Inventory Status UDC (76B/IV) to specify the ownership and location of inventory. The values shown in this table are hard-coded:

| Code | Description |
|---------|-------------------------------|
| (blank) | Company stock held by company |
| 1 | Company stock held by company |
| 2 | Company stock held by others |
| 3 | Other's stock held by company |

Fiscal Messages/Observations (76B/M1)

Set up codes for messages that will appear in the fiscal books and on IN68 reports. When you enter the codes in certain processing options for fiscal books or IN68 reports, the system prints the message that is associated with the code on the report or fiscal book.

Nota Fiscal Document Model (76B/MD)

You use the Nota Fiscal Document Model UDC (76B/MD) to specify the model of the *nota fiscal* that you used for the transaction. For example, you might set up these values:

| Code | Description |
|------|-----------------------------------|
| 01 | Normal <i>nota fiscal</i> |
| 07 | Transportation <i>nota fiscal</i> |
| 08 | Freight Note - Road |
| 09 | Freight Note - Water |
| 10 | Freight Note - Air |
| 11 | Freight Note - Rail |
| 21 | Communication Service NF |
| 22 | Telecommunication Service NF |

Merchandise Movement (76B/MM)

You use the Merchandise Movement UDC (76B/MM) to specify when merchandise is moved from one location to another. The values shown in this table are hard-coded:

| Code | Description |
|------|-------------|
| N | No |
| S | Yes |

Nature of Document Type - BR (76B/ND)

You use the Nature of Document Type - BR UDC (76B/ND) to specify whether the transaction was completed by using a *nota fiscal*. The values shown in this table are hard-coded:

| Code | Description |
|------|-------------------|
| I | Internal Document |
| F | Fiscal Document |

End Items (76B/PA)

Set up codes to identify the type of end items that you ship. For example, you can set up these codes:

| Code | Description |
|------|--------------|
| M | Manufactured |
| S | Stock |

Raw Materials (76B/SC)

Set up codes to represent the types of raw materials that you use. For example, you could set up the codes as shown in this table:

| Codes | Description 01 |
|-------|----------------|
| PAP | Paper Pulp |
| GLY | Glycerin |
| CS | Copper Sulfate |

Storage Control Document Type (76B/SD)

You use the Storage Control Document Type UDC (76B/SD) to specify the type of operation. The values shown in this table are hard-coded:

| Code | Description |
|------|--------------------|
| NF | <i>Nota fiscal</i> |
| OS | Service order |
| REQ | Requisition |

Merchandise Movement (76B/MM)

You use the Merchandise Movement UDC (76B/MM) to specify when merchandise is moved from one location to another. The values shown in this table are hard-coded:

| Code | Description |
|------|-------------|
| N | No |
| S | Yes |

End Items (76B/PA)

Set up codes to identify the type of end items that you ship. For example, you can set up these codes:

| Code | Description |
|------|--------------|
| M | Manufactured |
| S | Stock |

Raw Materials (76B/SC)

Set up codes to represent the types of raw materials that you use. For example, you could set up the codes as shown in this table:

| Codes | Description 01 |
|-------|----------------|
| PAP | Paper Pulp |
| GLY | Glycerin |
| CS | Copper Sulfate |

Storage Control Document Type (76B/SD)

You use the Storage Control Document Type UDC (76B/SD) to specify the type of operation. The values shown in this table are hard-coded:

| Code | Description |
|------|--------------------|
| NF | <i>Nota fiscal</i> |
| OS | Service order |
| REQ | Requisition |

Volume Type (76B/VT)

You use the Volume Type UDC (76B/VT) to specify the type of container for bulk items. For example, you might set up the values as shown in this table:

| Code | Description 01 |
|------|----------------|
| BAR | Barrel |
| TAN | Tank |
| PAC | Pack |

Business Unit Reporting Code 30 (00/01 - 00/30)

The Generate ICMS Magnetic Files - Sintegra program (R76B201) and the IN86-Filter for Inventory Records program (R76B100B) require that you set up a branch/plant category code with values to store inventory status information. For example, you might set up UDC 00/30 as the Business Unit Reporting Code 30 UDC.

The Branch/Plant (Business Unit) Category Code processing option uses the Business Unit Reporting Code 30 to determine how to process inventory records.

This table shows the valid values for the Business Unit Reporting Code 30 UDC:

| Code | Description |
|-------|-----------------------------|
| Blank | Prod./ownership is Company |
| 1 | Prod./ownership is Company |
| 2 | Prod. at Supp./Company owns |
| 3 | Prod at Co./Supplier owns |

After you set up a UDC category code with the Business Unit Reporting Code 30 values, you must associate a value from the UDC to the business units for which you report IN86, IN89, or ICMS data.

Setting Up AAIs for Tax Processing for Brazil

Set up these AAIs for Brazilian transactions:

- Set up the standard JD Edwards EnterpriseOne Distribution system AAIs to account for Brazilian taxes.

For example, the system uses AAI 4385 for debits and AAI 4390 for credits for *Programa de Integração Social/Programa de Formação do Patrimônio do Servidor Público* (PIS/PASEP) and *Contribuição para Financiamento da Seguridade Social* (COFINS) taxes.

- To account for ICMS, ICMS substitution, and IPI tax calculations, set up AAIs 4210, 4220 4240, 4285, 4290, 4310, 4385, and 4390.
- To account for Brazilian taxes, freights, expenses, insurance, and discounts, set up AAIs 4220 and 4240 in the JD Edwards EnterpriseOne Sales Order Management system and set up AAIs 4385 and 4390 in the JD Edwards EnterpriseOne Procurement system.
- For sales transactions, the system uses AAI 4220 to generate a debit to the posting account and uses AAI 4240 to generate a credit to the posting account when you update the general ledger with PIS/PASEP and COFINS tax credits.

- For procurement transactions, the system uses AAI 4385 to generate a debit to the posting account and uses AAI 4390 to generate a credit to the posting account when you update the general ledger with PIS/PASEP and COFINS tax credits.
- To account for taxes when closing a *nota fiscal*, set up the Cost/Expense Adjustments AAI (4385) and the Cost/Liability Adjustments AAI (4390).

Setting Up Next Numbers for Brazil

This section provides an overview of next numbers for Brazil and discusses how to:

- Set up next numbers for *notas fiscais*.
- Set up next numbers for electronic GIAs.
- Set up next numbers for Fiscal Books.

Understanding Next Numbers for Brazil

You must set up next numbers for *notas fiscais*, electronic GIAs, and fiscal books to correctly process sales information for Brazil.

Next Numbers for Notas Fiscais

You set up temporary next numbers for *notas fiscais*. These numbers are assigned to you by the government. The system uses the temporary next numbers when you run the Generate Nota Fiscal program (R76558B). After you review the temporary numbers for *notas fiscais* and make any necessary corrections, you run the Print Nota Fiscal program (R76560B) to generate the *nota fiscal* that accompanies merchandise or services. The Print Nota Fiscal program prints on the *nota fiscal* a next number from the block of *nota fiscal* numbers that are assigned to a company by the government.

Next Numbers for Electronic GIAs

You set up next numbers for electronic GIAs by completing the tenth next numbering position. The system uses the next number as part of the String Key field data item GISTR) when you run the Extract GIA program (R76B130) or when you manually create a new GIA.

Next Numbers for Fiscal Books

Each type of fiscal book that you generate must be sequentially numbered and can contain no more than 500 pages. You use the Fiscal Books Next Number program (P7602B) to specify the book number, the starting page number, and the maximum number of pages for each book.

Next Numbers for Remessa

Remessa is the remittance process for accounts receivable in which you send customer account information to a bank through an electronic media or the internet for collection purposes. After the bank receives the customer account information, the bank sends the customer a collection document called a *boleto*. The *boleto* indicates the amount that is owed to you. The customer uses the *boleto* to determine the amount that must be remitted to you.

You must set up next numbers in system 76 for *remessa* so that each transaction that you send to the bank is uniquely identified.

Forms Used to Set Up Next Numbers for Brazil

| Form Name | FormID | Navigation | Usage |
|-----------------------------------|---------|---|--|
| Nota Fiscal Next Number Revision | W7600BE | Brazilian Localization Setup (G76B41B), Next Number - Nota Fiscal On the Work With Nota Fiscal Next Numbers form, click Add. | Set up next numbers for <i>nota fiscal</i> numbers, which are assigned by the government. |
| Set Up Next Numbers by System | W0002C | Fast path, nn On the Work With Next Numbers form, select system 76B. | Set up next numbers for electronic GIAs. |
| Fiscal Books Next Number Revision | W7602BB | Brazilian Localization Setup (G76B41B), Next Number - Fiscal Books Click Add on Work With Fiscal Books Next Number. | Specify the book number, the starting page number, and the maximum number of pages for fiscal books. |

| Print Date | | |

Fiscal Books - Fiscal Books Next Number Revision form

Report Type Enter a UDC (76/FB) from the Fiscal Book Code table that identifies the type of fiscal book.

Book Number Enter the next number that the system uses to automatically assign numbers. Next numbers can be used for many types of documents; they include voucher numbers, invoice numbers, journal entry numbers, employee numbers, address numbers, and so on. You must adhere to the next numbers that have been preestablished unless custom programming is provided.

Next Page Number Enter the number of the page that follows the opening statement. The system automatically inserts the opening statement beginning on page one.

Maximum Number of Pages Enter the maximum number of pages in the fiscal book. Brazilian government regulations limit the size of a fiscal book to 500 pages.

Print Date Review the date the fiscal book is printed. This value is system-assigned.

Setting Processing Options for Address Book Additional Information - Brazil (P01012BR)

These processing options specify whether the system validates, allows duplicates for, and displays error or warning messages for CGC and CPF numbers. You can also specify whether the system validates the state tax ID in address book records.

Edits

- 1. CGC Error or Warning** Specify whether the system displays a warning or an error message when you enter a duplicate or erroneous CGC (*Cadastro Geral de Contribuintes*) number. Values are:

Blank: Display a warning message.

I: Display an error message.
- 2. CPF Error or Warning** Specify whether the system displays a warning or an error message when an erroneous or duplicate CPF number is entered. Values are:

Blank: Display a warning message.

I: Display an error message.
- 3. Duplicate CGC Number** Specify whether the system allows duplicate CGC numbers. Values are:

Blank: Do not allow duplicate CGC numbers.

I: Allows duplicate CGC numbers.
- 4. Duplicate CGC Error or Warning** Specify whether the system checks for duplicate or erroneous CGC numbers. If the Duplicate CGC Numbers processing option has a value of blank, the system does not allow duplicate CGC numbers. Values are:

Blank: The system generates an error for duplicate CGC numbers.

I: The system allows duplicate CGC numbers.
- 5. Duplicate CPF Numbers** Specify whether the system allows duplicate CPF numbers. Values are:

Blank: Allow duplicate CPF (*Cadastro de Pessoas Físicas*) numbers.

I: Do not allow duplicate CPF numbers.
- 6. Duplicate CPF Error or Warning** Specify whether the system checks for duplicate or erroneous CPF numbers. If the Duplicate CPF Numbers processing option has a value of blank, the system does not allow duplicate CPF numbers. Values are:

Blank: The system generates an error for duplicate CPF numbers.

I:

The system does not allow duplicate CPF numbers.
- 7. Duplicate State Tax ID Numbers** Specify whether the system allows duplicate State Tax ID numbers. Values are:

Blank: The system does not allow duplicate State Tax ID numbers.

I: The system does allow duplicate State Tax ID numbers.
- 8. Duplicate State Tax ID Error or Warning** Specify whether the system displays an error or warning message when you enter a duplicate State Tax ID. Values are:

Blank: The system displays an error message when a duplicate State Tax ID is entered.

I: The system displays a warning message when you enter a duplicate State Tax ID. This processing option applies when you enter Blank for the Duplicate State Tax ID Numbers processing option.

Setting Up Corresponding Versions of Programs for Brazil

Some country-specific functionality requires that you create versions of the same name for a country-specific programs and a base software program. For example, to have the system access the processing options for a country-specific voucher program, you might need to set up a version named XYZ for the country-specific voucher program, and a version named XYZ of the Standard Voucher Entry (P0411) program.

Set up corresponding versions for these programs:

| Brazilian Program | Base Software Program |
|---|--|
| Sales/Purchase Returns - Brazil (P76B805) | <p>Sales Order Entry (P4210) and Sales Ledger Inquiry (P42025).</p> <p>Note. Versions ZJDE7003 and ZJDE7004 of the Sales Order Entry program exist in the base software to process sales and purchase returns. Set up versions ZJDE7003 and ZJDE7004 of the Sales Ledger Inquiry and Sales/Purchase Returns – Brazil programs.</p> <p>See Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Understanding Sales Order Returns, Reverses, and Cancellations, page 550.</p> |
| <p>P.O. Brazilian Additional Information - Brazil (P4310BR)</p> <p>Note. If the versions are not the same, P.O. Brazilian Additional Information - Brazil uses version ZJDE0001.</p> | Enter Purchase Orders (P4310) |
| <p>Sales Order Brazilian Additional Information - Brazil (P4210BR)</p> <p>Note. If the versions are not the same, Sales Order Brazilian Additional Information - Brazil uses version ZJDE0001.</p> | Sales Order Entry (P4210) |
| Stand Alone Nota Fiscal (P7611B) and Generate Nota Fiscal (R76558B) | N/a |
| Address Book Additional Information - Brazil (P01012BR) | Address Book Revisions (P01012) |
| Brazilian Payment Process - PO (P76B470) | Create Payment Control Groups (R04570) |
| Nota Fiscal Receipts - Brazil (P4312BR) | PO Receipts (P4312) |

Setting Up Opening and Closing Terms for Fiscal Books for Brazil

This section provides an overview of opening and closing terms and discusses how to add opening or closing terms for fiscal books.

Understanding Opening and Closing Terms

Before writing any fiscal book, you must include the opening term and the closing term for the book on the first and last pages of the book, respectively.

The opening term of the book should include this information:

- Purpose of the book.
- Number of the book.
- Number of pages.
- Business to which the book pertains.
- Business address.
- Number assigned to the book by the *Junta Comercial* and the date when the number was assigned.
- CGC tax ID number.

These examples of an opening term and a closing term were taken from Departamento Fiscal Modelo (Ribeiro, Wanderlei Ban, São Paulo: Informações Objetivas Publicações Jurídicas Ltda., 1994, pp.1-2 in the section titled IV-Dos Livros Fiscais). This model is an opening term:

Termo de Abertura

Este livro que servirá como Diário Geral, nº 3, contém 200 folhas, numeradas tipograficamente, da São José Ltda., sita na Rua São Joaquim, 33, na Cidade de Cruz Torta-SP, registrada na Junta Comercial sob o nº 456378957, na seção de 23.12.66, inscrita no Cadastro Geral de Contribuintes sob o nº 56.678.978/0001-90 e na Fazenda Estadual sob o nº 122.345.234.111.

The closing term contains the:

- Purpose of the book.
- Number of the book.
- Number of pages.
- Name of the company.

This model is a closing term:

Termo de Encerramento

O presente livro serviu como Diário Geral, nº 3, com 200 folhas, numeradas tipograficamente, da São José Ltda.

Both the opening and closing terms should contain the date and signature of the business owner and the business' accountant.

Use these variables if you want the system to enter default values into the opening or closing terms:

- ##### (six # signs) - Use a default book number when you run the Transaction Journal report.
- @@@@ (six @ symbols) - Add the page number of the closing term to the statement.
- \$\$\$\$\$\$ (six \$ signs) - Add either the issue date or the current date to the term.

You enter the opening and closing terms in the Media Object form.

Form Used to Set Up Opening and Closing Terms

| Form Name | FormID | Navigation | Usage |
|--|---------|---|--------------------------------------|
| Fiscal Books - Work With Fiscal Books Next Number | W7602BA | Brazilian Localization Setup (G76B41B), Next Number - Fiscal Books Select a record, click either Opening Statement or Closing Statement, and then select Opening Statement or Closing Statement from the Row menu. | Add an opening or closing statement. |

Adding an Opening or Closing Statement

Access the Fiscal Books - Work With Fiscal Books Next Number form.

1. Click Find to view available records, and then select a record.
2. To add an opening or closing statement to the fiscal book, select Opening Statement or Closing Statement from the Row menu.
3. On Fiscal Books - Opening Statement or Fiscal Books - Closing Statement, click OK.
4. On Media Object Viewer, click Text, enter the opening or closing statement, and then click Save.

Setting Up a Cross-Reference for Transaction Nature Codes for Brazil

This section provides an overview of cross-references for transaction nature codes and discusses how to set up a cross-reference.

Understanding Cross-References for Transaction Nature Codes

JD Edwards EnterpriseOne uses three digits for transaction nature codes. Some states in Brazil require a five-digit code. You can use the Setup Transaction Nature Cross Reference program (P76B2001) to create a cross-reference between the standard three-digit codes in the JD Edwards EnterpriseOne software the five-digit codes that are required for Brazil. You set up the cross-references by company.

Forms Used to Set Up a Cross-Reference

| Form Name | FormID | Navigation | Usage |
|--|-----------|---|---|
| CFOP Cross Reference - [Work With CFOP Cross References] | W76B2001A | Fiscal Reports - Brazil (G76B111), Setup Transaction Nature Cross Reference | Access forms to set up cross-references. |
| CFOP Cross Reference - [CFOP Cross References] | W76B2001B | Click Add on Work With CFOP Cross References. | Add a cross-reference between a three-digit and a five-digit transaction nature code. |

Setting Up a Cross-Reference for Transaction Nature Codes

Access the CFOP Cross References form.

Setup Transaction Nature Cross Reference - CFOP Cross Reference - [CFOP Cross References]

OK Cancel Tools

Company 07600 Brazilian Company

From CFOP 511 00

To CFOP 00511

Effective Date 07/12/05

CFOP Cross References form

From CFOP

Enter a three-character code that for tax purposes, identifies a type of transaction. To enter values for the transaction nature code, use this convention: X.YY where X defines the origin of the transaction (inbound or outbound), and YY defines the transaction as a whole, such as a sales transaction. Values for X are:

- 1: Inbound, inside the state.
- 2: Inbound, other states.
- 3: Inbound, import.
- 5: Outbound, inside state.
- 6: Outbound, other states.
- 7: Outbound, export.

Examples of transaction nature codes:

511: In-state sale.

611: Out-of-state sale.

Suffix

Complete this two-character field in conjunction with the transaction nature code to identify the complementary implications of a type of transaction. For

example, the suffix might indicate that a certain type of transaction represents a inventory change, or that a transaction is eligible for a certain type of tax.

Values might include:

- 01*: Bonus
- 02*: Demo
- 03*: Sample
- 04*: Return merchandise
- 05*: Back order
- 06*: Donation

Examples of transaction nature codes with suffixes:

- 511 01*: In-state sale, bonus.
- 511 05*: In-state sale, back order.

To CFOP

Use this three-character code to indicate different types of transactions for tax purposes. To enter values for the transaction nature code, use the convention: X.YY where X defines the origin of the transaction (inbound or outbound) and YY defines the transaction as a whole, such as a sales transaction.

Values for X are:

- 1*:Inbound, inside the state.
- 2*:Inbound, other states.
- 3*:Inbound, import.
- 5*:Outbound, inside state.
- 6*:Outbound, other states.
- 7*:Outbound, export.

Examples of transaction nature codes (values for YY) include:

- 511*: In state sale.
- 611*: Out of state sale.

Effective Date

Enter the date on which you confirm that a specific order line was shipped.

Setting Up Company and Branch/Plant Cross-References for Brazil

This section provides an overview of company and branch/plant cross-references for Brazil and discusses how to set them up.

Understanding Company and Branch/Plant Cross-References for Brazil

In Brazil, the government requires every business unit (branch/plant) that belongs to a fiscal company to have a separate tax identification number. For reporting purposes, the government requires companies to verify that every business unit is assigned to only one fiscal company.

To associate business units with a fiscal company and prevent assigning the same business unit to more than one fiscal company, you set up fiscal company and branch/plant cross-references. You must set up a cross-reference for each branch/plant. You might need to complete the steps several times if you have more than one cross-reference.

Form Used to Set Up Company and Branch/Plant Cross-References

| Form Name | FormID | Navigation | Usage |
|--------------------------------------|---------|--|--|
| Fiscal Company/Branch Plant Revision | W7606BE | Brazilian Localization Setup (G76B41B), Fiscal Company/Branch Plant On the Work with Fiscal Company/Branch Plant form, click Add. | Set up company and branch/plant cross-references for Brazil. |

Setting Up Company and Branch/Plant Cross-References for Brazil

Access the Fiscal Company/Branch Plant Revision form.

Fiscal Company/Branch Plant Revision form

Setting Up Payment Formats for Brazil

This section provides an overview of payment formats for Brazil and discusses how to set up processing options for:

- Print Automatic Payments - Check & Boldero - Brazil (R04572CB1).
- Print Automatic Payments - Boldero Money Transfer (R04572DB).
- Print Automatic Payments - Check - Brazil (R04572DB1).
- Print Automatic Payments - Boldero with Boletto - Brazil (R04572RB).

Understanding Payment Formats for Brazil

JD Edwards EnterpriseOne software provides these payment formats for Brazil:

| Format | Description |
|-----------|--|
| R04572CB1 | Print Automatic Payments - Check & Bordero - Brazil |
| R04572DB | Print Automatic Payments - Bordero Money Transfer |
| R04572DB1 | Print Automatic Payments - Check - Brazil |
| R04572RB | Print Automatic Payments - Bordero with Boletto - Brazil |

Additionally, you can set up payment formats in the Dynamic Formatter program (P76B474).

See [Chapter 24, “\(BRA\) Setting Up Electronic Banking,” page 425](#).

Setting Processing Options for Print Automatic Payments - Check & Bordero - Brazil (R04572CB1)

Processing options enable you to specify the default processing for programs and reports.

Translation

Translation Program Enter *1* to use the standard program to translate payments amounts from numbers to words. If you leave this processing option blank, the system uses the X76500BR translation program. All checks are printed in Portuguese.

Payment

Message Specify the opening terms message.

First Line Size Specify the size of the first line of the print format. If you leave this processing option blank, the system uses the maximum value of 98.

Second Line Size Specify the size of the second line of the print format. If you leave this processing option blank, the system uses the maximum value of 98.

Convert Decimals Enter *1* to suppress the conversion of the value after the decimal into words.

Check Number Enter *1* to print the check number.

Company Specify the company whose description you want to print on the *bordero*

Date Enter *1* to print the GL date on the check. Leave this processing option blank to print the system date on the check.

Setting Processing Options for Print Automatic Payments - Bordero Money Transfer - Brazil (R04572DB)

Processing options enable you to specify the default processing for programs and reports.

Translation

Translation Program Enter *1* to use the standard program to translate payments amounts from numbers to words. If you leave this processing option blank, the system uses the X76500BR translation program. All checks are printed in Portuguese.

Payment

Message Specify the opening terms message.

Date Enter *1* to print the GL date on the check. Leave this processing option blank to print the system date on the check.

CHAPTER 23

(BRA) Setting Up Supplier Withholding

This chapter provides an overview of the setup for processing supplier withholding in Brazil and discusses how to:

- Set up purchase use codes for *Programa de Integração Social/Programa de Formação do Patrimônio do Servidor Público* (PIS/PASEP), *Contribuição para Financiamento da Seguridade Social* (COFINS), and *Contribuição Social sobre o Lucro Líquido* (CSLL) contributions.
- Set up withholding tax codes.
- Set up the income tax schedule for individuals.
- Set up payment due dates for taxes.

See Also

Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Supplier Withholding for Brazil, page 352

Understanding Set Up for Supplier Withholding for Brazil

Before the JD Edwards EnterpriseOne systems can calculate Brazilian supplier withholding taxes, you must set up the tax tables, UDCs, AAIs, and other information that the system needs to perform the calculations.

You can set up your system to perform calculations for these taxes:

| Tax | Explanation |
|---|---|
| IR (<i>Imposto de Renda</i>) | A federal income tax that is levied on services that are provided by individuals or legal entities. |
| ISS (<i>Imposto sobre Serviços</i>) | A tax that is defined by the city of origin of the job or service. |
| INSS (<i>Instituto Nacional do Seguro Social</i>) | The national social security tax. Some types of services are subject to INSS tax. The tax amount is added to the value of the provided service. |
| FUNRURAL (<i>Fundo de Assistência e Previdência do Trabalhador Rural</i>) | The income tax for agricultural businesses. It is similar to the IR tax for corporations, but the rate at which the income is taxed is different. |

| Tax | Explanation |
|-----------|--|
| PIS/PASEP | A mandatory contribution that is levied as a percentage of monthly billings. The PIS contribution is made to Brazilian social programs by private companies and enterprises. The PASEP contribution is made to Brazilian social programs by public or government entities. |
| COFINS | A mandatory contribution that is levied as a percentage of monthly billings on merchandise and services. |
| CSLL | A tax on net gains. |

The system calculates IR, PIS/PASEP, COFINS, and CSLL taxes when an automatic or manual payment is created. The system writes the tax information to the F0411 table and Voucher Additional Information Brazil (F76B0411) table after the payments are updated.

Taxes for INSS, ISS, and FUNRURAL are calculated after vouchers are entered, and before payments are made. The system calculates the taxes on both posted and non-posted vouchers.

To set up your system to calculate Brazilian social security and income taxes, you must:

- Set up these UDCs:
 - Document Type (00/DT).
 - Purchase Use (76/PU).
 - Retired IR-PF (Income Tax) (76B/AP).
 - Dependence Reduction IR-PF (76B/DP).
 - Document Type INSS - Brazil (76B/DT).
 - INSS Code (76B/IN).
 - Recieta Code (76B/IR).
 - Service Code (76B/IS).
 - Explanation of Installments (76B/OB).
 - Tax Code A/P (76B/TR).
 - Maximum Monthly INSS Amount (76B/TX).
 - Cross Reference - Due Date Tax (76B/VE).
 - Doc Types Unaffected Withholding (76B/UW).
- Set up the IR, INSS, PIS, COFINS, CSLL, and FUNRURAL tax codes that you need.
- Set up the income range, percentage of funds to be withheld, and the amount of the deduction for IR taxes for individuals.
- Set up purchase use codes for PIS/PASEP, COFINS, and CSLL contributions.
- Set up date ranges, due date rules, and payment terms in the Advanced Payment Terms module in the JD Edwards EnterpriseOne Accounts Payable system.
- Complete the appropriate fields for every vendor for which you calculate supplier withholding taxes on the Tax Information tab on the Address Book Additional Information - Brazil form in the Address Book Additional Information - Brazil program (P01012BR).

See *JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide*, “Entering Address Book Records,” (BRA) Entering Tax Information for Address Book Records.

- For INSS taxes, enter the *Código Brasileiro de Operações* (CBO) code for the supplier in the Complementary ID field on the Address Book Additional Information - Brazil form in the Address Book Additional Information - Brazil program.
- Complete these fields in the Item Master program for every item for which you will calculate supplier withholding taxes:
 - Retention of IR
 - Reduction IR
- Complete these fields in the Branch/Plant Master program for every item for which you will calculate supplier withholding taxes:
 - Retention of IR
 - Reduction IR
- For INSS taxes, enter in the Service Taxes Paid Externally program (P76B0403) the INSS contribution amounts that are held by others.

Setting Up Withholding Tax Codes

This section provides an overview of setting up withholding tax codes, lists a prerequisite, and discusses how to set up withholding tax codes.

Understanding Withholding Tax Code Setup

The Review A/P Tax Code program (P76B0401) enables you to set up tax codes that the system uses to calculate withholding taxes on *notas fiscais*. For example, you can set up codes for PIS/PASEP, COFINS, CSLL, INSS, and so on.

For social security and income taxes for suppliers, you must set up codes that represent each tax that is being withheld or aggregated. You might have more than one code for each tax type for each supplier. For example, you must set up INSS tax codes for each type of service that is provided by a supplier.

Withholding for PIS/PASEP, COFINS, and CSLL Contributions

When you purchase goods and services for which withholding taxes apply, the system calculates PIS/PASEP, COFINS, and CSLL when you run the Tax Calculation ISS, INSS, FUNRURAL program. Both PIS/PASEP and COFINS contributions are calculated for each line item on the *nota fiscal*.

CSLL contributions are calculated on the net amount of the *nota fiscal*. The system stores data about the contributions in the Voucher Additional Information Brazil (F76B0411) table.

Withholding for INSS Taxes

Set up a tax code for INSS retention and a different code for INSS aggregation.

Prerequisite

Verify that the tax codes for withholding taxes are set up in the Tax Code A/P (76B/TR) UDC table.

Form Used to Set Up Withholding Tax Codes

Tax Information Revisions form

Brazil Tax Information Enter up to eight characters to describe the tax.

Tax Type Enter a code that exists in the Tax Code A/P (76B/TR) UDC table to specify the type of Brazilian income tax. Values are:

01: IRRF

02: ISS

03: INSS

04: FUNRURAL

05: PIS

| | |
|---------------------------------------|---|
| | 06: COFINS |
| | 07: CSLL |
| Retention/Aggregation Rate | Enter the retention or aggregation tax rate that is applied to the service transaction. |
| Retention/ Aggregation/ Credit | Enter <i>R</i> if the tax code is for retention. Enter <i>A</i> if the tax code is for aggregation. Enter <i>C</i> if the tax code is for PIS/PASEP or COFINS credit. |
| Reduction IR | Enter the percentage of the reduction of the tax calculation base for an individual. |
| IR Code | Enter a code that exists in the Recieta Code (76B/IR) UDC table to identify the type of IR tax. |
| Alternate Payee Address Number | Enter the address number for an alternate payee, such as a tax authority. |
| Number of Dependents | Enter a code that exists in the Dependence Reduction IR-PF (76B/DP) UDC table to identify a reduction in tax liability based on the number of dependents the taxpayer claims. |
| Retired | Enter a code from the Retired IR-PF (Income Tax) (76B/AP) UDC table to indicate a reduction in tax liability for retired persons. |
| Progressive Table | Select this check box to use the progressive tax table when calculating taxes. Use the Progressive Table IR-PF program (P76B0402) to set up the progressive tax table. |
| ISS Code | Enter a code that exists in the Service Code (76B/IS) UDC table to specify the type of service for a city. |
| INSS Code | Enter a code that exists in the INSS Code (76B/IN) UDC table to specify the type of social security tax. |
| Cooperative | Select to indicate that the legal entity is a cooperative. |

Setting Up Purchase Use Codes for PIS/PASEP, COFINS, and CSLL Contributions

This section provides an overview of setting up purchase codes for PIS/PASEP, COFINS, and CSLL contributions and discusses how to set up purchase use codes.

Understanding Purchase Use Codes for PIS/PASEP, COFINS, and CSLL Contributions

You use the Purchase Use Tax Setup program (P76B003) to create associations between purchase use codes that exist in the Purchase Use (76/PU) UDC table and tax codes that exist in the F76B0401 table.

When you run the Tax Calculation ISS, INSS, FUNRURAL (R76B4310) program, the system accesses the associations between the purchase use codes and tax codes that you set up in the Withholding Information section of the Purchase Use Tax Setup - Brazil program. The system uses the associations to determine whether to calculate PIS/PASEP and COFINS withholding taxes. The system then reads the F76B0401 table to determine the tax rate that applies to an item or service.

Form Used to Set Up Purchase Use Codes for PIS/PASEP, COFINS, and CSLL Withholding Taxes

| Form Name | FormID | Navigation | Usage |
|----------------------------------|----------|--|--|
| Purchase Use Tax Setup Revisions | W76B003B | Brazil Localization Setup (G76B41B), Purchase Use Tax Setup Click Add on the Work With Purchase Use Tax Setup form. | Set up purchase use codes. The system enables the Apply xx field only when you complete the corresponding field. You must select this option before the system will calculate the withholding based on the code that you enter in the tax type field. For example, you can select Apply PIS only when you complete the PIS field. |

Setting Up Purchase Use Codes for PIS/PASEP, COFINS, and CSLL Withholding Taxes

Access the Purchase Use Tax Setup Revisions form.

Note. Use only the fields in the Withholding section of the Purchase Use Tax Setup Revisions form for PIS/PASEP, COFINS, and CSLL withholding. Use the Taxes Information section for PIS/PASEP and COFINS credits.

Purchase Use Tax Setup Revisions

- Purchase Use** Enter the purchase use code from UDC 76/PU for which you create an association with a tax code.
- PIS, COFINS, and CSLL** Enter the code from the F76B0401 table for which you create an association with a purchase use code.
- Apply PIS, Apply COFINS, and Apply CSLL** Select the option to enable the tax calculation.
The system enables the option only when you complete the corresponding field. For example, you can select Apply PIS only when you complete the PIS field.
You must select the option before the system will calculate withholding based on the code that you enter in the corresponding tax field.

Setting Up the Income Tax Schedule for Individuals

The system calculates IR taxes for individuals according to the schedule that you set up in the IR Progressive Table program (P76B0402). When you set up the schedule, you specify the income range, the percentage of funds that are being withheld, and the amount of the deduction.

This section discusses how to set up the income tax schedule for individuals.

Forms Used to Set Up Income Tax Schedules for Individuals

| Form Name | FormID | Navigation | Usage |
|--|-----------|---|--|
| Work With Income Tax Progressive Table | W76B0402A | A/P Tax Processing - Brazil (G76B0414), Progressive Table IR-PF | Locate income tax schedules. Delete income tax schedules. |
| Income Tax Progressive Table Revisions | W76B0402B | Click Add on the Work With Income Tax Progressive Table form. | Set up an income tax schedule for an individual. |

| Amount Deduction | Enter the amount of the deduction. |

Setting Up Payment Due Dates for Taxes

Before you can use JD Edwards EnterpriseOne software to calculate tax payments and payment due dates, you must set up the Advanced Payment Terms module in the JD Edwards EnterpriseOne Accounts Payable system. Income and social security taxes are due at different times, so you must set up a schedule for the payment due date for each tax type.

See *JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide*, “Setting Up Payment Terms,” Setting Up Advanced Payment Terms.

This table describes the payment due dates:

| Tax | Due Dates |
|-----------------------------|---|
| IR | <p>The due date is the Wednesday of the week after the date of payment of the <i>nota fiscal</i> for individuals and the Wednesday of the week after the GL date of the <i>nota fiscal</i> for corporate entities.</p> <p>For example, if you paid an invoice to a corporation on a Monday, the tax payment would be due in nine days. The system uses the payment terms and the Cross Reference - Due Date Tax UDC (76B/VE) when calculating the due date.</p> |
| PIS/PASEP COFINS CSLL | <p>Tax due dates for withholding from the 1st through the 15th of a month, and for withholdings from the 16th through the end of a month are due on the Friday of the week following the end of the payment period. If the Friday is a holiday, then the tax is due on Thursday.</p> <p>For example, if the 15th of the month is a Monday, the taxes for the period of the 1st through the 15th are due on the 26th, which is the Friday of the following week.</p> |
| ISS | <p>The due date is the seventh business day of the month after the date when the <i>nota fiscal</i> is entered into the system. If the seventh day is a nonworking day, the due date is the next working day. The system uses payment terms when calculating the due date.</p> |
| INSS | <p>The due date is the second business day of the month after the date when the <i>nota fiscal</i> is entered into the system. The system uses payment terms when calculating the due date.</p> |
| FUNRURAL | <p>The due date is the second day of the month after the date when the <i>nota fiscal</i> is entered into the system. If the second day is a nonworking day, the due date is the next working day. The system uses payment terms when calculating the due date.</p> |

When you set up your system to calculate payment due dates, you must set up:

- Date ranges.

You associate the date ranges that you set up to due date rules.

- Due date rules.

Due date rules specify how the system adds days to the date that the system uses for calculating the payment due date, whether the calculation for the payment due date is based on the date of the invoice or the GL date, and which work day rule the system uses.

- Payment terms.

Payment terms specify whether the system uses a due date rule to remit the payment on a net or on a discount basis. You associate the codes that you set up for due date rules to other payment rules when you create the codes for payment terms. The system uses the payment term codes as the description in the 76B/VE UDC, which associates the payment terms with invoice dates.

- The Cross Reference - Due Date Tax UDC table (76B/VE).

Set up this UDC to work with IR taxes.

See *JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide*, “Setting Up Payment Terms,” Setting Up Standard Payment Terms.

Date Ranges for ISS, INSS, and FUNRURAL Taxes

You set up date ranges so that the system can calculate when tax payments are due. After you set up date ranges, you associate the date ranges to due date rules.

The number of days that elapse between the date when a *nota fiscal* is processed and the date when the tax is due varies, depending on how many days are in a month and whether the statutory due date falls on a working or nonworking day. For example, if you process a *nota fiscal* on February 25, 2005, then the ISS tax is due on Monday, March 7, 2005, which is ten days later. If you process a *nota fiscal* on April 25, 2005, then the ISS tax is due on Monday, May 9, 2005, which is 14 days later. The tax is due on May 9 instead of May 7 because May 7 is a Saturday. When you set up date ranges for ISS, INSS, and FUNRURAL taxes, you set up a schedule that specifies how many days that the system adds to the GL date to calculate the tax due date.

Example of Date Range for ISS Tax

Suppose you want to set up date ranges for invoices that are processed in March 2005. March 1, 2005, is a Tuesday.

ISS taxes are due on the 7th business day of each month, so the time that elapsed between each date that you process *notas fiscais* and the due date varies. For each date that you might process invoices, you must count the number of days between the GL date and the 7th day of the month following the GL date. When you set up the ranges for this month, you specify the date when the tax is due in the Fixed Days field on the Date Range Revision form, and you enter the date in the From Day and in the To Day fields. You also complete the Days To Add field with the number of days between the GL date of the *nota fiscal* and the due date.

This table includes the entry that you would make for ISS taxes for invoices that are processed in March 2005:

| From Days | To Days | Days to Add | Fixed Days | Months to Add |
|-----------|---------|-------------|------------|---------------|
| 1 | 1 | 37 | 7 | 0 |

Date Ranges for IR Taxes

You set up date ranges so that the system can calculate when tax payments are due. After you set up date ranges, you associate the date ranges to due date rules.

For IR taxes, specify the range of dates for tax payments that are due on a specific date. For example, these taxes are due on Wednesday unless Wednesday is a nonworking day. When you set up a date range for taxes that are due on March 16, 2005, specify that the tax for *notas fiscais* that are processed between the 6th and the 12th is due on the 16th.

Example of Date Range for IR Tax

Suppose you want to set up date ranges for invoices that are processed in March 2005. March 1, 2005, is a Tuesday. IR taxes are due on Wednesday, so invoices processed in March of 2005 will have IR tax due on the 9th, 16th, 23rd, or 30th of the month. All invoices that are processed the first week of March (from Tuesday the 1st through Saturday the 5th) have IR tax due on the Wednesday of the following week, which is March 9. All invoices that are processed the second week of March (from Sunday the 6th through Saturday the 12th) have IR tax due on the Wednesday of the following week, which is January 16. When you set up the ranges for these weeks, you specify the date when the tax is due in the Fixed Days field on the Date Range Revision form, and you enter the first day of the week in the From Day and the last day of the week in the To Day fields.

Invoices that are processed during the last week of March 2005 have IR tax due on the first Wednesday of April, which is April 6. When you set up the date range for that week, you specify that the tax is due on the sixth day of the following month by specifying that the system adds a month to the due date that is specified in the Fixed Days field.

This table shows the entry that you would make for IR taxes for invoices that are processed in March 2005:

| From Day | To Day | Days to Add | Fixed Days | Months to Add |
|----------|--------|-------------|------------|---------------|
| 1 | 5 | 0 | 9 | 0 |
| 6 | 12 | 0 | 16 | 0 |
| 13 | 19 | 0 | 23 | 0 |
| 20 | 26 | 0 | 30 | 0 |
| 27 | 31 | 0 | 6 | 1 |

Due Date Rules for IR Taxes

You set up due date rules for IR for each month that begins on a different day of the week or that has a different number of days. For example, February and March of 2005 both begin on a Tuesday, but you must set up a different due date rule for February and for March because they have a different number of days.

The due date rule is a four-digit code. To make it easier to recognize what the code represents, you can set up due date rules that follow a recognizable pattern. For example, you might set up codes for the year 2005 according to this schedule:

| Identity Tax | Month, Day, Day of the Week | Day of the Week | Due Date Rule Code |
|--------------|------------------------------|-----------------|-----------------------------|
| R = IR tax | Jan = 31, begins on Saturday | Sunday = 1 | R731 = IR code for January |
| | Feb = 28, begins on Tuesday | Monday = 2 | R328 = IR code for February |
| | Mar = 31, begins on Tuesday | Tuesday = 3 | R331 = IR code for March |
| | April = 30, begins on Friday | and so on | R630 = IR code for April |

Due Date Calculation for PIS/PASEP, COFINS, and CSLL Withholdings

Create a payment term specifically for PIS/COFINS and CSLL withholding. Associate the payment term with a date rule for which a calendar exists in the Advanced Payment Terms module. Indicate the payment due dates as working dates, and specify that all other dates are holidays.

For PIS/PASEP, COFINS, and CSLL contributions, specify the range of dates for tax payments that are due on a specific day of the week. For example, these taxes are due on Friday unless Friday is a nonworking day. When you set up a date range for taxes that are processed between the 1st and the 15th, specify the Friday of the following week as the due date.

Payment Terms

When you set up payment terms, you create a code that associates due date rules with discount percentages. The system uses the codes that you create for calculating when a tax payment is due. The system also uses the payment term code in the Cross Reference - Due Date Tax UDC (76B/VE). After you set up payment terms, you can specify the payment terms for each supplier in the F0401 table.

CHAPTER 24

(BRA) Setting Up Electronic Banking

This chapter provides an overview of electronic banking and user-defined codes for electronic banking and discusses how to:

- Set up the monthly late fee rate (*juros de mora*).
- Set up bank layouts using the Dynamic Formatter.

See Also

Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Electronic Banking for Brazil, page 357

Understanding Electronic Banking

Companies in Brazil often use banks to facilitate the electronic transfer of payments and receipts between suppliers and customers. For payments to suppliers, you electronically send data to the bank as a flat file. You might send the file using the internet, or by using magnetic tape or other electronic media. The bank processes the data and then sends back to you data that describes the transactions processed by the bank.

For receipts, banks collect funds from the customers to pay for goods and services that the customers obtained from you. You can create a flat file with information about the customer and send it to the bank. The bank processes this information and contacts the customers with the amount that they owe to you. The customers send this money to the bank, and the bank sends you information about the transaction.

Because banks in Brazil do not use a common table layout for the transmission of data, the JD Edwards EnterpriseOne system provides a Dynamic Formatter application that lets you create the bank layouts that you need. The procedures that are contained in the Electronic Banking section of this guide describe how to use the Dynamic Formatter application. When you use the Dynamic Formatter application, you specify the bank layout in which the system processes outbound and inbound flat files.

You use the bank layouts that you set up in the Dynamic Formatter application to work with inbound and outbound automatic receipts.

Setting Up the Monthly Late Fee Rate

You must set up a version of the Generic Message/Rates Records program (P00191) with System Code 76, Record Type JM. The UDC 76/JM is hard coded into the business function that creates the Brazil A/R tag file record.

The rate is the Brazilian Monthly Late Fee Rate (*Juros de Mora*) used by the bank for late payments and is based on a 30-day month.

Setting Up Bank Layouts Using the Dynamic Formatter

This section provides an overview of bank layouts and bank layout attributes, lists prerequisites, and discusses how to:

- Set up the layout master.
- Set up transaction types and line types.
- Set up layout details.
- Specify the layout for transaction types.
- Specify the layout for a payment instrument.
- Create bank cross-references for attributes.
- Create next numbers for G/L accounts.

Understanding Bank Layouts

A bank layout is a set of specifications comprised of attributes. You create bank layouts by using the Dynamic Formatter Layout Setup program (P76B471). You use the bank layouts for processing electronic files for inbound and outbound payments and receipts. After you create a bank layout, you define the record types that the layout uses for inbound and outbound processes, and then you define the attributes and the position of the attributes for each inbound and outbound record type.

Banks in Brazil often use different layouts for different payment instruments. You should create a bank layout for each payment instrument for each bank with which you work.

After you create bank layouts, you must set up bank information for electronic banking. To set up bank information, perform these actions in this order:

1. Define the bank layouts that you want to use for automatic payments and automatic receipts.
2. Specify the payment instrument for each transaction type.
3. Create a cross reference for attributes that relates the value which the JD Edwards EnterpriseOne system uses for an attribute to the value that the bank uses.
4. Set up next numbers that the system uses when you generate the flat file.

Understanding Bank Layout Attributes

A bank layout is a set of specifications comprised of attributes. Before you can use a bank layout to send electronic data to the banks, you must assign attributes to a layout that you create. Attributes define specific data and the format of the data. The attributes that you can use are defined in the Dynamic Formatter Attributes UDC table (76B/F1).

The two types of attributes are:

| Attribute | Description |
|-------------|--|
| System | <p>Values that begin with an S. These values are constants.</p> <p>For example, <i>S0002</i> is the attribute for blanks and <i>S0003</i> is the attribute for zeros. You define the value of <i>S0001</i> when you specify layout details.</p> |
| Application | <p>Values that begin with a Z. These values are defined by each transaction.</p> <p>For example, attribute <i>Z0009</i> is the Company Name. The value of the <i>Z0009</i> attribute changes, depending on the company for which the transaction occurs.</p> |

The system retrieves the information for the attribute depending on:

- Whether the process is inbound or outbound.
- The line type that you specify when you set up the Layout Master.

You use the Dynamic Formatter Layout Setup program (P76B471) to create a record for each transaction/line type combination that you need for a bank layout.

For example, you might set up these transaction/line type combinations for each bank that you work with:

- Inbound/Header
- Inbound/Detail
- Inbound/Trailer
- Outbound/Header
- Outbound/Header Detail
- Outbound/Detail
- Outbound/Trailer
- Outbound/Trailer Detail

See Chapter 24, “(BRA) Setting Up Electronic Banking,” Setting Up Transaction Types and Line Types, page 456.

You must specify the bank layout that you want the system to use for each transaction type for each bank with which you work. When you specify the bank layout, you also identify where the system creates the text file for outbound transactions, where the system stores the file for inbound transactions, and where the application searches for information about the payment instrument.

For inbound transactions, the system searches for information about the payment instrument in the record type that you specify. For example, if you specify Header as the record type, the system searches the lines in the layout that contain header information to identify the payment instrument that is contained in the flat file.

See Chapter 24, “(BRA) Setting Up Electronic Banking,” Specifying the Layout for Transaction Types, page 459.

For some attributes, the information that the system retrieves is also determined by whether the attribute is used for automatic receipt or automatic payment processing.

Automatic Payment Process, Inbound, Line Type 1 (File Header)

This table shows examples of the attributes that you might use for inbound transactions with line type *1* (file header):

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|---------------|--|
| Z0001 | Company Person/Corp Code | F0101 - TAXC | The value for the Person/Corporation Code field in the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is On in the company constants, the system uses the Parent Address Number Person/Corporation Code. |
| Z0002 | Company Tax ID | F0101 - TAX | The value for the Tax ID field in the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is On in the company constants, the system uses the Parent Address Number Tax ID. |
| Z0003 | Company Bank Agency | F0030 - TNST | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the system parses information from the G/L Bank Account defined in the Payment Group and pulls the value before the separator (/) in the Bank Transit Number field in the Bank Transit Master table (F0030). For the Receipt process, the system parses information from the G/L Bank Account defined in the processing options and pulls the value before the separator (/) in the Bank Transit Number field in the F0030 table. |

| Value | Description | Description 2 | Explanation |
|-------|-----------------------------|---------------|--|
| Z0004 | Company Bank Account Number | F0030 - CBNK | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the system parses information from the G/L Bank Account defined in the Payment Group and pulls the value in the Bank Account Number field in the F0030 table. • For the Receipt process, the system parses information from the G/L Bank Account defined in the processing options and pulls the value in the Bank Account Number field in the F0030 table. |
| Z0005 | Company Bank Agency Digit | F0030 - TNST | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the system parses information from the G/L Bank Account defined in the Payment Group and pulls the value before the separator (-) in the Bank Transit Number field in the Bank Transit Master table (F0030). • For the Receipt process, the system parses information from the G/L Bank Account defined in the processing options and pulls the value before the separator (-) in the Bank Transit Number field in the F0030 table. |

| Value | Description | Description 2 | Explanation |
|--------------|-------------------------------------|-------------------------------|--|
| <i>Z0006</i> | Company Bank Account Digit | F0030 - CHKD | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the system parses information from the G/L Bank Account defined in the Payment Group and pulls the value in the Control Digit field in the F0030 table. For the Receipt process, the system parses information from the G/L Bank Account defined in the processing options and pulls the value in the Control Digit field in the F0030 table. |
| <i>Z0007</i> | Company Bank Agency Number + Digit | F0030 - TNST | The values for attributes <i>Z0003</i> and <i>Z0005</i> ; they are separated by a dash (-). |
| <i>Z0008</i> | Company Bank Account Number + Digit | F0030 - CBNK + CHKD | The values for attributes <i>Z0004</i> and <i>Z0006</i> ; they are separated by a dash (-). |
| <i>Z0009</i> | Company Name | F0101 - ALPH | The address book number in the F0010 table. If PO Unique Payment is On in the company constants, the system uses the Parent Address Number Alpha Name. |
| <i>Z0010</i> | Formatted File Date Created | UBE B9800100 - Get Audit Info | The date from the Get Audit Information field in the UBE. |
| <i>Z0011</i> | Formatted File Time Created | UBE B9800100 - Get Audit Info | The Time from the Get Audit Information field in the UBE. |
| <i>Z0012</i> | Company Bank Number | F0030 - TNST | The system parses information from the G/L Bank Account defined in the Payment Group and uses the first three digits in the Bank Number field in the F0030 table. |

| Value | Description | Description 2 | Explanation |
|-------|-------------------------------|---------------|---|
| Z0013 | Company Bank Name | F0030 - DL01 | The system parses information from the G/L Bank Account defined in the Payment Group and uses the first three digits in the Bank Account Number field in the F0030 table and the value in the Description field from the Bank Codes UDC table (76/BC). |
| Z0014 | Payment Instrument | F0411 - PYIN | |
| Z0015 | Company Street Name | F0101 - ADD1 | The value for the Address 1 field in the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is On in company constants, the system uses the Parent Address Number Address 1. |
| Z0016 | Company Street Number | NONE | |
| Z0017 | Company Street Complement | NONE | |
| Z0018 | Company City | F0101 - CTY1 | The value for the City field in the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is On in company constants, the system uses the Parent Address Number City. |
| Z0019 | Company Postal Code - No Mask | F0101 - ADDZ | <p>The value for the Postal Code field in the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is On in company constants, the system uses the Parent Address Number Postal Code.</p> <p>The system uses the value in the Postal Code field without the separator (-).</p> |

| Value | Description | Description 2 | Explanation |
|-------|---------------------------------|------------------------|---|
| Z0020 | Company State Code | F0101 - ADDS | The value for the State field in the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is On in company constants, the system uses the Parent Address Number State. |
| Z0022 | Formatted File Line Count | UBE R76B047E Variable | This UBE counts the number of lines created inside the flat file. |
| Z0057 | Company Postal Code with Mask | F0101 - ADDZ | The value for the Postal Code field from the F0101 table for the address book number that appears in the F0010 table. If PO Unique Payment is On in company constants, the system uses the Parent Address Number Postal Code. The attribute uses the value in the Postal Code field with the separator (-). |
| Z0058 | Payment Group Next Number | UBE R76B047ES NN 04/06 | This UBE generates a unique identifier for the flat file and assigns a next number from 04/06 for each file. |
| Z0060 | Company Bank Swift Code (Conv.) | F0030 - SWFT | The bank accord/agreement number for the bank as defined in the Dynamic Formatter G/L Bank Account File Numbers table (F76B477) for the BRPAGEL transaction type and the specified G/L bank account. |
| Z0065 | File Formatter Line Type | UBE R76B047ER Variable | |

Automatic Payment Process, Inbound, Line Type 2 (Detail)

This table shows examples of the attributes that you might use for inbound transactions with line type 2 (detail):

| Value | Description | Description 2 | Explanation |
|--------------|-----------------------------------|-----------------------|--|
| <i>Z0023</i> | Payment Group Sequence | UBE R76B047E Variable | The sequence number from the F04572 table, which is required to identify the payment in the return process in the client use code. |
| <i>Z0025</i> | Payee Bank Number | F04572 - BNST | The first three digits from the Bank Transit Number field in the F04572 table. |
| <i>Z0026</i> | Payee Bank Agency No | F04572 - BNST | The numbers before the separator (/) from the Bank Transit Number field in the F04572 table. |
| <i>Z0027</i> | Payee Bank Account Number | F04572 - CBNK | The value for the Bank Account Number field in the F04572 table. |
| <i>Z0028</i> | Payee Bank Agency Digit | F04572 - BNST | The value for the numbers before the separator in the Bank Transit Number field in the F04572 table. |
| <i>Z0029</i> | Payee Bank Account Digit | F04572 - CBNK | The value from the Control Digit field in the F04572 table. |
| <i>Z0030</i> | Payee Bank Agency Number + Digit | F04572 - BNST | The values for the <i>Z0026</i> and <i>Z0028</i> attributes, separated by a dash (-). |
| <i>Z0031</i> | Payee Bank Account Number + Digit | F04572 - CBNK | The values for the <i>Z0027</i> and <i>Z0029</i> attributes, separated by a dash (-). |

| Value | Description | Description 2 | Explanation |
|-------|----------------|---------------|---|
| Z0032 | Payee Name | F0101 - ALPH | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the value for the Alpha Name field in the F0101 table for the address book number that appears in the Payee Number field in the F04572 table. For the Receipt process, the value for the Alpha Name field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. |
| Z0034 | Payment Date | F04572 - DGJ | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the value for the G/L Date field in the A/P Payment Processing - Summary table (F04572). For the Receipt process, the value for the Payment Date field in the F04572 table. |
| Z0035 | Payment Amount | F04572 - PAAP | The value for the Payment Amount field in the F04572 table. |

| Value | Description | Description 2 | Explanation |
|-------|-------------------------------|-----------------|---|
| Z0042 | Payee Person Corporation Code | F0101 - TAXC | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the value for the Person Corporation Code in the F0101 table for the address book number that appears in the Payee Address Number field in the F04572 table. You must create a bank cross-reference. For the Receipt process, the value for the Person Corporation Code in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. |
| Z0043 | Payee Tax ID | F0101 - TAX | <p>The data for the attributes varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the value from the Tax ID field in the F0101 table for the address book number that appears in the Payee Address Number field in the F04572 table. For the Receipt process, the value for the Tax ID field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. |
| Z0044 | Bar Code - Payee Bank Number | R76B0411 - BBRC | Parses the Bank Code from the Bar Code field in the F76B04BC table for the first Voucher found in F04573 table. |
| Z0045 | Bar Code - Currency Code | R76B0411 - BBRC | For the first voucher in the F04573 table, pulls the currency code from the Bar Code field in the F76B04BC table. |

| Value | Description | Description 2 | Explanation |
|-------|---------------------------|--------------------|--|
| Z0046 | Bar Code - Control Digit | R76B0411 - BBRCD | Parses the currency code from the Bar Code field in the F76B04BC table for the first Voucher found in the F04573 table. |
| Z0047 | Bar Code - Payment Amount | R76B0411 - BBRCD | Parses the payment amount from the Bar Code field in the F76B04BC table for the first Voucher found in the F04573 table. |
| Z0048 | Bar Code - Bar Code All | R76B0411 - BBRCD | The system identifies the first voucher in the F04573 table. It then locates that voucher in the F76B04BC table and writes the value from the Bar Code field to the layout. |
| Z0049 | Due Date | F04572 - DGJ | The data for the attribute varies, depending on whether you are using the Payment or Receipt process: <ul style="list-style-type: none"> • For the Payment process, the value from the G/L Date field in the F04572 table. • For the Receipt process, the value from the Due Date field in the F03B11 table. |
| Z0050 | Open Amount | F04572 - PAAP+ADSA | The sum of the values of the Payment Amount and Discount Amount fields in the F04572 table. |
| Z0051 | Discount Taken | F04572 - ADSA | The data for the attribute varies, depending on whether you are using the Payment or Receipt process: <ul style="list-style-type: none"> • For the Payment process, the value from the Discount Amount field in the F04572 table. • For the Receipt process, the value from the Discount Amount field in the F03B11 table. |
| Z0052 | Abatement Amount | Zero | |

| Value | Description | Description 2 | Explanation |
|-------|-----------------------------------|------------------------|--|
| Z0053 | Discount + Rebate Amount | F04572 - ADSA | The value from the Discount Amount field in the F04572 table (F04572). |
| Z0054 | Fee Amount | Zero | |
| Z0055 | Rebate Amount | Zero | |
| Z0056 | Fee + Fee 2 Amount | Zero | |
| Z0059 | Bank Agency Digit + Account Digit | F0030 - TNST + CNBK | |
| Z0061 | Payee Address Book No | F04572 - AN8 | For the Payment process, the value from the Payee Address Number field in the F04572 table. This information is required to identify payment in return process in client use code. |
| Z0062 | Payment Sequence | UBE R76B047ES Variable | This UBE identifies the sequence of the number of payments for a payment group in the F04572 table. |
| Z0064 | Bar Code - Free Value | R76B0411 - BBRCDD | The value from the Bar Code field in the F76B04BC table, for the first voucher founded in the F04573 table. |
| Z0065 | File Formatter Line Type | UBE R76B047ER Variable | |

Automatic Payment Process, Inbound, Line Type 3 (Additional Header)

This table shows an example of the attribute that you might use for inbound transactions with line type 3 (additional header):

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|------------------------|---|
| Z0063 | Line sequence in Segment | UBE R76B047ES Variable | For each segment in a line sequence, this UBE resets the counter to zero. |

Automatic Payment Process, Inbound, Line Type 5 (Additional Trailer)

This table shows an example of the attribute that you might use for inbound transactions with line type 4 (additional trailer):

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|------------------------|---|
| Z0063 | Line sequence in Segment | UBE R76B047ES Variable | For each segment in a line sequence, this UBE resets the counter to zero. |

Automatic Payment Process, Inbound, Line Type 9 (File Trailer)

This table shows an example of the attribute that you might use for inbound transactions with line type 9 (file trailer):

| Value | Description | Description 2 | Explanation |
|-------|----------------------|-----------------------|--|
| Z0041 | Total Payment Amount | UBE R76B047E Variable | This UBE sums all of the payments in the file. |

Automatic Payment Process, Outbound, Line Type 1 (File Header)

This table shows examples of the attributes that you might use for outbound transactions with line type 1 (file header):

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|------------------------|-------------|
| Z0014 | Payment Instrument | F0411 - PYIN | |
| Z0065 | File Formatter Line Type | UBE R76B047ER Variable | |

Automatic Payment Process, Outbound, Line Type 2 (Detail)

This table shows examples of the attributes that you might use for outbound transactions with line type 2 (detail):

| Value | Description | Description 2 | Explanation |
|-------|------------------------|-----------------------|--|
| Z0014 | Payment Instrument | F0411 - PYIN | |
| Z0021 | Bank Return Message | Bank | |
| Z0023 | Payment Group Sequence | UBE R76B047E Variable | The sequence number from the F04572 table, which is required to identify the payment in the return process in the client use code. |
| Z0024 | Bank Return Code | Band | |

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|------------------------|--|
| Z0034 | Payment Date | F04572 - DGJ | The data for the attribute varies, depending on whether you are using the Payment or Receipt process: <ul style="list-style-type: none"> For the Payment process, the value for the G/L Date field in the F04572 table. For the Receipt process, the value for the Payment Date field in the F04572 table. |
| Z0035 | Payment Amount | F04572 - PAAP | The value for the Payment Amount field in the A/P Payment Processing - Summary table (F04572). |
| Z0051 | Discount Taken | F04572 - ADSA | The data for the attribute varies, depending on whether you are using the Payment or Receipt process: <ul style="list-style-type: none"> For the Payment process, the value from the Discount Amount field in the F04572 table. For the Receipt process, the value from the Discount Amount field in the F03B11 table. |
| Z0061 | Payee Address Book No | F04572 - AN8 | For the Payment process, the value from the Payee Address Number field in the F04572 table. This information is required to identify payment in return process in client use code. |
| Z0065 | File Formatter Line Type | UBE R76B047ER Variable | |

Automatic Payment Process, Outbound, Line Type 3 (Additional File Header)

This table shows examples of the attributes that you might use for outbound transactions with line type 3 (additional file header):

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|------------------------|-------------|
| Z0014 | Payment Instrument | F0411 - PYIN | |
| Z0065 | File Formatter Line Type | UBE R76B047ER Variable | |

Automatic Payment Process, Outbound, Line Type 5 (Additional File Trailer)

This table shows an example of the attribute that you might use for outbound transactions with line type 5 (additional file trailer):

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|------------------------|-------------|
| Z0065 | File Formatter Line Type | UBE R76B047ER Variable | |

Automatic Payment Process, Outbound, Line Type 9 (File Trailer)

This table shows an example of the attribute that you might use for outbound transactions with line type 9 (file trailer):

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|------------------------|-------------|
| Z0065 | File Formatter Line Type | UBE R76B047ER Variable | |

Automatic Receipts Process, Inbound, Line Type 1 (File Header)

This table shows examples of the attributes that you might use for inbound transactions with line type 1 (file header):

| Value | Description | Description 2 | Explanation |
|-------|-----------------------------|-------------------------------|--|
| Z0009 | Company Name | F0101 - ALPH | The address book number in the F0010 table. If PO Unique Payment is On in the company constants, the system uses the Parent Address Number Alpha Name. |
| Z0010 | Formatted File Date Created | UBE B9800100 - Get Audit Info | The date from the Get Audit Information field in the UBE. |
| Z0012 | Company Bank Number | F0030 - TNST | The system parses information from the G/L Bank Account defined in the Payment Group and uses the first three digits in the Bank Number field in the F0030 table. |
| Z0013 | Company Bank Name | F0030 - DL01 | The system parses information from the G/L Bank Account defined in the Payment Group and uses the first three digits in the Bank Account Number field in the F0030 table and the value in the Description field from the Bank Codes UDC table (76/BC). |

| Value | Description | Description 2 | Explanation |
|-------|---------------------------------|------------------------|--|
| Z0022 | Formatted File Line Count | UBE R76B047E Variable | This UBE counts the number of lines created inside the flat file. |
| Z0058 | Payment Group Next Number | UBE R76B047ES NN 04/06 | This UBE generates a unique identifier for the flat file and assigns a next number from 04/06 for each file. |
| Z0060 | Company Bank Swift Code (Conv.) | F0030 - SWFT | The bank accord/agreement number for the bank as defined in the F76B477 table for the BRPAGEL transaction type and the specified G/L bank account. |
| Z0065 | File Formatter Line Type | UBE R76B047ER Variable | |

Automatic Receipts Process, Inbound, Line Type 2 (Detail)

This table shows examples of the attributes that you might use for inbound transactions with line type 2 (detail):

| Value | Description | Description 2 | Explanation |
|-------|---------------------|---------------|--|
| Z0003 | Company Bank Agency | F0030 - TNST | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the system parses information from the G/L Bank Account defined in the Payment Group and pulls the value before the separator (/) in the Bank Transit Number field in the Bank Transit Master table (F0030). For the Receipt process, the system parses information from the G/L Bank Account defined in the processing options and pulls the value before the separator (/) in the Bank Transit Number field in the F0030 table. |

| Value | Description | Description 2 | Explanation |
|-------|-----------------------------|---------------|--|
| Z0004 | Company Bank Account Number | F0030 - CBNK | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the system parses information from the G/L Bank Account defined in the Payment Group and pulls the value in the Bank Account Number field in the F0030 table. For the Receipt process, the system parses information from the G/L Bank Account defined in the processing options and pulls the value in the Bank Account Number field in the F0030 table. |
| Z0005 | Company Bank Agency Digit | F0030 - TNST | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the system parses information from the G/L Bank Account defined in the Payment Group and pulls the value before the separator (-) in the Bank Transit Number field in the F0030 table. For the Receipt process, the system parses information from the G/L Bank Account defined in the processing options and pulls the value before the separator (-) in the Bank Transit Number field in the F0030 table. |

| Value | Description | Description 2 | Explanation |
|-------|-------------------------------------|---------------------|--|
| Z0006 | Company Bank Account Digit | F0030 - CHKD | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the system parses information from the G/L Bank Account defined in the Payment Group and pulls the value in the Control Digit field in the F0030 table. • For the Receipt process, the system parses information from the G/L Bank Account defined in the processing options and pulls the value in the Control Digit field in the F0030 table. |
| Z0007 | Company Bank Agency Number + Digit | F0030 - TNST | The values for attributes Z0003 and Z0005: they are separated by a dash (-). |
| Z0008 | Company Bank Account Number + Digit | F0030 - CBNK + CHKD | The values for attributes Z0004 and Z0006; they are separated by a dash (-). |
| Z0032 | Payee Name | F0101 - ALPH | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the value for the Alpha Name field in the F0101 table for the address book number that appears in the Payee Number field in the F04572 table. • For the Receipt process, the value for the Alpha Name field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. |
| Z0035 | Payment Amount | F04572 - PAAP | The value for the Payment Amount field in the F04572 table. |

| Value | Description | Description 2 | Explanation |
|-------|-------------------------------|---------------|---|
| Z0042 | Payee Person Corporation Code | F0101 - TAXC | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the value for the Person Corporation Code in the F0101 table for the address book number that appears in the Payee Address Number field in the F04572 table. You must create a bank cross-reference. • For the Receipt process, the value for the Person Corporation Code in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. |
| Z0043 | Payee Tax ID | F0101 - TAX | <p>The data for the attributes varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the value from the Tax ID field in the F0101 table for the address book number that appears in the Payee Address Number field in the F04572 table. • For the Receipt process, the value for the Tax ID field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. |

| Value | Description | Description 2 | Explanation |
|-------|-----------------------|----------------|--|
| Z0049 | Due Date | F04572 - DGJ | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the value from the G/L Date field in the F04572 table. • For the Receipt process, the value from the Due Date field in the F03B11 table. |
| Z0051 | Discount Taken | F04572 - ADSA | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the value from the Discount Amount field in the F04572 table. • For the Receipt process, the value from the Discount Amount field in the F03B11 table. |
| Z0055 | Rebate Amount | Zero | |
| Z0067 | Bank Duplicata Number | F7603B1 - BBDN | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the processing option is set to Bank (1), the value will be 000000000000. • If the processing option for Boletto Emitter is set to Company (2), the attribute value is determined as follows: • If a value exists in the Bank Duplicata Number field in the F7603B1 table, the attribute value is the value in the field. • If the Bank Duplicata Number field is blank, the attribute value is the Bank Duplicata next number for the BRCOBES transaction in the F76B477 table. |

| Value | Description | Description 2 | Explanation |
|-------|---------------------------|----------------|--|
| Z0068 | Document Number | F7603B1- BBDN | The value in the Invoice Number field in the F03B11 table. |
| Z0069 | Invoice Date | F03B11 - DIVJ | The value in the Invoice Date field in the F03B11 table. |
| Z0070 | Client Use Code | | |
| Z0071 | Bank Send Code | F7603B1 - BSCB | <p>The value for the attribute varies, depending on the processing options for R76B03ZS:</p> <ul style="list-style-type: none"> • If the Bank processing option has a value, that value is used. • If the Bank processing option does not have a value 01 is used. |
| Z0073 | Protest Instructions Code | | The value in the Protest Instructions Code field in the F7603B1 table. |
| Z0074 | Protest Instructions | | The value in the Protest Instructions Days field in the F7603B1 table. |
| Z0075 | Amount Fee by Day | | The value in the Daily Late Fee Amount field in the F7603B1 table. |
| Z0076 | Due Date AR | F03B11 - DDJ | The value in the Discount Due Date field in the F03B11 table. |

| Value | Description | Description 2 | Explanation |
|-------|----------------------|---------------|---|
| Z0077 | Payee Line 1 | F0116 - ADD1 | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the Customer Address option is blank, uses the value for the Address 1 field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. • If the Customer Address option is set to 1, uses the value in the Send Invoice To field in the F03012 table. |
| Z0078 | Customer Postal Code | 3 digit | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the Customer Address option is blank, uses the first five digits of the Postal Code field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. • If the Customer Address option is set to 1, uses the value in the Send Invoice To field in the F03012 table. |
| Z0079 | Customer Postal Code | 5 digit | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the Customer Address option is blank, uses the last three digits of the Postal Code field in the F0101 table for the address book number that appears in the Address Number field in the F03B11 table. • If the Customer Address option is set to 1, uses the value in the Send Invoice To field in the F03012 table. |

| Value | Description | Description 2 | Explanation |
|-------|------------------------------|---------------|---|
| Z0080 | Message Code | | The value in the Message Code field in the F7603B1 table. |
| Z0081 | Message Description | | The value in the message code attachment for the Message Code field in the F7603B1 table. |
| Z0085 | Discount Available by Day | | The value in the Discount Available/30 field in the F03B11 table. |
| Z0086 | Boleto Creation | | The value in the Boleto Emitter option for the R76B03ZS processing options. |
| Z0087 | Payment Group Control Number | F7603B1 - HDC | The value in the Carteira Number option for the R76B03ZS processing options. |

Automatic Receipts Process, Outbound, Line Type 1 (File Header)

This table shows examples of the attributes that you might use for outbound transactions with line type 1 (file header):

| Value | Description | Description 2 | Explanation |
|-------|-----------------------------|-------------------------------|--|
| Z0010 | Formatted File Date Created | UBE B9800100 - Get Audit Info | Date from file creation. |
| Z0058 | Payment Group Next Number | UBE R76B047ES NN 04/06 | This UBE generates a unique identifier for the flat file and assigns a next number from 04/06 for each file. |

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|----------------|---|
| Z0037 | Bank Return Payment Date | Bank | G/L Date, used as G/L Date of receipt |
| Z0067 | Bank Duplicata Number | F7603B1 - BBDN | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the processing option is set to Bank (1), the value will be 000000000000. • If the processing option for Boletto Emitter is set to Company (2), the attribute value is determined as follows: • If a value exists in the Bank Duplicata Number field in the F7603B1 table, the attribute value is the value in the field. • If the Bank Duplicata Number field is blank, the attribute value is the Bank Duplicata next number for the BRCOBES transaction in the F76477 table. |

Automatic Receipts Process, Outbound, Line Type 2 (Detail)

This table shows examples of the attributes that you might use for outbound transactions with line type 2 (detail):

| Value | Description | Description 2 | Explanation |
|-------|-----------------------------|---------------|--|
| Z0003 | Company Bank Agency | F0030 - TNST | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the system parses information from the G/L Bank Account defined in the Payment Group and pulls the value before the separator (/) in the Bank Transit Number field in the F0030 table. • For the Receipt process, the system parses information from the G/L Bank Account defined in the processing options and pulls the value before the separator (/) in the Bank Transit Number field in the F0030 table. |
| Z0004 | Company Bank Account Number | F0030 - CBNK | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the system parses information from the G/L Bank Account defined in the Payment Group and pulls the value in the Bank Account Number field in the F0030 table. • For the Receipt process, the system parses information from the G/L Bank Account defined in the processing options and pulls the value in the Bank Account Number field in the F0030 table. |

| Value | Description | Description 2 | Explanation |
|-------|---------------------------|---------------|--|
| Z0005 | Company Bank Agency Digit | F0030 - TNST | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the system parses information from the G/L Bank Account defined in the Payment Group and pulls the value before the separator (-) in the Bank Transit Number field in the F0030 table. For the Receipt process, the system parses information from the G/L Bank Account defined in the processing options and pulls the value before the separator (-) in the Bank Transit Number field in the F0030 table. |
| Z0024 | Bank Return Code | Bank | <p>The bank return code from bank file. The value in this field is written to the Receipts field in the Electronic Receipts Input table (F03B13Z1) when the special handling code in the Record Type UDC (76/RC) is set to 1. You must set up a bank cross-reference.</p> |
| Z0034 | Payment Date | F04572 - DGJ | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> For the Payment process, the value for the G/L Date field in the F04572 table. For the Receipt process, the value for the Payment Date field in the F04572 table. |
| Z0035 | Receipt Amount | F04572 - PAAP | <p>For all banks except bank 041 (Banrisul), the total amount received, including the fee amount. For Banrisul, the receipt amount does not include the fee amount.</p> |

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|------------------------|---|
| Z0051 | Discount Taken | F04572 - ADSA | <p>The data for the attribute varies, depending on whether you are using the Payment or Receipt process:</p> <ul style="list-style-type: none"> • For the Payment process, the value from the Discount Amount field in the F04572 table. • For the Receipt process, the value from the Discount Amount field in the F03B11 table. |
| Z0052 | Abatement Amount | Zero | |
| Z0054 | Fee Amount | Zero | <p>The fee amount that the system uses is determined by the processing options for the Process Return A/R Bank Tape Diskette - Dynamic Formatter process (R76B03ZR).</p> <p>Fee Invoice Creation processing option:</p> <ul style="list-style-type: none"> • Blank: The amount is ignored. • 1: The system creates an RF invoice with the amount of the fee paid. • 2: The system creates an RF invoice with a calculated fee amount that is based on the Daily Late Fee amount on table F76B03B1. <p>Fee Process processing option:</p> <ul style="list-style-type: none"> • Blank: The system performs receipt first on the original invoice and then applies the difference to the fee invoice. • 1: The system performs receipt first on the fee invoice, and then applies the difference to the original invoice. |
| Z0065 | File Formatter Line Type | UBE R76B047ER Variable | |

| Value | Description | Description 2 | Explanation |
|-------|-----------------------|----------------|--|
| Z0067 | Bank Duplicata Number | F7603B1 - BBDN | <p>The value for the attribute varies, depending on the processing options:</p> <ul style="list-style-type: none"> • If the processing option is set to Bank (1), the value will be 000000000000. • If the processing option for Boletto Emitter is set to Company (2), the attribute value is determined as follows: • If a value exists in the Bank Duplicata Number field in the F7603B1 table, the attribute value is the value in the field. • If the Bank Duplicata Number field is blank, the attribute value is the Bank Duplicata next number for the BRCOBES transaction in the F76B477 table. |
| Z0070 | Client Use Code | | <p>The identifier sent during the outbound process and returned during the inbound process.</p> <p>The Client Use Code is a concatenation of the Document Company + Document Type + Document Number, Pay Item/suffix, and Address Number in the Customer Ledger table (F03B11). This is the first process to find an invoice. If this field is blank, the system uses the Bank Duplicata Number.</p> <p>This is the first process to find an invoice. If this field is blank, the system uses the Bank Duplicata Number.</p> |

Automatic Receipts Process, Outbound, Line Type 9 (File Trailer)

This table shows an example of the attribute that you might use for outbound transactions with line type 9 (file trailer):

| Value | Description | Description 2 | Explanation |
|-------|--------------------------|------------------------|-------------|
| Z0065 | File Formatter Line Type | UBE R76B047ER Variable | |

Prerequisite

Set up these UDC tables with the values that you want to use in the layouts:

- Bank Codes (76/BC)
- Date Format (00/DF)
- Date Separator (H98/DS)
- Decimal Format (H98/DE)
- Direction Indicator (00/DN)
- Record Type (00/RD)
- Transaction Type (00/TT)

See Chapter 22, “(BRA) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Electronic Banking for Brazil, page 357.

Forms Used to Set up Bank Formats

| Form Name | FormID | Navigation | Usage |
|---|----------|--|---|
| Work with Dynamic Formatter Layout Master | W76B471A | <ul style="list-style-type: none"> • Bank Tape Processing (G76B413), Dynamic Formatter Layout Setup. • Bank Tape Processing (G76B415), Dynamic Formatter Layout Setup. | Locate bank layouts and select a bank layout for additional setup. |
| Dynamic Formatter Layout Master Revision | W76B471B | On the Work with Dynamic Formatter Layout Master form, click Add. | Name the bank layout and define the record length of the layout. |
| Work with Dynamic Formatter Layout Transaction & Line Types | W76B471C | On the Work with Dynamic Formatter Layout Master form, select a bank layout and then select Detail from the Row menu. | Create a record for each transaction/line type combination that you need for a bank layout. |
| Work with Dynamic Formatter Layout Details | W76B471D | On the Work with Dynamic Formatter Layout Transaction & Line Types form, select the line with which you want to work, and then select Detail from the Row menu. | Assign attributes to each transaction type or line type record in the bank layout. When you assign the attributes, you define on which line of the record the attribute appears and the position within the line that the attribute occupies. |

| Page Name | Object Name | Navigation | Usage |
|---|-------------|--|--|
| Work with Bank Additional Information for Dynamic Formatter | W76B474A | <ul style="list-style-type: none"> Bank Tape Processing (G76B413), Bank Information for Dynamic Formatter. Bank Tape Processing (G76B415), Bank Information for Dynamic Formatter. | Locate bank layouts that have been linked to transaction types and select them for further setup. |
| Bank Additional Information for Dynamic Formatter Revision | W76B474B | On the Work with Bank Additional Information for Dynamic Formatter form, click Add. | Specify the bank layout that you want the system to use for each transaction type for each bank with which you work. When you specify the bank layout, you also identify where the system creates the text file for outbound transactions, where the system stores the file for inbound transactions, and where the application searches for information about the payment instrument. |
| Work with Bank Layouts for Payment Instrument | W76B474C | On the Work with Bank Additional Information for Dynamic Formatter form, select the line with which you want to work, and then select Layouts for Instr. from the Row menu. | Associate bank layouts with payment instruments. |
| Work with Bank Attributes X Reference for Dynamic Formatter | W76B474D | On the Work with Bank Additional Information for Dynamic Formatter form, select the line with which you want to work, and then select X Reference from the Row menu. | The values that you set up for the layout attributes in the Dynamic Formatter Attributes UDC table (76B/F1) might not apply for every bank with which you work or for the different payment instruments for each bank. You set up cross-references between the JD Edwards EnterpriseOne values and the banks' values so that the system converts the JD Edwards EnterpriseOne value to each bank's required value on outbound transactions, and converts the bank's value to the JD Edwards EnterpriseOne value on inbound transactions. |

| Page Name | Object Name | Navigation | Usage |
|---|-------------|---|--|
| Work with G/L Bank Account Next Numbers | W76B474E | On the Work with Bank Additional Information for Dynamic Formatter form, select the line that you want to work with, and then select G/L Bank Account NN from the Row menu. | After you create bank layouts, set up the next numbers that the system uses when you generate the text file. |

Setting Up the Layout Master

Access the Dynamic Formatter Layout Master Revision form.

Layout

Enter a unique identifier to the layout.

Record Length

Enter the number of characters (not bytes) allowed per record. This system uses this value in the creation of a virtual diskette file for a Personal Computer download.

Setting Up Transaction Types and Line Types

Access the Work with Dynamic Formatter Layout Transaction & Line Types form.

Dynamic Formatter Layout Setup - Work with Dynamic Formatter Layout Transaction & Line Types

OK Delete Cancel Row Tools

Layout *Inbound*

Records 1 - 2 Customize Grid

| | Dir Ind | Dir Ind | Sequence Number | Record Type | Record Type | Lines by Line Type |

| <input checked="" type="radio"/> | 1 | Inbound | 1 | 1 | Header | 1 |
| <input type="radio"/> | | | | | | |

Work with Dynamic Formatter Layout Transaction & Line Types form

Dir Ind (direction indicator) Enter the direction of the transaction from the Direction UDC table (00/DN). Values are:

1: Inbound

2: Outbound

Sequence Number

Enter the sequence in which the record type will appear in the layout.

Record Type

Enter the type of record associated with the line. You set up values in the Record Type UDC (00/RD). For example, you might set up these record types:

1: Header

2: Detail

3: Header detail

4: Trailer detail

7: Header text

8: Detail text

9: Trailer

Lines by Line Type

Enter the number of lines in the layout that are of a specified record type for the sequence number.

Setting Up Layout Details

Access the Work with Dynamic Formatter Layout Details form.

Dynamic Formatter Layout Setup - Work with Dynamic Formatter Layout Details

OK Delete Cancel Tools

Work with Dynamic Formatter Layout Details form

Line ID

Displays the system-assigned line ID that uniquely identifies the records in this table.

The line ID determines the print order of the records on the stub or register.

Begin Pos. (dynamic formatter begin position) and **End Pos.** (dynamic formatter end position)

Enter the initial and final positions at which the characters of an attribute appear in the specified line of the flat file. If the attribute might not require all of the character positions defined by the difference between the Begin Position and the End Position, complete the Alpha Filler field with the character you want to occupy the non-required positions.

Attribute

Enter the attribute defined in the Dynamic Formatter UDC table (76B/F1) that occupies the position defined by the difference between the Begin Position and the End Position.

Values that begin with an *S* are constants. Values are:

S0001: User defined value

S0002: Blanks

S0003: Zeros

Values that are defined by each transaction application begin with a Z. These values are hard-coded, but the data associated with the value changes based on data in the table and fields referenced.

Description Alpha

Enter a description for the data items. Enter text in upper and lower case. The system uses this name to search for similar data items. To enter an alpha description, follow these conventions:

- Dates: Begin all date fields with the word *Date*.
- Amounts: Begin all amount fields with the word *Amount*.
- Units: Begin all unit, quantity, and volume fields with the word *Units*.
- Name: Begin all 30-byte description fields with the word *Name*.
- Prompt: Begin any Y/N prompting field with the word *Prompt*.
- Address Number: Begin all address numbers (employee, customer, owner) with the word *Address Number*.

Default Value

Optional default value for this prompt (see Display [Y/N/D]). To use a default value of blanks, enter **BLANK*.

Data Type

Enter the style or classification of data, such as numeric, alphabetic, and date. Do not change the data item type if it is used within an existing application. Otherwise, you must regenerate the table and review all business functions that use this data item. Data types include:

Character: A single letter, always the size of one.

Date: A date.

Integer: An integer.

Character (Blob): An item that can be translated from EBCDIC (8-bit character code commonly used on IBM mainframes) to ASCII (7-bit character code).

Binary (Blob): An item that cannot be translated, appears in machine code, and is found as an executable file under Win.help.

Binary: An option that represents two choices. It is usually a combination of the digits 1 and 0 to represent on and off or true and false.

String: An item that is always the same size or length.

Variable String: An item of variable size.

UTime: An item that allows business process to span several time zones.

Identifier: (ID) An item that is used within the program logic for controls. An ID is used to write a C program and reference third-party software that returns a pointer. An API then saves the pointer that references the ID. The parameter that the system passes to the C program is the ID.

Numeric: A long integer.

Item Dec (item decimal)

Enter the number of stored positions to the right of the decimal of the data item.

D F (decimal format)

Enter the number of positions to the right of the decimal you want to use. If you leave this field blank, the system value is used as the default.

| | |
|----------------------------------|--|
| Align Left | Select this option to align a group of controls vertically with the left edge of the selected control. |
| Alpha Filler | Enter the character that the system uses to fill the position defined by the difference between the Begin Position and End Position when the attribute value does not fill the position. |
| Date Format | <p>Enter the format of a date as it is stored in the database. Values are:</p> <p><i>MDY</i>: Month, Day, Year (MMDDYY).</p> <p><i>DMY</i>: Day, Month, Year (DDMMYY).</p> <p><i>YMD</i>: Year, Month, Day (YYMMDD).</p> <p><i>EMD</i>: 4-digit Year, Month, Day (YYYYMMDD).</p> <p>If you leave this field blank, the system displays dates based on the settings of the operating system on the workstation. With NT, the Regional Settings in the Control Panel control the settings for the operating system of the workstation.</p> |
| Date Sep (date separator) | Enter the character to use when separating the month, day, and year of a given date. If you enter an asterisk (*), the system uses a blank for the date separator. If you leave the field blank, the system uses the system value for the date separator. |

Specifying the Layout for Transaction Types

Access the Bank Additional Information for Dynamic Formatter Revision form.

Bank Information for Dynamic Formatter - Bank Additional Information for Dynamic Formatter Revision

OK Cancel Tools

Bank Code: 237 Banco Bradesco

Transaction Type: BRCOBES Electronic Receipts Brazil

|---------------------------------------|--|
| Attribute | <p>Enter the attribute defined in the Dynamic Formatter UDC table (76B/F1) that occupies the position defined by the difference between the Begin Position and the End Position.</p> <p>Values that begin with an <i>S</i> are constants. Values are:</p> <p><i>S0001</i>: User defined value</p> <p><i>S0002</i>: Blanks</p> <p><i>S0003</i>: Zeros</p> <p>Values that are defined by each transaction application begin with a <i>Z</i>. These values are hard-coded, but the data associated with the value changes based on data in the table and fields referenced.</p> |
| JD Edwards EnterpriseOne Value | Enter the JD Edwards EnterpriseOne value for the attribute that is associated to the bank's value. |
| Bank Value | Enter the value that the bank uses that you associate to the JD Edwards EnterpriseOne value. |

Creating Next Numbers for G/L Accounts

Access the Work with G/L Bank Account Next Numbers form.

CHAPTER 25

(BRA) Working With Accounts Receivable Processes for Brazil

This chapter provides overviews of automatic receipts and invoice processing for Brazil and discusses how to:

- Process outbound automatic receipts.
- Process inbound automatic receipts.
- Purge invoice transactions.

Understanding Automatic Receipts for Brazil

In Brazil, banks collect funds from customers to pay for goods or services. You can process automatic receipts if you receive payments directly from a customer's bank on a custom bank tape (lock box). You can create a bank tape with information about the customer and send it to the bank. The bank processes this information and contacts the customers with the amount that they owe you. The customers send this money to the bank, and the bank sends you information about the transaction.

When you use automatic receipts processing for Brazil, you can electronically transmit customer payment information to the banks in the layout that they require. You use the bank layouts that you create to send inbound and outbound automatic receipts. You create the layouts in the Dynamic Formatter Layout Setup program (P76B471).

The outbound process for automatic receipts (*Cobrança Escritural*) sends records from the Customer Ledger table (F03B11) to the specified bank.

The inbound process for automatic receipts:

- Uploads incoming flat files to the Electronic Receipts Input table (F03B13Z1).
- Updates receipt records by using the algorithm for the Update Receipts Register batch process (R03B551).
- Applies receipts to invoices by using the algorithm for the Apply Receipts to Invoices batch process (R03B50).
- Identifies invoices that are based on the client code or the bank *duplicata* number.

To use electronic banking for receipt processing for Brazil, complete these tasks in this order:

1. Create the layouts that the banks require for incoming data and assign the layouts to outbound transactions.
See [Chapter 24, “\(BRA\) Setting Up Electronic Banking,” page 425](#).
2. Enter invoices according to the normal procedures.
3. Update credit groups with all of the required values to be sent to the bank.

4. Verify that the records in the A/R Additional Information - Brazil table (F7603B1) contain all of the information that the systems require for electronic banking.

For outbound receipt records, complete these tasks in this order:

1. Run the Create A/R Bank Tape Diskette program (R76B03ZS) to insert detail lines into the A/P Payment Tape table (F04572OW).

See [Chapter 25, “\(BRA\) Working With Accounts Receivable Processes for Brazil,” Running the Create A/R Bank Tape Diskette Program, page 467.](#)

2. Review the records in the F04572OW table and create the text file that you can send to the bank.

See [Chapter 25, “\(BRA\) Working With Accounts Receivable Processes for Brazil,” Creating the Outbound Text File, page 468.](#)

For inbound receipts records, complete these tasks in this order:

1. Create layouts that correspond to the information that the bank sends to you for incoming data.
2. Assign the layouts that you create to inbound transactions.

See [Chapter 24, “\(BRA\) Setting Up Electronic Banking,” Specifying the Layout for Transaction Types, page 459.](#)

3. Import the flat file that the bank sends to you by using the File Upload for Bank Transaction Inbound Process application (P76B474I).

This application writes the records from the flat file to the File Upload for Bank Transaction Inbound Process table (F76B474I).

See [Chapter 25, “\(BRA\) Working With Accounts Receivable Processes for Brazil,” Importing Flat Files from Your Bank, page 472.](#)

4. Run the Process Return A/R Bank Tape Diskette - Dynamic Formatter program (R76B03ZR) to write records from the F76B474I table to the F03B13Z1 table.

See [Chapter 25, “\(BRA\) Working With Accounts Receivable Processes for Brazil,” Uploading Files into the Electronic Receipts Input Table, page 472.](#)

5. Process the inbound records according to the existing procedures for receipt processing.

Understanding Invoice Processing for Brazil

In Brazil, businesses remit customer invoice information, including interest rates for amounts that are past due, to banks for collection. Banks attempt to collect on the invoices and return collection information so that the businesses can update Accounts Receivable information.

You can use the base software to process invoices for customers. When you enter invoices, the system automatically associates the invoice with the additional information that the Brazilian bank requires to be collected on the invoice. This additional information is based on the A/R Brazilian Tag Maintenance country server and user-defined codes.

Processing Outbound Automatic Receipts

This section provides an overview of outbound automatic receipts, lists prerequisites, and discusses how to:

- Run the Create A/R Bank Tape Diskette program.
- Set processing options for Create A/R Bank Tape Diskette (R76B03ZS).
- Set processing options for Bank Transaction Outbound Process (P76B474O).
- Create the Outbound Text file.

Understanding Outbound Automatic Receipts

Before you process outbound bank records, you must set up bank layouts and associate the layouts to outbound transactions for each payment instrument for each bank with which you work. You then run the Create A/R Bank Tape Diskette - Dynamic Formatter program (R76B03ZS).

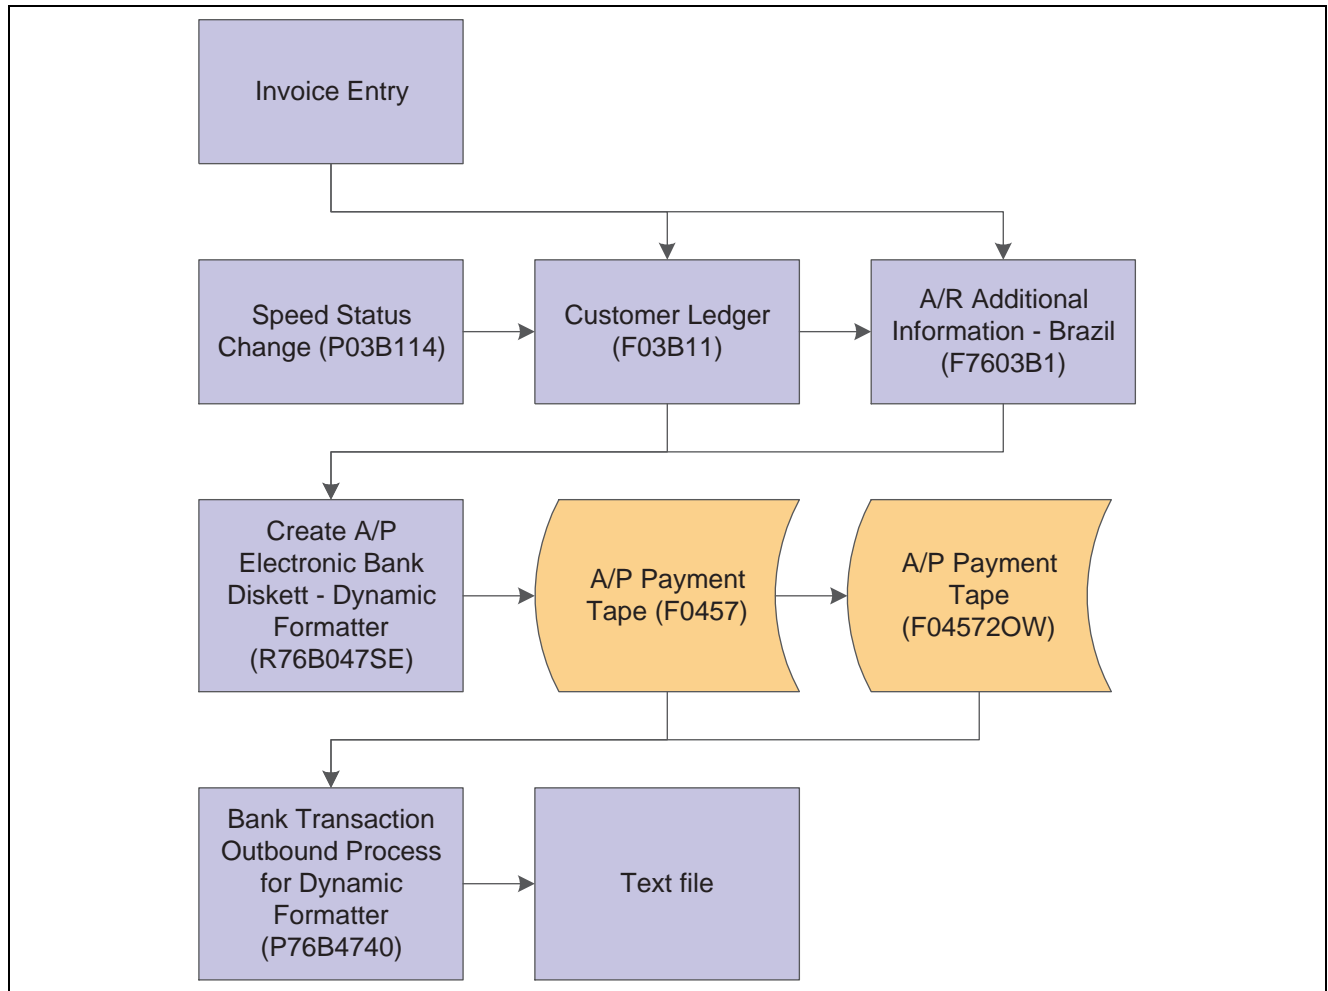

The Create A/R Bank Tape Diskette program (R76B03ZS):

- Writes records from the F03B11 table and the A/R Additional Information - Brazil table (F7603B1) to the F04572OW table.
- Changes the Bank Send Code field in the F7603B1 table to Send or to the code that you specify in the processing options.
- Creates a report.

You use the Bank Transaction Outbound Process program (P76B474O) to write records from the F04572OW table to the text file. When you create the text file, the system writes the file in the correct layout as determined by the Transaction Type, Payment Instrument, and Bank Code that you specified in the Bank Information for Dynamic Formatter program (P76B474).

For automatic payments, the system writes records from the A/P Payment Tape table (F0457) and the F04572OW table to a text file. For automatic receipts, the system writes records from the F04572OW table to a text file.

This process flow shows the outbound automatic receipts process:

Outbound automatic receipts process flow

Prerequisites

Before you complete the tasks in this section:

- Set the processing options for the Bank Transaction Outbound Process program (P76B474O).
- If working with outbound files, set the processing options for the Create A/R Bank Tape Diskette - Dynamic Formatter program (R76B03ZS).
- If working with inbound files, set the processing options for the Process Return A/R Bank Tape Diskette - Dynamic Formatter program (R76B03ZR).

Forms Used to Process Outbound Automatic Receipts

| Form Name | FormID | Navigation | Usage |
|------------------------------------|-----------|--|--|
| Tape Creation for Outbound Process | W76B474OC | <ul style="list-style-type: none"> Bank Tape Processing (G76B413), Bank Transaction Outbound Process. Or Bank Tape Processing (G76B415), Bank Transaction Outbound Process. <p>On Work with Outbound Bank Process Files, select a record, and then click Select.</p> | Write automatic receipts to an outbound text file. |

Running the Create A/R Bank Tape Diskette Program

Select Bank Tape Processing (G76B413), Create A/R Bank Tape Diskette.

Setting Processing Options for Create A/R Bank Tape Diskette (R76B03ZS)

Processing options enable you to specify the default processing for programs and reports.

Process

These processing options specify the bank information that the system writes to the F04572OW table.

| | |
|--|---|
| G/L Bank Account (general ledger bank account) | Specify the number of the bank account (general ledger account) to be updated automatically when receipts or disbursements are entered. The bank account number is assumed to be the same for every document in a batch. Therefore, the bank account number is not cleared from entry to entry. However, if you leave the bank account number blank, the system retrieves a default bank account number from the Automatic Accounting Instructions table (F0012), item number RB for the JD Edwards EnterpriseOne Accounts Receivable system and PB for the JD Edwards EnterpriseOne Accounts Payable system. |
| Enter bank send code for remessa. If left blank, '01' will be default | Specify the code that indicates the transaction status of the duplicata that is sent to the bank. The system uses this code to process the accounts receivable information. You select a code from the Bank Send Code UDC table (76/SC). |
| Boleto emitter | Specify whether the bank or the company sends the boleto to the customer. Values are: 1: Bank sends and processes. 2: Client sends and bank processes. |
| Acceptance code | Specify whether the bank or the company sends the <i>boleto</i> to the customer. Values are: Y: Company sends the <i>boleto</i> . |

N: Bank sends the *boleto*.

Final Mode

Specify whether you want to run the batch program in proof or final mode.

Values are:

1: Final

2: Proof

Address

Customer address

Specify the address that the system uses for the customer.

Values are:

Blank: Use the address number from the invoice.

1: Use the A/R send to address book number

Setting Processing Options for Bank Transaction Outbound Process (P76B474O)

Processing options enable you to specify the default processing for programs and reports.

Display

These processing options specify which records appear in the Work with Outbound Process File form.

Display created files

Specify whether the system displays Work with Outbound Process Files form displays only records for which files have been written. Values are:

Blank: Display only non-written file.

1: Display all files.

Type - Transaction

Specify the transaction type code that the system displays in the Work with Outbound Process Files form. You select a code from the Transaction Type (00/TT) UDC table. Values are:

BRPAGEL: Electronic Payments Brazil

BRCOBES: Electronic Receipts Brazil

Creating the Outbound Text File

Access the Tape Creation for Outbound Process form.

Path

Enter the path where the application is located on the computer or network. A path includes the drive, folders, and subfolders that contain the application to be executed.

Processing Inbound Automatic Receipts

This section provides overviews of inbound automatic receipts and the Process Return A/P Electronic Bank Disk program, lists a prerequisite, and discusses how to:

- Set processing options for File Upload for Bank Transaction Inbound Process (P76B474I).
- Import flat files from the bank.
- Upload files into the A/P Payment Tape table.
- Upload files into the Electronic Receipts Input table.
- Set processing options for Process Return A/R Bank Tape Diskette - Dynamic Formatter (R76B03ZR).
- Update credit groups.
- Set processing options for Update F7603B1 Credit Groups - Brazil (R7603B1).

Understanding Inbound Automatic Receipts

Before you process inbound bank records, you must set up bank layouts and associate the layouts to inbound transactions for each payment instrument for each bank with which you work. You then run the File Upload for Bank Transaction Inbound Process program (P76B474I) to write records from the flat file you received from the bank to the File Upload for Bank Transaction Inbound Process table (F76B474I).

You can set default values for the bank code and transaction type in the processing options, and you can set a processing option to enable changes to the location where the system searches for the flat file.

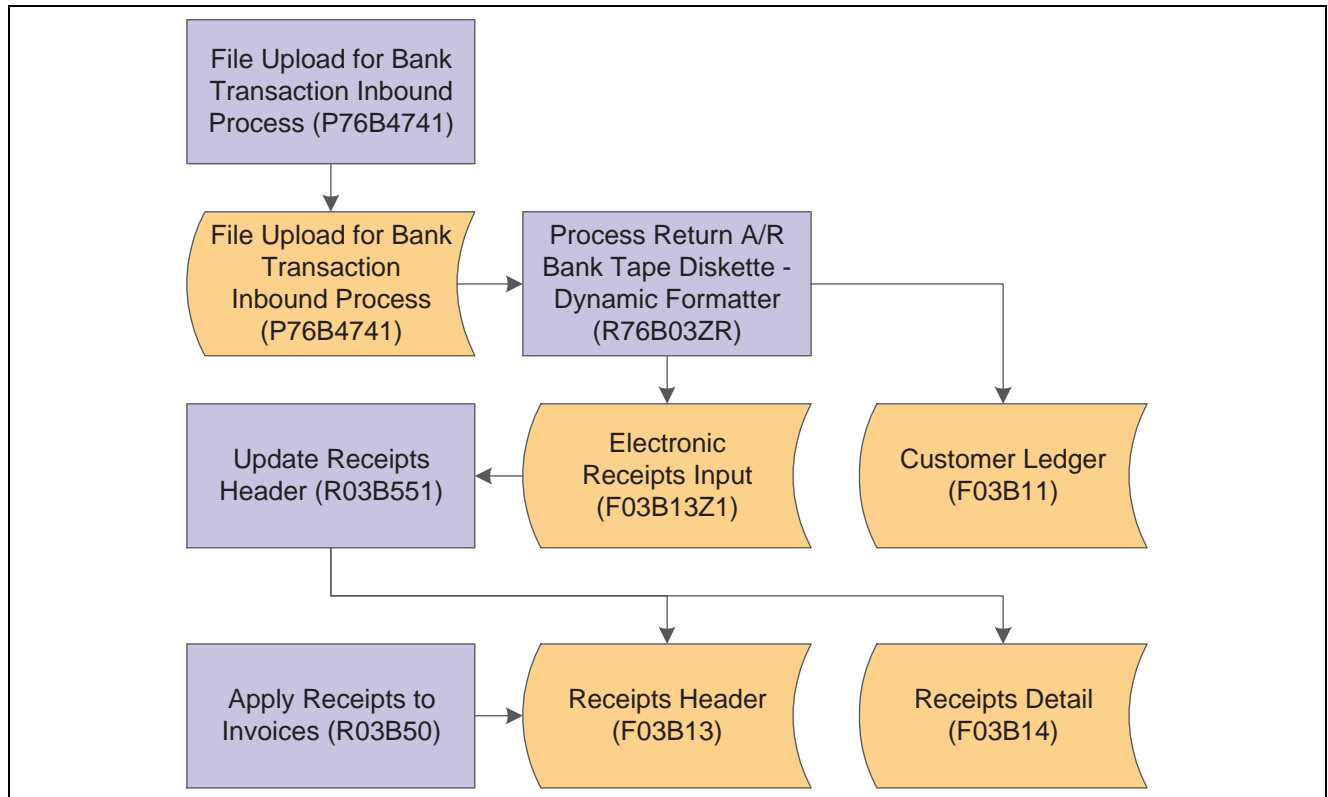

You use the Process Return A/R Bank Tape Diskette - Dynamic Formatter program (R76B03ZR) to write records from the F76B474I table to the F03B13Z1 table. You can set processing options to create fee invoices and perform two types of receipts. The inbound process identifies invoices based on the client code or the bank duplicata number.

You can launch the Process Return A/R Bank Tape Diskette - Dynamic Formatter program from a menu option or click Process on the Work with Inbound Bank Transaction Files form in the File Upload for Bank Transaction Inbound Process program.

Before reviewing the bank tape information, you must update all of the required values within the file. You can update the bank code as well as the code to be used as *remessa* (remittance). You also can select final or proof mode.

After you write records to the F03B13Z1 table, process them according to the usual procedures.

This process flow shows the inbound automatic receipts process:

Inbound automatic receipts process

Understanding the Process Return A/P Electronic Bank Disk Program

The Process Return A/P Electronic Bank Disk program (R76B047RE) uploads files from the File Upload for Bank Transaction Inbound Process table (F76B474I) into the F0457 table.

Alternatively, you can launch the Process Return A/P Electronic Bank Disk program from the File Upload for Bank Transaction Inbound program (P76B474I) and select a record on the Work with Inbound Bank Transaction Inbound form, and then click Process.

Prerequisite

Set the processing options for the File Upload for Bank Transaction Inbound program (P76B474I) and for the Process Return A/R Bank Tape Diskette - Dynamic Formatter program (R76B03ZR).

Forms Used to Process Inbound Automatic Receipts

| Form Name | FormID | Navigation | Usage |
|---|-----------|---|--|
| Work with Inbound Bank Transactions Files | W76B474IA | Bank Tape Processing (G76B413), File Upload for Bank Transaction Inbound. Or Bank Tape Processing (G76B415), File Upload for Bank Transaction Inbound. | Review uploaded bank files and instigate the process of importing a flat file. |
| Upload File for Bank Inbound Transaction | W76B474IB | On the Work with Inbound Bank Transactions Files form, click Add. | Import flat files from the bank. |

Setting Processing Options for File Upload for Bank Transaction Inbound (P76B474I)

Processing options enable you to specify the default processing for programs and reports.

Process

These processing options specify default values.

| | |
|-------------------------------------|---|
| Bank Code | Specify the default bank code that the system displays in the Work with Inbound Bank Transaction Files form. You select a code from UDC 76/BC. |
| Type - Transaction | Specify the default transaction type code that the system displays in the Work with Inbound Bank Transaction Files form. You select a code from UDC 00/TT. Values are: <i>BRPAGEL</i> : Electronic Payments Brazil <i>BRCOBES</i> : Electronic Receipts Brazil |
| EDI - Successfully Processed | Specify whether the system marks a record as successfully processed through the batch processing system. After a record has been marked as processed, it can no longer be updated through the batch processing system. Values are: Blank: Mark as processed. <i>I</i> : Do not mark as processed. |

Display

These processing options specify whether certain fields are input capable on the Upload File for Bank Inbound Transaction form.

| | |
|--|---|
| Disable Bank Code, Disable Transaction Type, Disable Path, and Disable File Extension | Specify whether the Bank Code, Transaction Type, Path, and File Extension fields on the Upload File for Bank Inbound Transaction form is input capable. When you enable input, you can override the value from the Bank Information for Dynamic Formatter application (P76B474) that the system displays. Values are: Blank: Allow input. |
|--|---|

I: Do not allow input.

Versions

**Electronic Payment
Inbound Processor
Version - R76B047RE
and Electronic Receipts
Inbound Processor Version
- R76B03ZR**

Specify the versions that you want to use for the Process Return A/P Electronic Bank Disk (R76B047RE) and the Electronic Receipts Inbound Processor Version (R76B03ZR) programs. The system uses the version that you specify when you process records from the File Upload for Bank Transaction Inbound application (P76B474I).

Importing Flat Files from Your Bank

Access the Work with Inbound Bank Transaction Files form.

If you have default values for the Bank Code or Transaction Type, those values appear on the Work with Inbound Bank Transactions Files form.

Note. The Layout tab displays information about the layout. It does not contain input fields.

To import flat files from the bank:

1. On Work with Inbound Bank Transactions Files, complete the Trans Type and Bank Code fields if they are not populated with default values.
2. Click Add.
3. Select the Upload tab.
4. On Upload File for Bank Inbound Transaction, complete or modify the Bank Code, Transaction Type, Path, and File Extension fields, and then click OK.

Note. You can complete the fields only if the processing options are set to allow you to override the values.

| | |
|-------------------------|---|
| Bank Code | Enter a code to specify the bank to which the system sends the outbound statement. The code that you enter must exist in UDC 76/BC. |
| Transaction Type | Enter a qualifier to identify the type of transaction. |
| Path | Enter the location of where the application is on the computer or network. |
| File Extension | Enter the extension that the system appends to the name in the Path field to create the name of the flat file. |

Uploading Files into the A/P Payment Tape Table

Select Bank Tape Processing (G76B415), Process Return A/P Electronic Bank Disk.

Uploading Files into the Electronic Receipts Input Table

Select Bank Tape Processing (G76B413), Process Return A/R Bank Tape Diskette.

Setting Processing Options for Process Return A/R Bank Tape Diskette - Dynamic Formatter (R76B03ZR)

Processing options enable you to specify the default processing for programs and reports.

Process

These processing options specify how the system processes unknown invoices and how it creates fee invoices.

Unknown invoices and address number

Specify how the system handles invoices when it cannot locate the invoice or address number in the database. Values are:

Blank: Do not process. The system ignores unknown invoices.

1: Create an RL document. The system creates a document with a document type of *RL*.

Unknown invoices

Specify how the system handles invoices that it cannot locate in the database. Values are:

Blank: Do not process. The system ignores unknown invoices.

1: Create an RU document. The system creates a document with a document type of *RU*.

Find Invoices

Specify how the system searches for invoices. Values are:

Blank: By client use code. The system searches for the invoice by the client use code that was used in the outbound process.

1: By bank *duplicata* number. The system searches for the invoice by the bank *duplicata* number.

2: By client use code and bank *duplicata* number. The system searches for the invoice by the client use code that was used in the outbound process, and then by the *duplicata* number.

3: By bank *duplicata* number and client use code. The system searches for the invoice by the bank *duplicata* number, and then by the client use code that was used in the outbound process.

Fees

Fee invoice creation

Specify whether the system creates a fee invoice. Values are:

Blank: Do not create.

1: Create using bank fee amount paid.

2: Create using amount calculated.

Fee process

Specify whether the system applies funds received to the original invoice before applying funds to the fee invoice, or applies funds to the fee invoice before applying funds to the original invoice. Values are:

Blank: Apply first original invoice

1: Apply first fee invoice

Updating Credit Groups

Select Bank Tape Processing - Brazil (G76B413), Update F7603B1 With Credit Groups.

Setting Processing Options for Update F7603B1 Credit Groups - Brazil (R7603B1)

Processing options enable you to specify the default processing for programs and reports.

Bank

These processing options specify the bank code and *remessa* code that the system uses.

| | |
|---------------------|--|
| Bank Code | Specify the Bank Code that the system uses. If you leave this processing option blank, the system uses 237 as the default. |
| Remessa Code | Specify the <i>remessa</i> code. If you leave this processing option blank, the system uses 01 as the default value. |

Mode

This processing option specifies the mode in which the program is run.

| | |
|-------------|---|
| Mode | Specify the mode in which the system runs the program. Values are: 0 or Blank: The system runs the program in proof mode. 1: The system runs the program in final mode. |
|-------------|---|

Purging Invoice Transactions for Brazil

This section provides an overview of the invoice purge process for Brazil and discusses how to:

- Run the Purge A/R Additional Information - Brazil program.
- Set processing options for Purge A/R Additional Information - Brazil.

Understanding the Invoice Purge Process for Brazil

You run the Purge A/R Additional Information - Brazil program (R7603B11) after you run the Invoice Transaction Purge program (R03B800). When you run the Purge A/R Additional Information - Brazil program, the system purges from the A/R Additional Information - Brazil table (F7603B1) all records that do not have a corresponding record in the F03B11 table. The system then writes a record to the Archive A/R Additional Information - Brazil table (F7603B1P) for each record that it purges from table F7603B1. Tables F7603B1 and F7603B1P contain identical fields.

Running the Purge A/R Additional Information - Brazil Program

Select Brazilian Purges (G76B41P), Purge A/R Additional Information - Brazil (R7603B11).

Setting Processing Options for Purge A/R Additional Information - Brazil (R7603B11)

Processing options enable you to specify the default processing for programs and reports.

Display

Report output:

Specify whether the report lists the records that are archived. If you do not select to list the records, the report contains only the number of records purged. Values are:

Blank: Do not list records.

/: List records.

CHAPTER 26

(BRA) Working with Vouchers and Payments for Brazil

This section provides overviews of voucher entry and voucher match, voucher processing, automatic payment processing; and discusses how to:

- Add bar code information to vouchers.
- Processing inbound and outbound payments.
- Enter manual payments.

Understanding Voucher Entry and Voucher Match for Brazil

In Brazil, you must use a three-way voucher match to create a voucher from a *nota fiscal*. You must locate the receipt records that correspond to the *nota fiscal* and match them to the *nota fiscal*. For example, if a supplier sends a *nota fiscal* for 100.00, you must locate and match the receipt records for the 100.00 worth of items that correspond to the *nota fiscal*. You can select multiple receipt records to match on a single voucher. When you complete the match process, the system creates two batches if any of the transactions are subject to IPI or ICMS recoverable, or ICMS payable.

The total amount of the receipt records you match to a *nota fiscal* must equal the amount on the *nota fiscal*. For example, if two receipt records correspond to a *nota fiscal* and each receipt record is for 200.00, the *nota fiscal* amount must equal 400.00 to perform a match. If a *nota fiscal* reflects a partial order, you can change the quantity or amount of a receipt record to match the *nota fiscal*. The system leaves the remaining balance of the receipt record open. For example, if a receipt record reflects 100 items but the *nota fiscal* amount reflects 50 items, you can change the receipt record quantity to 50. You can create a voucher for the remaining 50 items at a later time.

Before creating vouchers:

- Review the processing options for the Standard Voucher Entry program (P0411). You must set the Match Processing processing option on the Voucher Match tab to *I*, and must set the Voucher Match Version processing option on the Voucher Match tab to the version of the Voucher Match program (P4314) that you want to use.
- Review the processing options for the Voucher Match program (P4314). You must set the accounts receivable processing option on the Summarization tab to *I* to correctly process Brazilian taxes.

Understanding Voucher Processing for Brazil

The system enables some functions differently for voucher entry for Brazil than for the standard voucher entry process:

- If a voucher has withholding lines, you cannot modify the voucher using the Standard Voucher Entry program (P0411).

Use the F0411 Taxes Maintenance program (P76B4200) to modify ISS, INSS, and FUNRURAL taxes. These are the only taxes that you can modify.

- The ability to void or delete a line on a voucher is disabled if the voucher has been processed by using the Tax Calculation ISS, INSS, FUNRURAL program (R76B4310) and records exist for the voucher in the Voucher Tax Processed (F76B4012) table.
- When you delete a voucher, the system identifies whether the voucher includes withholding lines for INSS for an individual. If the voucher includes withholding lines for INSS for an individual, the system:
 - Sets the Reprocess INSSPF flag to yes in the Tax Accumulates by AN8 (F76B4016) table to enable the system to reprocess the month and update the accumulated amounts.
 - Deletes the withholding lines from the Voucher Additional Information Brazil (F76B0411) table.
 - Deletes the document from the F76B4012 table.

If the voucher does not contain withholding line for INSS for an individual, the system deletes the withholding lines from the F76B0411 table and deletes the document from the F76B4012 table.

Understanding Automatic Payment Processing for Brazil

The system processes records differently for Brazilian transactions than for standard transactions.

Considerations for Creating Payment Groups for Brazil

When you create a payment for Brazil, the system validates these conditions:

- The system checks that the (*Imposto sobre Serviços*) (ISS), *Instituto Nacional do Seguro Social* (INSS), and *Fundo de Assistência e Previdência do Trabalhador Rural* (FUNRURAL) taxes of the voucher are included in the first payment of the voucher.
- The system validates the correct setup of all the Brazil tax information to calculate *Imposto de Renda* (IR), *Programa de Integração Social/Programa de Formação do Patrimônio do Servidor Público* (PIS/PASEP), *Contribuição para Financiamento da Seguridade Social* (COFINS), and *Contribuição Social sobre o Lucro Líquido* (CSLL) withholding amounts.

Additionally, the system ignores vouchers with a document type that exists in the Doc. Types Unaffected Withhold (76B/UW) UDC table.

When the payment is updated, the system accumulates by month, Tax ID of the supplier, tax ID of the company, and tax type (IR, PIS/PASEP, COFINS, CSLL, and INSS) the gross amounts and contributions amounts paid. The system saves this information in the Tax Accumulates by AN8, Company (F76B4017) table.

When you create payment groups for Brazil, the system calculates withholding amounts for IR, PIS/PASEP, COFINS, and CSLL contributions and creates records for the contributions in the temporary tables A/P Payment Detail (F04573) and F04573 Brazilian Temp WH File (F76B473T). After you write and update the payment, the system copies the records from the temporary tables to the Accounts Payable Matching Document (F0413) and Accounts Payable Matching Document Detail (F0414) tables. The system also updates the F76B4017, F76B0411, and F0411 tables.

Review these processing option tabs before running the Create Payment Control Groups program:

| Processing Option Tab | Guidelines |
|-----------------------|--|
| Printing | <p>Use the Print Attachments processing option to specify whether to print attachments.</p> <ul style="list-style-type: none"> For standard checks (R04572DB1), enter <i>1</i> to print an attachment or enter <i>0</i> for no attachment. For Bordero (R04572DB, R04572CB1, R04572RB), you must indicate that you want a special attachment by entering <i>1</i>. |
| Process By | <p>Set the Payee processing option to specify whether to create payments based on payee, regardless of the supplier.</p> <p>For the Print Automatic Payments - Check - Brazil program (R04572DB1), you cannot create one payment per payee, regardless of supplier. You must leave the Payee field blank for this processing option.</p> |

Considerations for Voiding Payments

Instituto Nacional do Seguro Social (INSS) tax is assessed by voucher. If a voucher line and the INSS tax line is in the payment being voided, the system verifies that no payments were made for the voucher after the payment being voided was made.

If a payment being voided has PIS/PASEP, COFINS, or CSLL contributions that exceed the minimum, the system checks that no payments were made for that supplier after the payment being voided was made.

To void a payment other than the last payment, you must void all intervening payments. For example, if on January 10 you need to void a payment to a supplier that was processed on January 8, you must first void any payments made to the supplier on January 9.

When you void a payment, the system:

- Subtracts the withholding from the accumulated amounts stored in the Tax Accumulates by AN8, Company (F76B4017) table for *Imposto de Renda* (IR), PIS/PASEP, COFINS, CSLL, and INSS withholdings.
- voids the payment of the withholding lines (standard process).

The system generates in the F0413 and F0414 tables another line with the opposite sign for each withholding line. The withholding is part of the payment.

- Deletes the new lines inserted into the F0411 table and the Voucher Additional Information Brazil (F76B0411) table for the payment of IR, PIS/PASEP, COFINS, and CSLL withholding (localized process).
- If the lines of the withholdings are posted, the system generates new PE lines for the voids in the F0411 table.

Adding Bar Code Information to Vouchers for Brazil

This section provides an overview of bar code information for vouchers and discusses how to:

- Set processing options for Voucher Additional Information - Brazil (P76B04BC).
- Add bar code information to vouchers.

Understanding Bar Code Information for Vouchers

You can add bar code information to domestic currency vouchers that you process for payment. You add bar code information after you enter voucher information and before you create payment groups. Adding bar code information to your vouchers is optional unless you use the outbound automatic payment process. If you use the outbound automatic payment process, you must add bar code information to your vouchers.

A standard bar code contains 44 digits. When you use an optical reader to scan a bar code, the system:

1. Validates the 44 digits.
2. Populates the Bar Code Brazil field (data item BBRCD) in the F76B04BC table with the 44 digits.

You enter 47 digits when you manually enter a bar code. The 10th, 22nd, and 33rd digits are check digits that the validation routine uses to verify that the code that you enter is a valid bar code number. When you manually enter a bar code number, the system performs:

1. Validates each segment of the bar code number.
2. Translates the 47 digits that you entered into the 44-digit machine-entered format.
3. Populates the Bar Code Brazil field in the F76B04BC table with 44 digits.

You can override a machine-entered bar code number with a manually entered bar code number. When you manually enter a bar code for a voucher for which a bar code already exists and then click OK on the Work With Vouchers Bar Code - Brazil form in the Voucher Additional Information - Brazil program (P76B04BC), the system:

1. Validates each segment of the manually entered 47-digit bar code number.
2. Translates the 47-digits that you entered into the 44-digit machine-entered format.
3. Replaces the value for data item BBRCD in the F76B04BC table with the new value.

Form Used to Add Bar Code Information to Vouchers

| Form Name | FormID | Navigation | Usage |
|-------------------------------------|-----------|--|---|
| Work with Voucher Bar Code - Brazil | W76B04BCA | Bank Tape Processing (G76B415), Voucher Additional Information - Brazil. On the Work with voucher additional information - Brazil form, select a record and then select Bar Code from the Row menu. | Select or clear the Unique Payment option. You can only enable or disable this option if the Enable Unique Payment Flag processing option is blank. Enter bar code information for Brazil. |

Setting Processing Options for Voucher Additional Information - Brazil (P76B04BC)

Processing options enable you to specify the default processing for programs and reports.

Display

Pay Status Code Enter a value that exists in the Pay Status Code (00/PS) UDC table to specify the pay status code of the vouchers that the system processes.

Bar Code

Enable unique payment flag Enter *1* to disable the Unique Payment option on the Work with Voucher Bar Code - Brazil form. Leave this processing option blank to enable the option.

Create unique payment on bar code entry Specify whether to process payments for vouchers for which the bar code number has already been processed and paid. The value that you enter here overrides the Unique Payment option on the Work with Voucher Bar Code - Brazil form. Values are:

Blank: Create

1: Do not create

Enable bar code entry mode Specify whether to enable the Manual and Machine options on the Work with Voucher Bar Code - Brazil form. Values are:

Blank: Enable

1: Disable

Bar code entry mode Specify whether you enter bar code information manually. The value you enter here overrides the Manual and Machine options on the Work with Voucher Bar Code - Brazil form. Values are:

Blank: Machine (default value)

1: Manual

Status

Update Status Enter *1* to update the pay status code for the vouchers processed.

New Pay Status Specify the pay status code to which the system updates vouchers when the Update Status processing option is set to *1*.

Entering Bar Code Information for Vouchers

Access the Work with Voucher Bar Code - Brazil form.

Voucher Additional Information - Brazil - Work with Voucher Bar Code - Brazil

| <div style="display: flex; justify-content: space-between; align-items: center;"> OK  Cancel  Form  Tools  </div> | | | |
|---|-------------------------------------|-----------------------------------|---|
| Document Number | <input type="text" value="18"/> | <input type="text" value="PR"/> | <input type="text" value="00001"/> <input type="text" value="002"/> |
| Company | <input type="text" value="00050"/> | <i>Project Management Company</i> | |
| Address Number | <input type="text" value="11659"/> | <i>Maura's Supplier</i> | |
| Gross Amount | <input type="text" value="400.00"/> | <input type="checkbox"/> Mode (F) | Invoice Number |
| Pay Status | <input type="text" value="A"/> | <i>Approved for Payment</i> | Due Date |
| Payment Instrument | <input type="text"/> | <i>Default (A/R & A/P)</i> | |

| <input type="radio"/> Machine | <input checked="" type="radio"/> Manual | <input checked="" type="checkbox"/> Unique payment |
|-------------------------------|---|--|

| | | | | | | |
|------------------|----------------------|----------------------|----------------------|----------------------|----------------------|----------------------|
| Manual Bar Code | <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/> |
| Machine Bar Code | <input type="text"/> | | | | | |
| Bank Code | <input type="text"/> | | | | | |

Work with Voucher Bar Code - Brazil form

Machine

Select to enable the entry of bar codes by scanning.

You can select this option only if the Enable Bar Code Entry Mode processing option is blank.

Manual

Select to enable the manual entry of a bar code. If you select this mode, the system enables the eight segments of the Manual Bar Code field.

You can select this option only if the Enable Bar Code Entry Mode processing option is blank.

Unique payment

Select to prohibit the entry of a duplicate bar code.

Bar Code

Enter this code by scanning a bar code with an optical reader or by manually entering the code.

When you use an optical reader to scan a bar code, the reader discards the three check digits and populates the appropriate fields in the JD Edwards EnterpriseOne system with 44 digits.

When you manually enter a bar code, you enter the entire 47-digit number. The 10th, 22nd, and 33rd digits are check digits. Although the JD Edwards EnterpriseOne system does not use the check digits to validate the bar code, you should enter all 47 digits. The JD Edwards EnterpriseOne system populates the appropriate fields with 44 digits after discarding the 3 check digits.

The system displays an error message for each segment of the Manual Bar Code field if the digits that you enter are not valid or if you do not enter the appropriate number of digits for the segment.

The system does not display the bar code in the Machine Bar Code field when you add a bar code to a voucher. The system displays bar codes in the Machine Bar Code field only when the bar code already exists in the F76B04BC table, such as when you view an existing voucher that has an associated bar code.

Processing Inbound and Outbound Payments for Brazil

This section provides an overview of the process for inbound and outbound payments for Brazil, lists a prerequisite, and discusses how to:

- Set processing options for Create A/P Electronic Bank Diskette - Dynamic Formatter (R76B047SE).
- Create the outbound text file.
- Import flat files from your bank.

Understanding Inbound and Outbound Payments for Brazil

You use automatic payment processing to pay vouchers during your usual payment cycle. To process automatic payments, you assign formats to payment instruments. Then, you create payment groups. After you create payment groups, you process automatic payments in the group. When you select the Write function for your payment group, the system determines which payment formats to generate, based on the payment formatting programs that you assign to your payment instruments.

When you set up your system to use the Dynamic Formatter program (P76B474) for electronic payments, you write the outbound flat file in a layout that your bank wants to use, and you write the information that you receive in an inbound flat file in the layout that you want to use.

The outbound process for automatic payments sends records from the following tables to the specified bank:

- F0411 (Accounts Payable Ledger)
- F04571 (A/P Payment Control Group)
- F04572 (A/P Payment Header)
- F04573 (A/P Payment Detail)

The inbound process for automatic payments uploads incoming flat files to the File Upload for Bank Transaction Inbound Process (F76B474I) table, and then to tables F04571, F04572, and F04573. You then continue processing the inbound records, according to your usual procedures.

To use automatic banking for payment processing for Brazil:

- Create the layouts that your banks require for incoming data and assign the layouts to outbound transactions.
- Create the payment instruments that you need.
- Create the versions that you need for the Create A/P Electronic Bank Diskette - Dynamic Formatter program.
- Include program R76B047SE as a print program.
- For outbound payment records, complete the following tasks:

- Enter bar code information for your vouchers.
- Create your payment groups.
- Write your payments.
- Run the Create A/P Electronic Bank Diskette - Dynamic Formatter batch process to write records to the F0457 and F04572OW tables.
- Write records from the F0457 and F04572OW tables to a text file.

For inbound payment records, complete the following tasks:

- Import the flat file that your bank sends to you by using the File Upload for Bank Transaction Inbound Process program.

This program writes the records from the flat file to the F76B474I table.

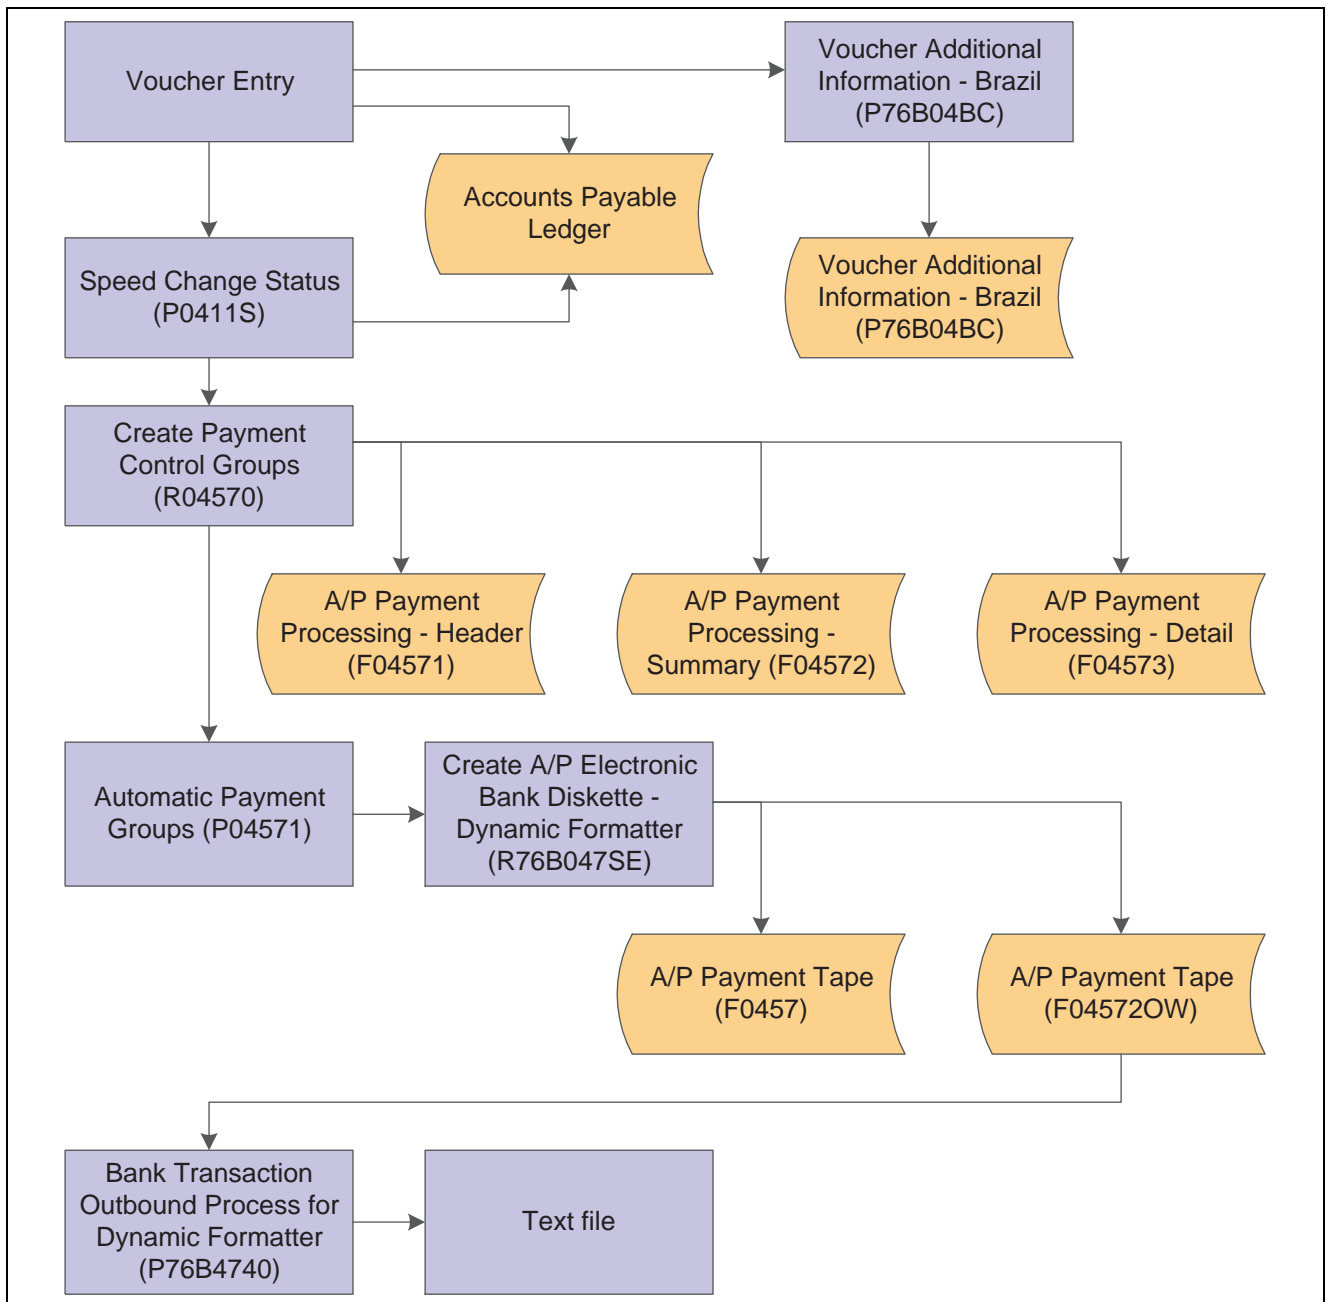

- Run the Process Return A/P Electronic Bank Diskette - Dynamic Formatter batch process (R76B047RE) to write records from table F76B474I to tables F04571, F04572, and F04573.
- Continue processing the inbound records according to your existing procedures for payment processing.

Processing Outbound Automatic Payments

Before you process outbound bank records, you must set up bank layouts and associate the layouts to outbound transactions for each payment instrument for each bank with which you work. You then run the Create A/P Electronic Bank Diskette - Dynamic Formatter batch program (R76B047SE) to write records to the F0457 and F04572OW tables.

You use the Bank Transaction Outbound Process program (P76B474O) to write records from the F0457 and F04572OW tables to the text file. When you create the text file, the system writes the file in the correct layout as determined by the Transaction Type, Payment Instrument, and Bank Code that you specified in the Bank Information for Dynamic Formatter program.

The following process flow illustrates the outbound automatic payment process:

Outbound automatic payment process flow

Writing Automatic Payments to the A/P Payment Tape Table (F04572OW)

The system automatically runs the Create A/P Electronic Bank Diskette - Dynamic Formatter program when you run the print process for payment groups. You must set the processing options for the Create A/P Electronic Bank Diskette - Dynamic Formatter program before you run the print process for payment groups. The Create A/P Electronic Bank Diskette - Dynamic Formatter program creates the text file and sets the status for the payment group to Update (UPD).

You can also run the Create A/P Electronic Bank Diskette - Dynamic Formatter program from a menu option.

The Create A/P Electronic Bank Diskette - Dynamic Formatter program does the following:

- Writes records from the following tables to the F04572OW table:

- F0411
- F04571
- F04572
- F04573
- Creates a report

Creating the Outbound Text File

You create outbound text files for automatic payments and for automatic receipts. The system writes the text file in the appropriate layout based on the bank code, payment instrument, and transaction type.

For automatic payments, the system writes records from the F0457 and F04572OW tables to a text file.

For automatic receipts, the system writes records from the F04572OW table to a text file.

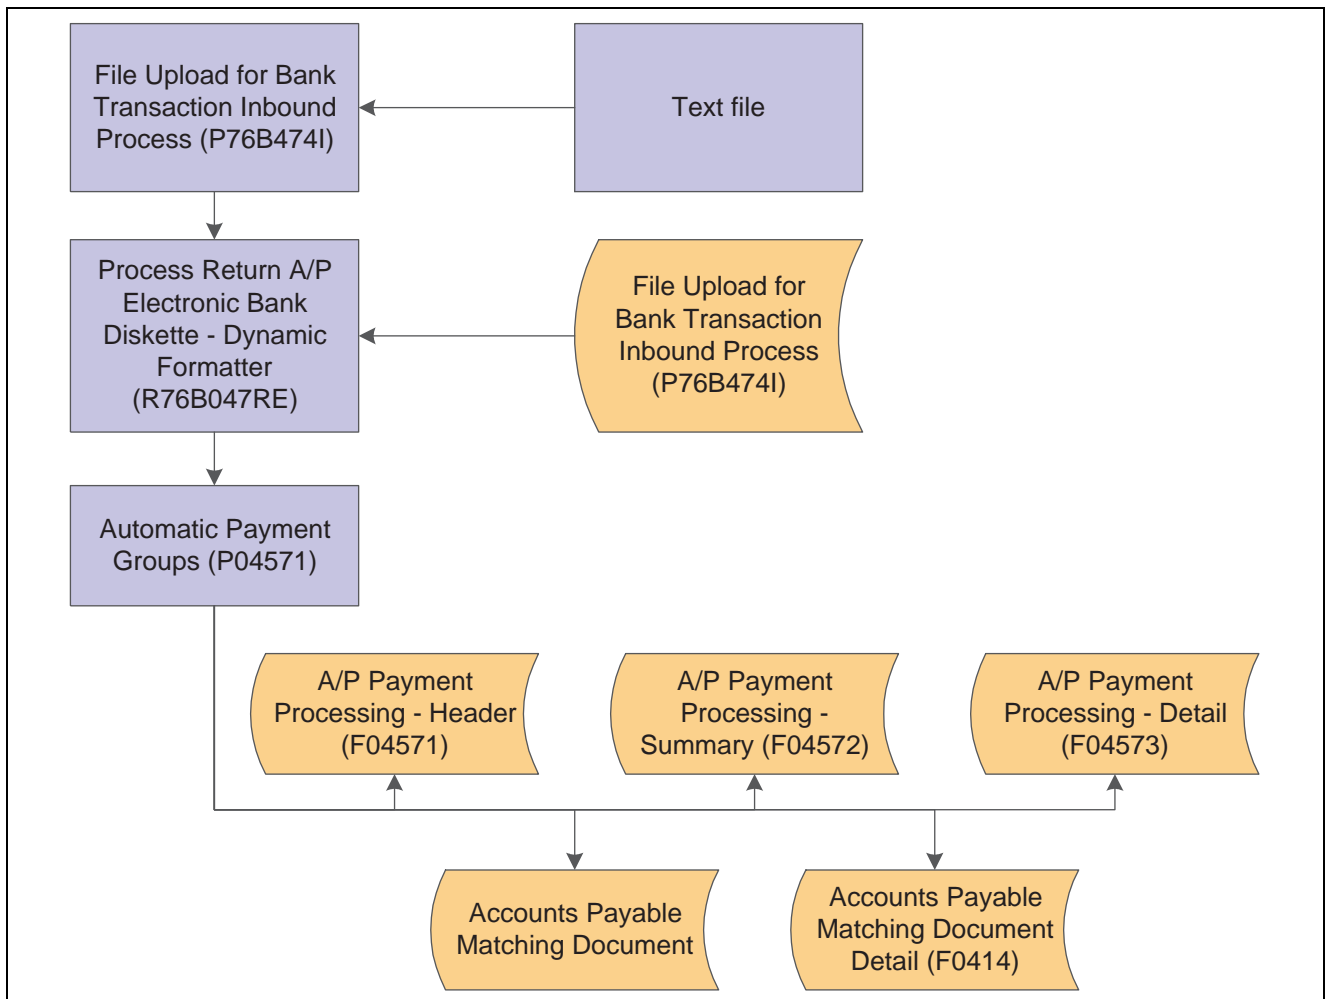

Processing Inbound Automatic Payments

Before you process inbound bank records, you must set up bank layouts and associate the layouts to inbound transactions for each payment instrument for each bank with which you work. You then run the Bank Information for Dynamic Formatter program (P76B474I) to write records from the flat file that you received from the bank to the F76B474I table.

You run the Process Return A/P Electronic Bank Diskette - Dynamic Formatter program to write records from the F76B474I table to the F0457 table. You can launch the Process Return A/P Electronic Bank Diskette Dynamic Formatter program from a menu option or by clicking Process in the File Upload for Bank Transaction Inbound program.

You process the records in table F0457 according to your usual procedures.

The following process flow illustrates the inbound automatic payments process:

Inbound automatic payment process flow

Importing Flat Files from Your Bank

Before you can use the automatic receipts or automatic payments data that your bank sends to you, you must upload the flat file from the location where it is stored to the F76B474I table. A layout that is associated with the bank code and transaction type for the file you want to upload must exist in your system.

You can set default values for the bank code and transaction type in the processing options, and you can set a processing option to enable changes to the location where the system searches for the flat file.

Prerequisites

Before completing the tasks in this chapter:

- Verify that a bank transit number exists in the F0030 table for each customer for whom you will process automatic payments.

See *JD Edwards EnterpriseOne Financial Management Solutions Application Fundamentals 8.12 Implementation Guide*, “Setting Up Bank Accounts”.

- Set the processing options for the Bank Transaction Outbound Process program (P76B474O)

See [Chapter 25, “\(BRA\) Working With Accounts Receivable Processes for Brazil,” Setting Processing Options for Bank Transaction Outbound Process \(P76B474O\), page 468.](#)

Forms Used to Process Inbound and Outbound Payments

| Form Name | FormID | Navigation | Usage |
|--|-----------|---|--|
| Tape Creation for Outbound Process | W76B474OA | Bank Tape Processing (G76B413), Bank Transaction Outbound Process. Bank Tape Processing (G76B415), Bank Transaction Outbound Process. On the Work with Outbound Bank Process Files form, select a record and click Select. | Create the outbound text file. |
| Upload File for Bank Inbound Transaction | W76B474IA | Bank Tape Processing (G76B413), File Upload for Bank Transaction Inbound. Bank Tape Processing (G76B415), File Upload for Bank Transaction Inbound. On the Work with Inbound Bank Transactions Files form, select a record and click Add. | Upload the flat file. You can complete the fields only if the processing options are set to enable you to override the values. The Layout tab displays information about the layout. It does not contain input fields. |

Setting Processing Options for Create A/P Electronic Bank Diskette - Dynamic Formatter (R76B047SE)

Processing options enable you to specify the default processing for programs and reports.

Transfer

Tape Payment Detail Specify the tape payment detail description.

Tape

Device Name Specify the machine model where the flat file was created. The system prints this information on a label that you can attach to a diskette.

| | |
|---------------------|---|
| Tape Density | Specify the media recording density. The system prints this information on a label that you can attach to a diskette. |
| Label Name | Specify the label name. |
| Block Size | Specify the size of the block you are copying. |
| New Volume | Specify the name of the new volume. |
| New Owner ID | Specify the name of the new owner. |
| File Name | Enter the name of the text file. |

Pmt. Inst. (payment instrument)

| | |
|---|---|
| Payment Instrument - DOC | Specify the code for the payment instrument that you assign to payments that were made by a direct deposit to the supplier's account in a bank, other than the bank that is sending the payment. The code that you specify must exist in the Payment Instruments UDC table (00/PY). |
| Payment Instrument - Check | Specify the code for the payment instrument that you assign to payments that are made by check. The code that you specify must exist in the Payment Instruments UDC table (00/PY). |
| Payment Instrument - Account Deposit | Specify the code for the payment instrument that you assign to payments that are made by a direct deposit to the supplier's account in the same bank as the bank that is sending the payment. The code that you specify must exist in the Payment Instruments UDC table (00/PY). |
| Payment Instrument - Boleto same Bank | Specify the code for the payment instrument that you assign to payments that are made by using a <i>boleto</i> , and where the supplier's account is at the bank that is processing the payment. The code that you specify must exist in the Payment Instruments UDC table (00/PY). |
| Payment Instrument - Boleto other Bank | Specify the code for the payment instrument that you assign to payments that are made by using a <i>boleto</i> , and where the supplier's account is at a bank other than the bank that is processing the payment. The code that you specify must exist in the Payment Instruments UDC table (00/PY). |

Process

| | |
|-----------------------------------|---|
| Use single Company Payment | Enter <i>1</i> to create one payment for each invoice. Leave this processing option blank to create separate payments. |
| Structure Type | Enter a value that exists in the Parent/Child Structure Type UDC table (01/TS) to specify the type of organizational structure that is set up in the address book record. |

Setting Processing Options for Bank Transaction Outbound Process (P76B474O)

Processing options enable you to specify the default processing for programs and reports.

| | |
|------------------------------|--|
| Display created files | Enter <i>1</i> to specify that the system displays on the Work with Outbound Process Files form only records for which files have been written. If you leave this processing option blank, the system display records for which files have not been written. |
| Type - Transaction | Specify the transaction type code that the system displays in the Work with Outbound Process Files form. You select a code from the Transaction Type (00/TT) UDC table. Use only these values: <i>BRPAGEL</i> : Electronic Payments Brazil <i>BRCOBES</i> : Electronic Receipts Brazil |

Creating the Outbound Text File

Access the Tape Creation for Outbound Process form.

Importing Flat Files From Your Bank

Access the Upload File for Bank Inbound Transaction form.

| | |
|-------------------------|--|
| Bank Code | Specify the bank to which the system sends the outbound statement. The code that you enter must exist in the Bank Codes (76/BC) UDC table. |
| Transaction Type | Enter the qualifier that identifies a specific type of transaction. |

Entering Manual Payments for Brazil

This section provides an overview of the manual payment process for Brazil, lists a prerequisite, and discusses how to enter withholding amounts for manual payments.

Understanding Manual Payments for Brazil

When you enter manual payments for Brazil using the Payment With Voucher Match program, the system launches the Manual Payment Withholding Registration program (P76B4900).

The Manual Payment Withholding Registration program enables you to enter tax amounts for *Imposto de Renda*(IR), *Programa de Integração Social/Programa de Formação do Patrimônio do Servidor Público* (PIS/PASEP), *Contribuição para Financiamento da Seguridade Social* (COFINS), and *Contribuição Social sobre o Lucro Líquido* (CSLL) withholding amounts when you process manual payments. After you complete the Manual Payment Entry form in the Manual Payment program, the system displays the Manual Payment Withholding Registration form. The form includes the withholding amount, the withholding due date, and the tax formula.

The system updates these tables:

- Creates a line in the F76B0411 table for IR, PIS/PASEP, COFINS, and CSLL contributions.
- Writes two lines to the F0411 table; one that is a positive amount and that is paid to the fiscal authority and one that is a negative amount and that is paid with the voucher.

- Updates the Tax Accumulates by AN8, Company (F76B4017) table.

The system accumulates by month, tax ID of the supplier, tax ID of the company, and tax type (IR, *Instituto Nacional do Seguro Social* [INSS], PIS/PASEP, COFINS and CSLL) the gross amounts and contributions amounts paid.

Prerequisite

You must process INSS, ISS (*Imposto sobre Serviços*), and FUNRURAL (*Fundo de Assistência e Previdência do Trabalhador Rural*) taxes before you process manual payments with IR, PIS/PASEP, COFINS, and CSLL taxes.

Forms Used to Enter Manual Payments

| Form Name | FormID | Navigation | Usage |
|---|-----------|--|---|
| Work with Payments | W0413MB | Manual Payment Processing (G0412), Payment with Voucher Match. | Select existing manual payments. |
| Manual Payment Entry | W0413MA | Click Add on the Work with Payments form. | Enter manual payment information. |
| Manual Payment Withholding Registration | W76B4900A | Click OK on the Manual Payment Entry form. | Enter withholding amounts, due dates, and the tax code. |

Entering Taxes for Manual Payments

Access the Manual Payment Withholding Registration form.

CHAPTER 27

(BRA) Processing Supplier Withholding

This chapter provides an overview of processing Brazilian withholding taxes and discusses how to:

- Update the General Ledger with PIS/PASEP and COFINS tax credits.
- Work with service taxes paid externally.
- Calculate ISS, INSS, and FUNRURAL taxes.
- Calculate IR, PIS/PASEP, COFINS, and CSLL taxes.
- Print the INSS withholding certificate.
- Maintain ISS and INSS tax records.
- Generate a summary report for CSLL, COFINS, and PIS/PASEP contributions.
- Generate the text file for taxes.
- Print withholding tax reports.

Understanding Withholding Taxes for Brazil

Businesses in Brazil must calculate withholding taxes for the service *notas fiscais* that they receive. These taxes are calculated on an aggregate basis for corporate entities and on a retention basis for individuals. When calculated on an aggregate basis, the tax is added to the basis of the total amount on the *nota fiscal* or voucher. The tax is remitted to the government, not to the supplier. When calculated on a retention basis, the tax is an amount that is withheld from the *nota fiscal* or voucher. In this situation, a portion of the amount that is due to the supplier (the tax) is remitted to the government instead of to the supplier. You must calculate withholding taxes before you process vouchers, and then you must post the vouchers after you calculate the taxes.

After the system calculates the taxes, you can generate reports and magnetic media to meet legal requirements. You generate a weekly collection report and an annual report that informs the federal Department of Revenue of the individuals and legal entities for which you calculated taxes.

The system calculates these withholding taxes:

| Tax | Explanation |
|---------------------------------------|---|
| IR (<i>Imposto de Renda</i>) | A federal income tax that is levied on services that are provided by individuals or legal entities. |
| ISS (<i>Imposto sobre Serviços</i>) | A tax that is defined by the city of origin of the job or service. |

| Tax | Explanation |
|---|--|
| INSS (<i>Instituto Nacional do Seguro Social</i>) | The national social security tax. Some types of services are subject to INSS tax. The tax amount is added to the value of the provided service. |
| FUNRURAL (<i>Fundo de Assistência e Previdência do Trabalhador Rural</i>) | The income tax for agricultural businesses. It is similar to the IR tax for corporations, but the rate at which the income is taxed is different. |
| PIS/PASEP (<i>Programa de Integração Social/Programa de Formação do Patrimônio do Servidor Público</i>) | A mandatory contribution that is levied as a percentage of monthly billings. The PIS contribution is made to Brazilian social programs by private companies and enterprises. The PASEP contribution is made to Brazilian social programs by public or government entities. |
| COFINS (<i>Contribuição para Financiamento da Seguridade Social</i>) | A mandatory contribution that is levied as a percentage of monthly billings on merchandise and services. |
| CSLL (<i>Contribuição Social sobre o Lucro Líquido</i>) | A tax on net gains. |

The applications that you use to calculate Brazilian withholding taxes read data from these tables:

- Accounts Payable Ledger (F0411).
- Address Book Brazilian Tag File (F76011).
- Nota Fiscal Header - Brazil (F7601B).
- Nota Fiscal Detail - Brazil (F7611B).
- Item Master Regional Information - Brazil (F76411).
- Item Branch Regional Information - Brazil (F76412).
- Purchase Order Detail Tag File - Brazil (F76432).
- Tax Code (F76B0401).
- IR Progressive (F76B0402).
- Voucher Additional Information Brazil (F76B0411).
- Services Taxes Paid Externally (F76B0403).

Results of the tax calculations are stored in these tables:

- Accounts Payable Ledger (F0411).
- Account Ledger (F0911).
- Voucher Additional Information Brazil (F76B0411).
- Voucher Tax Processed (F76B4012).
- Tax Accumulates by AN8 (F76B4016).
- Tax Accumulates by AN8, Company (F76B4017).

Updating the General Ledger with PIS/COFINS Tax Credits

This section provides an overview of the Taxes Netting Process program and discusses how to:

- Run the Taxes Netting Process program.
- Set data selection for Taxes Netting Process.
- Set processing options for Taxes Netting Process (R76B9011).

Understanding the Taxes Netting Process Program

You run the Taxes Netting Process program to update general ledger accounts with PIS/PASEP and COFINS tax amounts after you process vouchers or update sales, and before you run the Nota Fiscal Conversion program (R76B200A).

You can run the Taxes Netting Process program in either proof or final mode. When you run the program in proof mode, you can review the report that the system produces to determine if any errors exist. The report includes:

- Date range for the processed records.
- Whether the report is for the proof or final run of the program.
- If you set the processing options to print in detail, information about the *nota fiscal* for each record, including the number, series, document ID, and tax type.

Additionally, the report shows whether each transaction generated a debit or credit journal entry, and the amount of the entry.

- Errors that occurred during processing.
- The batch number and batch type (if you set the processing option to run the program in final mode and no errors occurred during processing).

After you correct any errors, you can run the report in final mode to create the journal entries and the batch.

Process Flow for Final Mode

When you run the Taxes Netting Process program in final mode, the system uses this logic to write records to the F0911 table for each selected, unprocessed record in the F76B011 table:

- Accesses the G/L Class Code Cross Reference UDC (76/GL) to determine the GL class code that is assigned to the branch/plant for PIS/PASEP and COFINS taxes.

If no GL class code cross-reference exists for the branch/plant, the system uses the default GL class code. The system uses the GL class code to determine the automatic accounting instruction (AAI) to use, and uses the AAI to determine the account to credit or debit.

- If the value in the Transaction Nature Code field (data item CFOP) in the F7611B table is greater than 500, the system uses AAI 4220 to generate a debit to the posting account and uses AAI 4240 to generate a credit to the posting account.

Transaction Nature codes that are greater than 500 are assigned to sales transactions. The system creates a summarized journal entry record by each tax type, GL date, and GL class code combination.

- If the value in the Transaction Nature Code field in the F7611B table is less than 500, the system uses AAI 4385 to generate a debit to the posting account and uses AAI 4390 to generate a credit to the posting account.

Transaction Nature codes that are less than 500 are assigned to procurement transactions. The system creates a summarized journal entry record by each tax type, GL date, and GL class code combination.

- Creates a single batch header and generates all records in the single batch header.

The system prints information about the batch on the report.

- Marks the records in the F76B011 table for which journal entries are written as processed.

Note. The system writes entries to the F0911 table only when no errors exist for the record in the F76B011 table. If an error exists, the system prints an error message on the report instead of writing entries to table F0911.

Reconciling the General Ledger for PIS/PASEP and COFINS Taxes

After you update the general ledger by running the Taxes Netting Process program, you can manually reconcile your accounts to determine whether you must send funds to the government for the amounts that you collected for PIS/PASEP and COFINS taxes, or whether you have a credit amount that you can apply to the amounts that are due the following month.

For example, if you paid more in PIS/PASEP and COFINS taxes through your procurement transactions than the amount of PIS/PASEP and COFINS taxes that you collected through your sales transactions, you have a credit amount that you can apply towards PIS/PASEP taxes for the following month.

For example, if the PIS/COFINS on purchases is 1000 BRL and the PIS/COFINS on sales is 800 BRL, the credit for following month is 200 BRL.

If you collected more through your sales transactions than you paid through your procurement transactions, you must remit to the government the difference between the amounts collected and paid, minus any credit from the previous month.

For example, if the PIS/COFINS on sales is 1300 BRL, the PIS/COFINS on purchases is 800 BRL, and the credit from the previous month is 200 BRL, the 300 BRL is due to the government.

The system does not store information about the total amounts paid on procurement transactions and the total amounts that were collected through sales transactions. It also does not store information about credits from previous months. You must manually reconcile your accounts to determine the difference between the amounts paid and collected each month. If you must generate a payment to the government for PIS/COFINS taxes, you must manually process the payment.

When you run the Generate ICMS Magnetic Files - Sintegra program (R76B201), you create a flat file that contains tax information. The system creates record type 54 records in the flat file for PIS and COFINS taxes that lists the amounts of PIS/COFINS taxes from the *notas fiscais* that were processed.

Running the Taxes Netting Process Report

Select Sale Order Processing – Brazil (G76B4211), Taxes Netting Process.

Select Purchase Order Processing – Brazil (G76B4311), Taxes Netting Process.

Setting Data Selection for the Taxes Netting Process

Along with processing options, you set data selection to specify the records to process. To process all of the unprocessed records, set your data selection so that the Processed Flag - Brazil field is *not* equal to 1.

Setting Processing Options for Taxes Netting Process (R76B9011)

Processing options enable you to specify the default processing for programs and reports.

Process

- 1. Mode**

Specify whether the system generates the report in proof or final mode. When you generate the report in final mode and the batch has no errors, the system creates entries in the F0911 table and updates the F76B011 table to indicate that the tax record was processed. Values are:

Blank: Process records in proof mode.

I: Process records in final mode.
- 2. G/L Summary or Detail**

Specify whether the system writes entries to the F0911 table as a summary of the records processed or in detail. Values are:

Blank: Write entries in detail.

I: Write entries in summary.
- 3. G/L Date**

Specify whether the system writes records to the F0911 table by GL Date or by the current date. Values are:

Blank: Current date

I: GL Date
- 4. Date - From**

Specify the starting date for the date range for which the system processes records. You must specify a date.
- 5. Date - To**

Specify the ending date for the date range for which the system processes records. You must specify a date.
- 6. Document Type**

Specify the document type that the system assigns to the records that it writes to the F0911 table. The document type that you specify must exist in the Document Type - All Types UDC table (00/DT). If you leave this processing option blank, the system assigns a document type of JE.
- 7. Domestic Ledger Type**

Specify the ledger type that the system assigns to the records that it writes to the F0911 table. The ledger type that you specify must exist in the Ledger Types UDC table (09/LT). If you leave this processing option blank, the system assigns a ledger type of AA.
- 8. Print Detail or Errors Only**

Leave this processing option blank to print all records on the report. Enter *I* to print only the records for which an error exists.

Versions

- 1. Journal Entry Version**

Specify a version for the Journal Entry MBF Processing Options program (P0900049). If you leave this processing option blank, the system uses version ZJDE0001.

Important! It is recommended that you use the default version of ZJDE0001 or a copy of it. Using a different version might compromise your data integrity.

Working with Service Taxes Paid Externally for Brazil

This section provides an overview of working with service taxes paid externally and discusses how to:

- Enter externally paid INSS tax amounts for a supplier.
- Run the INSS Withholding at Other Companies report.
- Set processing options for INSS Withholding at Other Companies (R76B04009).

Understanding Service Taxes Paid Externally

A supplier who provides a service to you during a month might also provide services to other companies during that month. The other companies might have withheld INSS taxes for the supplier. Occasionally, a supplier might make an INSS contribution for a month through a bank or government agency. You must consider the amounts that other companies withheld and the amounts that a supplier might have contributed for INSS when you calculate the amount of INSS tax that you withhold for the supplier.

You use the Service Taxes Paid Externally program (P76B0403) to enter the information that your supplier gives to you about the INSS tax amounts that others hold for the supplier. You must enter the information about the INSS tax amounts that are held by others before you calculate the INSS taxes which you must withhold for the supplier, and before you calculate IR taxes for the supplier.

You need only enter the amounts that are held by others when your supplier is an individual or cooperative, and when the supplier was paid for services to another company in the same month in which you pay the supplier for services or the supplier made an INSS contribution in the same month in which you pay the supplier.

Printing the INSS Withholding at Other Companies Report

You can generate the INSS Withholding at Other Companies report (R76B04009) to obtain a listing of the information that your suppliers give to you about the INSS tax amounts that other companies have withheld for them. The system prints the report by supplier and provides totals for each supplier. You use Data Selection to specify the records to include in the report.

Form Used to Enter Externally Paid INSS Tax Amounts for a Supplier

| Form Name | FormID | Navigation | Usage |
|---|-----------|---|--|
| Enter Service Tax Amounts Paid Externally | W76B0403A | A/P Tax Processing - Brazil (G76B0414), Service Taxes Paid Externally Click Add on the Work With Service Taxes Paid Externally form. | Enter externally paid INSS tax amounts for a supplier. |

Entering Externally Paid INSS Tax Amounts for a Supplier

Access the Enter Service Tax Amounts Paid Externally form.

| Service Taxes Paid Externally - Enter Service Tax Amounts Paid Externally | |
|---|--------------------|
| OK | Cancel Tools |
| | |
| Address Number * | 49281 |
| INSS Registration Number | |
| G/L Date * | 28/04/05 |
| Document Number for External Service Tax | |
| Service Tax Withholding Location * | 00 |
| Service Tax Amount Basis | 5000.00 |
| Service Tax Amount * | 500.00 |
| Service Tax External Company | |
| CNPJ/CPF Tax ID * | 00.000.000/0025-87 |

Enter Service Tax Amounts Paid Externally form

| | |
|---|--|
| INSS Registration Number | Enter the supplier's Registration Number for INSS. |
| Document Number for External Service Tax | Enter the document number that identifies a specific service tax that is stored externally for a supplier. |
| Service Tax Withholding Location | Specify where the service tax is stored. Values are: 00: External Company 01: Bank |
| Service Tax Amount Basis | Enter the amount that another company paid to the supplier. The INSS service tax that other company withheld is based on this amount. |
| Service Tax Amount | Enter the INSS tax that another company withheld for the supplier. |
| Service Tax External Company | Enter the identifier for a company or bank that is holding INSS taxes for a supplier. You can enter the company or bank name, or any other identifying name or number. |
| CNPJ/CPF Tax ID | Enter the tax ID of the company or bank that is holding the INSS taxes for the supplier. |

Running the INSS Withholding at Other Companies Report

Select A/P Tax Processing - Brazil (G76B0414), INSS/IN89 INSS Withholding at Other Comp.

Setting Processing Options for INSS/IN89 INSS Withholding at Other Comp. (R76B04009)

Processing options enable you to specify the default processing for programs and reports.

Other Company Transactions

| | |
|--------------|--|
| Month | Enter a two-digit value for the month for which the system processes records. For example, enter 05 for May. You must complete this processing option. |
| Year | Specify the fiscal year for the month that you specify in the Month processing option. You must complete this processing option. |

Calculating INSS, ISS, and FUNRURAL Taxes

This section provides overviews of the Tax Calculation ISS, INSS, FUNRURAL program, aggregation and retention for INSS taxes, and calculations for each tax; and discusses how to:

- Run the Tax Calculation ISS, INSS, FUNRURAL program.
- Set processing options for Tax Calculation ISS, INSS, FUNRURAL (R76B4310).

Understanding the Tax Calculation ISS, INSS, FUNRURAL Program

Use the Tax Calculation ISS, INSS, FUNRURAL (R76B4310) program to calculate ISS, INSS and FUNRURAL taxes. You run the Tax Calculation ISS, INSS, FUNRURAL program before you pay vouchers.

The Tax Calculation ISS, INSS, FUNRURAL program orders all vouchers in a date range by GL date and calculates the withholdings of each voucher. When you run the Tax Calculation ISS, INSS, FUNRURAL program, the system generates two lines in the F0411 table for each voucher processed. A positive line is created that is paid to the fiscal authority. A negative line is created that is paid with the voucher. The system requires that the negative lines are included on the first payment to the supplier.

The system generates records in the Voucher Additional Information Brazil (F76B0411) table when you calculate the taxes. During the calculation process, the system writes a record to the Voucher Tax Processed (F76B4012) table as it writes each withholding amount. The F76B4012 table includes information about ISS, INSS, and FUNRURAL taxes, including whether the taxes were already calculated for the voucher. If the process generates INSS tax for a supplier who is an individual, the system writes a record to the Tax Accumulates by AN8 (F76B4016) table for INSS taxes to maintain the monthly accumulated amount. The F76B4016 table accumulates the INSS taxes calculated so that the system can compare the amounts to the INSS monthly maximum for suppliers who are individuals. The system uses the amount in the F76B4016 to determine if the maximum tax withholding has occurred.

The Tax Calculation ISS, INSS, FUNRURAL program recalculates ISS and FUNRURAL taxes that were previously calculated when you process unposted vouchers.

The system selects vouchers that are not paid, whether they are posted or not posted. The system disregards all withholding lines and voided vouchers lines.

Use data selection to select vouchers to process when you calculate ISS and FUNRURAL. The system automatically processes records for all companies for which *BR* exists as the country code in the address book record. Because INSS updates accumulated amounts, the process does not use the data selection when you calculate this tax. Consider creating two versions: one to calculate ISS and FUNRURAL and the other to calculate INSS. Indicate the month and year of the unpaid vouchers to process by specifying the month and year in the processing options.

Important! When the system creates records in the F0911 table during the tax calculation process, it populates the Name - Remark Explanation field (data item EXR) with key identifying information. If you change the value in the Name - Remark Explanation field, you will compromise the integrity of the data and the system might produce inaccurate calculations.

Understanding Aggregation and Retention for INSS

The system calculates both aggregation and retention for INSS taxes for suppliers who are individuals or cooperatives. Before the system can correctly calculate aggregation and retention percentages for INSS taxes, you must:

- Use the Review A/P Tax Code program (P76B0401) to create tax codes for the INSS tax rates for aggregation and for retention.

For example, you might set up code INSA for a tax rate for INSS aggregation and INSR for a tax rate for INSS retention. Your business needs might require you to set up several codes for aggregation and for retention.

- Set up purchase use codes in the Purchase Use UDC table (76/PU) to define the aggregation and retention combinations that the system uses when calculating INSS taxes.

The system uses the values that you enter in the Description 02 field of the Purchase Use UDC table to determine the tax to apply to the supplier.

- Assign to suppliers of services the tax codes that specify the percentage of taxes aggregated or withheld.

You assign tax codes in the Address Book Revisions program (P01012), and the system stores the values in the Address Book Brazilian Tag File (F76011) table. The fields that you must complete with the tax codes are on the Tax Information tab of the Address Book Additional Information - Brazil form. If both aggregation and retention apply, you must assign a code for each to the supplier. The system uses the tax codes that you enter in the Address Book Revisions program only if you do not specify a code in the Purchase Use processing option in the Tax Calculation ISS, INSS, FUNRURAL program.

- Use the Brazilian P. O. Additional Information program (P4310BR) to assign a purchase use code to services on purchase orders.

The system writes the purchase use code to the Purchase Order Detail Tag File - Brazil table (F76432) table. If the supplier for a service is subject to INSS aggregation and retention, assign a purchase use code that includes a value in the Description 02 field of the purchase use code. The system uses the purchase use code that you enter here only if you do not specify a code in the Purchase Use processing option in the Tax Calculation ISS, INSS, FUNRURAL program.

When you run the Tax Calculation ISS, INSS, FUNRURAL program, the system uses this hierarchy to determine the retention and aggregation amounts:

- The system uses the value in the Purchase Use processing option if a value exists in the processing option.

The system then accesses the tax rate in the Tax Code (F76B0401) table and calculates the amount of the aggregation or retention. If the code in the processing option specifies a purchase use code that has tax codes that have both aggregation and retention rates assigned, then the Tax Calculation ISS, INSS, FUNRURAL program accesses the Address Book Brazilian Tag File (F76B0401) table twice to obtain both rates. If you complete this processing option with a valid purchase use code, the system ignores the value that exists in the Retention/Aggregation field (data item BRRTA) in the F76B0401 table.

- If you do not complete the Purchase Use processing option, the system uses the purchase use code from the F76432 table.

If no value for a purchase use code exists in the F76432 table, the system displays an error message describing the error in the setup.

Note. The system ignores the value in the INSS Y/N field (data item BRKINS) in the Item Master Regional Information program (P4101BR) and Item Branch Regional Information program (P76412B) when you run the Calculation ISS, INSS, FUNRURAL program.

Understanding Tax Calculations for ISS

Imposto sobre Serviços (ISS) is a tax that is defined by the city of origin of the job or service. The tax rates vary by city and type of service. Each type of service that is taxed by a city has a specific code. Tax rates are determined by the list of services and their codes. Each city can establish different tax rates per type of service.

Some cities require that the ISS tax amount be declared in the service *nota fiscal* by including the tax in the price, as is done for the ICMS tax. Other cities require that the tax be added to the price as a separate item, as is done for the IPI tax. Jobs or services that are subject to the ISS tax are exempt from ICMS and IPI taxes.

If a transaction is subject to ISS tax, the system:

- Calculates the amount of the withholding, based on information in the F7601B table, the processing options, or the F76B011 table.

The ISS tax is calculated for the entire voucher and the tax amount is paid when the first line of the voucher is paid.

- If there is no information in the F76B011 table about ISS tax, the system verifies the existence of a tax code in the Address Book Brazilian Tag File (F76011) table and applies the rate associated with the code.

Note. In the rare situation in which the calculated tax exceeds the amount of the first pay item, the amount for the first item becomes a negative amount. You must manually adjust the pay item according to your procedures.

Understanding Tax Calculations for INSS

Instituto Nacional do Seguro Social (INSS) is the national social security tax. Some types of services are subject to INSS tax, and the tax amount is added to the value of the provided service.

If a transaction is subject to INSS tax for individuals, the system does the following in this order:

- For standard vouchers, verifies the existence of a tax code in the F76011 table.
- Accesses the purchase order for the *nota fiscal*.
- Uses the Description 02 field in the Purchase Use (76/PU) UDC table to determine the INSS aggregation and INSS retention rates.

You set up INSS aggregation and INSS retention rates in the Tax Code table (F76B0401).

- Calculates the aggregation and retention amounts.
- Accesses the F76B0403 table to determine the amount of INSS tax, if any, which was withheld for the supplier by other companies.

The system accesses the F76B0403 table to track the monthly maximum tax amount.

- Accesses the INSS Maximum Monthly Tax Amount (76B/TX) UDC table to determine the maximum INSS retention amount for the associated tax code in the F76B0401 table.
- Compares the sum of the calculated INSS retention amount and the INSS tax that was withheld for the supplier by other companies to the maximum retention amount in UDC 76B/TX, and returns the greater of the calculated tax or the maximum INSS retention amount.
- The INSS tax is calculated for the entire voucher and the tax amount is paid when the first line of the voucher is paid.

If a transaction is subject to INSS tax for corporate entities, the system does the following in this order:

- For standard vouchers, verifies the existence of a tax code in the F76011 table.
- Accesses the purchase order for the *nota fiscal*.
- Calculates the amount of the withholding, based on the reduction percentage.

The INSS tax is calculated for the entire voucher and the tax amount is paid when the first line of the voucher is paid.

Note. In the rare situation in which the calculated tax exceeds the amount of the first pay item, the amount for the first item becomes a negative amount. You must manually adjust the pay item according to your procedures.

Understanding Tax Calculations for FUNRURAL

Fundo de Assistência e Previdência do Trabalhador Rural (FUNRURAL) is the income tax for agricultural businesses. It is similar to the IR tax for corporations, but the rate at which the income is taxed is different.

If a transaction is subject to FUNRURAL tax, the system does the following, in this order:

- Verifies the existence of a tax code in the F76011 table.
- Calculates the aggregate amount, based on the percentage of the retention.

The FUNRURAL tax is calculated for the entire voucher and the tax amount is paid when the first line item is paid.

Running the Tax Calculation ISS, INSS, FUNRURAL Program

Select A/P Tax Processing - Brazil (G76B0414), Tax Calculation ISS, INSS, FUNRURAL.

Setting Processing Options for Tax Calculation ISS, INSS, FUNRURAL (R76B4310)

Processing options enable you to specify the default processing for programs and reports. For reports, processing options enable you to specify the information that appears on reports.

General

| | |
|-----------------------|---|
| Address Number | Enter the number of the supplier to be processed. If you leave this processing option blank, the system processes the records of all suppliers. |
| GL Date Month | Enter the month for which the system selects records to process. |
| GL Date Year | Enter the year for which the system selects records to process. |

ISS

| | |
|--------------------------------|--|
| Calculate ISS | Enter <i>/</i> to calculate ISS taxes. |
| Brazil Tax Information | Specify the tax code that the system uses to determine the tax rate for the vouchers being processed. The system applies the tax rate that is associated with the tax code in the Tax Code (F76B0401) table. |
| Flag for Same City | Enter <i>/</i> to calculate ISS retention when the value in the City field in the address book record for the supplier is the same as the value in the City field in the address book record for the company. If you leave this processing option blank or the values are not the same, the system does not calculate the tax. |
| Pay Status Code | Enter the pay status code that the system assigns to the negative tax line that the system creates in the voucher. The negative tax line is subtracted from the amount paid to the supplier. |
| Pay Status Code Tax ISS | Enter the pay status code that the system assigns to the positive tax line that the system creates in the voucher. The positive tax line is the amount that you send to the tax authority. |

INSS

| | |
|--------------------------|--|
| Calculate INSS | Enter <i>/</i> to calculate INSS taxes. |
| Purchase Use Code | <p>Enter a purchase use code that instructs the system to calculate both retention and aggregation for INSS contributions. A valid purchase use code for this processing option must meet this criteria:</p> <ul style="list-style-type: none"> • Exist in the 76/PU UDC table. • Contain valid contribution codes for INSS retention and INSS aggregation in the Description 02 field, with the values separated by a slash (/). You set up valid tax codes in the Tax Code (F76B0401) table. • Be formatted so that the tax code for INSS retention is on the left of the slash and the tax code for INSS aggregation is on the right of the slash. <p>For example, if the F76B0401 table contains a value of INSR for INSS retention and a value of INSA for INSS aggregation, the Description 02 field for a valid value for this processing option would be <i>INSR/INSA</i>. In this example, a value of INSA/INSR in the Description 02 field would cause the system to ignore the Purchase Use Code processing option because the tax code for INSS aggregation is to the left of the slash, making the value invalid.</p> <p>When you complete the Purchase Use Code processing option with a valid value, the system ignores the value in the Brazil Tax Information processing option in this program and calculates both INSS retention and aggregation contributions. If you enter an invalid value in the Purchase Use Code</p> |

processing option, the system does not calculate INSS contributions. Codes that exist in the 76/PU UDC table are invalid for the Purchase Use Code processing option if no value exists in the Description 02 field or the values are set up incorrectly.

Brazil Tax Information

Specify the tax code that the system uses to determine the tax rate for the vouchers being processed. The system applies the tax rate that is associated with the tax code in the Tax Code (F76B0401) table. If you do not complete this processing option, the system uses this hierarchy to determine the tax to apply:

- The purchase use code in the Purchase Order Detail Tag File - Brazil (F76432) table.
- The tax code in the F76011 table for the supplier.

Pay Status Code

Enter the pay status code that the system assigns to the negative tax line that the system creates in the voucher. The negative tax line is subtracted from the amount paid to the supplier.

Pay Status Code INSS

Enter the pay status code that the system assigns to the positive tax line that the system creates in the voucher. The positive tax line is the amount that you send to the tax authority.

Maximum Retention Amount

Specify the monthly maximum retention amount for suppliers who are individuals. If the sum of the retentions that are calculated for the entire month is more than the amount that is entered in this processing option, no INSS tax is calculated. If you leave this processing option blank, the system uses the maximum retention amount as specified in the 76B/TX UDC table.

FUNRURAL

Calculate FUNRURAL

Enter 1 to calculate FUNRURAL taxes.

Brazil Tax Information for FUNRURAL

Specify the tax code that the system uses to determine the tax rate for the vouchers being processed. The system applies the tax rate that is associated with the tax code in the F76B0401 table.

Pay Status Code

Enter the pay status code that the system assigns to the negative tax line that the system creates in the voucher. The negative tax line is subtracted from the amount paid to the supplier.

Pay Status Code FUNRURAL

Enter the pay status code that the system assigns to the positive tax line that the system creates in the voucher. The positive tax line is the amount that you send to the tax authority.

Calculating IR, PIS/PASEP, COFINS, and CSLL Contributions fro Brazil

The system calculates IR, PIS/PASEP, COFINS, and CSLL contributions automatically when you run the automatic payment process. This section discusses the automatic payment process. You can also enter the contribution amounts when you process manual payments.

This section provides an overview of the tax calculations, lists a prerequisite, and discusses how to set processing options for Brazilian Payment Process - PO (P76B470).

Understanding Calculations for IR, PIS/PASEP, COFINS, and CSLL Taxes

Before you run the Create Payment Control Groups program (R04570), set the processing options in the Brazilian Payment Process - PO program (P76B470). Access the Brazilian Payment Process - PO program from the A/P Tax Processing - Brazil (G76B0414) menu. The system uses the values in these processing options to define the Brazil tax information that the system uses to calculate the withholdings for each voucher of the payment. The Create Payment and the Brazilian Payment Process - PO programs must have matching versions. For example, if you use version ZJDE0010 for the Create Payment Control Groups program to create payments for Brazil, you must set the processing options for the payment process in the ZJDE0010 version of the Brazilian Payment Process - PO program.

Create Payment Control Groups Program (R04570)

The Create Payment Control Groups program (R04570) calculates IR, PIS/PASEP, COFINS, and CSLL taxes. When you run the Create Payments program, the system:

- Disregards lines for ISS, INSS and FUNRURAL withholding.
- Calculates IR, PIS/PASEP, COFINS, and CSLL withholdings for each voucher line of the payment.

The system searches for accumulated amounts in the Tax Accumulates by AN8, Company (F76B4017) table before performing the tax calculations.

- Saves the tax calculation information to the Payment Processing - Detail (F04573) and F04573 Brazilian Temp WH File (F76B473T) tables.

The system creates one line for each type of withholding calculated saves it to the F04573T table.

- Updates the A/P Payment Processing - Summary (F04572) table with the payment amount, less the taxes calculated.

For PIS/PASEP, COFINS, and CSLL withholdings, if the accumulated gross amount in a month is less than the minimum amount that is entered in the Minimum Withholding Amount processing option in the Brazilian Payment Process - PO program, the system writes the tax amount and the gross amount for the voucher line in the PIS, COFINS and CSLL Below Min. (F76B411A) table for control purposes.

IR Tax

Imposto de Renda (IR) is a federal income tax that is levied on services that are provided by individuals or legal entities. The system calculates the tax for each line when you run the Create Payment Control Groups program.

Pessoa Física is IR tax levied on individuals. For most services, the taxable income is the value of the service that is provided. Before you calculate this tax, you must:

- Enter the number of dependents for the service provider in the IR Progressive (F76B0402) table.

The application uses the number of dependents to find the corresponding amounts and deductions in a scaled table of income brackets.

- Run the Tax Calculation ISS, INSS, FUNRURAL program to calculate ISS, INSS, and FUNRURAL taxes.

If a voucher is subject to IR tax, the system performs these actions for individuals in this order:

- Checks the Voucher Tax Processed (F76B4012) table to verify that ISS, INSS, and FUNRURAL taxes were calculated.

- For payments to suppliers, checks that the negative withholding lines for ISS, INSS, and FUNRURAL are included in the payment.
- Checks that the supplier does not have another payment in process because the system uses accumulated amounts that might be affected by another payment.
- Verifies the existence of a tax code in the Address Book Brazilian Tag File (F76011) table.
- The system uses the INSS maximum amount for the month to determine the applicable amount.

The system saved the INSS maximum amount to the F76B4012 table when the system calculated INSS tax for this voucher.

- Reduces the IR tax base by the amount of the INSS tax withheld.
- Calculates the withholding amount based on the percentage of the reduction of the basis of calculation, the number of dependents, whether the individual is retired, and the tax rate.

The system calculates IR tax for each line on the voucher and pays the voucher line and the withholding line in the same payment.

- Creates a line in the Voucher Additional Information Brazil (F76B0411) table for IR withholding.
- Writes two lines to the F0411 table; one that is a positive amount and that is paid to the fiscal authority and one that is a negative amount and that is paid with the voucher.
- Updates the Tax Accumulates by AN8, Company (F76B4017) table.

The system accumulates by month, tax ID of the supplier, tax ID of the company, and tax type (IR or INSS) the gross amounts and contributions amounts paid.

Note. INSS tax is accumulated because the IR amount is considered in the INSS calculations.

Pessoa Jurídica is the IR tax that is levied on legal entities. For corporate entities, the tax rate varies, according to the type of service. The taxable income is the value of the provided services.

If a transaction is subject to IR tax, the system performs these actions for corporate entities in this order:

- For payments to suppliers, checks that the negative withholding lines for ISS, INSS, and FUNRURAL are included in the payment.
- Checks that the supplier does not have another payment in process because the system uses accumulated amounts that might be affected by another payment.
- Verifies the existence of a tax code in the F76011 table.
- Calculates the withholding amount based on the percentage of the retention.

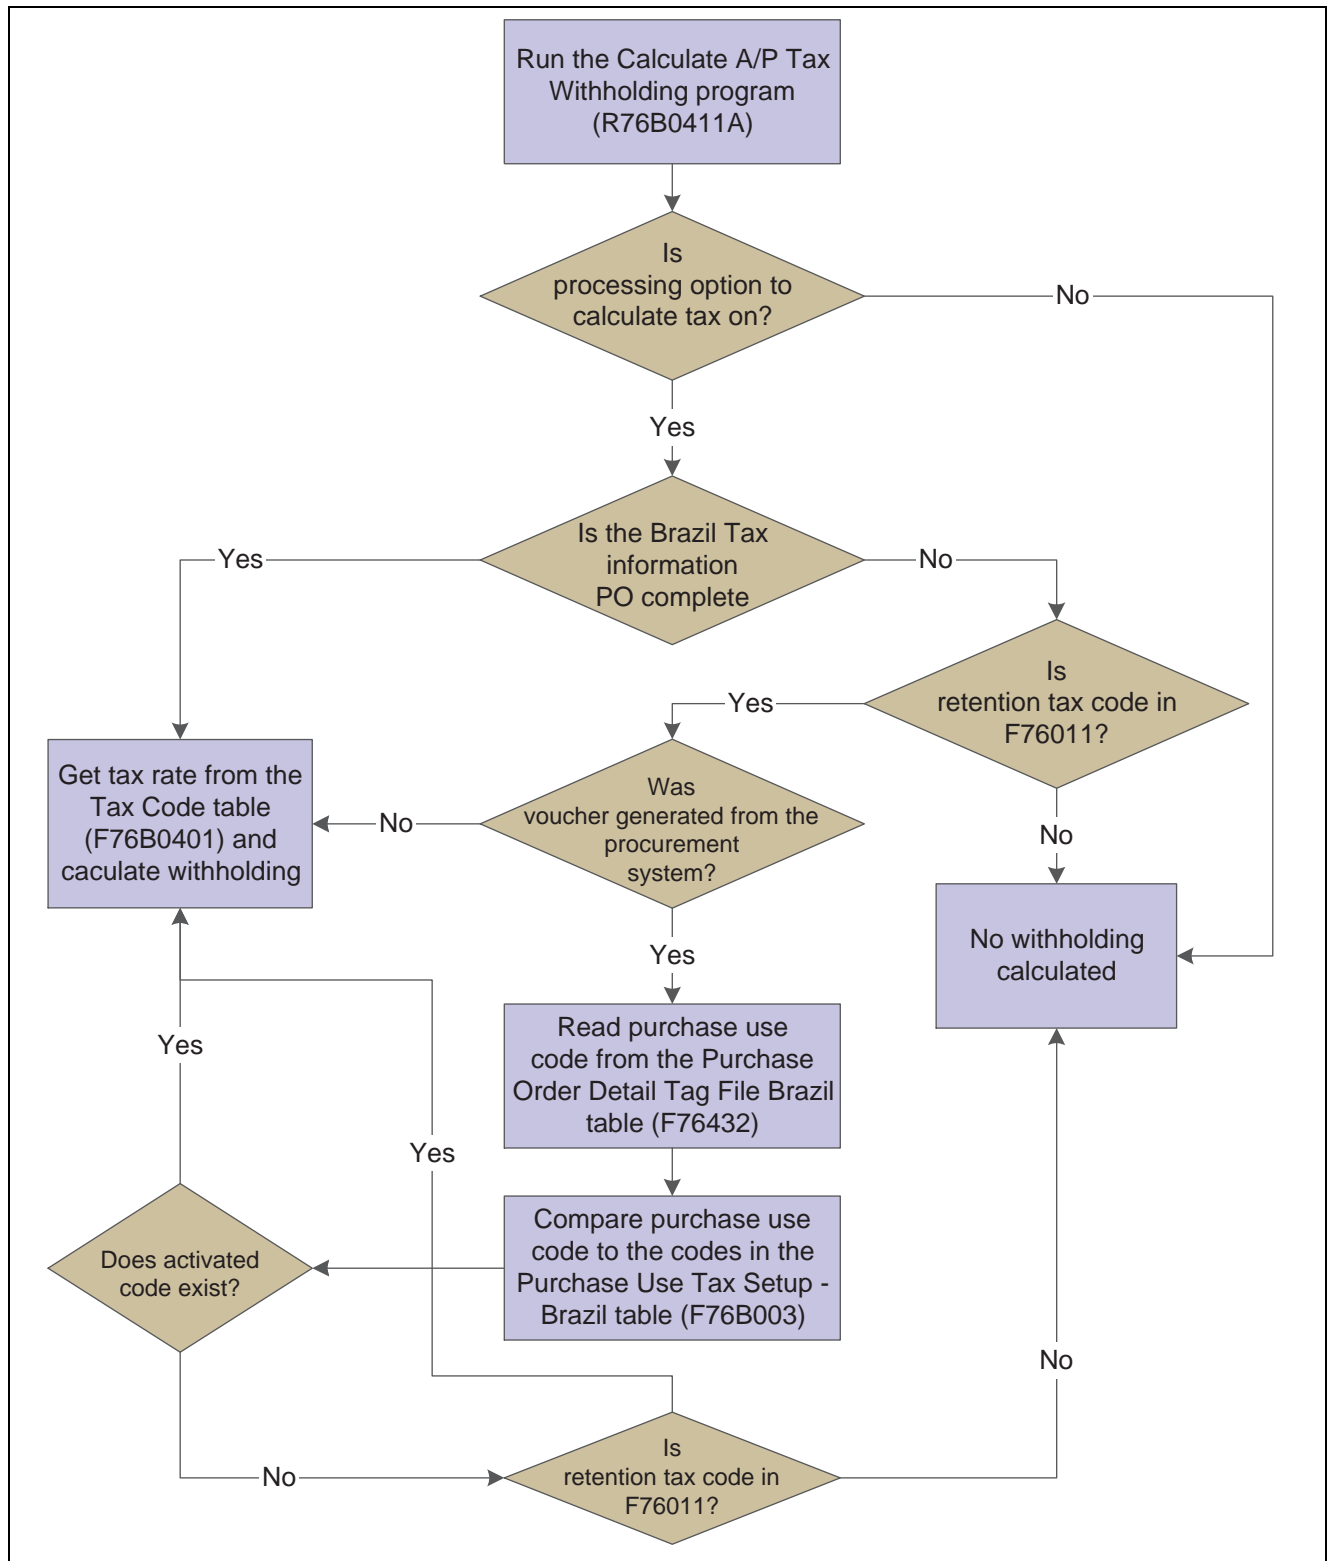

The IR tax is calculated for each line of the voucher and is paid with the corresponding service.

- Creates a line in the F76B0411 table for IR withholding.
- Writes two lines to the F0411 table; one that is a positive amount and that is paid to the fiscal authority and one that is a negative amount and that is paid with the voucher.
- Updates the Tax Accumulates by AN8, Company (F76B4017) table.

The system accumulates by month, tax ID of the supplier, tax ID of the company, and tax type (IR, INSS) the gross amounts and contributions amounts paid.

PIS/PASEP, COFINS, and CSLL Contributions

The system uses this process flow to determine whether to calculate PIS/PASEP, COFINS, and CSLL contributions:

Process flow to determine whether to calculate PIS/PASEP, COFINS, and CSLL contributions

If withholdings apply to the payment, the system:

- Checks the Voucher Tax Processed (F76B4012) table to verify that ISS and INSS taxes were calculated.
- For payments to suppliers, checks that the negative withholding lines for ISS, INSS, and FUNRURAL are included in the payment.
- Checks that the supplier does not have another payment in process because the system uses accumulated amounts that might be affected by another payment.
- Calculates the withholding for each line on the voucher.

Each withholding that the system calculates is generated as a new line of the voucher.

- Creates a line in the F76B0411 table for PIS/PASEP, COFINS, and CSLL contributions.

Vouchers subject to PIS/PASEP, COFINS, and CSLL contributions do not generate contributions if the accumulated gross amount in a month is less than the established minimum. In the first payment in which the accumulated gross amount is greater than the minimum, the system creates a line in the F76B0411 table.

- Writes two lines to the F0411 table; one that is a positive amount and that is paid to the fiscal authority and one that is a negative amount and that is paid with the voucher.
- Updates the F76B4017 table.

The system accumulates by month, tax ID of the supplier, tax ID of the company, and tax type (PIS/PASEP, COFINS and CSLL) the gross amounts and contributions amounts paid.

- If the accumulated gross amount in a month is less than the minimum amount in the Minimum Withholding Amount processing option in the Brazilian Payment Process - PO program, or if the first payment that the accumulated gross amount is greater than the minimum, the system writes the tax amount and the gross amount for the voucher line in the PIS, COFINS and CSLL Below Min. (F76B411A) table.

Writing Payments

When you write the payment, the system checks that the month and the year of the write operation is equal to the month and the year of the create payment operation.

Updating Payments

When you update the payment, the system:

- Copies all calculated information to the payment tables (F0413 and F0414).
- Creates a line in the F76B0411 table for IR, PIS/PASEP, COFINS, and CSLL contributions.
- Writes two lines to the F0411 table; one that is a positive amount and that is paid to the fiscal authority and one that is a negative amount and that is paid with the voucher.
- Updates the accumulated taxes table (F76B4017).

The system accumulates by month, tax ID of the supplier, tax ID of the company, and tax type (IR, INSS, PIS/PASEP, COFINS and CSLL) the gross amounts and contributions amounts paid.

Prerequisite

You must calculate INSS, ISS, and FUNRURAL before calculating IR, PIS/PASEP, COFINS, and CSLL taxes.

Setting Processing Options for Brazilian Payment Process - PO (P76B470)

Processing options enable you to specify the default processing for programs and reports. For reports, processing options enable you to specify the information that appears on reports.

PIS

| | |
|-----------------------------------|---|
| Brazil Tax Information | Specify the tax code that the system uses to determine the tax rate for the vouchers being processed. The system applies the tax rate that is associated with the tax code in the F76B0401 table. If you do not complete this processing option, the system uses this hierarchy to determine the tax to apply: <ul style="list-style-type: none"> • The purchase use code in the F76432 table. • The tax code in the F76011 table for the supplier. |
| Minimum Amount to Withhold | Enter the minimum amount on which the system calculates withholding. The system calculates withholding taxes for a supplier only when the total of the vouchers processed for the supplier exceed this amount. |
| Pay Status Code - PIS | Specify a value from the Pay Status Code (00/PS) UDC that indicates the pay status of the pay item created to offset the withholding amount. |

COFINS

| | |
|-----------------------------------|---|
| Brazil Tax Information | Specify the tax code that the system uses to determine the tax rate for the vouchers being processed. The system applies the tax rate that is associated with the tax code in the F76B0401 table. If you do not complete this processing option, the system uses this hierarchy to determine the tax to apply: <ul style="list-style-type: none"> • The purchase use code in the F76432 table. • The tax code in the F76011 table for the supplier. |
| Minimum Amount to Withhold | Enter the minimum amount on which the system calculates withholding. The system calculates withholding taxes for a supplier only when the total of the vouchers processed for the supplier exceed this amount. |
| Pay Status Code - COFINS | Specify a value from the Pay Status Code (00/PS) UDC that indicates the pay status of the pay item created to offset the withholding amount. |

CSLL

| | |
|-----------------------------------|---|
| Brazil Tax Information | Specify the tax code that the system uses to determine the tax rate for the vouchers being processed. The system applies the tax rate that is associated with the tax code in the F76B0401 table. If you do not complete this processing option, the system uses this hierarchy to determine the tax to apply: <ul style="list-style-type: none"> • The purchase use code in the F76432 table. • The tax code in the F76011 table for the supplier. |
| Minimum Amount to Withhold | Enter the minimum amount on which the system calculates withholding. The system calculates withholding taxes for a supplier only when the total of the vouchers processed for the supplier exceed this amount. |

| | |
|-------------------------------|--|
| Pay Status Code - CSLL | Specify a value from the Pay Status Code (00/PS) UDC that indicates the pay status of the pay item created to offset the withholding amount. |
| IR | |
| Brazil Tax Information | Specify the tax code that the system uses to determine the tax rate for the vouchers being processed. The system applies the tax rate that is associated with the tax code in the F76B0401 table. |
| Payment Terms Code | Specify the code that identifies the terms of payment. You set up codes in the Payment Terms program (P0014). If you leave this processing option blank, the system identifies the current period that is set up in the fiscal date pattern, and then uses the payment term that is associated with the current period. You set up the association between payment terms and current periods in the Cross Reference - Due Date Tax (76B/VE) UDC table. |
| Pay Status Code | This processing option is not used. Specify a value from the Pay Status Code (00/PS) UDC that indicates the pay status of the pay item the system creates to offset the withholding amount. |
| Maximum INSS | Enter the maximum withholding amount. The system uses this amount to determine whether the payments being processed should have INSS taxes withheld. The system uses the value in this processing option only if the F76B4012 table does not contain this information. |

Printing the INSS Withholding Certificate

This section provides an overview of the INSS withholding certificate, lists a prerequisite, and discusses how to print the withholding certificate.

Understanding the INSS Withholding Certificate

After you process the vouchers for suppliers who performed services for you, you run the INSS/IN89 Generate INSS Withholding Cert program (R76B04008) to print the INSS withholding certificates for the suppliers. The system prints one certificate per voucher. The certificate includes information about the supplier and the transaction for which you paid the supplier:

- The supplier's INSS Registration number, CBO code, and CNPJ/CPF number.
- The INSS tax amounts that you withheld for the supplier.
- The amount on which the withheld amount is based.
- The voucher number and date.
- The date when you issued the certificate.

Prerequisite

Run the Tax Calculation ISS, INSS, FUNRURAL (R76B4310) program to calculate the INSS taxes for the suppliers.

See [Chapter 27, “\(BRA\) Processing Supplier Withholding,” Calculating INSS, ISS, and FUNRURAL Taxes, page 500.](#)

Printing the INSS Withholding Certificate

Select A/P Tax Processing - Brazil (G76B0414), INSS/IN89 Generate INSS Withholding Cert.

Maintaining ISS and INSS Tax Records

This section provides an overview of records maintenance for taxes and discusses how to maintain records.

Understanding Tax Record Maintenance

The amounts for ISS, INSS, and FUNRURAL taxes are included on the invoices that your suppliers send to you. If you discover a rounding error in the amounts, you can use the F0411 Taxes Maintenance program (P76B4200) to correct the amounts. You can modify only unposted amounts.

When you change a tax amount, the system updates the F0411 and F76B0411 tables with the new values, and updates the F76B4012 table to show that the tax was changed manually.

Note. Use the Taxes Maintenance program only to correct rounding differences in the tax amounts. Use the Review A/P Tax Code (P76B0401) program to correct setup errors that cause errors in the tax amounts. Use the Nota Fiscal Check & Close program (P76B900) to process other changes to tax amounts.

Generating a Summary Report for CSLL, COFINS, and PIS/PASEP Taxes

This section provides an overview of the summary report for CSLL, COFINS, and PIS/PASEP taxes and discusses how to:

- Run the report.
- Set processing options for Summary IRPJ/CSLL/COFINS/PIS (R76B04010).

Understanding the Summary Report for CSLL, COFINS, and PIS/PASEP Taxes

After you post vouchers and run the Create Payment Control Groups program, you can generate a report that summarizes the taxes withheld for a supplier. The Summary IRPJ/CSLL/COFINS/PIS report (R76B04010) includes:

| Report Section | Contents |
|---|--|
| Header | Calendar year of the report. |
| 1. Payment Source (<i>Fonte Pagadora</i>) | The name and CNPJ number of the company who withheld taxes from the supplier. |
| 2. Corporation (Supplier of goods and services) (<i>Pessoa Juridica Fornecedora de Bens ou de Serviços</i>) | The supplier for whom the taxes are withheld. |
| 3. Relation of Payments to Withholdings (<i>Relação de Pagamentos e Retenções</i>) | The details of the transactions, which includes the month of payment, the Receita Code, total amount of all vouchers paid to the supplier per Receita Code, and the amount withheld. |

| Report Section | Contents |
|--|--|
| 4. Complementary Information (<i>Informações Complementares</i>) | An empty space on the report in which comments can be written. |
| 5. Person Responsible for report data (<i>Responsável Pelas Informações</i>) | The printed name of the person responsible for the report, the date, and a signature line. This section appears on every page of the report. |

You use data selection to select the supplier for whom to process records, and use processing options to specify the calendar year, name of person responsible for the report, and the date of the report.

Running the Summary of IRPJ/CSLL/COFINS/PIS Report

Select A/P Tax Processing (G76B0414), Summary IRPJ/CSLL/COFINS/PIS.

Setting Processing Options for Summary of IRPJ/CSLL/COFINS/PIS (R76B04010)

Processing options enable you to specify the default processing for programs and reports.

General

- | | |
|--|--|
| 1. Calendar Year | Specify the four digit calendar year for which the system processes records. |
| 2. Month of Payment - Beginning | Specify the first month for which the system processes records. |
| 3. Month of Payment - Ending | Specify the last month for which the system processes records. |

Signature

- | | |
|--------------------------------------|--|
| 1. Name of Person Responsible | Specify the name of the person who is responsible for producing the report. The system prints the name that you specify on each page of the report, along with a signature line. |
| 2. Report Date | Specify the date of the report. The system prints the date that you specify on each page of the report near the signature line. |

Generating the Text File for Taxes for Brazil

The Text File Generation for Fed. Tax Auth. program (R76B04006) generates a flat file for IR taxes for a 12-month period. The report is organized by the address book numbers of the suppliers and by the Recieta code that is assigned to the suppliers.

This section discusses how to:

- Run the Text File Generation for Fed. Tax Auth report.
- Set processing options for Text File Generation for Fed. Tax Auth. (R76B04006).

Running the Text File Generation for Fed. Tax Auth. Report

Select A/P Tax Processing - Brazil (G76B0414), Text File Generation for Fed. Tax Auth.

Setting Processing Options for Text File Generation for Federal Tax Authority (R76B04006)

Use these processing options to specify company information and the period and year for which the report is run.

Company

1. **Company - CNPJ / CGC** Enter the CNPJ/CGC of your company.
2. **Company Name** Enter your company name.
3. **Contact Person - CPF** Enter the CPF of the contact person in your company.

Person

1. **Responsible Person - CPF** Enter the CPF of the person responsible for the submission of magnetic media.
2. **Name of Responsible Person** Enter the name of the person responsible for the submission of magnetic media.
3. **Area Code** Specify the prefix for the telephone number.
4. **Telephone Number** Specify the telephone number of the person authorized to handle questions or problems about the text file.
5. **Responsible for CNPJ - CPF** Enter the name of the person responsible for the submission of magnetic media.

Directory

1. **Company Number** Enter the company number.
2. **From Date** Specify the beginning of the range of dates from which you want to select transactions.
3. **Thru Date** Specify the end of the range of dates from which you want to select transactions.
4. **Enter the Path for File Creation** Specify the directory where the system saves the text file that it generates.

Process

- Declarant Nature** Enter 0 if the company filing the report is a private legal entity other than an investment administration entity. Enter 5 if the company filing the report is a legal entity or federal public entity other than an investment administration entity.

Printing Withholding Tax Reports for Brazil

This section provides an overview of withholding tax reports and discusses how to:

- Run the INSS report.
- Set processing options for INSS Report (R76B04001).
- Run the FUNRURAL report.
- Set processing options for FUNRURAL Report (R76B04002).
- Run the DARF report.
- Set processing options for DARF (R76B04003).
- Run the Statement of Earnings - Individual report.
- Set processing options for Statement of Earnings - Individual (R76B04004).
- Run the Statement Issue - Corporate report.
- Set processing options for Statement Issue - Corporate (R76B04005).

Understanding Withholding Reports

After the system calculates the taxes, you can generate reports and magnetic media to meet legal requirements. You generate a weekly collection report and an annual report that informs the federal Department of Revenue of the individuals and legal entities for whom you calculated taxes.

INSS Report

The INSS Report program (R76B04001) produces a report that contains the withheld amounts of INSS taxes during period (monthly) accounting. You determine the period to report by setting processing options. The system selects data from the F76B0411 table for the period that you select. The report summarizes by voucher the INSS amount that your company withholds, and shows the amounts and open amounts for each company, INSS code, and supplier address book number combination. The report also includes the *Código Brasileiro de Operações* (CBO) code and the supplier's INSS registration number.

FUNRURAL Report

Use this program to print the withheld amounts of FUNRURAL taxes during period (month) accounting. You determine the period to report by setting processing options. The system selects data from the F76B0411 for the period that you select. The report shows the amounts and open amounts for each company and supplier address book number combination.

DARF Report

Use this program to print the withheld amounts of IR taxes during period (month) accounting. You determine the period to report by setting processing options. The system selects data from the F76B0411 table for the period that you select. The report shows the amounts and open amounts for each company and supplier address book number combination.

You use this report to gather information that is required for the DARF report.

Statement of Earnings - Individual Report

Use this program to print the withheld amounts of IR taxes for individuals during period (month) accounting. This report runs over the F0101 and F76B0411 tables for the period that you select. This program gathers data only for address book records for which the Person/Corporation Code is 1. You determine the period to report by setting processing options.

The report shows the accumulated tax amounts and the basis of the calculation for each IRRF code, address book number, and company.

Statement Issue - Corporate Report

Use this program to print the withheld amounts of IR taxes for corporate entities during period (month) accounting. This report runs over the F0101 and F76B0411 tables for the period that you select. This program gathers data only for address book records for which the Person/Corporation Code is 2. You determine the period to report by setting processing options.

The report shows the accumulated tax amounts and the basis of the calculation for each IRRF code, period, address book number, and company.

Prerequisites

Before you complete the tasks in this section:

- Add the CBO code to each supplier who is included in the report.
You add this code in the Complementary ID field on the Address Book Additional Information - Brazil form in the Address Book Additional Information - Brazil program (P01012BR).
- Run the Tax Calculation ISS, INSS, FUNRURAL (R76B4310) to calculate the INSS taxes for suppliers.

Running the INSS Report

Select A/P Tax Processing - Brazil (G76B0414), INSS Report.

Setting Processing Options for INSS Report (R76B04001)

Use these processing options to specify the period and year for which the report is run.

INSS

- | | |
|--|--|
| 1. Period Number - General Ledger | Enter the period number of the reporting period. |
| 2. Fiscal Year | Specify the fiscal year for the month that you specify in the Month processing option. You must complete this processing option. |

Running the FUNRURAL Report

Select A/P Tax Processing - Brazil (G76B0414), FUNRURAL Report.

Setting Processing Options for the FUNRURAL Report (R76B04002)

Use these processing options to specify the period and year for which the report is run.

FUNRURAL

- | | |
|--|--|
| 1. Period Number - General Ledger | Specify the reporting period. |
| 2. Fiscal Year | Specify the fiscal year for the month that you specify in the Month processing option. You must complete this processing option. |

Running the DARF Report

Select A/P Tax Processing - Brazil (G76B0414), DARF.

Setting Processing Options for DARF (R76B04003)

Use these processing options to specify the period and year for which the report is run.

DARF

- | | |
|--|--|
| 1. Period Number - General Ledger | Specify the reporting period. |
| 2. Fiscal Year | Specify the fiscal year for the month that you specify in the Month processing option. You must complete this processing option. |

Running the Individual Withholding Report

Select A/P Tax Processing - Brazil (G76B0414), Statement of Earnings - Individual.

Setting Processing Options for Statement of Earnings - Individual (R76B04004)

Use these processing options to specify the range of dates for which the report is run.

Period

- | | |
|---------------------|---|
| 1. From Date | Specify the beginning of the range of dates from which you want to select transactions. |
| 2. Thru Date | Specify the end of the range of dates from which you want to select transactions. |

Company

- | | |
|---|---|
| 1. Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. Responsible Name For Information: | Enter the name of the person responsible for the submission of magnetic media. |

Running the Statement Issue - Corporate Report

Select A/P Tax Processing - Brazil (G76B414), Statement Issue - Corporate.

Setting Processing Options for Statement Issue - Corporate (R76B04005)

Processing options enable you to specify the default processing for programs and reports.

Period

- | | |
|---------------------|---|
| 1. From Date | Specify the beginning of the range of dates from which the system selects transactions. |
| 2. Thru Date | Specify the end of the range of dates from which the system selects transactions. |

Company

- | | |
|---|---|
| 1. Company | Specify the company for which you process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. Responsible Name for the Information: | Enter the name of the person who is responsible for the submission of magnetic media. |

CHAPTER 28

(BRA) Working With Sales Order Processing for Brazil

This chapter provides overviews of processing sales orders in Brazil and the *nota fiscal*, and discusses how to:

- Enter additional sales order information for Brazil.
- Generate outbound *nota fiscais* for sales orders.
- Process PIS/PASEP and COFINS.
- Enter additional charges.
- Work with print messages for *notas fiscais*.
- Review outbound *notas fiscais*.
- Print outbound *notas fiscais*.
- Update sales in Brazil.
- Enter transfer orders for Brazil.
- Enter stand-alone *notas fiscais*.
- Work with returns, reverses, and cancellations.

Understanding Sales Order Management for Brazil

In Brazil, the government requires that businesses maintain detailed information about all merchandise and associated taxes during the delivery process. The information accompanies shipments in the *nota fiscal*.

When you use the JD Edwards EnterpriseOne Sales Order Management system in Brazil, you associate applicable Brazilian taxes with your sales orders. You then generate and print *notas fiscais* for the orders. When you generate the *notas fiscais*, the system assigns a temporary number to the order. You can use this temporary number when you review or revise your orders. When you print *notas fiscais*, the system assigns the appropriate number from the numbering sequence that is assigned to your company by the Brazilian government. You set up the Nota Fiscal Next Number - Brazil program (P7600B) with the numbering sequence that is assigned to your company.

The system automatically creates journal entries to account for the *notas fiscais* that are created during the JD Edwards EnterpriseOne Sales Order Management process.

To process sales orders in the JD Edwards EnterpriseOne Sales Order Management system, complete the following tasks in this order:

1. Enter the sales order by using the Sales Order Entry – Header - Brazil (P4210, version ZJDE7002) or the Sales Order Entry – Detail - Brazil (P4210, version ZJDE7001) programs.

2. Confirm the shipment by using the Shipment Confirmation program (P4205).
3. Generate the *nota fiscal* by running the Generate Nota Fiscal – Brazil program (R76558B).
This program assigns a temporary number to the *nota fiscal* and calculates Brazil tax amounts.
4. Add additional charges by using the Nota Fiscal Maintenance – Brazil program (P7610B).
This program lets you add freight, insurance and other expense information to the *nota fiscal*.
5. Verify the charges on the *nota fiscal* by using the Nota Fiscal Maintenance – Brazil program.
6. Print the final *nota fiscal* by running the Print Nota Fiscal – Ship From program (R76560B).
This program assigns the *nota fiscal* number according to the next numbering scheme that you set up, and then prints the *nota fiscal*.
7. Update journal entries for Brazil taxes by running the Update Sales – Brazil program (R76B803).
8. Update other sales files by running the Sales Update program (R42800).

Understanding the Nota Fiscal for Sales Orders for Brazil

In Brazil, the government requires companies to maintain additional sales order information for tax calculation purposes. This information includes:

- Transaction nature.
- Tax code.
- Fiscal classification.
- Whether the item is subject to ICMS Substitution.
- Origin of the item.
- Type of purchase (from a client's perspective).
- Fiscal message.

When you use the JD Edwards EnterpriseOne Sales Order Management system, you include this additional information in the header and detail portions of your sales order.

After you enter sales orders, you print *notas fiscais* by fiscal company and series. When you print *notas fiscais*, the system creates the *notas fiscais* that you ultimately send to your customers with each shipment. *Notas fiscais* include the following detailed information:

- Merchandise price.
- Applicable tax amounts.
- How the merchandise will be used.
- Origin and destination of the shipment.
- Any other expense that is associated with the transaction.

At times, you might need to create a *nota fiscal* that it is not directly attached to a purchase or sales order. In such cases, you can generate the stand-alone *nota fiscal*.

Entering Additional Sales Order Information for Brazil

This section provides an overview of additional sales order information, lists prerequisites, and discusses how to:

- Set processing options for Sales Order Brazilian Additional Information - Brazil (P4210BR) program.
- Enter additional information for Brazilian sales orders.

See Also

JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide, “Entering Sales Orders”

Understanding Additional Sales Order Information

When you enter new sales orders and the country that is specified in the user display preferences is Brazil, the system automatically runs the S.O. Brazilian Information program and displays these additional information forms to complete:

- S.O. Brazilian Additional Information Header.
- S.O. Brazilian Information Detail.

The system automatically uses the version of P4210BR that corresponds to the version of the Sales Entry program. If a corresponding version of P4210BR is not set up, the system uses version ZJDE0001.

Prerequisites

Before you complete the tasks in this section:

- Verify that the processing options in the Sales Order Entry program are set up to display header information before the detail information.
- To determine the transaction nature default, indicate whether the item was manufactured or purchased.

For Brazil, this information can be stored in an item master category code. Use UDC 76/CN to determine which category code you can use by entering SRP6, SRP7, SRP8, SRP9, or SRP0 for the code NATUR. For example, one data dictionary option for NATUR is SRP6. Data dictionary item SRP6 has values in UDC 41/06, so it is ready for you to use when you enter sales orders.

- Verify that you have set up the processing options for the Sales Order Brazilian Additional Information program (P4210BR).

Forms Used to Enter Additional Information for Brazilian Sales Orders

| Form Name | FormID | Navigation | Usage |
|-----------------------------------|----------|---|---|
| Work With Sales Order Headers | W4210H | Sales Order Processing - Brazil (G76B4211), Enter Sales Orders Header | Review and select sales order header records. |
| Sales Order Header | W4210G | Click Add on Work With Sales Order Headers. | Add and revise sales order header information. |
| Sales Order Detail Revisions | W4210A | Click OK on Sales Order Header. | Add and revise item information in the detail portion of the form. Enter line default information in addition to item information when you do not enter sales order headers. |
| Order Acceptance | W42232A | Click OK on Sales Order Detail Revisions. | Click the appropriate button to place the order or to revise the order. |
| S.O. Brazilian Information Header | W4210BRL | Click Place Order on Order Acceptance. | Add and revise the transaction nature code and transaction nature suffix. |
| S.O. Brazilian Information Detail | W4210BRQ | Click OK on S.O. Brazilian Additional Information Header. | Add and revise additional detail information for the Brazilian sales order. |

Setting Processing Options for Sales Order Brazilian Additional Information - Brazil (P4210BR)

Access the processing options using interactive versions.

Defaults

This processing option controls the system displays the matrix window during the matrix order entry process.

- 1. Transaction Nature Code** Enter the three-character code for the transaction nature. You set up transaction nature codes in the Transaction Nature program (P7615B). Enter the Transaction Nature code using this convention: XYY, where X defines the origin of the transaction (inbound or outbound) and YY defines the transaction as a whole, such as a sales transaction. Values for X are:

- 1: Inbound, inside the state.
- 2: Inbound, other states.
- 3: Inbound, import.
- 5: Outbound, inside state.
- 6: Outbound, other states.
- 7: Outbound, export.

2. Transaction Nature Suffix

Examples of transaction nature codes include: 511 (In-state sale) and 611 (Out-of-state sale). If you leave this processing option blank, the system uses *511* for the transaction nature.

Enter the default transaction nature suffix. Complete this two-character field in conjunction with the transaction nature code to identify the complementary implications of a type of transaction. For example, the suffix might indicate that a certain type of transaction represents an inventory change or that a transaction is assessed a certain type of tax. Transaction Nature suffixes are set up using the Transaction Nature - Brazil (P7615B) program. If you do not complete this field, the system uses a value of *00*. Values include:

01: Bonus

02: Demo

03: Sample

04: Return merchandise

05: Back order

06: Donation

These examples are Transaction Nature codes with suffixes: 511 01 is In state sale, bonus and 511 05 is In state sale, back order.

Edits

This processing option controls the system displays the matrix window during the matrix order entry process.

1. Branch A/B Number Validation (branch address book number validation)

Specify whether the system uses the address book number or the Inventory Constants file to validate the branch address book number. Values are:

Blank: Use the Inventory Constants file (F41001) for validation.

I: Use the address book number to validate the branch address book number.

Entering Additional Information for Brazilian Sales Orders

Access the S.O. Brazilian Additional Information Header form.

Add and revise the transaction nature code and transaction nature suffix. When you are finished, click OK to access the S.O. Brazilian Information Detail form. Complete any necessary information, and then click OK.

Generating Outbound Notas Fiscais

This section provides an overview of generating outbound *notas fiscais* and discusses how to:

- Run the Generate Nota Fiscal program.
- Set processing options for Generate Nota Fiscal (R76558B).

Understanding Outbound Notas Fiscais Generation

The Generate Nota Fiscal program:

- Creates one *nota fiscal* per sales order.
- Assigns a temporary *nota fiscal* number that you can use to reference the *nota fiscal* until the system assigns a permanent *nota fiscal* number when you run the Print Nota Fiscal - Sales- Brazil program (R76560B).
- Creates records in these tables:
 - Nota Fiscal Header - Brazil (F7601B).
 - Nota Fiscal Detail - Brazil (F7611B).
 - Nota Fiscal Print Message - Brazil (F7612B).
- Calculates the Brazilian taxes for the *nota fiscal*.
- Produces a report that lists both the errors and the generated *notas fiscais*.

Running the Generate Nota Fiscal Program

Select Sales Order Processing - Brazil (G76B4211), Generate Nota Fiscal.

Setting Processing Options for Generate Nota Fiscal (R76558B)

Processing options enable you to specify the default processing for programs and reports.

Select

Use these processing options to specify how the system updates status codes.

- 1. Next Status Code - From (Required)** Enter a user defined code (UDC) 40/AT to specify the beginning of the range of the next status of the *notas fiscais* that you want to select. You select a status from the Activity/Status UDC (40/AT). The status you select must be set up in the order activity rules based on the order type and the line type of the *notas fiscais* that you want to select. The combination of codes that you select for this processing option and the Next Status Code - To processing option in this program must be a valid last status/next status combination in the Order Activity Rules table (F40203).
- 2. Next Status Code - To (Required)** Enter a UDC (40/AT) to specify the end of the range of the next status of the *notas fiscais* that you select. You select a status from the Activity/Status Codes UDC (40/AT). The status you select must be set up in the order activity rules based on the order type and the line type of the *notas fiscais* that you want to select. The combination of codes that you select for this processing option and the Next Status Code - From processing option in this program must be a valid last status/next status combination in the F40203 table.

Defaults

Use these processing options to specify the *nota fiscal* series and the document type for the *nota fiscais* that you want to process.

- 1. Nota Fiscal Series** Enter the *nota fiscal* series that the system uses when it creates *nota fiscal* records. The *nota fiscal* series that you enter must exist in the Nota Fiscal Next Number Control (F7600B) table. If you leave this processing option blank, the system uses 00 for the *nota fiscal* series.
- 2. Document Type** Enter a UDC (00/DT) to identify the type of *nota fiscal* document that the system uses when it creates *nota fiscal* records. The value you enter must exist

in the document type - all documents (00/DT) UDC. The same code must also exist in the document type - invoices only (00/DI) UDC. If you leave this processing option blank, the system uses NS for the document type.

Process

Use these processing options to specify how the system updates tables and handles hold orders.

- | | |
|---|---|
| 1. Update Sales Order Detail File (F4211) | Specify whether the system updates the status codes in the Sales Order Details table (F4211). Values are: Blank: Update the status codes in the F4211 table. 1: Do not update status codes in the F4211 table. |
| 2. Override Next Status Code for F4211 (Optional) | Enter a UDC (40/AT) to select an alternate status for the next step in the order process. You select a status from the Activity/Status (40/AT) UDC table. The status that you select must be set up in the order activity rules based on the order type and the line type of the <i>notas fiscais</i> that you want to select. The override status is another allowed step in the process. |
| 3. Override Last Status Code for F7611B (Optional) | Enter a UDC (40/AT) to select an alternate status for the next step in the order process. You select a status from the Activity/Status (40/AT) UDC table. The status that you select must be set up in the order activity rules based on the order type and the line type of the <i>notas fiscais</i> that you want to select. The override status is another allowed step in the process. |
| 4. Override Next Status Code for F7611B (Optional) | Enter a UDC (40/AT) to select an alternate status for the next step in the order process. You select a status from the Activity/Status (40/AT) UDC table. The status that you select must be set up in the order activity rules based on the order type and the line type of the <i>notas fiscais</i> that you want to select. The override status is another allowed step in the process. |
| 5. Order Hold Code Validation | Specify the hold code that the system uses to prevent an order from going through the sales order process. The hold code does not have special processing associated with it, such as Credit Check, Minimum/Maximum Margin Check and so on, but it can be used to create an additional approval step for sales orders. Values are: Blank: Do not stop the process if the order is on hold. 1: Stop the process if the order is on hold. |

Print

Use these processing options to specify the order in which *nota fiscal* print messages appear on the *nota fiscal*.

- | | |
|---|--|
| 1. Print Message | Specify whether the system prints a valid global print message on each <i>nota fiscal</i> . You set up print messages in the Print Messages Revisions program (P40162). |
| 2. Message in Processing Options | Enter a value between 1 and 7 to specify the sequence in which messages appear on the <i>nota fiscal</i> . For example, if you want messages in processing options to print first, enter 1 in this option. Types of messages that you can print on the <i>nota fiscal</i> include: Message in Processing Options. Message in Sales Order Header. |

Message in Sales Order Detail.

Message in Sales Order Detail Tag File.

Message in Transaction Nature Master.

Message in Fiscal Classification Master.

Message in Preference Profile.

3. Message in Sales Order Header

Enter a value between 1 and 7 to specify the sequence in which messages appear on the *nota fiscal*. For example, if you want messages in the sales order header to print first, enter *1* in this option. Types of messages that you can print on the *nota fiscal* include:

Message in Processing Options.

Message in Sales Order Header.

Message in Sales Order Detail.

Message in Sales Order Detail Tag File.

Message in Transaction Nature Master.

Message in Fiscal Classification Master.

Message in Preference Profile.

4. Message in Sales Order Detail

Enter a value between 1 and 7 to specify the sequence in which messages appear on the *nota fiscal*. For example, if you want messages in the sales order detail to print first, enter *1* in this option. Types of messages that you can print on the *nota fiscal* include:

Message in Processing Options.

Message in Sales Order Header.

Message in Sales Order Detail.

Message in Sales Order Detail Tag File.

Message in Transaction Nature Master.

Message in Fiscal Classification Master.

Message in Preference Profile.

5. Message in Sales Order Detail Tag File

Enter a value between 1 and 7 to specify the sequence in which messages appear on the *nota fiscal*. For example, if you want messages in the sales order detail tag file to print first, enter *1* in this option. Types of messages that you can print on the *nota fiscal* include:

Message in Processing Options.

Message in Sales Order Header.

Message in Sales Order Detail.

Message in Sales Order Detail Tag File.

Message in Transaction Nature Master.

Message in Fiscal Classification Master.

Message in Preference Profile.

6. Message in Transaction Nature Master

Enter a value between 1 and 7 to specify the sequence in which messages appear on the *nota fiscal*. For example, if you want messages in transaction nature master to print first, enter *1* in this option. Types of messages that you can print on the *nota fiscal* include:

Message in Processing Options.

Message in Sales Order Header.

Message in Sales Order Detail.

Message in Sales Order Detail Tag File.

Message in Transaction Nature Master.

Message in Fiscal Classification Master.

Message in Preference Profile.

7. Message in Fiscal Classification Master

Enter a value between 1 and 7 to specify the sequence in which messages appear on the *nota fiscal*. For example, if you want messages in the fiscal classification master to print first, enter *1* in this option. Types of messages that you can print on the *nota fiscal* include:

Message in Processing Options.

Message in Sales Order Header.

Message in Sales Order Detail.

Message in Sales Order Detail Tag File.

Message in Transaction Nature Master.

Message in Fiscal Classification Master.

8. Message in Preference Profile

Enter a value between 1 and 7 to specify the sequence in which messages appear on the *nota fiscal*. For example, if you want messages in the preference profile to print first, enter *1* in this option. Types of messages that you can print on the *nota fiscal* include:

Message in Processing Options.

Message in Sales Order Header.

Message in Sales Order Detail.

Message in Sales Order Detail Tag File.

Message in Transaction Nature Master.

Message in Fiscal Classification Master.

Message in Preference Profile.

Processing PIS/PASEP and COFINS Taxes for Brazil

This section provides overviews of how to process *Programa de Integração Social/Programa de Formação do Patrimônio do Servidor Público* (PIS/PASEP) and *Contribuição para Financiamento da Seguridade Social* (COFINS) for sales order transactions, PIS/PASEP and COFINS for ship-to-sales returns, PIS/PASEP and COFINS for ship-from sales returns, and PIS/PASEP and COFINS for reversed and void transactions.

Understanding PIS/PASEP and COFINS for Sales Order Transactions

When you run the Generate Nota Fiscal program, the system creates the outbound *nota fiscal* with the temporary *nota fiscal* number and calculates taxes. The system uses this logic to determine whether to calculate PIS/PASEP and COFINS tax credits:

1. The system compares the Purchase Use Code for each line item on the *nota fiscal* to the Purchase Use Codes in the Purchase Use Tax Setup - Brazil table (F76B003).
2. If the system finds a match between the purchase use codes, the system reads the record in table F76B003 to determine if a tax code for PIS/PASEP tax credits (data item BTPIS) or COFINS tax credits (data item BTCOF) is associated with the purchase use code.

If a tax credit code is associated with a purchase use code in table F76B003, the system calculates PIS/PASEP or COFINS taxes if the Apply field for the tax specifies that the tax is to be applied. If a tax credit code is associated with the purchase use code in table F76B003 and the Apply field for the tax does not specify that the tax is to be applied, the system does not calculate the tax for the line.

3. If the system does not find a match between the purchase use code for a line item and the purchase use codes in table F76B003, the system retrieves the tax information for PIS/PASEP and COFINS tax credits (data item BRTAX1 through BRTAX8) from the supplier's address book entry from the Address Book Brazilian Tag File table (F76011) and calculates the tax, based on the code in the address book entry.

If the supplier's address book entry does not contain a tax valid tax code for PIS/PASEP or COFINS tax credits, the system does not calculate these withholding taxes for the line.

Note. Tax codes for PIS/PASEP and COFINS tax credits are valid only if the Retention/Aggregation/Credit field in the Tax Code table (F76B0401) (data item BRRTA) contains a C. The Generate Nota Fiscal program ignores PIS/PASEP and COFINS tax codes that do not contain a C in the Retention/Aggregation/Credit field.

When it calculates PIS/PASEP and COFINS taxes, the system follows these steps for *notas fiscais* in the JD Edwards EnterpriseOne Sales Order Management system:

- Calculates the tax by using this formula: (Nota Fiscal Line Extended Amount + Freight + Insurance + Expenses - Discount Amount) * Rate of PIS/PASEP or COFINS tax.
- Writes records to the Nota Fiscal Taxes Header - Brazil table (F76B001) and the Nota Fiscal Taxes Detail - Brazil table (F76B011), and marks the records as unprocessed.

Understanding PIS/PASEP and COFINS for Ship-To Sales Returns

You process ship-to sales returns when a customer returns merchandise to you after the client processes the receipt of the merchandise. The customer sends a sales return *nota fiscal* for the inbound transaction.

When you create a credit memo for a Ship-To sales return, the system:

1. Retrieves the tax information from the original, outbound *nota fiscal* from the F76B011 table.
The system does not calculate PIS/PASEP or COFINS taxes based on the credit order.
2. Writes records to table F76B011 to reverse the tax information from the original *nota fiscal*.

The new records contain the *nota fiscal* number from the sales return *nota fiscal* that the customer sent to you and are marked in the table as "not processed". The amount that the system writes is based on the original tax amount.

3. Marks the records as processed when you run the PIS COFINS Netting Process program (R76B9011).

Understanding PIS/PASEP and COFINS for Ship-From Sales Returns

You process ship-from sales returns when a customer returns merchandise to you before the client processes the receipt of the merchandise. You produce a *nota fiscal* for the inbound transaction.

When you create a credit memo for a Ship From sales return, the system:

1. Retrieves the tax information from the original *nota fiscal* from the F76B011 table.
The system does not calculate PIS/PASEP or COFINS taxes based on the credit memo.
2. Writes records to table F76B011 to reverse the tax information that appears on the original *nota fiscal*.
The new records contain the *nota fiscal* number from the sales return *nota fiscal* that you printed during the ship-from sales return process. The system marks the records as *not processed*. The amount that the system writes is based on the original tax amount.
3. Marks the records as processed when you run the PIS COFINS Netting Process program.

Understanding PIS/PASEP and COFINS for Reversed and Voided Transactions

If you need to cancel a sales order after generating the *nota fiscal* but before printing it, you must reverse the *nota fiscal* by using a version of the Reverse/Void Nota Fiscal program (R76559B) that is set up for reversing non-printed *notas fiscais*. Version XJDE0001 exists for reversing non-printed *notas fiscais*. When you use version XJDE0001 or a copy of it, the system deletes the records that are associated with the *notas fiscais* which you reversed from the *nota fiscal* tables.

When you use version XJDE0001 of the Reverse/Void Nota Fiscal program to reverse a transaction, the system deletes the tax records for PIS/PASEP and COFINS information from the F76B011 table.

If you need to cancel a sales order after printing it but before running the Update Sales - Brazil program (R76B803), you must reverse the *nota fiscal* by using a version of the Reverse/Void Nota Fiscal program that is set up for reversing printed *notas fiscais*. Version XJDE0002 exists for reversing printed *notas fiscais*. When you use version XJDE0002 or a copy of it, the system retains the records that are associated with the *notas fiscais* which you reverse in the *nota fiscal* tables. You must retain these records for fiscal book reporting.

When you use version XJDE0002 of the Reverse/Void Nota Fiscal program to reverse a transaction, the system processes PIS/PASEP and COFINS records in this order:

1. Retrieves the tax information from the original *nota fiscal* from the F76B011 table.
2. Changes the processed code from *not processed* (0), to *processed* (1).

The system does not process these records when you run the PIS COFINS Netting Process program.

See [Chapter 23, “\(BRA\) Setting Up Supplier Withholding,” page 413](#).

Entering Additional Charges

This section provides an overview of entering additional charges, and discusses how to enter additional charges for *notas fiscais*.

Understanding Additional Charges

The Brazilian localizations for the JD Edwards EnterpriseOne Sales Order Management system enables you to enter standard sales order information, such as item and quantity of goods, and lets you enter Brazil-specific information, such as the transaction nature. You also need to enter information about freight, insurance, and other charges into the system. You enter these additional charges for items after running the Generate Nota Fiscal program (R76558B) but before running the Print Nota Fiscal - Sales - Brazil program (R76560B) in final mode. The system adds the additional charges that you enter to the *nota fiscal*.

You can enter additional charges in the *nota fiscal* inquiry programs or in the Apply Additional Charges program (P7610B, version ZJDE0003). All of these entry methods use the Nota Fiscal Maintenance - Brazil program (P7610B), but the versions that you use are different. If you enter the additional charges in the Apply Additional Charges program, the system updates the *nota fiscal* to the next status code when you click OK. If you enter the additional charges in the *nota fiscal* inquiry programs, the system does not update the status of the *nota fiscal*; you must update it at a later step in the entry process.

Prerequisites

Before you complete the tasks in this section:

- Set the processing options for Apply Landed Costs - Purchasing (P7610B, version ZJDE7004) to specify the additional charges parameters that you want to use.
- Generate *notas fiscais*.

Forms Used to Enter Additional Charges for Notas Fiscais

| Form Name | FormID | Navigation | Usage |
|---|---------|---|---|
| Work With Nota Fiscal Headers | W7610BG | Sales Order Processing - Brazil (G76B4211), Nota Fiscal Inquiry - Header Browse | Review and select <i>nota fiscal</i> records. |
| Nota Fiscal Header Revision | W7610BC | Select a nota fiscal and select Header Revision from the Row on Work With Nota Fiscal Headers. | Add and revise <i>nota fiscal</i> header information. |
| Nota Fiscal Header Additional Information | W7610BH | Select Header Addl (Additional) Info (Information) from the Form menu on Nota Fiscal Header Revision. | Add and revise additional information for <i>nota fiscal</i> headers. |

Entering Additional Charges for Notas Fiscais

Access the Nota Fiscal Header Revision form.

Working with Print Messages for Notas Fiscais

This section provides overviews of printing messages for *notas fiscais* and entering preference profiles, and discusses how to revise print messages for *nota fiscal* text.

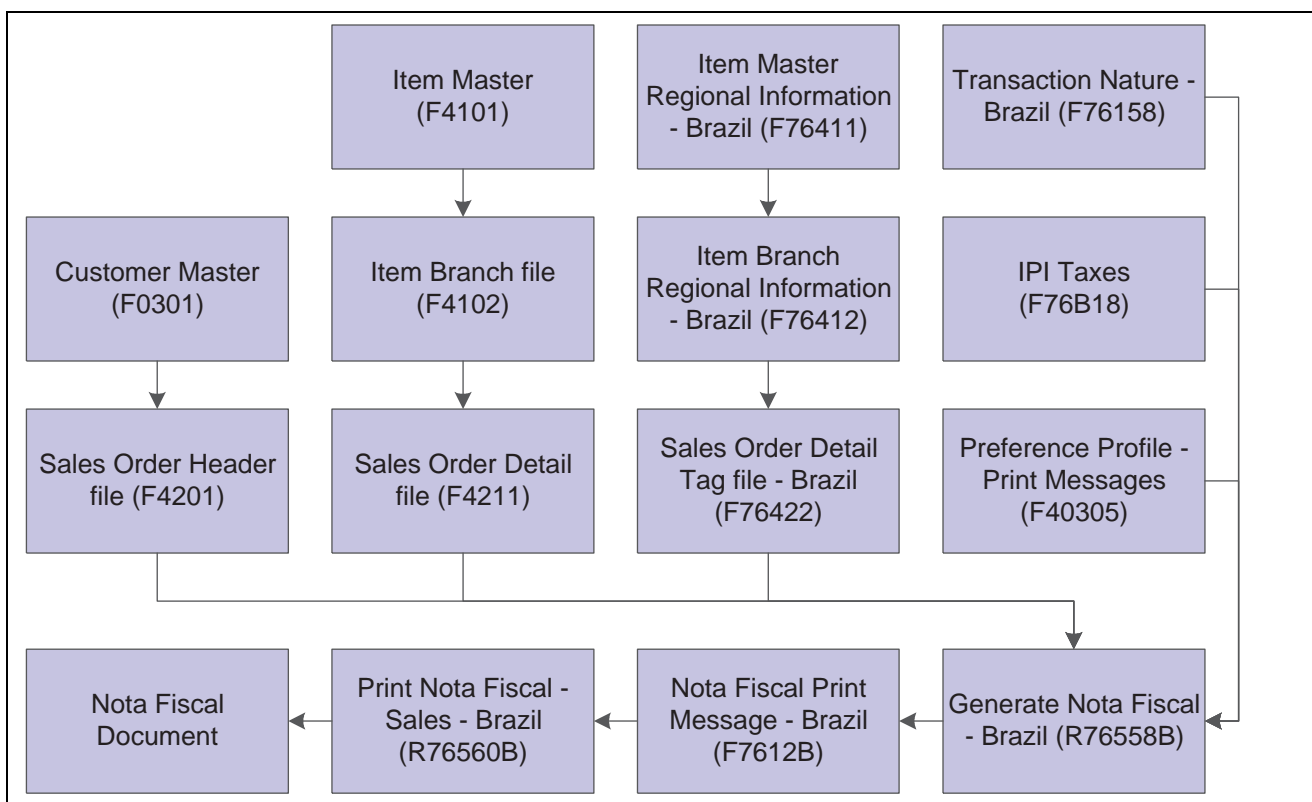

Understanding Printing Messages for Notas Fiscais

As you work with master tables, you might enter messages in the tables that you want to print on the *nota fiscal* for specific customers, items, or customer/item combinations. For example, you might enter in the Customer Master table (F0301) a message that is pulled into the Sales Order Header File table (F4201) and which the system accesses when you run the Generate Nota Fiscal program (R76558B).

This list shows the tables in which the system stores messages that are used by the Generate Nota Fiscal program:

- Sales Order Header File (F4201).
- Sales Order Detail File (F4211).
- Sales Order Detail Tag File - Brazil (F76422).
- IPI Taxes (F76B18).
- Transaction Nature - Brazil (F7615B).
- Preference Profile - Print Messages (F40305).

This graphic shows how print messages flow from source tables into the tables that the system reads when you run then Generate Nota Fiscal program:

Nota fiscal print messages

When you run the Generate Nota Fiscal program, the system calls messages from these tables and writes them to the Nota Fiscal Print Message - Brazil table (F7612B). You can revise messages in this table by using the Nota Fiscal Text Revisions - Brazil program (P7612B). Additionally, you can enter a message that you want to appear on the *nota fiscal* in the processing options for the Generate Nota Fiscal program. Before you run the Generate Nota Fiscal program, set the print message processing options to specify the messages to print on the *nota fiscal* and the order in which the messages print. Then, when you run the Print Nota Fiscal - Sales - Brazil program (R76560B), the system prints the messages that you specified on the *nota fiscal*.

You can set up print messages by customer/item combination, item group/customer group combination, and by item. You must set up preference profiles before you can use these messages.

Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Setting Processing Options for Generate Nota Fiscal (R76558B), page 526

Understanding Preference Profiles for Print Messages

You can set up different messages for various customer/item and item group/customer group combinations, and by item. Before you can use these messages, you must set up preference profiles for print messages.

To set up preference profiles for print messages, perform these tasks in this order:

1. Set up the Documents Using Text Messages UDC (40/OR).
You must set up a code for the Generate Nota Fiscal program (R76558B) before you can use preference profiles for print messages.
2. Set up messages.
3. Set up the Preference Master.
4. Select preference processing for Sales Order Entry in the processing options for the Sales Order Entry program.

Forms Used to Revise Print Messages

| Form Name | FormID | Navigation | Usage |
|----------------------------|---------|---|---|
| Work with Nota Fiscal Text | W7612BA | Sales Order Processing - Brazil (G76B4211), Nota Fiscal Text Revision | Review and select <i>nota fiscal</i> records to which you want to attach a message. |
| Nota Fiscal Text Revision | W7612BC | Select a nota fiscal on Work with Nota Fiscal Text. | Add and revise text messages for the <i>nota fiscal</i> . |

Revising Print Messages for Nota Fiscal Text

Access the Nota Fiscal Text Revision form.

When you run the Generate Nota Fiscal program, the system writes text messages from other tables to the Nota Fiscal Print Message - Brazil table (F7612B). The Nota Fiscal Text Revision program (P7612B) lets you maintain the text messages that the system stores in this table. You can access the Nota Fiscal Text Revision program from a menu, or from a Form exit in the Nota Fiscal Maintenance - Brazil (P7610B) program.

Reviewing Outbound Notas Fiscais

This section provides an overview of outbound *notas fiscais* review and discusses how to review outbound *nota fiscal* information.

Understanding Outbound Notas Fiscais Review

In Brazil, the government requires that businesses maintain detailed information regarding all merchandise and associated taxes during the delivery process. The information accompanies shipments in the form of a document named the *nota fiscal*. The *nota fiscal* organizes this information and places it in the header area and in the detail area.

After you generate and print (in proof mode) outbound *notas fiscais*, you can review the documents online to verify that the information is correct. If some of the data is incorrect, you can make changes online. Review *notas fiscais* by order number or by *nota fiscal* number.

Note. If you review *notas fiscais* documents after printing in proof mode, the *nota fiscal* number for each document is represented by a unique, system-generated next number. If you review *notas fiscais* after printing in final mode, the *nota fiscal* number is the official, government-assigned number.

Forms Used to Review Outbound Nota Fiscal Information

| Form Name | FormID | Navigation | Usage |
|---|---------|--|--|
| Work With Nota Fiscal Headers | W7610BG | Sales Order Processing - Brazil (G76B4211), Nota Fiscal Inquiry - Header Browse. | Review and select <i>nota fiscal</i> records. |
| Nota Fiscal Header Revision | W7610BD | Select a record, and select Header Revision from the Row menu on Work With Nota Fiscal Headers. | Review <i>nota fiscal</i> information for freight, service tax, merchandise tax. |
| Nota Fiscal Detail Revision | W7610BE | Select Detail Revision from the Form menu on Nota Fiscal Header Revision. | Review and revise detail information for the <i>nota fiscal</i> record. |
| Nota Fiscal Detail Additional Information | W7610BJ | Select a record, and select Detail Addl Info (Additional Information) from the Row menu on Nota Fiscal Detail Revision | Review additional information for the <i>nota fiscal</i> record. You cannot revise information on this form. |

Reviewing Outbound Nota Fiscal Information

Access the Nota Fiscal Header Revision form.

| | |
|---------------------------|---|
| Substitution Code | Review this code to determine whether a client or product is subject to tax substitution. Values are: Y: Use list price. Z: Use net price. N: No. |
| Substitution Tax | Review the ICMS Substitute amount that the customer must remit in advance if they are subject to Tax Substitution Mark-up. |
| ICMS Basis | Review the amount on which ICMS taxes are assessed. |
| Substitution Basis | Review the amount on which ICMS Substitute tax is assessed. Products that are eligible for ICMS Substitute tax are listed in ICMS government directive 14. |
| IPI Rate | Enter a number that identifies the percentage of tax that should be assessed or paid to the corresponding tax authority, based on the tax area. Enter the percentage as a whole number and not as the decimal equivalent. For example, to specify 7 percent, enter 7, not .07. The IPI (<i>Imposto sobre Produtos Industrializados</i>) is a Brazilian federal excise tax the government levies on manufactured products. The tax rate varies and is payable at the point of production |
| IPI Tax | Review the IPI tax amount that is printed on the <i>nota fiscal</i> . |
| IPI Code | Review this code, which indicates how IPI tax is assessed. This code determines in which column of the Inbound/Outbound Fiscal Book the system |

prints the IPI tax amount. You must enter a code that already exists in the IPI Code Fiscal Value (76/IP) UDC table. Values are:

- 1: Taxable.
- 2: Exempt or not taxable.
- 3: Other.

IPI Basis

Review the amount on which IPI taxes are assessed.

NF Discount

Review the amount of the discount amount available for the *nota fiscal*.

Printing Outbound Notas Fiscais

This section provides an overview of outbound *nota fiscais* and discusses how to:

- Run the Print Nota Fiscal program.
- Set processing options for Print Nota Fiscal (R764560B).

Understanding Outbound Nota Fiscais

In Brazil, the government requires that businesses maintain detailed information regarding all merchandise and associated taxes during the delivery process. The information accompanies shipments in the form of a document that is referred to as *nota fiscal*.

You can also print the outbound (sales) *notas fiscais* that you send to the customers. After you generate and review the outbound *nota fiscal*, you can print *notas fiscais* to include in the shipments.

You can print *notas fiscais* in proof or final mode. When you print the documents in final mode, the system updates each system-assigned document number with the appropriate official *nota fiscal* number, based on the information that you set up in the Nota Fiscal Next Number Control - Brazil table (F7600B).

Running the Print Nota Fiscal Program

Select Sales Order Processing - Brazil (G76B4211), Print Nota Fiscal.

Setting Processing Options for Print Nota Fiscal (R76560B)

Processing options enable you to specify the default processing for programs and reports.

Select

Use these processing options to specify the range of status codes from which the system selects the *notas fiscais* to print.

- 1. Next Status Code - From (Required)** Enter a UDC (40/AT) to specify the beginning of the range of the next status of the *notas fiscais* that you want to select. You select a status from the Activity/Status UDC (40/AT). The status you select must be set up in the order activity rules based on the order type and the line type of the *notas fiscais* that you want to select. The combination of codes that you select for this processing option and the Next Status Code - To processing option in this

program must be a valid last status/next status combination in the Order Activity Rules table (F40203).

2. Next Status Code - To (Required)

Enter a UDC (40/AT) to specify the end of the range of the next status of the *notas fiscais* that you select. You select a status from the Activity/Status Codes UDC (40/AT). The status you select must be set up in the order activity rules based on the order type and the line type of the *notas fiscais* that you want to select. The combination of codes that you select for this processing option and the Next Status Code - From processing option in this program must be a valid last status/next status combination in the Order Activity Rules table (F40203).

Defaults

Use these processing options to specify the defaults that the Print Nota Fiscal Sales - Brazil program (P76560B) uses for generating *notas fiscais*.

- 1. Invoice Document Type** Enter a UDC (00/DI) to identify the invoice document type. The value that you enter must exist in the Document Type - Invoices Only (00/DI) UDC. The same code must also exist in the Document Type - All Documents (00/DT) UDC. If you leave this processing option blank, the system uses RI for the invoice document type.
- 2. Issue Date** Enter the date that the system uses for the issue date of the *nota fiscal*. If you leave this field blank, the system date is used.
- 3. Next Status Code - Sales Order** Enter a code (UDC 40/AT) to specify the beginning of the range of the next status of the *notas fiscais* that you want to select. You select a status from the Activity/Status UDC (40/AT). The status you select must be set up in the order activity rules based on the order type and the line type of the *notas fiscais* that you want to select. The combination of codes that you select for this processing option and the Next Status Code - To processing option in this program must be a valid last status/next status combination in the Order Activity Rules table (F40203).
- 4. Next Status Code - Nota Fiscal** Enter a code (UDC 40/AT) to specify the beginning of the range of the next status of the *notas fiscais* that you want to select. You select a status from the Activity/Status UDC (40/AT). The status you select must be set up in the order activity rules based on the order type and the line type of the *notas fiscais* that you want to select. The combination of codes that you select for this processing option and the Next Status Code - To processing option in this program must be a valid last status/next status combination in the Order Activity Rules table (F40203).

Process

Use these processing option to specify whether the system prints the *notas fiscais* in final mode, and whether it summarizes *notas fiscais* detail lines by Item and Lot.

- 1. Mode** Specify whether to run the program in proof or final mode. Values are:
 Blank: Print the *notas fiscais* in proof mode.
 / Final mode.
- 2. Summarize Nota Fiscal (Future)** Specify whether the system prints an ICMS and IPI tax summary on the *nota fiscal*. Values are:

Blank: Do not print an ICMS and IPI tax summary on the *nota fiscal*.

I: Print a tax summary.

Print

Use these processing options to specify whether the system prints an ICMS and IPI tax summary on the *notas fiscais*, and whether the *nota fiscal* total amount is printed in words at the end of the *nota fiscal*.

1. ICMS and IPI Tax Summary

Specify whether the system summarizes *nota fiscal* detail line by item and lot. Value are:

Blank: Do not summarize *nota fiscal* detail lines by item and lot.

I: Summarize by item and lot.

2. Data Edits

Specify whether the system prints the total of the *nota fiscal* in words at the end of the *nota fiscal*. Values are:

Blank: Print the total of the *nota fiscal* in words at the end of the *nota fiscal*.

I: Do not print the total in words.

Updating Sales in Brazil

This section provides an overview of sales update for Brazil and discusses how to:

- Run the Sales Update - Brazil program.
- Set processing options for Sales Update - Brazil (R76B803).

Understanding Sales Update for Brazil

After you print *notas fiscais* in final mode, you can update the customer sales information. When you update customer sales information, the system creates Accounts Receivable records.

Note. The system does not process tax lines for PIS/PASEP and COFINS tax credits when you run the Sales Update - Brazil program.

You must update customer sales information *after* you print *notas fiscais* in final mode so that the accounts receivable (AR) records include the official *nota fiscal* document numbers that are required by the Brazilian government.

When you run the Sales Update - Brazil program, the system generates reports that include summary or detail information about:

- Updated information about customer sales.
- Accounts receivable and general ledger (GL) entries.
- Sales for different categories, such as stock sales and freight, cost of goods sold, and profit percentages.
- Errors that result from running the program.

Depending on how you set the processing options, the system updates the F4211 and the Sales Order Detail History (F42119) tables from information that is stored in the F7611B table.

Note. If you do not set the processing options to update tables F4211 and F42119, you must run the Sales Update program after you run the Sales Update - Brazil program.

You must select the appropriate version of the Sales Update - Brazil program to update the tables. Select one of these versions, based on the company's process:

- Sales Update

You can use the proof or final mode of this version when the sales order has been processed through Invoice Print and contains a document number and type in the Sales Order Detail file.

- Assign Invoice Numbers

You must use the proof or final version when the sales order has not been processed to print invoices in the Print Invoice program. The program assigns an AR number.

Note. Because of the number of transactions that occur when you run the Sales Update - Brazil program, it is recommended that you run the program in proof mode first to detect and correct any errors before you run it in final mode.

See Also

JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide, "Running the End of Day Processes," Updating Customer Sales

Prerequisites

Before you complete the tasks in this section:

- It is strongly recommended that you run the sales update when no one is on the system.
When you run the program during non-business hours, you can accurately update the history files. The system does not lock records.
- Notify the system operator before you run the sales update, or consider running the program during non-business hours.
- Verify that the appropriate line types are set up and that the processing options are set to correctly interface with the general ledger (GL) and accounts receivable.
- Verify that the status code for sales update and any status codes that follow are set up in the order activity rules.
- Verify that the automatic accounting instructions (AAIs) are set up for Brazilian taxes and additional charges.

Running the Update Sales - Brazil Program

Select Sales Order Processing - Brazil (G76B4211), Sales Update - Brazil.

Setting Processing Options Update Sales - Brazil (R76B803)

Processing options enable you to specify the default processing for programs and reports.

Defaults

- | | |
|------------------------------------|---|
| 1. Tax Line Type (Required) | Specify the line type for the records that the system creates when it writes journal entries for Brazilian taxes. |
| 2. Sales Reverse Defaults | Specify the document type that the system assigns to the records it creates when you process sales reverses or sales returns. You select a code from the Document Type - All Documents UDC table (00/DT). The code you select must also exist in the Document Type - Invoices Only UDC table (00/DI). |

Select

- | | |
|--|--|
| 1. Beginning Status (Optional) | Enter a UDC (40/AT) to specify the current status of the <i>notas fiscais</i> that you want to select. You select a status from the Activity/Status UDC (40/AT). The status you select must be set up in the order activity rules based on the order type and the line type of the <i>notas fiscais</i> that you want to select. The combination of codes that you select for this processing option and the Next Status Code - To processing option in this program must be a valid last status/next status combination in the Order Activity Rules table (F40203). |
| 2. Next Status Code - From (Required) | Enter a UDC (40/AT) to specify the beginning of the range of the next status of the <i>notas fiscais</i> that you to select. You select a status from the Activity/Status UDC (40/AT). The status you select must be set up in the order activity rules based on the order type and the line type of the <i>notas fiscais</i> that you want to select. The combination of codes that you select for this processing option and the Next Status Code - To processing option in this program must be a valid last status/next status combination in the Order Activity Rules table (F40203). |
| 3. Next Status Code - To (Required) | Enter a UDC (40/AT) to specify the end of the range of the next status of the <i>notas fiscais</i> that you select. You select a status from the Activity/Status Codes UDC (40/AT). The status you select must be set up in the order activity rules based on the order type and the line type of the <i>notas fiscais</i> that you want to select. The combination of codes that you select for this processing option and the Next Status Code - From processing option in this program must be a valid last status/next status combination in the Order Activity Rules table (F40203). |
| 4. Override Next Status (Optional) | Enter a UDC (40/AT) to select an alternate status for the next step in the order process. You select a status from the Activity/Status (40/AT) UDC table. The status that you select must be set up in the order activity rules based on the order type and the line type of the <i>notas fiscais</i> that you want to select. The override status is another allowed step in the process. |

Process

- | | |
|--------------------------------|---|
| 1. Sales Update | Specify whether the system runs the Sales Update program (R42800) after running the Sales Update - Brazil program (R76B803). Values are: Blank: Do not run sales update. 1: Run the Sales Update program after running the Sales Update - Brazil program. |
| 2. Sales Update Version | Specify the version of the Sales Update program that the system runs when you set the Sales Update processing option in the Sales Update - Brazil program to 1. If you leave this processing option blank and enter 1 for the Sales Update processing option, the system uses version XJDE0001. |

- 3. Sales Update Purge** Enter *1* to run a version of the Sales Update program to purge sales order records from the Sale Order Detail File table. The system writes the purged records to the Sales Order History File table. If you leave this processing option blank, the system does not run the sales update purge.
- 4. Sales Update Purge Version** Specify the version of the Sales Update program to run. If you leave this processing option blank, the system runs version XJDE0001.

Freight

- 1. Freight** Specify whether the system creates reversing accounting entries when you process a reverse or return for *notas fiscais* that contain freight charges. Values are:
- Blank: Do not create reversing entries.
- 1*: Create reversing accounting entries when you process a reverse or return for *notas fiscais* that contain freight charges.
- 2. Insurance** Specify whether the system creates reversing accounting entries when you process a reverse or return of *notas fiscais* that contain insurance charges. Values are:
- Blank: Do not create reversing entries.
- 1*: Create reversing accounting entries when you process a reverse or return for *notas fiscais* that contain insurance charges.
- 3. Additional Expenses** Specify whether the system creates reversing accounting entries when you process a reverse or return for *notas fiscais* that contain additional expenses. Values are:
- Blank: Do not create reversing entries.
- 1*: Create reversing accounting entries when you process a reverse or return for *notas fiscais* that contain additional expenses.
- 4. Freight Line Type** Specify the line type that the system assigns to the accounting entries it creates for freight charges. The system uses the value you enter in this processing option only when you enter *1* for the Freight processing option in the Sales Update - Brazil program.
- 5. Insurance Line Type** Specify the line type that the system assigns to the accounting entries it creates for insurance charges. The system uses the value you enter in this processing option only when you enter *1* for the Insurance processing option in the Sales Update - Brazil program.
- 6. Additional Expenses Line Type** Specify the line type that the system assigns to the accounting entries that it creates for additional expenses. The system uses the value that you enter in this processing option only when you enter *1* for the Additional Expenses processing option in Update Sales - Brazil.

Entering Transfer Orders for Brazil

This section provides an overview of transfer orders for Brazil and discusses how to enter transfer orders.

Understanding Transfer Orders for Brazil

You enter a transfer order to ship inventory between branch/plants within the company, maintain an accurate on-hand inventory amount, and provide tax information for *notas fiscais*. The transfer order program:

- Creates a sales order for the shipping location that represents the supplier.
- Creates a purchase order for the receiving location that represents the customer.
- Processes the inventory amounts on the transfer order as a formal purchase and sale of goods.
- Creates documents, such as pick slips or invoices, that are necessary to complete the transfer.

You enter transfer orders to input information about inventory that you move from one location to the other. Transfer orders are used in two situations:

- One location needs inventory from another location within the same branch plant.
- One branch plant needs inventory from another branch plant within the same company.

Note. When you generate a transfer order, the system automatically creates a purchase order with its corresponding Brazilian tag file information. The system creates this Brazilian tag file information with default values.

Forms Used to Enter Transfer Orders for Brazil

| Form Name | FormID | Navigation | Usage |
|-----------------------------------|----------|---|--|
| Customer Service Inquiry | W4210E | Purchase Return (G76B4212), Transfer Orders | Review and select orders. |
| Sales Order Detail Revisions | W4210A | Click Add on Customer Service Inquiry. | Add and revise orders. |
| S.O. Brazilian Information Header | W4210BRL | Enter a sales order and click OK Sales Order Detail Revisions. | Enter transaction nature information for Brazil. |
| S.O. Brazilian Information Detail | W4210BRI | Enter the Brazilian Header information and click OK on S.O. Brazilian Information Header. | Review the detail information about the order. |

Entering Transfer Orders for Brazil

Access the Customer Service Inquiry form.

Entering Stand-Alone Notas Fiscais

This section provides an overview of entering stand-alone *notas fiscais* and discusses how to:

- Set processing options for Stand-Alone Notas Fiscais.- Inbound and Outbound (P7611B).
- Enter a stand-alone *nota fiscal*.

Understanding Stand-Alone Notas Fiscais

In Brazil, the government requires that businesses maintain detailed information regarding all merchandise and associated taxes. The information accompanies shipments in the form of a document that is referred to as *nota fiscal*.

You might need to generate a *nota fiscal* apart from a purchase or sales order. For example, if a manufacturer ships merchandise into Brazil, that merchandise does not arrive with a *nota fiscal*. The receiving company in Brazil needs to generate an inbound stand-alone *nota fiscal* to begin the tracking process.

The stand-alone *nota fiscal* is not linked to any other accounting processes. For example, when you generate a stand-alone *nota fiscal*, it does not interface with general ledger, inventory, purchase order, sales order, accounts payable, or accounts receivable processes. Generate a stand-alone *nota fiscal* only when you want to print a document that does not affect any other accounting process.

When you enter a stand-alone *nota fiscal* manually, you should enter header and detail information. Once you enter this information, you can review the documents online to verify that the information is correct. You can review *notas fiscais* by order number or by *nota fiscal* number.

Note. If you review *notas fiscais* after printing a *nota fiscal* in proof mode, the *nota fiscal* number for each document is represented by a unique, system-generated next number. If you review *notas fiscais* after printing in final mode, the *nota fiscal* number is the official, government-assigned number.

When you run the PIS COFINS Netting Process program (P76B9011), the system does not create journal entries for the PIS/PASEP and COFINS taxes that you enter in this application. You must manually create the journal entries.

Printing Stand-Alone Notas Fiscais

After you generate and review the *nota fiscal*, you can print *notas fiscais* to include in the shipments. You use the same program, Print Nota Fiscal (R76560B), to print stand-alone *notas fiscais* as you would *notas fiscais* that you generated by running the Generate Nota Fiscal program.

You can print *notas fiscais* in proof or final mode. When you print the documents in final mode, the system updates each system-assigned document number with the appropriate official *nota fiscal* number. This number is based on the information that you set up in the Nota Fiscal Next Number Control - Brazil table (F7600B).

Prerequisite

Before you complete the tasks in this section, you should set up a matching version for the Stand Alone Nota Fiscal program (P7611B) and the Generate Nota Fiscal program (R76558B). The system calls the version of the Generate Nota Fiscal – Brazil program to get the print message sequence from the processing options. The Stand Alone Nota Fiscal program calls a version with a matching version name. If a matching version does not exist, the program calls version XJDE0001 by default.

Forms Used to Enter a Stand-Alone Notas Fiscais

| Form Name | FormID | Navigation | Usage |
|--|---------|---|--|
| Work With Stand Alone Nota Fiscal Detail | W7611BJ | Stand-Alone Nota Fiscal - Brazil (G76B4321), Stand Alone Nota Fiscal - Outbound | Review and select stand-alone outbound <i>nota fiscal</i> records. |
| Outbound Nota Fiscal Header Revision | W7611BD | Click Add on Work With Stand Alone Nota Fiscal Detail. | Add stand-alone <i>notas fiscais</i> for outbound processing. |
| Outbound Nota Fiscal Detail Revision | W7611BF | Select Detail Revision from the Row menu on Outbound Nota Fiscal Header Revision. | Add and revise details for stand-alone outbound <i>nota fiscal</i> records. |
| Outbound NF Additional Information | W7611BE | Select a record on Outbound Nota Fiscal Detail Revision, and select Detail Addl Info from the Row menu. | Add and revise additional information for stand-alone outbound <i>nota fiscal</i> records. |
| Work With Stand Alone Nota Fiscal Header | W7611BA | Stand-Alone Nota Fiscal - Brazil (G76B4321), Stand Alone Nota Fiscal - Inbound | Review and select stand-alone inbound <i>nota fiscal</i> records. |
| Inbound Nota Fiscal Header Revision | W7611BD | Click Add on Work With Stand Alone Nota Fiscal Header. | Add stand-alone <i>notas fiscais</i> for inbound processing. |
| Inbound Nota Fiscal Detail Revision | W7611BF | Select Detail Revision from the Row menu on Inbound Nota Fiscal Header Revision. | Add and revise details for stand-alone inbound <i>nota fiscal</i> records. |
| Inbound NF Additional Information | W7611BE | Select a record on Inbound Nota Fiscal Detail Revision, and select Detail Addl Info from the Row menu. | Add and revise additional information for stand-alone inbound <i>nota fiscal</i> records. |
| Work With Nota Fiscal Text | W7612BA | Select Text Revision from the Form menu on Outbound Nota Fiscal Header Revision. Select Text Revision from the Form menu on Inbound Nota Fiscal Header Revision. | Review and select the record to which you want to attach message text. |
| Nota Fiscal Text Revision | W7612BC | Select Message Revisions from the Row menu on Work With Nota Fiscal Text. | Add and revise message text. |

Setting Processing Options for Stand Alone Nota Fiscal - Inbound and Outbound (P7611B)

Processing options enable you to specify the default processing for programs and reports.

Display

1. Header or Detail

Specify whether the system first displays the Nota Fiscal Header Revisions form or the Nota Fiscal Detail Revisions when you inquire on a *nota fiscal*. You can review header information before detail information and edit default information that affects the *nota fiscal*. Values are:

Blank: The system displays the Nota Fiscal Header Revisions form first.

1: The system displays the Nota Fiscal Detail Revisions form first.

Defaults

1. Nota Fiscal Series

Specify the *nota fiscal* series that the system uses to create and inquire upon *nota fiscal* records. If the *nota fiscal* is to be printed, you must set up the *nota fiscal* series by using the *nota fiscal* Next Number - Brazil program (P7600B).

2. Nota Fiscal Document Type

Specify the *nota fiscal* Document Type that the system uses to create and inquire upon *nota fiscal* records. If the *nota fiscal* is to be printed, you must set up the *nota fiscal* Document Type by using the *nota fiscal* Next Number - Brazil program (P7600B). You set up values in the Document Type UDC table (00/DT).

3. Line Type

Specify how the system processes the lines of a transaction. Line types affect the systems with which the transaction interfaces (JD Edwards EnterpriseOne General Accounting system, JD Edwards EnterpriseOne Job Cost system, JD Edwards EnterpriseOne Accounts Payable system, JD Edwards EnterpriseOne Accounts Receivable system, and JD Edwards EnterpriseOne Inventory Management system). Line Types also specify the conditions for including a line on reports and in calculations.

4. Override Last Status

Enter a UDC (40/AT) to indicate the From Status code range that the system uses for *nota fiscal* creation. You must enter a status that has been set up in the user defined codes list (40/AT) of the order activity rules based on the order type and the line type that you are using. The combination of Status From and Status Thru must be a valid last status/next status combination in the Order Activity Rule list. If you leave this field blank, the status codes will be retrieved from the order activity rules.

5. Override Next Status

Enter a UDC (40/AT) to indicate the To Status code range that the system uses for *nota fiscal* creation. You must enter a status that has been set up in the user defined codes list (40/AT) of the order activity rules based on the order type and the line type that you are using. The combination of Status From and Status Thru must be a valid last status/next status combination in the Order Activity Rule list. If you leave this field blank, the status codes will be retrieved from the order activity rules.

6. Branch/Plant

Enter a branch/plant. This is a separate entity within a business for which you want to track costs.

7. Update Nota Fiscal Header

Specify whether the system automatically update *nota fiscal* header. Values are:

Blank: Do not automatically update *nota fiscal* header.

1: Automatically update *nota fiscal* header.

- 8. Stand-Alone Nota Fiscal Type (Required)** Specify whether the system creates an inbound stand-alone *nota fiscal*. Values are:
- 1*: Create an inbound stand-alone *nota fiscal*.
- 5*: Create outbound stand-alone *nota fiscal*.

Edits

- 1. Status** Specify whether the system disables the status code fields. Values are:
- Blank: Do not disable status code fields.
- 1*: Disable status code fields.
- 2. Status Code Limit for Changes** Enter a UDC (40/AT) to indicate the status code at which detail lines cannot be changed. The detail lines will be protected if the next status is greater than or equal to the status you enter. You must specify a UDC that has been set up in the Order Activity Rules (40/AT) based on the order type and the line type that you are using.
- 3. Taxes and Freight** Specify whether to enable users to change the taxes and freight in the header of the *nota fiscal*. Values are:
- Blank: Enable users to change the taxes and freight in the header of the *nota fiscal*
- 1*: Do not enable users to change the taxes and freights in the header of the *nota fiscal*.
- 4. Branch Validation** Specify whether the system validates the branch against the Branch/Plant Constants file (F41001) or the Business Unit Master file (F0006). Values are:
- Blank: The system validates the branch against the F41001 table.
- 1*: The system validates against the F0006 table.

Entering a Stand-Alone Nota Fiscal

When you enter inbound and outbound stand-alone *nota fiscais*, you use a different version of the same program. Although processing option settings differentiate the versions, many of the forms that appear are the same. After you complete the necessary fields on each form, click OK, and the system automatically brings you to the next form that you need to complete.

Access the Outbound Nota Fiscal Header Revision form to enter outbound stand-alone records.

Access the Inbound Nota Fiscal Header Revision form to enter inbound stand-alone records.

Inbound and Outbound Nota Fiscal Header Revisions Form

Select the Freights tab.

Select the Services Taxes tab.

Select the Merchandise Taxes tab.

Select the Departure Dates tab.

Inbound and Outbound Nota Fiscal Detail Revisions Form

These terms apply to the Inbound Nota Fiscal Detail Revisions form and the Outbound Nota Fiscal Detail Revisions form.

| | |
|------------------------------|--|
| Location | Enter the storage location from which goods will be moved. |
| Lot Serial Number | Enter a number that identifies a lot or a serial number. A lot is a group of items with similar characteristics. |
| Description 1 | Enter a remark about an item. |
| Purchasing UOM | Enter a UDC (00/UM) that identifies the unit of measure in which you usually purchase the item. |
| Description 2 | Enter a second, 30-character description, remark, or explanation. |
| Tax Summary | <p>Enter an auxiliary code that you use to combine ICMS and IPI tax characteristics. Values might include:</p> <p>01: Taxed domestic goods (IPI and ICMS).</p> <p>02: Taxed domestic goods (ICMS taxed, IPI tax rate Zero).</p> <p>03: Exempt products.</p> <p>04: Export.</p> <p>05: ICMS deferred, IPI suspended.</p> <p>06: ICMS exempt, IPI taxed.</p> |
| Fiscal Classification | Enter a code that specifies groups of products, as defined by the local tax authorities. The product groups are based on taxing conventions and other national statistics. The system uses this code to determine the applicable tax rate for a product. |
| IPI Tax Rate | <p>Enter a number that identifies the percentage of tax that should be assessed or paid to the corresponding tax authority, based on the tax area.</p> <p>Enter the percentage as a whole number and not as the decimal equivalent. For example, to specify 7 percent, enter 7, not .07.</p> |
| DIPI Code | Enter the DIPI Classification code. This is a four-character, alphanumeric field that you can use for tax reporting. Use this code to link the product with the Transaction Nature. |
| ISS Tax Rate | <p>Enter a number that identifies the percentage of tax that should be assessed or paid to the corresponding tax authority, based on the tax area.</p> <p>Enter the percentage as a whole number and not as the decimal equivalent. For example, to specify 7 percent, enter 7, not .07.</p> |
| IR Tax Rate | <p>Enter a number that identifies the percentage of tax that should be assessed or paid to the corresponding tax authority, based on the tax area.</p> <p>Enter the percentage as a whole number and not as the decimal equivalent. For example, to specify 7 percent, enter 7, not .07.</p> |
| II Taxable Amount | Enter the amount on which II taxes are assessed. |

| | |
|--|--|
| II Tax Rate | <p>Enter a number that identifies the percentage of tax that should be assessed or paid to the corresponding tax authority, based on the tax area.</p> <p>Enter the percentage as a whole number and not as the decimal equivalent. For example, to specify 7 percent, enter 7, not .07.</p> |
| II Tax | Enter the II tax amount that is printed on the <i>nota fiscal</i> . |
| Match Type | <p>Enter a code that is attached to each purchase-order detail record or receipt record, that indicates whether a voucher exists and whether the voucher or receipt record has been reversed. Values are:</p> <p><i>1</i>: No voucher exists.</p> <p><i>2</i>: A voucher exists.</p> <p><i>3</i>: The voucher has been reversed.</p> <p><i>4</i>: The receipt record has been reversed.</p> <hr/> <p>Note. Record types 3 and 4 are audit records only; you cannot access these record types for the Voucher Match program (P4314) or the PO Receipts program (P4312).</p> <hr/> |
| ICMS Tax Subst Mark-up (ICMS tax substitution mark-up) | <p>Enter a code that specifies whether a client or product is subject to tax substitution. Values are:</p> <p><i>Y</i>: Use list price.</p> <p><i>Z</i>: Use net price.</p> <p><i>N</i>: No.</p> |
| Purchase Use Code | <p>Enter a code that identifies the purpose for which the merchandise was purchased. You define purchase use codes in the Purchase Use UDC table (76/PU). When you define purchase use codes, use the special handling code to specify this type of tax information:</p> <p>For ICMS tax:</p> <p><i>0</i>: ICMS tax is nonrecoverable.</p> <p><i>1</i>: ICMS tax is 100 percent recoverable.</p> <p>For IPI tax:</p> <p><i>0</i>: IPI tax is nonrecoverable.</p> <p><i>1</i>: IPI tax is 50 or 100 percent recoverable, depending on the status of the ship-to and ship-from taxpayer.</p> |
| Cur Code (currency code) | Enter a code that identifies the currency of a transaction. |
| Item Orig (item origin) | Enter a code that specifies the origin of a product. You must select a hard-coded value from the Item Origin UDC (76/IO). |

Nota Fiscal Text Revision form

These terms apply to the Nota Fiscal Text Revisions form.

Message Text Enter a line of text used in the *nota fiscal* generation.

Working With Returns, Reverses, and Cancellations in Brazil

This section provides an overview of sales order returns, reverses, and cancellations, and discusses how to:

- Run the Reverse/Void Nota Fiscal program.
- Set the processing options for Reverse/Void Nota Fiscal (R76559B).
- Set processing options for Sales/Purchase Returns - Brazil (P76B805).
- Enter a ship-to sales return.
- Enter a ship-from sales return.

Understanding Sales Order Returns, Reverses, and Cancellations

Occasionally, you need to cancel sales orders or process the return of products. You process cancellations and returns differently, depending on the processing stage at which the cancellation or return occurs. This table describes the actions that you must take at different processing stages:

| Sales Order and Nota Fiscal | Action | Effect |
|--|---|--|
| You enter a sales order, but a <i>nota fiscal</i> is not generated. | You cancel the order by changing the order status to canceled. | None. No accounting entries were created. |
| You generate a <i>nota fiscal</i> , but it is not printed. | You reverse the <i>nota fiscal</i> using the version for non-printed <i>notas fiscais</i> in the Reverse/Void Nota Fiscal (R76559B) program. | <p>The system deletes the records from these tables:</p> <ul style="list-style-type: none"> • Nota Fiscal Header - Brazil table (F7601B). • Nota Fiscal Detail - Brazil table (F7611B). • Nota Fiscal Print Message - Brazil (F7612B). • Nota Fiscal Taxes Header - Brazil table (F76B001). • Nota Fiscal Taxes Detail - Brazil (F76B011). <p>The records are not reported in the fiscal books.</p> |
| You print the <i>nota fiscal</i> but have not run the Sales Update program, and you have not shipped the products. | You reverse the <i>nota fiscal</i> , using the version for printed <i>notas fiscais</i> in the Reverse/Void Nota Fiscal program. Close the sales order. | <p>The system does not delete <i>nota fiscal</i> records from the Nota Fiscal Header - Brazil, Nota Fiscal Detail - Brazil, Nota Fiscal Print Message - Brazil, Nota Fiscal Taxes Detail - Brazil, and Nota Fiscal Taxes Header - Brazil tables. These records are reported in the fiscal books by using the status code that you specified in the processing options for the Reverse/Void Nota Fiscal program.</p> |

| Sales Order and Nota Fiscal | Action | Effect |
|--|--|---|
| You print the <i>nota fiscal</i> and run the Sales Update program. You ship the products, and the products are returned to you before the buyer receives the products. | You create and print an inbound <i>nota fiscal</i> by using the Sales Return - Ship From program (version ZJDE7004). | The system creates reversing entries for items and expenses as determined by processing options, and updates inventory records. |
| You ship the products, and they are received by the buyer. The buyer returns some or all of the products to you. | The buyer issues an inbound <i>nota fiscal</i> to you. You use the Sales Return - Ship To program (version ZJDE7003) to enter the information from the <i>nota fiscal</i> that the buyer issued into the system. You do not print a <i>nota fiscal</i> for the return. | The system creates records in the <i>nota fiscal</i> tables for reporting in the fiscal books. |

If you need to cancel a sales order before you generate the *nota fiscal*, you cancel the sales order by using the Sales Order Entry program to update the sales order to a closed status. Since no records are created in the *nota fiscal* tables until you generate the *nota fiscal*, you do not create any reversing accounting entries.

Nota Fiscal Reversals

If you need to cancel a sales order after generating the *nota fiscal* but before printing it, you must reverse the *nota fiscal* by using a version of the Reverse/Void Nota Fiscal program that is set up for reversing non-printed *notas fiscais*. Version XJDE0001 exists for reversing nonprinted *notas fiscais*. When you use version XJDE0001 or a copy of it, the system deletes the records that are associated with the *notas fiscais* which you reversed from the *nota fiscal* tables.

If you need to cancel a sales order after printing it but before running the Update Sales - Brazil program (R76B803), you must reverse the *nota fiscal* by using a version of the Reverse/Void Nota Fiscal program that is set up for reversing printed *notas fiscais*. Version XJDE0002 exists for reversing printed *notas fiscais*. When you use version XJDE0002 or a copy of it, the system retains the records that are associated with the *notas fiscais* which you reverse in the *nota fiscal* tables. You must retain these records for fiscal book reporting.

In addition to reversing the *nota fiscal*, you must either reuse or close the sales order. It is strongly recommended that you close the sales order.

Note. When you cancel a *nota fiscal* for which a record exists in the Nota Fiscal Taxes Detail - Brazil table, the system changes the processed flag in the record to 1 to indicate that the record is closed. When you run the PIS COFINS Netting Process program (R76B9011), the system does not process the record.

Ship-To Sales Returns

If you need to process the cancellation of an order after you have run the Update Sales - Brazil program, you must process the cancellation as a sales return. You must consider the price for the merchandise, and the taxes and other fees charged on the original printed *nota fiscal* when you process the return so that the appropriate reversing entries are made to the financial and inventory systems.

You use the Ship-To sales return process when the company to which you shipped the merchandise returns the merchandise after receiving it into its inventory. The returning company must send a *nota fiscal* with the returned merchandise.

Brazil requires that a *nota fiscal* accompany all products that are shipped. If the company to which you shipped the merchandise returns the merchandise after receiving it into its inventory, the company must create a *nota fiscal* to accompany the return. This type of a return is referred to as a "ship-to" sales return. When you receive the returned merchandise, you must complete these steps in this order:

1. Use the Sales Return - Ship To program (version ZJDE7003) to enter the information on the *nota fiscal* into the system, create detail lines for the returned items, and associate the original *nota fiscal* with the *nota fiscal* that is sent with the returned merchandise.
2. Run the ZJDE7002 version of the Shipment Confirm program (P4205).
3. Generate the return *nota fiscal* by running the XJDE0005 version of the Generate Nota Fiscal program (R76558B).

Note. Make a note of the value that the system provides for the Order Number field on the Create Sales Ledger Details form. You will use this number later in the return process.

To complete the ship-to return process, you must ship confirm the order and then generate the *nota fiscal*.

This table lists some considerations for the ship-to sales return process:

| Program | Considerations |
|-------------------------------|---|
| Sales Ledger Inquiry (P42025) | <p>These considerations apply:</p> <ul style="list-style-type: none"> • The Sales Ledger Inquiry program must have a version that matches the version that you use in Sales Order Entry. <p>If you use version ZJDE7003 (Sales Return - Ship To) in Sales Order Entry, you must set up version ZJDE7003 in the Sales Ledger Inquiry program.</p> <ul style="list-style-type: none"> • For the Order Type processing option on the Default tab, select the code that represents a <i>nota fiscal</i> batch return. • Consider making the range of status that is specified by the Status Code - From and Status Code - Thru processing options on the Default tab as wide as possible. <p>For example, if you enter 520 for the Status Code - From processing option and enter 999 for the Status Code - To processing option, the system searches over a wide range of <i>notas fiscais</i> when it uses the Sales Ledger Inquiry program.</p> <ul style="list-style-type: none"> • For the Enter Status Code processing option on the Credit Memo tab, enter the next status of the <i>nota fiscal</i> that was sent with the merchandise that is now being returned. <p>For example, if 999 is the next status of an order for which the sales update is run, enter 999 for this processing option.</p> <ul style="list-style-type: none"> • You do not need to enter a value for the second processing option on the Credit Memo tab. • You do not need to enter values on the Versions tab because the Sales Ledger Inquiry program is called from the Sales Order Entry program. |

| Program | Considerations |
|---|--|
| Sales/Purchase Returns - Brazil (P76B805) | <p>These considerations apply:</p> <ul style="list-style-type: none"> • The Sales/Purchase Returns - Brazil program must have a version that matches the version that you use in Sales Order Entry. <p>If you use version ZJDE7003 (Sales Order Entry - Return Order - Ship To) in Sales Order Entry, you must set up version ZJDE7003 in the Sales/Purchase Returns - Brazil program.</p> <ul style="list-style-type: none"> • Consider making the range of status that is specified by the Next Status Code - From and Next Status Code - Thru processing options on the Select tab as wide as possible. <p>For example, if you enter 520 for the Next Status Code - From processing option and enter 999 for the Next Status Code - To processing option, the system searches over a wide range of <i>notas fiscais</i> when it uses the Sales/Purchase Returns - Brazil program.</p> |
| Sales Return - Ship To (P4210/ZDJE7003) | <p>These considerations apply:</p> <ul style="list-style-type: none"> • For the Order Type processing option on the Defaults tab, enter the code that represents sales order returns. • For the Line Type processing option on the Defaults tab, enter the code that represents a ship-to credit. • For the Beginning Status, enter the status that represents Enter Sales Order. • For the Sales Ledger Inquiry processing option on the Version tab, enter the version that matches the version of Purchase Order Entry that you are using. |

Setting Up Ship-To Return Versions

Set up the Sales Ledger Inquiry program (P42025) with a version that corresponds to the version of Sales Order Entry program (P4210) that you use to process the return. For example, version ZJDE7003 of the Sales Order Entry program in the base Sales Order Management software is set up for processing sales order returns when the buyer receives and then returns merchandise. If you use this version for processing the return, you must set up a version ZJDE7003 in the Sales Ledger Inquiry program.

Set up the Sales/Purchase Returns - Brazil program (P76B805) with a version that corresponds to the version of the Sales Order Entry program that you use to process the return. For example, version ZJDE7003 of the Sales Order Entry program in the base JD Edwards EnterpriseOne Sales Order Management software is set up for processing sales order returns when the buyer receives and then returns merchandise. If you use this version for processing the return, you must set up a version ZJDE7003 in the Sales/Purchase Returns - Brazil program.

Ship-From Sales Returns

If you need to process the cancellation of an order after you have run the Update Sales - Brazil program, you must process the cancellation as a sales return. You must consider the price for the merchandise, and the taxes and other fees charged on the original printed *nota fiscal* when you process the return so that the appropriate reversing entries are made to the financial and inventory systems.

You use the Ship-From sales return process when the company to which you shipped the merchandise returns the merchandise before they received the merchandise into their inventory. You must create a *nota fiscal* to account for this type of transaction. When you process this type of sales return, you must process the return in this order:

1. Use the Sales Order Entry - Return Order - Ship From program (version ZJDE7004) to create detail lines for the returned items and associate the original *nota fiscal* with the *nota fiscal* that you create for the return.
2. Run the ZJDE7002 version of the Shipment Confirm program.
3. Generate the return *nota fiscal* by running the XJDE0003 version of the Generate Nota Fiscal program.
4. Print the *nota fiscal* for the return in final mode by using the Print Nota Fiscal - Ship From program (R76560B).
5. Update the sales for Brazil by running the Sales Update - Brazil program (R76B803).

This table lists some considerations for the ship-to sales return process:

| Program | Considerations |
|----------------------|---|
| Sales Ledger Inquiry | <p>These considerations apply:</p> <ul style="list-style-type: none"> • The Sales Ledger Inquiry program must have a version that matches the version that you use in Sales Order Entry. <p>If you use version ZJDE7004 (Sales Return - Ship From) in Sales Order Entry, you must set up version ZJDE7004 in The Sales Ledger Inquiry program.</p> <ul style="list-style-type: none"> • For the Order Type processing option on the Defaults tab, select the code that represents a <i>nota fiscal</i> batch return. • Consider making the range of status that is specified by the Status Code - From and Status Code - Thru processing options on the Defaults tab as wide as possible. <p>For example, if you enter 520 for the Status Code - From processing option and enter 999 for the Status Code - To processing option, the system searches over a wide range of <i>notas fiscais</i> when it uses the Sales Ledger Inquiry program.</p> <ul style="list-style-type: none"> • For the Enter Status Code processing option on the Credit Memo tab, enter the next status of the <i>nota fiscal</i> that was sent with the merchandise that is now being returned. <p>For example, if 999 is the next status of an order for which the sales update is run, enter 999 for this processing option.</p> <ul style="list-style-type: none"> • You do not need to enter a value for the second processing option on the Credit Memo tab. • You do not need to enter values on the Versions tab because the Sales Ledger Inquiry program is called from the Sales Order Entry program. |

| Program | Considerations |
|---|---|
| Sales/Purchase Returns - Brazil (P76B805) | <p>These considerations apply:</p> <ul style="list-style-type: none"> • The Sales/Purchase Returns - Brazil program must have a version that matches the version you use in Sales Order Entry. <p>If you use version ZJDE7004 (Sales Return - Ship From) in Sales Order Entry, you must set up version ZJDE7004 in the Sales/Purchase Returns - Brazil program.</p> <ul style="list-style-type: none"> • Consider making the range of status specified by the Next Status Code - From and Next Status Code - Thru processing options on the Select tab as wide as possible. <p>For example, if you enter 520 for the Next Status Code - From processing option and enter 999 for the Next Status Code - To processing option, the system searches over a wide range of <i>notas fiscais</i> when it uses the Sales/Purchase Returns - Brazil program.</p> |
| Sales Return - Ship From (P4210/ZDJE7004) | <p>These considerations apply:</p> <ul style="list-style-type: none"> • For the Order Type processing option on the Defaults tab, enter the code that represents sales order returns. • For the Line Type processing option on the Defaults tab, enter the code that represents a ship-to credit. • For the Beginning Status processing option on the Defaults tab, enter the status that represents Enter Sales Order. • For the Sales Ledger Inquiry processing option on the Versions tab, enter the version that matches the version of Sales Order Entry that you are using. |

Setting Up Ship-From Return Versions

Set up the Sales Ledger Inquiry program with a version that corresponds to the version of the Sales Order Entry program that you use to process the return. For example, version ZJDE7004 of the Sales Order Entry program in the base JD Edwards EnterpriseOne Sales Order Management software is set up for processing sales order returns when the buyer did not receive the merchandise. If you use this version for processing the return, you must set up a version ZJDE7004 in the Sales Ledger Inquiry program.

Set up the Sales/Purchase Returns - Brazil program with a version that corresponds to the version of the Sales Order Entry program that you use to process the return. For example, version ZJDE7004 of the Sales Order Entry program in the base JD Edwards EnterpriseOne Sales Order Management software is set up for processing sales order returns when the buyer did not receive the merchandise. If you use this version for processing the return, you must set up a version ZJDE7004 in the Sales/Purchase Returns - Brazil program.

Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Running the Generate Nota Fiscal Program, page 526

Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Running the Print Nota Fiscal Program, page 537

Prerequisites

Before you complete the tasks in this section:

- Verify that a corresponding version of the Sales Order Entry program exists in the Sales Ledger Inquiry program. For example, if you use version ZJDE7004 of the Sales Order Entry program to process sales order returns, version ZJDE7004 must exist for returns in the Sales Ledger Inquiry program.
- Verify that a matching version of the Sales Order Entry program exists in the Sales/Purchase Returns - Brazil program. For example, if you use version ZJDE7003 of the Sales Order Entry program to process sales order returns, version ZJDE7003 must exist for returns in the Sales/Purchase Returns - Brazil program.
- Verify that the processing options and version are set up for the Sales Ledger Inquiry program (P42025).

See *JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide*, “Entering Additional Orders,” Setting Processing Options for Sales Ledger Inquiry (P42025).

- Verify that processing options and version are set up for the Sales Order Entry program (P4210).

See *JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide*, “Entering Sales Orders,” Setting Processing Options for Sales Order Entry (P4210).

- Verify that the processing options and version are set up for the Sales/Purchase Returns - Brazil program.
- Verify that the processing options and version are set up for the Sales Return - Ship To program (P4210/ZJDE7003).
- Verify that the processing options and version are set up for the Sales Return - Ship From program (P4210/ZJDE7004).
- Verify that supplier master and purchasing instruction records exist for the client who is returning the merchandise you are processing.
- Verify that supplier master and purchasing instruction records exist for the client who is returning the merchandise you are processing.

Forms Used to Enter Ship-To Sales Returns and Ship-From Sales Returns

| Form Name | FormID | Navigation | Usage |
|------------------------------|--------|--|--------------------------------------|
| Sales Order Detail Revisions | W4210A | Sales Order Processing - Brazil (G76B4211), Sales Return - Ship To Click Add on Customer Service Inquiry. | Access Customer Service Inquiry form |

| Page Name | Object Name | Navigation | Usage |
|-----------------------------------|-------------|---|--|
| Ship To Nota Fiscal Number | W76B805B | Select Credit Memo from the Form menu on Sales Order Detail Revisions. | Enter information from the <i>nota fiscal</i> that the buyer sent with the returned merchandise. |
| Create Sales Ledger Details | W76B805E | Click OK on Ship To Nota Fiscal Number. | Enter the <i>nota fiscal</i> number from the <i>nota fiscal</i> that accompanied the order when you shipped it to the customer |
| Nota Fiscal Selection | W76B805G | Select NF Selection from the Form menu on Create Sales Ledger Details. | Populate the Create Sales Ledger Details form with data from the original sales <i>nota fiscal</i> |
| Work With Sales Ledger Inquiry | W42025A | Select Credit Memo from the Form menu on Sales Order Detail Revisions. | Enter the order number the system displayed on the Create Sales Ledger Details form. |
| S.O. Brazilian Information Header | W4210BRL | Click OK on the Sales Order Detail Revisions form. | Verify that header information is correct |
| S.O. Brazilian Information Detail | W4210BRA | Click OK on the S.O. Brazilian Information Header form. | Verify that the detail information is correct |
| Sales Order Detail Revisions | W4210A | Sales Order Processing - Brazil (G76B4211), Sales Return - Ship From Click Add on the Customer Service Inquiry form. | Access the Sales Order Detail Revisions form. |
| Create Sales Ledger Details | W76B805E | Select Credit Memo from the Form menu on the Sales Order Detail Revisions form. | Enter data about the return including order type, branch/plant, and customer. |
| Nota Fiscal Selection | W76B805G | Select NF Selection from the Form menu on Create Sales Ledger Details. | Populate the Create Sales Ledger Details form with data from the original sales <i>nota fiscal</i> . |
| Work With Sales Ledger Inquiry | W42025A | Click OK on the Create Sales Ledger Details form. | Enter the new order number that was previously generated by the system, and select the lines for which you process a return. |
| Sales Order Detail Revisions | W4210A | Click Close on the Work with Sales Ledger Inquiry form. | Review the lines you process for return and note the new order number. |
| S.O. Brazilian Information Header | W4210BRL | Click OK on the Sales Order Detail Revisions form. | Verify header information. |

| S.O. Brazilian Information Detail | W4210BRA | Click OK on the S.O. Brazilian Information Header form. | Verify detail information. |

Running the Reverse/Void Nota Fiscal Program

Select Sales Order Processing - Brazil (G76B4211), Reverse/Void Nota Fiscal.

Setting the Processing Options for Reverse/Void Nota Fiscal (R76559B)

Processing options enable you to specify the default processing for programs and reports.

Select

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- 1. Generated Nota Fiscal Status Code (Required)** Enter a user-defined code (UDC) 40/AT to specify the status of the *notas fiscais* that the system selects to reverse. You must select a code from the Activity/Status Codes UDC (40/AT) table. The code you select must be set up in the order activity rules for the order type and the line type of the *notas fiscais* that you want to process.
- 2. Printed Nota Fiscal Status Code (Required)** Enter a UDC (40/AT) to specify the status code for the printed *notas fiscais*. The system selects and processes the *nota fiscais* with this status code.

Defaults

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- 1. Sales Order Next Status Code (Required)** Enter a UDC (40/AT) to specify the status code for the printed *notas fiscais*. The system selects and processes the *notas fiscais* that are at the status you specify.
- 2. Nota Fiscal Next Status Code (Required)** Enter a UDC (40/AT) to specify an override next status for the sales order. If you leave this processing option blank, the next status reverts to the previous status.

Setting Processing Options for Sales/Purchase Returns - Brazil (P76B805)

Use these processing options to set display values, specify a reverse sign for purchase orders, specify status code ranges, and set system defaults and edits.

Display

Use this processing option to indicate processing for sales or purchasing *notas fiscais*.

- Nota Fiscals** Specify whether the system processes sales or purchasing *notas fiscais*. Values are:

Blank: Sales *notas fiscais*.

I: Purchasing *notas fiscais*.

Process

Use this processing option to reverse the purchase order amount.

Reverse Sign Specify that the sign should be reversed when processing purchase orders.

Select

Use this processing option to specify the status code range that the system uses when accessing the program.

Range of Status Codes Specify the range of status codes to use when retrieving records. To make this range as wide as possible set these values to *520* and *999*.

Defaults

Use these processing options to set system default values. These processing options are not important for sales returns.

Inventory Location Specify the default inventory location. Values are:

Blank: Blank location.

I: Ship to address book.

2: Ship to *nota fiscal* series.

3: Original location.

Return Branch Specify the return branch.

Document Type Specify the document type.

Edits

Use this processing option to validate the Ship To document number. This processing option is important for ship-to sales returns.

Validate Ship to Document Number Specify whether the system validates the Ship To document number. Values are:

Blank: Do not validate.

Use this value when processing

I: Validate the Ship To document number.

Use this value when processing ship-to sales returns.

Entering Ship-To Sales Returns

Access the Sales Order Detail Revisions form.

NF Series Enter a two-character number that, along with the *nota fiscal* number, identifies a *nota fiscal*. The Nota Fiscal Series field is the second key that the system uses to access a specific *nota fiscal*.

Entering Ship-From Sales Returns

Access the Sales Order Detail Revisions form.

CHAPTER 29

(BRA) Processing Fiscal Books

This chapter provides an overview of Fiscal Books, lists prerequisites, and discusses how to:

- Generate the Fiscal Books workfiles.
- Maintain inbound and outbound *nota fiscal* records for fiscal books.
- Maintain *Imposto sobre Circulação de Mercadorias e Serviços* (ICMS) and *Imposto sobre Produtos Industrializados* (IPI) tax information for fiscal books.
- Maintain GNRE information for fiscal books.
- Generate the ICMS magnetic files.
- Purge incomplete fiscal books.
- Print fiscal books reports.
- Print the DIPI Summaries and Statements report.
- Print the DIPI Annual Movements report.
- Generate fiscal books.

Understanding Fiscal Books for Brazil

Fiscal books are required by the Brazilian government to report information about taxable transactions and the taxes due on those transactions. You print fiscal books on the 10th, 20th, and the last day of the month for ICMS tax and at the end of the month for IPI tax.

The *notas fiscais* that are generated by the JD Edwards EnterpriseOne Sales Order Management and JD Edwards EnterpriseOne Procurement systems are automatically converted into the Fiscal Books module. You must manually enter stand-alone *notas fiscais*.

A program is provided that populates a *nota fiscal* header and a *nota fiscal* detail workfile with data from the *nota fiscal* header and *nota fiscal* detail tables. Then you run reports from the workfiles to generate reports that comply with the layout which is defined by the ICMS Ordinance 57/95, and you generate electronic media files according to the layout that is defined by the ICMS Ordinance 57/95 (*Systema Integrado de Informacoes*). Additionally, programs are provided that generate supporting reports and programs that submit fiscal book data to the tax authority electronically.

When you generate Fiscal Books, the system prints an opening and closing page. You create the text for opening and closing pages by using the Fiscal Books Next Numbers program (P7602B).

See [Chapter 22, “\(BRA\) Setting Up Country-Specific Functionality for Brazil,” Setting Up Opening and Closing Terms for Fiscal Books for Brazil, page 405.](#)

To maintain the records and generate fiscal books, you must complete these tasks in this order:

1. Set up the system for Fiscal Books.
2. Run the Nota Fiscal Conversion program (R76B200A).

When you run the Nota Fiscal Conversion program, the system writes information from the Nota Fiscal Header - Brazil (F7601B) and the Nota Fiscal Detail - Brazil (F7611B) tables to the Nota Fiscal - Header (Fiscal Books) table (F76101B) and the Nota Fiscal - Detail (Fiscal Books) table (F76111B).

3. Run the Integrity Report (R76B0001).

The Integrity Report process purges records from tables F76101B and F76111B when the record does not exist in both tables.

4. Maintain fiscal books records as necessary.
5. Print and review the fiscal books supplementary reports.
6. Generate and review fiscal books.
7. Generate the electronic media to submit the fiscal books.

Reporting IPI in Fiscal Books

IPI is a federal tax that applies to domestic or imported manufactured goods. The system calculates IPI as follows:

- For *notas fiscais* dated in 2004, the IPI tax must be reported by *quinzenas*. *Quinzena* 1 is the period from the 1st day through the 15th day of a month. *Quinzena* 2 is the period from the 16th day of the month through the end of a month.
- For *notas fiscais* dated in 2005, IPI tax must be reported monthly.

Data items BRADEC and BRADCL store the codes that indicate the period for which IPI taxes were calculated. These tables store codes for data item BRADEC or BRADCL:

- Nota Fiscal - Header (Fiscal Books) table (F76101B).
- Verification of ICMS/IPI - Statement (F76B102).
- Verification of ICMS/IPI - Information (F76B103).
- Verification of ICMS/IPI - Comments (F76B104).

The system writes or reads codes for BRADCE and BRADCL when you run these programs:

| Program | System Action |
|---|----------------------|
| Nota Fiscal Conversion (R76B200A) | Writes code to table |
| Verification of ICMS/IPI (P76B1002) | Writes code to table |
| Inbound Nota Fiscal Maintenance (P76B1001) Outbound Nota Fiscal Maintenance (P76B1001) | Writes code to table |
| Verification of IPI (R76B4002) | Reads code in table |
| DIPI Summary and Statements (R76B4006) | Reads code in table |

| Program | System Action |
|---|---------------------|
| Outbound Registry (R76B4001) | Reads code in table |
| Inbound Registry (R76B4016) Note. Program R76B4016 has been renamed to Inbound Registry. It was formerly Inbound Registry São Paulo. Program R76B4000 (Inbound Registry) is obsolete. | Reads code in table |

When the system writes codes to one of the tables that stores codes for data item BRADEC or BRADCL, it writes the codes in this manner:

- For *notas fiscais* dated in 2004, the system writes codes as follows:
 - For *notas fiscais* dated from the 1st day through the 15th day of the month, the system writes 1.
 - For *notas fiscais* dated from the 16th of the month through the end of the month, the system writes 2.
- For *notas fiscais* dated in 2005, the system writes 1.

Prerequisites

Before completing the tasks in this chapter:

- Set up UDCs.

See [Chapter 22, “\(BRA\) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Fiscal Books and Electronic GIAs for Brazil, page 376](#).

- Set up next numbers for fiscal books.

See [Chapter 22, “\(BRA\) Setting Up Country-Specific Functionality for Brazil,” Setting Up Next Numbers for Brazil, page 400](#).

- Set up opening and closing terms for fiscal books.

See [Chapter 22, “\(BRA\) Setting Up Country-Specific Functionality for Brazil,” Setting Up Opening and Closing Terms for Fiscal Books for Brazil, page 405](#).

Generating the Fiscal Books Workfiles

This section provides an overview of the fiscal books workfiles, and discusses how to:

- Run the Nota Fiscal Conversion program.
- Set processing options for the Nota Fiscal Conversion program (R76B200A).

Understanding Fiscal Books Workfiles

Before you can generate fiscal book reports and the electronic media that you must submit to *Sintegra* (*Systema Integrado de Informacoes*), you must create the fiscal book workfiles. The Nota Fiscal Conversion program enables you to specify the *notas fiscais* that you write to the workfiles. When you run the Nota Fiscal Conversion program, the system writes information from the Nota Fiscal Header - Brazil (F7601B) and the Nota Fiscal Detail - Brazil (F7611B) tables to the Nota Fiscal - Header (Fiscal Books) table (F76101B) and the Nota Fiscal - Detail (Fiscal Books) table (F76111B). Other batch programs that you use to generate fiscal book reports cull data from tables F76101B and F76111B.

Prerequisites

Before you complete the tasks in this section:

- Update inbound and outbound *nota fiscal* records as necessary.

See [Chapter 29, “\(BRA\) Processing Fiscal Books,” Maintaining Inbound and Outbound Notas Fiscais Records for Fiscal Books, page 566.](#)

- Set up the transaction nature codes cross-references.

See [Chapter 22, “\(BRA\) Setting Up Country-Specific Functionality for Brazil,” Setting Up a Cross-Reference for Transaction Nature Codes for Brazil, page 406.](#)

Running the Nota Fiscal Conversion Program

Select Fiscal Reports - Brazil (G76B111), Nota Fiscal Conversion.

Setting the Processing Options for Nota Fiscal Conversion (R76B200A)

These processing options specify how the system writes *nota fiscal* data to the *nota fiscal* work files for fiscal books.

Default

- | | |
|----------------------------|---|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 3. Thru Date | Specify the ending date of the <i>notas fiscais</i> for which you want to process data. |
| 4. Nota Fiscal Type | Specify whether you work with inbound or outbound <i>notas fiscais</i> . Values are: E: Inbound S: Outbound |

Messages

- | | |
|--|--|
| 1. IPI Tax Not Credited | Select a message code from the Fiscal Message/Observations UDC (76B/M1). Use this option when <i>notas fiscais</i> show IPI tax that you cannot recover. |
| 2. IPI Tax 50% Recoverable | Select a message code from the Fiscal Message/Observations UDC (76B/M1). Use this option when <i>notas fiscais</i> do not show IPI tax that you can recover. |
| 3. Free Port Zone Discount | Select a message from the Fiscal Message/Observations UDC (76B/M1). The message that you select overrides the message from the Nota Fiscal Header - Fiscal Books table (F76B101B) and prints in the Fiscal Books. |
| 4. Freight, Insurance and Expenses | Select a message from the Fiscal Message/Observations UDC (76B/M1). The message that you select overrides the message from the Nota Fiscal Header - Fiscal Books table (F76B101B) and prints in the Fiscal Books. |
| 5. Substitution | Select a message from the Fiscal Message/Observations UDC (76B/M1). The message you select overrides the message from the Nota Fiscal Header - Fiscal Books table (F76B101B) and prints in the Fiscal Books. |
| 6. ICMS Tax Differential Between States | Select a message from the Fiscal Message/Observations UDC (76B/M1). The message you select overrides the message from the Nota Fiscal Header - Fiscal Books table (F76B101B) and prints in the Fiscal Books. |
| 7. Suffix Code for Transaction Nature | Specify the suffix for the transaction nature codes that you want to exclude from the report. Line items that have transaction nature codes that end with the suffix that you enter will appear in the Fiscal Books with an amount of zero. For example, if a line item for the cost of packaging materials or pallets has the transaction nature suffix that you enter here, the line item appears in the Fiscal Books with 0 for the amount. |
| 8. Message Code for Suffix | Select the message code that you want to print for the suffix of the transaction nature code. You select the message code from the Fiscal Message/Observations UDC (76B/M1). |

Processing

- | | |
|------------------------------------|--|
| 1. Refresh Conversion Table | Specify whether the system refreshes the records already written to the Nota Fiscal - Header (Fiscal Books) table (F76101B) and the Nota Fiscal - Detail (Fiscal Books) table (F76111B). If you set this processing option to 1, you must use Data Selection to specify a range of dates for which the system will refresh the records. Values are: Blank: Do not refresh records. 1: Refresh records. |
| 2. Purge Conversion Table | Specify whether the system purges all records from the Nota Fiscal Header - Fiscal Books table (F76101B) and the Nota Fiscal Details - Fiscal Books table (F76111B). |

Codes

- | | |
|----------------------------|---|
| 1. Cancelled Code 1 | Select a code from the Activity/Status Codes UDC (40/AT) to represent canceled <i>notas fiscais</i> . |
|----------------------------|---|

- | | |
|----------------------------|---|
| 2. Cancelled Code 2 | Select a code from the Activity/Status Codes UDC (40/AT) to represent canceled <i>notas fiscais</i> . |
| 3. Cancelled Code 3 | Select a code from the Activity/Status Codes UDC (40/AT) to represent canceled <i>notas fiscais</i> . |
| 4. Cancelled Code 4 | Select a code from the Activity/Status Codes UDC (40/AT) to represent canceled <i>notas fiscais</i> . |

Maintaining Inbound and Outbound Notas Fiscais Records for Fiscal Books

This section provides an overview of *nota fiscal* maintenance and discusses how to:

- Set processing options for the Inbound Nota Fiscal Maintenance and Outbound Nota Fiscal Maintenance (P76B1001) program.
- Add a *nota fiscal* record for fiscal books.

Understanding Nota Fiscal Maintenance

The JD Edwards EnterpriseOne Sales Order Management and JD Edwards EnterpriseOne Procurement systems write data to the Nota Fiscal Header - Brazil (F7601B) and the Nota Fiscal Detail - Brazil (F7611B) tables when you generate *notas fiscais*. The system writes data in these tables to the Nota Fiscal - Header (Fiscal Books) table (F76101B) and the Nota Fiscal - Detail (Fiscal Books) table (F76111B) when you run the Nota Fiscal Conversion program (R76B200A). The system uses the data in the F76101B and F76111B tables to create Fiscal Books.

If you generate stand-alone *notas fiscais* or you generate *notas fiscais* outside of the JD Edwards EnterpriseOne systems, the data is not included in the F7601B and F7611B tables. Therefore, data for those *notas fiscais* are not written to the F76101B and F76111B tables when you run the Nota Fiscal Conversion program. You use the Maintenance of Fiscal Books program (P76B1001) to add data for inbound and outbound *notas fiscais* to the F76101B and F76111B tables before you run the Nota Fiscal Conversion program. You can also use this program to revise or delete *nota fiscal* records.

Forms Used to Add Inbound and Outbound Nota Fiscal Records

| Form Name | FormID | Navigation | Usage |
|------------------------|-----------|--|---|
| Nota Fiscal Revisions | W76B1001B | Fiscal Reports - Brazil (G76B111), Inbound Nota Fiscal Maintenance Click Add on the Work with Nota Fiscal form. | Add header information for an inbound <i>nota fiscal</i> . |
| Work with Nota Fiscal | W76B1001A | Fiscal Reports - Brazil (G76B111), Outbound Nota Fiscal Maintenance | Add header information for an outbound <i>nota fiscal</i> . |
| Work with Fiscal Books | W76B1001C | Select Nota Fiscal Detail from the Form menu on the Nota Fiscal Revisions form. | Access the Fiscal Book Revisions form. |
| Fiscal Book Revisions | W76B1001D | Click Add on the Work with Fiscal Books form. | Enter item information |

Setting Up Processing Options for Inbound Nota Fiscal Maintenance and Outbound Nota Fiscal Maintenance (P76B1001)

Processing options enable you to specify the default processing for programs and reports.

Default

This processing option specifies whether the system processes inbound or outbound *notas fiscais*.

- Nota Fiscal Type** Specify whether you work with inbound or outbound. *notas fiscais*. Values are:
E: Inbound
S: Outbound

Adding a Nota Fiscal Record for Fiscal Books

Access the Nota Fiscal Revisions form.

Nota Fiscal Revisions form

| | |
|---------------------------------------|---|
| Status Code | Enter a value that exists in the Activity/Status Codes (40/AT) UDC table to indicate the status of the line. |
| Nota Fiscal Date | Enter the date of the <i>nota fiscal</i> . |
| Issuer CNPJ | Enter the issuer CGC number. |
| Supplier Number | Enter the address book number of the supplier who issued the <i>nota fiscal</i> . |
| Issue Date | For inbound <i>notas fiscais</i> , enter the date that you received the <i>nota fiscal</i> . For outbound <i>notas fiscais</i> , enter the date that you issued the <i>nota fiscal</i> . |
| NF Total | Enter the total amount of the <i>nota fiscal</i> . The system calculates the total as follows: Merchandise + IPI tax amount + ICMS Substitute tax amount + Complementary Expenses - Discounts |
| ICMS Discount - Free Port Zone | Enter the amount of the discount available to a free port zone customer. |
| Fiscal Message Code 01 | Enter a code by which records in the Inbound Registry and the Outbound Registry are sorted for summary purposes. You must select a code from the Fiscal Messages/Observations UDC (76BM1). |

| | |
|-------------------------------|---|
| Fiscal Message Code 02 | Enter a code by which records in the Inbound Registry and the Outbound Registry are sorted for summary purposes. You must select a code from the Fiscal Messages/Observations UDC (76B/M1). |
| Fiscal Comment Code | Enter a code that appears in a comments column in the Inbound Registry and the Outbound Registry. You must select a code from the Fiscal Message/Observations UDC (76B/M1). |
| NF Value 01 | Enter an amount that the system associates with the Fiscal Message Code 01 and the Fiscal Comment Code fields. The system totals the amounts in this field for each Fiscal Message Code summary for the Inbound Registry and the Outbound Registry, and prints the total along with the value in the Fiscal Message Code 01 field. The value in the NF Value 01 field is also displayed with the Fiscal Comment Code in the comment column in the Inbound Registry and the Outbound Registry. |
| NF Value 02 | Enter an amount that the system associates with the Fiscal Message Code 02 and the Fiscal Comment Code fields. The system totals the amounts in this field for each Fiscal Message Code summary for the Inbound Registry and the Outbound Registry, and prints the total along with the value in the Fiscal Message Code 02 field. |
| Fiscal Classification | Enter a code that specifies groups of products, as defined by the local tax authorities. The product groups are based on taxing conventions and other national statistics. The system uses this code to determine the applicable tax rate for a product. |
| Tax Situation | Enter the tax situation code. |
| Gross Weight | Enter the total weight of the item, including packaging, pallets, and so on. |
| Weight Unit | Enter the unit measure on which the item weight is calculated, such as liter, kilo, and so on. |
| Extended Price | Enter the number of units multiplied by the unit price. |
| IPI Code | Enter the IPI code. |
| IPI Rate | Enter the rate at which the IPI tax is assessed. |
| IPI Tax | Enter the IPI tax amount that is printed on the <i>nota fiscal</i> . |
| ISS Rate | Enter the rate at which ISS tax is assessed. |
| Reduction Basis | Enter the amount on which ICMS taxes are assessed. In this case, the ICMS taxable amount is reduced due to the sale of given products. |
| IPI Reduction | Enter the amount on which IPI taxes are assessed. In this case, the IPI taxable amount is reduced due to the sale of given products. |

Maintaining ICMS and IPI Tax Information for Fiscal Books

This section provides an overview of ICMS and IPI tax information for fiscal books and discusses how to:

- Add ICMS and IPI demonstrative codes.

- Add ICMS and IPI collection information for fiscal books.
- Add comments for ICMS and IPI taxes for fiscal books.

Understanding ICMS and IPI Tax Information for Fiscal Books

The Verification of ICMS/IPI program (P76B1002) enable you to enter this type of information about the ICMS and IPI taxes that you paid:

- Demonstration Codes (76B/TD) that represent the type of credit or debit.
- Tax payments made, including the payment date and where the payment was made.
- Comments about the payment.

The Verification of ICMS/IPI program populates these tables:

- Verification ICMS/IPI - Statement (F76B102).
- Verification ICMS/IPI - Information (F76B103).
- Verification ICMS/IPI - Comments (F76B104).

The system uses these tables to write information to the Verification of IPI report (R76B4002) and the Verification of ICMS report (R76B4003).

Forms Used to Maintain ICMS and IPI Taxes

| Form Name | FormID | Navigation | Usage |
|--|-----------|--|--|
| Verification of ICMS/IPI - Demonstratives | W76B1002A | Fiscal Reports - Brazil (G76B111), Verification of ICMS/IPI | Add codes from the Demonstrative Codes UDC (76B/TD) to specify whether an ICMS or IPI tax is a credit or debit. The system prints this information in the ICMS Verification fiscal book. |
| Verification of ICMS/IPI - Collection Document | W76B1002B | Select Collection Document from the Form menu on the Verification of ICMS/IPI - Demonstratives form. | Add information about the payment of ICMS and IPI taxes, including the date paid and the confirmation number |
| Verification of ICMS/IPI - Observations | W76B1002C | Select Comments from the Form menu on the Verification of ICMS/IPI - Demonstratives form. | Add comments that print at the end of the Verification of IPI and the Verification of ICMS reports. |

Adding ICMS and IPI Demonstrative Codes

Maintaining GNRE Information for Fiscal Books

This section provides an overview of GNRE and discusses how to add GNRE information.

Understanding GNRE

GNRE (*Guia Nacional De Recolimento de Tributos Esaduais*) is a document that you use to pay ICMS substitution tax in Brazil. When you pay the tax, the bank gives you a confirmation number to acknowledge that you paid the tax. You must enter the confirmation number into the JD Edwards EnterpriseOne system so that the number can be reported in the fiscal books. The system writes the information to the GNRE Table (F76B105) and uses the information to generate record type 55 when you generate the magnetic tape for reporting purposes.

Forms Used to Maintain GNRE Information

| Form Name | FormID | Navigation | Usage |
|---------------------|-----------|--|--|
| Maintenance of GNRE | W76B1003A | Fiscal Reports - Brazil (G76B111), Maintenance of GNRE | Enter the confirmation number that the bank sends to you for GNRE. |

Adding GNRE Information

Access the Maintenance of GNRE form.

Company From

Enter the company that issued the GNRE form.

New GNRE Number

Enter the confirmation number that a bank gives to you, acknowledging that you paid ICMS Substitution tax by using a GNRE document.

| | |
|-------------------------------------|---|
| Tax ID | Enter the identification code required by various tax authorities. This can be a social security number, federal or state corporate tax ID, sales tax number, and so on. The system verifies the number and prints the separators in their correct format, according to the value of TAXC (Person/Corporation Code). If no value exists for TAXC, the system uses the Corporate Entity. |
| Payment Date | For inbound <i>notas fiscais</i> , enter the date that you received the <i>nota fiscal</i> . For outbound <i>notas fiscais</i> , enter the date that you issued the <i>nota fiscal</i> . |
| Company State | Enter the state code of the company that issued the <i>nota fiscal</i> . |
| Destination State | Enter a user defined code (00/S) that specifies the state or province. This code is usually a postal service abbreviation. |
| Bank Number | Enter the bank number. |
| Bank Branch Number | Enter the bank branch number. |
| Due Date | Enter the due date of the <i>nota fiscal</i> . |
| Amount | Enter the amount of the <i>nota fiscal</i> . |
| Fiscal Month | Enter the base month. |
| Fiscal Year | Enter the base year. |
| Agreement or Protocol Number | Enter the agreement number. |

Generating ICMS Magnetic Files (Sintegra)

This section provides an overview of the ICMS magnetic files and discusses how to:

- Run the Generate ICMS Magnetic Files - Sintegra program (R76B201)
- Set processing options for the Generate ICMS Magnetic Files - Sintegra program (R76B201)

Understanding ICMS Magnetic Files (Sintegra)

The Generate ICMS Magnetic Files - Sintegra program (R76B201) lets you create the flat file that you must submit for fiscal books reporting. Beginning in January 2003, the Brazilian government requires that you use the flat file layout as described in law *Convenio* ICMS 69/02 when you electronically submit the fiscal books for transactions that occurred after December 31, 2002. You use the format that is required by *Convenio* ICMS 57/95 for transactions that occurred prior to January 1, 2003. You specify the format that the system uses in the *Convenio* processing option.

The system reads records from these tables to populate the flat file:

- Nota Fiscal - Header (Fiscal Books) (F76101B).
- Nota Fiscal - Detail (Fiscal Books) (F76111B).
- Nota Fiscal Taxes Header - Brazil (F76B001).
- Item ASOF File (F41112).
- GNRE Table (F76B105).

- Branch/Plant Fiscal Company X-Reference - Brazil (F7606B).

The system reads tables F76111B, F76B101, and F76B001 to create record type 54 records that are based on data from *notas fiscais*. The record type 54 records that the system creates from tables F76111B and F76101B contain data about IPI and ICMS taxes. The record type 54 records that the system creates from table F76B001 contain data about PIS/PASEP and COFINS tax credits.

The system reads table F41112 to create record type 74 records that are based on transactions for which no *nota fiscal* exists, such as inventory adjustments.

What You Should Know About Processing Record Types 54, 74, and 75

The system generates record type 54 records from data in the Nota Fiscal - Detail (Fiscal Books) table (F76111B) and generates record type 74 records from data in the Item ASOF File table (F41112). The system then writes record type 75 records that are based on the data in record type 54 or record type 74 records.

Note. The information in this topic refers only to record type 54 records that are based on data in table F76111B. The system also creates record type 54 records that are based on data in the Nota Fiscal Taxes Header - Brazil table (F76B001), but it does not create record type 75 records that are based on those record type 54 records.

The system generates record types 54, 74, and 75 records according to these rules:

- When you set the Record Type 74 processing option to 1, the system creates records from data in table F41112. You can populate table F41112 only on a monthly basis. Therefore, the data that the system uses to populate records for record type 74 always encompasses an entire month, even when you set the From Date and Thru Date processing options to encompass a period of less than a month.

For example, if you set the From Date processing option to December 1, 2005, and the Thru Date processing option to December 15, 2005, the system applies that reporting period to all record types except record type 74. For record type 74, the system populates records for the period of December 1, 2005, through December 31, 2005.

- The system generates these records when you set the processing options as follows:

| Processing Options | Results |
|--|---|
| <p>Processing options are set as follows:</p> <ul style="list-style-type: none"> Record type 54 = 1 Record type 74 = 1 Record type 75 = 1 Files by State = 1 | <p>The system writes to the flat file as follows:</p> <ul style="list-style-type: none"> The system does <i>not</i> generate record type 74 records when the Files by State processing option is set to 1, even when the Record type 74 processing option is set to 1. Consequently, the system does not generate record type 75 records that are based on record type 74 records when the Files by State processing option is set to 1. The system generates record type 54 records from data in table F76111B and then generates record type 75 records as follows: If both table F76111B and table F41112 contain data for an item, the system writes a record type 54 record and a record type 75 record that is based on the record type 54 record; it does <i>not</i> create a record type 74 record for the item. If the system writes a record type 54 record for the item, the system writes a separate text file for each state for the record type 54 record and the record type 75 record. The system writes a single record type 75 record for each item from record type 54 records. |
| <p>Processing options are set as follows:</p> <ul style="list-style-type: none"> Record type 54 = 1 Record type 74 = 1 Record type 75 = 1 Files by State = 0 | <p>The system writes to the flat file as follows:</p> <ul style="list-style-type: none"> The system generates record type 54 records from data in table F76111B and record type 74 records from data in table F41112, and then it generates record type 75 records as follows: If both table F76111B and table F41112 contain data for an item, the system writes a record type 54 record and a record type 75 record that is based on the record type 54 record, and a record type 74 record for the item. The system does not create a record type 75 record that is based on the record type 74 record. The system generates record type 74 records and record type 75 records that are based on record type 74 records, only when no data for an item exists in table F76111B and a quantity for an item exists in table F41112. The system writes a single record type 75 record for each item from record type 54 and record type 74 records. Record type 75 records that are based on record type 74 records contain no tax data because they are based on table F41112. |

Record Type 54 Records That are Based on Tables F76111B and F76101B

The system creates record type 75 records that are based on the record type 54 records, if they exist, and based on record type 74 records, if they exist. The system writes only one record type 75 record for each item. The item data in table F76111B takes precedence over data in table F41112. In other words, if a record type 54 record and record type 74 record exist for an item, the system writes the data from record type 54 record to record type 75. You specify in processing options whether the system creates record type 74, 54, and 75 records.

If the system creates record type 75 records that are based on record type 54 records, the record type 75 records in the flat file contain values for these fields:

- Tax Situation Code
- IPI Tax Rate
- ICMS Tax Rate
- ICMS Reduction Basis
- ICMS Substitution Basis

If the system creates record type 75 records that are based on record type 74 records, the record type 75 records in the flat file contain zeros for the previously mentioned fields.

Record Type 54 Records That are Based on Table F76B001

If table F7B001 contains an amount (other than zero) for PIS/PASEP or COFINS tax credits, the system sums the amounts for the taxes and writes a record type 54 to the flat file as illustrated in this table:

| Segment Number | Segment Value |
|--------------------------------------|---|
| 01 (Type) | 54. |
| 02 (CNPJ) | The CNPJ of the supplier on inbound transactions, or the CNPJ of the customer on outbound transactions. |
| 03 (Model) | The Nota Fiscal Mode code. |
| 04 (Series) | The <i>nota fiscal</i> . series number. |
| 05 (Number) | The <i>nota fiscal</i> . number. |
| 06 (CFOP) | The Transaction Nature Code from the first line of a multiple line <i>nota fiscal</i> . |
| 07 (CST) | Zero |
| 08 (Item Sequence) | 993 |
| 09 (Item Code) | Blanks |
| 10 (Quantity) | Zero |
| 11 (Amount) | The sum of the PIS and COFINS taxes for the <i>nota fiscal</i> . from table F76B001. |
| 12 (Discount Amount) | Zero |
| 13 (ICMS Basis) | Zero |
| 14 (ICMS Basis for Substitution Tax) | Zero |
| 15 (IPI Amount) | Zero |
| 16 (ICMS Rate) | Zero |

Modifications to the Sintegra Flat File for 2003

As of January 2003, the format for the flat file for sending Sintegra data was modified by the Brazilian government. The JD Edwards EnterpriseOne system supports both the new format that is required by law *Convenio* ICMS 69/02 and the old format that is required by law *Convenio* ICMS 57/95.

Prerequisites

Before you complete the tasks in this section:

- Run the Item Ledger As Of Record Generation program (R41542) to populate the Item ASOF File table (F41112) so that the system can create record type 74.

See *JD Edwards EnterpriseOne Inventory Management 8.12 Implementation Guide*, “Reviewing Item and Quantity Information,” Setting Processing Options for Item Ledger As Of Record Generation (R41542).

- Set the processing options for the Generate ICMS Magnetic Tape - Sintegra program (R76B201).
- Set up the Ownership Code values in a Branch/Plant category code.

Running the Generate ICMS Magnetic Files - Sintegra Program

Select Fiscal Reports - Brazil (G76B111), Generate ICMS Magnetic Files - Sintegra.

Setting the Processing Options for Generate ICMS Magnetic Files - Sintegra (R76B201)

These processing options specify the company, dates, and type of *notas fiscais* and fiscal books with which you want to work.

Default

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|---------------------------|---|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>nota fiscal</i> for which you want to process data. |
| 3. Thru Date | Use this processing option to specify the ending date of the <i>nota fiscal</i> for which you want to process data. |
| 4. Print Report | Specify whether the system prints a verification report. The report is a dump of the text files. Values are: Blank: Do not print a report. 1: Print a report. |
| 5. Purpose of File | Specify the purpose of the text file. Values are: 1: Initial submission of text file. 2: Resubmission of text file. 3: Submission of information that was missing from initial submission. |

- 4: Submission of text file with corrected information.
- 5: Submission of text file due to the original submission containing information for an incorrect State
- 6. Nature of Transactions** Specify the type of transactions contained in the text file.
- 7. Summarize Record Type 75** Specify how the system writes type 75 records to the text file. Values are:
- 1*: Summarize records and write by Second Item Number, ICMS Substitution Code, ICMS Rate, and Reduction Rate.
- 2*: Write records by Second Item Number.

File Properties

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- 1. Directory Name** Specify the directory where the system saves the text file that it generates.
- 2. Text File Name** Specify the name of the text file.
- 3. Files by State** Specify whether the system creates separate text files for each state. The system creates separate text files for record type 54 and record type 55 records, and for record type 75 records that are based on record type 54 records. Values are:
- Blank: Do not create separate text files. The system appends .TXT to the name that you entered in the Text File Name processing option.
- 1*: Create separate text files. The system names each text file by preceding the name that you entered in the Text File Name processing option with the state code and appending .TXT to the name that you entered in the Text File Name processing option. For example, if you enter Outbound in the Text File Name processing option, for the state of São Paulo, the system writes the file name as: SPOUTBOUND.TXT.
- 4. Equipment Model** Specify the machine model where the text file was created. The system prints this information on a label that you can attach to a diskette.
- 5. Media Recording Density** Specify the media recording density. The system prints this information on a label that you can attach to a diskette.

Company

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- 1. Contact Name** Specify the name of the person authorized to handle questions or problems about the text file.
- 2. Contact Telephone Number** Specify the telephone number of the person authorized to handle questions or problems about the text file.
- 3. Company Facsimile Number** Specify the number of the company's facsimile machine.
- 4. Street Address** Specify the street address of the company.

- | | |
|--|---|
| 5. Building Number | Specify the building number of the company. |
| 6. Additional Address Information | Specify additional address information for the company. |
| 7. City or County | Specify the city or county for the company. |
| 8. Zip Code | Specify the postal code number for the company. |
| 9. Branch/Plant (Business Unit) Category Code | Enter the category code of the branch/plant (business unit) in which you have set up the Ownership Code. If you leave this processing option blank, the system uses category code 30. |

Processing

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|--------------------------|---|
| 1. Record type 50 | Specify whether you want to create this type of record. Values are: Blank: Do not create records for this record type. <i>1</i> : Create records. The system lists <i>nota fiscal</i> headers and total amounts. |
| 2. Record type 51 | Specify whether you want to create this type of record. Values are: Blank: Do not create records for this record type. <i>1</i> : Create records. The system lists <i>nota fiscal</i> headers and total amounts. |
| 3. Record type 53 | Specify whether you want to create this type of record. Values are: Blank: Do not create records for this record type. <i>1</i> : Create records. The system lists <i>nota fiscal</i> headers and total amounts. |
| 4. Record type 54 | Specify whether you want to create this type of record. Values are: Blank: Do not create records for this record type. <i>1</i> : Create records. The system lists <i>nota fiscal</i> headers and total amounts. |
| 5. Record type 55 | Specify whether you want to create this type of record. Values are: Blank: Do not create records for this record type. <i>1</i> : Create records. The system lists <i>nota fiscal</i> headers and total amounts. |
| 6. Record type 70 | Specify whether you want to create this type of record. Values are: Blank: Do not create records for this record type. <i>1</i> : Create records. The system lists <i>nota fiscal</i> headers and total amounts. |
| 7. Record type 75 | Specify whether you want to create this type of record. Values are: Blank: Do not create records for this record type. <i>1</i> : Create records. The system lists <i>nota fiscal</i> headers and total amounts. |
| 8. Record type 74 | Specify whether the system creates records for record type 74. The Files by State processing option must be blank, and the Record type 74 processing option must be set to <i>1</i> to generate records for record type 74. Values are: Blank: Do not create records for this record type. |

I: Create records for record type 74.

9. Convenio

Specify the flat file format for the magnetic file. Values are:

Blank: Use the format that is required by law *Convenio* ICMS 31/99.

I: Use the format that is required by law *Convenio* ICMS 69/02.

NF Futura

Although processing options are set up during system implementation, you can change processing options each time you run a program.

1. Billing Invoice.

Specify the suffix for the transaction nature codes that represent billing invoices. The system reports *notas fiscais* that have transaction nature codes that end with the suffix that you enter as a *Nota Fiscal Futura*, and prints 0 (zero) for the tax amount on the report.

2. Delivery.

Specify the suffix for the transaction nature codes that represent the taxes for merchandise shipped after a billing invoice is sent. *Notas fiscais* that have transaction nature codes that end with the suffix that you enter are reported as a *Nota Fiscal Futura*.

Purging Incomplete Fiscal Book Records

This section provides an overview of purging incomplete fiscal book records, lists prerequisites, and discusses how to purge incomplete fiscal book records.

Understanding Purging Incomplete Fiscal Book Records

This program deletes the incomplete *notas fiscais* from the Nota Fiscal - Header (Fiscal Books) table (F76101B) and the Nota Fiscal - Detail (Fiscal Books) table (F76111B), and prints a report listing the records that were deleted. When you run this program, the system deletes *notas fiscais* that have a header record and no detail record, and those that have a detail record and no header record.

Prerequisites

Before you complete the tasks in this section:

- Verify ICMS and IPI taxes.
- Revise *nota fiscal* records, as necessary.
- Revise GNRE records, as necessary.
- Set up the cross-reference for transaction nature codes.

See [Chapter 22, “\(BRA\) Setting Up Country-Specific Functionality for Brazil,” Setting Up a Cross-Reference for Transaction Nature Codes for Brazil, page 406.](#)

- Generate the Fiscal Books work files.

See [Chapter 29, “\(BRA\) Processing Fiscal Books,” Generating the Fiscal Books Workfiles, page 563.](#)

Purging Incomplete Fiscal Book Records

Select Fiscal Records - Brazil (G76B111), Integrity Report.

Printing Fiscal Books Reports

Fiscal books reports provide supplementary data for the fiscal books that you submit to the government. You produce fiscal books reports for the same tax reporting period as the fiscal books.

This section discusses how to:

- Print the Issuer Code List report.
- Set processing options for Issuer Codes List (R76B4004).
- Print the Product Codes List report.
- Set processing options for Product Code List (R76B4005).
- Print the retained ICMS report.
- Set processing options for Notas Fiscais With Retained ICMS (R76B4007).
- Print the Listing of Interstate Operations report.
- Set processing options for Interstate Operation Listing (R76B4008).
- Print the interstate operations for inbound transactions report.
- Set processing options for Interstate Operation Form - Inbound (R76B4009).
- Print the interstate operations for outbound transactions report.
- Set processing options for Interstate Operation Form - Outbound (R76B4010).
- Print the Annual Declaration - IPM report.
- Set processing options for Annual Declaration - IPM (R76B4012).

Prerequisites

Before you complete the tasks in this section:

- Verify ICMS and IPI taxes.
- Revise *nota fiscal* records, as necessary.
- Revise GNRE records, as necessary.
- Set up the cross-reference for transaction nature codes.
- Generate the Fiscal Books work files.

Printing the Issuer Code List Report

The Issuer Code List report lists the codes that are associated with the suppliers which appear on the selected *notas fiscais*. You can generate this report from a menu option; the system automatically generates this report when you generate the Inbound Book report (R76B4000) in final mode. You send the Issuer Code List report to the appropriate government agency along with the Inbound Registry Fiscal Book.

Select Fiscal Records - Brazil (G76B111), Issuer Code List.

Setting Processing Options for Issuer Codes List (R76B4004)

Use these processing options to set default information.

Default

These processing options specify the company, and the beginning and ending dates for the *notas fiscais* that the system processes.

- 1. Fiscal Company:** Specify the company for which you want to process *nota fiscal* data. If you leave this processing option blank, the system processes records for all companies.
- 2. From Date** Specify the beginning date of the *notas fiscais* for which you want to process data.
- 3. Thru Date** Specify the ending date of the *notas fiscais* for which you want to process data.

Printing the Product Codes List Report

The Product Code List report (R76B4005) provides a list of the items and their associated product codes that appear on the selected *notas fiscais*.

Select Fiscal Records - Brazil (G76B111), Product Code List.

Setting Processing Options for Product Codes List (R76B4005)

Use this processing option to set default information.

Default

This processing option specifies the company for which you want to process *nota fiscal* data.

- 1. Fiscal Company** Specify the company for which you want to process *nota fiscal* data. If you leave this processing option blank, the system processes records for all companies.

Printing the Retained ICMS Report

This report lists the *notas fiscais* that contained ICMS substitution for a specified period. You generate this report by state, based on the client state, and send it to each state government.

Select Fiscal Reports - Brazil (G76B111), Notas Fiscais with Retained ICMS.

Setting Processing Options for Notas Fiscais With Retained ICMS (R76B4007)

Use these processing options to define how the system processes data.

Selection

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|----------------------------|--|
| 1. Nota Fiscal Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 2.. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. |

Printing the Listing of Interstate Operations

This report lists the *notas fiscais* that you issued in a specified period. You generate the report by state, based on the customer state, and send it to each state government.

Select Fiscal Records - Brazil (G76B111), Listing of Interstate Operations.

Setting Processing Options for Interstate Operation Listing (R76B4008)

Use these processing options to set default values.

Default

These processing options specify the company, dates, and type of *nota fiscal* for which you want to process data.

- | | |
|----------------------------|---|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 3. Thru Date | Specify the ending date of the <i>notas fiscais</i> for which you want to process data. |
| 4. Nota Fiscal Type | Specify whether you work with inbound or outbound <i>notas fiscais</i> . Values are: E: Inbound S: Outbound |

Printing the Interstate Operations for Inbound Transactions Report

This report summarizes taxes for inbound *notas fiscais*. The system groups the records by the issuer state. You send the report to the state where the company resides.

Select Fiscal Records - Brazil (G76B111), Interstate Operation Form - Inbound.

Setting Processing Options for the Interstate Operation Form - Inbound (R76B4009)

Use these processing options to specify default values.

Default

These processing options specify the company and dates for which you want to process *nota fiscal* data.

- | | |
|--------------------------|---|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 3. Thru Date | Specify the ending date of the <i>notas fiscais</i> for which you want to process data. |

Printing the Interstate Operations for Outbound Transactions Report

This report summarizes taxes on outbound *notas fiscais*. The system groups the records by the issuer state. You send the report to the state where the company resides.

Select Fiscal Records - Brazil (G76B111), Interstate Operation Form - Outbound.

Setting Processing Options for the Interstate Operation Form - Outbound (R76B4010)

Use these processing options to specify default values.

Default

These processing options specify the company and dates for which you want to process *nota fiscal* data.

- | | |
|--------------------------|---|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 3. Thru Date | Specify the ending date of the <i>notas fiscais</i> for which you want to process data. |

Printing the Annual Declaration - IPM Report

The Annual Declaration - IPM report provides a summary of the ICMS taxes paid for the year.

Select Fiscal Records - Brazil (G76B111). Annual Declaration - IPM.

Setting Processing Options for Annual Declaration - IPM (R76B4012)

Use these processing options to set default values.

Default

These processing options specify the company and dates for which you want to process *nota fiscal* data.

- 1. Fiscal Company** Specify the company for which you want to process *nota fiscal* data. If you leave this processing option blank, the system processes records for all companies.
- 2. From Date** Specify the beginning date of the *notas fiscais* for which you want to process data.
- 3. Thru Date** Specify the ending date of the *notas fiscais* for which you want to process data.

Printing the DIPI Summaries and Statements

This section provides an overview of the DIPI summaries and statements report, lists a prerequisite, and discusses how to:

- Print the DIPI summaries and statements report.
- Set processing options for DIPI Summaries and Statements.

Understanding the DIPI Summaries and Statements Report

The DIPI Summaries and Statements program (R76B4006) produces two reports that contain a summary of IPI taxes based on transaction nature codes:

- The FICHA 23 - *Entradas e Creditos* report (Inbounds and Credits) provides information about inbound transactions.
- The FICHA 24 - *Saidas e Debitos* report (Outbounds and Debits) provides information about outbound transactions.

The system determines the layout of the FICHA 23 and FICHA 24 reports by accessing the DIPI Inbound Report Line Defs UDC table (76B/DI) and the DIPI Outbound Report Line Defs UDC table (76B/DO). These UDC tables contain values for transaction nature codes in the Codes field, values for the report (*ficha*) in the Description 01 field, and line numbers in the Description 02 field.

When you run the DIPI Summaries and Statements program, the system:

- Reads the value in the Transaction Nature Code field in the Nota Fiscal - Detail (Fiscal Books) table (F76111B) for the transactions that you process.
- Compares the transaction nature codes from table F76111B to the values in the 76B/DI UDC and 76B/DO UDC
- Determines the section of the report and line for which to include the transaction data.

For example, suppose these values exist in the 76B/DI UDC table:

| Codes | Description 01 | Description 02 |
|--------------|-----------------------|-----------------------|
| 111 | 23 | 01 |
| 114 | 23 | 05 |
| 211 | 23 | 01 |
| 235 | 23 | 04 |

| Codes | Description 01 | Description 02 |
|-------|----------------|----------------|
| 312 | 23 | 08 |
| 394 | 23 | 10 |

When you run the DIPI Summaries and Statements program, the system includes all transactions that have a transaction nature code of 111 and 211 on line 01 of the Ficha 23 report.

FICHA 23 - Entradas e Creditos

The FICHA 23 - *Entradas e Creditos* report contains totals for three columns of data as described in this table:

| Report | Columns | Totals |
|--|---|---|
| FICHA 23 - Entradas e Creditos (Inbounds and Credits) | Inbound transactions with credits (Com Creditos) | <ul style="list-style-type: none"> Inbound transactions for the domestic market (<i>Entradas-Mercado Nacional</i>). Inbound transactions for foreign markets (<i>Entradas-Mercado Externo</i>). Total of the inbound transactions for domestic and foreign markets (<i>Total Das Entradas</i>). Total of other credits (<i>Total de Outros Creditos</i>). The system completes this field with zeros. |

| Report | Columns | Totals |
|--------|---|---|
| | Inbound transactions without credits (<i>Sem Creditos</i>). | <ul style="list-style-type: none"> Inbound transactions for the domestic market (<i>Entradas-Mercado Nacional</i>). Inbound transactions for foreign markets (<i>Entradas-Mercado Externo</i>). Total of the inbound transactions for domestic and foreign markets (<i>Total Das Entradas</i>). Total of other credits (<i>Total de Outros Creditos</i>). The system completes this field with zeros. |
| | Inbound transactions with credited IPI tax (<i>IPI Creditado</i>) | <ul style="list-style-type: none"> Inbound transactions for the domestic market (<i>Entradas-Mercado Nacional</i>). Inbound transactions for foreign markets (<i>Entradas-Mercado Externo</i>). Total of the inbound transactions for domestic and foreign markets (<i>Total Das Entradas</i>). Total of other credits (<i>Total de Outros Creditos</i>). The system completes this field with zeros. Total of credited IPI (<i>Total Do IPI Creditado</i>). |

The system adds up the amounts for records for the FICHA 23 - *Entradas e Creditos* report by transaction nature codes and prints the summed amounts for the codes on each line as follows:

- Line 01:
- Transaction nature codes: 111, 121, 171, 211, 221, 271.
- Line 02:
- Transaction nature codes: 112, 122, 172, 212, 222, 272.
- Line 03
- Transaction nature codes: 113, 213.
- Line 04
- Transaction nature codes: 131, 132, 177, 178, 231, 232, 235, 277, 278.
- Line 05
- Transaction nature codes: 114, 123, 124, 133, 134, 142, 143, 144, 151, 153, 154, 155, 161, 162, 163, 164, 165, 170, 173, 174, 175, 176, 179, 182, 185, 186, 191, 192, 193, 194, 195, 196, 197, 198, 199, 214, 224, 233, 234, 242, 243, 244, 251, 252, 253, 254, 255, 261, 262, 263, 264, 265, 270, 273, 274, 275, 276, 279, 285, 286, 291, 292, 293, 294, 295, 296, 297, 298, 299.
- Line 06

- Sum of lines 01 through 05.
- Line 07
- Transaction nature code: 311.
- Line 08
- Transaction nature code: 312.
- Line 09
- Transaction nature code: 321, 322.
- Line 10
- Transaction nature code: 313, 323, 324, 351, 352, 353, 354, 391, 394, 397, 399.
- Line 11
- Sum of lines 07 through 10.
- Line 12
- Sum of lines 06 and 11.
- Line 13, 14, 15, 16.
- Other Credits. The system completes these lines with zeros.
- Line 17
- Sum of lines 13 through 16.
- Line 18
- Sum of lines 12 and 17.

FICHA 24 - Saidas e Debitos

The FICHA 24 - *Saidas e Debitos* report (Outbounds and Debits) contains totals for three columns of data as described in this table:

| Report | Columns | Totals |
|--|---|---|
| FICHA 24 - <i>Saidas e Debitos</i> (Outbounds and Debits) | Outbound transactions with debits (<i>Com Debitos</i>) | <ul style="list-style-type: none"> • Outbound transactions for the domestic market (<i>Saidas-Mercado Nacional</i>). • Outbound transactions for foreign markets (<i>Saidas-Mercado Externo</i>). • Total of the outbound transactions for domestic and foreign markets (<i>Total Das Saidas</i>). The system completes this field with zeros. |

| Report | Columns | Totals |
|--------|--|--|
| | Outbound transactions without debits (<i>Sem Debitos</i>) | <ul style="list-style-type: none"> Outbound transactions for the domestic market (<i>Saidas-Mercado Nacional</i>). Outbound transactions for foreign markets (<i>Saidas-Mercado Externo</i>). Total of the outbound transactions for domestic and foreign markets (<i>Total Das Saidas</i>). The system completes this field with zeros. |
| | Outbound transactions with debited IPI tax (<i>IPI Debitado</i>) | <ul style="list-style-type: none"> Outbound transactions for the domestic market (<i>Saidas-Mercado Nacional</i>). Outbound transactions for foreign markets (<i>Saidas-Mercado Externo</i>). Total of the outbound transactions for domestic and foreign markets (<i>Total Das Saidas</i>). Total of other debits (<i>Total de Outros Debitos</i>). The system completes this field with zeros. Total of debited IPI (<i>Total Do IPI Debitado</i>). |

The system sums the amounts for records for the FICHA 24 - *Saidas e Debitos* report by transaction nature codes and prints the summed amounts for the codes on each line as follows:

- Line 01:
- Transaction nature codes: 511, 514, 516, 521, 525, 571, 611, 614, 616, 618, 621, 625, 671, 672.
- Line 02:
- Transaction nature codes: 512, 515, 517, 522, 573, 574, 612, 615, 617, 619, 622, 626, 673, 674.
- Line 03:
- Transaction nature codes: 513, 613.
- Line 04:
- Transaction nature codes: 531, 532, 577, 578, 631, 632, 635, 677, 678.
- Line 05:
- Transaction nature codes: 523, 524, 533, 534, 542, 543, 544, 545, 551, 552, 553, 561, 562, 563, 575, 576, 579, 581, 585, 586, 587, 588, 589, 591, 592, 593, 594, 595, 596, 597, 599, 623, 624, 633, 634, 642, 643, 644, 645, 651, 652, 653, 661, 662, 663, 670, 675, 676, 679, 685, 686, 687, 688, 689, 691, 692, 693, 694, 695, 696, 697, 699.
- Line 06:
- Sum of lines 01 through 05.
- Line 07:
- Transaction nature codes: 711, 716.

- Line 08:
- Transaction nature codes: 712, 717.
- Line 09:
- Transaction nature codes: 731, 732.
- Line 10:
- Transaction nature codes: 733, 734, 741, 761, 799.
- Line 11:
- Sum of lines 07 through 10.
- Line 12:
- Sum of lines 06 and 11.
- Line 13, 14, 15, 16, 17:
- Other Debits. The system completes these lines with zeros.
- Line 18:
- Sum of lines 13 through 17.
- Line 19:
- Sum of lines 12 and 18.

Prerequisite

Before you complete the tasks in this section, verify that the DIPI Inbound Report Line Definitions UDC table (76B/DI) and the DIPI Outbound Report Line Definitions UDC table (76B/DO) contain the values that you need to process the inbound and outbound transactions.

Printing the DIPI Summaries and Statements Report

Select Fiscal Records - Brazil (G76B111). DIPI Summaries and Statements.

Setting Processing Options for DIPI Summaries and Statements (R76B4006)

Use these processing options to set default values.

Default

These processing options specify the company and dates for which you want to process *nota fiscal* data, and the beginning credit balance.

- | | |
|--------------------------|---|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 3. Thru Date | Specify the ending date of the <i>notas fiscais</i> for which you want to process data. |

4. Credit Balance

Specify the period beginning credit balance for IPI taxes. Because the system does not carry over the balance from the previous month, you must enter the ending balance for last month as the beginning balance for this month. The ending balance for the previous month is on the IPI Verification report for that month. You generate the IPI Verification report when you run the Verification of IPI program (R76B4002).

Printing the DIPI Annual Movements Report

This section provides an overview of the DIPI annual movements report, lists a prerequisite, and discusses how to:

- Print the DIPI Annual Movements report.
- Set processing options for DIPI Annual Movements (R76B4011).

Understanding the DIPI Annual Movements Report

The DIPI Annual Movements program (R76B4011) produces a report that lists the customers who comprise the top 80 percent of the sales that are generated for a company, up to 100 customers. If more than 100 customers comprise the top 80 percent, the report lists only the top 100 customers.

The report lists the customers by each of these categories:

- The Ficha 25 section of the report lists the issuers of raw materials/merchandise (*Remetentes de Insumos/Mercadorias*).
- The Ficha 26 section of the report lists the customers for inbound raw materials and merchandise (*Entradas de Insumos/Mercadorias*).
- The Ficha 27 section of the report lists the recipients of raw materials and merchandise (*Destinatarios de Produtos/Mercadorias/Insumos*).
- The Ficha 28 section of the report lists the customers for outbound raw materials and merchandise (*Saidas de Produtos/Mercadorias/Insumos*).

Prerequisite

Set up the DIPI Annual Movements Report UDC table (76B/DA).

Printing the DIPI Annual Movements Report

Select Fiscal Records - Brazil (G76B111), DIPI Annual Movements.

Setting Processing Options for DIPI Annual Movements (R76B4011)

Use these processing options to set default values.

Default

These processing options specify the company and dates for which you want to process *nota fiscal* data.

- | | |
|---------------------------|---|
| 1. Fiscal Company: | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 3. Thru Date | Specify the ending date of the <i>notas fiscais</i> for which you want to process data. |

Generating Fiscal Books

This chapter provides an overview of each fiscal book that you can generate, and discusses how to:

- Print the inbound registry fiscal book.
- Set processing options for Inbound Registry (R76B4016).
- Print the outbound registry fiscal book.
- Set processing options for Outbound Registry (R76B4001).
- Print the outbound registry for ISS fiscal book.
- Set processing options for Outbound Registry - ISS (R76B4015).
- Print the IPI verification fiscal book.
- Set processing options for Verification of IPI (R76B4002).
- Print the ICMS verification fiscal book.
- Set processing options for Verification of ICMS (R76B4003).
- Print the inventory records fiscal book.
- Set processing options for Inventory Record (R76B4013).
- Print the manufacturing and inventory control fiscal book.
- Set processing options for Record of Manufacturing Control and Inventory (R76B4014).

Understanding the Fiscal Books to Generate for Brazil

The federal government in Brazil requires that you produce fiscal books according to a specified schedule. You electronically send the fiscal books to the government.

These applications generate fiscal books:

- Inbound Book (R76B4000).
- Outbound Book (R76B4001).
- Verification of IPI (R76B4002).
- Verification of ICMS (R76B4003).
- Inventory Record (R76B4013).
- Record of Manufacturing Control and Inventory (R76B4014).
- Outbound Registry - ISS (R76B4015).

- Inbound Registry - São Paulo (R76B4016).

Inbound Registry Fiscal Book

The Inbound Registry batch program generates a report that meets the requirements for the Inbound Fiscal Book. The report includes information about inbound *notas fiscais*, including the transaction nature, state, value, and the tax amount and percentage.

In the detail section, the report totals the ICMS and IPI taxes on the *notas fiscais* for each date in the date range that you specify in the processing options.

In the summary section, the report totals ICMS tax by transaction nature for each state. You specify how the report handles IPI tax by setting processing options.

Outbound Registry Fiscal Book

The Outbound Registry batch program (R76B4001) generates a report that meets the requirements for the Outbound Fiscal Book. The report includes information about outbound *notas fiscais*, including the transaction nature, state, value, and the tax amount and percentage.

In the detail section, the report totals the ICMS and IPI taxes on the *notas fiscais* for each date in the date range that you specify in the processing options.

In the summary section, the report totals ICMS tax by transaction nature for each state. You specify how the report handles IPI tax by setting processing options.

IPI Verification Fiscal Book

This report produces a credit and debit summary of IPI tax amounts that is based on the inbound and outbound *notas fiscais*. If the company is subject to IPI taxes, you must generate this report every ten days.

Verification of ICMS

This report produces a credit and debit summary of ICMS tax amounts that is based on the inbound and outbound *notas fiscais*. You must generate this report monthly.

Inventory Records Fiscal Book

The system uses records in the Item ASOF File table (F41112) to create the Inventory Records Fiscal Book. Before you print the Inventory Records Fiscal Book, you must update the records in table F41112.

Printing the Inbound Registry Fiscal Book

Select Fiscal Reports - Brazil (G76B111), Inbound Registry.

Setting Processing Options for Inbound Registry (R76B4016)

Use these processing options to set default values, define how the system processes data, and specify the text to print at the end of the report.

Default

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|----------------------------|---|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 3. Thru Date | Specify the ending date of the <i>notas fiscais</i> for which you want to process data. |
| 4. Proof/Final Mode | Specify whether the system runs the batch program in proof or final mode. Values are: Blank: Run in proof mode. 1: Run in final mode. |
| 5. Fiscal Book Code | Specify the type of fiscal book for which you want to convert data. You select a code from the Fiscal Book Code UDC (76/FB). |

Processing

Although processing options are set up during JD Edwards EnterpriseOne implementation, you can change processing options each time you run a program.

- | | |
|----------------------------|--|
| 1. Supplier Number | Specify whether the address book number or the Tax ID number of the supplier prints on the report. Values are: Blank: Use the tax ID number (CNPJ) 1: Use the address book number |
| 2. Monthly Summary | Specify whether a summary section prints on the report. Values are: Blank: Do not print summary. 1: Print summary. The system prints a summary of ICMS and IPI tax amounts by Transaction Nature and tax rate percentage for the range of dates set by the From Date and Through Date processing options for this program. |
| 3. Billing Invoices | Specify the suffix for the transaction nature codes that represent billing invoices. The system reports <i>notas fiscais</i> that have transaction nature codes that end with the suffix that you enter as a <i>Nota Fiscal Futura</i> , and prints 0 (zero) for the tax amount on the report. |

Text

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|--------------------|--|
| 1. Text 1 | Specify text that will print at the end of the report. The text you enter in this processing option prints next to the amount that you enter in the Amount 1 processing option. |
| 2. Amount 1 | Specify an amount that will print at the end of the report. The amount you enter in this processing option prints next to the text that you enter in the Text 1 processing option. |
| 3. Text 2 | Specify text that will print at the end of the report. The text you enter in this processing option prints next to the amount that you enter in the Amount 2 processing option. |

- | | |
|--------------------|--|
| 4. Amount 2 | Specify an amount that will print at the end of the report. The amount you enter in this processing option prints next to the text that you enter in the Text 2 processing option. |
| 5. Text 3 | Specify text that will print at the end of the report. The text you enter in this processing option prints next to the amount that you enter in the Amount 3 processing option. |
| 6. Amount 3 | Specify an amount that will print at the end of the report. The amount you enter in this processing option prints next to the text that you enter in the Text 3 processing option. |

Printing the Outbound Registry Fiscal Book

Select Fiscal Reports - Brazil (G76B111), Outbound Registry.

Setting Processing Options for Outbound Registry (R76B4001)

These processing options specify how the system creates the Outbound Fiscal Book. When you run this program in final mode, the system changes the status code for canceled *notas fiscais* to 997, changes the status code for all other *notas fiscais* to 987, and updates the last print date in the Fiscal Books Next Number Control - Brazil table (F7602B).

Default

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|----------------------------|--|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 3. Thru Date | Specify the ending date of the <i>notas fiscais</i> for which you want to process data. |
| 4. Proof/Final Mode | Specify whether the system runs the batch program in proof or final mode. Values are: Blank: Proof mode. 1: Final mode. |
| 5. Fiscal Book Code | Specify the type of fiscal book for which you want to convert data. You select a code from the Fiscal Book Code UDC (76/FB). |
| 6. IPI Tax Print | Specify whether the system prints details or a summary of IPI taxes, or does not print IPI taxes. Values are: 1: Print a line for every IPI tax record for each transaction nature code on a <i>nota fiscal</i> . 2: Print a summary of the IPI taxes for each <i>nota fiscal</i> . 3: IPI taxes are not printed. |

Processing

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- 1. Monthly Summary** Specify whether a summary section prints on the report. Values are:
Blank: Do not print summary.
1: Print summary. The system prints a summary of ICMS and IPI tax amounts by Transaction Nature and tax rate percentage for the range of dates set by the From Date and Through Date processing options for this program.
- 2. Billing Invoices** Specify the suffix for the transaction nature codes that represent billing invoices. The system reports *notas fiscais* that have transaction nature codes that end with the suffix that you enter as a *Nota Fiscal Futura*, and prints 0 (zero) for the tax amount on the report.
- 3. Delivery** Specify the suffix for the transaction nature codes that represent the taxes for merchandise shipped after a billing invoice is sent. *Notas fiscais* that have transaction nature codes that end with the suffix that you enter are reported as a *Nota Fiscal Futura*.

Text

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- 1. Text 1** Specify text that will print at the end of the report. The text you enter in this processing option prints next to the amount that you enter in the Amount 1 processing option.
- 2. Amount 1** Specify an amount that will print at the end of the report. The amount you enter in this processing option prints next to the text that you enter in the Text 1 processing option.
- 3. Text 2** Specify text that will print at the end of the report. The text you enter in this processing option prints next to the amount that you enter in the Amount 2 processing option.
- 4. Amount 2** Specify an amount that will print at the end of the report. The amount you enter in this processing option prints next to the text that you enter in the Text 2 processing option.
- 5. Text 3** Specify text that will print at the end of the report. The text you enter in this processing option prints next to the amount that you enter in the Amount 3 processing option.
- 6. Amount 3** Specify an amount that will print at the end of the report. The amount you enter in this processing option prints next to the text that you enter in the Text 3 processing option.

Printing the Outbound Registry for ISS Fiscal Book

Select Fiscal Reports - Brazil (G76B111), Outbound Registry - ISS.

Setting Processing Options for Outbound Registry - ISS (R76B4015)

These processing options specify how the system creates the Outbound Registry for ISS Fiscal Book.

When you run this program in final mode, the system changes the status code for canceled *notas fiscais* to 997, changes the status code for all other *notas fiscais* to 987, and updates the last print date in the Fiscal Books Next Number Control table (F7602B).

Default

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|--------------------------------|---|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 3. Thru Date | Specify the ending date of the <i>notas fiscais</i> for which you want to process data. |
| 4. Proof/Final Mode | Specify whether the system runs the batch program in proof or final mode. Values are: Blank: Proof mode 1: Final mode |
| 5. Services Nota Fiscal | Specify the Transaction Nature code that is associated with Services. |
| 6. Fiscal Book Code | Specify the type of fiscal book for which you want to convert data. You select a code from the Fiscal Book Code UDC (76/FB). |

Processing

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|-------------------------|---|
| 1. Status Code 1 | Select a code from the Activity/Status Codes UDC (40/AT) to represent canceled <i>notas fiscais</i> . |
| 2. Status Code 2 | Select a code from the Activity/Status Codes UDC (40/AT) to represent canceled <i>notas fiscais</i> . |
| 3. Status Code 3 | Select a code from the Activity/Status Codes UDC (40/AT) to represent canceled <i>notas fiscais</i> . |
| 4. Status Code 4 | Select a code from the Activity/Status Codes UDC (40/AT) to represent canceled <i>notas fiscais</i> . |

Text

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|------------------|---|
| 1. Text 1 | Specify text that prints at the end of the report. You can enter up to 35 characters. |
| 2. Text 2 | Specify text that prints at the end of the report. You can enter up to 35 characters. |
| 3. Text 3 | Specify text that prints at the end of the report. You can enter up to 35 characters. |
| 4. Text 4 | Specify text that prints at the end of the report. You can enter up to 35 characters. |

Printing the IPI Verification Fiscal Book

Select Fiscal Reports - Brazil (G76B111), Verification of IPI.

Setting Processing Options for Verification of IPI (R76B4002)

These processing options specify how the system writes information for verifying IPI taxes. When you run this program in final mode, the system changes the status code for canceled *notas fiscais* to 997, changes the status code for all other *notas fiscais* to 987, and updates the last print date in the Fiscal Books Next Number Control table (F7602B).

Default

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|----------------------------|---|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 3. Thru Date | Specify the ending date of the <i>notas fiscais</i> for which you want to process data. |
| 4. Fiscal Book Code | Specify the type of fiscal book for which you want to convert data. You select a code from the Fiscal Book Code UDC (76/FB). |

Processing

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|----------------------------|--|
| 1. Proof/Final Mode | Specify whether the system runs the batch program in proof or final mode. Values are: Blank: Proof mode. 1: Final mode. |
| 2. Billing Invoice | Specify the suffix for the transaction nature codes that represent billing invoices. The system reports <i>notas fiscais</i> that have transaction nature codes that end with the suffix that you enter as a <i>Nota Fiscal Futura</i> , and prints 0 (zero) for the tax amount on the report. |

4. Delivery

Specify the suffix for the transaction nature codes that represent the taxes for merchandise shipped after a billing invoice is sent. *Notas fiscais* that have transaction nature codes that end with the suffix that you enter are reported as a *Nota Fiscal Futura*.

Printing the Verification of ICMS

Select Fiscal Reports - Brazil (G76B111), Verification of ICMS.

Setting Processing Options for Verification of ICMS (R76B4003)

These processing options specify how the system writes information for verifying ICMS taxes. When you run this program in final mode, the system changes the status code for canceled *notas fiscais* to 997, changes the status code for all other *notas fiscais* to 987, and updates the last print date in the Fiscal Books Next Number Control table (F7602B).

Default

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|----------------------------|---|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. From Date | Specify the beginning date of the <i>notas fiscais</i> for which you want to process data. |
| 3. Thru Date | Specify the ending date of the <i>notas fiscais</i> for which you want to process data. |
| 4. Fiscal Book Code | Specify the type of fiscal book for which you want to convert data. You select a code from the Fiscal Book Code UDC (76/FB). |

Processing

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|----------------------------|--|
| 1. Proof/Final Mode | Specify whether the system runs the batch program in proof or final mode. Values are: Blank: Proof mode 1: Final mode |
| 2. Billing Invoice | Specify the suffix for the transaction nature codes that represent billing invoices. The system reports <i>notas fiscais</i> that have transaction nature codes that end with the suffix that you enter as a <i>Nota Fiscal Futura</i> , and prints 0 (zero) for the tax amount on the report. |
| 3. Delivery | Specify the suffix for the transaction nature codes that represent the taxes for merchandise shipped after a billing invoice is sent. <i>Notas fiscais</i> that have transaction nature codes that end with the suffix that you enter are reported as a <i>Nota Fiscal Futura</i> . |
| 4. Summary by Rate | Specify whether the system prints a summary by ICMS tax interest rate. The system will break and print summaries when the rate changes. |

Printing the Inventory Records Fiscal Book

Select Fiscal Reports - Brazil (G76B111), Inventory Records.

Setting Processing Options for Inventory Record (R76B4013)

Use these processing options to define default values.

Default

These processing options specify how the system creates the Inventory Records Fiscal Book.

- | | |
|-----------------------------------|--|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
| 2. Month | Enter a two-digit value for the month for which the system processes records. For example, enter <i>05</i> for May. You must complete this processing option. |
| 3. Year | Specify the year on which to report. Enter a four-digit value. |
| 4. Items with Zero Balance | Specify whether the system includes items with a zero balance on the report. Values are: Blank: Do not include items with a zero balance on the report. <i>I</i> : Include items with a zero balance on the report. |
| 5. Proof/Final Mode | Specify whether the system runs the batch program in proof or final mode. Values are: Blank: Proof mode <i>I</i> : Final mode. |
| 6. Fiscal Book Code | Specify the type of fiscal book for which you want to convert data. You select a code from the Fiscal Book Code UDC (76/FB). |

Printing the Manufacturing and Inventory Control Fiscal Book

Select Fiscal Reports - Brazil (G76B111), Manufacturing and Inventory Control.

Setting Processing Options for Record of Manufacturing Control and Inventory (R76B4014)

Use these processing options to specify how the system creates the Manufacturing and Inventory Control Fiscal Book.

Default

Although processing options are set up during system implementation, you can change processing options each time you run a program.

- | | |
|--------------------------|---|
| 1. Fiscal Company | Specify the company for which you want to process <i>nota fiscal</i> data. If you leave this processing option blank, the system processes records for all companies. |
|--------------------------|---|

- 2. Month** Enter a two-digit value for the month for which the system processes records. For example, enter *05* for May. You must complete this processing option.
- 3. Year** Specify the year on which to report. Enter a four-digit value.
- 4. Proof/Final Mode** Specify whether the system runs the batch program in proof or final mode. Values are:
Blank: Proof mode
I: Final mode.
- 5. Third Item Number** Specify whether the system prints the third item number on the report. Values are:
Blank: Do not print the third item number.
I: Print the third item number.
- 6. Fiscal Book Code** Specify the type of fiscal book for which you want to convert data. You select a code from the Fiscal Book Code UDC (76/FB).

CHAPTER 30

(BRA) Working with the Electronic GIA Workbench

This chapter provides an overview of the electronic GIA workbench and GIA record types; lists prerequisites, and discusses how to:

- Add company profiles.
- Work with *Declaração do Índice de Participação dos Municípios* (DIPAM-B) codes.
- Work with electronic *Guia de Informação e Apuração* (GIA) occurrences and sub-item codes.
- Set up city codes.
- Extract GIA data.
- Create GIA records manually.
- Modify GIA records.
- Delete GIA Records.
- Print GIA data.
- Send GIA data.
- Purge GIA data.

Understanding the Electronic GIA Workbench for Brazil

Guia de Informação e Apuração (GIA) is the ICMS Assessment and Information form. Taxpayers use the GIA to report their economic activities, such as the selling and purchasing of goods within a state and between states. The GIA provides a record of the ICMS tax that is due to the state government. The GIA is sent to the tax authorities of the state government in an electronic flat file in a format that is specified by the state.

Note. The JD Edwards EnterpriseOne systems support only the requirements of the state of São Paulo.

You obtain the data for the GIA flat files by running the Nota Fiscal Conversion program (R76B200A). The Nota Fiscal Conversion program reads the Nota Fiscal Header - Brazil table (F7601B) and the Nota Fiscal Detail - Brazil table (F7611B), and populates the Nota Fiscal - Header (Fiscal Books) table (F76101B) and the Nota Fiscal - Detail (Fiscal Books) table (F76111B). You then run the Extract GIA program (R76B130). The Extract GIA program reads the data in tables F76101B and F76111B, and populates the F76B130 table and the F76B131 table. You can then use the Electronic GIA Workbench program (P76B130) to maintain the records in tables F76B130 and F76B131. The Electronic GIA Workbench program also lets you manually add records for transactions that do not exist in tables F7601B and F7611B. After you make any needed modifications, you generate the flat files that you send to the state government.

What You Should Know About the Flexible Field

The Flexible Field is a 400-character field (data item GIFF) in the Electronic GIA Detail table (F76B131). When you run the Extract GIA program, the system reads data in the F76101B table and the F76111B table and writes a series of text strings, each up to 400-characters, to the Flexible Field in table F76B131. When you load GIA records in the Electronic GIA Workbench program, the system parses the text in the Flexible Field into the appropriate fields on the Electronic GIA Revision form.

If you manually create records by using the Electronic GIA Workbench program, the system creates the text string that it writes to the Flexible Field by concatenating the values that you enter in the fields on the Electronic GIA Revision form. The system displays the text string in the Electronic GIA Revision form when you click Find after completing a record.

What You Should Know About the String Key Field

The system uses the value in the String Key field to determine the order of the data in the flat file. Additionally, the String Key field on the Electronic GIA Workbench form shows the ancestry of a record. For example, a CFOP record (record type 10) can exist only as a child of a header record (record type 05). A header record can exist only as a child of a master record (record type 01). Because of these dependencies, the value in the String Key field for a CFOP record contains information about each of the antecedents. In this example, the value for the String Key field contains 30 characters: the first 15 characters contain information about the master record, characters 16 through 22 contain information about the header record, and characters 23 through 30 contain information about the CFOP record.

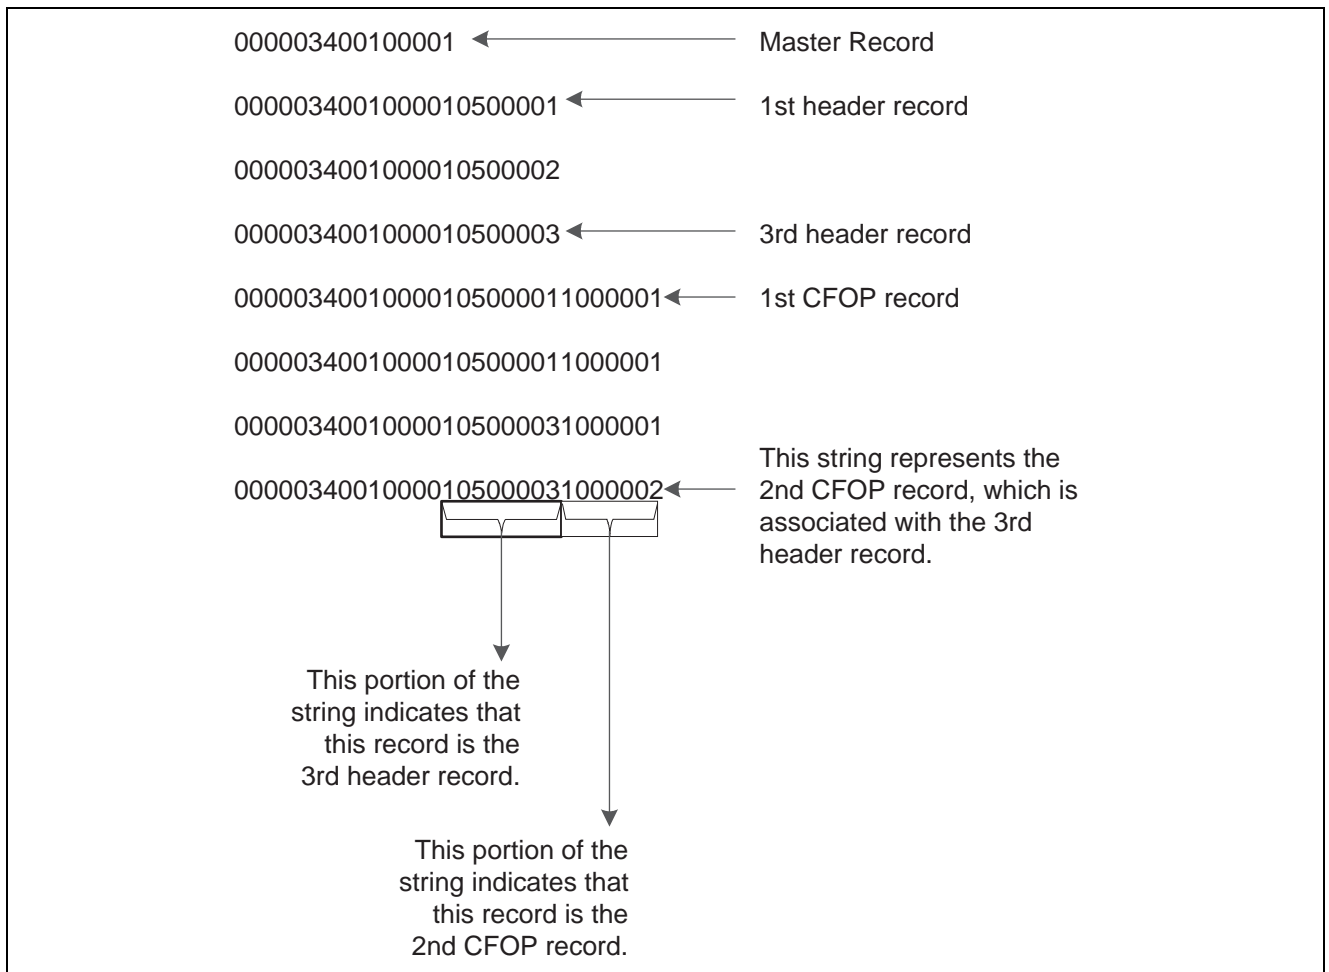

This diagram shows an example of a value in the String Key field:

Value in the String Key field

You can use the value in the String Key field to determine which child record belongs to which parent record. For example, when you run the Extract GIA program, the system creates a CFOP record for each transaction nature code for each company in the company profile that you select. If the company profile contains five companies (which the system displays as record type 05) and each company has *notas fiscais* for five transaction nature codes, the system creates 25 CFOP records. Although the 25 CFOP records are the descendants of five different parents, all 25 records are displayed consecutively in the Electronic GIA Workbench. The value in the String Key field reveals which child records (record type 10) belong to each parent record (record type 05).

This diagram shows an example of the relationship between parent and child records in the String Key field:

String Key field relationships

This table describes the information contained in the String Key field for each record type:

| Record Type | String Key Field |
|-------------|---|
| 01 (Master) | <p>The value in the String Key field for a master record contains 15 characters.</p> <ul style="list-style-type: none"> The first 8 characters denote the next numbering scheme. This sequence of characters increments according to the next numbers that you set up in the 10th next numbering position for system 76B. Characters 9 - 15 denote the number of the master record. Because each GIA can have only one master record, characters 9 through 15 are always <i>0100001</i>. |

| Record Type | String Key Field |
|-----------------|--|
| 05 (Header) | <p>The value in the String Key field for a header record contains 22 characters.</p> <ul style="list-style-type: none"> • Characters 1 - 15 are the characters for the master record that is the parent of the header record. • Characters 16 and 17 are always <i>05</i>. • Characters 18 through 22 denote the number of the header record. |
| 10 (CFOP) | <p>The value in the String Key field for a CFOP record contains 30 characters.</p> <ul style="list-style-type: none"> • Characters 1 - 15 are the characters for the master record that is the parent of the header record that is the parent of the CFOP record. • Characters 16 through 22 are the number of the header record that is the parent of the CFOP record. • Characters 23 and 24 are always <i>10</i>. • Characters 25 through 30 are the number of the CFOP record. |
| 14 (Interstate) | <p>The value in the String Key field for an interstate record contains 37 characters.</p> <ul style="list-style-type: none"> • Characters 1 - 15 are the characters for the master record that is the parent of the header record that is the parent of the CFOP record that is the parent of the interstate record. • Characters 16 through 22 are the number of the header record that is the parent of the CFOP record that is the parent of the interstate record. • Characters 23 through 30 are the number of the CFOP record that is the parent of the interstate record. • Characters 31 and 32 are always <i>14</i>. • Characters 33 through 36 are the number of the interstate record. |

| Record Type | String Key Field |
|-------------------|--|
| 18 (ZFM/ALC) | <p>The value in the String Key field for a ZFM/ALC record contains 43 characters.</p> <ul style="list-style-type: none"> • Characters 1 through 15 are the characters for the master record that is the parent of the header record that is the parent of the CFOP record that is the parent of the interstate record that is the parent of the ZFM/ALC record. • Characters 16 through 22 are the number of the header record that is the parent of the CFOP record that is the parent of the interstate record that is the parent of the ZFM/ALC record. • Characters 23 through 30 are the number of the CFOP record that is the parent of the interstate record that is the parent of the ZFM/ALC record. • Characters 31 through 36 are the number of the interstate record that is the parent of the ZFM/ALC record. • Characters 37 and 38 are always <i>18</i>. • Characters 39 through 43 are the number of the ZFM/ALC record. |
| 20 (Occurrences) | <p>The value in the String Key field for an occurrences record contains 29 characters.</p> <ul style="list-style-type: none"> • Characters 1 through 15 are the characters for the master record that is the parent of the header record that is the parent of the occurrences record. • Characters 16 through 22 are the number of the header record that is the parent of the CFOP record that is the parent of the interstate record. • Characters 23 and 24 are always <i>20</i>. • Characters 25 through 29 are the number of the occurrences record. |
| 25 (State Tax ID) | <p>The value in the String Key field for a state tax ID record contains 36 characters.</p> <ul style="list-style-type: none"> • Characters 1 through 15 are the characters for the master record that is the parent of the header record that is the parent of the occurrences record. • Characters 16 through 22 are the number of the header record that is the parent of the CFOP record that is the parent of the interstate record. • Characters 23 through 29 are the number of the occurrences record. • Characters 30 and 31 are always <i>25</i>. • Characters 32 through 36 are the number of the state tax ID record. |

| Record Type | String Key Field |
|-------------------------|--|
| 26 (Substitute Tax ID) | <p>The value in the String Key field for a substitute tax ID record contains 36 characters.</p> <ul style="list-style-type: none"> • Characters 1 through 15 are the characters for the master record that is the parent of the header record that is the parent of the occurrences record. • Characters 16 through 22 are the number of the header record that is the parent of the CFOP record that is the parent of the interstate record. • Characters 23 through 29 are the number of the occurrences record. • Characters 30 and 31 are always 26. • Characters 32 through 36 are the number of the substitute tax ID record. |
| 27 (Substituted Tax ID) | <p>The value in the String Key field for a substituted tax ID record contains 36 characters.</p> <ul style="list-style-type: none"> • Characters 1 through 15 are the characters for the master record that is the parent of the header record that is the parent of the occurrences record. • Characters 16 through 22 are the number of the header record that is the parent of the CFOP record that is the parent of the interstate record. • Characters 23 through 29 are the number of the occurrences record. • Characters 30 and 31 are always 27. • Characters 32 through 36 are the number of the substituted tax ID record. |

| Record Type | String Key Field |
|-------------------------|---|
| 30 (DIPAM-B) | <p>The value in the String Key field for a DIPAM-B record contains 30 characters.</p> <ul style="list-style-type: none"> • Characters 1 - 15 are the characters for the master record that is the parent of the header record that is the parent of the DIPAM-B record. • Characters 16 through 22 are the number of the header record that is the parent of the DIPAM-B record. • Characters 23 and 24 are always <i>30</i>. • Characters 25 through 30 are the number of the DIPAM-B record. |
| 31 (Exportation Record) | <p>The value in the String Key field for an exportation record contains 30 characters.</p> <ul style="list-style-type: none"> • Characters 1 through 15 are the characters for the master record that is the parent of the header record that is the parent of the exportation record. • Characters 16 through 22 are the number of the header record that is the parent of the exportation Record. • Characters 23 and 24 are always <i>31</i>. • Characters 25 through 30 are the number of the exportation record. |

What You Should Know About the GIA Keyword

The GIA keyword (data item GIKW) consists of text that, along with the company profile, identifies the GIA record. You associate a GIA keyword with a company profile when you generate a GIA or when you manually create a GIA. The system uses the combination of the GIA keyword and company profile as the identifier for the GIA.

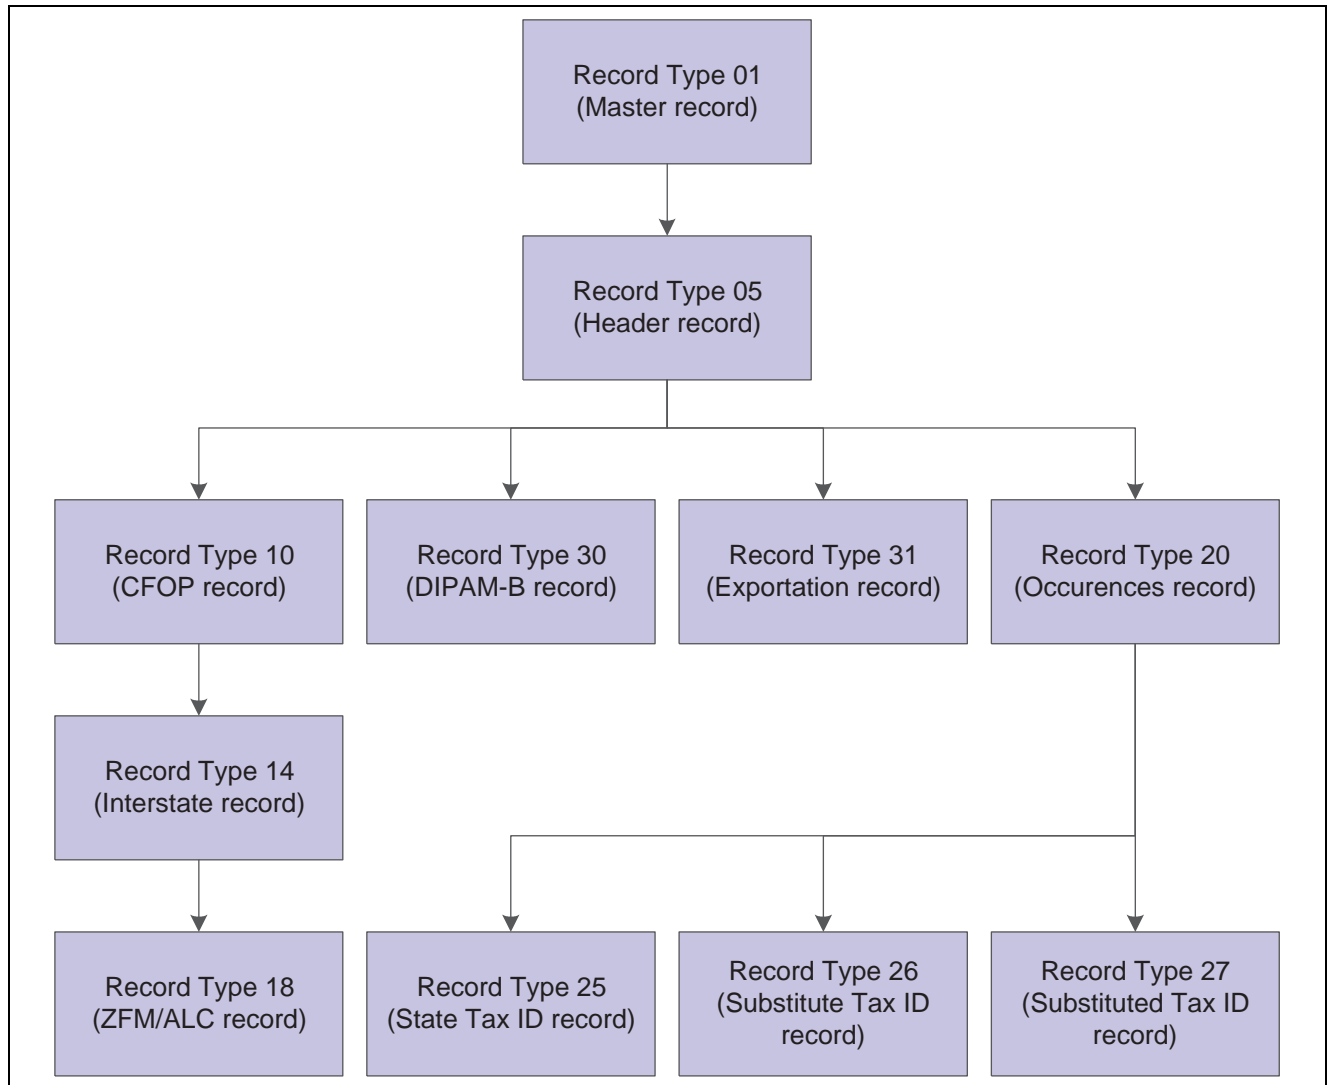

You cannot change a GIA keyword. If the GIA must have a different GIA keyword, you must purge the GIA that is assigned an incorrect GIA keyword, regenerate the GIA, and then assign it the correct keyword.

Consider using a specific naming convention for the GIA keywords to make GIAs easier to identify. For example, you might use 1 for the first reporting period, 2 for the second reporting period, and so on.

Understanding GIA Record Types

Each GIA record type is a set of records that have the same structure. The state government determines the structure and data contained in each record type. Some GIA record types exist only if another type of record exists. This dependent relationship is referred to as a parent/child relationship. For example, an interstate record (record type 14) can exist only if there is a CFOP record (record type 10). When referring to the relationship between an interstate record and a CFOP record, the interstate record is considered as the child record of the CFOP record (the parent record).

This chart shows the parent/child relationships between record types:

Parent/child relationships between GIA record types

Record Type 01 (Master)

Record type 01 is the master record. Only one master record exists for a GIA, and all GIAs have a master record. The master record is the parent record of record type 05 (Header).

The master record contains data about the GIA, such as the date and time when the GIA was generated, and the layout version in which the GIA was generated. When you run the Extract GIA program, the system creates a master record that is based on the processing options that you set for the Extract GIA program. You can also manually create a master record for transactions for which no *notas fiscais* exist.

Record Type 05 (Header)

Record type 05 is the header record. The system creates one header record for each company in the company profile that you select when you run the Extract GIA program. If you manually create a GIA, you must manually create one header record for each company in the company profile that you select. The header record is the child of the master record (type 01) and is the parent of record types 10 (CFOP), 20 (occurrences), 30 (DIPAM-B), and 31 (exportation record).

Each header record contains data about a company in the company profile and information about the GIA. For example, each header record contains the state tax ID, the CNAE number, and the ICMS amounts for the company, as well as the number of child records that are attached to the header record.

Record Type 10 (CFOP)

Record type 10 is the CFOP record. The system creates a CFOP record for each transaction nature code for each company in the company profile that you select when you run the Extract GIA program. For example, when you run the Extract GIA program, the system creates a CFOP record (record type 10) for each transaction nature code for each company in the company profile that you select. If the company profile contains five companies (which the system displays as record type 05) and each company has *notas fiscais* for five transaction nature codes, the system creates 25 CFOP records.

The system populates the CFOP record with data from the Nota Fiscal - Header (Fiscal Books) table and the Nota Fiscal - Detail (Fiscal Books) table. If you manually create a GIA, you must manually create a CFOP record for each transaction nature code for each company in the company profile that you select. The CFOP record is a child of the header record and the parent of record type 14 (Interstate).

Each CFOP record contains information about the ICMS tax information for a specific transaction nature code.

Record Type 14 (Interstate)

Record type 14 is the interstate record. The system creates an interstate record for each state for which a record type 10 exists. The system populates the interstate record with data from the Nota Fiscal - Header (Fiscal Books) table and the Nota Fiscal - Detail (Fiscal Books) table. If you manually create a GIA, you must manually create an interstate record for each state for which a record type 10 exists. The interstate record is a child of a CFOP record and the parent of record type 18 (ZFM/ALC).

Each interstate record contains information about the ICMS taxes for the specified state.

Record Type 18 (ZFM/ALC)

Record type 18 is the ZFM/ALC record. The system creates an ZFM/ALC record for each sales transaction that occurred in a free port zone. The system populates the ZFM/ALC record with data from the Nota Fiscal - Header (Fiscal Books) table and the Nota Fiscal - Detail (Fiscal Books) table. If you manually create a GIA, you must manually create a ZFM/ALC record for each sales transaction that occurred in a free port zone. The ZFM/ALC record is a child of an interstate record and has no descendants.

Each ZFM/ALC record contains information about the sales transactions that occurred in a free port zone, including the amount of the transaction and the city code of the free port zone.

Record Type 20 (Occurrences)

Record type 20 is the occurrences record. The system creates occurrences records when you run the Extract GIA program if you entered occurrences records in the Electronic GIA Occurrences program (P76B128B). If you did not enter occurrences records in the Electronic GIA Occurrences program, you must enter them in the Electronic GIA Workbench program if any occurrences apply to the reporting period for which you extracted GIA data. The system populates the occurrences record with data from the F76B128B table. The occurrences record is a child of the header record and is the parent of record types 25 (State Tax ID), 26 (Substitute Tax ID), and 27 (Substituted Tax ID).

Each occurrences record contains information about the transaction, including the sub-item code, the legal argument, and the date of the occurrence.

Record Type 25 (State Tax ID)

Record type 25 is the state tax ID record. The system creates a state tax ID record when you run the Extract GIA program if the parent occurrence record has an occurrence type of 0 and the sub-item code is one of these codes:

- 00218
- 00219
- 00704
- 00705
- 00706
- 00707
- 00729
- 00730

If you manually create a GIA, you must manually create a state tax ID record as appropriate. The state tax ID record is a child of an occurrences record and has no descendants.

Record Type 26 (Substitute Tax ID)

Record type 26 is the substitute tax ID record. The system creates a substitute tax ID record type when you run the Extract GIA program if the parent occurrence record has an occurrence type of 0 and the sub-item code is one of these codes:

- 00210
- 00211

If you manually create a GIA, you must manually create a Substitute Tax ID record as appropriate. The Substitute Tax ID record is a child of an occurrences record and has no descendants.

Record Type 27 (Substituted Tax ID)

Record type 27 is the Substituted Tax ID record. The system creates a Substituted Tax ID record type when you run the Extract GIA program if the parent occurrence record has an occurrence type of 1 and the sub-item Code is one of these codes:

- 00701
- 00702

If you manually create a GIA, you must manually create a substituted tax ID record as appropriate. The substituted tax ID record is a child of an occurrences record and has no descendants.

Record Type 30 (DIPAM-B)

Record type 30 is the DIPAM-B record. The system creates a DIPAM-B record for each DIPAM-B code for each company that is included in the company profile that you select.

If you manually create a GIA, you must manually create a DIPAM-B record as appropriate. The DIPAM-B record is a child of a header record and has no descendants.

Record Type 31 (Exportation Record)

Record type 31 is the exportation record. The system does not create this record; you must create it manually.

Prerequisites

Before completing the tasks in this chapter:

- Set up UDCs.

See [Chapter 22, “\(BRA\) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Fiscal Books and Electronic GIAs for Brazil, page 376.](#)

- Set up next numbers for electronic GIA.

See [Chapter 22, “\(BRA\) Setting Up Country-Specific Functionality for Brazil,” Setting Up Next Numbers for Brazil, page 400.](#)

Adding Company Profiles

This section provides an overview of company profiles and discusses how to add a company profile.

Understanding Company Profiles

You set up company profiles to group companies for ICMS reporting purposes. For example, you might set up a company profile that includes all of the companies with which you do business that are located in a particular state.

The company profile that you want to use must exist in the GIA Company Profile table (F76B129) before you use the Extract GIA program to automatically generate GIA records or before you manually create a GIA. When you create a GIA either manually or automatically by using the Extract GIA program, you associate a GIA keyword (GIKW) with the company profile. The combination of the keyword and the company profile comprises the unique GIA identifier.

You use the Electronic GIA Company Profile program (P76B129) to set up company profiles.

Note. You cannot display existing company profiles when you click Find on the Electronic GIA Company Profile form. You must complete the Company Profile field before you click Find; the system does not return any results if the field is blank. To view existing profiles, click Search next to the Company Profile field, and then click Find on the Electronic GIA Company Profile Search & Select form.

Forms Used to Add a Company Profile

Working With DIPAM-B Codes

This section provides an overview of DIPAM-B codes and discusses how to:

- Define DIPAM-B codes.
- Associate transaction nature codes to DIPAM-B codes.

Understanding Electronic GIA DIPAM-B Codes

DIPAM codes are government codes that summarize several transaction nature codes. You use the Electronic GIA DIPAM-B Code program (P76B127A) to set up valid DIPAM-B codes for ICMS tax reporting. After you set up valid DIPAM-B codes, you use the DIPAM-B Cross Reference program (P76B127B) to associate the DIPAM-B codes with transaction nature codes.

Note. You complete the DIPAM-B Header field and the DIPAM-B Description field in the grid. The system displays the values in the DIPAM-B Header and DIPAM-B Description fields in the Expanded Grid Line area when you select an existing DIPAM-B Code in the detail area.

Forms Used to Work With DIPAM-B Codes

Working With Electronic GIA Occurrences and Sub-Item Codes

This section provides an overview of occurrences and sub-item codes and discusses how to:

- Define GIA sub-item codes.
- Define occurrences.

Understanding Occurrences and Sub-Item Codes

Sub-item codes are government codes that identify actions which are associated with transactions that are subject to ICMS taxes, or that supply additional information about the transactions. For example, a sub-item code might define debits, credits, or deductions. Occurrences identify when the action that is identified by a sub-item code occurred. You create occurrence records for transactions that do not fall under the normal taxation rules.

You set up sub-item codes by using the Electronic GIA Sub-Item Code program (P76B128A). Generally, you set up the sub-item codes once and then modify them as necessary.

Before you extract GIA records, you use the Electronic GIA Occurrences program (P76B128B) to enter the occurrences that occurred during the time frame for which you extract GIA records. Occurrences records are child records of header records (record type 5).

Forms Used to Work With Sub-Items and Occurrences

| Form Name | FormID | Navigation | Usage |
|-------------------------------|-----------|---|--|
| Electronic GIA Sub-Item Codes | W76B128AA | Electronic GIA - Brazil (G76B1111), Occurrences | Enter the sub-item code, legal argument, and occurrence description for each occurrence. |

Setting Up City Codes

This section provides an overview of setting up city codes and discusses how to set up city codes.

Understanding Setting Up City Codes

You set up electronic city codes to associate a numeric code with a city and state. The Brazilian government provides the codes that you must use. When you set up the GIA city codes, you must enter the city name exactly as it appears in the address Book records for the customers. When you run the Extract GIA program, the system uses the electronic GIA city codes for record types 18 and 30.

You use the Electronic GIA City Codes program (P76B132) to set up GIA city codes.

Forms Used to Set Up City Codes

| Form Name | FormID | Navigation | Usage |
|---------------------------|----------|--|-----------------------------------|
| Electronic GIA City Codes | W76B132A | Electronic GIA - Brazil (G76B1111), City Codes | Set up Electronic GIA City Codes. |

City Name

The city name that is associated with the City Code.

Extracting GIA Data

This section provides an overview of the extraction process and discusses how to:

- Set processing options for Extract GIA (R76B130).
- Set processing options for Electronic GIA - Workbench (P76B130).
- Run the Extract GIA program.

Understanding the Extraction Process for GIA Data

You obtain the data for the GIA flat files by running the I/O Nota Fiscal Conversion program. The Nota Fiscal Conversion program reads the F7601B and the F7611B tables, and populates the F76101B and F76111B tables. You then run the Extract GIA program to populate the Electronic GIA Header table (F76B130) and the Electronic GIA Detail table (F76B131).

The system produces a report that shows the fiscal companies that are included in table F76B130.

Note. Tables F76101B and F76111B do not contain all of the data that is required for fiscal books reporting. You must manually enter data for record type 31, and for some fields in other record types. You enter this required data in the Electronic GIA - Workbench program.

You must manually create exportation records (record type 31). The system does not create this record type when you run R76B130.

See Chapter 30, “(BRA) Working with the Electronic GIA Workbench,” Creating GIA Records Manually, page 621.

Important! If you complete the fields on the Extract GIA form with the profile, keyword, and dates that you used for a previous GIA submission, the system purges the previous GIA and then creates a new GIA with the same unique identifier.

Prerequisites

Before you complete the tasks in this section:

- Verify that a company profile exists for the companies for which you want to extract GIA data.
- Verify that the required GIA DIPAM-B codes exist in the GIA Valid DIPAM-B table (F76B127A) and that required cross-references between the DIPAM-B codes and transaction nature codes exist in the GIA DIPAM-B Cross-Reference table (F76B127B).
- Verify that the required GIA occurrences and sub-item codes exist in the GIA Occurrences table (F76B128B).
- Verify that the required GIA City Codes exist in the GIA City Codes table (F76B132).
- Run the Nota Fiscal Conversion program to populate the F76101B and the F76111B tables. The Extract GIA program obtains data from tables F76101B and F76111B.
- Set the processing options for the Electronic GIA - Workbench program. You must specify in the processing options for the Extract GIA program the version of the Extract GIA program that you want to run. You can access the processing options only through Interactive Versions.
- Set the processing options for the Extract GIA program. You can access the processing options only through Batch Versions.

Forms Used to Extract GIA Data

| Form Name | FormID | Navigation | Usage |
|----------------|----------|--|--|
| Extracting GIA | W76B130B | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select Extract GIA from the Report menu on Electronic GIA Workbench. | Identify the data that you want to select. |

Setting Processing Options for Extract GIA (R76B130)

You access the processing options for Extract GIA through Batch Versions.

Defaults

Although processing options are set up during JD Edwards EnterpriseOne implementation, you can change processing options each time that you run a program.

- 1. GIA Lay Out Version (Required)** Specify the layout version that the system uses to generate the GIA file. The government of São Paulo determines the specifications of the layouts.
- 2. GIA Type (Required)** Specify whether the GIA submission is the original or a substitute submission. The value that you enter must exist in the GIA Type UDC table (76B/G2).

3. JD Edwards EnterpriseOne Federal Tax ID (Required)

Specify the Federal Tax ID (CNPJ) required for record type 05 in the GIA table.

Setting Processing Options for Electronic GIA - Workbench (P76B130)

You access the processing options for Electronic GIA - Workbench through Interactive Versions.

Defaults

Although processing options are set up during system implementation, you can change processing options each time that you run a program.

- 1. Extract GIA (R76B130)** Specify the version that the systems uses when it launches the Extract GIA program. If you do not complete this processing options, the system uses version ZJDE0001.
- 2. Print GIA (R76B131)** Specify the version that the systems uses when it launches the Print GIA program. If you do not complete this processing options, the system uses version ZJDE0001.
- 3. Send GIA (R76B132)** Specify the version that the systems uses when it launches the Send GIA program. If you do not complete this processing options, the system uses version ZJDE0001.

Running the Extracting GIA Program

Access the Extracting GIA form.

The screenshot shows a window titled "Electronic GIA - Workbench - Extracting GIA". Inside the window, there are three input fields. The first is "Company Profile" with a red asterisk, containing the text "Rio De Janeiro". The second is "Keyword" with a red asterisk, containing the text "JANUARY". The third is "GIA Reference Date", which is a date range. It has a "From" label, a date field with "01/01/08", a "Thru" label, and a date field with "01/31/08". There is a small calendar icon next to the "01/31/08" date. The window has a standard menu bar with "OK", "Cancel", and "Tools" buttons.

Extracting GIA form

Creating GIA Records Manually

This section provides an overview of manually creating GIA records and discusses how to:

- Create a master record manually.

- Create a child record manually.

Understanding the Manual Creation of GIA Records

When you run the Extract GIA program to create GIAs, the system automatically creates most of the child records for each parent record type. However, when you manually create a GIA master record (record type 01), you must manually create all other record types. You use the Electronic GIA - Workbench program to manually create GIA records.

You create a master record and then each child record as needed. The system does not automatically populate any of the data for the records that you create. You must manually enter the necessary data.

You cannot create child records for record types 18, 25, 26, 27, 30, or 31. These record types are not parent records for any other record type.

If you manually create records by using the Electronic GIA - Workbench program, the system creates the text string that it writes to the Flexible Field by concatenating the values that you enter in the fields on the Electronic GIA Revision form. The system displays the text string in the Electronic GIA Revision form when you click Find after completing a record.

Prerequisites

Before you complete the tasks in this section:

- Verify that a company profile exists for the companies for which you want to extract GIA data.
- Become familiar with GIA record types.

Forms Used to Create GIA Records Manually

| Form Name | FormID | Navigation | Usage |
|-------------------------|----------|--|--|

Add New GIA Record Type form

Record Type

Enter a code that identifies the type of GIA record. The code that you enter must exist in the UDC table for GIA record types (76B/G6). GIA record types are defined by the government.

If you are creating a child record for a master (01), CFOP (10), or interstate (14) parent record, the system automatically assigns the allowed child record type. For a header (05) or occurrences (20) parent record, you must enter a record type that is a valid child record type of that parent record. If you enter a record type that is not a valid child record type, the system displays an error message.

Creating a Child Record Manually

Access the Add New GIA Record Type form.

Modifying GIA Records

This section provides an overview of modifying GIA records and discusses how to:

- Modify a GIA master record.
- Modify a GIA header record.
- Modify a GIA CFOP record.
- Modify a GIA interstate record.
- Modify a GIA ZFM/ALC record.
- Modify a GIA occurrences record.
- Modify a GIA state tax ID record.
- Modify a GIA substitute tax ID record.
- Modify a GIA substituted tax ID record.
- Modify a GIA DIPAM – B record.
- Modify a GIA exportation record.

Understanding How to Modify GIA Records

After you extract GIA data, you can review and modify as necessary the data that the system wrote to the F76B130 and F76B131 tables. You can also add records to and delete child records from parent records.

When you add or delete child records, the system recounts the number of child records that are associated with the parent record and updates the appropriate field in the parent record. For example, suppose that a CFOP record (record type 10) has three interstate records (record type 14) associated with it. The Total - Record Type 14 field for the CFOP records displays a value of 3. If you delete one interstate record from the CFOP record, the system changes the value in the Total - Record Type 14 field to a value of 2.

Forms Used to Modify GIA Records

| Form Name | FormID | Navigation | Usage |
|--|----------|---|---|
| Electronic GIA Revision, 01- Master tab | W76B130F | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select a master record and then click Select on Electronic GIA Workbench. | Modify a GIA master record (record type 01). |
| Electronic GIA Revision, 05 - Header tab | W76B130F | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select a header record (record type 05) and then click Select on Electronic GIA Workbench. | Modify a header record (record type 05). |
| Electronic GIA Revision, 10 - CFOP tab | W76B130F | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select a CFOP record (record type 10) and then click Select on Electronic GIA Workbench. | Modify a CFOP record (record type 10). |
| Electronic GIA Revision, 14 - Interstate tab | W76B130F | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select an interstate record (record type 14) and then click Select on Electronic GIA Workbench. | Modify an interstate record (record type 14). |
| Electronic GIA Revision, 18 - ZFM/ALC tab | W76B130F | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select a ZFM/ALC record (record type 18) and then click Select on Electronic GIA Workbench. | Modify a ZFM/ALC record (record type 18). |

| Page Name | Object Name | Navigation | Usage |
|---|-------------|--|--|
| Electronic GIA Revision, Occurrences tab | W76B130F | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select an occurrences record (record type 20) and then click Select on Electronic GIA Workbench. | Modify a GIA occurrences record (record type 20). |
| Electronic GIA Revision, State Tax ID tab | W76B130F | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select a state tax ID record (record type 25) and then click Select on Electronic GIA Workbench. | Modify a GIA state tax ID record (record type 25). |
| Electronic GIA Revision, Substitute Tax ID tab | W76B130F | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select a substitute tax ID record (record type 26) and then click Select on Electronic GIA Workbench. | Modify a substitute tax ID record (record type 26). |
| Electronic GIA Revision, Substituted Tax ID tab | W76B130F | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select a substituted tax ID record (record type 27) and then click Select on Electronic GIA Workbench. | Modify a substituted tax ID record (record type 27). |
| Electronic GIA Revision, DIPAM - B tab | W76B130F | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select a DIPAM - B record (record type 30) and then click Select on Electronic GIA Workbench. | Modify a DIPAM - B record (record type 30). |
| Electronic GIA Revision, Exportation Record tab | W76B130F | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select an exportation record (record type 31) and then click Select on Electronic GIA Workbench. | Modify an exportation record (record type 31). |

Modifying a GIA Master Record

Access the Electronic GIA Revision, 01- Master tab.

Generation Date

Displays the date when the GIA was extracted and generated.

| | |
|-------------------------------|--|
| Generation Time | Displays the time when the GIA was extracted and generated. |
| Layout Version | Identifies the GIA layout version that was used in the GIA extraction. |
| Total - Record Type 05 | Displays the number of type 05 records that exist for a type 01 parent record. |

Modifying a GIA Header Record

Access the Electronic GIA Revision form, 05 - Header tab.

| | |
|-----------------------------------|---|
| Tax ID | Enter the identification code required by various tax authorities. This can be a social security number, federal or state corporate tax ID, sales tax number, and so on. The system verifies the number and prints the separators in their correct format, according to the value of TAXC (Person/Corporation Code). If no value exists for TAXC, the system uses the Corporate Entity. |
| Reference | Enter the GIA reference date that is represented in this format: YYYYMM. |
| GIA Initial Reference | Enter the GIA reference date that is represented in this format: YYYYMM. |
| Type | Enter a code that indicates the type of GIA record. The code that you enter must exist in the GIA Type (76B/G2) UDC table. |
| Flag for Transaction | Enter a code that identifies if any <i>notas fiscais</i> for a specified fiscal company exist that fall within the specified date range for processing. |
| Sent Flag | An option that indicates whether the GIA flat file has been sent to the government. Values are: 0: The GIA has not been sent. 1: The GIA has been sent. |
| ICMS Tax Receivable Amount | Enter the total of the ICMS receivable amounts in the GIA reporting period. |
| Tax ID | Enter the identification code required by various tax authorities. This can be a social security number, federal or state corporate tax ID, sales tax number, and so on. The system verifies the number and prints the separators in their correct format, according to the value of TAXC (Person/Corporation Code). If no value exists for TAXC, the system uses the Corporate Entity. |
| ICMS Fixed Amount | Enter the total of the ICMS fixed amount in the GIA reporting period. |
| Total - Records Type 10 | Enter the number of type 10 records that exist for a type 05 parent record. |
| Total - Record Type 20 | Enter the number of type 20 records that exist for a type 05 parent record. |
| Total - Record Type 30 | Enter a code that indicates how many type 30 records exist for a type 05 parent record. |
| Total - Record Type 31 | Enter a code that indicates how many type 31 records exist for a type 05 parent record. |

Modifying a GIA CFOP Record

Access the Electronic GIA Revision form, 10 - CFOP tab.

| | |
|---------------------------------|--|
| Nota Fiscal Total Amount | Enter the total of the <i>notas fiscais</i> in the GIA reporting period. |
| ICMS Taxable Amount | Enter the total of the ICMS taxable amount in the GIA reporting period. |
| ICMS Exempt Amount | Enter the total of the ICMS-exempt amount in the GIA reporting period. |
| ICMS Others Amount | Enter the total of other ICMS amounts in the GIA reporting period. |
| Other Taxes Amount | Enter the total of other taxes, such as IPI tax, for the GIA reporting period. |
| Total - Record Type 14 | Enter the number of type 14 records that exist for a type 10 parent record. |

Modifying a GIA Interstate Record

Access the Electronic GIA Revision form, 14 - Interstate tab.

| | |
|---|--|
| Total Amount for Taxpayers | Enter the total of the <i>notas fiscais</i> for taxpayers in the GIA reporting period. |
| ICMS Taxable Amount for Taxpayers | Enter the total of the ICMS taxable amount for taxpayers in the GIA reporting period. |
| Total Amount for Non-Taxpayers | Enter the total of the <i>notas fiscais</i> for non-taxpayers in the GIA reporting period. |
| ICMS Taxable Amount for Non-Taxpayer | Enter the total of the ICMS taxable amount for non-taxpayers in the GIA reporting period. |
| Others Operations Amount | Enter the totals of the other operation amount in the GIA reporting period. |
| ICMS Tax Subst Amount Oil or Energy (ICMS tax substitution amount oil or energy) | Enter the total of the ICMS tax substitution amounts for oil and energy in the GIA reporting period. |
| ICMS Tax Subst Amount Non-Oil/Energy (ICMS tax substitution amount non-oil/energy) | Enter the total of the ICMS tax substitution amounts for non-oil and non-energy in the GIA reporting period. |
| Flag For Free Zone Operation | Enter a code that indicates whether the transaction has free-zone discounts. |
| Total - Record Type 18 | Enter the number of type 18 records that exist for a type 14 parent record. |

Modifying a GIA ZFM/ALC Record

Access the Electronic GIA Revision form, 18 - ZFM/ALC tab.

| | |
|---------------------------|--|
| Nota Fiscal Date | Enter the date of the <i>nota fiscal</i> . |
| Fiscal Item Value | Enter the fiscal item value. |
| CGC Tax ID Carrier | Enter the CGC tax identification number that identifies the carrier. |

Modifying a GIA Occurrences Record

Access the Electronic GIA Revision form, Occurrences tab.

| | |
|-----------------------------------|---|
| Associated Sub-Item Amount | Enter the amount associated with an occurrence. |
| Occurrence Type | Enter the code that identifies the GIA occurrence type. The code that you enter must exist in the Occurrence Type (76B/G4) UDC table. |
| Total - Record Type 25 | Enter the number of type 25 records that exist for a type 20 parent record. |
| Total - Record Type 26 | Enter the number of type 26 records that exist for a type 20 parent record. |
| Total - Record Type 27 | Enter the number of type 27 records that exist for a type 20 parent record. |

Modifying a GIA State Tax ID Record

Access the Electronic GIA Revision form, State Tax ID tab.

| | |
|-------------------------------------|---|
| Issuer State Inscription | Enter the issuer state inscription. |
| Associated Occurrence Amount | Enter the total monetary amount of an occurrence for a specific state tax ID during the GIA reporting period. |

Modifying a GIA Substitute Tax ID Record

Access the Electronic GIA Revision form, 26 - Substitute Tax ID tab.

Modifying a GIA Substituted Tax ID Record

Access the Electronic GIA Revision form, 27 - Substituted Tax ID tab.

Modifying a GIA DIPAM - B Record

Access the Electronic GIA Revision form, 30 - DIPAM - B tab.

| | |
|-----------------------|---|
| DIPAM-B Amount | Enter the total of the DIPAM-B amount that is associated with a DIPAM-B code. |
|-----------------------|---|

Modifying a GIA Exportation Record

Access the Electronic GIA Revision form, Exportation Record tab.

Deleting GIA Records

When you delete a GIA record in the Electronic GIA - Workbench application, the system deletes the record that you select and all of the child records that are associated with that record. When you delete child records from a parent record, the system updates the fields in the parent record that disclose the number of child records that are attached to the parent record. For example, suppose that a CFOP record (record type 10) has three interstate records (record type 14) associated with it. The Total - Record Type 14 field for the CFOP records display a value of 3. If you delete one interstate record from the CFOP record, the system changes the value in the Total - Record Type 14 field to a value of 2.

When you delete GIA records by using the Electronic GIA Workbench application, the system deletes the records only from the F76B130 and F76B131 tables; it does not delete records in the F7601B and the F7611B tables.

Form Used to Delete GIA Records

| Form Name | FormID | Navigation | Usage |
|--------------------------|----------|--|---|
| Electronic GIA Workbench | W76B130A | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench | Select GIA records to delete from the electronic GIA workbench. |

Deleting GIA Records

Access the Electronic GIA Workbench form.

Printing GIA Data

You run the Print GIA program (R76B131) to produce a report that contains the GIA data that resides in the Flexible Field in the F76B131 table. The system prints up to 200 characters per line in the detail section of the report.

Prerequisite

Set the processing options for the Electronic GIA - Workbench program. You must specify in the Print GIA processing option the version of the Print GIA program that you want to run. You can access the processing options only through Batch Versions.

Form Used to Print GIA Data

| Form Name | FormID | Navigation | Usage |
|--------------|----------|--|-----------------|
| Printing GIA | W76B130B | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Select Print GIA from the Report menu on Electronic GIA Workbench. | Print GIA data. |

Printing GIA Data

Access the Printing GIA form.

Sending GIA Data

This section provides an overview of sending GIA data and discusses how to:

- Set processing options for Send GIA (R76B132).
- Sending GIA data.

Understanding How to Send GIA Data

When you run the Send GIA program, the system reads the Flexible Field in the F76B131 table and creates the flat file in the location that you specify in the processing options. You then send the flat file to the Brazilian government. The Send GIA program also produces a report that lists the number of records that the system writes to the flat file.

Important! If you run the Send GIA program for a company profile and keyword combination for which you previously created a flat file and set the processing options to write the flat file to the same location and file name, the system deletes the previously created flat file.

After you create the flat file, you must access the Brazilian government website to validate the data in the file. This validation takes place outside of the system and is not discussed in this documentation for generating and sending GIA records.

Prerequisites

Before you complete the tasks in this section:

- Set the processing options for the Electronic GIA - Workbench program.
You must specify in the Send GIA processing option the version of the Send GIA program that you want to run. You can access the processing options only through Batch Versions.
- Set the processing options for the Send GIA program.
You can access the processing options only through Batch Versions.

Forms Used to Send GIA Data

| Form Name | FormID | Navigation | Usage |
|-------------|----------|--|----------------|
| Sending GIA | W76B130B | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench. Select Send GIA from the Report menu on Electronic GIA Workbench. | Send GIA data. |

Setting Processing Options for Send GIA (R76B132)

Processing options enable you to specify the default processing for programs and reports.

Process

Although processing options are set up during the system implementation, you can change processing options each time that you run a program.

- 1. Directory Name (Required)** Specify the directory in which the system creates the GIA flat file (for example, c:\b9\printqueue\).

- 2. File Name (Required)** Specify the name of the GIA flat file created by the Send GIA program (R76B132). You must use .txt as the file extension. For example, you could name the flat file: gia1201.txt.
- 3. Ignore GIA Status** Specify whether the system verifies the GIA status. Values are:
- Blank: Update GIA status to 1 (GIA Sent).
- 1: Generate an error message and do not create the GIA flat file if the GIS Status is equal to 1.

Sending GIA Data

Access the Sending GIA form.

Purging GIA Data

You purge GIA data to delete GIA records from the F76B130 and F76B131 tables.

When you purge GIA data, the system deletes all of the records that are associated with a combination of company profile and keyword. The system deletes the records only from the F76B130 and F76B131 tables; it does not delete records in the F7601B and F7611B table.

Forms Used to Purge GIA Data

| Form Name | FormID | Navigation | Usage |
|--------------------------|----------|--|-----------------|
| Electronic GIA Workbench | W76B130A | Electronic GIA - Brazil (G76B1111), Electronic GIA - Workbench Complete the Company Profile and Keyword fields in the header area and then select Purge GIA from the Form menu on Electronic GIA Workbench. | Purge GIA data. |

Purging GIA Data

Access the Electronic GIA Workbench form.

CHAPTER 31

(BRA) Working With Procurement Processes for Brazil

This chapter provides overviews of purchase order returns; PIS/PASEP and COFINS processing; setup considerations for purchase order returns; lists prerequisites, and discusses how to:

- Enter purchase orders for Brazil.
- Enter and review receipts.
- Enter reversing receipts.
- Work with errors on *notas fiscais*.
- Close inbound *notas fiscais*.
- Generate a correction letter for *notas fiscais*.
- Enter landed costs and freight notes.
- Process purchase order returns for Brazil.
- Generate the *nota fiscal* for a purchase return
- Print the *nota fiscal* for purchase returns.

Understanding Purchase Order Returns for Brazil

When you return purchased merchandise to the supplier, you must issue a new *nota fiscal* to accompany the returned merchandise. Brazilian law requires that companies issue an accompanying *nota fiscal* whenever merchandise is moved between different taxpayer units.

The purchase return *nota fiscal* must be based on the supplier's original *nota fiscal*. If merchandise is fully returned, the outbound *nota fiscal* values must be identical to the supplier's original *nota fiscal*. If merchandise is partially returned, the outbound *nota fiscal* values must be proportional to the supplier's original *nota fiscal*.

The tax rates and costs must be returned in the same amounts as those amounts that were used in the supplier's original *nota fiscal*. The original freight, insurance, and expenses must also be returned proportionally and handled with a separate *nota fiscal*.

When you process a purchase return, the system uses the original purchase price; the costs retrieved from the supplier's original *nota fiscal* are not modified or overridden by prices in the JD Edwards Enterprise One Procurement system. The system can create journal entries to support processing purchase returns. The purchase return process considers repasse and discounts.

When you enter a receipt of a *nota fiscal*, you enter the tax amounts from the *nota fiscal* that the supplier sent with the merchandise. The system stores the tax amounts in the F7611B table and the F76B011 table. When you process a purchase return, the system retrieves the tax amounts from tables F7611B and F76B001; it does not recalculate the taxes.

To process a purchase return for Brazil, you must perform these steps:

1. Process the receipt of the merchandise.

See [Chapter 31, “\(BRA\) Working With Procurement Processes for Brazil,” Entering and Reviewing Receipts for Procurement for Brazil, page 641.](#)

2. Generate a *nota fiscal* for the received merchandise.

See [Chapter 28, “\(BRA\) Working With Sales Order Processing for Brazil,” Generating Outbound Notas Fiscais, page 525.](#)

3. Enter the purchase return.

See [Chapter 31, “\(BRA\) Working With Procurement Processes for Brazil,” Processing Purchase Order Returns for Brazil, page 657.](#)

4. Ship confirm the return.

See *JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide*, “Processing Sales Orders,” Confirming Shipments.

5. Generate the return *nota fiscal*.

See [Chapter 31, “\(BRA\) Working With Procurement Processes for Brazil,” Generating the Nota Fiscal for a Purchase Return, page 659.](#)

6. Compare the values on the original *nota fiscal* to the return *nota fiscal* to verify that the prices, taxes, and other fees are correct.

7. Print the return *nota fiscal*.

See [Chapter 31, “\(BRA\) Working With Procurement Processes for Brazil,” Printing the Nota Fiscal for Purchase Returns, page 659.](#)

Understanding PIS/PASEP and COFINS Processing

You process purchase returns when you return merchandise that you have received into inventory from the supplier.

When you create a credit memo for a purchase return, the system performs these steps:

1. Retrieves the tax information from the original *nota fiscal* from the F76B011 table.

The system does not calculate PIS/PASEP or COFINS taxes based on the credit memo.

2. Writes records to the F76B011 table to reverse the tax information that appears on the original *nota fiscal*.

The new records contain the *nota fiscal* number from the purchase return *nota fiscal* that you printed during the purchase return process. The system marks the records as "not processed." The amount that the system writes is based on the original tax amount.

3. Marks the record in the F76B011 table as processed when you run the PIS COFINS Netting Process program (R76B9011).

Understanding Setup Considerations for Purchase Order Returns

Before you process a purchase order return, you must verify that these programs are set up:

- Sales Ledger Inquiry (P42025).
- Sales/Purchase Returns - Brazil (P76B805).
- Sales Order Entry (P4210, version ZJDE7006).

You must also verify that supplier master and purchasing instruction records exist for the supplier to whom you are returning the merchandise.

This table lists some considerations for the purchase order return process:

| Program | Considerations |
|-------------------------------|---|
| Sales Ledger Inquiry (P42025) | <p>These considerations apply:</p> <ul style="list-style-type: none"> • The Sales Ledger Inquiry program must have a version that matches the version that you use in the Enter Order Detail program. If you use version ZJDE7006 (Purchase Return Brazil) in P4210, you must set up version ZJDE7006 in the Sales Ledger Inquiry program. • On the Defaults tab in the processing options, for the Order Type processing option, select the code that represents a purchase order return. Also, consider widening the range of statuses in the Status Code - From and Status Code - Thru processing options. For example, if you enter <i>400</i> for the Status Code - From processing option and enter <i>999</i> for the Status Code - To processing option, the system searches over a wide range of <i>notas fiscais</i> when it uses the Sales Ledger Inquiry program. • On the Credit Memo tab in the processing options, for the Enter the Status Code processing option, enter the last status of the <i>nota fiscal</i> that you create for the merchandise that you return. • On the Versions tab of the processing options, you do not need to enter values because the Sales Ledger Inquiry program is called from the Sales Order Entry program. |

| Program | Considerations |
|---|--|
| Sales/Purchase Returns - Brazil (P76B805) | <p>These considerations apply:</p> <ul style="list-style-type: none"> • The Sales/Purchase Returns - Brazil program must have a version that matches the version that you use in the Sales Order Entry program (P4210). If you use version ZJDE7006 (Enter Order Detail) in the Sales Order Entry program, you must set up version ZJDE7006 in the Sales/Purchase Returns - Brazil program. • On the Select tab in the processing options, consider widening the range of statuses in the Next Status Code - From and Next Status Code - Thru processing options. For example, if you enter 400 for the Next Status Code - From processing option and enter 999 for the Next Status Code - To processing option, the system searches over a wide range of <i>notas fiscais</i> when it uses the Sales/Purchase Returns - Brazil program. |
| Sales Order Entry (P4210/ZDJE7006) | <p>These considerations apply to the Defaults tab in the processing options:</p> <ul style="list-style-type: none"> • For the Order Type processing option, enter the code that represents purchase order returns. • For the Line Type processing option, enter the code that represents the type of merchandise that you are returning. For example, if you are returning a stock item, enter <i>BS</i>. • For the Beginning Status processing option, enter the status that represents Enter Sales Order. <p>On the Versions tab in the processing options, for the Sales Ledger Inquiry processing option, enter the version that matches the version of the Enter Order Detail program that you are using.</p> |

Entering Purchase Orders for Brazil

This section provides an overview of the purchase order process flow, lists prerequisites, and discusses how to:

- Set processing options for P.O. Brazilian Additional Information - Brazil (P4310BR).
- Enter purchase orders for Brazil.

Understanding Purchase Order Entry in Brazil

In Brazil, the government requires that businesses maintain detailed information about all merchandise and associated taxes during the delivery process. The information accompanies shipments in the form of a document known as a *nota fiscal*.

When you enter a purchase order, you also enter information that the system uses to generate the associated *nota fiscal* document. When you receive a shipment for the purchase order, you enter or update information for the related *nota fiscal*. When you enter item information, the system calculates any applicable IPI, ICMS, and ICMS Substitution taxes. The Brazilian government holds both the seller and buyer responsible for the accuracy of tax calculations. You can verify the accuracy of the *nota fiscal* document that the supplier sends with the shipment, based on the inbound version of the *nota fiscal* that the system generates.

When you use the JD Edwards EnterpriseOne Procurement system in Brazil, you enter additional information in the header and then in the detail portions of the purchase order.

When you enter purchase orders, the system automatically displays the additional information forms for the purchase order header and detail. To access additional information forms when you inquire on existing purchase orders, use the regional information exits.

The system automatically creates journal entries to account for the *notas fiscais* that the procurement process creates.

The Brazilian government requires companies to maintain additional purchase order information for tax audit purposes. This additional information includes:

- Transaction nature.
- Tax code.
- Fiscal classification.
- Whether the item is subject to ICMS Substitution.
- Origin of the item.
- Purchase use.
- Fiscal message.

Prerequisites

Before you enter purchase orders, you must:

- Indicate whether the item was manufactured or purchased to determine the transaction nature default. For Brazil, this information can be stored in an item master category code. Use UDC 76/CN to determine which category code you can use by entering SRP6, SRP7, SRP8, SRP9, or SRP0 for the code NATUR. For example, one data dictionary option for NATUR is SRP6. Data dictionary item SRP6 has values in UDC 41/06, so it is ready for you to use when you enter purchase orders.
- Verify that you have set up the processing options for P.O. Brazilian Additional Information - Brazil (P4310BR). Select processing options from the Version Setup/Advanced Operations - BRZ menu (G76B31), and then navigate to the Purchase Order Processing - Brazil menu (G76B4311) to enter purchase orders.
- Verify that the version for P.O. Brazilian Additional Information - Brazil (P4310BR) and the version for Enter Purchase Orders (P4310) are the same. If the versions are not the same, P.O. Brazilian Additional Information - Brazil (P4310BR) uses version ZJDE0001.
- Verify that item master information and item branch/plant information are set up for each of the inventory items.
- Verify that branch/plant constants are set up for each of the business units or branches (required for only inventory management).
- Set up order activity rules and order line types.
- (Optional) Set up default location and printer information for the terminal or user profile.

- Set up address book records for all suppliers.
- Set up procurement instructions for each supplier and ship-to address.

Forms Used to Enter Purchase Orders for Brazil

| Form Name | FormID | Navigation | Usage |
|---------------------------------------|----------|---|--|
| Order Header | W4310B | Purchase Order Processing - Brazil (G76B4311), Enter Purchase Orders Click the Add button on the Work With Order Headers form. | Enter purchase orders for Brazil. Note. The Order Header form appears only if the Header Display processing option on the Processing tab of the Enter Purchase Orders program is set to display the header form first. |
| Order Header - Additional Information | W4310H | Select Additional Info from the Form menu on the Order Header form. | Optionally, review, add, or change the default information. |
| Order Detail | W4310A | Click the OK button on the Order Header form. | Enter order detail. |
| P.O. Header Brazilian Add Information | W4310BRB | Click the OK button on the Order Detail form. | Review the transaction-nature defaults. |
| P.O. Detail Brazilian Add Information | W4310BRF | Click the OK button on the P.O. Header Brazilian Add Information form. | Review detail information and verify that it is correct. |

Setting Processing Options for P.O. Brazilian Additional Information - Brazil (P4310BR)

Processing options enable you to specify the default processing for programs and reports.

Defaults

These processing options enable you to specify the values that the P.O. Brazilian Additional Information - Brazil (P4310BR) uses when other values are not entered for the transaction.

| | |
|--------------------------------|--|
| Transaction Nature Code | <p>Specify the three-character code for the transaction nature. You set up transaction nature codes in the Transaction Nature program (P7615B).</p> <p>Enter the Transaction Nature code using this convention: XYY</p> <p>X defines the origin of the transaction (inbound or outbound). YY defines the transaction as a whole, such as a purchase transaction. Values for X are:</p> <p>1: Inbound and inside the state.</p> <p>2: Inbound and in other states.</p> <p>3: Inbound and import.</p> <p>5: Outbound and inside the state.</p> <p>6: Outbound and in other states.</p> |
|--------------------------------|--|

7: Outbound and export.

Examples of Transaction Nature Codes:

111: In-state purchases

311: Purchase of an import

If you leave this processing option blank, the system uses *111* for the transaction nature.

Transaction Nature Suffix

Specify the suffix to the Transaction Nature code. The suffix identifies the complementary implications of a type of transaction. For example, the suffix might indicate that a certain type of transaction represents a inventory change or that a transaction is eligible for a certain type of tax. You set up Transaction Nature suffixes in the Transaction Nature program (P7615B). If you leave this processing option blank, the system uses 00 for the transaction nature suffix. Values are:

01: Bonus

02: Demo

03: Sample

04: Return merchandise

05: Back order

06: Donation

Examples of Transaction Nature Codes with suffixes:

111 02: In-state purchase, bonus

311 02: Purchase of an import, bonus

Entering Purchase Orders for Brazil

Order Header form

Transaction Nature

Enter a three-character code that is used for tax purposes and identifies a type of transaction. Use this convention: X.YY, where X defines the origin of the transaction (inbound or outbound) and YY defines the transaction as a whole, such as a sales transaction (511 for an in-state sale and 611 for an out-of-state sale). Values for X are:

- 1: Inbound and inside the state.
- 2: Inbound and in other states.
- 3: Inbound and import.
- 5: Outbound and inside the state.
- 6: Outbound and in other states.
- 7: Outbound and export.

Transaction Nature Suffix

Enter a two-character field that you use with the Transaction Nature code to identify the complementary implications of a transaction type. For example, the suffix might indicate that a certain transaction type represents an inventory change or that a transaction is eligible for a certain type of tax. Values are:

- 01: Bonus
- 02: Demo
- 03: Sample
- 04: Return merchandise
- 05: Backorder

06: Donation

Entering and Reviewing Receipts for Procurement for Brazil

This section provides an overview of receipts for Brazilian procurement, lists a prerequisite, and discusses how to:

- Set processing options for the Nota Fiscal Receipts - Brazil program (P4312BR).
- Enter receipts for procurement for Brazil.
- Set processing options for the Nota Fiscal Maintenance - Brazil program (P7610B).
- Review inbound *nota fiscal* header information.
- Review inbound *nota fiscal* detail information.

Understanding Receipts for Brazilian Procurement

You must enter receipt information to verify the receipt of goods or services on a purchase order. You must verify the quantity, cost, and so on, for each order that you receive. If you make an error or need to cancel receipts, you can enter reversing receipts.

To enter a receipt, you must first locate the open purchase order detail lines that correspond to the receipt. An open detail line contains items that have not yet been received. The system retrieves all open detail lines for the item number, purchase order number, or account number that you specify.

If the detail lines on a purchase order differ from the details of the actual receipt, you must adjust the purchase order detail lines to reflect the receipt. For example, if the order quantity on a detail line is 20 but you receive a quantity of 10, you must change the quantity on the detail line to 10. You specify whether to close the remaining balance on the line or to keep it open.

After you enter receipts for purchase orders and record the inbound *nota fiscal* that you receive from The suppliers, you can review the documents online to verify that the information correlates with the document. If some of the data is incorrect, you can make changes online. You can review *notas fiscais* by order number or by *nota fiscal* number.

The receipt process for Brazil also lets you enter corrections to the *nota fiscal* and send a request for a corrected *nota fiscal* to the supplier. You can perform this procedure either when entering receipts for procurement or by accessing the Nota Fiscal Check and Close program (P76B900). When you enter corrections, you can review the differences between the values that are calculated by the system and the values that are provided by the supplier for ICMS tax, IPI tax, ICMS Substitution tax, Freight, and Discounts. If a discrepancy exists, you can generate a letter requesting a corrected *nota fiscal*.

When you set up receipt routing for Brazil, you must enable payment processing at the first step of the route.

Prerequisite

The processing options for the Nota Fiscal Receipts - Brazil (P4312BR) program configure the *nota fiscal*. You must set up matching versions for the Nota Fiscal Receipts - Brazil and the PO Receipts (P4312) programs. If you do not set up matching versions, the system uses ZJDE0001.

Forms Used to Enter and Review Receipts for Procurement for Brazil

| Form Name | FormID | Navigation | Usage |
|--------------------------------------|---------|--|--|
| Work With Purchase Orders to Receive | W4312F | Purchase Order Processing - Brazil (G76B4311), Enter Receipts by PO | Work with purchase orders to receive. |
| Purchase Order Receipts | W4312A | Select a detail line on the Work With Purchase Orders to Receive form, and click the Select button. | Review and adjust receipt details. |
| Work With Nota Fiscal Headers | W7610BG | Purchase Order Processing - Brazil (G76B4311), Nota Fiscal Inquiry | Work with headers for <i>nota fiscal</i> . |
| Nota Fiscal Header Revision | W7610BD | Select a record on the Work With Nota Fiscal Headers form, and then select Header Revision from the Row menu. | Make revisions to inbound <i>nota fiscal</i> header information. |
| Nota Fiscal Detail Revision | W7610BE | Select a record on the Work With Nota Fiscal Headers form, and then select Detail Revisions from the Row menu. | Make revisions to inbound <i>nota fiscal</i> detail information. |

Setting Processing Options for Nota Fiscal Receipts - Brazil (P4312BR)

Processing options enable you to specify the default processing for programs and reports.

Defaults

These processing options enable you to specify the type of transaction.

- 1. Nota Fiscal Document Type** Specify the *nota fiscal* document type that the system uses when it creates records in the F7611B table. If you leave this processing option blank, the system uses NF for the document type.
- 2. Override Last Status** Specify the override line status that the system uses when it creates records in the F7611B table. If you leave this processing option blank, the system uses the status from the order activity rules.
- 3. Override Next Status** Specify the override line status that the system uses when it creates records in the F7611B table. If you leave this processing option blank, the system uses the status from the order activity rules.

Entering Receipts for Procurement for Brazil

Access the Work With Purchase Orders to Receive form.

| | |
|---|---|
| Order Number | Enter a number that identifies an original document. For example, the document can be a requisition, blanket order, or purchase order. |
| Item Number | Enter a number that the system assigns to an item. The system can display the number in short, long, or third item number format. |
| Account Number | <p>Enter a value that identifies an account in the general ledger. Use one of these formats to enter account numbers:</p> <ul style="list-style-type: none"> • Standard account number (business unit.object.subsidiary or flex format). • Third general ledger number (maximum of 25 digits). • Account ID number. The number is eight digits long. • Speed code, which is a two-character code that you concatenate to the AAI item SP. You can then enter the code instead of an account number. <p>The first character of the account number indicates its format. You define the account format in the JD Edwards EnterpriseOne General Accounting system constants.</p> |
| G/L Date (general ledger date) | <p>Enter a date that identifies the financial period to which the transaction is to be posted.</p> <p>The company constants specify the date range for each financial period. You can have as many as 14 periods. Generally, period 14 is used for audit adjustments. The system validates this field for PBCO (posted before cutoff), PYEB (prior year ending balance), PACO (post after cutoff), and WACO (post way after cutoff) messages.</p> |
| N.F. Number (<i>nota fiscal</i> number) | Enter a six-character number that identifies a <i>nota fiscal</i> . The number consists of the <i>nota fiscal</i> number and the <i>nota fiscal</i> series. |
| N.F. Series (<i>nota fiscal</i> series) | Enter a two-character number that along with the <i>nota fiscal</i> number, identifies a <i>nota fiscal</i> . The Nota Fiscal Series field is the second key that the system uses to access a specific <i>nota fiscal</i> . |

Setting Processing Options for Nota Fiscal Maintenance - Brazil (P7610B)

Processing options enable you to specify the default processing for programs and reports.

Display

This processing option enables you to control The display preferences.

- 1. Header or Detail**

Specify whether the system displays the Nota Fiscal Header Revisions form or the Nota Fiscal Detail Revisions first when you inquire on a *nota fiscal*. You can review header information before detail information and edit default information that affects the *nota fiscal*. Values are:

Blank: The system displays the Nota Fiscal Header Revisions form first.

1: The system displays the Nota Fiscal Detail Revisions form first.

Freights

These processing options enable you to specify how the system processes freight information. The term additional charges refers to freight insurance and additional expenses that are added to *notas fiscais* during the sales order process. The term landed costs refers to freight insurance and additional expenses that are added to *notas fiscais* during the procurement process.

- 1. Prorate Basis (Required)** Specify the basis for prorating freight charges. The system uses values from the F7611B table for the quantities and amounts. When determining the values for weights, the system uses values from the F4211 table when processing sales orders and uses values in the F4311 table when processing purchase orders. Values are:

Blank: Quantity

1: Weight

2: Amount
- 2. Freight Line Type (Required)** Specify the freight line type. This processing option specifies how the system processes lines on a transaction. The line type affects the systems with which the transaction interfaces (JD Edwards EnterpriseOne General Accounting system, JD Edwards EnterpriseOne Job Cost system, JD Edwards EnterpriseOne Accounts Payable system, JD Edwards EnterpriseOne Accounts Receivable system, and JD Edwards EnterpriseOne Inventory Management system). The line type also specifies the conditions for including a line on reports and in calculations.
- 3. Insurance Line Type (Required)** Specify the insurance line type. This processing option specifies how the system processes lines on a transaction. The line type affects the systems with which the transaction interfaces (JD Edwards EnterpriseOne General Accounting system, JD Edwards EnterpriseOne Job Cost system, JD Edwards EnterpriseOne Accounts Payable system, JD Edwards EnterpriseOne Accounts Receivable system, and JD Edwards EnterpriseOne Inventory Management system). The line type also specifies the conditions for including a line on reports and in calculations.
- 4. Expenses Line Type (Required)** Specify the tax line type. This processing option specifies how the system processes lines on a transaction. The line type affects the systems with which the transaction interfaces (JD Edwards EnterpriseOne General Accounting system, JD Edwards EnterpriseOne Job Cost system, JD Edwards EnterpriseOne Accounts Payable system, JD Edwards EnterpriseOne Accounts Receivable system, and JD Edwards EnterpriseOne Inventory Management system). The line type also specifies the conditions for including a line on reports and in calculations.
- 5. Taxes** Specify whether taxes are included. This processing option applies only to landed costs processing. Use this processing option only if the landed cost prorate basis is set to *Amount*. Values are:

Blank: Include only the extended amount as the basis of the tax.

1: Include taxes and tax-related discounts based upon which landed costs amounts are prorated.
- 6. F43121 Freight Recording** Specify whether the system creates one record or multiple records in the F43121 table for freight charges associated with *nota fiscal* lines. The system uses this processing option only when you process purchase orders. Values are:

Blank: Create a record for each line on a *nota fiscal*.

1: Create one record for each *nota fiscal*.

- | | |
|---|--|
| 7. Next Status Code - From (Required) | Specify the From Status code range that the system uses for <i>nota fiscal</i> selection. You must enter a status that has been set up in the UDC list of the order activity rules based on the order type and the line type that you are using. The combination of Status From and Status Thru must be a valid last status/next status combination in the Order Activity Rule list (40/AT). |
| 8. Next Status Code - To (Required) | Specify the To Status code range that the system uses for <i>nota fiscal</i> selection. You must enter a status that has been set up in the UDC list of the order activity rules based on the order type and the line type that you are using. The combination of Status From and Status Thru must be a valid last status/next status combination in the Order Activity Rule table (40/AT). |
| 9. Next Status Code (Optional) | Specify the next step in the order process. You must use a UDC (40/AT) that has been set up in the Order Activity Rules form for the order type and the line type that you are using. The override status is another allowed step in the process. |
| 10. Doc. Type - Regular (Optional) | Specify the code for the document type for the transaction. You select a code from Document Type - All Documents UDC (00/DT). If you leave this option blank, the system uses the document type already scheduled. |
| 11. Doc. Type - Exceptional (Optional) | Specify an alternative document type that overrides the document type associated with the freight, insurance, and other expenses lines on a <i>nota fiscal</i> . When you complete this processing option, the system searches for the Automatic Accounting Instruction (AAI) that is associated with the alternative document type and writes journal entries to the accounts that are associated with the AAI. |

Defaults

These processing options enable you to specify default values, such as stand-alone *nota fiscal* version, *nota fiscal* document for two-way match, last status code, and next status code that the Nota Fiscal Maintenance - Brazil program (P7610B) uses when other values are not entered for the transaction.

- | | |
|--|---|
| 1. Stand Alone Nota Fiscal Version | Specify the version of the Nota Fiscal Maintenance program (P7610B) that the system runs. If you leave this processing option blank, the system uses version ZJDE0001. |
| 2. NF Document for Two Way Match (<i>nota fiscal</i> document for two way match) | Specify the <i>nota fiscal</i> document type for two-way match. You must enter values that have been set up in UDC list (00/DT). If you leave this processing option blank, the system uses NF (purchasing <i>nota fiscal</i>) for the document type. |
| 3. Last Status Code Default | Specify the beginning of the range of the next status of the <i>notas fiscais</i> that you to select. You select a status from the Activity/Status UDC (40/AT). The status that you select must be set up in the order activity rules based on the order type and the line type of the <i>notas fiscais</i> that you want to select. The combination of codes that you select for this processing option and the Next Status Code - To processing option in this program must be a valid last status/next status combination in the F40203 table. |
| 4. Next Status Code Default | Specify the end of the range of the next status of the <i>notas fiscais</i> that you select. You select a status from the Activity/Status Codes UDC (40/AT). The |

status the you select must be set up in the order activity rules based on the order type and the line type of the *notas fiscais* that you want to select. The combination of codes that you select for this processing option and the Next Status Code - From processing option in this program must be a valid last status/next status combination in the F40203 table.

5. Close Nota Fiscal Version

Specify the version of the Nota Fiscal Check & Close program (P76B900) that the system uses to write tax and costs information to the appropriate tables. If you do not complete this processing option, the system uses version ZJDE0001.

Edits

These processing options enable you to specify whether the system protects the status of the *nota fiscal* and to set the status code limit for changes.

1. **Status**
Specify whether the system makes changes to the status of a *nota fiscal* during sales order or purchase order processing. Values are:
Blank: Allow changes to the status of the *nota fiscal*.
1: Do not allow changes to the status of the *nota fiscal*.
2. **Status Code Limit for Changes**
Enter the status code at which detail lines cannot be changed. The system does not change the status of detail lines if the next status in the F40203 table is greater than or equal to the status that you enter for this processing option.
3. **Account Validation**
Specify whether the system enables account validation. When enables, the system validates the accounts and AAIs used in the additional charges and landed costs process prior to processing the records. Although account validation decreases performance, it ensures database integrity. It is strongly recommended that account validation be enabled at all times. You may disable this feature to improve performance after a new implementation or program changes have been tested. Values are:
Blank: Enable validation.
1: Disable validation.

Reviewing Inbound Nota Fiscal Header Information

Access the Work With Nota Fiscal Headers form.

NF Source (*nota fiscal* source)

Enter a code that identifies how a *nota fiscal* was generated in the system. You select a code from the Nota Fiscal Source UDC (76/NF). The codes are hard-coded. Values are:

- 1: Stand-alone Nota Fiscal - PO
- 2: Complementary Nota Fiscal - PO
- 3: 2-Way Match Nota Fiscal - PO
- 4: 3-Way Match Nota Fiscal - PO
- 5: Stand-alone Nota Fiscal - SO
- 6: Complementary Nota Fiscal - SO
- 7: Nota Fiscal - SO

Reviewing Inbound Nota Fiscal Detail Information

Access the Work With Nota Fiscal Headers form.

Entering Reversing Receipts for Brazilian Procurement

This section provides an overview of receipt reversals for Brazilian procurement and discusses how to enter a reversing receipt for Brazilian procurement.

Understanding Receipt Reversals for Brazilian Procurement

You can reverse a receipt if you have not yet created a voucher for the receipt. You might reverse a receipt if you recorded a receipt by mistake or you recorded the wrong receipt.

When you reverse a receipt, the system accounts for the order as if it had never been received. The system reverses all accounting and inventory transactions.

Form Used to Enter Reversing Receipts for Brazilian Procurement

| Form Name | FormID | Navigation | Usage |
|-----------------------------|---------|--|------------------------------|
| Work With Purchase Receipts | W43214A | Purchase Order Processing - Brazil (G76B4311), Open Receipts by Supplier | Work with purchase receipts. |

Entering a Reversing Receipt for Brazilian Procurement

Access the Work With Purchase Receipts form.

Working with Errors on Notas Fiscais for Brazil

This section provides an overview of errors on *notas fiscais* and discusses how to compare *nota fiscal* amounts.

Understanding Errors on Notas Fiscais

As you work with *notas fiscais* from suppliers, you can calculate taxes and other charges due, and then compare the calculations to the amounts that are listed on each *nota fiscal*. You can then automatically generate a letter requesting a correction to the *nota fiscal*.

You can compare *nota fiscal* values when you enter receipts or at a later time. Comparing corrected values is an optional activity that you use when you want to send a request for a corrected *nota fiscal*. The application compares the values that you enter to the values that are currently in the system for the *nota fiscal*. The system notifies you if discrepancies exist between the values.

If discrepancies exist, you can generate a letter to request corrections to the *nota fiscal*. The system uses the values that you entered when it generates the letter, so you should complete at least the fields for which discrepancies exist. You create the text for the letter by using the Fiscal Books Next Number program (P7602B).

Forms Used to Work with Errors on Notas Fiscais

| Form Name | FormID | Navigation | Usage |
|-------------------------------|----------|--|---|
| Work With Nota Fiscal Headers | W7610BG | Purchase Order Processing - Brazil (G76B4311), Nota Fiscal Inquiry | Work with <i>nota fiscal</i> headers. |
| Nota Fiscal Check | W76B900A | Select a row on the Work With Nota Fiscal Headers form, and then select Close Nota Fiscal from the Row menu. | Perform <i>nota fiscal</i> tasks, such as comparing <i>nota fiscal</i> amounts. |

Comparing Nota Fiscal Amounts

Access the Work With Nota Fiscal Headers form.

| | |
|---|--|
| N.F. Number (nota fiscal number) | Enter a six-character number that identifies a <i>nota fiscal</i> . The number consists of the <i>nota fiscal</i> number and the <i>nota fiscal</i> series. |
| N.F. Total (<i>nota fiscal</i> total) | Enter the total amount of the <i>nota fiscal</i> . The system calculates the total as follows: Merchandise + IPI tax amount + ICMS Substitute tax amount + Complementary Expenses - Discounts |
| ICMS Amount | Enter the amount on which ICMS taxes are assessed. |
| ICMS Tax | Enter the ICMS tax amount that is printed on the <i>nota fiscal</i> . |
| ICMS Substitution | Enter the amount on which ICMS Substitute tax is assessed. Products that are eligible for ICMS Substitute tax are listed in ICMS government directive 14. |
| ICMS Substitute | Enter the ICMS Substitute amount that The customer must remit in advance if they are subject to Tax Substitution Mark-up. |
| Taxable Amount | Enter the amount on which IPI taxes are assessed. |
| IPI Tax | Enter the IPI tax amount that is printed on the <i>nota fiscal</i> . |
| Freight | Enter a complementary expense to The customer. The system prorates this expense amount among each of the <i>notas fiscais</i> that are listed and adds the prorated amount to the ICMS taxable amount for each document. |
| Insurance | Enter the insurance amount that you charge the client as complementary expense. This amount must be included on the <i>nota fiscal</i> . |

| | |
|----------------------------|--|
| Expenses | Enter the amount of the total financial expenses that is printed on the <i>nota fiscal</i> . |
| ISS Tax | Enter the ISS tax amount that is printed on the <i>nota fiscal</i> . |
| ISS Amount | Enter the amount on which ISS taxes are assessed. |
| IR Tax | Enter the IR tax amount that is printed on the <i>nota fiscal</i> . |
| IR Taxable Amount | Enter the amount on which IR taxes are assessed. |
| ICMS Repasse | Enter an additional discount granted to the client on interstate sales. It is based on the tax rate difference among states. |
| ICMS Dis. Free Zone | Enter the amount of the discount available to a free port zone customer. |

Closing Inbound Notas Fiscais

This section provides overviews of the Nota Fiscal Check & Close program (P76B900) and PIS/PASEP and COFINS processing; lists prerequisites, and discusses how to:

- Set processing options for the Nota Fiscal Check & Close program (P76B900).
- Close an inbound *nota fiscal*.

Understanding the Nota Fiscal Check & Close Program (P76B900)

You must close a *nota fiscal* after receiving or adding landed costs to it, or both. When you access the Nota Fiscal Inquiry program (P7610B), you can run the Nota Fiscal Check & Close program (P76B900). When you run the Nota Fiscal Check & Close program, the system updates these tables with the taxes that are calculated in the receipt process:

- F0911
- F4111
- F43121
- F7601B
- F7611B
- F76B00, if the system calculates PIS/PASEP or COFINS taxes
- F76B011, if the system calculates PIS/PASEP or COFINS taxes

The taxes that are calculated in the *nota fiscal* during the receipt process must be posted to the general ledger.

Note. The system posts PIS/PASEP and COFINS taxes when you run the PIS COFINS Netting Process program (R76B9011). When you run the Nota Fiscal Check & Close program, the system updates tables F76B001 and F76B011 with PIS/PASEP and COFINS taxes, but it does not post journal entries for the taxes.

The taxes that are calculated must also be computed into the item ledger in the inventory system, and the costs must be calculated. The system uses the same document type, document number, and batch number as the original receipt when creating journal entries.

Note. The system updates the F43121 table with the line type for PIS/PASEP taxes only when you complete the PIS Line Type processing option with a valid value, and updates the F43121 table with the line type for COFINS taxes only when you complete the COFINS Line Type processing option with a valid value.

You can close an inbound *nota fiscal* when you receive goods or close it interactively from the Nota Fiscal Inquiry program (P7610B).

PIS/PASEP and COFINS Processing for Procurement Transactions

When you close an inbound *nota fiscal*, the system runs the Nota Fiscal Check & Close program (P76B900) to calculate the taxes on the *nota fiscal*. The system uses this logic to determine whether to calculate PIS/PASEP and COFINS tax credits:

1. The system compares the Purchase Use Code for each line item on the *nota fiscal* to the Purchase Use Codes in the F76B003 table.
2. If the system finds a match between the purchase use codes, the system reads the record in the F76B003 table to determine if a tax code for PIS/PASEP tax credits (data item BTPIS) or COFINS tax credits (data item BTCOF) is associated with the purchase use code.

If a tax credit code is associated with a purchase use code in the F76B003 table, the system calculates PIS/PASEP or COFINS taxes if the Apply field for the tax specifies that the tax is to be applied. If a tax credit code is associated with the purchase use code in the F76B003 table and the Apply field for the tax does not specify that the tax is to be applied, the system does not calculate the tax for the line.

3. If the system does not find a match between the purchase use code for a line item and the purchase use codes in the F76B003 table, the system retrieves the tax information for PIS/PASEP and COFINS tax credits (data item BRTAX1 through BRTAX8) from the supplier's address book entry from the F76011 table and calculates the tax, based on the code in the address book entry.

If the supplier's address book entry does not contain a tax valid tax code for PIS/PASEP or COFINS tax credits, the system does not calculate these withholding taxes for the line.

Note. Tax codes for PIS/PASEP and COFINS tax credits are valid only if the Retention/Aggregation/Credit field in the F76B0401 table (data item BRRTA) contains a C. The Nota Fiscal Check & Close program ignores PIS/PASEP and COFINS tax codes that do not contain a C in the Retention/Aggregation/Credit field.

The system follows these steps when calculating PIS/PASEP and COFINS taxes for *notas fiscais* entered in the JD Edwards Enterprise One Procurement system:

1. Calculates the tax by using this formula: (Nota Fiscal Line Extended Amount + Freight + Insurance + Expenses - Discount Amount) * Rate of PIS/PASEP or COFINS tax.
2. Writes records to the F43121 for the PIS/PASEP and COFINS taxes, but does not create payables transaction until you run the PIS COFINS Netting Process program (R76B9011).
3. Updates the Average Cost of the item with the amount, excluding the PIS/PASEP and COFINS taxes.
4. Writes records to the F76B001 table and the F76B011 table, and marks the records as unprocessed.

Prerequisites

Before you complete the tasks in this section:

- Set up the Cost/Expense Adjustments AAI (4385) and the Cost/Liability Adjustments AAI (4390).
See [Chapter 22, “\(BRA\) Setting Up Country-Specific Functionality for Brazil,” Setting Up AAI for Tax Processing for Brazil, page 399.](#)
- Set up the G/L Posting Category Code (41/9), G/L Class Code Cross Reference (76/GL), and Average Cost Calculation (40/AV) UDCs.
See [Chapter 22, “\(BRA\) Setting Up Country-Specific Functionality for Brazil,” Setting Up UDCs for Procurement Processing for Brazil, page 391.](#)
- Set the processing options for the Nota Fiscal Check & Close program (P76B900).
See [Chapter 31, “\(BRA\) Working With Procurement Processes for Brazil,” Setting Processing Options for Nota Fiscal Check & Close \(P76B900\), page 651.](#)

Forms Used to Close an Inbound Nota Fiscal

| Form Name | FormID | Navigation | Usage |
|-------------------------------|----------|--|---|
| Work With Nota Fiscal Headers | W7610BG | Purchase Order Processing - Brazil (G76B4311), Nota Fiscal Inquiry | Work with <i>nota fiscal</i> headers. |
| Nota Fiscal Check | W76B900A | Select a row on the Work With Nota Fiscal Headers form, and then select Close Nota Fiscal from the Row menu. | Perform <i>nota fiscal</i> tasks, such as closing an inbound <i>nota fiscal</i> . |

Setting Processing Options for Nota Fiscal Check & Close (P76B900)

Processing options enable you to specify the default processing for programs and reports.

Close Nota

These processing options enable you to specify the status of the *notas fiscais* with which you want to work.

- 1. Status for processing (From):** Specify the From Status code range that the system uses for *nota fiscal* selection. You must enter a status that has been set up in the UDC list of the order activity rules based on the order type and the line type that you are using. The combination of Status From and Status Thru must be a valid last status/next status combination in the Order Activity Rule list (40/AT).
- 2. Status for processing (To):** Specify the To Status code range that the system uses for *nota fiscal* selection. You must enter a status that has been set up in the UDC list of the order activity rules based on the order type and the line type that you are using. The combination of Status From and Status Thru must be a valid last status/next status combination in the Order Activity Rule table (40/AT).
- 3. Status for update:** Specify the next step in the order process. You must use a UDC (40/AT) that has been set up on the Order Activity Rules form for the order type and the line type that you are using. The override status is another allowed step in the process.

- | | |
|----------------------------|---|
| 4. PIS Line Type | Specify the line type that the system writes to the F43121 table for PIS/PASEP tax credits. If you leave this processing option blank, the system does not write a line type to the F43121 table. |
| 5. COFINS Line Type | Specify the line type that the system writes to the F43121 table for COFINS tax credits. If you leave this processing option blank, the system does not write a line type to table F43121. |

Closing an Inbound Nota Fiscal

Access the Work With Nota Fiscal Headers form.

Generating a Correction Letter for a Nota Fiscal

If discrepancies exist between the amounts that the system calculates and the calculations that The supplier sent on the *nota fiscal*, you can generate a letter to the supplier requesting a correction.

This section lists a prerequisite and discusses how to:

- Generate a correction letter for a *nota fiscal*.
- Create the text for a correction letter.

Prerequisite

Verify that the text for the correction letter exists.

Forms Used to Generate a Correction Letter for a Nota Fiscal

| Form Name | FormID | Navigation | Usage |
|------------------------------------|----------|--|--|
| Work With Nota Fiscal Headers | W7610BG | Purchase Order Processing - Brazil (G76B4311), Nota Fiscal Inquiry | Work with <i>nota fiscal</i> headers. |
| Nota Fiscal Check | W76B900A | Select a row on the Work With Nota Fiscal Headers form, and then select Close Nota Fiscal from the Row menu. | Perform <i>nota fiscal</i> tasks. |
| Printer Selection | W986162B | On Nota Fiscal Check, select Correction Letter from the Form menu. | Select the report output destination. |
| Work With Fiscal Books Next Number | W7602BA | Brazilian Localization Setup (G76B41B), Next Number - Fiscal Books | Work with fiscal books next number. |
| Fiscal Books Next Number Revision | W7602BB | On the Work With Fiscal Books Next Number form, click Add. | Make revisions to a fiscal books next number. |
| Opening Statement | W7602BE | On the Work With Fiscal Books Next Number form, select a line and select Opening Statement from the Row menu. | Modify an opening statement. |
| Media Object Viewer | N/A | Click OK on the Opening Statement form. | Enter text that you want to appear before the detail portion of the corrections. |
| Closing Statement | W7602BF | On the Work With Fiscal Books Next Number form, select a line and then select Closing Statement from the Row menu. | Modify a closing statement. |

Generating a Correction Letter for a Nota Fiscal

Access the Work with Nota Fiscal Headers form.

Creating the Text for a Correction Letter

You use the Fiscal Books Next Number program (P7602B) to create the text for the correction letter. The Fiscal Books Next Number program lets you create an opening section and a closing section that the system prints on one letter. When you generate the letter, the system inserts between the two sections the details of the discrepancies between the *nota fiscal* that you received and the amounts that were calculated by the system.

Associating the CC UDC Value with the Company

Access the Work With Fiscal Books Next Number form, which you use to associate the CC UDC value.

Creating the Revision Letter Text

Access the Work with Fiscal Books Next Number form.

Entering Landed Costs and Freight Notes for Brazil

This section provides overviews of landed costs and tax calculations on freight notes, lists a prerequisite, and discusses how to:

- Apply landed costs.
- Enter freight notes.

See Also

JD Edwards EnterpriseOne Procurement Management 8.12 Implementation Guide, “Creating Vouchers,”
Entering Landed Costs

Understanding Landed Costs for Brazil

When you purchase items, extra costs for delivery fees, broker fees, import taxes, and so on, are not uncommon. These costs are called landed costs. You can enter landed costs for items after the receipt process or as a stand-alone process.

In Brazil, companies enter stand-alone landed costs for expenses that are associated with *notas fiscais*. Typically, these expenses include freight, insurance, and expenses. The two types of landed costs are:

- Landed costs that are entered immediately after the receipt process and are included in the *nota fiscal*.
- Stand-alone landed costs that are entered at some point after the receipt process (called freight notes) and are included in a separate *nota fiscal*.

You can enter landed costs for a purchase order immediately after the receipt process. If you enter landed costs immediately after the receipt process, you can enter only the costs for a specific *nota fiscal* document.

After you enter the landed costs for the *nota fiscal* document, the system prevents you from entering additional costs to the same document. Enter landed costs only after you receive all *nota fiscal* lines.

Note. Landed costs are reversed automatically when you reverse a receipt.

When you enter stand-alone landed costs, you can enter all of the landed costs for multiple *notas fiscais* at once. The system prorates the total amount of the landed costs to the *notas fiscais*, and creates a batch of transactions to record the landed costs in the JD Edwards EnterpriseOne General Accounting and JD Edwards EnterpriseOne Inventory Management systems. You must review and post this batch.

After you enter landed costs for the *nota fiscal*, the system prevents you from entering additional costs. Enter landed costs only after you receive all *nota fiscal* lines.

If you cannot enter landed costs immediately after the receipt process, you must enter freight notes. For example, you enter freight notes if the landed cost amounts are not included on the merchandise *nota fiscal* from the vendor.

Understanding PIS/PASEP and COFINS Taxes for Freight Notes

You might receive a freight *nota fiscal* for freight, insurance, and other expenses that apply to goods received on a merchandise *nota fiscal*. When you apply the expenses to the merchandise *nota fiscal*, the system launches the Freight Note Processing program (P76B807). The Freight Note Processing program prorates the PIS/PASEP and COFINS contributions on the freight charges at the same ratio as the system used for the PIS/PASEP and COFINS contributions on the goods received. The system then updates the item ledger and average costs for the goods on the merchandise *nota fiscal* and creates journal entries to account for the contributions on the freight *nota fiscal*.

System Process Flow

When you select Freight Note from the Row menu on the Work With Nota Fiscal Header form, the system launches the Freight Note Processing program. On the Work With Landed Costs form, you can select the merchandise *nota fiscal* by choosing NF Selection from the Form menu. When you apply the freight, insurance, or other expenses to the freight *nota fiscal*, the system:

- Retrieves and stores the PIS/PASEP and COFINS G/L Class.

The system retrieves the G/L offset account from the 76/GL UDC, using the strings PIS and COF to identify the offset account. The UDC Description that the system retrieves, along with the 4385 distribution automatic accounting instruction (AAI), identify the debit account that the system uses. The item's G/L offset account and the 4390 distribution AAI identify the credit account that the system uses.

- Creates journal entries.
- Updates the item ledger with the freight PIS/PASEP and COFINS transactions.
- Updates the average cost of the items on the merchandise *nota fiscal* to include the freight PIS/PASEP and COFINS transactions.

Prerequisite

Set the processing options on the Freight tab of the Nota Fiscal Maintenance - Brazil program (P7610B) to specify the landed cost parameters that you want to use.

Forms Used to Enter Landed Costs and Freight Notes

| Form Name | FormID | Navigation | Usage |
|-------------------------------|----------|--|----------------------|
| Landed Cost Selection | W43291A | Receipts Matching and Posting (G43A15), Stand-Alone Landed Cost Select a receipt record on the Work With Purchase Receipts form, and then select Apply Landed Cost from the Row menu. | Enter landed costs. |
| Work With Nota Fiscal Headers | W7610BG | Purchase Order Processing - Brazil (G76B4311), Apply Landed Costs Purchase Order Processing - Brazil (G76B4311), Nota Fiscal Inquiry | Apply landed costs. |
| Nota Fiscal Header Revision | W7610BD | Select a <i>nota fiscal</i> on the Work With Nota Fiscal Headers form, and then select Header Revision from the Row menu. | Apply landed costs. |
| Work With Landed Cost | W76B807D | Select a <i>nota fiscal</i> on the Work With Nota Fiscal Headers form, and then select Freight Note from the Row menu. | Enter freight notes. |

Applying Landed Costs

Access the Work With Nota Fiscal Headers form.

| | |
|---|--|
| NF Number (<i>nota fiscal</i> number) | Enter a six-character number that identifies a <i>nota fiscal</i> . The number consists of the <i>nota fiscal</i> number and the <i>nota fiscal</i> series. |
| NF Series (<i>nota fiscal</i> series) | Enter a two-character number that along with the <i>nota fiscal</i> number, identifies a <i>nota fiscal</i> . The Nota Fiscal Series field is the second key that the system uses to access a specific <i>nota fiscal</i> . |
| NF Source (<i>nota fiscal</i> source) | Enter a code that identifies how a <i>nota fiscal</i> was generated in the system. You select a code from the Nota Fiscal Source UDC (76/NF). The codes are hard-coded. Values are: 1: Standalone Nota Fiscal - PO 2: Complementary Nota Fiscal - PO 3: 2-Way Match Nota Fiscal - PO 4: 3-Way Match Nota Fiscal - PO 5: Standalone Nota Fiscal - SO 6: Complementary Nota Fiscal - SO 7: Nota Fiscal - SO |

| | |
|---|---|
| NF Freight (<i>nota fiscal</i> freight) | Enter a complementary expense to the customer. The system prorates this expense amount among each of the <i>notas fiscais</i> listed and adds the prorated amount to the ICMS taxable amount for each document. |
| NF Insurance (<i>nota fiscal</i> insurance) | Enter the insurance amount that you charge the client as complementary expense. This amount must be included on the <i>nota fiscal</i> . |
| NF Expenses (<i>nota fiscal</i> expenses) | Enter the amount of the total financial expenses that is printed on the <i>nota fiscal</i> . |

Entering Freight Notes

Access the Work With Landed Cost form.

| | |
|------------------|---|
| Freight | Enter a complementary expense to the customer. The system prorates this expense amount among each of the <i>notas fiscais</i> listed and adds the prorated amount to the ICMS taxable amount for each document. |
| Insurance | Enter the insurance amount that you charge the client as complementary expense. This amount must be included on the <i>nota fiscal</i> . |
| Expenses | Enter the amount of the total financial expenses that is printed on the <i>nota fiscal</i> . |

Processing Purchase Order Returns for Brazil

This section lists prerequisites and discusses how to:

- Set processing options for the Sales/Purchase Returns - Brazil program (P76B805).
- Process purchase orders returns.

Prerequisites

Before processing purchase order returns for Brazil, you must:

- Execute the purchase order receipt.
- Set up the processing options for the Sales Ledger Inquiry program (P42025), Sales/Purchase Returns - Brazil program (P76B805), and Sales Order Entry program (P4210, version ZJDE7006).

See [Chapter 28, “\(BRA\) Working With Sales Order Processing for Brazil,” Setting Processing Options for Sales/Purchase Returns - Brazil \(P76B805\), page 558.](#)

Forms Used to Process Purchase Order Returns for Brazil

| Form Name | FormID | Navigation | Usage |
|--------------------------------|----------|---|---|
| Customer Service Inquiry | W4210E | Purchase Return (G76B4212), Enter Order Detail | Locate and review sales orders. |
| Sales Order Detail Revisions | W4210A | Click the Add button on the Customer Service Inquiry form. | Make revisions to sales order details. |
| Sales Ledger Detail | W42025B | On the Sales Order Detail Revisions form, select Credit Memo from the Form menu. On Work With Sales Ledger Inquiry, select Sales Ledger Dtl from the Row menu. | Create sales ledger details. |
| Nota Fiscal Selection | W76B805G | On the Create Sales Ledger Details form, select an order number, and then select NF Selection from the Form menu. | Enter a <i>nota fiscal</i> number to find an order. |
| Work With Sales Ledger Inquiry | W42025A | Select a line on Create Sales Ledger Details, and click OK. | Work with a sales ledger inquiry. |

Processing Purchase Order Returns

Access the Sales Order Detail Revisions form.

NF Doc Type (*nota fiscal* document type)

Enter a code from UDC 00/DT that identifies the origin and purpose of the transaction. The system reserves several prefixes for document types, such as vouchers, invoices, receipts, and timesheets. The reserved document type prefixes for codes are:

P: Accounts payable documents

R: Accounts receivable documents

T: Time and Pay documents

I: Inventory documents

O: Purchase order documents

S: Sales order documents

Supplier Number

Enter a number that identifies a supplier entry in the JD Edwards EnterpriseOne Address Book system.

Transaction Nature

Enter a three-character code that, for tax purposes, identifies a type of transaction. To enter values, use this convention: X.YY. X defines the origin of the transaction (inbound or outbound). Values for X are:

1: Inbound, inside the state.

2: Inbound, other states.

3: Inbound, import.

5: Outbound, inside state.

6: Outbound, other states.

7: Outbound, export.

YY defines the transaction as a whole, such as a sales transaction.

Examples of Transaction Nature codes:

511: In-state sale.

611: Out-of-state sale.

Generating the Nota Fiscal for a Purchase Return

This section discusses how to generate the *nota fiscal*.

See Also

Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Setting Processing Options for Generate Nota Fiscal (R76558B), page 526

Generating a Nota Fiscal

Select Purchase Return (G76B4212), Generate Nota Fiscal.

Printing the Nota Fiscal for Purchase Returns

This section provides and discusses how to print the *nota fiscal* for a purchase return.

See Also

Chapter 28, “(BRA) Working With Sales Order Processing for Brazil,” Setting Processing Options for Print Nota Fiscal (R76560B), page 537

Printing the Nota Fiscal

Select Purchase Return (G76B4212), Print Nota Fiscal.

After you generate the return *nota fiscal*, you should verify that the prices, taxes, and other fees match the values on the original *nota fiscal*. You then print the return *nota fiscal* using the Nota Fiscal Print program (R76500B). When you print the *nota fiscal*, the system assigns to the *nota fiscal* the next number from the *nota fiscal* numbers that you set up in the Next Number - Nota Fiscal program (P7600B).

CHAPTER 32

(BRA) Working With Inventory Management for Brazil

This chapter discusses how to:

- Add additional item master information.
- Add additional branch/plant information.

Adding Additional Item Master Information for Brazil

This section provides an overview of additional item master information for Brazil and discusses how to add additional item master information.

Understanding Additional Item Master Information for Brazil

The Brazilian government requires Brazilian businesses to enter specific tax information that is related to each inventory item. The system uses this tax information to calculate *Imposto sobre Produtos Industrializados* (IPI), *Imposto sobre Circula   de Mercadorias e Servicos* (ICMS), and *Imposto sobre Circula   de Mercadorias e Servicos Substituto* (ICMS) Substitution taxes; generate *nota fiscal* documents; and generate applicable fiscal reports.

You must enter general information for all stock and nonstock items. The system uses this information to identify and process each item in the distribution and manufacturing systems.

In Brazil, the government requires companies to maintain this additional information for each item:

- Fiscal classification.
- Tax code (IPI or ICMS).
- Whether the item is subject to tax substitution markup.
- Item origin.
- Purchase use.
- Messages to print.
- Retention of IR.
- Reduction of IR.
- Whether the item is a part of retention or reduction of INSS.

The system automatically displays the additional information form when you enter a new inventory item record. To access the additional information form when you inquire on an existing inventory item, select a record and select Regional Information from the Row menu.

You may also review (but not add) additional information from the Inventory Master - Brazil menu (G76B4111). You can review additional information by choosing Item Master.

When you enter additional information for an item, the system creates a record for the item in the F76411 table.

Prerequisite

Verify that UDC 76/CN is set up.

Form Used to Add Additional Item Information for Brazil

| Form Name | FormID | Navigation | Usage |
|---|----------|--|---|
| Item Master Regional Information - Brazil | W4101BRA | Inventory Master - Brazil (G76B4111), Item Master - Brazil. Select a row in the detail area on the Work With Item Master Regional Information - Brazil form, and select Select. | Enter additional item master information. |

Entering Additional Item Master Information

Access the Item Master Regional Information - Brazil form.

Item Master - Brazil - Item Master Regional Information - Brazil

ICMS Substitution: Y Yes, Use List Price

Item Origin: 0 Domestic Goods

Item Master Regional Information - Brazil form

Fiscal Class

Specify groups of products, as defined by the local tax authorities. The product groups are based on taxing conventions and other national statistics. The system uses this code to determine the applicable tax rate for a product.

| | |
|--------------------------|--|
| Tax Code | <p>Enter an auxiliary code that you use to combine ICMS and IPI tax characteristics. Values might include:</p> <ul style="list-style-type: none"> • <i>01</i>: Taxed domestic goods (IPI and ICMS). • <i>02</i>: Taxed domestic goods (ICMS taxed, IPI tax rate Zero). • <i>03</i>: Exempt products. • <i>04</i>: Export. • <i>05</i>: ICMS deferred, IPI suspended. • <i>06</i>: ICMS exempt, IPI taxed. |
| Purchase Use | <p>Enter a code that identifies the purpose for which the merchandise was purchased. You define purchase use codes in the Purchase Use UDC table (76/PU). When you define purchase use codes, use the special handling code to specify this tax information:</p> <p>For ICMS tax:</p> <ul style="list-style-type: none"> • <i>0</i> ICMS tax is nonrecoverable. • <i>1</i> ICMS tax is 100 percent recoverable. <p>For IPI tax:</p> <ul style="list-style-type: none"> • <i>0</i> IPI tax is nonrecoverable. • <i>1</i> IPI tax is 50 or 100 percent recoverable, depending on the status of the ship-to and ship-from taxpayer. |
| Print Message | Enter a user-defined code (40/PM) that you assign to each fiscal print message that appears on the <i>nota fiscal</i> . |
| ICMS Substitution | <p>Enter a code that specifies whether a client or product is subject to tax substitution. Values are:</p> <ul style="list-style-type: none"> • <i>Y</i>: Use list price. • <i>Z</i>: Use net price. • <i>N</i>: No. |
| Item Origin | Enter a code that specifies the origin of a product. You must select a hard-coded value from the Item Origin UDC (76/IO). |
| Retention of IR | Enter the percentage of the retention of income tax for a legal entity. |
| Reduction IR | Enter the percentage of the reduction of the tax calculation base for an individual. |
| INSS Y/N | Specify whether the item is part of the retention/aggregation calculation for INSS. A check mark in the box indicates that the item is part of the calculation. |

Adding Additional Branch/Plant Information for Brazil

This section provides an overview of additional branch/plant information and discusses how to add additional branch/plant information.

Understanding Additional Branch/Plant Information for Brazil

Information about an item might be different from warehouse to warehouse. For example, taxes might be applicable to an item at one warehouse but not at another. You might also have different quantity requirements for each item, based on the warehouse. After you enter master information for an item, you can assign the item to different warehouses or branch/plants. You can then customize the item information for each branch/plant. You can also specify at which locations in the branch/plant the item is stored.

Every system that retrieves item information searches for the item branch/plant information before using the item master information.

In Brazil, companies can override the Item Master information that they enter for specific lot locations. Companies should maintain these fields:

- Fiscal classification.
- Tax code (IPI or ICMS).
- Whether the item is subject to tax substitution markup.
- Item origin.
- Purchase use.
- Messages to be printed.

To associate the additional information that is required to meet Brazilian reporting requirements with the inventory items that you enter, the country that is specified in the user display preferences must be Brazil (BR). To access the additional information form when you inquire on an existing inventory item, select a record and then select Regional Information from the Row menu. Brazilian information needs to be added only by location if the location is different than that added for the item.

You may also review (but not add) additional information from the Inventory Master - Brazil menu (G76B4111). You can review additional information by choosing Item Branch/Plant - Brazil.

When you enter additional branch/plant information for an item, the system creates a record for the item in the F76412 table.

Forms Used to Enter Additional Branch/Plant Information

| Form Name | FormID | Navigation | Usage |
|---|----------|---|---|
| Work With Item Locations | W41024B | Lot Control (G4113), Item/Lot Information Revisions. | Enter additional branch/plant information for items for Brazil. |

Item Branch Regional Information - Brazil form

Branch/Plant

Enter an alphanumeric code that identifies a separate entity within a business for which you want to track costs. For example, a business unit might be a warehouse location, job, project, work center, branch, or plant.

Item Number

Enter a number that the system assigns to an item. It can be in short, long, or third item number format.

Fiscal Class

Enter a code that specifies groups of products, as defined by the local tax authorities. The product groups are based on taxing conventions and other national statistics. The system uses this code to determine the applicable tax rate for a product.

Tax Code

Enter an auxiliary code that you use to combine ICMS and IPI tax characteristics. Values might include:

- 01 Taxed domestic goods (IPI and ICMS).
- 02 Taxed domestic goods (ICMS taxed, IPI tax rate Zero).
- 03 Exempt products.
- 04 Export.
- 05 ICMS deferred, IPI suspended.
- 06 ICMS exempt, IPI taxed.

Purchase Use

Enter a code that identifies the purpose for which the merchandise was purchased. You define purchase use codes in the Purchase Use UDC table (76/PU). When you define purchase use codes, use the special handling code to specify this tax information:

For ICMS tax:

- 0: ICMS tax is nonrecoverable.
- 1: ICMS tax is 100 percent recoverable.

For IPI tax:

- 0: IPI tax is nonrecoverable.
- 1: IPI tax is 50 or 100 percent recoverable, depending on the status of the ship-to and ship-from taxpayer.

Print Message

Enter a user-defined code (40/PM) that you assign to each fiscal print message that appears on the *nota fiscal*.

ICMS Substitution

Enter a code that specifies whether a client or product is subject to tax substitution. Values are:

- Y: Use list price
- Z: Use net price.
- N: No.

Item Origin

Enter a code that specifies the origin of a product. You must select a hard-coded value from the Item Origin UDC (76/IO).

Retention of IR

Enter the percentage of the retention of income tax for a legal entity.

Reduction IR

Enter the percentage of the reduction of the Tax Calculation Base for an individual.

INSS Y/N

Specify whether the item is part of the Retention/Aggregation calculation for INSS. A check mark in the box indicates that the item is part of the calculation.

CHAPTER 33

(BRA) Filtering Records for IN86 and IN89 Tax Reporting

This chapter provides overviews of IN86 and IN89 tax reporting, filter programs, and tables, and discusses how to:

- Purge IN86 and IN89 work tables.
- Populate the work and complementary tables for journal entries.
- Populate the work and complementary tables for account balances.
- Populate the work and complementary tables for supplier vouchers and payments.
- Populate the work and complementary tables for customer receipts.
- Populate the work and complementary tables for customer invoices.
- Populate the work and complementary tables for fixed assets.
- Populate the work and complementary tables for storage control.
- Populate the work tables for inventory records.
- Populate the work and complementary tables for *notas fiscais* for services.
- Populate the work and complementary tables for merchandise *notas fiscais* issued by Company.
- Populate the work and complementary tables for Merchandise Notas Fiscais Issued by Supplier.
- Populate the work and complementary tables for Inbound Service Nota Fiscal Third Parties for IN89.
- Populate the work and complementary tables for bills of material.

Understanding IN86 and IN89 Tax Reporting for Brazil

IN86 and IN89 refer to legal reporting requirements in Brazil. These requirements requires businesses to report all of their business transactions that occur over a period of time using magnetic media. The government defines the period of time, the required information, and the magnetic media layout. The government also allows businesses to submit additional information with their transaction data.

Typically, the government informs a company that it has been selected for audit and that the company is required to make an IN86 or IN89 submission for the business transactions that occurred within a reporting date range. The company then has 20 work days in which to remit the required submission to the government.

JD Edwards EnterpriseOne software provides a solution for and supports IN86 and IN89 tax reporting only for data that is stored in JD Edwards EnterpriseOne tables. For example, JD Edwards EnterpriseOne tables for Brazil do not store payroll data, so the system does not support IN86 or IN89 data for payroll data.

Brazilian government specifications allow companies to include additional fields in the text files for reporting or to modify the length of fields. To include additional fields or modify the length of the fields, you must customize the programs that are provided by the JD Edwards EnterpriseOne system. JD Edwards EnterpriseOne software does not support changes that you make to the programs that JD Edwards EnterpriseOne software provides.

Terms and Concepts for IN86 and IN89 Tax Reporting

Become familiar with the terms and concepts shown in this table before you process data for IN86 or IN89 tax reporting:

| Term | Description |
|---------------------------------|---|
| Source Tables | The JD Edwards EnterpriseOne tables from which the system filters data to populate the work and complementary tables. For example, the system filters data from the Nota Fiscal - Detail (Fiscal Books) table (F76111B) to populate the IN86-Work Table for Individuals and Legal Entities table (F76B8601). |
| Work Tables | The tables that the IN86 and IN89 filter programs populate with transaction data from the source tables. |
| Complementary Tables | The shared tables that the IN86 and IN89 filter programs populate with auxiliary data from the source tables. |
| IN86 and IN89 Filter programs | The IN86 and IN89 programs that you run to populate the work tables and complementary tables. Running the filter programs is the first step in preparing data for IN86 and IN89 tax reporting. |
| IN86 and IN89 Generate programs | The programs that you run to produce the data and text files that you send to the government for IN86 and IN89 tax reporting. Running the generate program is the final step in preparing the data that is contained in source tables for reporting. |
| Leiname.txt File | The Portuguese name for the Readme.txt file that you submit to the government for IN86 and IN89 tax reporting. This text file must be submitted in Portuguese. The system produces a Leiname.txt file when you run a generate program. |
| Data Sample | An Adobe Acrobat file (PDF) that contains the first and last 30 records from the data file. The data sample consists of the text file data-strings in the same format as they appear in the data file; the system does not format the data sample with column headings. You must submit a printed copy of the PDF to the government. The system produces a data sample when you run a generate program. |
| Cover Letter | A printed copy of the Leiname.txt file that you submit for IN86 and IN89 reporting. |

Understanding IN86 and IN89 Filter Programs

Running the filter programs is the first step in producing the data for IN86 and IN89 tax reporting. A filter program reads the appropriate source tables and populates the associated work tables and complementary tables. If the filter program completes its run without errors, the report displays a message that it completed successfully. If the system encounters an error, the report displays a message stating that it did not complete successfully. In some cases, such as when you do not complete the processing options with valid values, the report also displays an error message.

Filter programs populate both work tables and complementary tables. The system populates tables according to the rules shown in this table:

| Table Type | Rules |
|---------------------|---|
| Work Table | <p>When populating a work table, the system writes to the table according to the rules for that particular table. Additionally, if you run a filter program over the same source tables without first purging the records in the work table, the system updates the records in the work table with any changed data from the source table.</p> <p>For example, when you run the IN86-Filter Supplier Vouchers and Payments program (R76B8601), the system populates the IN86-Work Table for Suppliers and Customers (F76B8602) with one record for each transaction. If you change a voucher's gross amount in the source table and then rerun the IN86-Filter Supplier Vouchers/Payments program, the system updates the voucher amount in table F76B8602.</p> |
| Complementary Table | <p>When populating a complementary table, the system writes one record for the first occurrence of the auxiliary information that is contained in the complementary table. If the auxiliary information appears more than once in the source table, the Update Date field reflects the earliest date. If you run more than one filter program that populates a complementary table, the system updates the Update Date field to reflect the earliest date if a record for the auxiliary information already exists in the Complementary Table. The system does not update any other fields.</p> <p>For example, when you run the IN86-Filter for Mdse NF Issued by Supplier program (R76B100E), the system populates the IN86-Work Table for Individuals and Legal Entities (F76B8601) table.</p> <p>If you have not purged table F76B8601 before running another filter program that populates the table, the system appends records to the table for auxiliary information, or it updates the Update Date field in existing records to the earliest date.</p> |

Several filter programs might populate the same table. For example, both the IN86-Filter for Mdse NF Issued by Supplier (R76B100E) and the IN86-Filter for Services Outbound Nota Fiscal (R76B100C) programs populate the IN86-Work Table for Individuals and Legal Entities (F76B8601). You should run all of the programs that are needed for reporting purposes before you run the programs to generate the data and text files for shared tables.

Understanding How the System Populates the IN86-Work Table for Business Unit Table

The system populates the IN86-Work Table for Business Unit table (F76B006) when you run one of these filter programs:

- IN86-Filter for Journal Entries (R76B911).
- INSS/IN89-Filter for Journal Entries (R76B911).
- IN86-Filter for Account Balance (R76B902).
- INSS/IN89-Filter for Account Balance (R76B902).

After you have processed all of the relevant records, table F76B006 contains each business unit name and description for the journal entry and account balance records.

When the system populates table F76B006, it creates records according to these rules:

- If a record for a business unit does not exist in table F76B006, the system creates a new record with the business unit information.
- If a record for the business unit does exist, the system compares the date in the Update Date field to the general ledger date (data item DGJ) of the transaction being processed.

If the general ledger date is earlier than the date in the Update Date field, the system updates the Update Date field with the general ledger date.

Understanding How the System Populates the IN86-Work Table for Account Master Table

The IN86-Work Table for Account Master (F76B901) captures data about the date of the first occurrence of an account.

The system populates table F76B901 when you run one of these filter programs:

- IN86-Filter for Journal Entries (R76B911).
- INSS/IN89-Filter for Journal Entries (R76B911).
- IN86-Filter for Account Balance (R76B902).
- INSS/IN89-Filter for Account Balance (R76B902).
- IN86-Filter Supplier Vouchers/Payments (R76B8601).
- INSS/IN89-Filter Supplier Vouchers/Payments (R76B8601).

- IN86-Filter Customer Receipts (R76B8605).
- INSS/IN89-Filter Customer Receipts (R76B8605).
- IN86-Filter Customer Invoices (R76B8604).
- INSS/IN89-Filter Customer Invoices (R76B8604).
- IN86-Filter Fixed Assets (R76B5200).
- INSS/IN89-Filter Fixed Assets (R76B5200).
- INSS/IN89-Fltr-3rd Party Srvs-Inbound NF (R76B100H).

After you have processed all of the relevant records, table F76B901 contains the date of the first occurrence of an account.

When the system populates table F76B901, it creates records according to these rules:

- If a record for an account does not exist in table F76B901, the system creates a new record with the account information.
- If a record for the account does exist, the system compares the date in the Update Date field to the general ledger Date field (data item DGJ) of the transaction being processed. If the date in the G/L Date field is earlier than the date in the Update Date field, the system updates the Update Date field with the date from the G/L Date field.

Understanding How the System Populates the IN86-Work Table for Individuals and Legal Entities Table

The IN86-Work Table for Individuals and Legal Entities (F76B8601) captures data about the individuals and legal entities for which you capture transaction data.

The system populates table F76B8601 when you run one of these filter programs:

- IN86-Filter Supplier Vouchers/Payments (R76B8601).
- INSS/IN89-Filter Supplier Vouchers/Payments (R76B8601).
- IN86-Filter Customer Receipts (R76B8605).
- INSS/IN89-Filter Customer Receipts (R76B8605).
- IN86-Filter Customer Invoices (R76B8604).
- INSS/IN89-Filter Customer Invoices (R76B8604).
- IN86-Filter for Services Outbound NF (R76B100C).
- INSS/IN89-Fltr -Services Outbound NF (R76B100C).
- IN86-Filter for Mdse NF by CO (R76B100D).
- INSS/IN89-Fltr-Mdse NF issued by CO (R76B100D).
- IN86-Filter for Mdse NF by Supplier (R76B100E).
- INSS/IN89-Fltr-Msde NF issued by Supplier (R76B100E).
- INSS/IN89-Fltr-3rd Party Srvs-Inbound NF (R76B100H).

After you have processed all of the relevant records, table F76B8601 contains the date of the first occurrence of an individual or legal entity.

When the system populates table F76B8601, it creates records according to these rules:

- If a record for an individual or legal entity does not exist in table F76B8601, the system creates a new record with the appropriate information.
- If a record for the individual or legal entity does exist, the system compares the date in the Update Date field (data item DGJ) in table F76B8601 to the G/L Date field (data item DGJ) in the source table. If the date in the G/L Date field is earlier than the date in the Update Date field, the system updates the Update Date field with the date from the G/L Date field.

Understanding How the System Populates the IN86-Work Table for Transaction Nature Table

The system populates the IN86-Work Table for Transaction Nature table (F76B400F) when you run one of these filter programs:

- IN86-Filter for Mdse NF by Supplier (R76B100E).
- INSS/IN89-Fltr-Mdse NF issued by Supplier (R76B100E).
- IN86-Filter for Mdse NF by CO (R76B100D).
- INSS/IN89-Fltr-Mdse NF issued by CO (R76B100D).

After you have processed all of the relevant records, table F76B400F contains the date of the first occurrence of the nature of the operation. The nature of the operation is a combination of a transaction nature code (data item BNOP) and a transaction nature suffix (data item BSOP).

When the system populates table F76B400F, it creates records according to these rules:

- If a record for a code/suffix combination does not exist in table F76B400F, the system creates a new record with the code/suffix combination information.
- If a record for the combination does exist, the system compares the date in the Update Date field in table F76B400F to the Fiscal Issue Date (data item BRADLJ) of the record being processed. If the Fiscal Issue Date is earlier than the date in the Update Date field, the system updates the Update Date field with the Fiscal Issue Date.

Understanding How the System Populates the IN86-Work Table for Item Number and Service Code Table

The system populates the IN86-Work Table for Item Number and Service Code table (F76B400G) when you run one of these filter programs:

- IN86-Filter for Storage Control (R76B100A).
- INSS/IN89-Filter for Storage Control (R76B100A).
- IN86-Filter for Inventory Records (R76B100B).

- INSS/IN89-Filter for Inventory Records (R76B100B).
- IN86-Filter for Services Outbound NF (R76B100C).
- INSS/IN89-Fltr- Services Outbound NF (R76B100C).
- IN86-Filter for Mdse NF by CO (R76B100D).
- INSS/IN89-Fltr-Mdse NF Issued by CO (R76B100D).
- IN86-Filter for Mdse NF by Supplier (R76B100E).
- INSS/IN89-Fltr- Mdse NF Issued by Supplier (R76B100E).
- INSS/IN89-Fltr-3rd Party Srvs-Inbound NF (R76B100H).
- IN86-Filter for Bill of Material (R76B3000).
- INSS/IN89-Filter for Bill of Material (R76B3000).

After you have processed all of the relevant records, table F76B400G contains the date of the first occurrence of the item number (data item LITM).

When the system populates table F76B400G, it creates records according to these rules:

- If a record for an item number does not exist in table F76B400G, the system creates a new record with the item number.
- If a record for the item number does exist, the system compares the date in the Update Date field to the Effective From Date (data item IXEFFF) of the record being processed. If the Effective From Date is earlier than the date in the Update Date field, the system updates the Update Date field with the Effective From Date.

Purging IN86 and IN89 Work Tables

This section provides an overview of the purge programs and discusses how to:

- Run the purge program.
- Set processing options for the purge programs.

Understanding the Purge Program

You use the IN86-Purge Work Tables program (R76B8610) or the INSS/IN89 Purge Work Tables program (R76B8610) to delete all of the records from the specified IN86 and IN89 work tables and complementary tables. You specify the tables to purge in the processing options. You typically run program R76B8610 before you begin processing records for a new reporting period.

Additionally, you might run program R76B8610 to clear the records from a specific work table or complementary table prior to a re-running a filter program that populates the work table or complementary table.

Running the Purge Programs

Use one of these navigations to access the R76B8610 program:

Select Brazil IN86 (G76BIN86), IN86-Purge Work Tables.

Select Brazil INSS/IN89 (G76BINSS), INSS/IN89 Purge Work Tables.

Setting Processing Options for IN86-Purge Work Table (R76B8610) and INSS/IN89-Purge Work Table (R76B8610)

Processing options enable you to specify the default processing for programs and reports.

Tables

For each processing option, enter *1* to clear the table, or leave the processing option blank to retain the records in the table.

Processing options are:

- 1. F76B006 - IN86 Work Table for Business Unit
- 2. F76B8200 - IN86 Work Table for Fixed Assets
- 3. F76B8601 - IN86 Work Table for Individual and Legal Entities
- 4. F76B8602 - IN86 Work Table for Suppliers and Customers
- 5. F76B901 - IN86 Work Table for Account Master
- 6. F76B902 - IN86 Work Table for Account Balance
- 7. F76B911 - IN86 Work Table for Journal Entries
- 8. F76B400A - IN86 Work Table for Storage Control
- 9. F76B400B - IN86 Work Table for Inventory Records
- 10. F76B400F - IN86 Work Table for Transaction Nature
- 11. F76B400G - IN86 Work Table for Item Number and Service Code
- 12. F76B410C and F76B411C - IN86 Header and Detail for Services Outbound Nota Fiscal
- 13. F76B410D and F76B411D - IN86 Header and Detail for Merchandise Nota Fiscal Issued by CO
- 14. F76B410E and F76B411E - IN86 Header and Detail for Merchandise Nota Fiscal Issued by Supplier
- 15. F76B3010 - IN86 Work Table for Item Part List
- 16. F76B410H - INSS Work Table for Third Party Inbound Transactions

Populating the Work and Complementary Tables for Journal Entries for IN86 and IN89

This section provides an overview of the work and complementary tables for journal entries and discusses how to:

- Run the IN86-Filter for Journal Entries (R76B911) and INSS/IN89- Filter for Journal Entries (R76B911) programs.
- Set processing options for the IN86-Filter for Journal Entries (R76B911) and the INSS/IN89- Filter for Journal Entries (R76B911) programs.

Understanding the Work and Complementary Tables for Journal Entries

To generate journal entry records for IN86 or IN89, you run the IN86-Filter for Journal Entries program (R76B911) or the INSS/IN89-Filter for Journal Entries program (R76B911). Program R76B911 reads these source tables:

- Account Ledger (F0911)
- Account Master (F0901)
- Business Unit Master (F0006)

This table shows the tables that the system populates when you run program R76B911:

| Work Table | Complementary Tables |
|---|--|
| IN86-Work Table for Journal Entries (F76B911) | IN86-Work Table for Business Unit (F76B006) |
| Not applicable | IN86-Work Table for Account Master (F76B901) |

Program R76B911 processes journal entry transactions at the lowest level of detail that is available. The system processes only the transactions that meet these criteria:

- The ledger type is equal to AA.
- The posting code is equal to P.

The transactions were posted within the date range that you specify in the processing options.

Running the IN86-Filter for Journal Entries (R76B911) and the INSS/IN89- Filter for Journal Entries (R76B911) Programs

Select IN86 Data Filter (G76BIN8601), IN86-Filter for Journal Entries.

Select INSS/IN89 Data Filter (G76BINSS01), INSS/IN89-Filter for Journal Entries.

Both navigations access the R76B911 program.

Setting Processing Options for the IN86-Filter for Journal Entries (R76B911) and the INSS/IN89- Filter for Journal Entries (R76B911) Programs

Processing options enable you to specify the default processing for programs and reports.

Select

1. From Date and 2. Thru Date Specify the beginning or end of the reporting date range. Blank is not a value.

Populating the Work and Complementary Tables for Account Balances for IN86 and IN89

This section provides an overview of the work and complementary tables for account balances and discusses how to:

- Run the IN86-Filter for Account Balance (R76B902) and INSS/IN89-Filter for Account Balance (R76B902) programs.
- Set processing options for the IN86-Filter for Account Balance (R76B902) and the INSS/IN89-Filter for Account Balance (R76B902) programs.

Understanding Work and Complementary Tables for Account Balances

To generate account balances records for IN86 or IN89, you run the IN86-Filter for Account Balance program (R76B902) or the INSS/IN89-Filter for Account Balance program (R76B902). Program R76B902 reads these source tables:

- Account Balances (F0902)
- Account Debit Balances (F0902A)
- Account Master (F0901)
- Business Unit Master (F0006)

This table show the tables that the system populates when you run program R76B902:

| Work Tables | Complementary Tables |
|---|--|
| IN86-Work Table for Account Balance (F76B902) | IN86-Work Table for Business Unit (F76B006) |
| Not applicable | IN86-Work Table for Account Master (F76B901) |

Program R76B902 does these process steps:

- Processes account balances at the lowest level of detail available. For each line in table F0902, the system writes a separate record to table F76B902 for each month within the date range that you specify. For example, if the date range encompasses accounting periods 1 through 3, the system writes three lines for each record in table F0902 - one for each accounting period.
- If the Account Balance by Currency option is enabled in the Company Constants, the system summarizes the records by the base currency codes.
- Uses a beginning balance of zero for revenue accounts.
- Assumes that the Fiscal Date Pattern is based on a calendar year. For example, the system assumes that period 1 is January, period 2 is February, and so on.

The system processes only the accounts that meet these criteria:

- The ledger type is equal to AA.
- The balance during the reporting period is not zero.
- The transactions were posted within the date range that you specify in the processing options.

Running the IN86-Filter for Account Balance (R76B902) and the INSS/IN89-Filter for Account Balance (R76B902) Programs

Select IN86 Data Filters (G76BIN8601), IN86-Filter for Account Balance.

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Filter for Account Balance.

Setting Processing Options for the IN86-Filter for Account Balance (R76B902) and the INSS/IN89-Filter for Account Balance (R76B902) Programs

Processing options enable you to specify the default processing for programs and reports.

Select

- | | |
|--|---|
| 1. Fiscal Year | Specify the fiscal year of the reporting period. Enter a two-digit value. For example, for the year 2003, enter 03. Blank is not a value. |
| 2. From Period and 3. Thru Period | Specify the first period or the last period for which you want to process records. Blank is not a value. |

Populating the Work and Complementary Tables for Supplier Vouchers and Payments for IN86 and IN89

This section provides an overview of the work and complementary tables for supplier vouchers and payments and discusses how to:

- Run the IN86-Filter Supplier Vouchers/Payments (R76B8601) and INSS/IN89- Filter Supplier Vouchers/Payments (R76B8601) programs.
- Set processing options for the IN86-Filter Supplier Vouchers/Payments (R76B8601) and the INSS/IN89- Filter Supplier Vouchers/Payments (R76B8601) programs.

Understanding Work and Complementary Tables for Supplier Vouchers and Payments

To generate supplier voucher and payment records for IN86 or IN89, you run the IN86-Filter Supplier Vouchers/Payments program (R76B8601) or the INSS/IN89-Filter Supplier Vouchers/Payments program (R76B8601). This program reads these source tables:

- Accounts Payable Ledger (F0411).
- Accounts Payable Matching Document Detail (F0414).
- Accounts Payable - Matching Document (F0413).

This table shows the tables that the system populates when you run program R76B8601:

| Work Table | Complementary Tables |
|--|---|
| IN86-Work Table for Suppliers and Customers (F76B8602) | IN86-Work Table for Individuals and Legal Entities (F76B8601) |
| | IN86-Work Table for Account Master (F76B901) |

Program R76B8901 processes accounts payable transactions that were posted within the date range that you specify in the processing options and applies these rules:

- Excludes unposted vouchers, voided vouchers, and audit trail records for voided vouchers.
- Excludes unposted payments, voided payments, currency gain and loss records.

Prerequisite

Verify that the correct special handling codes are associated with the appropriate codes in the Document Type - All Documents UDC table (00/DT).

Running the IN86-Filter Supplier Vouchers/Payments (R76B8601) and INSS/IN89- Filter Supplier Vouchers /Payments (R76B8601) Programs

Select IN86 Data Filters (G76BIN8601), IN86-Filter Supplier Vouchers/Payments.

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Filter Supplier Vouchers/Payments.

Setting Processing Options for the IN86-Filter Supplier Vouchers/Payments (R76B8601) and the INSS/IN89- Filter Supplier Vouchers/Payments (R76B8601) Programs

Processing options enable you to specify the default processing for programs and reports.

Select

- 1. From Date and 2. Thru Date** Specify the beginning or the end of the reporting date range. You must complete this processing option.

Populating the Work and Complementary Tables for Customer Receipts for IN86 and IN89

This section provides an overview of the work and complementary tables for customer receipts and discusses how to:

- Run the IN86-Filter Customer Receipts (R76B8605) and INSS/IN89-Filter Customer Receipts (R76B8605) programs.
- Set processing options for the IN86-Filter Customer Receipts (R76B8605) and the INSS/IN89-Filter Customer Receipts (R76B8605) programs.

Understanding the Work and Complementary Tables for Customer Receipts

To generate customer receipts records for IN86 or IN89, you run the IN86-Filter Customer Receipts program (R76B8605) or the INSS/IN89-Filter Customer Receipts program (R76B8605). Program R76B8605 reads the A/R Check Detail File (F03B14) table.

This table shows the tables that the system populates when you run the R76B8605 program:

| Work Tables | Complementary Tables |
|--|---|
| IN86-Work Table for Suppliers and Customers (F76B8602) | IN86-Work Table for Individuals/Legal Entities (F76B8601) |
| Not applicable | IN86-Work Table for Account Master (F76B901) |

Program R76B8605 writes one record to table F76B8602 for each record in table F03B14 and applies these rules:

- Sorts data by the Account ID (data item AID), then by the Address Number (data item AN8), and then by the Date (data item DGJ).

You cannot change the data sequencing.

- Excludes unposted records.
- Excludes voided records.
- Excludes draft and rounding records. The user can delete or change this data selection.
- Writes amounts as positive amounts.
- Populates the Operation Type field (data item OPBR) with the first character of the special handling code that is associated with the Document Type code (data item DCTM) that exists in table F03B14.

The Document Type codes exist in the Document Type UDC table (00/DT). If the special handling code is blank, the system writes an R to the Operation Type field.

- Populates the Document Type field (data item DTBR) with the second, third, and fourth characters of the special handling code that is associated with the Document Type code (data item DCTM) that exists in table F03B14.

The Document Type codes exist in the Document Type UDC table (00/DT). If the special handling code is blank, the system writes DUP to the Document Type field.

Running the IN86-Filter Customer Receipts (R76B8605) and INSS/IN89-Filter Customer Receipts (R76B8605) Programs

Select IN86 Data Filters (G76BIN8601), IN86-Filter Customer Receipts.

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Filter Customer Receipts.

Setting Processing Options for the IN86-Filter Customer Receipts (R76B8605) and the INSS/IN89-Filter Customer Receipts (R76B8605) Programs

Processing options enable you to specify the default processing for programs and reports.

Select

- 1. From Date and 2. Thru Date** Specify the beginning or the end of the reporting date range. Blank is an not a value.

Populating the Work and Complementary Tables for Customer Invoices for IN86 and IN89

This section provides an overview of the work and complementary tables for customer invoices and discusses how to:

- Run the IN86-Filter Customer Invoices (R76B8604) and INSS/IN89-Filter Customer Invoices (R76B8604) programs.
- Set processing options for the IN86-Filter Customer Invoices (R76B8604) and the INSS/IN89-Filter Customer Invoices (R76B8604) programs.

Understanding the Work and Complementary Tables for Customer Invoices

To generate customer ledger records for IN86 or IN89, you run the IN86-Filter Customer Invoices program (R76B8604) or the INSS/IN89-Filter Customer Invoices program (R76B8604). Program R76B8604 reads the Customer Ledger (F03B11) table:

Program R76B8604 populates these tables:

| Work Table | Complementary Tables |
|--|---|
| IN86-Work Table for Suppliers and Customers (F76B8602) | IN86-Work Table for Account Master (F76B901) |
| Not applicable | IN86-Work Table for Individuals and Legal Entities (F76B8601) |

Program R76B8604 writes one record to table F768602 for each record in table F03B11 and applies these rules:

- Excludes unposted records.
- Excludes voided records.
- Excludes invoices with document type of R1, R5, and RU when you run the standard XJDE0001 version.
- Populates the Operation Type field (data item OPBR) with the first character of the special handling code that is associated with the Document Type code (data item DCTM) that exists in the A/R Check Detail File table (F03B14).

The Document Type codes exist in the Document Type UDC table (00/DT). If the special handling code is blank, the system writes a C to the Operation Type field.

- Populates the Document Type field (data item DTBR) with the second, third, and fourth characters of the special handling code that is associated with the Document Type code (data item DCTM) that exists in table F03B14.

The Document Type codes exist in the Document Type UDC table (00/DT). If the special handling code is blank, the system writes DUP to the Document Type field.

Running the IN86-Filter Customer Invoices (R76B8604) and INSS/IN89-Filter Customer Invoices (R76B8604) Programs

Select IN86 Data Filters (G76BIN8601), IN86-Filter Customer Invoices.

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Filter Customer Invoices.

Setting Processing Options for the IN86-Filter Customer Invoices (R76B8604) and the INSS/IN89-Filter Customer Invoices (R76B8604) Programs

Processing options enable you to specify the default processing for programs and reports.

Select

- 1. From Date and 2. Thru Date** Specify the beginning or the end of the reporting date range. Blank is not a value.

Populating the Work and Complementary Tables for Fixed Assets for IN86 and IN89

This section provides an overview of the work and complementary tables for fixed assets and discusses how to:

- Run the IN86-Filter Fixed Assets (R76B5200) and INSS/IN89- Filter Fixed Assets (R76B5200) programs.
- Set processing options for the IN86-Filter Fixed Assets (R76B5200) and INSS/IN89- Filter Fixed Assets (R76B5200) programs.

Understanding the Work and Complementary Tables for Fixed Assets

You run the IN86-Filter Fixed Assets program (R76B5200) or the INSS/IN89-Filter Fixed Assets program (R76B5200) to generate fixed assets records for IN86 or IN89. Program R76B5200 reads these source tables:

- Asset Master File (F1201)
- Asset Account Balances File (F1202)

This table shows the tables that the system populates when you run the R76B5200 program:

| Work Table | Complementary Table |
|---|--|
| IN86-Work Table for Fixed Assets (F76B8200) | IN86-Work Table for Account Master (F76B901) |

Program R76B5200 applies these rules as it writes records to table F76B8200:

- If an asset is not disposed, the system includes the asset if the asset's Acquisition Date (data item FAFAJ) is before the date that you enter in the Thru Date in the processing option.
- If an asset is disposed, the system includes the asset if the asset's Disposal Date (data item FADSP) is within the range of dates that are specified in the processing options.

- If a supplemental data table that associates fixed asset numbers to purchase order numbers exists, the system populates the Acquisition Document Type, Document Series, and Acquisition Document Number fields with data from the supplemental data table.

If no supplemental data table exists, the system leaves the Acquisition Document Type, Document Series, and Acquisition Document Number fields blank.

Running the IN86-Filter Fixed Assets (R76B5200) and INSS/IN89-Filter Fixed Assets (R76B5200) Programs

Select IN86 Data Filters (G76BIN8601), IN86-Filter Fixed Assets.

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Filter Fixed Assets.

Setting Processing Options for the IN86-Filter Fixed Assets (R76B5200) and the INSS/IN89-Filter Fixed Assets (R76B5200) Programs

Processing options enable you to specify the default processing for programs and reports.

Select

- | | |
|--------------------------------------|---|
| 1. From Date and 2. Thru Date | Specify the beginning or the end of the reporting date range. You must complete these processing options. |
| 3. Supplemental Data Type | Specify the code for the supplemental data table that associates fixed asset numbers with purchase order numbers. If a supplemental data table that associates fixed asset numbers with purchase order numbers exists, the system updates the Acquisition Document Type, Document Series, and Acquisition Document Number fields in the IN86-Work Table for Fixed Assets table (F76B8200) with data from the supplemental data table. If no supplemental data table exists, the system leaves the Acquisition Document Type, Document Series, and Acquisition Document Number fields blank. |

Populating the Work and Complementary Tables for Storage Control for IN86 and IN89

This section provides an overview of the work and complementary tables for storage control and discusses how to:

- Run the IN86-Filter for Storage Control (R76B100A) and INSS/IN89-Filter for Storage Control (R76B100A) programs.
- Set processing options for the IN86-Filter for Storage Control (R76B100A) and INSS/IN89-Filter for Storage Control (R76B100A) programs.

Understanding the Work and Complementary Tables for Storage Control

To generate storage control records for IN86 or IN89, you run the IN86-Filter for Storage Control program (R76B100A) or the INSS/IN89-Filter for Storage Control program (R76B100A). This program reads the Item Ledger File (F4111) table.

The R76B100A program populates these work and complementary tables:

| Work Table | Complementary Table |
|--|---|
| IN86-Work Table for Storage Control (F76B400A) | IN86-Work Table for Item Number and Service Code (F76B400G) |

The R76B100A program processes item ledger transactions and applies these rules as it writes records to table F76B400A:

- If a *nota fiscal* exists for the transaction, the system performs these processes:
- Assigns F as the Nature of Document Type (data item BRND).
- Assigns NF as the Storage Control Document Type field (data item BRSD) if the company issued the *nota fiscal*.
- Writes the value of the data item BSER from the Nota Fiscal Detail - Brazil table (F7611B) to the Nota Fiscal Series field (data item BSER).
- Writes the value of data item BNNF from table F7611B to the Document Number field (data item BRDN).
- For an outbound *nota fiscal*, writes the ship-from address number to the Address Number - Ship From field (data item BSFH).

For an inbound *nota fiscal*, writes the supplier ship-from address number the Address Number - Ship From field.

- If no *nota fiscal* exists for the transaction, the system performs these processes:
- Assigns I as the Nature of Document Type (data item BRND).
- Writes either OS or REQ to the Storage Control Document Type field (data item BRSD).
- Writes blanks for the series/subseries (data item BSER).
- Writes the value of data item DOC from table F4111 to the Document Number field (data item BRDN).
- Writes blanks for the Address Number - Ship From field.
- Populates the Movement Indicator field (data item BRMI) with an E for inbound transactions and an S for outbound transactions.

Running the IN86-Filter for Storage Control (R76B100A) and INSS/IN89-Filter for Storage Control (R76B100A) Programs

Select IN86 Data Filters (G76BIN8601), IN86-Filter for Storage Control.

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Filter for Storage Control.

Setting Processing Options for the IN86-Filter for Storage Control (R76B100A) and the INSS/IN89-Filter for Storage Control (R76B100A) Programs

Processing options enable you to specify the default processing for programs and reports.

Select

1. From Date and 2. Thru Date Specify the beginning or the end of the reporting date range.

Populating the Work Tables for IN86-Filter for Inventory Records (R76B100B) and INSS/IN89-Filter for Inventory Records (R76B100B) for IN86 and IN89

This section provides an overview of the work tables for inventory records and discusses how to:

- Run the IN86-Filter for Inventory Records (R76B100B) and INSS/IN89-Filter for Inventory Records (R76B100B) programs.
- Set processing options for the IN86-Filter for Inventory Records (R76B100B) and the INSS/IN89-Filter for Inventory Records (R76B100B) programs.

Understanding the Work Tables for Inventory Records

To generate inventory records for IN86, you run the IN86-Filter for Inventory Records program (R76B100B) or the INSS/IN89-Filter for Inventory Records program (R76B100B). This program reads these source tables:

- Item ASOF File (F41112).
- Branch/Plant Fiscal Company X-Reference - Brazil (F7606B).

Program R76B100B populates these work tables:

- IN86-Work Table for Inventory Records (F76B400B).
- IN86-Work Table for Item Number and Service Code (F76B400G).

Program R76B100B processes inventory records and applies these rules as it writes records to table F76B400B:

- Populates the Inventory Status field (data item BRIV) according to the value that you set in the Branch Plant (Business Unit) Category Code processing option.
- Populates the Unit of Measure - Primary field (data item UOM1) with the value from data item UOM1 in the Item Master table (F4101).
- Populates the Cumulative Quantity field (data item CMQT) by adding the value for CMQT from table F41112 to the sum of the months that is specified in the Month processing option for table F76B400B.

For example, if you enter 3 in the Month processing option, the system adds the values for quantity for months one, two, and three (data items NQ01, NQ02, and NQ03) to the value for CMQT.

- Populates the Cumulative Amount field (data item CUMA) by adding the value for CUMA from table F41112 to the sum of the months that is specified in the Month processing option for table F76B400B.

For example, if you enter 3 in the Month processing option, the system adds the values for amounts for months one, two, and three (data items AN01, AN02, and AN02) to the value for CUMA.

Important! You *must* purge table F76B400B before you rerun the program R76B100B. If you do not purge table F76B400B prior to rerunning this filter program, the data will be inaccurate. Unlike other filter programs, when you rerun program R76B100B without first purging table F76B400B, the system adds quantities to the existing records; it does not replace existing values with values that you changed in the source tables.

Running the IN86-Filter for Inventory Records (R76B100B) and INSS/IN89-Filter for Inventory Records (R76B100B) Programs

Select IN86 Data Filters (G76BIN8601), IN86-Filter for Inventory Records.

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Filter for Inventory Records.

Setting Processing Options for the IN86-Filter for Inventory Records (R76B100B) and the INSS/IN89-Filter for Inventory Records (R76B100B)

Processing options enable you to specify the default processing for programs and reports.

Select

- | | |
|--|--|
| 1. Century | Specify the calendar century associated with the year. The century is the first two digits of a four-digit year. For example, for the year 1998, enter 19. For the year 2001, enter 20. |
| 2. Fiscal Year | Specify a two-digit fiscal year. For example, for the year 1998, enter 98. For the year 2001, enter 01. |
| 3. Month | Specify the month for which the quantities in the Item ASOF File (F41112) are accumulated. Enter the month in a two-digit format. For example, enter 01 for January. |
| 4. Inventory Date | Specify the last day of the month for which the quantities in the Item ASOF File (F41112) are accumulated. Blank is not a value. |
| 5. Branch Plant (Business Unit) Category Code | Specify the user-defined code table that contains the category code that you set up to hold the inventory status ownership codes, and that you associate with the business unit. If you do not complete this processing option, the system uses the values that you set up in the 00/30 UDC table. |
| 6. Company From | Specify the company whose data you want to work with. |

Populating the Work and Complementary Tables for Notas Fiscais for Services for IN86 or IN89

This section provides an overview of the work and complementary tables for *notas fiscais* for services and discusses how to:

- Run the IN86-Filter for Services Outbound NF (R76B100C) and INSS/IN89-Fltr -Services Outbound NF (R76B100C) programs.
- Set processing options for the IN86-Filter for Services Outbound NF (R76B100C) and the INSS/IN89-Fltr -Services Outbound NF (R76B100C) programs.

Understanding the Work and Complementary Tables for Notas Fiscais for Services

To generate *notas fiscais* for services records for IN86 or IN89, you run the IN86-Filter for Services Outbound NF program (R76B100C) or INSS/IN89-Fltr -Services Outbound NF (R76B100C). Program R76B100C reads these source tables:

- Nota Fiscal - Header (Fiscal Books) (F76101B).
- Nota Fiscal - Detail (Fiscal Books) (F76111B).

This table shows the work and complementary tables that the system populates when you run the R76B100C program:

| Work Tables | Complementary Tables |
|---|---|
| IN86-Work Table for Services Outbound Nota Fiscal Header (F76B410C) | IN86-Work Table for Individuals and Legal Entities (F76B8601) |
| IN86-Work Table for Services Outbound Nota Fiscal Detail (F76B411C) | IN86-Work Table for Item Number and Service Code (F76B400G) |

The system applies these rules as it writes records to tables F76B410C and F76B411C:

- For F76B410C, if the line status (data item TRTY) for the item is 996 or 997 in table F76101B, the system writes an S to the Cancel Situation - Brazil field (data item BRCS). Otherwise, the system writes an N to the Cancel Situation - Brazil field.
- For F76B411C, if the Item Number field (data item LITM) in table F76111B is blank, the system populates the Complementary Description field in table F76B411C (data item BRD60) with a concatenation of the values from the Description field (data item DSC1) and the Description -2 field (data item DSC2) from table F76111B.

If the Item Number field in table F76111B is blank, the system does not populate the Complementary Description field.

Running the IN86-Filter for Services Outbound NF (R76B100C) and INSS/IN89-Fltr -Services Outbound NF (R76B100C) Programs

Select IN86 Data Filters (G76BIN8601), IN86-Filter for Services Outbound NF.

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Fltr -Services Outbound NF.

Setting Processing Options for the IN86-Filter for Services Outbound NF (R76B100C) and the INSS/IN89-Fltr -Services Outbound NF (R76B100C) Programs

Processing options enable you to specify the default processing for programs and reports.

Select

From Date and Thru Date Specify the beginning or the end of the reporting date range.

Populating the Work and Complementary Tables for Merchandise Notas Fiscais Issued by CO for IN86 and IN89

This section provides an overview of the work and complementary tables for Merchandise Notas Fiscais Issued by CO and discusses how to:

- Run the IN86-Filter for Mdse Nota Fiscal by CO (R76B100D) and INSS/IN89-Filter for Mdse Nota Fiscal by CO (R76B100D) programs.
- Set processing options for the IN86-Filter for Mdse Nota Fiscal by CO (R76B100D) and INSS/IN89-Filter for Mdse Nota Fiscal by CO (R76B100D) programs.

Understanding the Work and Complementary Tables for Merchandise Notas Fiscais Issued by CO

To generate *notas fiscais* for merchandise records for IN86 or IN89, you run the IN86-Filter for Mdse NF CO program (R76B100D) or INSS/IN89-Fltr -Mdse NF issued by CO program (R76B100D). This program reads these source tables:

- Nota Fiscal - Header (Fiscal Books) (F76101B).
- Nota Fiscal - Detail (Fiscal Books) (F76111B).
- Nota Fiscal Header - Brazil (F7601B).

This table shows the work and complementary tables that the system populates when you run the R76B100D program:

| Work Tables | Complementary Tables |
|---|---|
| IN86-Work Table for Merchandise Nota Fiscal Issued by CO Hdr (F76B410D) | IN86-Work Table for Individuals and Legal Entities (F76B8601) |
| IN86-Work Table for Merchandise Nota Fiscal Issued by CO Dtl (F76B411D) | IN86-Work Table for Transaction Nature (F76B400F) |
| Not applicable | IN86-Work Table for Item Number and Service Code (F76B400G) |

Program R76B100D processes *nota fiscal* records and applies these rules as it writes records to table F76B410D:

- Populates the Nota Fiscal Document Model field (data item BRMD) with the value from the Description 01 field from the Sintegra CFOP Cross Reference UDC table (76B/TN) that is associated with the first line on the *nota fiscal*.

If the system cannot determine a value from the UDC, it writes *01* for the Nota Fiscal Document Model field.

- Populates the Address Number field (data item AN8) according to these rules:

- If the record is outbound, writes the value from the Address Number field (data item AN8) from table F76101B.
- If the record is inbound, writes the value from the Fiscal Issuer Address Number field (data item BRAANE) from table F76101B.
- Populates the Freight Mode field (data item BRFM) with either CIF or FOB.
The system writes FOB if a value for freight, insurance, or expenses exists in table F76101B. Otherwise, the system writes CIF to the Freight Mode field.
- Populates the Invoice Type field (data item BRIT) with the value that you specify in the processing options.
- Populates the *Movement Indicator* field (data item BRMI) with an *E* for inbound transactions and an *S* for outbound transactions.
- Leaves the Volume Type field (data item BRVT) blank because the value is not stored in the source tables.
You can use the appropriate IN86 maintenance program to complete this field.
- If the line status (data item TRTY) for the item is 996 or 997 in table F76101B, the system writes an *S* to the Cancel Situation - Brazil field (data item BRCS).
Otherwise, the system writes an *N* to the Cancel Situation - Brazil field.
- If a *nota fiscal* record exists in table F7601B, the system populates these fields:
 - Transportation Type field (data item BRTT) is populated from the Equipment Type field (data item EQUIP) in table F7601B.
 - Carrier Number field (data item ANCR) is populated from the Carrier Number field (data item ANCR) in table F7601B.
 - Volume Quantity field (data item TOQN) is populated from the Total Quantity field (data item TOQN) in table F7601B.
 - Gross Weight field (data item BRGW) is populated from the Gross Weight field (data item ITWT) in table F7601B.
 - Net Weight field (data item BRNW) is populated from the Net Weight field (data item TOWT) in table F7601B.
 - Vehicle Identification field (data item LICP) is populated from the License Plate Number field (data item LICP) in table F7601B.
- If a *nota fiscal* record exists in table F76101B but does not exist in the F7601B, such as those records entered into table F76101B by using the Maintenance of Fiscal Books program (P76B1001), the system leaves these fields blank:
 - Transportation Type (data item BRTT)
 - Carrier Number (data item ANCR)
 - Volume Quantity (data item TOQN)
 - Gross Weight (data item BRGW)
 - Net Weight (data item BRNW)
 - Vehicle Identification (data item LICP)

The system applies these rules as it writes records to table F76B411D:

- Populates the Nota Fiscal Document Model field (data item BRMD) with the value from the Description 01 field from the Sintegra CFOP Cross Reference UDC table (76B/TN) that is associated with each detail

line on the *nota fiscal*. If the system cannot determine a value from the UDC, it writes *01* for the Nota Fiscal Document Model field.

- If the Item Number field (data item LITM) in table F76111B is blank, populates the Complementary Description field in table F76B411D (data item BRD60) with a concatenation of the values from the Description field (data item DSC1) and the Description -2 field (data item DSC2) from table F76111B. If the Item Number field in table F76111B contains an item number, the system does not populate the Complementary Description field.
- Populates the Movement Indicator field (data item BRMI) with an *E* for inbound transactions and an *S* for outbound transactions.
- Populates the Nature of Operation - Brazil field (data item BRNO) with a concatenation of the value in the Transaction Nature field (data item BNOP) from the Nota Fiscal Detail - Brazil table (F76111B) and the value in the Transaction Suffix field (data item BSOP) from table F76B111 if the record in table F76B111 was generated by a JD Edwards EnterpriseOne program. If the record in table F76B111 was manually entered by using the Maintenance of Fiscal Books program (P76B1001), the system concatenates a value for BNOP or BRNOP from the Table for BNOP Conversion (Fiscal Books only) (F76B200) and the value in the Transaction Suffix field (data item BSOP) from table F76B111.
- Populates the Merchandise Movement field (data item BRMM) with the value that you specify in the processing options.

When it writes records to table F76B8601, the system writes records for both the Participant Address Book Number (data item AN8 from table F76B410D) and the Carrier Address Book Number (data item ANCR from table F76B410D).

Data Selection

Program R76B100D processes transactions for merchandise *notas fiscais* that were issued by the company. The company might issue both outbound *notas fiscais* that are based on sales orders and inbound *notas fiscais* that are based on purchase returns and ship-to returns. You must set the data selection for program R76B100D to encompass all of the relevant *notas fiscais*. For example, you might create separate versions of program R76B100D and set the data selection for the Document Type and Transaction Nature Suffix to different values to process the various types of transactions.

Running the IN86-Filter for Mdse Nota Fiscal by CO (R76B100D) and INSS/IN89-Filter for Mdse Nota Fiscal by CO (R76B100D) Programs

Select IN86 Data Filters (G76BIN8601), IN86-Filter for Mdse NF by CO.

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Fltr -Mdse NF issued by CO.

Setting Processing Options for the IN86-Filter for Mdse Nota Fiscal by CO (R76B100D) and the INSS/IN89-Filter for Mdse Nota Fiscal by CO (R76B100D) Programs

Processing options enable you to specify the default processing for programs and reports.

Select

1. **From Date** and 2. **Thru Date** Specify the beginning or the end of the reporting date range.

Default

1. Invoice Type

Specify a default Invoice Type. The value that you enter must exist in the Invoice Type UDC table (76B/IT). The system assigns the invoice type that you enter to the records for all of the transactions which are included in the date range that you specify in the processing options. Because the transactions in the date range might include transactions that should have an invoice type other than the one you enter, the invoice type that you enter might not be valid for all of the transactions. You must use the IN86-Maintain Mdse NF by CO program (P76B200D) on the G76BIN8602 menu and the INSS/IN89-Maintain Mdse NF issued by CO program (P76B200D) on the G76BINSS02 menu to review all of the records that are produced by program R76B100D and correct the invoice type as necessary. Values are:

1: Cash transactions

2: Installment transactions

2. Merchandise Movement

Enter a default Merchandise Movement code. The value that you enter for the invoice type must exist in the Movement Indicator UDC table (76B/MM). The system assigns the movement indicator that you enter to the records for all of the transactions that are included in the date range that you specify in the processing options. Because the transactions in the date range might include transactions that should have a movement indicator other than the one you enter, the movement indicator that you enter might not be valid for all of the transactions. You must use the IN86-Maintain Mdse NF by CO program (P76B200D) on the G76BIN8602 menu and the INSS/IN89-Maintain Mdse NF issued by CO program (P76B200D) on the G76BINSS02 menu to review all of the records that are produced by program R76B100D and correct the movement indicator as necessary. Values are:

N: No

S: Yes

Populating the Work and Complementary Tables for Merchandise Notas Fiscais Issued by Supplier for IN86 and IN89

This section provides an overview of the work and complementary tables for merchandise *notas fiscais* issued by suppliers and discusses how to:

- Run the IN86-Filter for Mdse NF by Supplier (R76B100E) and INSS/IN89-Fltr-Msde NF issued by Supplier (R76B100E) programs.
- Set processing options for the IN86-Filter for Mdse NF by Supplier (R76B100E) and the INSS/IN89-Fltr-Msde NF issued by Supplier (R76B100E) programs.

Understanding the Work and Complementary Tables for Merchandise Notas Fiscais Issued by Supplier

To generate merchandise *notas fiscais* issued by suppliers records for IN86 and IN89, you run the IN86-Filter for Mdse NF by Supplier program (R76B100E) or the INSS/IN89-Fltr-Mdse NF issued by Supplier (R76B100E). This program reads these source tables:

- Nota Fiscal - Header (Fiscal Books) (F76101B)
- Nota Fiscal - Detail (Fiscal Books) (F76111B)

Program R76B100E populates these work and complementary tables:

| Work Tables | Complementary Tables |
|---|---|
| IN86-Work Table for Merchandise NF Issued by Supplier Header (F76B410E) | IN86-Work Table for Individuals and Legal Entities (F76B8601) |
| IN86-Work Table for Merchandise NF Issued by Supplier Detail (F76B411E) | IN86-Work Table for Transaction Nature (F76B400F) |
| Not applicable | IN86-Work Table for Item Number and Service Code (F76B400G) |

Program R76B100E processes *nota fiscal* records and applies these rules as it writes records to table F76B410E:

- Populates the Nota Fiscal Document Model field (data item BRMD) with the value from the Description 01 field from the Sintegra CFOP Cross Reference UDC table (76B/TN) that is associated with the first line on the *nota fiscal*. If the system cannot determine a value from the UDC, it writes *01* for the Nota Fiscal Document Model field.
- Populates the Invoice Type field (data item BRIT) according to the value that you enter in the Invoice Type processing option.

The system applies these rules as it writes records to table F76B411E:

- Populates the Nota Fiscal Document Model field (data item BRMD) with the value from the Description 01 field from the Sintegra CFOP Cross Reference UDC table (76B/TN) that is associated with each detail line on the *nota fiscal*.

If the system cannot determine a value from the UDC, it writes *01* for the Nota Fiscal Document Model field.

- If the Item Number field (data item LITM) in table F76111B is blank, populates the Complementary Description field in table F76B411E (data item BRD60) with a concatenation of the values from the Description field (data item DSC1) and the Description -2 field (data item DSC2) from table F76111B.

If the Item Number field in table F76111B contains an item number, the system does not populate the Complementary Description field.

- Populates the Nature of Operation - Brazil field (data item BRNO) with a concatenation of the value in the Transaction Nature field (data item BNOP) from the Nota Fiscal Detail - Brazil table (F76111B) and the value in the Transaction Suffix field (data item BSOP) from table F76111B if the record in table F76111B was generated by a JD Edwards EnterpriseOne program.

If the record in table F76111B was manually entered by using the Maintenance of Fiscal Books program (P76B1001), the system concatenates a value for BNOP or BRNOP from the Table for BNOP Conversion (Fiscal Books only) table (F76B200) and the value in the Transaction Suffix field (data item BSOP) from table F76111B.

- Populates the Merchandise Movement field (data item BRMM) with the value that you specify in the processing options.

Running the IN86-Filter for Mdse NF by Supplier (R76B100E) and INSS/IN89-Fltr-Mdse NF issued by Supplier (R76B100E) Programs

Select IN86 Data Filters (G76BIN8601), IN86-Filter for Mdse NF by Supplier.

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Fltr-Mdse NF issued by Supplier.

Setting Processing Options for the IN86-Filter for Mdse NF by Supplier (R76B100E) and the INSS/IN89-Fltr-Mdse NF issued by Supplier (R76B100E) Programs

Processing options enable you to specify the default processing for programs and reports.

Select

- 1. From Date and 2. Thru Date** Specify the beginning or the end of the reporting date range.

Defaults

- 1. Invoice Type** Specify a default Invoice Type. The value that you enter must exist in the Invoice Type UDC table (76B/IT). Values are:
- I*: Cash transactions
 - 2*: Installment transactions
- 2. Merchandise Movement** Enter a default Merchandise Movement code. The value that you enter must exist in the Merchandise Movement UDC table (76B/MM). Values are:
- N*: No
 - S*: Yes

Populating the Work and Complementary Tables for Inbound Service Nota Fiscal Third Parties for IN89

This section provides an overview of the work and complementary tables for inbound service *notas fiscais* for third parties and discusses how to:

- Run the INSS/IN89-Fltr-3rd Party Srvs-Inbound NF program (R76B100H).
- Set processing options for the INSS/IN89-Fltr-3rd Party Srvs-Inbound NF program (R76B100H).

Understanding the Work and Complementary Tables for Inbound Service Nota Fiscal Third Parties

To generate service *notas fiscais* issued by third parties records for IN89, you run the Fltr-3rd Party Srvs-Inbound NF program (R76B100H). This program reads these source tables:

- Nota Fiscal - Header (Fiscal Books) (F76101B).
- Nota Fiscal - Detail (Fiscal Books) (F76111B).

The Fltr-3rd Party Srvs-Inbound NF program populates these work and complementary tables:

| Work Table | Complementary Tables |
|---|---|
| INSS-Work Table for Services Third Party Inbound NF Header (F76B410H) | IN86-Work Table for Item Number and Service Code (F76B400G) |
| Not applicable | IN86-Work Table for Account Master (F76B901) |
| Not applicable | IN86-Work Table for Individuals and Legal Entities (F76B8601) |

The Fltr-3rd Party Srvs-Inbound NF program retrieves INSS values only if these conditions are met:

- A purchase order was entered, the service was received, and an inbound *nota fiscal* was generated from the receipt.
- A 3-way voucher match was performed for the service.
- The Nota Fiscal Conversion program (R76B200A) was run.
- The Calculate A/P Tax Withholding program (R76B0411A) was run for INSS taxes.

The Fltr-3rd Party Srvs-Inbound NF program does not populate the INSS values in table F76B410H for transactions for which you perform these actions:

- You enter a stand-alone *nota fiscal* using the Stand Alone Nota Fiscal program (P7611B).
- You use a 2-way voucher match instead of a 3-way voucher match.
- You enter a fiscal books record by using the Maintenance of Fiscal Books program (P76B1001).

The Fltr-3rd Party Srvs-Inbound NF program processes *nota fiscal* records and applies these rules as it writes records to table F76B410H:

- Populates the Document Type INSS - Brazil field (BSFH) with the second, third, and fourth characters of the special handling code that is associated with the Document Type code (data item DCT) that exists in table F76101B.

The Document Type codes exist in the Document Type - All Documents UDC table (00/DT). If the Special Handling Code field in the UDC table is blank, the system writes the *nota fiscal* document type to the Document Type INSS - Brazil field in table F76B410H.

- If the Item Number field (data item LITM) in table F76111B is blank, populates the Complementary Description - Brazil field in table F76B410H (data item BRD60) with a concatenation of the values from the Description field (data item DSC1) and the Description -2 field (data item DSC2) from table F76111B.

If the Item Number field in table F76111B is populated, the system does not populate the Complementary Description - Brazil field.

- Populates the INSS Basis field (BRBINSS) with a 3 if the value in the Total Taxable Base field (BRTXTT) in the Voucher Additional Information Brazil table (F76B0411) is a 3, and populates the INSS Basis field with zeros (0) if the value in the Total Taxable Base field is other than a 3.

If the system cannot find an INSS record in table F76B0411, the system populates the INSS Basis field (BRBINSS) with blanks.

- Populates the INSS Tax field (BRAINSS) with the value in the Amount field (AA) in table F76B0411 if the value in the Total Taxable Base field (BRTXTT) in table F76B0411 is 3, and populates the INSS Tax field with zeros (0) if the value in the Total Taxable Base field is other than a 3.

If the system cannot find an INSS record in table F76B0411, the system populates the INSS Basis field (BRBINSS) with blanks.

- Leaves these fields blank when the program does not return values for the INSS Basis and INSS Tax Amount:
- Document Company (KCO)
- Document (DOC)
- Pay Item (SFX)
- Pay Item Extension Number (SFEXE)
- Document Type - Voucher Only (DCTV)

Running the INSS/IN89-Fltr-3rd Party Srvs-Inbound NF (R76B100H) Program

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Fltr-3rd Party Srvs-Inbound NF.

Setting Processing Options for the INSS/IN89-Fltr-3rd Party Srvs-Inbound NF Program (R76B100H)

Processing options enable you to specify the default processing for programs and reports.

Default

Date From and Date Thru Specify the beginning or the end of the reporting date range.
Blank is an not a value.

Populating the Work and Complementary Tables for Bills of Material for IN86 and IN89

This section provides an overview of the work and complementary tables for bills of material and discusses how to:

- Run the IN86-Filter for Bill of Material (R76B3000) and INSS/IN89-Filter for Bill of Material (R76B3000) programs.
- Set processing options for the IN86-Filter for Bill of Material (R76B3000) and the INSS/IN89-Filter for Bill of Material (R76B3000) programs.

Understanding the Work and Complementary Tables for Bills of Material

To generate item and parts records for IN86 or IN89, you run the IN86-Filter for Bill of Material program (R76B3000) or the INSS/IN89-Filter for Bill of Material program (R76B3000). This program reads the Bill of Material Master File (F3002) table.

The system populates these work and complementary tables when you run program R76B3000:

| Work Table | Complementary Table |
|--|---|
| Work Table for Item/Part List (F76B3010) | IN86-Work Table for Item Number and Service Code (F76B400G) |

Program R76B3000 processes end item and component item records to populate table F76B3010 with the bill of material structure for each finished product and all of the components that are required to build a unit of the finished product. The system applies these rules as it writes records to table F76B3010:

- When you set the Reporting Period Flag processing option to 1, includes in the report all of the components that have an Effective Thru Date (data item EFFT) which is greater than or equal to the date in the From Date processing option.
- When you set the Reporting Period Flag processing option to 2, includes in the report all of the components that have an Effective From Date (data item EFFF) which is less than or equal to the date in the Thru Date processing option.
- When you set the Reporting Period Flag processing option to 3, includes in the report all of the components that meet these criteria:
 - The Effective From Date (data item EFFF) is less than or equal to the date that you specify in the Thru Date processing option.
 - The Effective Thru Date (data item EFFT) is greater than or equal to the date that you specify in the From Date processing option.
- Processes records that have the bill type that you specify in the processing options.
- Does not include components with these properties:
 - LNTY = T
 - COBY = I
 - SBNT = 0 and COBY = Blank
 - STKT = 0
- For components of phantom items, if the component's stocking type equals zero, writes the records as-if the phantom item's component is a component of the phantom item's parent item.

The system also changes the component line number to a unique number.

- Includes all of the ingredients consumed during process manufacturing for each co-product/by-product.

Data Selection

JD Edwards EnterpriseOne software sets the Data Selection as indicated in this table:

| Operator | Left Operand | Comparison | Right Operand |
|----------|--|-----------------|---------------|
| Where | BC Units - Batch Quantity (F3002) | Is equal to | <Zero) |
| Or | BC Co-Products/By-Products/Intermediate (F3002) | Is not equal to | <Blank) |
| And | BC Units- Batch Quantity (F3002) | Is not equal to | (Zero) |
| And | BC Quantity - Standard Required Quantity (F3002) | Is equal to | (Zero) |

If you modify the data selection from the settings that are provided, these results might occur:

- If you do not set the Batch Quantity to equal zero, the system stores multiple batch-bills-of-material for each component; and the final report might contain multiple bills of material that point to the same component.
- If you do not set the Co-Products/By-Products/Intermediate to equal zero, as well as setting the Batch Quantity to equal zero, the system filters out the co-products/by-products because of the method in which table F3002 stores co-product/by-product items.

What You Should Know About Processing Options for Program R76B3000

The values that you specify in some of the processing options for the IN86-Filter for Bill of Material program (R76B3000) or the INSS/IN89-Filter for Bill of Material program (R76B3000) affect the way that the other processing options work. The system applies these rules for the processing options:

- If you set the Reporting Period Flag processing option to 1, you must enter a valid value in the From Date processing option. If you do not enter a valid value, the system does not process any records and displays an error message.
- If you set the Reporting Period Flag processing option to 2, you must enter a valid value in the Thru Date processing option. If you do not enter a valid value, the system does not process any records and displays an error message.
- If you set the Reporting Period Flag processing option to 3, you must enter valid values in the From Date and Thru Date processing options.

If you do not enter valid values, the system does not process any records and displays an error message.

- When you set the Reporting Period Flag processing option to 1, the system includes in the report all of the components that have an Effective Thru Date (data item EFFT) which is greater than or equal to the date in the From Date processing option.
- When you set the Reporting Period Flag processing option to 2, the system includes in the report all of the components that have an Effective From Date (data item EFFF) which is less than or equal to the date in the Thru Date processing option.
- When you set the Reporting Period Flag processing option to 3, the system includes in the report all of the components that meet these criteria:
 - The Effective From Date (data item EFFF) is less than or equal to the date that you specify in the Thru Date processing option.
 - The Effective Thru Date (data item EFFT) is greater than or equal to the date that you specify in the From Date processing option.

Prerequisite

Create a zero-batch bill of material.

See *JD Edwards EnterpriseOne Requirements Planning 8.12 Implementation Guide*, “Planning for Process and Repetitive Manufacturing,” Generating MPS for Batch Bills.

Running the IN86-Filter for Bill of Material (R76B3000) and INSS/IN89-Filter for Bill of Material (R76B3000) Programs

Select IN86 Data Filters (G76BIN8601), IN86-Filter for Bill of Material.

Select INSS/IN89 Data Filters (G76BINSS01), INSS/IN89-Filter for Bill of Material.

Setting Processing Options for the IN86-Filter for Bill of Material (R76B3000) and the INSS/IN89-Filter for Bill of Material (R76B3000) Programs

Processing options enable you to specify the default processing for programs and reports.

Defaults

Type Bill of Material

Specify the type of bill of material for which the system produces the report. The type of bill of material that you specify must exist in the Bill Type UDC table (40/TB). The report includes all components that are assigned the bill type that you specify. If you leave this processing option blank, the system uses M for manufacturing bill of material.

Select

Reporting Period Flag

Specify the reporting period. If you do not complete this option, the system does not produce the report. Values are:

1: The system includes in the report all of the components that have an Effective Thru Date (data item EFFT) which is greater than or equal to the date in the From Date processing option. If you set the Reporting Period Flag processing option to 1, you must enter a value in the From Date processing option. If you do not enter a value, the system does not process any records and displays an error message.

2: The system includes in the report all of the components that have an Effective From Date (data item EFFF) which is less than or equal to the date in the Thru Date processing option. If you set the Reporting Period Flag processing option to 2, you must enter a value in the Thru Date processing option. If you do not enter a value, the system does not process any records and displays an error message.

3: The system includes in the report all of the components that have an Effective From Date (data item EFFF) that is less than or equal to the date that you specify in the Thru Date processing option and that have an Effective Thru Date (data item EFFT) that is greater than or equal to the date that you specify in the From Date processing option. If you set the Reporting Period Flag processing option to 3, you must enter values in the From Date and Thru

Date processing options. If you do not enter values, the system does not process any records and displays an error message.

From Date and Thru Date

Specify the date or dates that the system uses to determine the components to include in the report.

When you enter a valid date in the From Date processing option and set the Reporting Period Flag processing option to 1, the system includes in the report all of the components that have an Effective Thru Date (data item EFFT) which is greater than or equal to the date in the From Date processing option. If you do not enter a valid date in the From Date processing option when you set the Reporting Period processing option to 1, the system does not process any records.

When you enter a valid date in the Thru Date processing option and set the Reporting Period Flag processing option to 2, the system includes in the report all of the components that have an Effective From Date (data item EFFF) which is less than or equal to the date in the Thru Date processing option. If you do not enter a valid date in the Thru Date processing option when you set the Reporting Period processing option to 2, the system does not process any records.

When you enter valid dates in both the From Date and Thru Date processing options and set the Reporting Period Flag processing option to 3, the system includes in the report all of the components that have an Effective From Date (data item EFFF) that is less than or equal to the date that you specify in the Thru Date processing option and all of the components that have an Effective Thru Date (data item EFFT) that is greater than or equal to the date that you specify in the From Date processing option. If you do not enter valid dates in both the From Date and Thru Date processing options when you set the Reporting Period Flag processing option to 3, the system does not process any records.

CHAPTER 34

(BRA) Maintaining Records for IN86 and IN89 Tax Reporting

This chapter provides an overview of maintaining records and discusses how to:

- Maintain IN86 and IN89 records for journal entries.
- Maintain IN86 and IN89 records for account balances.
- Maintain IN86 and IN89 records for suppliers and customers.
- Maintain IN86 and IN89 records for fixed assets.
- Maintain IN86 and IN89 records for storage control.
- Maintain IN86 and IN89 records for inventory control.
- Maintain IN86 and IN89 records for *notas fiscais* for services.
- Maintain IN86 and IN89 records for merchandise *notas fiscais* issued by the company.
- Maintain IN86 and IN89 records for merchandise *notas fiscais* issued by suppliers.
- Maintain IN89 records for third-party services for inbound *nota fiscais*.
- Maintain IN86 or IN89 records for bills of material.
- Maintain IN86 and IN89 records for business units.
- Maintain IN86 and IN89 records for account master information.
- Maintain IN86 and IN89 records for individuals and legal entities.
- Maintain IN86 and IN89 transaction nature records.
- Maintain IN86 and IN89 records for item numbers and service codes.

Understanding Maintaining IN86 and IN89 Records

Maintaining records is the second step in producing data for IN86 or IN89 tax reporting. After you populate the work and complementary tables, you can use the appropriate maintenance programs to view the data in the tables. You can also make limited changes to the data in the work and complementary tables, such as adding data that is not stored in the JD Edwards EnterpriseOne source tables.

Generally, for records that you generated by using a filter program and for records that you manually entered, you can change only the data that you entered. You can change the Update Date field in some records so that you can maintain the integrity between system-generated and user-generated records. Additionally, some work and complementary tables require data that JD Edwards EnterpriseOne software does not store in source tables; the fields for these data are enabled so that you can enter the required data. You can determine which records are system-generated by viewing the date in the Record Origin field (data item RDOR). The Record Origin field contains a 1 if the record is system-generated and contains a 2 if the record is user-generated.

When you use the IN86 and IN89 maintenance programs, you can add, change, and delete data only from the work or complementary table; you cannot change the data in the source tables from these programs. If you need to change the source data, you must use the application that is designed to modify the source table.

If you must correct data in IN86 or IN89 records for data that originated in a source table, you can maintain data integrity between the IN86 or IN89 records and the source table by using one of these methods to correct the data.

Repopulate IN86 or IN89 Tables Method

When you use this method, you change the data in the source table, and then repopulate the IN86 or IN89 tables. To maintain data integrity using this method, perform these steps:

1. Modify the data in the appropriate source tables.
2. Run the IN86-Purge Work Tables program (R76B8610) or INSS/IN89-Purge Work Tables program (R76B8610), and specify the tables that you want to purge in the processing options.
3. Repopulate the work table or complementary table by running one of the filter programs that populate the table.

Note. Several filter programs might populate the same work or complementary table. To ensure that you create records with all of the relevant data, you must rerun all of the filter programs that you ran before you purged the work or complementary table.

Delete and Add IN86 or IN89 Records Method

When you use this method, you delete and add records in the IN86 or IN89 tables, and correct the data in the source tables. To maintain data integrity using this method, perform these steps in this order:

1. Use the appropriate IN86 or IN89 maintenance application to delete the record that contains the incorrect data.
2. Use the appropriate IN86 or IN89 maintenance application to add a record with the correct data.
3. Correct the data in the source tables by using the application or process that is designed to modify records in the source table.

This table lists the maintenance programs that you use to modify each table:

| Table | Maintenance Program |
|---|---|
| IN86-Work Table for Journal Entries (F76B911) | IN86-Maintain Journal Entries (P76B911) and INSS/IN89-Maintain Journal Entries (P76B911) |
| IN86-Work Table for Account Master (F76B901) | IN86-Maintain Account Master (P76B901) and INSS/IN89-Maintain Account Master (P76B901) |
| IN86-Work Table for Business Unit (F76B006) | IN86-Maintain Business Unit (P76B006) and INSS/IN89-Maintain Business Unit (P76B006) |

| Table | Maintenance Program |
|---|--|
| IN86-Work Table for Account Balance (F76B902) | IN86-Maintain Account Balances (P76B902) and INSS/IN89-Maintain Account Balances (P76B902) |
| IN86-Work Table for Suppliers and Customers (F76B8602) | IN86-Maintain Suppliers and Customers (P76B8602) and INSS/IN89-Maintain Suppliers & Customers (P76B8602) |
| IN86-Work Table for Individuals and Legal Entities (F76B8601) | IN86-Maintain Individuals/ Legal Entities (P76B8601) and INSS/IN89-Maintain Indivl and Lgl Entity (P76B8601) |
| IN86-Work Table for Fixed Assets (F76B8200) | IN86-Maintain Fixed Assets (P76B6200) and INSS/IN89-Maintain Fixed Assets (P76B6200) |
| IN86-Work Table for Storage Control (F76B400A) | IN86-Maintain Storage Control (P76B200A) and INSS/IN89-Maintain Storage Control (P76B200A) |
| IN86-Work Table for Item Number and Service Code (F76B400G) | IN86-Maintain Item Number / Service Code (P76B200G) and INSS/IN89- Maintain Item Num and Srv Code (P76B200G) |
| IN86-Work Table for Inventory Records (F76B400B) | IN86-Maintain Inventory Control (P76B200B) and INSS/IN89- Maintain Inventory Records (P76B200B) |
| IN86-Work Table for Services Outbound Nota Fiscal Header (F76B410C) | IN86-Maintain Services Outbound NF (P76B200C) and INSS/IN89-Maintain Services Outbound NF (P76B200C) |
| IN86-Work Table for Services Outbound Nota Fiscal Detail (F76B411C) | IN86-Maintain Services Outbound NF (P76B200C) and INSS/IN89-Maintain Services Outbound NF (P76B200C) |
| IN86-Work Table for Transaction Nature (F76B400F) | IN86-Maintain Transaction Nature (P76B200F) and INSS/IN89-Maintain Transaction Nature (P76B200F) |
| IN86-Work Table for Merchandise Nota Fiscal Issued by CO Hdr (F76B410D) | IN86-Maintain Mdse NF by CO (P76B200D) and INSS/IN89-Maintain Mdse NF issued by CO (P76B200D) |
| IN86-Work Table for Merchandise Nota Fiscal Issued by CO Dtl (F76B411D) | IN86-Maintain Mdse NF by CO (P76B200D) and INSS/IN89-Maintain Mdse NF issued by CO (P76B200D) |
| IN86-Work Table for Merchandise NF Issued by Supplier Header (F76B410E) | IN86-Maintain Mdse NF by Supplier (P76B200E) and INSS/IN89-Maintain Mdse NF by Supplier (P76B200E) |
| IN86-Work Table for Merchandise NF Issued by Supplier Detail (F76B411E) | IN86-Maintain Mdse NF by Supplier (P76B200E) and INSS/IN89- IN86-Maintain Mdse NF by Supplier (P76B200E) |
| IN86-Work Table for Item/Part List (F76B3010) | IN86-Maintain Item/Part List (P76B3010) and INSS/IN89-Maintain Item/Part List (P76B3010) |

Maintaining IN86 and IN89 Records for Journal Entries

This section provides an overview of maintaining IN86 and IN89 records for journal entries and discusses how to maintain records for journal entries.

Understanding How to Maintain IN86 and IN89 Records for Journal Entries

You use the IN86-Maintain Journal Entries program (P76B911) or the INSS/IN89-Maintain Journal Entries program (P76B911) to review, add, and delete records in the IN86-Work Table for Journal Entries table (F76B911).

You can modify any field in any record that you add to table F76B911. However, the only field that you can modify for system-generated records is the Balancing Account (data item OFAC). When the system creates table F76B911, it populates it with data from the Account Ledger table (F0911). Because table F0911 does not store the Balancing Account, you must manually enter the data for this field for every record in table F76B911.

When you add a record to table F76B911, you must ensure that the data is valid; the system does not use next-numbering or provide any validation for user-entered data.

If you add or delete records from table F76B911, you must make the corresponding adjustment to the records in the IN86-Work Table for Account Master (F76B901) and the IN86-Work Table for Business Unit (F76B006). The system does not maintain the integrity between tables F76B911, F76B901, and F76B006 when you add or delete records.

Except as noted above, fields for system-generated records cannot be changed in program R76B911. If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Make the change in table F0911 and then repopulate table F76B911 by running the IN86-Filter for Journal Entries program (R76B911) or the INSS/IN89-Filter for Journal Entries program (R76B911).
- Delete the record with the incorrect data from table F76B911, add a new record with the correct data, and make the appropriate changes in table F0911.

Note. You can modify all of the fields for user-generated records. For system-generated records, you can modify only the Balancing Account field. To locate records that are user-generated enter 2 in the Origin Code field in the QBE line and then click Find.

Forms Used to Maintain Journal Entry Records

| Form Name | FormID | Navigation | Usage |
|---------------------------|----------|--|---|
| Work with Journal Entries | W76B911A | <ul style="list-style-type: none"> IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Journal Entries INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Journal Entries | Locate records. |
| Journal Entry Revisions | W76B911B | On the Work with Journal Entries form, select a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for journal entries. |

Adding or Revising Records for Journal Entries

Access the Journal Entry Revisions form.

| | |
|-------------------------------------|---|
| Document Type | Enter a user-defined code (00/DT) that identifies the origin and purpose of the transaction. The system reserves several prefixes for document types, such as vouchers, invoices, receipts, and timesheets. |
| Document Number | Enter a number that identifies the original document, such as a voucher, invoice, or journal entry. On entry forms, you can assign the document number or let the system assign it using the Next Numbers program (P0002). Matching document numbers (DOCM) identify related documents in the JD Edwards EnterpriseOne Accounts Receivable system and the JD Edwards EnterpriseOne Accounts Payable system. |
| Document Company | <p>Enter a number that, with the document number, document type and general ledger date, uniquely identifies an original document, such as invoice, voucher, or journal entry.</p> <p>If you use the Next Numbers by Company/Fiscal Year feature, the Automatic Next Numbers program (X0010) uses the document company to retrieve the correct next number for that company.</p> <p>If two or more original documents have the same document number and document type, you can use the document company to locate the desired document.</p> |
| JE Date (journal entry date) | Enter a date that identifies the financial period to which the transaction will be posted. You define financial periods for a date pattern code that you assign to the company record. The system compares the date that you enter on the transaction to the fiscal date pattern assigned to the company to retrieve the appropriate fiscal period number, as well as to perform date validations. |
| Journal Entry Line Number | Enter a number that designates a line within a journal entry. The system uses this field to sequence the journal entry lines for inquiry purposes. |

| | |
|--------------------------------|---|
| Filing Number | Enter a number that identifies a group of transactions that the system processes and balances as a unit. When you enter a batch, you can either assign a batch number or let the system assign it using the Next Numbers program. |
| Balancing Account | Enter the account number for the offset side of the journal entry. This account is also known as Automatic Entry Account. |
| Amount | Enter a number that identifies the amount that the system will add to the account balance of the associated account number. Enter credits with a minus sign (-) either before or after the amount. |
| Debit /Credit Indicator | Enter a code that indicates whether an amount is less than zero (Credit) or greater than zero (Debit). Values are: <i>C</i> : Credit <i>D</i> : Debit |
| Remarks/History1 | Enter a description, remark, explanation, name, or address. |
| Remarks/History2 | Enter a name or remark that describes the purpose for using an account or conveys any other information that the user wants about the transaction. |

Maintaining IN86 and IN89 Records for Account Balances

This section provides an overview of maintaining IN86 and IN89 records for account balances and discusses how to maintain records.

Understanding Maintaining IN86 and IN89 Records for Account Balances

You use the IN86-Maintain Account Balances program (P76B902) or the INSS/IN89-Maintain Account Balances program (P76B902) to review, add, and delete records in the IN86-Work Table for Account Balance (F76B902).

You can modify any field in any record that you add to table F76B902. When you add a record to table F76B902, you must ensure that the data is valid; the system does not use next-numbering or provide any validation for user-entered data.

If you add or delete records from table F76B902, you must make the corresponding adjustment to the records in the IN86-Work Table for Account Master (F76B901) and the IN86-Work Table for Business Unit (F76B006). The system does not maintain the integrity between tables F76B902, F76B901, and F76B006 when you add or delete records.

Fields for system-generated records cannot be changed in program P76B902. If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Make the change in the source table and then repopulate table F76B902 by running the IN86-Filter for Account Balance program (R76B902) or the INSS/IN89-Filter for Account Balance program (R76B902).
- Delete the record with the incorrect data from table F76B902, add a new record with the correct data, and make the appropriate changes in the source table.

What You Should Know About the IN86-Work Table for Account Balance

These rules apply to IN86-Work Table for Account Balance (F76B902):

- The system populates the amount fields with absolute values.
- If you add a record to table F76B902, you must do these tasks:
 - Enter an amount in the Beg Month Balance Amount field.
 - Complete the Debit/Credit Indicator field.
- Enter an amount in either the Total Debit Amount or Total Credit Amount field.

Alternatively, you can enter amounts in both the Total Debit Amount and Total Credit Amount fields.

- The system calculates the value for the End Month Bal Amount field by determining whether the amount in the Beg Month Balance Amount is a debit or credit, subtracting the amount in the Total Debit Amount field, and then adding the amount in the Total Credit Amount field to the value in the Beg Month Balance Amount field.
- You can populate table F76B902 only on a periodic basis because the source table - Account Balances (F0902) - stores data only on a periodic basis.

The data that the system uses to populate table F76B902 always encompasses an entire accounting period or periods, even when you set the From Date and Thru Date processing options to encompass a date range that does not equal an entire accounting period or periods.

Note. If you add a record to IN86-Work Table for Account Balance (F76B902), you must do these tasks:

Enter an amount in the Beg Month Balance Amount field.

Complete the Debit/Credit Indicator field.

Enter an amount in either the Total Debit Amount or Total Credit Amount field. Alternatively, you can enter amounts in both the Total Debit Amount and Total Credit Amount fields.

The system calculates the value for the End Month Bal Amount field by determining whether the amount in the Beg Month Balance Amount is a debit or credit, subtracting the amount in the Total Debit Amount field, and then adding the amount in the Total Credit Amount field to the value in the Beg Month Balance Amount field.

Forms Used to Maintain Account Balances Records

| Form Name | FormID | Navigation | Usage |
|----------------------------|----------|--|--|
| Work with Account Balances | W76B902A | <ul style="list-style-type: none"> IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Account Balances INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Account Balances | Locate records. |
| Account Balances Revisions | W76B902B | On the Work with Account Balances form, choose a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for account balances. |

Adding or Revising Records for Account Balances

Access the Account Balances Revisions form.

Beg Balance Date
(beginning balance date)

Enter a date that identifies the financial period to which the transaction will be posted. You define financial periods for a date pattern code that you assign to the company record. The system compares the date that you enter on the transaction to the fiscal date pattern assigned to the company to retrieve the appropriate fiscal period number, as well as to perform date validations.

Beg Month Bal Amount
(beginning month balance amount)

Enter the balance amount at the beginning of the month.

Debit/Credit Indicator

Enter a code that indicates whether an amount is less than zero (Credit) or greater than zero (Debit). Values are:

C: Credit

D: Debit

Total Debit Amount and Total Credit Amount

Enter the total of the debits or the credits for the records.

Maintaining IN86 and IN89 Records for Suppliers and Customers

This section provides an overview of maintaining IN86 and IN89 records for suppliers and customers and discusses how to maintain records.

Understanding IN86 and IN89 Records for Suppliers and Customers

You use the IN86-Maintain Suppliers and Customers program (P76B8602) or the INSS/IN89-Maintain Suppliers & Customers program (P76B8602) to review, add, and delete records in the IN86-Work Table for Suppliers and Customers (F76B8602).

You can modify any field in any record that you add to table F76B8602. When you add a record to table F76B8602, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

If you add or delete records from table F76B8602, you must make the corresponding adjustment to the records in the IN86-Work Table for Account Master (F76B901) and the IN86-Work Table for Individuals and Legal Entities (F76B8601). The system does not maintain the integrity between tables F76B8602, F76B901, and F76B8601 when you add or delete records.

Fields for system-generated records cannot be changed in program P76B8602. If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Make the change in the source table and then repopulate table F76B8602 by running the IN86-Filter Supplier Vouchers/Payments program (R76B8601) or the INSS/IN89-Filter Supplier Vouchers/Payments program (R76B8601).
- Delete the record with the incorrect data from table F76B8602, add a new record with the correct data, and make the appropriate changes in the source table.

Note. To locate records that are user-generated enter 2 in the RO field in the QBE line and then click Find. You can modify all of the fields for user-generated records. Additionally, you can enter 1 in the Sup/Cust Flag field in the QBE line to locate supplier records, or enter 2 in the Sup/Cust Flag field to locate customer records.

Forms Used to Maintain Supplier and Customer Records

| Form Name | FormID | Navigation | Usage |
|-----------------------------------|-----------|--|---|
| Work with Suppliers and Customers | W76B8602A | INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Suppliers & Customers | Locate records. |
| Supplier and Customer Revision | W76B8602B | On the Work with Suppliers and Customers form, select a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for suppliers and customers. |

Adding or Revising Records for Supplier and Customer Records

Access the Supplier and Customer Revisions form.

Supplier

Enter an option that indicates whether a record originated within the JD Edwards EnterpriseOne Accounts Payable or JD Edwards EnterpriseOne Accounts Receivable systems. Records from the JD Edwards EnterpriseOne Accounts Payable system are supplier records. Records from the JD Edwards EnterpriseOne Accounts Receivable system are customer records. Values are:

| | |
|-------------------------|---|
| | <p>1: Accounts Payable (F0411 and F0414)</p> <p>2: Accounts Receivable (F03B11 and F03B14)</p> |
| Customer | <p>Enter an option that indicates whether a record originated within the JD Edwards EnterpriseOne Accounts Payable or the JD Edwards EnterpriseOne Accounts Receivable system. Records from the JD Edwards EnterpriseOne Accounts Payable system are supplier records. Records from the JD Edwards EnterpriseOne Accounts Receivable system are customer records. Values are:</p> <p>1: Accounts Payable (F0411 and F0414)</p> <p>2: Accounts Receivable (F03B11 and F03B14)</p> |
| Document Number | <p>Enter a number that identifies the original document, such as a voucher, invoice, or journal entry. On entry forms, you can assign the document number or let the system assign it using the Next Numbers program (P0002). Matching document numbers (DOCM) identify related documents in the JD Edwards EnterpriseOne Accounts Receivable and JD Edwards EnterpriseOne Accounts Payable systems. Examples of original and matching documents are:</p> <p>Accounts Payable</p> <p>Original document - voucher</p> <p>Matching document - payment</p> <p>Accounts Receivable</p> <p>Original document - invoice</p> <p>Matching document - receipt</p> <hr/> <p>Note. In the JD Edwards EnterpriseOne Accounts Receivable system, these transactions simultaneously generate original and matching documents: deductions, unapplied receipts, chargebacks, and drafts.</p> <hr/> |
| Batch Number | <p>Enter a number that identifies a group of transactions that the system processes and balances as a unit. When you enter a batch, you can either assign a batch number or let the system assign it using the Next Numbers program.</p> |
| Document Company | <p>Enter a number that, with the document number, document type and general ledger date, uniquely identifies an original document, such as invoice, voucher, or journal entry.</p> <p>If you use the Next Numbers by Company/Fiscal Year feature, the Automatic Next Numbers program (X0010) uses the document company to retrieve the correct next number for that company.</p> <p>If two or more original documents have the same document number and document type, you can use the document company to locate the desired document.</p> |
| Payment ID | <p>Enter a number that the system assigns from Next Numbers to identify and track payment records.</p> |
| Operation Type | <p>Enter the operation type that you report for supplier and customer transactions for IN86 tax reporting for Brazil. The system completes this field with the first character of the Special Handling Code (SPHD) assigned to the transaction's document type in the Document Type UDC table (00/DT). If a special handling</p> |

| | |
|-----------------------------|--|
| | code is not assigned to the document type, the system writes C as the value for Accounts Payable vouchers and Accounts Receivable invoices, and it writes P for Accounts Payable payments and Accounts Receivable receipts. |
| Document Type | <p>Enter a user-defined code (00/DT) that identifies the origin and purpose of the transaction. The system reserves several prefixes for document types, such as vouchers, invoices, receipts, and timesheets. The reserved document type prefixes for codes are:</p> <p>P: Accounts payable</p> <p>R: Accounts receivable</p> <p>T: Time and Pay</p> <p>I: Inventory</p> <p>O: Purchase order</p> <p>S: Sales order</p> |
| File Line Identifier | Creates a unique key within a file with a next number approach. |
| Pay Item | Enter a number that identifies the pay item for a voucher or an invoice. The system assigns the pay item number. If the voucher or invoice has multiple pay items, the numbers are sequential. |
| Invoice Number | <p>Enter the supplier's invoice number that is used for voucher entry. Voucher entry allows only one invoice per voucher number. If multiple invoice numbers exist on a voucher, you must set them up as multiple vouchers or combine the invoices and enter them as one voucher.</p> <p>Depending on how you have the accounts payable constants set, the system can do one of these processes:</p> <p>Accept a duplicate invoice number without warning or error</p> <p>Generate a warning message in which the duplicate invoice number can still be accepted</p> <p>Generate an error message</p> <p>Blank values are treated in the same manner as any other invoice number. Two blank invoice numbers are treated as duplicates.</p> <p>To test for duplicate invoice numbers that might have been entered in error, run the Suspected Duplicate Payments report (R04601).</p> <hr/> <p>Note. The duplicate invoice number validation is not run for vouchers with document type NO. These vouchers are created by the Generate Reimbursements program (R03B610).</p> <hr/> |
| DocType - Brazil | Enter the document type that you report for supplier and customer transactions for IN86 tax reporting for Brazil. The system completes this field with the 2nd, 3rd, and 4th characters of the Special Handling Code (SPHD) assigned to the transaction's document type in the Document Type UDC table (00/DT). If a special handling code is not assigned to the document type, the system writes DUP as the value for Accounts Payable and Accounts Receivable transactions. |
| Remark | Enter a generic field that you use for a remark, description, name, or address. |

| | |
|----------------------------|--|
| Operation Date | Enter a date that identifies the financial period to which the transaction will be posted. You define financial periods for a date pattern code that you assign to the company record. The system compares the date that you enter on the transaction to the fiscal date pattern assigned to the company to retrieve the appropriate fiscal period number, as well as to perform date validations. |
| Operation Amount | <p>Enter the amount of the payment in the JD Edwards EnterpriseOne Accounts Payable system .</p> <p>Enter the amount of the receipt in the JD Edwards EnterpriseOne Account Receivable system. This amount must balance to the total amount applied to the invoice pay items.</p> |
| Document Date Issue | Enter the date that either you or the system assigns to an invoice or voucher. This can be either the date of the supplier's invoice to you or the date of the invoice to the customer. |
| Amount Receivable | Enter a value that specifies the total amount of the invoice or voucher pay item. The gross amount might include the tax amount, depending on the tax explanation code. The system does not decrease the gross amount when payments are applied. When you void a transaction, the system clears the gross amount field. |
| Expiration Date | <p>Enter the date that the net payment is due in the JD Edwards EnterpriseOne Accounts Receivable system.</p> <p>Enter the date that the payment is due to receive a discount in the JD Edwards EnterpriseOne Accounts Payable system; or, if no discount is offered, the net due date.</p> <p>The system calculates the due date based on the payment term entered, or you can enter it manually. If you enter a negative voucher or invoice (debit or credit memo), the system might use the general ledger date as the due date regardless of the payment term entered. A processing option in the master business function (P0400047 for vouchers and P03B0011 for invoices) controls how the system calculates the due date for debit and credit memos.</p> |

Maintaining IN86 and IN89 Records for Fixed Assets

This section provides an overview of maintaining IN86 and IN89 records for fixed assets and discusses how to maintain records.

Understanding IN86 and IN89 Records for Fixed Assets

You use the IN86-Maintain Fixed Assets program (P76B6200) or the INSS/IN89-Maintain Fixed Assets program (P76B6200) to review, add, and delete records in the IN86-Work Table for Fixed Assets (F76B8200).

You can modify any field in any record that you add to table F76B8200. However, the only fields that you can modify for system-generated records are the Acquisition Document Type, Document Series, and Acquisition Document Number fields. If a supplemental data table that associates fixed asset numbers to purchase order numbers exists when you run the filter program for fixed assets, the system populates these fields with data from the supplemental data tables. If no supplemental data table exists, you must manually complete these fields.

When you add a record to table F76B8200, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

If you add or delete records from table F76B8200, you must make the corresponding adjustment to the records in the IN86-Work Table for Account Master (F76B901). The system does not maintain the integrity between tables F76B8200 and F76B901 when you add or delete records.

Except as noted above, fields for system-generated records cannot be changed in the IN86-Maintain Fixed Assets program. If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Make the change in the Asset Master File table (F1201) or in the Asset Account Balances File table (F1202), and then repopulate table F76B8200 by running the IN86-Filter Fixed Assets program (R76B5200) or the INSS/IN89-Filter for Fixed Assets program (R76B5200).
- Delete the record with the incorrect data from table F76B8200, add a new record with the correct data, and make the appropriate changes in tables F1201 and F1202.

What You Should Know About the IN86-Work Table for Fixed Assets

The system populates the IN86-Work Table for Fixed Assets table (F76B8200) with data from the Asset Master File (F1201) and the Asset Account Balances File (F1202) tables. These tables do not store data that associates fixed asset numbers with purchase order numbers. To link fixed asset numbers with purchase order numbers, you must set up and maintain a supplemental data table by using supplemental database code AM (Asset Management). You enter the Data Type for the supplemental data table in the processing options of the IN86-Filter Fixed Assets program (R76B5200) or the INSS/IN89-Filter Fixed Assets program (R76B5200). You determine the Data Type when you set up the supplemental data table.

If you set up a supplemental data table to associate the fixed asset number to a purchase order number, the system populates the Acquisition Document Type, Document Series, and Acquisition Document Number fields when you run program R76B5200. If you do not set up a supplemental data table, you must manually complete the Acquisition Document Type, Document Series, and Acquisition Document Number fields.

The system includes the Company field in table F76B8200 when it filters records. The system does not include data from the Company field in the data and text files that you send to the government.

Forms Used to Maintain Fixed Assets

| Form Name | FormID | Navigation | Usage |
|--------------------------------------|-----------|--|--|
| Work With Fixed Assets Work Files | W76B6200A | <ul style="list-style-type: none"> IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Fixed Assets INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Fixed Assets | Locate records. |
| Revise Fixed Assets Work Files | W76B6200B | On the Work With Fixed Assets Work File form, select a record and click Select to modify a record, or click Add to create a new record | Modify or add IN86 or IN89 records for fixed assets. |

Adding or Revising Records for Fixed Assets

Access the Revise Fixed Assets Work Files form.

Asset Number Enter an 8-digit number that uniquely identifies an asset.

Parent Number Enter a parent number groups related components together. You can associate each item of property and piece of equipment with a parent item. For example, you can associate a mobile telephone with a specific automobile (the parent), a printer with a computer (the parent), or a flat bed with a specific truck chassis (the parent).

Note. If this is a data entry field, the default value is the asset number. For example, if the asset number is 123, the system assigns 123 as the default parent number.

Description 2 Enter additional text that further describes or clarifies a field in the system.

Description 3 Enter additional text that further describes or clarifies an element.

Asset Cost BU (asset cost business unit) Enter the business unit to which the system charges original acquisition cost and any supplemental capital additions. The system uses a default value for this field based on the business unit that you specify on the Asset Master Revisions form when you create a new asset master record. You can change this default value on the Depreciation Information form only if you have not entered any transactions for the account.

Asset Cost Object Enter the object account to which the original acquisition cost and any supplemental capital additions have been charged.

If the asset is a non-capitalized lease, this should be the expense account that lease payments are charged to. This expense account should have default coding instructions set up for method 00 (no depreciation method used).

Asset Cost Subsidiary Enter the subsidiary account to which the original acquisition cost and any supplemental capital additions have been charged.

| | |
|---|--|
| Accum Depr Acct BU | Enter the business unit to which the system charges accumulated depreciation amounts. |
| Accum Depr Acct OBJ | Enter the object account number to which the accumulated depreciation amount is to be charged. |
| Accum Depr Acct SUB | Enter the subsidiary account to which the accumulated depreciation amount is to be charged. |
| Acquisition Document Number/Type | <p>Enter a number that identifies the original document, such as a voucher, invoice, or journal entry. On entry forms, you can assign the document number or let the system assign it using the Next Numbers program (P0002). Matching document numbers (DOCM) identify related documents in the JD Edwards EnterpriseOne Accounts Receivable and JD Edwards EnterpriseOne Accounts Payable systems.</p> <p>Examples of original and matching documents are:</p> <p>Accounts Payable</p> <p>Original document - voucher</p> <p>Matching document - payment</p> <p>Accounts Receivable</p> <p>Original document - invoice</p> <p>Matching document - receipt</p> <hr/> <p>Note. In the JD Edwards EnterpriseOne Accounts Receivable system, these transactions simultaneously generate original and matching documents: deductions, unapplied receipts, chargebacks, and drafts.</p> <hr/> |
| PO Do Ty (purchase order document type) | <p>Enter a value that is hard-coded in the originating programs and passed to the JD Edwards EnterpriseOne Accounts Payable system.</p> <p>In the JD Edwards EnterpriseOne Accounts Receivable system, the document type on the purchase order issued by the customer can be entered directly into the Accounts Receivable Ledger (F03B11)</p> |
| Document Series | Enter the document series and sub-series of a <i>nota fiscal</i> . |
| Tracking Number | Enter a value that represents the Acquisition Type plus the Document Number. You use this field to track purchasing information for fixed assets. |
| Date Acquired | <p>Enter the date the asset was acquired. This date is typically the start depreciation date, but you can specify a different start depreciation date on the Depreciation Information form.</p> <p>If you are using the half-year convention, you must adjust the start depreciation date manually.</p> |
| Depr Start Date (depreciation start date) | Enter the date when the depreciation computations start for an asset. This date can be different from the date the asset was acquired. |
| Date Disposed | Enter the date the asset was disposed. |
| Acquisition Amount | Fixed Asset column for amounts. The editing of this column, for example, including or excluding commas, can be performed through data dictionary edits. |

| | |
|--|--|
| Acquisition Amt in Real | Enter the initial cost of an asset in Brazilian <i>reais</i> . |
| Initial Accum Depr | Enter the cumulative prior year-end balance. The system uses this amount as the beginning balance for balance sheet and job cost accounts. |
| | <hr/> <p>Note. Do not confuse this amount with the prior year-end net posting amount.</p> <p>The prior year-end net posting amount includes only the postings from the prior year. It does not include the ending balance of the previous year. The prior year-end net postings are typically used for profit and loss statement comparisons.</p> <hr/> |
| Depr during period | Enter the net amount from the week-to-date postings for an account. |
| New or Used | Enter a user-defined code (H12/NO) that specifies whether an asset is new or used for tax purposes. Values are: N: New. U: Used. This code is used in computing the ITC limitation on the acquisition of used assets. |
| Annual Depr Rate (annual depreciation rate) | Enter the rate of depreciation for an asset for each life year. |

Maintaining IN86 and IN89 Records for Storage Control

This section provides an overview of maintaining IN86 and IN89 records for storage control and discusses how to maintain records.

Understanding IN86 and IN89 Records for Storage Control

You use the IN86-Maintain Storage Control program (P76B200A) or the INSS/IN89-Maintain Storage Control program (P76B200A) to review, add, and delete records in the IN86-Work Table for Storage Control (F76B400A).

You can modify most of the fields in records that you add to table F76B400A. When you add a record to table F76B400A, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

If you add or delete records from table F76B400A, you must make the corresponding adjustment to the records in the IN86-Work Table for Item Number and Service Code (F76B400G). The system does not maintain the integrity between tables F76B400A and F76B400G when you add or delete records.

Fields for system-generated records cannot be changed in program P76B200A. If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Make the change in the source table and then repopulate table F76B400A by running the IN86-Filter for Storage Control program (R76B100A) or the INSS/IN89-Filter for Storage Control program (R76B100A).
- Delete the record with the incorrect data from table F76B400A, add a new record with the correct data, and make the appropriate changes in the source table.

Forms Used to Maintain Storage Control Records

| Form Name | FormID | Navigation | Usage |
|---------------------------|-----------|---|---|
| Work with Storage Control | W76B200AA | <ul style="list-style-type: none"> IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Storage Control INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89- Maintain Storage Control | Locate records. |
| Storage Control Revisions | W76B200AB | On the Work with Storage Control form, select a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for storage control. |

Adding or Revising Records for Storage Control

Access the Storage Control Revisions form.

Document Company

Enter a number that, with the document number, document type and general ledger date, uniquely identifies an original document, such as invoice, voucher, or journal entry.

If you use the Next Numbers by Company/Fiscal Year feature, the Automatic Next Numbers program (X0010) uses the document company to retrieve the correct next number for that company.

If two or more original documents have the same document number and document type, you can use the document company to locate the desired document.

Fiscal Company

Enter the company whose data you want to work with.

Ship From

Enter the address number of the supplier from which you want to ship this order. The system determines the address of the supplier, including street, city, state, zip code, and country based on the record that you enter for the supplier in the JD Edwards EnterpriseOne Address Book system.

Inventory Document Type

Enter a user-defined code (00/DT) that identifies the origin and purpose of the transaction. The system reserves several prefixes for document types, such as vouchers, invoices, receipts, and timesheets.

Nature of Document Type - Brazil

Enter a code that indicates whether the item is associated with a fiscal document or an internal document. The Brazilian government determines the values. Values must exist in the Nature of Document Type - BR UDC table (76B/ND) and include these values:

I: Internal document

F: Fiscal document

| | |
|--|---|
| <hr/> Note. Blank is not a value. <hr/> | |
| Storage Control Document Type | <p>Enter a code that indicates whether the type of operation is a <i>nota fiscal</i>, service order, or requisition. The value that you enter must exist in the Storage Control Document Type - BR UDC table (76B/SD). Values are:</p> <p><i>NF</i>: <i>Nota fiscal</i></p> <p><i>OS</i>: Service order</p> <p><i>REQ</i>: Requisition</p> |
| <hr/> Note. Blank is not a value. <hr/> | |
| NF Series (<i>nota fiscal</i> series) | Enter a two-character number that along with the <i>nota fiscal</i> number, identifies a <i>nota fiscal</i> . The Nota Fiscal Series field is the second key that the system uses to access a specific <i>nota fiscal</i> . |
| Document Number | Enter a storage control number that identifies an item. This number is either the <i>nota fiscal</i> number or the CARDEX number, depending on the item's source. Blank is not a value. |
| Inventory Transaction Date | <p>Enter a date that identifies the financial period to which the transaction is to be posted.</p> <p>The company constants specify the date range for each financial period. You can have as many as 14 periods. Generally, period 14 is used for audit adjustments. The system validates this field for PBCO (posted before cutoff), PYEB (prior year ending balance), PACO (post after cutoff), and WACO (post way after cutoff) messages.</p> |
| Remarks | Enter text to identify the reason that a transaction occurred. |
| Unit of Measure | Enter the unit of measure you used when you entered this transaction into the system. |
| Quantity | Enter a value that represents the available quantity, which might consist of the on-hand balance minus commitments, reservations, and backorders. You enter this value in the Branch/Plant Constants program (P41001). |
| Transaction Type | <p>Enter a code that indicates whether the item was received on an inbound transaction or was shipped on an outbound transaction. The value that you enter must exist in the Movement Indicator UDC table (76B/MI). Valid values are determined by the Brazilian government and include these values:</p> <p><i>E</i>: Inbound</p> <p><i>S</i>: Outbound</p> |
| <hr/> Note. Blank is not a valid value. <hr/> | |
| Unit Cost | Enter the amount per unit, derived by dividing the total cost by the unit quantity. |
| Total Value | Enter the extended cost or price value of an inventory transaction for an inventory item. |

Branch Plant

Enter an alphanumeric code that identifies a separate entity within a business for which you want to track costs. For example, a business unit might be a warehouse location, job, project, work center, branch, or plant.

You can assign a business unit to a document, entity, or person for purposes of responsibility reporting. For example, the system provides reports of open accounts payable and accounts receivable by business unit to track equipment by responsible department.

Business unit security might prevent you from viewing information about business units for which you have no authority.

Maintaining IN86 and IN89 Records for Inventory Control

This section provides an overview of maintaining IN86 and IN89 records for inventory control and discusses how to maintain records.

Understanding IN86 and IN89 Records for Inventory Control

You use the IN86-Maintain Inventory Control program (P76B200B) or the INSS/IN89-Maintain Inventory Records program (P76B200B) to review, add, and delete records in the IN86-Work Table for Inventory Records (F76B400B).

You can modify most of the fields in records that you add to table F76B400B. When you add a record to table F76B400B, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

If you add or delete records from table F76B400B, you must make the corresponding adjustment to the records in the IN86-Work Table for Item Number and Service Code (F76B400G). The system does not maintain the integrity between tables F76B400B and F76B400G when you add or delete records.

Fields for system-generated records cannot be changed in program P76B200B. If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Make the change in the source table, purge table F76B400B, and then repopulate table F76B400B by running the IN86-Filter for Inventory Records program (R76B100B) or the INSS/IN89-Filter for Inventory Records program (R76B100B).
- Delete the record with the incorrect data from table F76B400B, add a new record with the correct data, and make the appropriate changes in the source table.

Forms Used to Maintain Inventory Control Records

| Form Name | FormID | Navigation | Usage |
|-----------------------------|-----------|--|---|
| Work with Inventory Control | W76B200BA | <ul style="list-style-type: none"> IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Inventory Control INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Inventory Records | Locate records. |
| Inventory Records Revisions | W76B200BB | On the Work with Inventory Control form, choose a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for inventory control. |

Adding or Revising Records for Inventory Control

Access the Inventory Records Revisions form.

| | |
|--------------------------------|---|
| Fiscal Company | Enter the company whose data you want to work with. |
| Inventory Date | Enter a storage control date that is the base date for the inventory balance you report to the government. Specifically, this date is the last day of the month for the year and month of the specified period. Blank is not a value. |
| Inventory Status | <p>Enter a code that specifies the ownership status of items within the branch / plant. The value that you enter must exist in the Inventory Status UDC table (76B/IV). Values, which are determined by the Brazilian government, are:</p> <p>1: Company stock held by company</p> <p>2: Company stock held by others</p> <p>3: Stock owned by others but held by company</p> |
| Primary Unit of Measure | Enter a user-defined code (00/UM) that identifies the unit of measure that the system uses to express the quantity of an item, for example, EA (each) or KG (kilogram). |
| Cumulative Quantity | Enter the cumulative total quantity from all transactions in the Item Ledger for an item. |
| Total Value | Enter the total amount of all transactions in the Item Ledger for an Item. |

Maintaining IN86 and IN89 Records for Notas Fiscais for Services

This section provides an overview of maintaining IN86 and IN89 records for *notas fiscais* for services and discusses how to maintain records.

Understanding IN86 and IN89 Records for Notas Fiscais for Services

You use the IN86-Maintain Services Outbound NF program (P76B200C) or the INSS/IN89-Maintain Services Outbound NF program (P76B200C) to review, add, and delete records in these tables:

- IN86-Work Table for Services Outbound Nota Fiscal Header (F76B410C)
- IN86-Work Table for Services Outbound Nota Fiscal Detail (F76B411C)

Modifying Records

You can modify most of the fields in any record that you add to tables F76B410C or F76B411C. This table shows the only fields that you can modify for system-generated:

| Data Item | Description |
|------------------------------------|---|
| IRRF Tax Rate (data item BRXIR) | The system calculates a value and populates the field in table F76B410C, but you can override the system-generated value. |
| Amount IR Taxable (data item BBCR) | The system does not calculate a value. You must enter a value for every record in table F76B410C. |
| Amount IR Tax (data item BIRT) | The system does not calculate a value. You must enter a value for every record in table F76B410C. |

When you add data to table F76B410C, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

Fields for system-generated records cannot be changed in program P76B200C except as noted in the above table. If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Make the change in the source table, and then repopulate tables F76B410C and F76B411C by running the IN86-Filter for Services Outbound Nota Fiscal program (R76B100C) or the INSS/IN89- Filter for Services Outbound Nota Fiscal program (R76B100C).
- Delete the record with the incorrect data from tables F76B410C and F76B411C, add a new record with the correct data, and make the appropriate changes in the source tables.

Adding and Deleting Records

When you use program P76B200C to add or delete records, the system updates both the header and detail work tables (F76B410C and F76B411C). These rules apply to adding and deleting records using program P76B200C:

- When creating a user-generated record, you must add both a header and a detail record.
- You cannot add a detail record to an existing system-generated header record. You can add detail records to an existing user-generated header record.

- For system-generated records, you can delete detail records only when you delete the header record. When you delete the header record, the system also deletes all of the detail records that are associated with the header record. You cannot delete only a detail record.
- For user-generated records, you can delete one or more detail records without deleting the header record.

When you add records to tables F76B410C and F76B411C, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

Note. You can modify all fields for user-generated records. For system-generated records, you can modify only the IRRF Tax Rate, Amount IR Taxable, and Amount IR Tax fields. To locate records that are user-generated enter 2 in the Record Origin field in the QBE line, and then click Find.

Forms Used to Maintain Notas Fiscais for Services Records

| Form Name | FormID | Navigation | Usage |
|---|-----------|--|---|
| Work With Services Outbound Nota Fiscal | W76B200CA | <ul style="list-style-type: none"> • IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Services Outbound NF • INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Services Outbound NF | Locate records. |
| Services Outbound Nota Fiscal Revisions | W76B200CB | On the Work With Services Outbound Nota Fiscal form, select a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for suppliers and customers. |

Adding or Revising Records for Notas Fiscais for Services

Access the Services Outbound Nota Fiscal Revisions form.

| | |
|---|---|
| NF Number (<i>nota fiscal</i> number) | Enter a six-character number that identifies a <i>nota fiscal</i> . The number consists of the <i>nota fiscal</i> number and the <i>nota fiscal</i> series. |
| NF Series (<i>nota fiscal</i> series) | Enter a two-character number that along with the <i>nota fiscal</i> number, identifies a <i>nota fiscal</i> . The Nota Fiscal Series field is the second key that the system uses to access a specific <i>nota fiscal</i> . |
| Document Type | Enter a user-defined code (00/DT) that identifies the origin and purpose of the transaction. The system reserves several prefixes for document types, such as vouchers, invoices, receipts, and timesheets. |
| NF Issue Date (<i>nota fiscal</i> issue date) | Enter a date that indicates when the <i>nota fiscal</i> was issued. For outbound transactions, the date is usually the <i>nota fiscal</i> print date. For inbound transactions, the date is typically the date that is printed on the supplier's <i>nota fiscal</i> . |

| | |
|--|--|
| Note. Blank is not a value. | |
| IRRF Tax | Enter the IR tax amount that is printed on the <i>nota fiscal</i> . |
| IRRF Basis | Enter the amount on which IR taxes are assessed. |
| N.F Discount | Enter the amount of the discount amount available for the <i>nota fiscal</i> . |
| IRRF Tax Rate | Enter the tax rate for IRRF tax expressed as a percentage. |
| Ship To | Enter a number that identifies an entry in the JD Edwards EnterpriseOne Address Book system, such as employee, applicant, participant, customer, supplier, tenant, or location. |
| Nota Fiscal Item Value | Enter the sum of the item amount on the <i>nota fiscal</i> . |
| Cancel Situation - Brazil | Enter a code that indicates the cancellation status. The value that you enter must exist in the Cancel Situation UDC table (76B/CS). Values are: S: Canceled N: Not canceled |
| <hr/> Note. Blank is not a value. <hr/> | |
| Line Number | Enter a number that identifies multiple occurrences, such as line numbers on a purchase order or other document. Generally, the system assigns this number, but in some cases you can override it. |
| Complementary Description | Enter an additional description of the item. You might use this description to more clearly identify the item that is included in the report to the Brazilian government. |
| Extended Price | Enter the number of units multiplied by the unit price. |
| ISS Rate | Enter the tax rate for ISS tax expressed as a percentage. |
| ISS Basis | Enter the amount on which ISS taxes are assessed. |
| ISS Tax | Enter the ISS tax amount that is printed on the <i>nota fiscal</i> . |
| Transaction Originator | Enter the person who originally entered the transaction. |

Maintaining IN86 and IN89 Records for Merchandise Notas Fiscais Issued by Company

This section provides an overview of maintaining IN86 and IN89 records for merchandise *notas fiscais* issued by the Company and discusses how to maintain records.

Understanding IN86 and IN89 Records for Merchandise Notas Fiscais Issued by Company

You use the IN86-Maintain Mdse NF by CO program (P76B200D) or the INSS/IN89-Maintain Msde NF issued by CO program (P76B200D) to review, add, and delete records in these tables:

- IN86-Work Table for Merchandise Nota Fiscal Issued by CO Hdr (F76B410D).
- IN86-Work Table for Merchandise Nota Fiscal Issued by CO Dtl (F76B411D).

Modifying Records

You can modify any field in any record that you add to tables F76B410D or F76B411D. This table shows the fields that you can modify for system-generated records in table F76B410D:

| Data Item | Description |
|---------------------------------------|--|
| Transportation Type (data item BRTT) | The system writes a value to this field if a value exists in the source table, but you can modify the value in table F76B410D. |
| Carrier Number (data item ANCR) | The system writes a value to this field if a value exists in the source table, but you can modify the value in table F76B410D. |
| Volume Quantity (data item BRVQ) | The system writes a value to this field if a value exists in the source table, but you can modify the value in table F76B410D. |
| Volume Type (data item BRVT) | The source table does not contain a value for this data item. You must enter a value for every record in table F76B410D. |
| Gross Weight (data item BRGW) | The system writes a value to this field if a value exists in the source table, but you can modify the value in table F76B410D. |
| Net Weight (data item BRNW) | The system writes a value to this field if a value exists in the source table, but you can modify the value in table F76B410D. |
| Freight Mode (data item BRFM) | The system writes FOB if a value for freight, insurance, or expenses exists in table F76B101B. Otherwise, the system writes CIF to the Freight Mode field. |
| License Plate Number (data item LICP) | The system writes a value to this field if a value exists in the source table, but you can modify the value in table F76B410D. |

| Data Item | Description |
|-------------------------------|---|
| Invoice Type (data item BRIT) | The Invoice Type processing option lets you enter an invoice type that the system assigns to all of the records that it writes to table F76B410D. Because the records that the system writes to the table might include transactions which should have an invoice type other than the one that you specify in the Invoice Type processing option, the invoice type which the system writes to table F76B410D might not be valid for all of the transactions. You must review all of the records which are produced by program R76B100D and correct the invoice type as necessary. |
| Remarks (data item REMBR) | The source table does not contain a value for this data item. You can enter a value for any record in table F76B410D. |

When you modify data in table F76B410D, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

Besides the fields listed in the above table, fields for system-generated records cannot be changed in program P76B200D. If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Make the change in the source table, and then repopulate tables F76B410D and F76B411D by running the program R76B100D.
- Delete the record with the incorrect data from tables F76B410D and F76B411D, add a new record with the correct data, and make the appropriate changes in the source tables.

Adding and Deleting Records

When you use program P76B200D to add or delete records, the system updates both the header and detail work tables (F76B410D and F76B411D). These rules apply to adding and deleting records using program P76B200D:

- When creating a user-generated record, you must add both a header and a detail record.
- You cannot add a detail record to an existing, system-generated header record.
You can add detail records to an existing user-generated header record.
- For system-generated records, you can delete detail records only when you delete the header record.
When you delete the header record, the system also deletes all of the detail records that are associated with the header record. You cannot delete only a detail record.
- For user-generated records, you can delete one or more detail records without deleting the header record.

When you add records to work and complementary tables, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

Forms Used to Maintain Merchandise Notas Fiscais Issued by Company Records

| Form Name | FormID | Navigation | Usage |
|---------------------------------------|-----------|---|--|
| Work With Merchandise NF Issued by CO | W76B200DA | <ul style="list-style-type: none"> IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Mdse NF by CO INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Mdse NF issued by CO | Locate records. |
| Merchandise NF Issued by CO Revisions | W76B200DB | On the Work With Merchandise NF Issued by CO form, select a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for merchandise <i>notas fiscais</i> issued by Company. |

Adding or Revising Records for Merchandise Notas Fiscais Issued by Company

Access the Merchandise NF Issued by CO Revisions form.

NF Number (*nota fiscal* number)

Enter a six-character number that identifies a *nota fiscal*. The number consists of the *nota fiscal* number and the *nota fiscal* series.

NF Sr (*nota fiscal* series)

Enter a two-character number that along with the *nota fiscal* number, identifies a *nota fiscal*. The Nota Fiscal Series field is the second key that the system uses to access a specific *nota fiscal*.

Document Type

Enter a user-defined code (00/DT) that identifies the origin and purpose of the transaction. The system reserves several prefixes for document types, such as vouchers, invoices, receipts, and timesheets. The reserved document type prefixes for codes are:

P: Accounts payable
R: Accounts receivable
T: Time and Pay
I: Inventory
O: Purchase order
S: Sales order

NF Issue Date (*nota fiscal* issue date)

Enter a date that indicates when the *nota fiscal* was issued. For outbound transactions, the date is usually the *nota fiscal* print date. For inbound transactions, the date is typically the date that is printed on the supplier's *nota fiscal*.

| | |
|--|---|
| <hr/> Note. Blank is not a value. <hr/> | |
| NF Discount (<i>nota fiscal discount</i>) | Enter the amount of the discount amount available for the <i>nota fiscal</i> . |
| NF Freight (<i>nota fiscal freight</i>) | Enter a complementary expense to the customer. The system prorates this expense amount among each of the <i>notas fiscais</i> listed and adds the prorated amount to the ICMS taxable amount for each document. |
| NF Insurance (<i>nota fiscal insurance</i>) | Enter the insurance amount that you charge the client as complementary expense. This amount must be included on the <i>nota fiscal</i> . |
| NF Expenses (<i>nota fiscal expenses</i>) | Enter the amount of the total financial expenses that is printed on the <i>nota fiscal</i> . |
| IPI Tax | Enter the IPI tax amount that is printed on the <i>nota fiscal</i> . |
| Substitution Tax | Enter the ICMS Substitute amount that the customer must remit in advance if they are subject to Tax Substitution Mark-up. |
| NF Total (<i>nota fiscal total</i>) | Enter the total amount of the <i>nota fiscal</i> . The system calculates the total as follows: Merchandise + IPI tax amount + ICMS Substitute tax amount + Complementary Expenses - Discounts |
| NF Class (<i>nota fiscal class</i>) | Enter a code that indicates whether the item was received on an inbound transaction or was shipped on an outbound transaction. The value that you enter must exist in the Movement Indicator UDC table (76B/MI). Valid values are determined by the Brazilian government and include these values: <i>E</i> : Inbound <i>S</i> : Outbound |
| <hr/> Note. Blank is not a value. <hr/> | |
| NF Model (<i>nota fiscal model</i>) | Enter a code that identifies the model of the <i>nota fiscal</i> . The value that you enter must exist in the Nota Fiscal Document Model UDC table (76B/MD). Additionally, values also appear in the Description 01 field of the Sintegra CFOP Cross Reference UDC table (76B/TN). Values include: <i>01</i> : Normal <i>nota fiscal</i> <i>07</i> : Transportation <i>nota fiscal</i> <i>08</i> : Freight note - road |
| <hr/> Note. Blank is not a value. <hr/> | |
| Issuer Number | Enter a number that identifies an entry in the JD Edwards EnterpriseOne Address Book system, such as employee, applicant, participant, customer, supplier, tenant, or location. |
| NF Issue / Receipt Date (<i>nota fiscal issue / receipt date</i>) | Enter a date that indicates when the <i>nota fiscal</i> was issued or received. For outbound transactions, this date is usually the <i>nota fiscal</i> print date. For inbound transactions, the date is typically the receipt date. |

| | |
|----------------------------------|---|
| | Note. Blank is not a value. |
| Nota Fiscal Item Value | Enter the sum of the item amount on the <i>nota fiscal</i> . |
| State Tax ID | Enter a state identification number that identifies a company for the state government. |
| | Note. Blank is not a value. |
| Transportation Type | Enter a code that identifies the mode of transit of an item. The mode might include transportation by air, railway, highway, and so on. |
| Carrier Number | Enter the address book number of the carrier, which is specified by the customer or by the organization. You might use this carrier because of route requirements or special handling requirements. |
| Volume Quantity | Enter a value that indicates the quantity of items that is shipped on a <i>nota fiscal</i> , based on volume packaging. |
| Volume Type | Enter a code that indicates the volume unit-of-measure of items that are shipped on a <i>nota fiscal</i> . |
| Gross Weight | Enter the total weight of the goods that is reported on the <i>nota fiscal</i> . |
| Net Weight | Enter the weight of the goods, minus packaging and so on, that is reported on the <i>nota fiscal</i> . |
| Freight Mode | Enter a code that indicates who is responsible for paying the freight charges. The value that you enter must exist in the Freight Mode UDC table (76B/FM). Values are: <i>CIF</i> : Cost, Insurance, Freight <i>FOB</i> : Free on Board |
| | Note. Blank is not a value. |
| Vehicle Identification | Enter the license plate number of a given truck in the truck assignment system. |
| Cancel Situation - Brazil | Enter a code that indicates the cancellation status. The value that you enter must exist in the Cancel Situation UDC table (76B/CS). Values are: <i>S</i> : Canceled <i>N</i> : Not canceled |
| | Note. Blank is not a value. |
| Invoice Type - Brazil | Enter a code that indicates the type of invoice. The value that you enter must exist in the Invoice Type UDC table (76B/IT). Values are: <i>1</i> : Cash transactions <i>2</i> : Installment transactions |
| | Note. Blank is not a value. |

| | |
|----------------------------------|--|
| Remarks | Enter a general remark of up to 45 characters. |
| Line Number | Enter a number that identifies multiple occurrences, such as line numbers on a purchase order or other document. Generally, the system assigns this number, but in some cases you can override it. |
| Complementary Description | Enter an additional description of the item. You might use this description to more clearly identify the item that is included in the report to the Brazilian government. |
| Transportation Nat | Enter a code that identifies the transaction for fiscal reporting purposes. The structure of this code indicates whether the transaction was inbound or outbound, intrastate or interstate, and so on. |
| | <hr/> Note. Blank is not a value. <hr/> |
| Nature of the Operation | Enter an internal code that is the concatenation of the Transaction Nature Code and Transaction Nature Suffix, and is in a format that is reported to the Brazilian government. |
| | <hr/> Note. Blank is not a value; you must complete this field. <hr/> |
| Fiscal Classification | Enter a code that specifies groups of products, as defined by the local tax authorities. The product groups are based on taxing conventions and other national statistics. The system uses this code to determine the applicable tax rate for a product. |
| Quantity | Enter the quantity of units affected by this transaction. |
| U/M (unit of measure) | Enter a user-defined code (00/UM) that indicates the quantity in which to express an inventory item, for example, CS (case) or BX (box). |
| Unit Price | Enter a base or default price that is used with multipliers from the pricing rules to develop discounted prices. If no formula applies to an item or no discounts apply to a customer, the system uses this price without adjustments. |
| Extended Price | Enter the number of units multiplied by the unit price. |
| IPI Tribute | Enter a code that indicates how IPI tax is assessed. The value that you enter must exist in the Fiscal Value Codes - IPI UDC table (76B/CW). Values include: 1: Taxable 2: Not taxable 3: Other |
| | <hr/> Note. Blank is not a value. <hr/> |
| IPI Rate | Enter the tax rate for IPI tax expressed as a percentage. |
| IPI Basis | Enter the amount on which IPI taxes are assessed. |
| IPI Tax | Enter the IPI tax amount that is printed on the <i>nota fiscal</i> . |

State Tax Situation

Enter a three-digit code that indicates the product origin and the method that is used to assess ICMS tax. The first digit indicates the origin. The second and third digits identify how the ICMS is taxed.

Note. Blank is not a value.

Values for the first digit are:

0: Domestic goods

1: Foreign product, direct import

2: Foreign product, purchased in local market

Values for the second and third digits are:

10: Taxed, with ICMS collection by tax substitution

20: Taxed, with taxable amount reduction

30: Exempt or non-taxable, with ICMS collection by tax substitution

40: Exempt or non-taxable

50: Suspended and deferred

60: ICMS previously charged by tax substitution

70: Reduced taxable amount, with ICMS collection by tax substitution

90: Other

ICMS Tribute

Enter a code that specifies how ICMS tax is assessed. The value that you enter must exist in the Fiscal Amount Codes - ICMS UDC table (76B/CV). Values include:

1: Taxable

2: Not taxable

3: Other

Note. Blank is not a value.

ICMS Rate

Enter the tax rate for ICMS tax expressed as a percentage.

ICMS Basis

Enter the amount on which ICMS taxes are assessed.

ICMS Rate

Enter the amount of ICMS tax that is assessed.

Substitution Basis

Enter the amount on which ICMS Substitute tax is assessed. Products that are eligible for ICMS Substitute tax are listed in ICMS government directive 14.

Substitution Tax

Enter the ICMS Substitute amount that the customer must remit in advance if they are subject to Tax Substitution Mark-up.

Merchandise Movement

Enter a code that indicates whether the merchandise moved from one location to another. The value that you enter must exist in the Merchandise Movement UDC table (76B/MM). Values are:

S: Yes

N: No

Note. Blank is not a value.

Maintaining IN86 and IN89 Records for Merchandise Notas Fiscais Issued by Suppliers

This section provides an overview of maintaining IN86 and IN89 records for merchandise *notas fiscais* issued by suppliers and discusses how to maintain records.

Understanding IN86 and IN89 Records for Merchandise Notas Fiscais Issued by Suppliers

You use the IN86-Maintain Mdse NF by Supplier program (P76B200E) and the INSS/IN89-Maintain Mdse NF by Supplier program (P76B200E) to review, add, and delete records in these tables:

- IN86-Work Table for Merchandise NF Issued by Supplier Header (F76B410E)
- IN86-Work Table for Merchandise NF Issued by Supplier Detail (F76B411E)

Modifying Records

You can modify any field in any record that you add to table F76B410E or F76B411E. This table shows the fields that you can modify for system-generated records in tables F76B410E and F76B411E:

| Data Item | Description |
|-------------------------------|--|
| Invoice Type (data item BRIT) | The Invoice Type processing option lets you enter an invoice type that the system assigns to all of the records that it writes to table F76B410E. Because the records that the system writes to the table might include transactions that should have an invoice type other than the one that you specify in the Invoice Type processing option, the invoice type that the system writes to table F76B410E might not be valid for all of the transactions. You must review all of the records that are produced by program R76B100E and correct the invoice type as necessary. |
| Remark (data item REMBR) | The source table does not contain a value for this data item. You can enter a value for any record in table F76B410E. |

| Data Item | Description |
|---------------------------------------|---|
| Nature of Operation (data item BRNO) | The system populates the Nature of Operation - Brazil field (data item BRNO) with a concatenation of the value in the Transaction Nature field (data item BNOP) and the value in the Transaction Suffix field (data item BSOP) from the Nota Fiscal - Detail (Fiscal Books) table (F76111B) if the record in table F76111B was generated by a JD Edwards EnterpriseOne program. If the record in table F76111B was manually entered by using the Maintenance of Fiscal Books program (P76B1001), the system concatenates a value for BNOP or BRNOP from the Table for BNOP Conversion (Fiscal Books only) table (F76B200) and the value in the Transaction Suffix field (data item BSOP) from table F76111B. You can modify the value that the system writes to this field. |
| Merchandise Movement (data item BRMM) | The system populates the Merchandise Movement field (data item BRMM) with the value that you specify in the processing options. You can modify the value that the system writes to this field. |

When you modify fields in tables F76B410E and F76B411E, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

Other than the fields listed in the above table, fields for system-generated records cannot be changed in program P76B200E. If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Make the change in the source table, and then repopulate tables F76B410E and R76B411E by running program R76B100E.
- Delete the record with the incorrect data from tables F76B410E and F76B411E, add a new record with the correct data, and make the appropriate changes in the source tables.

Adding and Deleting Records

When you use program P76B200E to add or delete records, the system updates both the header and detail work tables (F76B410E and F76B411E). These rules apply to adding and deleting records using program P76B200E:

- When creating a user-generated record, you must add both a header and a detail record.
- You cannot add a detail record to an existing, system-generated header record.

You can add detail records to an existing user-generated header record.

- For system-generated records, you can delete detail records only when you delete the header record.

When you delete the header record, the system also deletes all of the detail records that are associated with the header record. You cannot delete only a detail record.

- For user-generated records, you can delete one or more detail records without deleting the header record.

When you add records to tables F76B410E and F76B411B, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

Forms Used to Maintain Merchandise Notas Fiscais Issued by Suppliers Records

| Form Name | FormID | Navigation | Usage |
|---|-----------|--|---|
| Work With NF Issued by Supplier | W76B200EA | <ul style="list-style-type: none"> IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Mdse NF by Supplier INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Mdse NF by Supplier | Locate records. |
| Merchandise NF Issued by Supplier Revisions | W76B200EB | On the Work With Merchandise NF Issued by CO form, select a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for merchandise <i>notas fiscais</i> issued by supplier. |

Adding or Revising Records for Merchandise Notas Fiscais Issued by Suppliers

Access the Merchandise NF Issued by Supplier Revisions form.

| | |
|---|--|
| NF Number (<i>nota fiscal</i> number) | Enter a six-character number that identifies a <i>nota fiscal</i> . The number consists of the <i>nota fiscal</i> number and the <i>nota fiscal</i> series. |
| NF Series (<i>nota fiscal</i> series) | Enter a two-character number that along with the <i>nota fiscal</i> number, identifies a <i>nota fiscal</i> . The Nota Fiscal Series field is the second key that the system uses to access a specific <i>nota fiscal</i> . |
| Document Type | <p>Enter a user-defined code (00/DT) that identifies the origin and purpose of the transaction. The system reserves several prefixes for document types, such as vouchers, invoices, receipts, and timesheets. The reserved document type prefixes for codes are:</p> <p>P: Accounts payable R: Accounts receivable T: Time and Pay I: Inventory O: Purchase order S: Sales order</p> |
| NF Issue Date (<i>nota fiscal</i> issue date) | Enter a date that indicates when the <i>nota fiscal</i> was issued. For outbound transactions, the date is usually the <i>nota fiscal</i> print date. For inbound transactions, the date is typically the date that is printed on the supplier's <i>nota fiscal</i> . |

| | |
|---|--|
| <hr/> Note. Blank is not a value. <hr/> | |
| Company From | Enter the company whose data you want to work with. |
| Ship From | Enter the address number of the supplier from which you want to ship this order. The system determines the address of the supplier, including street, city, state, zip code, and country based on the record that you enter for the supplier in the JD Edwards EnterpriseOne Address Book system. |
| NF Discount (<i>nota fiscal</i> discount) | Enter the amount of the discount amount available for the <i>nota fiscal</i> . |
| NF Expenses (<i>nota fiscal</i> expenses) | Enter the amount of the total financial expenses that is printed on the <i>nota fiscal</i> . |
| NF Freight (<i>nota fiscal</i> freight) | Enter a complementary expense to the customer. The system prorates this expense amount among each of the <i>notas fiscais</i> listed and adds the prorated amount to the ICMS taxable amount for each document. |
| NF Total (<i>nota fiscal</i> total) | Enter the total amount of the <i>nota fiscal</i> . The system calculates the total as follows: Merchandise + IPI tax amount + ICMS Substitute tax amount + Complementary Expenses - Discounts |
| IPI Tax | Enter the IPI tax amount that is printed on the <i>nota fiscal</i> . |
| NF Insurance (<i>nota fiscal</i> insurance) | Enter the insurance amount that you charge the client as complementary expense. This amount must be included on the <i>nota fiscal</i> . |
| Substitution Tax | Enter the ICMS Substitute amount that the customer must remit in advance if they are subject to Tax Substitution Mark-up. |
| NF Model (<i>nota fiscal</i> model) | Enter a code that identifies the model of the <i>nota fiscal</i> . The value that you enter must exist in the Nota Fiscal Document Model UDC table (76B/MD). Additionally, the values also appear in the Description 1 field of the Sintegra CFOP Cross Reference UDC table (76B/TN). Values include: 01: Normal <i>nota fiscal</i> 07: Transportation <i>nota fiscal</i> 08: Freight note - road |
| <hr/> Note. Blank is not a value. <hr/> | |
| NF Receipt Date (<i>nota fiscal</i> receipt date) | Enter a date that indicates when the <i>nota fiscal</i> was issued or received. For outbound transactions, this date is usually the <i>nota fiscal</i> print date. For inbound transactions, the date is typically the receipt date. |
| <hr/> Note. Blank is not a value. <hr/> | |
| State Tax ID | Enter a state identification number that identifies a company for the state government. |
| <hr/> Note. Blank is not a value. <hr/> | |

| | |
|----------------------------------|--|
| Nota Fiscal Item Value | Enter the sum of the item amount on the <i>nota fiscal</i> . |
| Invoice Type - Brazil | <p>Enter a code that indicates the type of invoice. The value that you enter must exist in the Invoice Type UDC table (76B/IT). Values are:</p> <p>1: Cash transactions</p> <p>2: Installment transactions</p> <hr/> <p>Note. Blank is not a value.</p> <hr/> |
| Remarks | Enter a general remark of up to 45 characters. |
| Line Number | Enter a number that identifies multiple occurrences, such as line numbers on a purchase order or other document. Generally, the system assigns this number, but in some cases you can override it. |
| Complementary Description | Enter an additional description of the item. You might use this description to more clearly identify the item that is included in the report to the Brazilian government. |
| Transaction Nature | <p>Enter a code that identifies the transaction for fiscal reporting purposes. The structure of this code indicates whether the transaction was inbound or outbound, intrastate or interstate, and so on.</p> <hr/> <p>Note. Blank is not a value.</p> <hr/> |
| Nature of Operation | <p>Enter an internal code that is the concatenation of the Transaction Nature Code and Transaction Nature Suffix, and is in a format that is reported to the Brazilian government.</p> <hr/> <p>Note. Blank is not a value; you must complete this field.</p> <hr/> |
| Fiscal Classification | Enter a code that specifies groups of products, as defined by the local tax authorities. The product groups are based on taxing conventions and other national statistics. The system uses this code to determine the applicable tax rate for a product. |
| Quantity | Enter the quantity of units affected by this transaction. |
| U/M (unit of measure) | Enter a user-defined code (00/UM) that indicates the quantity in which to express an inventory item, for example, CS (case) or BX (box). |
| Unit Price | Enter a base or default price that is used with multipliers from the pricing rules to develop discounted prices. If no formula applies to an item or no discounts apply to a customer, the system uses this price without adjustments. |
| Extended Price | Enter the number of units multiplied by the unit price. |
| IPI Tribute Indicator | <p>Enter a code that indicates how IPI tax is assessed. The value that you enter must exist in the Fiscal Value Codes - IPI UDC table (76B/CW). Values include:</p> <p>1: Taxable</p> <p>2: Not taxable</p> <p>3: Other</p> |

| | |
|-------------------------------|--|
| | <hr/> Note. Blank is not a value. |
| IPI Rate | Enter the tax rate for IPI tax expressed as a percentage. |
| IPI Basis | Enter the amount on which IPI taxes are assessed. |
| Tax Situation | Enter a three-digit code that indicates the product origin and the method that is used to assess ICMS tax. The first digit indicates the origin. The second and third digits identify how the ICMS is taxed. |
| | <hr/> Note. Blank is not a value. |
| | Values for the first digit are: <i>0</i> : Domestic goods <i>1</i> : Foreign product, direct import <i>2</i> : Foreign product, purchased in local market Values for the second and third digits are: <i>10</i> : Taxed, with ICMS collection by tax substitution <i>20</i> : Taxed, with taxable amount reduction <i>30</i> : Exempt or non-taxable, with ICMS collection by tax substitution <i>40</i> : Exempt or non-taxable <i>50</i> : Suspended and deferred <i>60</i> : ICMS previously charged by tax substitution <i>70</i> : Reduced taxable amount, with ICMS collection by tax substitution <i>90</i> : Other |
| ICMS Tribute Indicator | Enter a code that specifies how ICMS tax is assessed. The value that you enter must exist in the Fiscal Amount Codes - ICMS UDC table (76B/CV). Values include: <i>1</i> : Taxable <i>2</i> : Not taxable <i>3</i> : Other |
| | <hr/> Note. Blank is not a value. |
| ICMS Rate | Enter the amount of ICMS tax that is assessed. |
| ICMS Basis | Enter the amount on which ICMS taxes are assessed. |
| ICMS Rate | Enter the tax rate for ICMS tax expressed as a percentage. |
| Substitution Basis | The amount on which ICMS Substitute tax is assessed. Products that are eligible for ICMS Substitute tax are listed in ICMS government directive 14. |
| Merchandise Movement | Enter a code that indicates whether the merchandise moved from one location to another. The value that you enter must exist in the Merchandise Movement UDC table (76B/MM). Values are: |

S: Yes

N: No

Note. Blank is not a value.

Maintaining IN89 Records for Third Party Services for Inbound Nota Fiscais

This section provides an overview of maintaining IN86 and IN89 records for third-party services for inbound *nota fiscais* and discusses how to maintain records.

Understanding IN86 and IN89 Records for Third Party Services for Inbound Nota Fiscais

You use the INSS-Mntn 3rd Party Svcs Inbound NF program (P76B200H) to review, add, and delete records from the INSS-Work Table for Services Third Party Inbound NF Header table (F76B410H).

You can modify most of the fields in records that you add to table F76B410H. When you add a record to table F76B410H, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

If you add or delete records from table F76B410H, you must make the corresponding adjustment to the complementary tables to which the INSS-Mntn 3rd Party Svcs Inbound NF program writes. The system does not maintain the integrity between table F76B410H and these complementary tables:

- IN86-Work Table for Item Number and Service Code (F76B400G).
- IN86-Work Table for Individuals and Legal Entities (F76B8601).
- IN86-Work Table for Account Master (F76B901).

Fields for system-generated records cannot be changed in program P76B200H. If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Make the change in the source table, purge table F76B400H, and then repopulate table F76B410H by running the INSS-Fltr-3rd Party Svcs-Inbound NF program (R76B100H).
- Delete the record with the incorrect data from table F76B410H, add a new record with the correct data, and make the appropriate changes in the source and complementary tables.

Forms Used to Maintain Third Party Services for Inbound Nota Fiscais Records

| Form Name | FormID | Navigation | Usage |
|---------------------------|-----------|--|--|
| Work With Inbound Entries | W76B200HA | INSS/IN89 Maintenance Applications (G76BINSS02), Maintain 3rd Party Svcs Inbound NF | Locate records. |
| Inbound Entries Revisions | W76B200HB | On the Work With Inbound Entries form, select a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for third-party services for inbound <i>notas fiscais</i> . |

Adding or Revising Records for Third Party Services for Inbound Notas Fiscais

Access the Inbound Entries Revisions form.

| | |
|---|--|
| Company | Enter the company whose data you want to work with. |
| Ship From | Enter the address number of the supplier from which you want to ship this order. The system determines the address of the supplier, including street, city, state, zip code, and country based on the record that you enter for the supplier in the JD Edwards EnterpriseOne Address Book system. |
| NF Issue Date (<i>nota fiscal</i> issue date) | Enter a date that indicates when the <i>nota fiscal</i> was issued. For outbound transactions, the date is usually the <i>nota fiscal</i> print date. For inbound transactions, the date is typically the date that is printed on the supplier's <i>nota fiscal</i> . |
| Note. Blank is not a value. | |
| N.F. Number | Enter a six-character number that identifies a <i>nota fiscal</i> . The number consists of the <i>nota fiscal</i> number and the <i>nota fiscal</i> series. |
| Document Type INSS | Enter a code that specifies the document type to be reported as part of Brazil's INSS process. The system updates this field with the 2nd, 3rd, and 4th characters of the special handling code (SPHD) assigned to the transaction's document type in the Document Type UDC table (00/DT). If a special handling code is not associated with the document type assigned to the transaction's document type, the system uses the transaction record's document type. When you add a record manually, the value that you enter must exist in the Document Type INSS Brazil UDC table (76B/DT). Government mandated values are: <i>DUP: Duplicata</i> <i>REC: Recibo</i> <i>NP: Nota Promissória</i> |
| Complementary Description - Brazil | Enter an additional description of the item. You might use this description to more clearly identify the item that is included in the report to the Brazilian government. |

| | |
|----------------------------------|---|
| N.F. Total | <p>Enter the total amount of the <i>nota fiscal</i>. The system calculates the total as follows:</p> <p>Merchandise + IPI tax amount + ICMS Substitute tax amount + Complementary Expenses - Discounts</p> |
| INSS Basis | Enter the amount on which INSS taxes are assessed. |
| INSS Tax | Enter the amount of INSS tax assessed. |
| Extended Amount | Enter the sum of the item amount on the <i>nota fiscal</i> . |
| Document Company | <p>Enter a number that, with the document number, document type and general ledger date, uniquely identifies an original document, such as invoice, voucher, or journal entry.</p> <p>If you use the Next Numbers by Company/Fiscal Year feature, the Automatic Next Numbers program (X0010) uses the document company to retrieve the correct next number for that company.</p> <p>If two or more original documents have the same document number and document type, you can use the document company to locate the desired document.</p> |
| Document Number | <p>Enter a number that identifies the original document, such as a voucher, invoice, or journal entry. On entry forms, you can assign the document number or let the system assign it using the Next Numbers program (P0002). Matching document numbers (DOCM) identify related documents in the JD Edwards EnterpriseOne Accounts Receivable and JD Edwards EnterpriseOne Accounts Payable systems. Examples of original and matching documents are:</p> <p>Accounts Payable</p> <p>Original document - voucher</p> <p>Matching document - payment</p> <p>Accounts Receivable</p> <p>Original document - invoice</p> <p>Matching document - receipt</p> <hr/> <p>Note. In Accounts Receivable, these transactions simultaneously generate original and matching documents: deductions, unapplied receipts, chargebacks, and drafts.</p> <hr/> |
| Pay Item | Enter a number that identifies the pay item for a voucher or an invoice. The system assigns the pay item number. If the voucher or invoice has multiple pay items, the numbers are sequential. |
| Pay Item Extension Number | Enter a code to designate an adjusting entry to a pay item on a voucher or invoice. This field is required so that each record is unique. |
| Document Type | <p>Enter a user-defined (system 00, type DV) document type for voucher entry. Any document type set up for voucher-only entry should begin with the letter P (payables). Reserved document types have been defined for vouchers, invoices, receipts, and time sheets.</p> <p>The reserved document types are:</p> |

P_ Accounts Payable Documents
 R_ Accounts Receivable Documents
 T_ Payroll Documents
 I_ Inventory Documents
 O_ Order Processing Documents

Note. For voucher entry, if you are using document type DV, you must also set up document type DT in user-defined codes.

Maintaining IN86 or IN89 Records for Bills of Material

This section provides an overview of maintaining IN86 and IN89 records for bills of material and discusses how to maintain records.

Understanding IN86 and IN89 Records for Bills of Material

You use the IN86-Maintain Item/Part List program (P76B3010) or the INSS/IN89-Maintain Item/Part List program (P76B3010) to review, add, and delete records in the Work Table for Item/Part List (F76B3010).

You can modify any field in any record that you add to table F76B3010. When you add or modify a record in table F76B3010, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

If you add or delete records from table F76B3010, you must make the corresponding adjustment to the records in the IN86-Work Table for Item Number and Service Code (F76B400G). The system does not maintain the integrity between tables F76B3010 and F76B400G when you add or delete records.

Fields for system-generated records cannot be changed in program P76B3010. If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Make the change in the source table and then repopulate table F76B3010 by running program R76B3000.
- Delete the record with the incorrect data from table F76B3010, add a new record with the correct data, and make the appropriate changes in the source table.

Forms Used to Maintain Bills of Material Records

| Form Name | FormID | Navigation | Usage |
|--------------------------|-----------|---|---|
| Work With Item/Part List | W76B3010B | INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Item/Part List | Locate records. |
| Item/Part List Revisions | W76B3010A | On Work With Item/Part List, select a record and click Select to modify a record, or click Add to add a record. | Modify or add IN86 or IN89 records for bills of material. |

Adding or Revising Records for Bills of Material

Access the Item/Part List Revisions form.

Type of Bill

Enter a user-defined code (40/TB) that designates the type of bill of material. You can define different types of bills of material for different uses. For example:

M: Standard manufacturing bill

RWK: Rework bill

SPR: Spare parts bill

The system enters bill type M in the work order header when you create a work order, unless you specify another bill type. The system reads the bill type code on the work order header to know which bill of material to use to create the work order parts list. MRP uses the bill type code to identify the bill of material to use when it attaches MRP messages. Batch bills of material must be type M for shop floor management, product costing, and MRP processing.

Branch/Plant

Enter a code that represents a high-level business unit. Use this code to refer to a branch or plant that might have departments or jobs, which represent lower-level business units, subordinate to it. For example:

Branch/Plant (MMCU)

Dept A (MCU)

Dept B (MCU)

Job 123 (MCU)

Business unit security is based on the higher-level business unit.

Batch Quantity

Enter the quantity of finished units that you expect this bill of material or routing to produce. You can specify varying quantities of components based on the amount of finished goods produced. For example, 1 ounce of solvent is required per unit up to 100 units of finished product. However, if 200 units of finished product is produced, 2 ounces of solvent are required per finished unit. In this example, you would set up batch quantities for 100 and 200 units of finished product, specifying the proper amount of solvent per unit.

Quantity

Enter the number of units that the system applies to the transaction.

UM (unit of measure)

Enter a user-defined code (00/UM) that identifies the unit of measurement for an amount or quantity. For example, it can represent a barrel, box, cubic meter, liter, hour, and so on.

Line No.

Enter a number that specifies how the system displays the sequence of components on a single-level bill of material. This number initially indicates the sequence in which a component was added to the bill of material. You can modify this number to change the sequence in which the components appear.

Oper Seq#

Enter a number used to indicate an order of succession.

In routing instructions, a number that sequences the fabrication or assembly steps in the manufacture of an item. You can track costs and charge time by operation.

In bills of material, a number that designates the routing step in the fabrication or assembly process that requires a specified component part. You define the operation sequence after you create the routing instructions for the item. Shop Floor Management uses this number in the backflush/preflush by operation process.

| | |
|-------------------------|---|
| | In engineering change orders, a number that sequences the assembly steps for the engineering change. |
| | For repetitive manufacturing, a number that identifies the sequence in which an item is scheduled to be produced. |
| | Skip To fields allow you to enter an operation sequence that you want to begin the display of information. |
| | You can use decimals to add steps between existing steps. For example, use 12.5 to add a step between steps 12 and 13. |
| Percent Scrap | Enter the percentage of unusable component material that is created during the manufacture of a particular parent item. During DRP/MPS/MRP generation, the system increases gross requirements for the component item to compensate for the loss. Enter percentages as whole numbers, for example, 5 percent as 5.0. |
| | Note. Inventory shrink and scrap are compounded to calculate the total loss in the manufacture of a particular item. Accurate shrink and scrap factors support more accurate planning calculations. |
| Effective From | Enter a date that indicates the beginning effective date for a range of dates. |
| Effective Thru | Enter a date that indicates the ending effective date for a range of dates. |
| Component Branch | Enter a secondary or lower-level business unit. The system uses the value that you enter to indicate that a branch or plant contains several subordinate departments or jobs. For example, assume that the component branch is named MMCU. The structure of MMCU might be as follows: Branch/Plant - (MMCU) Dept A - (MCU) Dept B - (MCU) Job 123 - (MCU) |

Maintaining IN86 and IN89 Records for Business Units

This section provides an overview of maintaining IN86 and IN89 records for business units and discusses how to maintain records.

Understanding IN86 and IN89 Records for Business Units

You use the IN86-Maintain Business Unit program (P76B006) or the INSS/IN89-Maintain Business Unit program (P76B006) to review, add, and delete records in the IN86-Work Table for Business Unit (F76B006).

You can modify any field in any record that you add to table F76B006. When you add or modify a record in table F76B006, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

Most fields for system-generated records cannot be changed in program P76B006. You can change the Update Date field so that you can maintain the integrity between records in table F76B006 and the other tables that are created by the filter programs that populate table F76B006.

If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Delete the record with the incorrect data from table F76B006, add a new record with the correct data, and make the appropriate changes in the source table.
- Make the change in the source table, purge table F76B006, and repopulate table F76B006 by running one or more of these filter programs:
- IN86-Filter for Journal Entries (R76B911).
- INSS/IN89-Filter for Journal Entries (R76B911).
- IN86-Filter for Account Balances (R76B902).
- INSS/IN89-Filter for Account Balances (R76B902).

Note. To capture all of the relevant records, you must run all of the filter programs that you ran before you purged table F76B006.

Maintaining Data Integrity

When you run one of the filter programs listed above, the system populates table F76B006 according to these rules:

- If a record for a business unit does not exist in table F76B006, the system creates a new record with the business unit information.
- If a record for the business unit does exist, the system compares the date in the Update Date field to the general ledger date (data item DGJ) of the transaction being processed.

If the general ledger date is earlier than the date in the Update Date field, the system updates the Update Date field with the general ledger date.

When you manually add, delete, or modify a record in table F76B006, you must compare the date in the Update Date field to the date in the general ledger Date field (data item DGJ) and enter the appropriate date.

Forms Used to Maintain Business Unit Records

| Form Name | FormID | Navigation | Usage |
|-------------------------|----------|--|--|
| Work With Business Unit | W76B006A | <ul style="list-style-type: none"> • IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Business Unit • INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Business Unit | Locate records. |
| Business Unit Revisions | W76B006B | On the Work With Business Unit form, select a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for business units. |

Adding or Revising Records for Business Units

Access the Business Unit Revisions form.

Maintaining IN86 and IN89 Records for Account Master Information

This section provides an overview of maintaining IN86 and IN89 records for account master information and discusses how to maintain records.

Understanding IN86 and IN89 Records for Account Master Information

You use the IN86-Maintain Account Master program (P76B901) or the INSS/IN89-Maintain Account Master program (P76B901) to review, add, and delete records in the IN86-Work Table for Account Master (F76B901).

You can modify any field in any record that you add to table F76B901. When you add or modify a record in table F76B901, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

Most fields for system-generated records cannot be changed in program P76B901. You can change the Update Date field so that you can maintain the integrity between records in table F76B901 and the other tables that are created by the filter programs that populate table F76B901.

If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Delete the record with the incorrect data from table F76B901, add a new record with the correct data, and make the appropriate changes in the source table.
- Make the change in the source table, purge table F76B901, and repopulate table F76B901 by running one or more of these filter programs:
 - IN86-Filter for Journal Entries (R76B911).
 - INSS/IN89-Filter for Journal Entries (R76B911).
 - IN86-Filter for Account Balance (R76B902).
 - INSS/IN89-Filter for Account Balance (R76B902).
 - IN86-Filter Supplier Vouchers and Payments (R76B8601).
 - INSS/IN89-Filter Supplier Vouchers & Payments (R76B8601).
 - IN86-Filter Customer Receipts (R76B8605).
 - INSS/IN89-Filter Customer Receipts (R76B8605).
 - IN86-Filter Customer Invoices (R76B8604).
 - INSS/IN89-Filter Customer Invoices (R76B8604).
 - IN86-Filter Fixed Assets (R76B5200).
 - INSS/IN89-Filter Fixed Assets (R76B5200).
 - INSS/IN89-Fltr-3rd Party Srvs-Inbound NF (R76B100H).

Note. To capture all relevant records, you must run all of the filter programs that you ran before you purged table F76B901.

Maintaining Data Integrity

When you run one of the filter programs listed above, the system populates table F76B901 according to these rules:

- If a record for an account does not exist in table F76B901, the system creates a new record with the account information.
- If a record for the account does exist, the system compares the date in the Update Date field to the General Ledger Date field (data item DGJ) of the transaction being processed. If the date in the General Ledger Date field is earlier than the date in the Update Date field, the system updates the Update Date field with the date from the General Ledger Date field.

When you manually add, delete, or modify a record in table F76B901, you must compare the date in the Update Date field to the date in the General Ledger Date field (data item DGJ) and enter the appropriate date.

What You Should Know About the IN86-Work Table for Account Master (F76B901)

The system applies these rules as it writes records to IN86-Work Table for Account Master (F76B901):

- The Account Type field (data item ATYB) is hard-coded to an *A* because of Brazilian regulations.
- The Object Account Parent field (data item OBJ0) and the Subsidiary Parent field (data item SUB0) are the lowest level non-posting accounts prior to the posting account.

For example, if the posting account is at a level of detail of 7, the account that is one level higher (level of detail 6) is the parent account.

Forms Used to Maintain Account Master Records

| Form Name | FormID | Navigation | Usage |
|--------------------------|----------|--|--|
| Work With Account Master | W76B901A | <ul style="list-style-type: none"> • IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Account Master • INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Account Master | Locate records. |
| Account Master Revisions | W76B901B | On the Work With Account Master form, select a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for account master information. |

Adding or Revising Records for Account Master Information

Access the Account Master Revisions form.

| | |
|---|--|
| Account Type | Enter a code that specifies the type of account included in the report. The only value is A (Posting Account). |
| Non-Posting Obj Acct (non-posting object account) | Enter the object account parent |
| Non-Posting Subsidiary | Enter the subsidiary parent |

Maintaining IN86 and IN89 Records for Individuals and Legal Entities

This section provides an overview of maintaining IN86 and IN89 records individuals and legal entities and discusses how to maintain records.

Understanding IN86 and IN89 Records for Individuals and Legal Entities

You use the IN86-Maintain Individuals and Legal Entities program (P76B8601) or the INSS/IN89-Maintain Indivl and Lgl Entity program (P76B8601) to review, add, and delete records in the IN86-Work Table for Individuals and Legal Entities (F76B8601).

You can modify any field in any record that you add to table F76B8601. When you add a record to table F76B8601, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

Most fields for system-generated records cannot be changed in program P76B8601. You can change the Update Date field so that you can maintain the integrity between records in table F76B8601 and the other tables that are created by the filter programs that populate table F76B8601. You can also enter data in the Neighborhood field (data item NBHD). JD Edwards EnterpriseOne source tables do not contain the data that is required for the Neighborhood field, so you must complete the field for each record in table F76B8601.

If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Delete the record with the incorrect data from table F76B8601, add a new record with the correct data, and make the appropriate changes in the source table.
- Make the change in the source table, purge table F76B8601, and repopulate table F76B8601 by running one or more of these filter programs:
- IN86-Filter Supplier Vouchers/Payments (R76B8601).
- INSS/IN89-Filter Supplier Vouchers/Payments (R76B8601).
- IN86-Filter Customer Receipts (R76B8605).
- INSS/IN89-Filter Customer Receipts (R76B8605).
- IN86-Filter Customer Invoices (R76B8604).
- INSS/IN89-Filter Customer Invoices (R76B8604).
- IN86-Filter for Services Outbound NF (R76B100C).
- INSS/IN89-Fltr -Services Outbound NF (R76B100C).
- IN86-Filter for Mdse NF by CO (R76B100D).

- INSS/IN89-Fltr Mdse NF issued by CO (R76B100D).
- IN86-Filter for Mdse NF by Supplier (R76B100E).
- INSS/IN89-Fltr-Mdse NF issued by Supplier (R76B100E).

Note. To capture all relevant records, you must run all of the filter programs that you ran before you purged table F76B8601.

Maintaining Data Integrity

When you run one of the filter programs listed above, the system populates table F76B8601 according to these rules:

- If a record for a business unit does not exist in table F76B8601, the system creates a new record with the business unit information.
- If a record for the individual or legal entity does exist, the system compares the date in the Update Date field (data item DGJ) in table F76B8601 to the G/L Date field (data item DGJ) in the source table. If the date in the G/L Date field is earlier than the date in the Update Date field, the system updates the Update Date field with the date from the G/L Date field.

When you manually add, delete, or modify a record in table F76B8601, you must compare the date in the Update Date field to the date in the G/L Date field (data item DGJ) and enter the appropriate date.

Forms Used to Maintain Records for Individuals and Legal Entities

| Form Name | FormID | Navigation | Usage |
|--|-----------|---|---|
| Work With Individuals and Legal Entities | W76B8601A | <ul style="list-style-type: none"> • IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Individuals/Legal Entities • INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Indivl and Lgl Entity | Locate records. |
| Individuals and Legal Entity Revisions | W76B8601B | On the Work With Individuals and Legal Entities form, select a record and click Select to modify a record, or click Add to create a new record | Modify or add IN86 or IN89 records for individual and legal entities. |

Adding or Revising Records for Individuals and Legal Entities

Access the Individuals and Legal Entity Revisions form.

Mailing Name Enter the company or person to whom billing or correspondence is addressed.

Mailing Address Enter the mailing address of the individual or legal entity that you report for IN86 tax reporting for Brazil. The system completes this field with the

| | |
|--------------------------------|---|
| | concatenation of values from the Address Line 1 (ADD1) and Address Line 2 (ADD2) fields as stored in the Address by Date table (F0116) for the Address Number (AN8) of the individual or legal entity. |
| Neighborhood | Enter the neighborhood of the individual or legal entity that you report for IN86 tax reporting for Brazil. You enter the neighborhood in the IN86-Maintain Individuals and Legal Entities program (P76B8601), and the system stores the value in the IN86-Work Table for Individuals and Legal Entities table (F76B8601). |
| City | Enter a name that indicates the city associated with the address. |
| State | Enter a user-defined code (00/S) that specifies the state or province. This code is usually a postal service abbreviation. |
| Country | Enter the country of the individual or legal entity that is reported as part of Brazil's IN86 process. The system completes this field with the description from the Country Codes UDC table (00/CN) for the Country (CTR) stored in the Address by Date table (F0116) for the Address Number (AN8) of the individual or legal entity. |
| Postal Code | Enter the United States ZIP code or the postal code that specifies where a letter is to be routed. Attach this code to the address for delivery in other countries. This code is used as the low end value when doing Postal Code Transaction range processing. |
| CNPJ / CPF | Enter the identification code required by various tax authorities. This can be a social security number, federal or state corporate tax ID, sales tax number, and so on. The system verifies the number and prints the separators in their correct format, according to the value of TAXC (Person/Corporation Code). If no value exists for TAXC, the system uses the Corporate Entity. |
| State Tax ID | Enter an identification number assigned by a tax authority to an individual, in addition to the primary Tax ID number (TX1). |
| Municipal Tax ID | Enter the identification number used by the county to identify a taxpayer. In Brazil, this information is mandatory on <i>notas fiscais</i> and all legal reports. |
| Person/Corporation Code | <p>Enter a code that designates the type of taxpayer. For 1099 reporting for U.S. suppliers and foreign suppliers, the system selects only records with a code of P or N.</p> <p>Values for U.S. entities are:</p> <p>Blank: Corporate entity (the Tax ID prints as 12-3456789)</p> <p>C: Corporate entity (the Tax ID prints as 12-3456789)</p> <p>P: Individual (the Tax ID prints as 123-45-6789)</p> <p>N: Noncorporate entity (the Tax ID prints as 12-3456789)</p> <p>Values for non-U.S. entities are:</p> <p>1: Individual</p> <p>2: Corporate entity</p> <p>3: Both an individual and a corporate entity</p> <p>4: Noncorporate entity</p> |

5: Customs authority

Maintaining IN86 and IN89 Transaction Nature Records

This section provides an overview of maintaining IN86 and IN89 transaction nature records and discusses how to maintain records.

Understanding IN86 and IN89 Transaction Nature Records

You use the IN86-Maintain Transaction Nature program (P76B200F) or the INSS/IN89-Maintain Transaction Nature program (P76B200F) to review, add, and delete records in the IN86-Work Table for Transaction Nature table (F76B400F).

You can modify any field in records that you add to table F76B400F, except for the Nature of the Operation field. When you add or modify a record in table F76B400F, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

Most fields for system-generated records cannot be changed in program P76B200F. You can change the Update Date field so that you can maintain the integrity between records in table F76B400F and the other tables that are created by the filter programs that populate table F76B400F.

If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Delete the record with the incorrect data from table F76B400F, add a new record with the correct data, and make the appropriate changes in the source table.
- Make the change in the source table, purge table F76B400F, and repopulate table F76B400F by running one or more of these filter programs:
- IN86-Filter for Mdse NF by CO (R76B100D).
- INSS/IN89-Fltr-Mdse NF issued by CO (R76B100D).
- IN86-Filter for Mdse NF by Supplier (R76B100E).
- INSS/IN89-Fltr-Mdse NF issued by Supplier (R76B100E).

Note. To capture all relevant records, you must run all of the filter programs that you ran before you purged table F76B400F.

Maintaining Data Integrity

When you run one of the filter programs listed above, the system populates table F76B006 according to these rules:

- If a record for a code/suffix combination does not exist in table F76B400F, the system creates a new record with the code/suffix combination information.
- If a record for the combination does exist, the system compares the date in the Update Date field in table F76B400F to the Fiscal Issue Date (data item BRADLJ) of the record being processed. If the Fiscal Issue Date is earlier than the date in the Update Date field, the system updates the Update Date field with the Fiscal Issue Date.

When you manually add, delete, or modify a record in table F76B400F, you must compare the date in the Update Date field to the date in the Fiscal Issue Date field (data item BRADLJ) and enter the appropriate date.

Forms Used to Maintain Transaction Nature Records

| Form Name | FormID | Navigation | Usage |
|------------------------------|-----------|--|--|
| Work with Transaction Nature | W76B200FA | <ul style="list-style-type: none"> IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Transaction Nature INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Transaction Nature | Locate records. |
| Transaction Nature Revisions | W76B200FB | On the Work with Transaction Nature form, select a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 transaction nature records. |

Adding or Revising Transaction Nature Records

Access the Transaction Nature Revisions form.

Nature of the Operation - Brazil

Enter an internal code that is the concatenation of the Transaction Nature Code and Transaction Nature Suffix, and is in a format that is reported to the Brazilian government.

Note. Blank is not a value; you must complete this field.

Maintaining IN86 and IN89 Records for Item Numbers and Service Codes

This section provides an overview of maintaining IN86 and IN89 records for item numbers and service codes and discusses how to maintain records.

Understanding IN86 and IN89 Records for Item Numbers and Service Codes

You use the IN86-Maintain Item Number/Service Code program (P76B200G) or the INSS/IN89- Maintain Item Num and Srv Code program (P76B200G) to review, add, and delete records in the IN86-Work Table for Item Number / Service Code (F76B400G).

You can modify any field in any record that you add to table F76B400G, except for the 2nd Item Number field. When you add or modify a record in table F76B400G, you must ensure that the data is valid; the system does not provide any validation for user-entered data.

Most fields for system-generated records cannot be changed in program P76B200G. You can change the Update Date field so that you can maintain the integrity between records in table F76B400G and the other tables that are created by the filter programs that populate table F76B400G.

If you must change the data in a non-editable field in a record, you must do one of these tasks:

- Delete the record with the incorrect data from table F76B400G, add a new record with the correct data, and make the appropriate changes in the source table.
- Make the change in the source table, purge table F76B400G, and repopulate table F76B400G by running one or more of these filter programs:
 - IN86-Filter for Storage Control (R76B100A).
 - INSS/IN89-Filter for Storage Control (R76B100A).
 - IN86-Filter for Inventory Records (R76B100B).
 - INSS/IN89-Filter for Inventory Records (R76B100B).
 - IN86-Filter for Services Outbound NF (R76B100C).
 - INSS/IN89-Fltr-Services Outbound NF (R76B100C).
 - IN86-Filter for Mdse NF by CO (R76B100D).
 - INSS/IN89-Fltr-Mdse NF issued by CO (R76B100D).
 - IN86-Filter for Mdse NF by Supplier (R76B100E).
 - INSS/IN89-Fltr-Mdse NF issued by Supplier (R76B100E).
 - IN86-Filter for Bill of Material (R76B3000).
 - INSS/IN89-Filter for Bill of Material (R76B3000).

Note. To capture all relevant records, you must run all of the filter programs that you ran before you purged table F76B400G.

Maintaining Data Integrity

When the system populates table F76B400G, it creates records according to these rules:

- If a record for an item number does not exist in table F76B400G, the system creates a new record with the item number.
- If a record for the item number does exist, the system compares the date in the Update Date field to the Effective From Date (data item IXEFFF) of the record being processed. If the Effective From Date is earlier than the date in the Update Date field, the system updates the Update Date field with the Effective From Date.

When you manually add, delete, or modify a record in table F76400G, you must compare the date in the Update Date field to the date in the Effective From Date (data item IXEFFF) and enter the appropriate date.

Forms Used to Maintain Records for Item Numbers and Service Codes

| Form Name | FormID | Navigation | Usage |
|--|-----------|---|--|
| Work With Item Number and Service Code | W76B200GA | <ul style="list-style-type: none"> • IN86 Maintenance Applications (G76BIN8602), IN86-Maintain Item Number/Service Code • INSS/IN89 Maintenance Applications (G76BINSS02), INSS/IN89-Maintain Item Num and Srv Code | Locate records. |
| Item Number and Service Code Revisions | W76B200GB | On the Work With Item Number and Service Code form, select a record and click Select to modify a record, or click Add to create a new record. | Modify or add IN86 or IN89 records for item numbers and service codes. |

Adding or Revising Records for Item Numbers and Service Codes

Access the Item Number and Service Code Revisions form.

CHAPTER 35

(BRA) Generating the Data and Text Files for IN86 and IN89 Tax Reporting

This chapter provides an overview of the generation process and describes how to:

- Generate the data and text files for journal entries.
- Generate the data and text files for account balances.
- Generate the data and text files for suppliers and customers.
- Generate the INSS Text flat file.
- Generate the data and text files for fixed assets.
- Generate the data and text files for storage control.
- Generate the data and text files for inventory records.
- Generate the data and text files for *notas fiscais* for services for IN89.
- Generate the data and text files for *notas fiscais* for services for IN86.
- Generate the data and text files for merchandise *notas fiscais* issued by company.
- Generate the data and text files for merchandise *notas fiscais* issued by suppliers.
- Generate the data and text files for third-party services inbound *notas fiscais*.
- Generate the data and text files for bills of material.
- Generate the data and text files for business units.
- Generate the data and text files for account master.
- Generate the data and text files for individuals and legal entities.
- Generate the data and text files for transaction nature records.
- Generate the data and text files for item numbers and service codes.

Understanding Generating the Data and Text Files

After you run the filter programs and maintain the IN86 or IN89 records as necessary, you run the appropriate IN86 or IN89 generate program to generate the data and text files that are required for IN86 or IN89 reporting. This table shows the output from the generate programs:

| Output | Description |
|------------------|---|
| Data file | A text file that contains the transaction data for the reporting period that you specify. You specify in processing options the file name and the location in which the system creates the file. You submit the text file to the government in an electronic format. |
| Data sample | An Adobe Acrobat file (PDF) that contains the first and last 30 records from the data file. The data sample consists of the text file data-strings in the same format as they appear in the data file; the system does not format the data sample with column headings. You must submit a printed copy of the PDF to the government. |
| ReadMe (Leiname) | <p>A text file that contains the headings for information that you must report and the specific layout of the corresponding data text file submission. You must complete the specific information that is indicated by the headings. For example, the text file contains headings for the CNPJ and Company Name, and you must specify that information for those headings. You can use any compatible text editor, such as Microsoft Word or Microsoft Notepad, to modify the text file.</p> <p>The government does not specify naming conventions for the ReadMe file, but the government specifies that the file extension must be ".txt".</p> <p>The system produces the ReadMe file in Portuguese, and you submit it to the government in an electronic format.</p> |
| Cover letter | A printed copy of the ReadMe file that you submit for IN86 reporting. You must generate the printed copy of the ReadMe file; the JD Edwards EnterpriseOne IN86 and IN89 generate programs do not initiate the printing of the ReadMe file. |

If the report completes successfully, the system produces the outputs. If the report does not complete successfully, the system generates a report that contains an error message.

Note. Several filter programs might populate the same complementary table. For example, both the IN86-Filter for Account Balance program (R76B902) and the IN86-Filter for Journal Entries program (R76B911) populate the IN86-Work Table for Account Master (F76B901). You should run all of the programs that are needed for reporting purposes before you run the programs to generate the data and text files for the shared complementary tables.

What You Should Know About Specifying the File Location for Data and ReadMe Files

When you generate the data and ReadMe files for IN86 and IN89 tax reporting, you must specify in the processing options the location to which the system writes the files. Observe these rules when specifying the location:

- The location that you specify must include a valid path, file name, and extension.
- You can specify a location on either a client or server as long as the folder or directory that you specify exists in the location that you specify.

- You must have write permissions to the folder or directory that you specify.

Generating the Generation of Data and Text Files for Journal Entries

This section provides an overview of the generation program for journal entries and discusses how to:

- Run the IN86-Generate Journal Entries program (R76B911A).
- Set the processing options for the IN86-Generate Journal Entries program (R76B911A).

Understanding the Data and Text Files for Journal Entries

You run the IN86-Generate Journal Entries program (R76B911A) after you review and maintain the IN86 records for journal entries. In particular, you must use the IN86-Maintain Journal Entries program (P76B911) to enter the Balancing Account (data item OFAC) for each record before you run the IN86-Generate Journal Entries program.

The IN86-Generate Journal Entries program reads the data in the IN86-Work Table for Journal Entries table (F76B911).

Running the IN86-Generate Journal Entries Program

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Journal Entries.

Setting Processing Options for the IN86-Generate Journal Entries Program (R76B911A)

Processing options enable you to specify the default processing for programs and reports.

Process

- 1. Data File Location and 2. Readme File Location** Specify the location where the system writes the data text file or readme file. You must specify a valid path, file name, and extension for the location. You can specify a location on either a client or server as long as the folder or directory that you specify exists in the location that you specify and you have write permissions to the folder or directory that you specify. If you leave these processing options blank, the system does not process any records.

For example, you might specify this path: C:\IN86\Data\filename.txt.

Generating the Generation of Data and Text Files for Account Balances for IN86 and IN89

This section provides an overview of the generation program for account balances and discusses how to:

- Run the IN86-Generate Monthly Account Balances program (R76B902A) and the INSS/IN89-Generate Monthly Account Balances program (R76B902A).
- Set processing options for the IN86-Generate Monthly Account Balances (R76B902A) and the INSS/IN89-Generate Monthly Acct Balances (R76B902A) programs.

Understanding the IN86-Generate Monthly Account Balances (R76B902A) and the INSS/IN89-Generate Monthly Account Balances (R76B902A) Programs

You run the IN86-Generate Monthly Account Balances program (R76B902A) or the INSS/IN89-Generate Monthly Account Balances program (R76B902A) after you review and maintain the IN86 or IN89 records for account balances. Program R76B902A reads the IN86-WorkTable for Account Balance table (F76B902), and produces the data files and text files that are required for IN86 and IN89 reporting.

Running the IN86-Generate Monthly Account Balances Program (R76B902A) and the INSS/IN89-Generate Monthly Account Balances Program (R76B902A)

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Monthly Account Balances.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Monthly Acct Balances.

Setting Processing Options for the IN86-Generate Monthly Account Balances (R76B902A) and the INSS/IN89-Generate Monthly Acct Balances (R76B902A) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

- 1. Data File Location and 2. Readme File Location** Specify the location where the system writes the data text file or readme file. You must specify a valid path, file name, and extension for the location. You can specify a location on either a client or server as long as the folder or directory that you specify exists in the location that you specify and you have write permissions to the folder or directory that you specify. If you leave these processing options blank, the system does not process any records.

For example, you might specify this path: C:\IN86\Data\filename.txt.

Generating the Generation of Data and Text Files for Suppliers and Customers for IN86 and IN89

This section provides an overview of the generation program for suppliers and customers and discusses how to:

- Run the IN86-Generate Suppliers and Customers program (R76B8602) and the INSS/IN89-Generate Suppliers & Customers program (R76B8602).

- Set processing options for the IN86-Generate Suppliers and Customers (R76B8602) and the INSS/IN89-Generate Suppliers & Customers (R76B8602) programs.

Understanding the Data and Text Files for Suppliers and Customers

You run the IN86-Generate Suppliers and Customers program (R76B8602) or the INSS/IN89-Generate Suppliers & Customers program (R76B8602) after you review and maintain the IN86 or IN89 records for suppliers and customers. Program R76B8602 reads the IN86-Work Table for Suppliers and Customers table (F76B8602), and produces the data and text files that you send to the government.

You specify whether the system generates records for suppliers or customers in the processing options. If you want to report on both customers and suppliers, you must run the program twice: once with the Supplier or Customer processing option set to 1 (Supplier), and once with the Supplier or Customer processing option set to 2 (Customer).

Note. If you run the report more than once, you must either name the output files differently for each run of the program or specify different paths for the output. If you do not specify different names or paths, the system overwrites the existing data.

Running the IN86-Generate Suppliers and Customers Program (R76B8602) and the INSS/IN89-Generate Suppliers & Customers Program (R76B8602)

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Suppliers and Customers.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Suppliers & Customers.

Setting Processing Options for the IN86-Generate Suppliers and Customers (R76B8602) and the INSS/IN89-Generate Suppliers & Customers (R76B8602) Programs

Processing options enable you to specify the default processing for programs and reports.

Select

- 1. Supplier or Customer** Specify whether the system generates the flat file for suppliers or customers. The flat file for suppliers is generated from the JD Edwards EnterpriseOne Accounts Payable system. The flat file for customers is generated from the JD Edwards EnterpriseOne Accounts Receivable system. Values are:
1: Supplier
2: Customer

Process

- 1. Data File Location and 2. Readme File Location** Specify the location where the system writes the data text file or readme file. You must specify a valid path, file name, and extension for the location. You can specify a location on either a client or server as long as the folder or directory that you specify exists in the location that you specify and you have

write permissions to the folder or directory that you specify. If you leave these processing options blank, the system does not process any records.

For example, you might specify this path: C:\IN86\Data\filename.txt.

Generating the INSS Text Flat File for IN89

This section provides an overview of the INSS/IN89-Generate INSS Text Flat File program (R76B04007) and discusses how to:

- Run the INSS/IN89-Generate INSS Text Flat File program (R76B04007).
- Set processing options for the INSS Text Flat File program (R76B04007).

Understanding the Generation of the INSS Text Flat File

When you run the INSS/IN89-Generate INSS Text Flat File program (R76B04007), the system generates a flat file that contains the name and mailing address for the suppliers for which you withhold INSS taxes. The flat file also included these data about the suppliers:

- CNPJ/CFP number
- INSS Registration number
- State tax ID
- Municipal tax ID

Prerequisite

The system reads the IN86-Work Table for Individuals and Legal Entities table (F76B8601) to populate the INSS text flat file. You must run all INSS/IN89 programs that populate table F76B8601 prior to producing this flat files.

See [Chapter 33, “\(BRA\) Filtering Records for IN86 and IN89 Tax Reporting,” Understanding How the System Populates the IN86-Work Table for Individuals and Legal Entities Table, page 671.](#)

Running the INSS/IN89-Generate INSS Text Flat File Program (R76B04007)

Select INSS/IN89-Text File Generators (G76BINSS03), INSS/IN89-Generate INSS Text Flat File.

Setting Processing Options for the INSS Text Flat File Program (R76B04007)

Processing options enable you to specify the default processing for programs and reports.

Process

- 1. Data File Location and 2. Readme File Location** Specify the location where the system writes the data text file or readme file. You must specify a valid path, file name, and extension for the location. You can specify a location on either a client or server as long as the folder or

directory that you specify exists in the location that you specify and you have write permissions to the folder or directory that you specify. If you leave these processing options blank, the system does not process any records.

For example, you might specify this path: C:\IN86\Data\filename.txt.

Generating the Data and Text Files for Fixed Assets for IN86 and IN89

This section provides an overview of the generation program for fixed assets and discusses how to:

- Run the IN86-Generate Fixed Assets Flat File program (R76B7200) and the INSS/IN89-Generate Fixed Assets Flat File program (R76B7200).
- Set processing options for the IN86-Generate Fixed Assets Flat File (R76B7200) and the INSS/IN89-Generate Fixed Assets Flat File (R76B7200) programs.

Understanding the Generation of Data and Text Files for Fixed Assets

You run the IN86-Generate Fixed Assets Flat File program (R76B7200) or the INSS/IN89-Generate Fixed Assets Flat File program (R76B7200) after you review and maintain the IN86 or IN89 records for fixed assets. Program R76B7200 reads the IN86-Work Table for Fixed Assets table (F76B8200), and produces the data and text files for IN86 and IN89 reporting.

You can use the Company field in the data selection, but the system does not include data from the Company field in the text and data files that you send to the government.

Running the IN86-Generate Fixed Assets Flat File (R76B7200) and INSS/IN89-Generate Fixed Assets Flat File (R76B7200) Programs

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Fixed Assets Flat File.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Fixed Assets Flat File.

Setting Processing Options for the IN86-Generate Fixed Assets Flat File (R76B7200) and the INSS/IN89-Generate Fixed Assets Flat File (R76B7200) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

1. **Data File Location and 2. Readme File Location** Specify the path and file name, including extension, of the flat file or the readme file. For example, you might specify this path:

C:\IN86\Data\filename.txt

The system does not produce the flat file unless the path and file name are valid for the file system that you are using, and you have write permissions

to the file. If you leave these processing options blank, the system does not process any records.

Generating the Data and Text Files for Storage Control for IN86 and IN89

This section provides an overview of the generation program for storage control and describes how to:

- Run the IN86-Generate Storage Control program (R76B300A) and the INSS/IN89-Generate Storage Control (R76B300A).
- Set processing options for the IN86-Generate Storage Control (R76B300A) and the INSS/IN89-Generate Storage Control (R76B300A) programs.

Understanding the Generation of Data and Text Files for Storage Control

You run the IN86-Generate Storage Control program (R76B300A) or the INSS/IN89-Generate Storage Control (R76B300A) after you review and maintain the IN86 or IN89 records for storage control. Program R76B300A reads the IN86-Work Table for Storage Control table (F76B400A), and produces the data and text files for IN86 and IN89 reporting.

Running the IN86-Generate Storage Control (R76B300A) and the INSS/IN89-Generate Storage Control (R76B300A) Programs

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Storage Control.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Storage Control.

Setting Processing Options for the IN86-Generate Storage Control (R76B300A) and the INSS/IN89-Generate Storage Control (R76B300A) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

**Text File Location
(Directory Path) and
ReadMe File Location
(Directory Path)**

Specify the directory path where the system creates the text file. This name should include the name of the text file and the text file extension. The backslash (\) character is reserved as a special key. Most file systems require a double backslash rather than a single backslash in order for the system to correctly write to the directory path specified. For example:
C:\\IN86Folder\\TextFile.txt

Generating the Data and Text Files for Inventory Records for IN86 and IN89

This section provides an overview of the generation program for inventory records and describes how to:

- Run the IN86-Generate Inventory Records program (R76B300B) and the INSS/IN89-Generate Inventory Records (R76B300B).
- Set processing options for the IN86-Generate Inventory Records (R76B300B) and the INSS/IN89-Generate Inventory Records (R76B300B) programs.

Understanding the Generation of the Data and Text Files for Inventory Records

You run the IN86-Generate Inventory Records program (R76B300B) or the INSS/IN89-Generate Inventory Records (R76B300B) after you review and maintain the IN86 or IN89 records for inventory records. Program R76B300B reads the IN86-Work Table for Inventory Records (F76B400B), and produces the data and text files for IN86 and IN89 reporting.

Running the IN86-Generate Inventory Records (R76B300B) and the INSS/IN89-Generate Inventory Records (R76B300B) Programs

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Inventory Records.

Select the INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Inventory Records.

Setting Processing Options for the IN86-Generate Inventory Records (R76B300B) and the INSS/IN89-Generate Inventory Records (R76B300B) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

Text File Location (Directory Path) and ReadMe File Location (Directory Path)

Specify the directory path where the system creates the text file. This name should include the name of the text file and the text file extension. The backslash (\) character is reserved as a special key. Most file systems require a double backslash rather than a single backslash in order for the system to correctly write to the directory path specified. For example: C:\\IN86Folder\\TextFile.txt

Generating the Data and Text Files for Notas Fiscais for Services for IN89

This section provides an overview of the generation program for *notas fiscais* for services and describes how to:

- Run the INSS/IN89-Generate Srv Outbound Nota Fiscal Program (R76B300J).
- Set processing options for the INSS/IN89-Generate Srv Outbound Nota Fiscal (R76B300J) program.

Understanding the Generation Program for Notas Fiscais for Services for IN89

You run the INSS/IN89-Generate Srv Outbound Nota Fiscal program (R76B300J) after you review and maintain the IN89 records for outbound *notas fiscais* for services. The INSS/IN89-Generate Srv Outbound Nota Fiscal program reads the data in the IN86-Work Table for Services Outbound Nota Fiscal Header (F76B410C) and the IN86-Work Table for Services Outbound Nota Fiscal Detail (F76B411C).

The INSS/IN89-Generate Srv Outbound Nota Fiscal program produces separate data and text files for the data in tables F76B410C and F76B411C.

Running the INSS/IN89-Generate Srv Outbound Nota Fiscal (R76B300J) Program

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Srv Outbound Nota Fiscal.

Setting Processing Options for the INSS/IN89-Generate Srv Outbound Nota Fiscal (R76B300J) Program

Processing options enable you to specify the default processing for programs and reports.

Process

Text File Header Location (Directory Path), Text File Detail Location (Directory Path), ReadMe Header File Location (Directory Path), and ReadMe Detail File Location (Directory Path)

Specify the directory path where the Text File will be created. (It should include the name of the text file and the text file extension.) The \ (backslash) character is reserved as a special key. Most file systems require that a double backslash be inserted instead of a single backslash in order for the system to correctly write to the directory path specified. For example, C:\\INSSFold\\TextFile.txt.

Generating the Data and Text Files for Notas Fiscais for Services for IN86

This section provides an overview of the generation program for *notas fiscais* for services and describes how to:

- Run the IN86-Generate Services Outbound NF program (R76B300C).
- Set processing options for the IN86-Generate Services Outbound NF program (R76B300C).

Understanding the Generation Program for Notas Fiscais for Services for IN86

You run the IN86-Generate Services Outbound NF program (R76B300C) after you review and maintain the IN86 records for outbound *notas fiscais* for services. The IN86-Generate Services Outbound NF program reads the data in the IN86-Work Table for Services Outbound Nota Fiscal Header (F76B410C) and the IN86-Work Table for Services Outbound Nota Fiscal Detail (F76B411C).

The IN86-Generate Services Outbound NF program produces separate data and text files for the data in tables F76B410C and F76B411C.

Running the IN86-Generate Services Outbound NF Program

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Services Outbound NF.

Setting Processing Options for the IN86-Generate Services Outbound NF Program (R76B300C)

Processing options enable you to specify the default processing for programs and reports.

Process

Text File Header Location (Directory Path), Text File Detail Location (Directory Path), ReadMe Header File Location (Directory Path), and ReadMe Detail File Location (Directory Path)

Enter the name of the directory path in which the system creates the text file. The path must include the name of the text file and the text file extension. Additionally, many file systems require a double backslash, instead of a single backslash, for the system to correctly write to the directory path that you indicate. For example, the directory path might be C:\\IN86Folder\\TextFile.txt

Generating the Data and Text Files for Merchandise Notas Fiscais Issued by Company for IN86 or IN89

This section provides an overview of the generation program for merchandise *notas fiscais* issued by company and describes how to:

- Run the IN86-Generate Mdse NF by CO program (R76B300D) and the INSS/IN89-Generate Merchandise NF by issued CO program (R76B300D).
- Set processing options for the IN86-Generate Mdse NF by CO (R76B300D) and the INSS/IN89-Generate Mdse NF issued by CO (R76B300D) programs.

Understanding the Generation Program for Merchandise Notas Fiscais Issued by Company

You run the IN86-Generate Mdse NF by CO program (R76B300D) or the INSS/IN89-Generate Merchandise NF by issued CO program (R76B300D) after you review and maintain the IN86 or IN89 records for merchandise *notas fiscais* that are issued by the company. Program R76B300D reads the data in the IN86-Work Table for Merchandise Nota Fiscal Issued by CO Hdr (F76B410D) and the IN86-Work Table for Merchandise Nota Fiscal Issued by CO Dtl (F76B411D).

Program R76B300D produces separate data and text files for the data in tables F76B410D and F76B411D.

Running the IN86-Generate Mdse NF by CO Program (R76B300D) and the INSS/IN89-Generate Merchandise NF by issued CO Program (R76B300D)

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Mdse NF by CO.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Mdse NF issued by CO.

Setting Processing Options for the IN86-Generate Mdse NF by CO (R76B300D) and the INSS/IN89-Generate Mdse NF issued by CO (R76B300D) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

| | |
|---|---|
| Text File Header Location (Directory Path), Text File Detail Location (Directory Path), ReadMe Header File Location (Directory Path), and ReadMe Detail File Location (Directory Path) | Enter the name of the directory path in which the system creates the text file. The path must include the name of the text file and the text file extension. Additionally, many file systems require a double backslash, instead of a single backslash, for the system to correctly write to the directory path that you specify. For example, the directory path might be C:\\IN86Folder\\TextFile.txt |
|---|---|

Generating the Data and Text Files for Merchandise Notas Fiscais Issued by Suppliers for IN86 and IN89

This section provides an overview of the generation program for merchandise *notas fiscais* issued by suppliers and describes how to:

- Run the IN86-Generate Mdse NF by Supplier program (R76B300E) and the INSS/IN89-Generate Mdse NF by Supplier program (R76B2300D).
- Set processing options for the IN86-Generate Mdse NF by Supplier (R76B300E) and the INSS/IN89-Generate Mdse NF by Supplier (R76B300E) programs.

Understanding the Generation Program for Merchandise Notas Fiscais Issued by Suppliers

You run the IN86-Generate Mdse NF by Supplier program (R76B300E) or the INSS/IN89-Generate Mdse NF by Supplier program (R76B2300D) after you review and maintain the IN86 or IN89 records for merchandise *notas fiscais* that are issued by suppliers. Program R76B300E reads the data in the IN86-Work Table for Merchandise NF Issued by Supplier Header (F76B410E) and the IN86-Work Table for Merchandise NF Issued by Supplier Detail (F76B411E).

Program R76B300E produces separate data and text files for the data in tables F76B410E and F76B411E.

Running the IN86-Generate Mdse NF by Supplier Program (R76B300E) and the INSS/IN89-Generate Mdse NF by Supplier Program (R76B2300D)

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Mdse NF by Supplier.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Mdse NF by Supplier.

Setting Processing Options for the IN86-Generate Mdse NF by Supplier (R76B300E) and the INSS/IN89-Generate Mdse NF by Supplier (R76B300E) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

Text File Header Location (Directory Path), Text File Detail Location (Directory Path), ReadMe Header File Location (Directory Path), and ReadMe Detail File Location (Directory Path)

Enter the name of the directory path in which the system creates the text file. The path must include the name of the text file and the text file extension. Additionally, many file systems require a double backslash, instead of a single backslash, for the system to correctly write to the directory path that you specify. For example, the directory path might be C:\\IN86Folder\\TextFile.txt

Generating the Data and Text Files for Third Party Services Inbound Notas Fiscais for IN89

This section provides an overview of the generation program for third-party services inbound *notas fiscais* and describes how to:

- Run the INSS/IN89-Gen 3rd Party Svcs Inbound NF program (R76B300H).
- Set processing options for the INSS/IN89-Gen 3rd Party Svcs Inbound NF program (R76B300H).

Understanding the Generation Program for Third-Party Services Inbound Notas Fiscais

You run the INSS/IN89-Gen 3rd Party Svcs Inbound NF program (R76B300H) after you review and maintain the IN89 records for inbound service *notas fiscais* that are issued by third parties. The INSS/IN89-Gen 3rd Party Svcs Inbound NF program reads the data in the INSS Work Table for Services Third Party Inbound NF Header table (F76B410H) and produces separate data and text files for the data in table F76B410H.

Running the INSS/IN89-Gen 3rd Party Svcs Inbound NF program (R76B300H)

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Gen 3rd Party Svcs Inbound NF.

Setting Processing Options for the INSS/IN89-Gen 3rd Party Svcs Inbound NF Program (R76B300H)

Processing options enable you to specify the default processing for programs and reports.

Process

Data Text File Location (Directory Path) and Read Me Text File Location (Directory Path)

Specify the directory path where the Text File will be created. (It should include the name of the text file and the text file extension.) The \ (backslash) character is reserved as a special key. Most file systems require that a double backslash be inserted instead of a single backslash in order for the system to correctly write to the directory path specified. For example, C:\\INSSFold\\TextFile.txt.

Generating the Data and Text Files for Bills of Material for IN86 and IN89

You run the IN86-Generate Item/Part List program (R76B3010) or the INSS/IN89-Generate Item/Part List program (R76B3010) after you review and maintain the IN86 or IN89 records for bills of material. Program R76B3010 reads the data in the Work Table for Item/Part List (F76B3010).

This section describes how to:

- Run IN86-Generate Item/Part List program (R76B3010) and the INSS/IN89-Generate Item/Part List program (R76B3010).
- Set processing options for the IN86-Generate Item/Part List (R76B3010) and the INSS/IN89-Generate Item/Part List (R76B3010) programs

Running the IN86-Generate Item/Part List Program (R76B3010) and the INSS/IN89-Generate Item/Part List Program (R76B3010)

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Item/Part List.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Item/Part List.

Setting Processing Options for the IN86-Generate Item/Part List (R76B3010) and the INSS/IN89-Generate Item/Part List (R76B3010) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

1. **Data File Location** and 2. **Readme File Location** Specify the location where the system writes the data text file or the readme text file. You must specify a valid path, file name, and extension for the location. You can specify a location on either a client or server as long as the folder or directory that you specify exists in the location that you specify and you have write permissions to the folder or directory that you specify. If you leave these processing options blank, the system does not process any records.

For example, you might specify this path: C:\IN86\Data\filename.txt.

Generating Data and Text Files for Business Units for IN86 and IN89

You run the IN86-Generate Business Unit program (R76B006A) or the INSS/IN89-Generate Business Unit (R76B006A) after you review and maintain the IN86 or IN89 records for business units. Program R76B006A reads the IN86-Work Table for Business Unit (F76B006), and produces the data and text files that you submit to the government.

This section describes how to:

- Run the IN86-Generate Business Unit program (R76B006A) and the INSS/IN89-Generate Business Unit (R76B006A) program.
- Set processing options for the IN86-Generate Business Unit (R76B006A) and INSS/IN89-Generate Business Unit (R76B006A) programs.

Running the IN86-Generate Business Unit Program (R76B006A) and the INSS/IN89-Generate Business Unit (R76B006A) Program

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Business Unit.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Business Unit.

Setting Processing Options for the IN86-Generate Business Unit (R76B006A) and the INSS/IN89-Generate Business Unit (R76B006A) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

1. **Data File Location** and 2. **Readme File Location** Specify the location where the system writes the data file or the readme file. The location that you specify must include the path, file name, and extension

of the data file. For example, you might specify C:\IN86\Data\filename.txt. You can specify a location on either a client or server as long as the folder or directory that you specify exists in the location that you specify and is valid for the file system. Additionally, you must have write permissions to the folder or directory that you specify.

If you do not complete these processing options, the system does not process any records.

Generating the Data and Text Files for Account Master Information for IN86 and IN89

Run the IN86-Generate Account Master Information program (R76B901A) or the INSS/IN89-Generate Account Master Info program (R76B901A) after you review and maintain the IN86 or IN89 records for account master information. Program R76B901A reads the IN86-Work Table for Account Master (F76B901), and produces the data and text files that you send to the government.

This section describes how to:

- Run the IN86-Generate Account Master Information program (R76B901A) or the INSS/IN89-Generate Account Master Info program (R76B901A).
- Set processing options for the IN86-Generate Account Master Information (R76B901A) and the INSS/IN89-Generate Account Master Info (R76B901A) programs.

Running the IN86-Generate Account Master Information (R76B901A) or the INSS/IN89-Generate Account Master Info (R76B901A) Programs

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Account Master Information.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Account Master Info.

Setting Processing Options for the IN86-Generate Account Master Information (R76B901A) and the INSS/IN89-Generate Account Master Info (R76B901A) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

1. **Data File Location and 2. Readme File Location** Specify the location where the system writes the data text file or the readme file. You must specify a valid path, file name, and extension for the location. You can specify a location on either a client or server as long as the folder or directory that you specify exists in the location that you specify and you have write permissions to the folder or directory that you specify. If you leave these processing options blank, the system does not process any records.

For example, you might specify this path: C:\IN86\Data\filename.txt.

Generating the Data and Text Files for Individuals and Legal Entities for IN86 and IN89

You run the IN86-Generate Individuals/Legal Entities program (R76B8603) or the INSS/IN89-Generate Indivl and Lgl Entity program (R76B8603) after you review and maintain the IN86 records for individuals and legal entities. Program R76B8603 reads the IN86-Work Table for Individuals and Legal Entities (F76B8601), and produces the data and text files that you send to the government.

This section describes how to:

- Run the IN86-Generate Individuals/Legal Entities program (R76B8603) and the INSS/IN89-Generate Indivl and Lgl Entity program (R76B8603).
- Set processing options for the IN86-Generate Individuals/Legal Entities (R76B8603) and the INSS/IN89-Generate Indivl and Lgl Entity (R76B8603) programs.

Running the IN86-Generate Individuals/Legal Entities Program (R76B8603) and the INSS/IN89-Generate Indivl and Lgl Entity Program (R76B8603)

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Individuals/Legal Entities.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Indivl and Lgl Entity.

Setting Processing Options for the IN86-Generate Individuals /Legal Entities (R76B8603) and the INSS/IN89-Generate Indivl and Lgl Entity (R76B8603) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

1. **Data File Location and 2. Readme File Location** Specify the location where the system writes the data text file or the readme text file. You must specify a valid path, file name, and extension for the location. You can specify a location on either a client or server as long as the folder or directory that you specify exists in the location that you specify and you have write permissions to the folder or directory that you specify. If you leave these processing options blank, the system does not process any records.

For example, you might specify this path: C:\IN86\Data\filename.txt.

Generating the Data and Text Files for Transaction Nature Records for IN86 and IN89

You run the IN86-Generate Transaction Nature program (R76B300F) or the INSS/IN89-Generate Transaction Nature program (R76B300F) after you review and maintain the IN86 or IN89 records for transaction nature codes. Program R76B300F reads the IN86-Work Table for Transaction Nature (F76B400F), and produces the data and text files that you send to the government.

This section describes how to:

- Run the IN86-Generate Transaction Nature program (R76B300F) and the INSS/IN89-Generate Transaction Nature program (R76B300F).
- Set processing options for the IN86-Generate Transaction Nature (R76B300F) and the INSS/IN89-Generate Transaction Nature (R76B300F) programs.

Running the IN86-Generate Transaction Nature Program (R76B300F) and the INSS/IN89-Generate Transaction Nature Program (R76B300F)

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Transaction Nature.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Transaction Nature.

Setting Processing Options for the IN86-Generate Transaction Nature (R76B300F) and the INSS/IN89-Generate Transaction Nature (R76B300F) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

**Text File Location
(Directory Path) and
ReadMe File Location
(Directory Path)**

Enter the name of the directory path in which the system creates the text file. The path must include the name of the text file and the text file extension. Additionally, many file systems require a double backslash, instead of a single backslash, for the system to correctly write to the directory path that you specify. For example, the directory path might be C:\\IN86Folder\\TextFile.txt

Generating the Data and Text Files for Item Number and Service Code Records for IN86 and IN89

You run the IN86-Generate Item Number/Service Code program (R76B300G) or the INSS/IN89-Generate Item Num and Srv Code program (R76B300G) after you review and maintain the IN86 or IN89 records for item numbers and service codes. Program R76B300G reads the IN86-Work Table for Item Number and Service Code (F76B400G), and produces the data and text files that you send to the government.

This section describes how to:

- Run the IN86-Generate Item Number/Service Code program (R76B300G) and the INSS/IN89-Generate Item Num and Srv Code (R76B300G) programs.
- Set processing options for the IN86-Generate Item Number/Service Code (R76B300G) and the INSS/IN89-Generate Item Num and Srv Code (R76B300G) programs.

Running the IN86-Generate Item Number/Service Code Program (R76B300G) and the INSS/IN89-Generate Item Num and Srv Code Program (R76B300G)

Select IN86 Text File Generators (G76BIN8603), IN86-Generate Item Number/Service Code.

Select INSS/IN89 Text File Generators (G76BINSS03), INSS/IN89-Generate Item Num and Srv Code.

Setting Processing Options for the IN86-Generate Item Number/Service Code (R76B300G) and the INSS/IN89-Generate Item Num and Srv Code (R76B300G) Programs

Processing options enable you to specify the default processing for programs and reports.

Process

**Text File Location
(Directory Path) and
ReadMe File Location
(Directory Path)**

Specify the directory path where the system creates the text file. This name should include the name of the text file and the text file extension. The backslash (\) character is reserved as a special key. Most file systems require a double backslash rather than a single backslash in order for the system to correctly write to the directory path specified. For example:
C:\\IN86Folder\\TextFile.txt

CHAPTER 36

(BRA) Processing IN68 Records for Tax Reporting

This chapter provides overviews of IN68 tax reporting and the text file generation programs, and describes how to:

- Work with the Physical and Legal Person Table - IN68.
- Work with the Codes Table for IN68.
- Work with accounts receivable and accounts payable records.
- Work with account balance records.
- Work with general ledger records.
- Work with *nota fiscal* records for items.
- Work with *nota fiscal* records for services.
- Working with item ledger records.
- Working with inventory records.
- Working with product data records.
- Working with fixed assets records.
- Working with fixed assets with depreciation on hold records.
- Working with fixed assets with currency corrections.

Understanding IN68 Tax Reporting

In Brazil, the federal government requires that all companies submit electronic media reports for:

- All of their commercial activities that generate payables and receivables.
- The depreciation of fixed assets and the accounting activities that are associated with the fixed assets.
- The Bill of Material structure and the CARDEX transactions that are used for the accounting of raw materials which are used in the manufacture and shipping of end items, if the company is a manufacturer.

To meet this legal requirement in Brazil, you must create and file IN68 text files. The IN68 reporting process is based on the law SRF No. 068, which is effective as of 1995. This law requires the generation of fiscal information for the collection of income tax that must be sent to the Brazilian Government Department of Revenue.

JD Edwards EnterpriseOne software provides batch processes that you use to create IN68 work files for several financial and manufacturing systems as well as work files for the JD Edwards EnterpriseOne Sales Order Management, JD Edwards EnterpriseOne Procurement, and JD Edwards EnterpriseOne Fixed Assets systems.

For each of the required IN68 text files, you create the IN68 work files, and then review and revise them as necessary. Then you generate a text file that you submit to the tax authority.

When you run the process to create a work file, the system populates the Physical and Legal Person Table - IN68 (F76B70) and Codes Table - IN68 (F76B80) tables with the person/legal entity code (table F76B70) and the IN68 codes (table F76B80) from the records that the system reads when creating the work file. Then, when you generate the final report and text file, the system validates that each record in the work file has an entry in tables F76B70 and F76B80.

Note. Only some of the batch programs write records to table F76B70.

You generate the text files for tables F76B70 and F76B80 after you generate all of the other required text files. You purge these tables before you generate the work files for the next IN68 reporting period.

Understanding the IN68 Text File Generation Programs

The batch processes for generating IN68 produce reports and text files that you forward to the tax authority. You can set a processing option to generate only the report. When you run the batch processes, the system names the text files by appending the extension .txt to the code for the report. For example, when you run the Final Creation for Item Ledger - IN68 program (R76B507), the system creates a report with the code of R76B509 and names the text file F76B509.txt. The system saves the text file to the directory that you specify in the processing options. You must generate and save the file on a client machine; you cannot generate or save the file on a server.

This table shows the batch processes you use to generate reports and text files for IN68:

| Workfile | Batch Process | Reports |
|---|--|--|
| Account Payable and Receivable Table - IN68 (F76B20) | Final Creation for A/P and A/R - IN68 (R03B581) | R03B581 |
| Account Ledger - IN68 (F76B10) | Final Creation for Journal Entries - IN68 (R098311) | R76B311 |
| Account Balances - IN68 (F76B11) | Final Creation for Account Balances - IN68 (R098301) | R76B301 |
| Workfiles: <ul style="list-style-type: none"> • Nota Fiscal Header/Table for Goods - IN68 (F76B30) • Nota Fiscal Detail/Table for Goods - IN68 (F76B31) | Final Creation for Nota Fiscal Item - IN68 (R76B307) | Reports for outbound <i>notas fiscais</i> for items: <ul style="list-style-type: none"> • R76B30S • R76B31S • R76B30T Reports for inbound <i>notas fiscais</i> for items: <ul style="list-style-type: none"> • R76B30E • R76B31E • R76B30T |

| Workfile | Batch Process | Reports |
|---|--|--|
| Workfiles: <ul style="list-style-type: none"> • Nota Fiscal Header/Table for Services - IN68 (F76B40) • Nota Fiscal Detail/Table for Services - IN68 (F76B41) | Final Creation for Nota Fiscal of Services - IN68 (R76B407) | Reports for outbound <i>notas fiscais</i> for services: <ul style="list-style-type: none"> • R76B40S • R76B41S Reports for inbound <i>notas fiscais</i> for services: <ul style="list-style-type: none"> • R76B40E • R76B41E |
| Item Ledger Table - IN68 (F76B50) | Final Creation for Item Ledger - IN68 (R76B507) | R76B509 |
| Inventory Records Table - IN68 (F76B51) | Final Creation for Inventory Records - IN68 (R76B517) | R76B519 |
| Workfiles: <ul style="list-style-type: none"> • Products Table - IN68 (F76B60) • Packing and Raw Material Table - IN68 (F76B61) | Final Creation for Data of Products - IN68 (R76B607) | R76B60P R76B61I R76B61E |
| Fixed Asset Table - IN68 (F76B62) | Final Creation for Fixed Assets IN68 (R76B627) | R76B629 |
| Information for Depreciation on Hold Table - IN68 (F76B63) | Final Creation for Fixed Assets w/ Depr on Hold - IN68 (R76B637) | R76B639 |
| Balances/JEs w/Currency Correction Table - IN68 (F76B64) | Final for Balances/JEs w/ Currency Correction - IN68 (R76B647) | R76B649 |
| Physical and Legal Person Table - IN68 (F76B70) | Final Creation for Physical and Legal Person - IN68 (R76B707) | R76B709 |
| Codes Table - IN68 (F76B80) | Final Creation of Codes - IN68 (R76B807) | R76B809 |

The above programs write records to the text file only after they evaluate the records in the workfiles and tables F76B80 and F76B70.

Using Data Selection for each batch process, you determine the records that the system should consider for IN68. The XJDE0001 version for each batch process contains default data selection.

When you generate the reports and text files, the system validates the information in the selected records in the workfiles against table F76B80, and writes a record to the report and text file for each record in the workfile if the required data is in table F76B80. If the data is not in table F76B80, the system writes an error message to the report and text file.

Each selected record in the text file must contain the codes that are required by the final creation batch process. In addition, the values for the type of data expressed by the code must match; and the G/L Date of the record in table F76B80 must be less than or equal to the G/L Date of the selected record in the workfile.

Example of Validation

The Work File Creation for Accounts Receivable - IN68 program (R03B580) creates table F76B20. The Final Creation for accounts receivable and accounts payable program generates the report and text file for the table.

When you run the Final Creation for AR and AP program for each selected record in table F76B20, the Final Creation for AR and AP program writes a record to the F03B581.txt file if the F76B80 record meets these criteria:

- A G/L Date that is less than or equal to the G/L Date of the F76B20 record read.
- Code 02.
- Code 06.
- Code 07.
- An Operation Type that is equal to the Operation Type of the F76B20 record read.
- A Document Type that is equal to the Document Type of the F76B20 record read.
- A Search Type that is equal to the Search Type of the F76B20 record read.

Codes Validated

This table shows the codes that the system validates for each batch process:

| Batch Process | Codes Validated |
|--|---|
| Final Creation for A/P and A/R - IN68 (R03B581) | 02 - Type of Operation 06 - Document Type 07 - Category Individual/Legal Entity |
| Final Creation for Journal Entries - IN68 (R098311) | 01 - Chart of Accounts 02 - Type of Operation 03 - Cost Center |
| Final Creation For Account Balances - IN68 (R098301) | 01 - Chart of Accounts |

| Batch Process | Codes Validated |
|---|--|
| Final Creation for Nota Fiscal Item - IN68 (R76B307) | <p>For F76B30:</p> <ul style="list-style-type: none"> • 06 - Document Type • 07 - Category Individual/Legal Entity • 08 - Model Fiscal Documents • 11 - Mode of Transport • 12 - Volume Type • 13 - Modality of Freight <p>For F76B31:</p> <ul style="list-style-type: none"> • 02 - Type of Operation • 03 - Cost Center • 14 - Products • 15 - Unit of Measure /Master for Sales • 16 - Federal Tax Situation • 18 - Fiscal Classification |
| Final Creation for Nota Fiscal of Services - IN68 (R76B407) | <p>For F76B40:</p> <ul style="list-style-type: none"> • 06 - Document Type • 07 - Category Individual/Legal Entity • 08 - Model Fiscal Documents <p>For F76B41:</p> <p>21 - Service Code</p> |
| Final Creation for Item Ledger - IN68 (R76B507) | <p>01 - Chart of Accounts</p> <p>02 - Type of Operation</p> <p>03 - Cost Center</p> <p>06 - Document Type</p> <p>14 - Products</p> <p>23 - Nature of the Stock</p> |
| Final Creation for Inventory Records - IN68 (R76B517) | <p>03 - Cost Center</p> <p>10 - Localization</p> <p>14 - Products</p> <p>15 - Unit of Measure / Master for Sales</p> <p>18 - Fiscal Classification</p> <p>23 - Nature of the Stock</p> |

| Batch Process | Codes Validated |
|--|---|
| Final Creation for Data of Products - IN68 (R76B607) | 03 - Cost Center 14 - Products 15 - Unit of Measure / Master for Sales 24 - Raw Material 25 - Packing |
| Final Creation for Fixed Assets - IN68 (R76B627) | 01 - Chart of Accounts 03 - Cost Center 04 - Expense 06 - Document Type 27 - Fixed Asset Situation |
| Final Creation for Fixed Assets w/ Depr on Hold - IN68 (R76B637) | None |

Working with the Physical and Legal Person Table - IN68

This section provides an overview of the Physical and Legal Person Table - IN68 and describes how to:

- Purge the Physical and Legal Person Table - IN68.
- Add records in the Physical and Legal Person Table - IN68.
- Run the Final Creation for Physical and Legal Person - IN68 (R76B707) Program.
- Set processing options for the Final Creation for Physical and Legal Person - IN68 program (R76B707).

Understanding the Physical and Legal Person Table - IN68

All of the JD Edwards EnterpriseOne programs that cull address book information for IN68 reports write records to the Physical and Legal Person Table - IN68 (F76B70). These records include information such as the federal and state tax IDs. Data in table F76B70 becomes part of the IN68 reporting.

When you generate certain work files for IN68, the system also writes records to the Physical and Legal Person Table - IN68 (F76B70). When you generate the final text files and reports for those work files, the system validates information in the work file tables against table F76B70. The validation assures that a record exists in table F76B70 for every customer, supplier, or other entity for which you are reporting a transaction that is reportable for IN68 purposes. You submit a text file containing the records in table F76B70 along with the other IN68 text.

These programs write records to the F76B70 table:

- Work File Creation for Accounts Receivable - IN68 (R03B580).

- Work File Creation for A/P IN68 (R04530).
- Work File Creation for Nota Fiscal Item - IN68 (R76B300).
- Work File Creation for Nota Fiscal of Services - IN68 (R76B400).
- Work File Creation for Item Ledger - IN68 (R76B500).

If you create *notas fiscais* outside of the JD Edwards EnterpriseOne systems for customers, suppliers, or others who are not in the JD Edwards EnterpriseOne Address Book system, you must add the required data to table F76B70. You can also revise existing records in table F76B70.

Purging Records

After you generate all of the required text files for an IN68 reporting period, you purge the table so that you do not carry over data from one reporting period to the next.

You should purge the Physical and Legal Person Table - IN68 (F76B70) only after all of the text files and reports for a reporting period are complete. If you purge this table before generating all reports and text files, the system displays error messages for any report or text file for which required data does not exist in table F76B70.

Generating the Physical and Legal Person Text File and Report for IN68

The Final Creation, Physical/Legal Entities batch process lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report. The batch process names the text file F76B709.txt and saves it to the directory that you enter in the processing options. If a file with this name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate.

You must generate and save the file on a client machine; you cannot generate or save the file on a server.

Forms Used to Add and Revise Records in Table F76B70

| Form Name | FormID | Navigation | Usage |
|---|----------|--|------------------------------|
| Revision of Individuals / Legal Entities - Research | W76B704A | Maintenance and Inquiries - IN68 (G76BIN682), Revision of Individuals/Legal Entities | Locate records to revise. |
| Revision of Individuals / Legal Entities - Register | W76B704B | On the Revision of Individuals / Legal Entities - [Research] form, click Add. | Add records to table F76B70. |

Running the Purge Program

Select Filter Programs - IN68 (G76BIN681), Work File Creation-Physical/Legal Entity.

Adding Records in Table F76B70

Access the Revision of Individuals / Legal Entities - [Register] form.

Additional Date

Enter a date that can be used with supplemental data information. For example, you can enter a verification date in this field to show when information was last reviewed and possibly updated.

| | |
|-----------------------------------|---|
| Search Type | <p>Enter a user-defined code (01/ST) that specifies the kind of address book record to search for. Examples include:</p> <p><i>E</i>: Employees</p> <p><i>X</i>: Ex-employees</p> <p><i>V</i>: Suppliers</p> <p><i>C</i>: Customers</p> <p><i>P</i>: Prospects</p> <p><i>M</i>: Mail distribution lists</p> <p><i>TAX</i>: Tax authorities</p> |
| Person/Corporation Code | <p>Enter a code that designates the type of taxpayer. For 1099 reporting for U.S. suppliers and foreign suppliers, the system selects only records with a code of P or N.</p> <p>Values for U.S. entities are:</p> <p>Blank: Corporate entity (the Tax ID prints as 12-3456789)</p> <p><i>C</i>: Corporate entity (the Tax ID prints as 12-3456789)</p> <p><i>P</i>: Individual (the Tax ID prints as 123-45-6789)</p> <p><i>N</i>: Noncorporate entity (the Tax ID prints as 12-3456789)</p> <p>Values for non-U.S. entities are:</p> <p><i>1</i>: Individual</p> <p><i>2</i>: Corporate entity</p> <p><i>3</i>: Both an individual and a corporate entity</p> <p><i>4</i>: Noncorporate entity</p> <p><i>5</i>: Customs authority</p> |
| Alpha Name | <p>Enter the text that names or describes an address. This 40-character alphabetic field appears on a number of forms and reports. You can enter dashes, commas, and other special characters, but the system cannot search on them when you use this field to search for a name.</p> |
| Tax ID | <p>Enter the identification code required by various tax authorities. This can be a social security number, federal or state corporate tax ID, sales tax number, and so on. The system verifies the number and prints the separators in their correct format, according to the value of TAXC (Person/Corporation Code). If no value exists for TAXC, the system uses the Corporate Entity.</p> |
| State Tax ID | <p>Enter a code that identifies an entity to various taxing authorities. Such codes would include Social Security Number, federal or state corporate tax IDs, sales tax number, and so forth. This code has specifically been established for Payroll to be able to handle the current requirement of states such as Idaho and Louisiana which use more than 9 positions. Do not enter hyphens or dashes in this field.</p> |
| Taxpayer ID - Municipality | <p>Enter the identification number used by the county to identify a taxpayer. In Brazil, this information is mandatory on <i>notas fiscais</i> and all legal reports.</p> |

| | |
|-------------------------------|---|
| Alternate Company Name | Enter an alternative company description that might be different from the legal name of the company. |
| County | Enter the name of a county, parish, or other political district that is necessary for the address or for tax purposes. |
| City | Enter a name that indicates the city associated with the address. |
| State | Enter a user-defined code (00/S) that specifies the state or province. This code is usually a postal service abbreviation. |
| Postal Code | Enter the United States ZIP code or the postal code that specifies where a letter is to be routed. Attach this code to the address for delivery in other countries. This code is used as the low end value when doing Postal Code Transaction range processing. |

Running the Final Creation For Physical/Legal Person (R76B707) Program

Select Final Generation and Integrities - IN68 (G76BIN683), Final Creation, Physical/Legal Entities.

Setting Processing Options for the Final Creation for Physical and Legal Person - IN68 Program (R76B707)

Processing options enable you to specify the default processing for programs and reports.

Report Generation

This processing option specifies whether the system generates a text file and where the system stores the text file.

- | | |
|---|---|
| 1. Enter '1' to only generate the report. If left blank, the report and the .TXT file will be created. | Specify report output. Values are: |
| | Blank: Create the report and .txt file. |
| | 1: Create the report only. |

Directory TXT

This processing option specifies whether the system generates a text file and where the system stores the text file.

- | | |
|-----------------------|---|
| Directory Name | Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file. |
| | For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory: C:\B9\ |

Working with the Codes Table for IN68

This section provides an overview of the Codes Table - IN68 (F76B80) and describes how to:

- Purge the Codes Table - IN68.
- Add records to the Codes Table - IN68.
- Run the Final Creation of Codes - IN68 (R76B807) Program.
- Set processing options for the Final Creation of Codes - IN68 program (R76B807).

Understanding the Codes Table for IN68

All of the programs for IN68 reports write records to the Codes Table - IN68 (F76B80). These records include information such as the bank and bank account numbers that are used for financial transactions. Data in table F76B80 becomes part of the IN68 reporting.

If you create *notas fiscais* outside of the JD Edwards EnterpriseOne systems for customers, suppliers, or others who are not in the JD Edwards EnterpriseOne Address Book system, you must add the required data to table F76B80 by using the Revision of Codes - IN68 program (P76B804).

Purging Records

After you generate all of the required text files for an IN68 reporting period, you purge table F76B80 so that you do not carry over data from one reporting period to the next.

You should purge the Codes Table - IN68 (F76B80) only after all text files and reports for a reporting period are complete. If you purge this table before generating all reports and text files, the system displays error messages for any report or text file for which required data does not exist in table F76B80.

Adding and Revising Records

When you generate work files for IN68, the system also writes records to the Codes Table - IN68 (F76B80). When you generate the final text files and reports for IN68 reporting, the system validates information in the work file tables against table F76B80. The validation assures that a record exists in table F76B80 for every transaction that is reportable for IN68 purposes. You submit a text file containing the records in table F76B80 along with the other IN68 text files.

If you generate reportable transactions outside of the JD Edwards EnterpriseOne systems, you must add the required data to table F76B80. You can also revise existing records in the table.

Generating the Code Table for IN68 Text File and Report

The Final Creation of Codes batch process lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report. The batch process names the text file F76B809.txt and saves it to the directory that you enter in the processing options. If a file with this name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate.

You must generate and save the file on a client machine; you cannot generate or save the file on a server.

Forms Used to Add and Revise Records in Table F76B80

| Form Name | FormID | Navigation | Usage |
|--------------------------------|----------|--|------------------------------|
| Revision of Codes - [Research] | W76B804A | Maintenance and Inquiries - IN68 (G76BIN682), Revision of Codes - IN68 | Locate records to revise. |
| Revision of Codes - [Register] | W76B804B | On the Revision of Codes - Register form, click Add. | Add records to table F76B80. |

Running the Purge F76B800 Program (R76B800)

Select Filter Programs - IN68 (G76BIN681), Work File Creation (Clearing) for Codes.

Adding Records in Table F76B80

Access the Revision of Codes - Register form.

| | |
|------------------------------|---|
| Code Table | Enter the code from the Codes - IN68 UDC (76/IN). The system uses these codes to validate records in the IN68 work files. |
| Used Code | Enter a code that further describes a code in the Codes - IN68 UDC table (76/IN). For example, code 07 in the Codes - IN68 UDC represents an individual or legal entity. You might set up C (Customer), V (Vendor), and E (Employee) as Used Codes for code 07. |
| Additional Date | Enter a date that can be used with supplemental data information. For example, you can enter a verification date in this field to show when information was last reviewed and possibly updated. |
| Used Code Description | Enter the description of the Used Code. |

Running the Final Creation of Codes (R76B807) Program

Select Final Generation and Integrities - IN68 (G76BIN683), Final Creation of Codes.

Setting Processing Options for the Final Creation of Codes - IN68 Program (R76B807)

Processing options enable you to specify the default processing for programs and reports.

Report Generation

These processing options specify whether the system generates a text file and where the system stores the text file.

| | |
|---|---|
| 1. Enter '1' to only generate the report. If left blank, the report and the .TXT file will be created. | Specify report output. Values are: Blank: Create the report and the .txt file. /: Create the report only. |
|---|---|

Directory TXT

These processing options specify whether the system generates a text file and where the system stores the text file.

Directory Name

Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file.

For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory:

C:\B9\

Working With Accounts Receivable and Accounts Payable Records for IN68

This section provides overviews of accounts receivable records and accounts payable records for IN68, and describes how to:

- Run the Work File Creation for Accounts Receivable - IN68 program (R03B580).
- Set processing options for the Work File Creation for Accounts Receivable - IN68 program (R03B580).
- Run the Work File Creation for A/P program (R04530).
- Set processing options for Work File Creation for A/P program (R04530).
- Add records to the Account Payable and Receivable Table - IN68.
- Run the Final Creation for Accounts Payable/Receivable - IN68 program (R03B581).
- Set processing options for Final Creation for Accounts Payable/Receivable - IN68 program (R03B581).

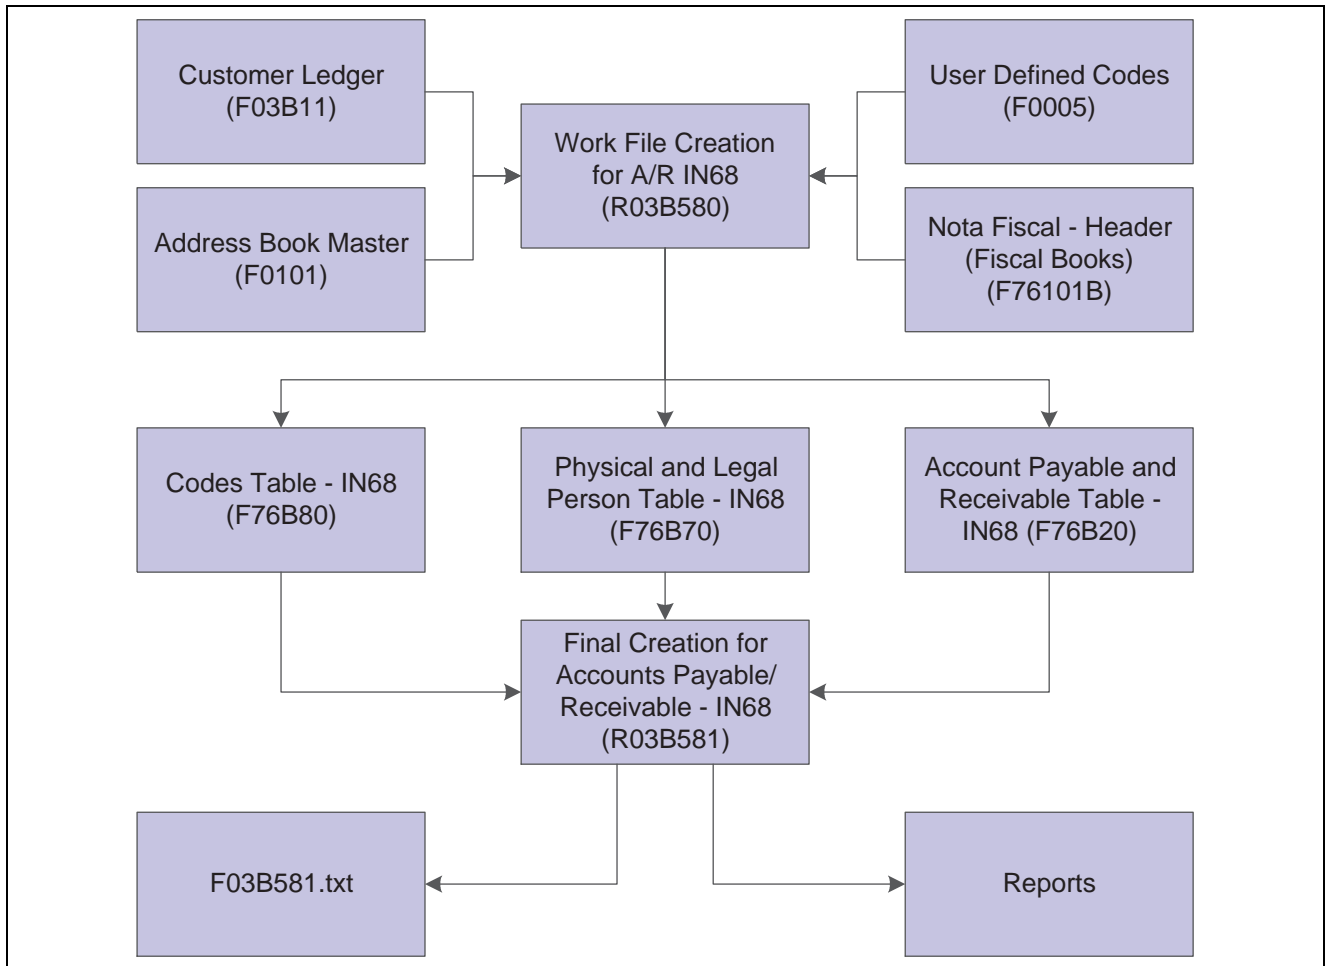

Understanding Accounts Receivable Records for IN68

To generate Accounts Receivable records for IN68, you run the Work File Creation for Accounts Receivable - IN68 batch process (R03B580) to generate the Account Payable and Receivable Table - IN68 (F76B20). Table F76B20 is the work file that contains a subset of data from these tables:

- Customer Ledger (F03B11).
- Address Book Master (F0101).
- User-Defined Codes (F0005).
- Nota Fiscal - Header (Fiscal Books) (F76101B).

After you generate the work file, you can use the Account Payable and Receivable Revisions program (P03B130) to review and make any necessary changes to the work file. After you make the necessary changes, you run the Final Creation for Accounts Payable/Receivable - IN68 batch process (R03B581) to create a report and the text file that you send to the tax authority.

This graphic shows how the system processes accounts receivable records for IN68 tax reporting:

Accounts receivable records for IN68

Understanding the Work File Creation for A/R Batch Process (R03B580)

You run the Work File Creation for A/R batch process (R03B580) to generate the Account Payable and Receivable Table - IN68 (F76B20). The Work File Creation for A/R process also populates records in the Physical and Legal Person Table - IN68 (F76B70) and the Codes Table - IN68 (F76B80).

By using Data Selection, you determine the records in the Customer Ledger (F03B11) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each selected F03B11 record, the Work File Creation for A/R process writes a record to table F76B20 according to these rules:

- Verifies that the address number that appears in the F03B11 record exists in the Address Book Master table (F0101).
- Identifies each address that is read from table F0101 with the description of the Search Type field in the User-Defined Codes table (F0005).

For example, if the description for the search type is *Customer*, the record is identified as a Customer record. You set up search types in the Search Type UDC (01/ST).

- Writes a record to the table F76B20 according to the input in the Operation Type and Document Type processing options.

- Determines the Debit/Credit Indicator according to the arithmetic operator (>, <) in the Gross Amount field in table F03B11.

If RPAG >= 0, then the Debit/Credit Indicator = D for A/R. If the RPAG < 0, then the Debit/Credit Indicator = C for A/P.

After writing a record to table F76B20, the batch process:

- Populates table F76B70 if a corresponding record does not exist.
- Populates table F76B80 if a corresponding record does not exist.

Note. The system writes to table F76B20 when you run the Work File Creation for A/R batch process and the Work File Creation for A/P IN68 batch process (R04530).

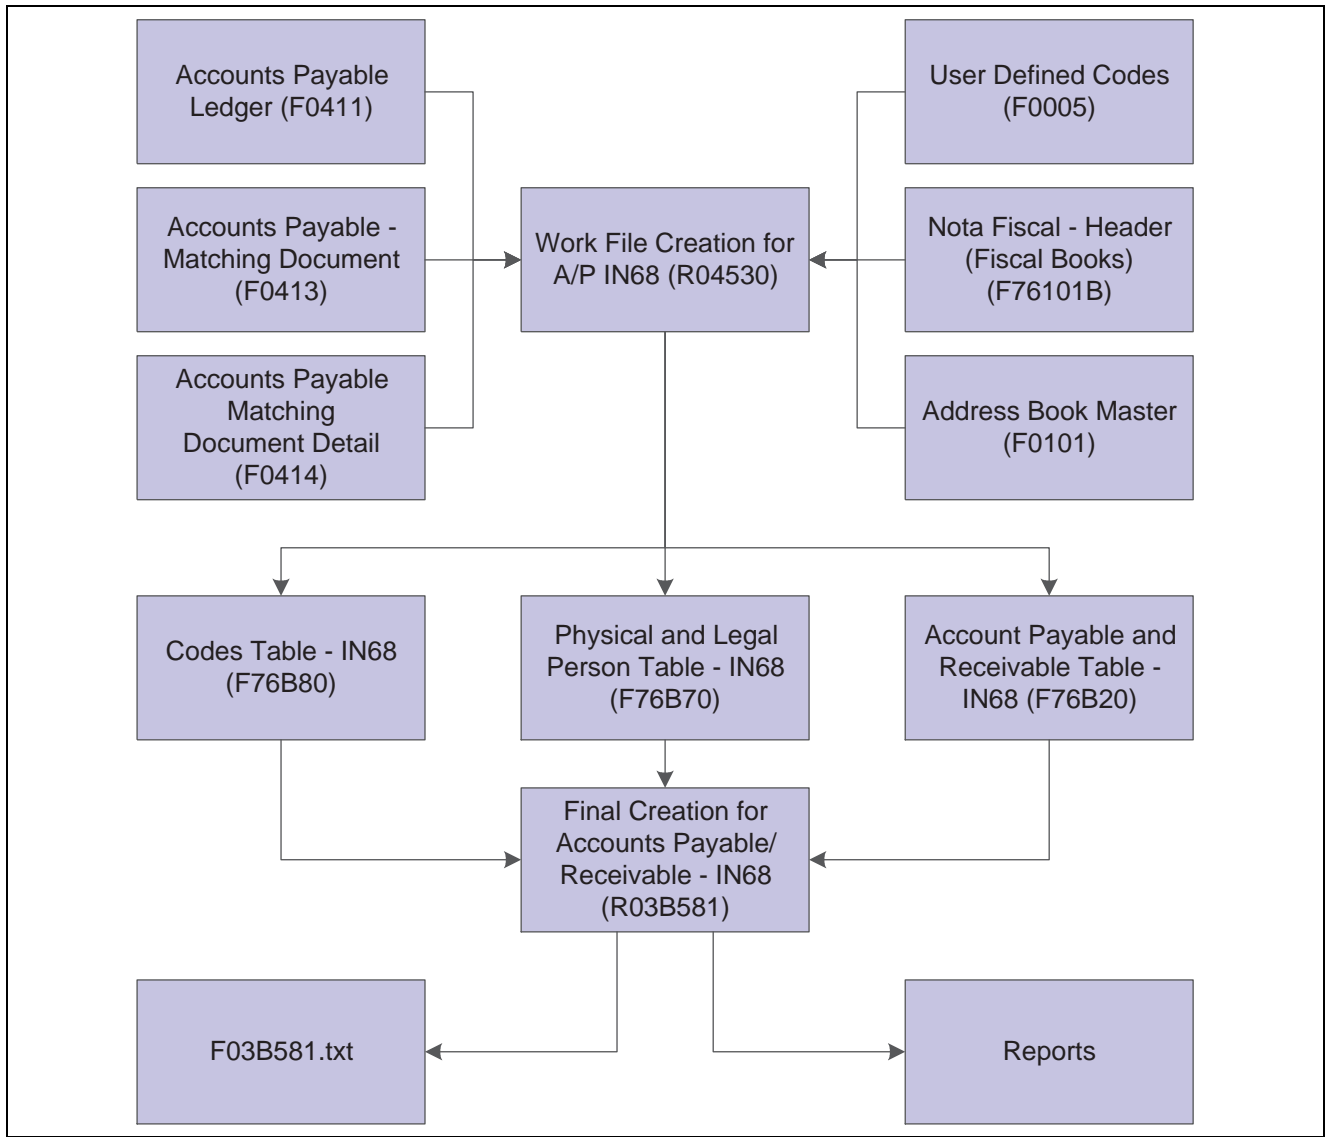

Understanding Accounts Payable Records for IN68

To generate Accounts Payable records for IN68, you run the Work File Creation for A/P IN68 batch process (R04530) to generate the Account Payable and Receivable Table - IN68 (F76B20). Table F76B20 is the work file that contains a subset of data from these tables:

- Accounts Payable Ledger (F0411).
- Accounts Payable - Matching Document (F0413).
- Accounts Payable Matching Document Detail (F0414).
- Address Book Master (F0101).
- User-Defined Codes (F0005).
- Nota Fiscal - Header (Fiscal Books) (F76101B).

After you generate the work file, you can use the Account Payable and Receivable Revisions - IN68 program (P03B130) to review and make any necessary changes to the work file. After you make the necessary changes, you run the Final Creation for Accounts Payable/Receivable - IN68 batch process (R03B581) to create a report and the text file that you send to the tax authority.

This graphic shows how the system processes accounts payable records for IN68 tax reporting:

Accounts Payable records for IN68

Understanding the Work File Creation for A/P (R04530) Program

You run the Work File Creation for A/P batch process (R04530) to generate the Account Payable and Receivable Table - IN68 (F76B20). The Work File Creation for A/P program also populates records in the Physical and Legal Person Table - IN68 (F76B70) and the Codes Table - IN68 (F76B80).

Using Data Selection, you determine the records in the Accounts Payable Ledger table (F0411) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each selected F0411 record, the Work File Creation for A/P program writes a record to table F76B20 according to these rules:

- Verifies that the address number that appears in the F0411 record exists in the Address Book Master table (F0101).
- Identifies each address that is read from table F0101 with the description of the Search Type field in the User-Defined Codes table (F0005). For example, if the description for the search type is Customer, the record is identified as a Customer record. You set up search types in the 01/ST UDC.

- Writes a record to table F76B20 according to the input in the Operation Type and Document Type processing options.
- Determines the Debit/Credit Indicator according to the arithmetic operator (>, <) in the Gross Amount field in the F03B11 table.

If RPAG >= 0, then the Debit/Credit Indicator = D for A/R. If the RPAG < 0, then the Debit/Credit Indicator = C for A/P.

After writing a record to table F76B20, the batch process:

- Populates table F76B70 if a corresponding record does not exist.
- Populates table F76B80 if a corresponding record does not exist.

Note. The system writes to table F76B20 when you run the Work File Creation for A/R batch process (R03B580) or the Work File Creation for A/P batch process.

Understanding the Account Payable and Receivable Table - IN68 Program (F76B20)

After you generate the Account Payable and Receivable Table - IN68 (F76B20), you can review and modify records in the table. When you modify a record, you can add information, such as the Pay Item or Batch Number, that the work file creation process does not provide. You can add a record only if the account number for the record you add has a valid Used Code in the Codes Table - IN68 table (F76B80). The account number is a concatenation of the business unit, object account, and subsidiary. If the values that you enter do not have a corresponding Used Code in table F76B80, the system displays an error message.

You use the Accounts Payable and Receivable Revisions (P03B130) program to add or modify records in table F76B20.

Understanding the Final Creation for A/R and A/P Program (R03B581)

The Final Creation for A/R and A/P batch process (R03B581) lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report. The batch process names the text file F03B581.txt and saves it to the directory that you enter in the processing options. If a file with this name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate.

You must generate and save the file on a client machine; you cannot generate or save the file on a server. The batch process writes records to the F03B581.txt file only after it evaluates the records in the Codes Table - IN68 table (F76B80) and the Physical and Legal Person Table - IN68 table (F76B70).

By using Data Selection, you determine the records in the Account Payable and Receivable Table - IN68 (F76B20) that the system should write to the report and text file. The XJDE0001 version for this batch process contains default data selection.

For each selected record in table F76B20, the batch process writes a record to the F03B581.txt file if table F76B80 contains a record that meets all of these requirements:

- A Code of 02, the G/L Date is less than or equal to the G/L Date of the F76B20 record read, and the Operation Type is equal to the Operation Type of the F76B20 record read. If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.
- A Code of 06, the G/L Date is less than or equal to the G/L Date of the F76B20 record read, and the Document Type is equal to the Document Type of the F76B20 record read. If the process does not find

a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 07, the G/L Date is less than or equal to the G/L Date of the F76B20 record read, and the Search Type is equal to the Search Type of the F76B20 record read. If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

For each record in table F76B20, the batch process writes a record to the F03B581.txt file if all of these conditions exist:

- Table F76B70 contains a record that has a G/L Date that is less than or equal to the G/L Date of the F76B20 record read.
- Search Type is equal to the Search Type of the F76B20 record read.
- An address number that is equal to the address number of the F76B20 record read.

If the process does not find a record in table F76B70 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

After it processes the information in tables F76B20, F76B70, and F76B80, the Final Creation for A/R and A/P process writes this information to the report:

- Data about the lines on the text file, including the sequence number, description of the line, the beginning and ending positions, the size of the record, and the number of decimal places, if any.
- A list of the records that are written to the text file.
- A summary section that includes data on the total length of the text string, a count of the records read, and total length of each record in the text file.
- The error messages generated.

Forms Used Add and Revise Records for Table F76B20

| Form Name | FormID | Navigation | Usage |
|-------------------------------|----------|--|-------------------------------|
| Work With Suppliers/Customers | W03B130B | Maintenance and Inquiries - IN68 (G76BIN682), Account Payable and Receivable Revisions | Locate records to revise. |
| Supplier/Customer Revisions | W03B130A | On the Work With Suppliers/Customers form, click Add. | Add a record to table F76B20. |

Running the Work File Creation for Accounts Receivable - IN68 (R03B580)

Select Filter Programs - IN68 (G76BIN681), Work File Creation for A/R.

Setting Processing Options for the Work File Creation for Accounts Receivable - IN68 Program (R03B580)

These processing options specify how the system populates the Account Payable and Receivable Table - IN68 (F76B20) when you run the Work File Creation for Accounts Receivable batch process (R03B580).

Default

- 1. Operation Type**
 Enter a value for the Operation Type. The system writes this value to the Accounts Payable and Receivable - IN68 table (F76B20) and the Code Table - IN68 (F76B80). Valid values for the operation type are those values that exist in the Document Type UDC (00/DT). If you enter an invalid value or leave this option or the Operation Type Description option blank, the system uses the description in the Original Document Type field (DCTM) in the Customer Ledger table (F03B11) if it exists, or uses the description in the Document Type field (DTC) from the F03B11 if no value exists in the Original Document Type field.
- 2. Operation Type Description**
 Enter the description for the operation type that you entered for the Operation Type processing option. If you entered an invalid value in the Operation Type option, or left that option or this option blank, the system uses the description in the Original Document Type field (DCTM) in the Customer Ledger table (F03B11) if it exists, or uses the description in the Document Type field (DTC) from the F03B11 if no value exists in the Original Document Type field.
- 3. Document Type**
 Enter a value for the Document Type. The system writes this value to the Accounts Payable and Receivable - IN68 table (F76B20) and the Code Table - IN68 (F76B80). Valid values for the document type are those values that exist in the Document Type UDC (00/DT). If you enter an invalid value or leave this option or the Document Type Description option blank, the system uses the Document Type from the Nota Fiscal Header - Fiscal Books table (F76101B) if the record exists in the F76101B table, or uses NF (*nota fiscal*) for the document type if the record does not exist in the F76101B table.
- 4. Document Type Description**
 Enter the description for the document type that you entered for the Document Type processing option. If you entered an invalid value the Document Type option, or left that option or this option blank, the system uses the description from the Nota Fiscal Header - Fiscal Books table (F76101B) if the record exists in the F76101B table, or uses NF (*nota fiscal*) for the description if the record does not exist in the F76101B table.

Process

- 1. Clear Table Flag**
 Enter a value to specify whether to clear the Accounts Payable and Receivable - IN68 table (F76B20) when you generate the work file for Accounts Payable records or generate the work file for Accounts Receivable records. This table is used by both the Work File Creation for A/R batch process (R03B580) and the Work File Creation for A/P batch process (R04530). If you do not clear the table, the system appends new records to any records already in the table. Values are:

 Blank: Do not clear. The system appends records generated to existing records, if any.
 1: Clear.

Running the Work File Creation for A/P (R04530) Program

Select Filter Programs - IN68 (G76BIN681), Work File Creation for A/P.

Setting Processing Options for the Work File Creation for A/P Program (R04530)

These processing options specify how the system populates the Account Payable and Receivable Table - IN68 (F76B20) when you run the Work File Creation for A/P batch process (R04530).

Select

Enter the From Date and Enter the Through Date

Specify the beginning or the ending of the date range for which Accounts Payable information will be written to the IN68 work files. The system compares the date range to the G/L Date (DGJ) of vouchers and the Check/Item Date (DMJT) of payments.

Defaults

1. Operation Type

Enter a value for the Operation Type. The system writes this value to the Accounts Payable and Receivable - IN68 table (F76B20) and the Code Table - IN68 (F76B80). Valid values for the operation type are those values that exist in the Document Type UDC (00/DT). If you enter an invalid value or leave this option or the Operation Type Description option blank, the system uses the description in the Original Document Type field (DCTM) in the Accounts Payable Ledger table (F0411) if it exists, or uses the description in the Document Type field (DTC) from the F0411 if no value exists in the Original Document Type field.

2. Operation Type Description

Specify a description for the operation type you entered in the Operation Type processing option. If you leave this processing option blank, the system uses the description that is set up in the Document Type user-defined code table (00/DT).

3. Document Type

Enter a default value for the document type. Valid values for the document type are contained in UDC (00/DT). If you enter an invalid value or leave this processing option blank, the system uses the document type from the Nota Fiscal - Header (Fiscal Books) table (F76101B). If the record does not exist in the F76101B table, the system uses NFF (*nota fiscal futura*) for the document type.

4. Document Type Description

Enter a text description for the document type that you entered for the Document Type processing option. If you leave this processing option blank, the system uses the description of the document type you selected in the Document Type processing option, as specified in the Document Type UDC (00/DT). If the document type is NFF, the description is *nota fiscal futura*.

Process

1. Clear Table Flag

Specify whether to clear the Accounts Payable and Receivable - IN68 table (F76B20) when you generate the work file for Accounts Payable records or generate the work file for Accounts Receivable records. This table is used by both the Work File Creation for A/R batch process (R03B580) and the Work File Creation for A/P batch process (R04530). If you do not clear the table, the system appends new records to any records already in the table. Values are:

1: Clear.

Blank: Do not clear. The system appends records generated to existing records, if any.

Adding Records to Table F76B20

Access the Supplier/Customer Revisions form.

| | |
|--------------------------|---|
| Doc Company | <p>Enter a number that, with the document number, document type and G/L date, uniquely identifies an original document, such as invoice, voucher, or journal entry.</p> <p>If you use the Next Numbers by Company/Fiscal Year feature, the Automatic Next Numbers program (X0010) uses the document company to retrieve the correct next number for that company.</p> <p>If two or more original documents have the same document number and document type, you can use the document company to locate the desired document.</p> |
| Search Type | <p>Enter a user-defined code (01/ST) that specifies the kind of address book record to search for. Examples include:</p> <p><i>E</i>: Employees</p> <p><i>X</i>: Ex-employees</p> <p><i>V</i>: Suppliers</p> <p><i>C</i>: Customers</p> <p><i>P</i>: Prospects</p> <p><i>M</i>: Mail distribution lists</p> <p><i>TAX</i>: Tax authorities</p> |
| Due Date | <p>In the JD Edwards EnterpriseOne Accounts Receivable system, the date that the net payment is due.</p> <p>In the JD Edwards EnterpriseOne Accounts Payable system, the date that the payment is due to receive a discount or, if no discount is offered, the net due date.</p> <p>The system calculates the due date based on the payment term entered, or you can enter it manually. If you enter a negative voucher or invoice (debit or credit memo), the system might use the general ledger date as the due date regardless of the payment term entered. A processing option in the master business function (P0400047 for vouchers and P03B0011 for invoices) controls how the system calculates the due date for debit and credit memos.</p> |
| Total Actuals | <p>Enter the actual amounts of a job. The amounts displayed are from the Actual Amounts (AA) ledger. This field is informational only.</p> |
| Document Type | <p>Enter the type of document, such as a <i>nota fiscal</i>. You must set up valid document types in the Document Type UDC (00/DT).</p> |
| Series/Sub Series | <p>Enter the document series and subseries of the <i>nota fiscal</i>.</p> |
| Batch Number | <p>Enter a number that identifies a group of transactions that the system processes and balances as a unit. When you enter a batch, you can either assign a batch number or let the system assign it using the Next Numbers program.</p> |

Invoice Date

The date that either you or the system assigns to an invoice or voucher. This can be either the date of the supplier's invoice to you or the date of the invoice to the customer.

Running the Final Creation for Accounts Payable/Receivable - IN68 (R03B581) Program

Select Final Generation and Integrities - IN68 (G76BIN683), Final Creation for A/R and A/P.

Setting Processing Options for the Final Creation for Accounts Payable/Receivable - IN68 Program (R03B581)

Processing options enable you to specify the default processing for programs and reports.

Processing

These processing options specify whether the system generates a text file and where the system stores the text file.

1. Report Generation

Specify whether the system generates only a report, or generates a report and a text file. Values are:

I: Report only

Blank: Report and text file

2. Directory Name

Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file.

For example, on a client machine that has a directory named B7 on a C drive, you could enter this as a valid directory:

C:\B7\

Working with Account Balance Records for IN68

This section provides overview of account balance records and describes how to:

- Run the Update Account Balances (F76B11) - IN68 batch process (R098303).
- Set processing options for the Update Account Balances (F76B11) - IN68 program (R098303).
- Add records to table F76B11.
- Run the Final Creation for Account Balances - IN68 program (R098301).
- Set processing options for the Final Creation for Account Balances - IN68 program (R098301).

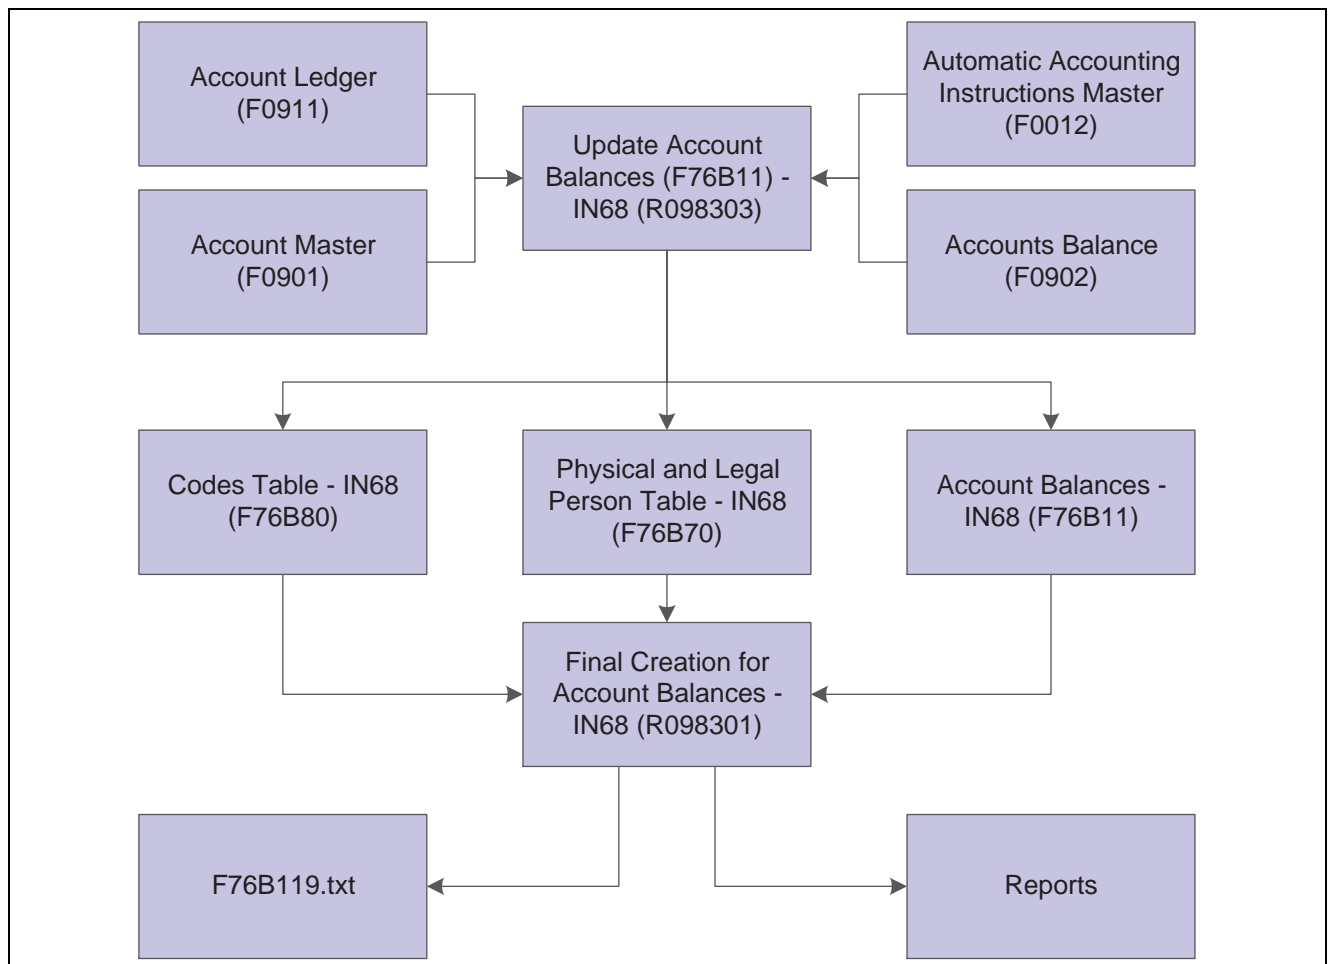

Understanding Account Balance Records for IN68

To generate Accounting Balances records for IN68, you run the Update Account Balances (F76B11) - IN68 batch process (R098303) to generate the Account Balances - IN68 table (F76B11). The F76B11 is a work file that contains a subset of data from these tables:

- Account Ledger (F0911)
- Account Master (F0901)
- Account Balance (F0902)
- Automatic Accounting Instructions Master (F0012)

After you generate the work file, you can use the Account Balances Revisions - IN68 program (P098301) to review and make any necessary changes to the work file. After you make the necessary changes, you run the Final Creation for Account Balances - IN68 batch process (R098301) to create a report and the text file that you send to the tax authority.

This graphic shows how the system processes account balance records for IN68 tax reporting:

Account balance records for IN68

Understanding the Update Account Balances (F76B11) - IN68 Batch Process (R098303)

You run the Update Account Balances (F76B11) - IN68 batch process (R098303) to generate the Account Balances - IN68 table (F76B11). The Update Account Balances (F76B11) - IN68 process also populates records in the Codes Table - IN68 table (F76B80).

Using Data Selection, you determine the records in the Accounts Balances table (F0902) that the system considers for IN68. The system provides a default data selection on the XJDE0001 version.

For each selected F0902 record, the batch process writes records to these tables:

- Account Balance - IN68 (F76B11).
- Codes Table - IN68 (F76B80).

When you run the Update Account Balances (F76B11) - IN68 process, the system performs these processes:

- Reads the AA ledger records in the Account Master table (F0901) according to the processing options that you set.
- Updates an existing record or writes a new record to table F76B11 for each company/period/account combination.

The account is a concatenation of the business unit and the object.subsidiary account. The Subledger field is not used to differentiate account numbers; the system writes a blank amount to table F76B11 for the Subledger field. The system updates records or writes new records that are based on a processing option.

- Writes a record to table F76B80 for each account number and a description for each period.
- Calculates the total debits and total credits by accumulating the amounts from the Account Ledger table (F0911) for each period.
- Compares the period totals from tables F0901 and F0911 and, if the totals are not the same, writes to an error report the F0902 record information and the amount of the difference.

Beginning Balances for Periods

The GLG4 and GLG5 AAI accounts for each company determine the beginning balance for period 1. If an account is a retained earnings account or a balance sheet account, the period 1 beginning balance is the value in the beginning balance prior year ending (PYE) field (GBAPYC); otherwise, it is zero. For example, if the object account in table F0902 is equal to the GLG4 object account, or less than or equal to the GLG5 object account, the value in the GBAPYC field is the period 1 beginning balance.

The beginning balance for subsequent periods is the sum of the beginning balance of the previous period and the net postings of the previous period.

Example of Beginning Balances

Period 1 beginning balance = GBAPYC or zero, based on GLG4 and GLG5

Period 2 beginning balance = Period 1 beginning balance + Period 1 net postings (GBAN01)

Period 3 beginning balance = Period 2 beginning balance + Period 2 net postings (GBAN02)

Period 4 beginning balance = Period 3 beginning balance + Period 3 net postings (GBAN03)

Account Balances for IN68 (R098303) Report

The Update Account Balances (F76B11) - IN68 program (R098303) generates a summary report that includes this information:

- Beginning balance total.
- Total debit amount.
- Total credit amount.
- Ending balance total.
- Number of table F0902 records read.
- Number of table F76B11 records written or updated.

The process also generates an error report when the totals on tables F0902 and F0911 do not match. The error report includes this information:

- Company.
- Account ID, number, and description.
- Century and fiscal year.
- Ledger type.
- Period.
- Amount of the difference between tables F0902 and F0911.

Understanding the Account Balances - IN68 Table (F76B11)

After you generate the Account Balances - IN68 table (F76B11), you can review, modify, add, and delete records in the table. When you modify a record, you can add information, such as Total Debits or Total Credits, that the Update Account Balances (F76B11) - IN68 program (R098303) does not provide. You can add a record only if the account number for the record that you add has a valid Used Code in the Codes Table - IN68 table (F76B80). The account number is a concatenation of the business unit, object account, subsidiary, and subledger. If the values you enter do not have a corresponding Used Code in table F76B80, the system displays an error message.

You use the Account Balances Revisions program (P098301) to add or revise records in table F76B11.

Understanding the Final Creation for Account Balances - IN68 Program (R098301)

The Final Creation for Account Balances - IN68 program (R098301) lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report. The batch process names the text file F76B119.txt and saves it to the directory that you enter in the processing options. If a file with this name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate. You must generate and save the file on a client machine; you cannot generate or save the file on server.

Using Data Selection, you determine the records in the Account Balances - IN68 table (F76B11) that the system considers for IN68. The XJDE0001 version for this batch process contains default data selection.

The batch process writes records to the F76B119.txt file only after it evaluates the records in tables F76B80 and F76B11.

For each selected record in table F76B11, the batch process writes a record to the F76B119.txt file if all of these conditions exist:

- Table F76B80 contains a record that has a Code of 01.
- G/L Date is less than or equal to the Date in the F76B11 record read

- Used Code (BRCUT) is equal to the Account Number of the F76B11 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

The Final Creation for Account Balances - IN68 program produces a report that contains this information:

- Data about the lines on the text file, including the sequence number; description of the line; the beginning and ending positions; the size of the record; and the number of decimal points, if any.
- A summary section that includes data on the total length of the text string, a count of the records read, a count of the records written, the total debit amount, the total credit amount, and the total of the debits and credits.
- The error messages generated.

Forms Used Add and Revise Records for Table F76B11

| Form Name | FormID | Navigation | Usage |
|-----------------------------------|----------|---|-------------------------------|
| Work With Account Balances - IN68 | W098301A | Maintenance and Inquiries - IN68 (G76BIN682), Account Balances Revisions - IN68 | Locate records to revise. |
| Account Balance Revisions - IN68 | W098301B | On the Work With Account Balances - IN68 form, click Add. | Add a record to table F76B11. |

Running the Update Account Balances (F76B11) - IN68 Batch Process (R098303)

Select Filter Programs - IN68 (G76BIN681), Update Account Balances (F76B11) - IN68.

Setting Processing Options for the Update Account Balances (F76B11) - IN68 Process (R098303)

These processing options specify the periods for which you want to process account balances and whether the system clears previous records from the Account Balances - IN68 table (F76B11).

Periods

1. Beginning Period Number

Specify the beginning period of the current year for which the system generates F76B11 records. If you leave this processing option blank or enter a value other than 1 through 12, the system uses 1 for the beginning period. The value that you enter for the Ending Period Number processing option in the R098303 program cannot be less than the value that you enter for this processing option.

2. Ending Period Number

Specify the ending period of the current year for which the system generates F76B11 records. If you leave this processing option blank or enter a value other than 1 through 12, the system uses 12 for the ending period. The value that you enter for this processing option cannot be less than the value that you enter in the Beginning Period Number processing option in the R098303 program.

Initialize

- 1. Initialize F76B11 Table** Specify whether the system clears the Account Balances - IN68 table (F76B11) when you generate the work file for account balances records. If you do not clear the table, the system appends new records to any records already in the table. Values are:
- I*: Clear.
- Blank: Do not clear. The system appends records generated to existing records, if any.

Adding Records to Table F76B11

Access the Account Balance Revisions - IN68 form.

- Initial Amount** Enter the corrected initial amount.
- Credit/Debit Indicator for Initial Balance** Indicate whether a line in the Automatic Accounting Instructions table is to be used for Debit or Credit entries when writing Journal Entries.
- Total Debits** Enter the total of the debits for the records.
- Total Credits** Enter the total of the credits for the records.
- Final Amount** Enter the final amount associated with a line item on a change request.
- Credit/Debit Indicator for Final Balance** Indicate whether a line in the Automatic Accounting Instructions table is to be used for Debit or Credit entries when the system writes journal entries.

Running the Final Creation for Account Balances - IN68 Program (R098301)

Select Final Generation and Integrities (G76BIN683), Final Creation for Account Balances - IN68.

Setting Processing Options for the Final Creation for Account Balances - IN68 Program (R098301)

Processing options enable you to specify the default processing for programs and reports.

Process

These processing options specify whether the system generates a text file and where the system stores the text file.

- 1. Report Generation** Specify whether the system prints a report and generates a text file, or only prints the report. Values are:
- I*: Report only
- Blank: Report and the text file
- 2. Directory Name** Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local machine. When you specify the directory path, you must enter the character \

at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file.

For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory:

C:\B9\

Working With General Ledger Records for IN68

This section provides overviews of general ledger records and describes how to:

- Run the Update General Ledger - IN68 program.
- Set processing options for the Update General Ledger (F76B10) - IN68 program (R098313).
- Add records to table F76B10.
- Run the Final Creation for Journal Entries - IN68 program (R098311).
- Set processing options for the Final Creation for Journal Entries - IN68 program (R098311).

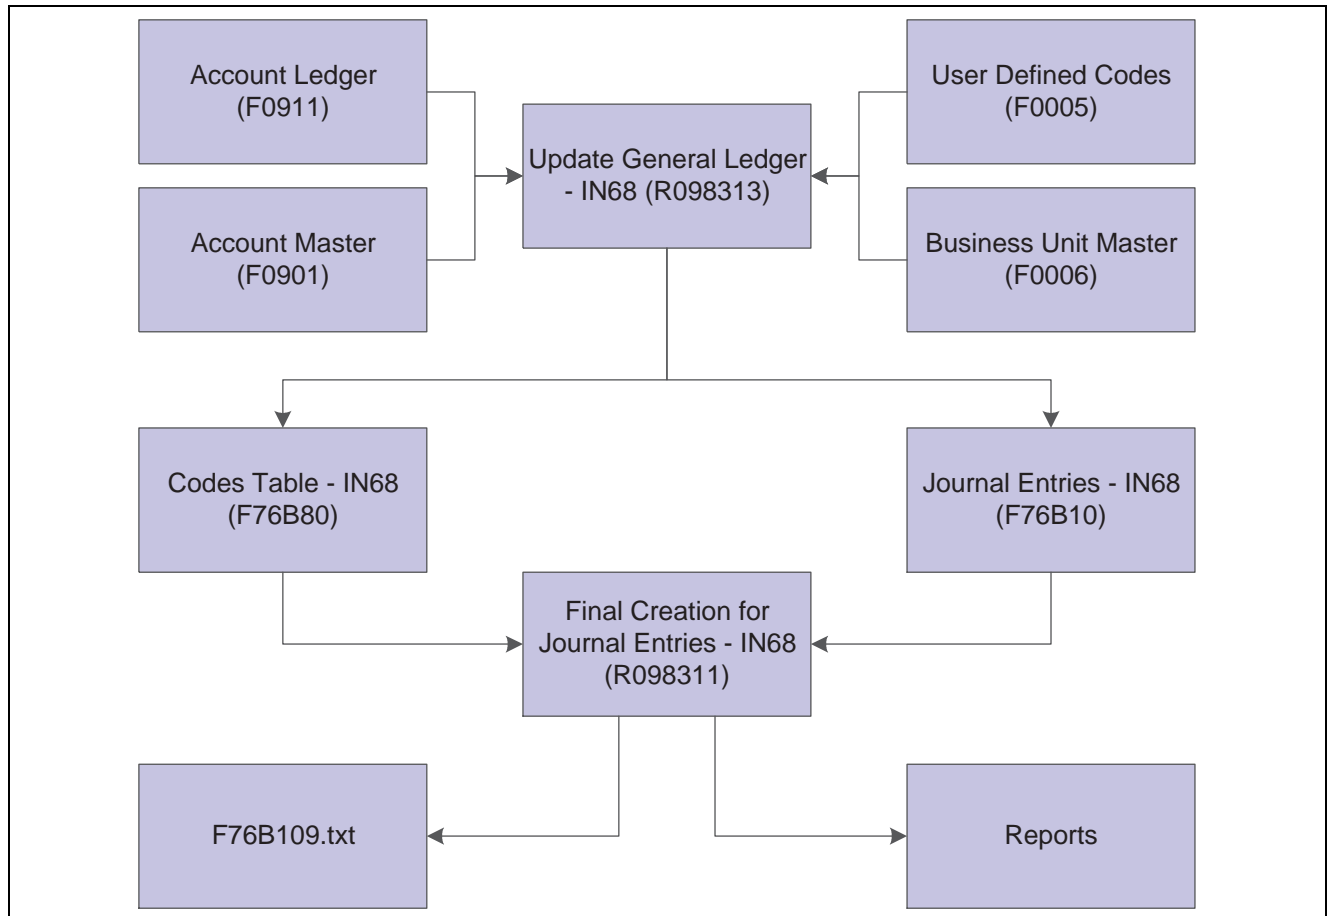

Understanding General Ledger Records for IN68

To generate General Ledger records for IN68, you run the Update General Ledger (F76B10) - IN68 batch process (R098313), which populates the Journal Entries - IN68 table (F76B10). Table F76B10 is a work file that contains a subset of data from these files:

- Account Ledger (F0911)
- Account Master (F0901)
- User-Defined Codes (F0005)
- Business Unit Master (F0006)

After you generate the work file, you can use the Journal Entries Revisions - IN68 program (P098311) to review and make any necessary changes to the work file. After you make the necessary changes, you run the Final Creation for Journal Entries - IN68 batch process (R098311) to create a report and the text file that you send to the tax authority.

This graphic shows how the system processes general ledger records for IN68 tax reporting:

General ledger records for IN68

Understanding the Update General Ledger - IN68 Program (R098313)

You run the Update General Ledger - IN68 program (R098313) to generate the Account Ledger - IN68 table (F76B10). The Update General Ledger - IN68 program also populates the Codes Table - IN68 table (F76B80).

You determine the records in the Account Ledger table (F0911) that the system considers for IN68. The XJDE0001 version for this batch process contains default data selection.

For each selected F0911 record, the batch process writes records to these tables:

- Account Ledger - IN68 (F76B10)
- Codes Table - IN68 (F76B80)

When you run the Update General Ledger - IN68 program, the system performs these processes, in this order:

1. Reads posted AA ledger records in table F0911, according to the processing options that you set.
2. Updates an existing record or writes a new record to table F76B10 for each company/GL date/account/subledger combination.

The account is a concatenation of the business unit and the object.subsidiary account. The system updates records or writes new records that are based on a processing option.

3. Updates table F76B80 with the account, business unit, and operation code for each GL date.

You use a processing option to specify the operation code.

4. Generates a summary report that includes this information:
 - Total debit amount.
 - Total credit amount.
 - Total of debits and credits.
 - The number of F0911 records read.
 - The number of F76B10 records written or updated.

Understanding the Journal Entries - IN68 Table (F76B10)

After you generate the Journal Entries - IN68 table (F76B10), you can review, modify, add, and delete records in the table. When you modify a record, you can add information, such as the Cost Center or Operation Type, that the Update General Ledger (F76B10) - IN68 program (R098313) does not provide. You can add a record only if the account number for the record that you add has a valid Used Code in the Codes Table - IN68 table (F76B80). The account number is a concatenation of the business unit, object account, and subsidiary. Additionally, when you revise or add a record, the system validates the value that you enter in the Operation Type, Cost Center, Expense Cost Center, and Historical Code fields against values in table F76B80. If the values that you enter do not have a corresponding Used Code in table F76B80, the system displays an error message.

You use the Journal Entries Revisions - IN68 program (P098311) to add or modify records in table F76B10.

Understanding the Final Creation for Journal Entries - IN68 Program (R098311)

The Final Creation for Journal Entries - IN68 program (R098311) lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report. The batch process names the text file F76B109.txt and saves it to the directory that you enter in the processing options. If a file with this name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate. You must generate and save the file on a client machine; you cannot generate or save the file on a server.

Using Data Selection, you determine the records in the Account Ledger - IN68 table (F76B10) that the system considers for IN68. The XJDE0001 version for this batch process contains data selection.

The batch process writes records to the F76B109.txt file only after it evaluates the records in the Codes Table - IN68 table (F76B80) and table F76B10.

For each selected record in table F76B10, the batch process writes a record to the F76B109.txt file if table F76B80 contains a record that meets all of these requirements:

- A Code of 01, the G/L Date is less than or equal to the G/L Date in the F76B10 record read, and the Used Code (BRCUT) is equal to the Account Number of the F76B10 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 02, the G/L Date is less than or equal to the G/L Date in the F76B10 record read, and the Used Code (BRCUT) field is equal to the Operation Type (BRTPO) field in the F76B10 record.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 03, the G/L Date is less than or equal to the G/L Date in the F76B10 record read, and the Used Code (BRCUT) is equal to the Cost Center in the F76B10 record.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

After it processes the information in tables F76B10 and F76B80, the Final Creation for Journal Entries - IN68 program writes this information to the report:

- Data about the lines on the text file, including the sequence number; description of the line; the beginning and ending positions; the size of the record; and the number of decimal points, if any.
- A list of the records that are written to the text file.
- A summary section that includes data on the total length of the text string and a count of the records read.
- The error messages generated.

Forms Used Add and Revise Records for Table F76B10

| Form Name | FormID | Navigation | Usage |
|----------------------------------|----------|--|-------------------------------|
| Work With Journal Entries - IN68 | W098311B | Maintenance and Inquiries - IN68 (G76BIN682), Journal Entries Revisions - IN68 | Locate records to revise. |
| Journal Entries Revisions - IN68 | W098311A | On the Work With Journal Entries form- IN68, click Add. | Add a record to table F76B10. |

Running the Update General Ledger - IN68 Program

Select Filter Programs - IN68 (G76BIN681), Update General Ledger (F76B10) - IN68.

Setting Processing Options for the Update General Ledger (F76B10) - IN68 Program (R098313)

These processing options specify the operation type and whether to clear the work file.

Operation Type

- 1. Category Code** Specify the category code of the account. The system uses the category code you choose as the value for the operation type. The system retrieves the operation type description from the UDC table for the category code. For example, if you enter 4 for this processing option, the system retrieves the operation type description from the G/L Reporting Code 4 UDC table (09/04).
- 2. Operation Type** Enter a value for the Operation Type. The system writes this value to the Journal Entries - IN68 table (F76B10) and the Code Table - IN68 (F76B80).
- 3. Operation Type Description** Enter a description for the operation type that you entered for the Operation Type processing option.

Initialize

- 1. Initialize F76B10 Table** Specify whether the system clears the Journal Entries - IN68 table (F76B10) when you generate the work file for account balances records. If you do not

clear the table, the system appends new records to any records already in the table. Values are:

Blank: Do not clear. The system appends records generated to existing records, if any.

I: Clear.

Adding Records to Table F76B10

Access the Journal Entries Revisions - IN68 form.

| | |
|-------------------------------|--|
| As-of Date | Enter a date that identifies the financial period to which the transaction will be posted. You define financial periods for a date pattern code that you assign to the company record. The system compares the date that you enter on the transaction to the fiscal date pattern assigned to the company to retrieve the appropriate fiscal period number, as well as to perform date validations. |
| Credit/Debit Indicator | Indicate whether a line in the Automatic Accounting Instructions table is to be used for Debit or Credit entries when writing Journal Entries. |
| Business Unit | <p>Enter either a subsequent business unit or a project number.</p> <p>A subsequent business unit specifies where to charge costs (or revenues) when the original business unit has been closed or suspended. For example, the subsequent business unit can be used in corporate reorganizations when you close a business unit and direct all costs to the subsequent business unit. In this situation, you must enter journal entries to transfer existing balances.</p> <p>A project number is used to group business units within an overall business unit. For example, you can group jobs by project. In this case, the project business unit can also have accounts for tracking overhead costs that can be allocated to jobs.</p> |
| Subsidiary | Enter a number that specifies the ending subsidiary account in a range of accounts. The system uses the accounts in this range to determine the basis for the allocation. Only posted amounts in the account range are included. |
| Object Account | Enter a value that identifies the ending object account in a range of accounts. |
| Subledger | <p>Enter a code that indicates the subledger and the subledger type for a transaction. You can specify a subledger and subledger type, or use one of these values:</p> <p><i>*SRC</i>: Use the subledger and subledger type from the workfile transaction.</p> <p><i>*WO</i>: Use the work order number and the subledger type W.</p> <p><i>*CUST</i>: Use the address number for the customer and the subledger type A.</p> <p><i>*CC</i>: Use the business unit from the workfile transaction and the subledger type C.</p> <p><i>*EMP</i>: Use the employee or supplier address number from the workfile transaction and the subledger type A.</p> <p><i>*AUTH</i>: Use the address book number of the tax authority and the subledger type A. The tax authority is associated with the tax rate area that is assigned to the workfile transaction. This value is only for the Tax Liability - Credit billing AAI (4815).</p> |

| | |
|----------------------------|---|
| Cost Center | Enter the lowest value of the range a given user is authorized to view and process data. It is used in conjunction with the Business Unit Through Code which defines highest value. If no record exists for a user and file, the user is completely authorized to the file. If the file name is blank for a given user, the Business Unit range setup applies to all users of the file. |
| Expense Cost Center | Enter a business unit is an accounting entity required for management reporting and can be thought of as a profit center, department, prospect, lease, well, project, and so on. This business unit is the expense business unit for a well or property and points to the billing DOI for this property. The expense business unit might or might not be the same as the revenue business unit. |
| | <hr/> Note. This is an alphanumeric field. This data is always right justified on entry (for example, CO123 would appear as _____CO123). A security mechanism has been provided to inhibit a user from entering or inquiring into business units outside the scope of his or her authority. <hr/> |
| Observation | Enter a name or remark that describes the purpose for using an account or conveys any other information about the transaction. |

Running the Final Creation for Journal Entries - IN68 (R098311) Program

Select Final Generation and Integrities - IN68 (G76BIN683), Final Creation for Journal Entries - IN68.

Setting Processing Options for the Final Creation for Journal Entries - IN68 Program (R098311)

Processing options enable you to specify the default processing for programs and reports.

Process

These processing options specify whether the system generates a text file and where the system stores the text file.

- 1. Report Generation** Specify whether the system prints a report and generates a text file, or only prints the report. Values are:
I: Report only
Blank: Report and the text file
- 2. Directory Name** Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program run only on a local machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file.

For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory:
C:\\B9\\

Working with Nota Fiscal Records for Items for IN68

This section provides overview for *nota fiscal* records for items and describes how to:

- Run the Work File Creation for Nota Fiscal Item - IN68 program (R76B300).
- Set processing options for the Work File Creation for Nota Fiscal Item - IN68 program (R76B300).
- Add records to tables F76B30 and F76B31.
- Run the Final Creation for Notas Fiscais for Goods - IN68 program (R76B307).
- Set processing options for the Final Creation for Notas Fiscais for Goods - IN68 program (R76B307).

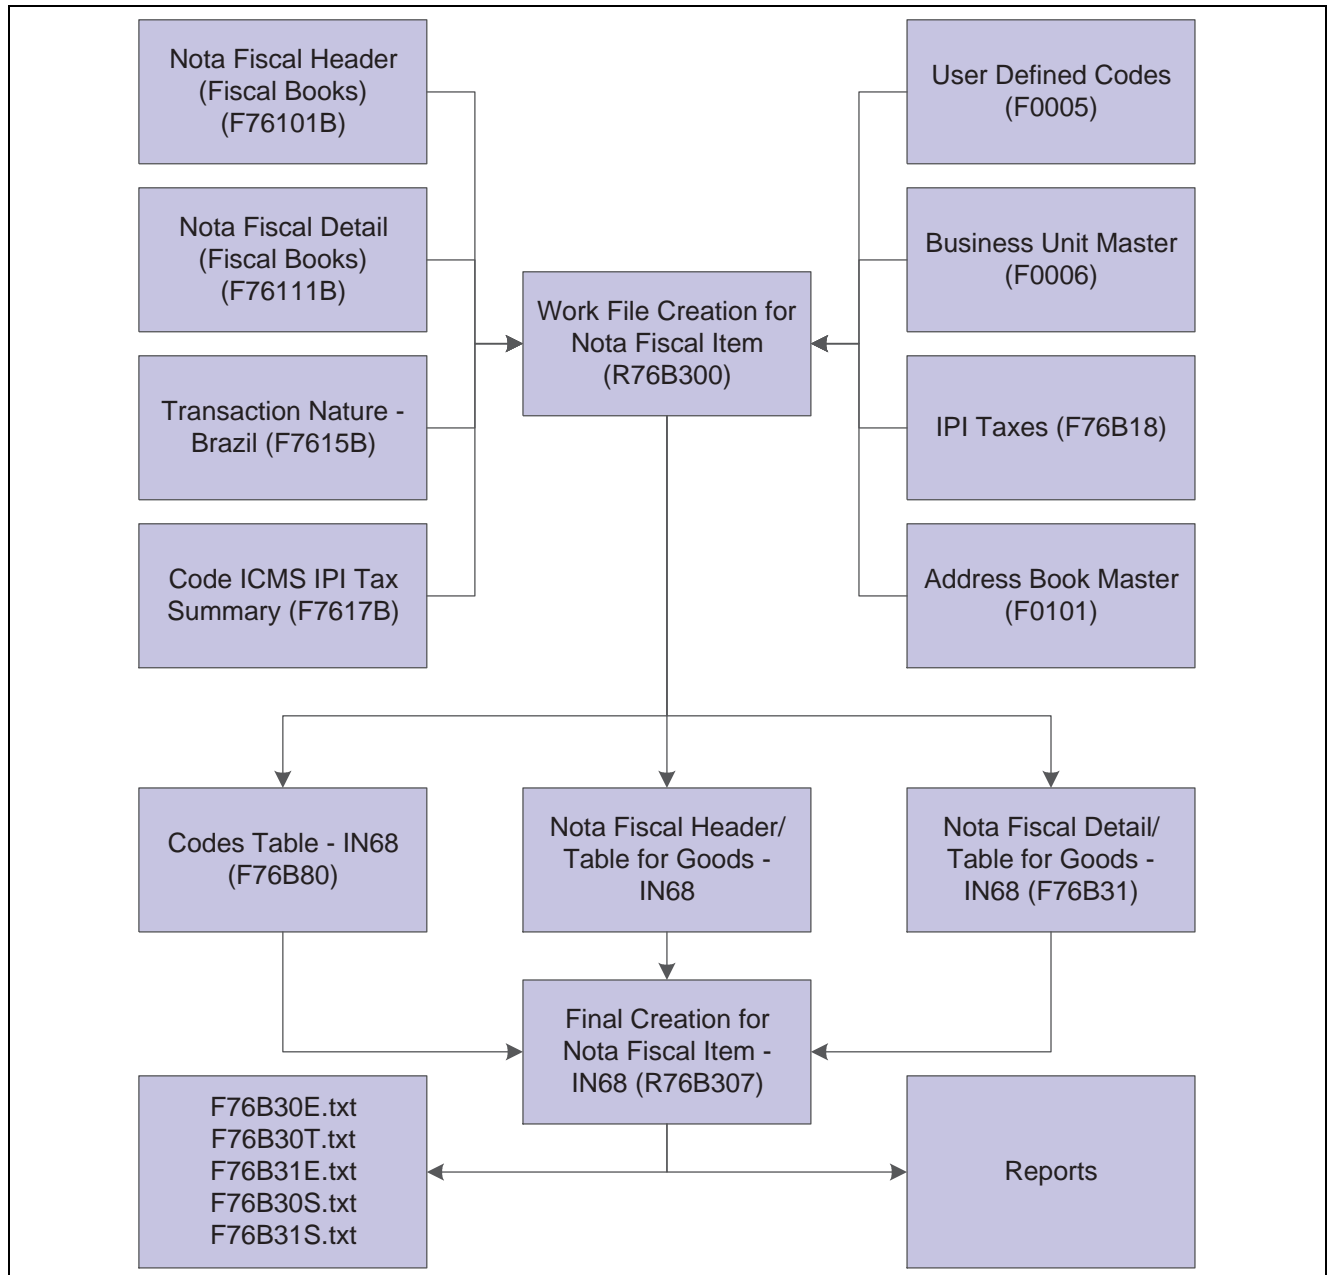

Understanding Nota Fiscal Records for Items for IN68

To generate *nota fiscal* records for Items for IN68, you run the Work File Creation for Nota Fiscal Item - IN68 batch process (R76B300) to generate the Nota Fiscal Header/Table for Goods - IN68 table (F76B30) and the Nota Fiscal Detail/Table for Goods - IN68 table (F76B31). These work files contains a subset of data from these files:

- Nota Fiscal - Header (Fiscal Books) (F76101B).
- Nota Fiscal - Detail (Fiscal Books) (F76111B).
- Transaction Nature - Brazil (F7615B).
- Code - ICMS IPI Tax Summary (F7617B).
- IPI Taxes (F76B18).
- Address Book Master (F0101).
- User-Defined Codes (F0005).
- Business Unit Master (F0006).

After you generate the work file, you can use the Revision of Nota Fiscal Item - IN68 program (P76B304) to review and make any necessary changes to the work files. After you make the necessary changes, you run the Final Creation for Nota Fiscal Item - IN68 batch process (R76B307) to create reports and the text files that you send to the tax authority.

This graphic shows how the system processes *nota fiscal* records for items for IN68 tax reporting:

Nota fiscal records for items for IN68

Understanding the Work File Creation for Nota Fiscal Item (R76B300) Program

You run the Work File Creation for Nota Fiscal Item program (R76B300) to generate the Nota Fiscal Header/Table for Goods - IN68 table (F76B30) and the Nota Fiscal Detail/Table for Goods - IN68 table (F76B31). The Work File Creation for Nota Fiscal Item program also populates records in the Physical and Legal Person Table - IN68 table (F76B70) and the Codes Table - IN68 table (F76B80).

Using Data Selection, you determine the records in the Nota Fiscal - Header (Fiscal Books) table (F76101B) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each selected F76101B record, the batch process writes records to these tables:

- Nota Fiscal Header/Table for Goods - IN68 table (F76B30).
- Nota Fiscal Detail/Table for Goods - IN68 table (F76B31).
- Physical and Legal Person Table - IN68 (F76B70).
- Codes Table - IN68 (F76B80).

Before writing a record to tables F76B30 and F76B31, the batch process performs these actions:

- Verifies that the address number that appears in the F76B101B record exists in the Address Book Master table (F0101).
- Identifies each address that is read from table F0101 with the description of the Search Type field in the User-Defined Codes table (F0005).

For example, if the description for the search type is *Customer*, the record is identified as a customer record. You set up search types in the Search Type UDC (01/ST).

- Writes values to table F76B30 and table F76B31 according to the input in the Operation Type, Document Type, Inbound/Outbound, and IPI tax processing options.
- Determines the Debit/Credit Indicator according to the arithmetic operator (>, <) in the Gross Amount field in table F76101B.
- Writes information about the ICMS tax, ICMS Substitution, and freight charges.
- Accumulates these totals for the records read:
 - Total value of the goods.
 - Base value of IPI.
 - Value of IPI.
 - Value of Discount.
 - Total value of NF.

After writing records to tables F76B30 and F76B31, the batch process:

- Populates table F76B70
- Populates table F76B80

Understanding How to Add or Modify Records in Tables F76B30 and F76B31

After you generate the Nota Fiscal Header/Table for Goods - IN68 table (F76B30) and the Nota Fiscal Detail/Table for Goods - IN68 table (F76B31), you can review and modify records in the tables. If the values that you enter do not have a corresponding Used Code in the Codes Table - IN68 table (F76B80), the system displays an error message.

You use the Revision of Nota Fiscal Item (P76B304) program to add or modify records.

Understanding the Final Creation for Notas Fiscais for Goods - IN68 (R76B307) Program

The Final Creation for Nota Fiscal Item (R76B307) program lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report.

This batch process generates reports and text files, depending on how you set the Inbound/Outbound processing option. This table shows the reports and corresponding text files for the R76B307 program:

| Processing Option set to Inbound | Processing Option set to Outbound |
|--|--|
| Reports: <ul style="list-style-type: none"> • R76B30E • R76B30T • R76B31E Text files: <ul style="list-style-type: none"> • F76B30E.txt • F76B30T.txt • F76B31E.txt | Reports: <ul style="list-style-type: none"> • R76B30S • R76B30T • R76B31S Text files: <ul style="list-style-type: none"> • F76B30S.txt • F76B30T.txt • F76B31S.txt |

If a file with the same name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate. The batch process saves the text files to the directory that you enter in the processing options. You must generate and save the file on a client machine; you cannot generate or save the file on a server. The batch process writes records to the text files only after it evaluates the records in the Codes Table -IN86 table (F76B80) and the Physical and Legal Persons Table - IN68 table (F76B70).

Using Data Selection, you determine the records in the Nota Fiscal Header/Table for Goods - IN68 table (F76B30) and the Nota Fiscal Detail/Table for Goods - IN68 table (F76B31) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each record in table F76B30, the batch process writes a record to the text files if table F76B80 contains a record that meets all of these requirements:

- A Code of 06, the G/L Date is less than or equal to the G/L Date of the F76B30 record read, and the Used Code is equal to the Document Type of the F76B30 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 07, the G/L Date is less than or equal to the G/L Date of the F76B30 record read, and the Used Code is equal to the Search Type of the F76B30 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 08, the G/L Date is less than or equal to the G/L Date of the F76B30 record read, and the Used Code is equal to the Model Fiscal Documents of the F76B30 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 11, the G/L Date is less than or equal to the G/L Date of the F76B30 record read, and the Used Code is equal to the Mode of Transport of the F76B30 record read. If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 12, the G/L Date is less than or equal to the G/L Date of the F76B30 record read, and the Used Code is equal to the Volume Type of the F76B30 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of *13*, the G/L Date is less than or equal to the G/L Date of the F76B30 record read, and the Used Code is equal to the Modality of Freight of the F76B30 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

For each record in table F76B31, the batch process writes a record to the text files if table F76B80 contains a record that has:

- A Code of *02*, the G/L Date is less than or equal to the G/L Date of the F76B31 record read, and the Used Code is equal to the Operation Type of the F76B31 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of *03*, the G/L Date is less than or equal to the G/L Date in the F76B31 record read, and the Used Code is equal to the Cost Center in the F76B31 record.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of *14*, the G/L Date is less than or equal to the G/L Date of the F76B31 record read, and the Used Code is equal to the Products in the F76B31 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of *15*, the G/L Date is less than or equal to the G/L Date of the F76B31 record read, and the Used Code is equal to the Unit of Measure in the F76B31 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of *16*, the G/L Date is less than or equal to the G/L Date of the F76B31 record read, and the Used Code is equal to the Federal Tax Situation in the F76B31 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of *18*, the G/L Date is less than or equal to the G/L Date of the F76B31 record read, and the Used Code is equal to the Fiscal classification in the F76B31 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

Forms Used Add and Revise Records for Tables F76B30 and F76B31

| Form Name | FormID | Navigation | Usage |
|---|----------|---|---|
| Revision of Nota Fiscal Item - [Research] | W76B304A | Maintenance and Inquiries - IN68 (G76BIN682), Revision of Nota Fiscal Item - IN68 | Locate records to revise. |
| Master of Goods | W76B304C | On the Revision of Nota Fiscal Item - [Research] form, click Add. | Add header information to tables F76B30 and F76B31. |
| Master of Goods - Items | W76B304D | On the Master of Goods form, select Nota Fiscal Item from the Form menu. | Add item information to tables F76B30 and F76B31. |

Running the Work File Creation for Nota Fiscal Item Program (R76B300)

Select Filter Programs - IN68 (G76BIN681), Work File Creation for Nota Fiscal Item

Setting Processing Options for the Work File Creation for Nota Fiscal Item - IN68 Program (R76B300)

These processing options specify values for the Nota Fiscal Header/Table for Goods - IN68 table (F76B30) and Nota Fiscal Detail/Table for Goods - IN68 table (F76B31).

Values

1. **Movement Indicator** Specify the direction of the process. Values are:
E: Inbound nota fiscal
S: Outbound nota fiscal
2. **Document Type** Specify the code that the system uses for the Document Type field.
3. **Document Type Code Description** Specify the description that the system uses for the document type code. If left blank, the system uses the document type code of Nota Fiscal (QXDCT).
4. **Model Document** Specify the code that the system uses for the Model Document field. If left blank, the system uses the value *01* for the Model Document.
5. **Model Document Code Description** Specify the code that the system uses for the Model Document field. If left blank, the system uses the description *Nota Fiscal Model 01*.
- 6a. **Message to Identify IPI** and 6b. **Message to Identify IPI 50%** Specify the message code for IPI tax.

Processing

1. Enter '1' to clear tables F76B30 and F76B31 before processing.

Specify whether the system clears the F76B30 and F76B31 tables before processing. Values are:

Blank: Appends records to the tables without clearing the tables.

1: Clears the tables before processing.

Adding Records to Tables F76B30 and F76B31

Access the Master of Goods form.

| | |
|--|---|
| Movement Indic (movement indicator) | Enter a code that indicates whether the <i>nota fiscal</i> is for an inbound or outbound transaction. Values are: E: Inbound S: Outbound |
| Document Type | Enter the type of document, such as a <i>nota fiscal</i> . You must set up valid document types in the Document Type UDC (00/DT). |
| Series/Sub Series | Enter the document series and subseries of the <i>nota fiscal</i> . |
| Document Date | Enter the date that the system prints on the document. |
| Applied Date | Enter the date that the <i>nota fiscal</i> was applied to the JD Edwards EnterpriseOne Accounts Payable or JD Edwards EnterpriseOne Accounts Receivable system. |
| Document Number | Enter the reference number of the document. |
| Series/Sub Series 2 | Enter the series and sub series number of the <i>nota fiscal</i> . |
| Document Model | Enter the code for the model of the document. The Brazilian government specifies the codes for model documents in the ICMS 57/95 document. |
| State Inscript | Enter the state-issued inscription number. |
| Final Tax Payer | Enter the taxpayer ID of the individual or company who pays the tax. |
| Number of Importation | Enter the importation declaration number. |
| Carrier Type | Reserved for future use. |
| Carrier Number | Enter the address book number of the carrier, which is specified by the customer or by the organization. You might use this carrier because of route requirements or special handling requirements. |
| Freight Terms | Enter the terms or conditions for the payment of freight charges. |
| Vehicle Identification | Enter the identification number of the vehicle used to transport goods. |
| Flag - Cancel Flag | The cancel flag indicates that cancel is selected. Values are: 1: Selected. Blank or 0: Not selected. |
| IPI Observations | Enter remarks about the IPI tax. |

| | |
|--------------------------------------|--|
| Include Time | Enter an option that determines whether time and pay data that was already entered into the system is included in the gross amount of a specified payment. |
| Volume Quantity | Enter the quantity of volumes. |
| Liquid Weight | Enter the weight of liquid goods. You can enter up to 9 characters. |
| Gross Weight | Enter the gross weight of the goods. You can enter up to 9 characters. |
| IPI Recoverable | Enter the IPI tax amount that is eligible for recovery. |
| IPI Tax | Enter the IPI tax amount that is printed on the <i>nota fiscal</i> . |
| Freight | Enter a complementary expense to the customer. The system prorates this expense amount among each of the <i>notas fiscais</i> listed and adds the prorated amount to the ICMS taxable amount for each document. |
| Est. Other (Estimated Other) | Enter an amount - Estimated Other. |
| Discount Amount | Enter the total amount of the discount. |
| Security Received | Enter a number that specifies the amount of security deposits received. |
| Extended Price | Enter the number of units multiplied by the unit price. |
| Total Actuals | Enter the actual amounts of a job. The amounts displayed are from the Actual Amounts (AA) ledger. This field is informational only. |
| Line ID (line identification) | Enter the line number on the <i>nota fiscal</i> . |
| Sch Typ (search type) | Enter a user-defined code (01/ST) that specifies the kind of address book record to search for. Examples include: <i>E</i> : Employees <i>X</i> : Ex-employees <i>V</i> : Suppliers <i>C</i> : Customers <i>P</i> : Prospects <i>M</i> : Mail distribution lists <i>TAX</i> : Tax authorities |
| Emit. Destin. | Enter a user-defined name or remark. |
| Description Line 2 | Enter a second, 30-character description, remark, or explanation. |
| CFOP | Use this three-character code to indicate different types of transactions for tax purposes. To enter values for the Transaction Nature code, use this convention: X, YY. Use a value for X to define the origin of the transaction (inbound or outbound). Values for X are: <i>I</i> : Inbound, inside the state <i>2</i> : Inbound, other states <i>3</i> : Inbound, import <i>5</i> : Outbound, inside state |

6: Outbound, other states

7: Outbound, export

Use values for YY to define the transaction as a whole, such as a sales transaction.

Examples of Transaction Nature Codes:

511: In-state sale

611: Out-of-state sale

Operation Type

Enter the type of operation.

Fiscal Classification

Enter a code that specifies groups of products, as defined by the local tax authorities. The product groups are based on taxing conventions and other national statistics. The system uses this code to determine the applicable tax rate for a product.

UM (unit of measure)

Enter a user-defined code (00/UM) that indicates the quantity in which to express an inventory item, for example, CS (case) or BX (box).

Quantity Ordered

Enter the quantity of units affected by this transaction.

Liquid Weight

Enter the weight of the liquid.

Unit Price

Enter the list or base price to be charged for one unit of this item. In sales order entry, all prices must be set up in the Item Base Price File table (F4106).

Extended Price

Enter the number of units multiplied by the unit price.

Discount Amount

Enter total amount of the discount.

Security Received

Enter a number that specifies the amount of security deposits received.

Nota Fiscal Freight

A complementary expense to the customer. The system prorates this expense amount among each of the *notas fiscais* listed and adds the prorated amount to the ICMS taxable amount for each document.

Other Charges

On a given bill, this is the sum of all of the charges that are NOT subject to budget billing. This is determined by the bill item associated with the charge.

Romaneio Number

Enter the romaneio number.

Effective Date

Enter the date the action takes effect.

Tax Mtd (tax method)

Enter the Federal Additional Tax Method 01

IPI Indic.

Indicate if a value for IPI tax exists.

IPI Rate

Enter the rate at which IPI tax is applied.

IPI Recoverable

Enter the IPI tax amount that is eligible for recovery.

IPI Tax

Enter the IPI tax amount that is printed on the *nota fiscal*.

State Tax

Enter the type of condition of the state tax.

State Tax

Enter the type of condition of the state tax.

ICMS Indic.

Indicate if a value for ICMS tax exists.

| | |
|------------------------------------|--|
| ICMS Rate | Enter the rate at which ICMS tax is applied. |
| ICMS Taxable Amount | Enter the amount on which ICMS taxes are assessed. |
| Amount of ICMS to be Paid | Enter the ICMS tax amount that is to be paid. |
| ICMS Substitute | Enter the ICMS Substitute amount that the customer must remit in advance if they are subject to Tax Substitution Mark-up. |
| ICMS Tax | Enter the ICMS tax amount that is printed on the <i>nota fiscal</i> . |
| Reduced ICMS Taxable Amount | Enter the amount on which ICMS taxes are assessed. In this case, the ICMS taxable amount is reduced due to the sale of given products. |
| Dif. ICMS | Enter the difference in the ICMS tax rate applied by the state of origin and the state where the goods are received. |

Running the Final Creation for Notas Fiscais for Goods - IN68 (R76B307) Program

Select Final Generation and Integrities - IN68 (G76BIN683), Final Creation for Nota Fiscal Item.

Setting Processing Options for the Final Creation for Nota Fiscal Item - IN68 Program (R76B307)

These processing options specify whether the system generates a text file and where the system stores the text file. You also specify whether you want to work with inbound or outbound *notas fiscais*.

Report Generation

- 1. Report Generation** Specify the report output. Values are:
Blank: Report and the .txt file.
I: Report only.
- 2. Movement Type Indicator** Specify the direction of the process. Values are:
E: Inbound
S: Outbound

Directory TXT

- 1. Directory Name** Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file.

For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory:
C:\B9\

Working with Nota Fiscal Records for Services for IN68

This section provides overviews of *nota fiscal* records for services and describes how to:

- Run the Work File Creation for Nota Fiscal Services (R76B400) program.
- Set processing options for the Work File Creation for Nota Fiscal Services program (R76B400).
- Add records for tables F76B40 and F76B41.
- Run the Final Creation, Nota Fiscal of Services program (R76B407).
- Set processing options for the Final Creation, Nota Fiscal of Services program (R76B407).

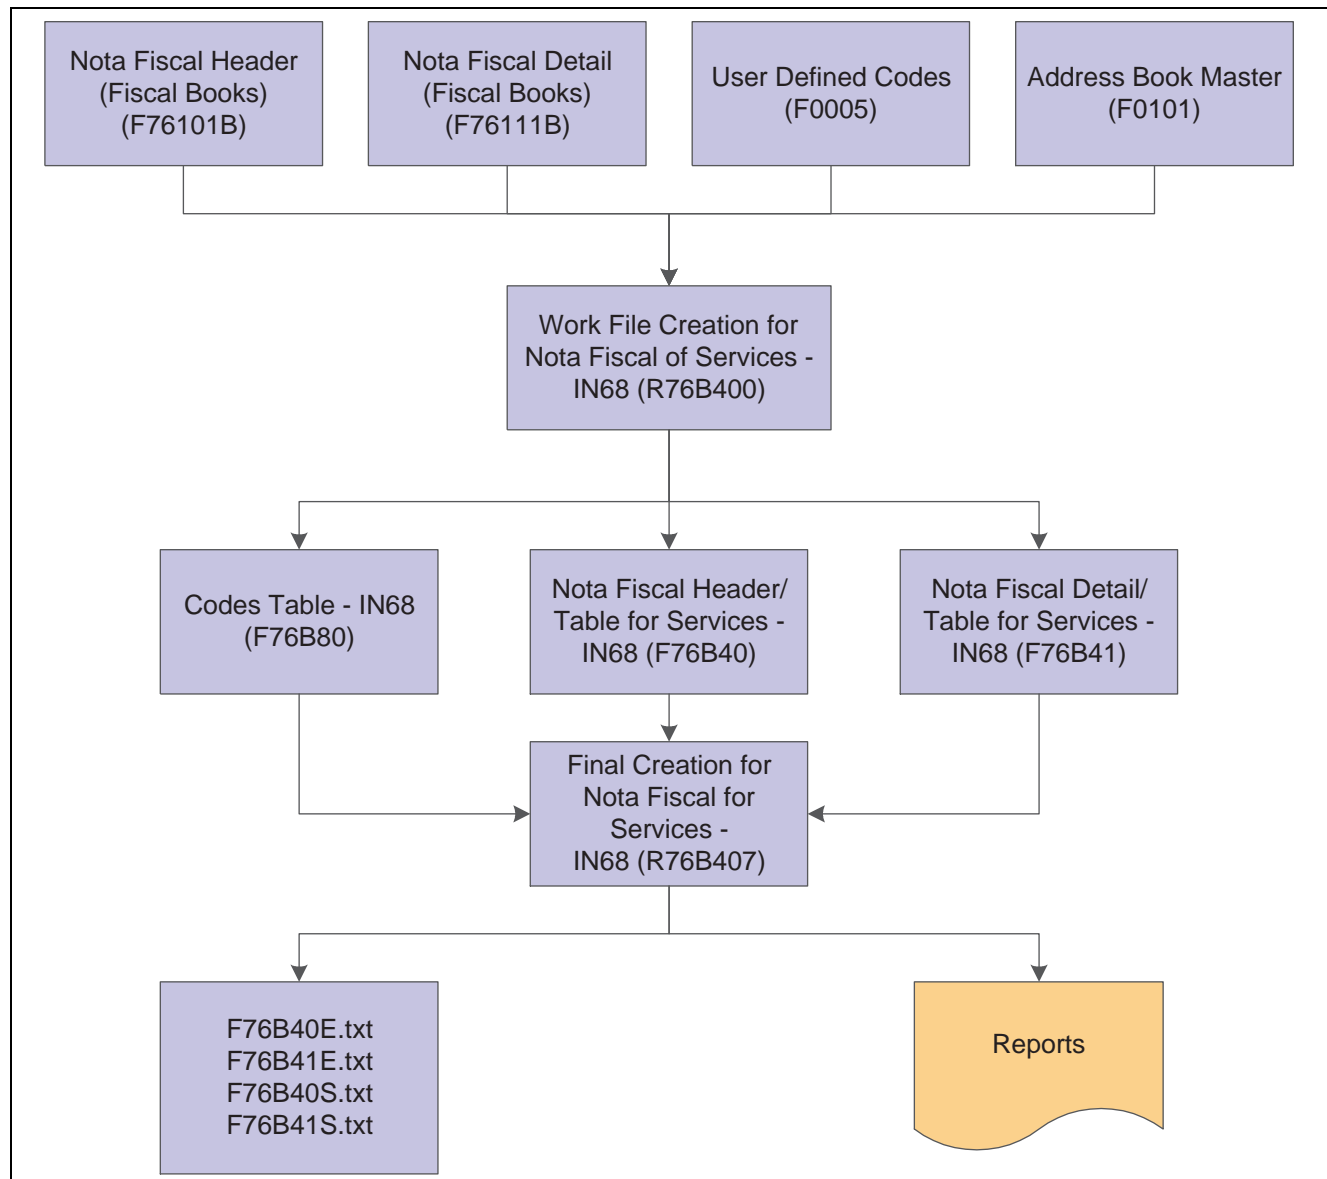

Understanding Nota Fiscal Records for Services for IN68

To generate *nota fiscal* records for services for IN68, you run the Work File Creation for Nota Fiscal of Services - IN68 batch process (R76B400) to generate the Nota Fiscal Header/Table for Services- IN68 table (F76B40) and the Nota Fiscal Detail/Table for Services - IN68 table (F76B41). These work files contain a subset of data from these files:

- Nota Fiscal - Header (Fiscal Books) (F76101B).
- Nota Fiscal - Detail (Fiscal Books) (F76111B).
- Address Book Master (F0101).
- User-Defined Codes (F0005).

After you generate the work file, you can use the Revision of Nota Fiscal of Services - IN68 program (P76B404) to review and make any necessary changes to the work files. After you make necessary changes, you run the Final Creation for Nota Fiscal of Services - IN68 batch process (R76B407) to create reports and the text files that you send to the tax authority.

This graphic shows how the system processes *nota fiscal* records for services for IN68 tax reporting:

Nota fiscal records for services for IN68

Understanding the Work File Creation for Nota Fiscal Services (R76B400) Program

You run the Workfile Creation-Nota Fiscal Services program (R76B400) to generate the Nota Fiscal Header/Table for Services - IN68 table (F76B40) and the Nota Fiscal Detail/Table for Services - IN68 table (F76B41). The Workfile Creation-Nota Fiscal Services program also populates records in the Physical and Legal Person Table - IN68 table (F76B70) and the Codes Table - IN68 table (F76B80).

Using Data Selection, you determine the records in the Nota Fiscal - Header (Fiscal Books) table (F76101B) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each selected F76101B record, the batch process writes records to these tables:

- Nota Fiscal Header/Table for Services - IN68 table (F76B40).

- Nota Fiscal Detail/Table for Services - IN68 table (F76B41).
- Physical and Legal Person Table - IN68 (F76B70).
- Codes Table - IN68 (F76B80).

Before writing a record to tables F76B40 and F76B41, the Workfile Creation-Nota Fiscal Services program:

- Verifies that the address number that appears in the F76101B record exists in the Address Book Master table (F0101).
- Identifies each address that is read from table F0101 with the description of the Search Type field in the User-Defined Codes table (F0005).

For example, if the description for the search type is *Customer*, the record is identified as a customer record. You set up search types in the 01/ST UDC.

- Writes values to table F76B40 and table F76B41 according to the input in the Operation Type, Document Type, Inbound/Outbound, and IPI tax processing options.
- Determines the Debit/Credit Indicator according to the arithmetic operator (>, <) in the Gross Amount field in table F76101B.
- Writes information about the ICMS, IRRF, and ISS taxes.

After writing records to tables F76B30 and F76B31, the Workfile Creation-Nota Fiscal Services program:

- Populates table F76B70
- Populates table F76B80

Understanding the Final Creation for Nota Fiscal for Services (R76B407) Program

The Final Creation for Nota Fiscal of Services program (R76B407) lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report.

This batch process generates reports and text files, depending on how you set the Inbound/Outbound processing option. This table shows the reports and corresponding text files for the R76B407 program:

| Processing Option set to Inbound | Processing Option set to Outbound |
|--|--|
| Reports: <ul style="list-style-type: none"> • R76B40E • R76B41E Text files: <ul style="list-style-type: none"> • F76B40E.txt • F76B41E.txt | Reports: <ul style="list-style-type: none"> • R76B40S • R76B41S Text files: <ul style="list-style-type: none"> • F76B40S.txt • F76B41S.txt |

If a file with the same name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate. The batch process saves the text files to the directory that you enter in the processing options. You must generate and save the file on a client machine; you cannot generate or save the file on a server. The batch process writes records to the text files only after it evaluates the records in the Physical and Legal Persons Table - IN68 table (F76B70) and the Codes Table - IN68 table (F76B80).

Using Data Selection, you determine the records in the Nota Fiscal Header/Table for Services - IN68 table (F76B40) and the Nota Fiscal Detail/Tables for Services - IN68 table (F76B41) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each record in table F76B40, the Final Creation, Nota Fiscal of Services program writes a record to the text files if table F76B80 contains a record that meets all of these requirements:

- A Code of 06, the G/L Date is less than or equal to the G/L Date of the F76B40 record read, and the Used Code is equal to the Document Type of the F76B40 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 07, the G/L Date is less than or equal to the G/L Date of the F76B40 record read, and the Used Code is equal to the Search Type of the F76B40 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 08, the G/L Date is less than or equal to the G/L Date of the F76B40 record read, and the Used Code is equal to the Model Fiscal Documents of the F76B40 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

For each record in table F76B41, the batch process writes a record to the text files if all of these conditions exist:

- Table F76B80 contains a record that has a Code of 21.
- G/L Date is less than or equal to the G/L Date of the F76B41 record read.
- Used Code is equal to the Service Code in the F76B41 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

After it processes the information in tables F76B40, F76B41, F76B70, and F76B80, the Final Creation, Nota Fiscal of Services program writes this information to the reports:

- Value of the service for each record.
- Total of the value of services.
- Number of records processed.

Forms Used Add and Revise Records for Tables F76B40 and F76B41

| Form Name | FormID | Navigation | Usage |
|---|----------|---|---|
| Revision of Nota Fiscal Services - Research | W76B404A | Maintenance and Inquiries - IN68 (G76BIN682), Revision of Nota Fiscal Services - IN68 | Locate records to revise. |
| Master of Services | W76B404C | On the Revision of Nota Fiscal Services - Research form, click Add. | Add header information to tables F76B40 and F76B41. |
| Master of Services - Items | W76B404D | On the Master of Services form, click Nota Fiscal Items. | Add item information to tables F76B40 and F76B41. |

Running the Work File Creation for Nota Fiscal Services (R76B400) Program

Select Filter Programs - IN68 (G76BIN681), Workfile Creation-Nota Fiscal Services.

Setting Processing Options for the Work File Creation-Nota Fiscal Services Program (R76B400)

These processing options specify values for the Nota Fiscal Header/Table for Services - IN68 table (F76B40) and the Nota Fiscal Detail/Table for Services - IN68 (F76B41) table.

Values

1. **Movement Indicator** Specify the direction for the process. Values are:
E: Inbound nota fiscal
S: Outbound nota fiscal
2. **Document Type** Specify the code that the system uses for the Document Type field.
3. **Document Type Description** Specify the description for the document type code. If you leave this processing option blank, the system uses the document type *Receipt* (QXDCT).
4. **Model Document** Specify the code that the system uses for the Model Document field.
5. **Model Document Description** Specify the model document description. If left blank, the system uses a model document code *01* and description *Nota Fiscal Model 01*.
- 6a. **Message to Identify IPI** and 6b. **Message to Identify IPI 50%** Specify the message code for the IPI tax.

Processing

1. **Enter '1' to clear tables F76B40 and F76B41 before processing.** Specify whether the system clears the F76B40 and F76B41 tables before processing. Values are:
Blank: Appends records to the tables without clearing.

I: Clears the tables before processing.

Adding Records to Tables F76B40 and F76B41

Access the Master of Services form.

| | |
|---|--|
| NF Number (<i>nota fiscal</i> number) | Enter the number assigned to the <i>nota fiscal</i> . |
| Movement Indic (movement indicator) | Enter a code that indicates whether the <i>nota fiscal</i> is for an inbound or outbound transaction. Values are: <i>E</i> : Inbound <i>S</i> : Outbound |
| Document Type | Enter the type of document, such as a <i>nota fiscal</i> . You must set up valid document types in the Document Type UDC (00/DT). |
| Series/Sub Series | Enter the document series and subseries of the <i>nota fiscal</i> . |
| Document Date | Enter the date that the system prints on the document. |
| Document Model | Enter the code for the model of the document. The Brazilian government specifies the codes for model documents in the ICMS 57/95 document. |
| Flag - Cancel Flag | Indicates whether cancel is selected. <i>I</i> : Selected. Blank or <i>0</i> : Not selected. |
| IRRF Rate | Enter the IRRF tax rate. |
| Base IRRF | Enter the base value for calculating ICMS tax. |
| Total IRRF Tax | Enter the total value of IRRF tax. |
| Discount Amount | Enter the total amount of the discount. |
| Total Actuals | Enter the actual amounts of a job. The amounts displayed are from the Actual Amounts (AA) ledger. This field is informational only. |
| Include Time | Enter an option that determines whether time and pay data that was already entered into the system is included in the gross amount of a specified payment. |
| Sv Cd (service code) | Enter a code that identifies the type of service being provided in relation to an item number. |
| Sch Typ (search type) | Enter a user-defined code (01/ST) that specifies the kind of address book record to search for. Examples include: <i>E</i> : Employees <i>X</i> : Ex-employees <i>V</i> : Suppliers <i>C</i> : Customers <i>P</i> : Prospects <i>M</i> : Mail distribution lists |

TAX: Tax authorities

| | |
|--|---|
| Service Chg. Sales (service charge sales) | Enter a number that indicates the total amount of sales that are attributed to events such as conventions or meetings. |
| Extended Price | Enter the number of units multiplied by the unit price. |
| ICMS Rate | Enter the rate at which ICMS tax is applied. |
| ICMS Taxable Amount | Enter the amount on which ICMS taxes are assessed. |
| Amount of ICMS to be Paid | Enter the ICMS tax amount that is to be paid. |
| Order Number | Enter a number that identifies an original document. This document can be a voucher, a sales order, an invoice, unapplied cash, a journal entry, and so on. |
| Final Total Amount | Enter the total for the line item that includes the ICMS tax amount. |

Running the Final Creation for Nota Fiscal for Services (R76B407) Program

Select Final Generation and Integrities - IN68 (G76BIN683), Final Creation, Nota Fiscal of Services.

Setting Processing Options for the Final Creation, Nota Fiscal of Services Program (R76B407)

These processing options specify whether the system generates a text file and where the system stores the text file. You also specify whether you want to work with inbound or outbound *notas fiscais*.

Report Generation

- | | |
|-----------------------------------|---|
| 1. Report Generation | Specify the report output. Values are: Blank: Report and the .txt file. <i>I</i> : Report only. |
| 2. Movement Type Indicator | Specify the direction for the process. Values are: <i>E</i> : Inbound <i>S</i> : Outbound |

Directory TXT

- | | |
|--------------------------|--|
| 1. Directory Name | Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file. For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory: C:\B9\ |
|--------------------------|--|

Working with Item Ledger Records for IN68

This section provides overviews of item ledger records and describes how to:

- Run Work File Creation for the Item Ledger - IN68 program (R76B500).
- Set processing options for the Work File Creation for Item Ledger - IN68 program (R76B500).
- Add or modify records in table F76B50.
- Run the Final Creation for the Item Ledger program (R76B507).
- Set processing options for the Final Creation for the Item Ledger program (R76B507).

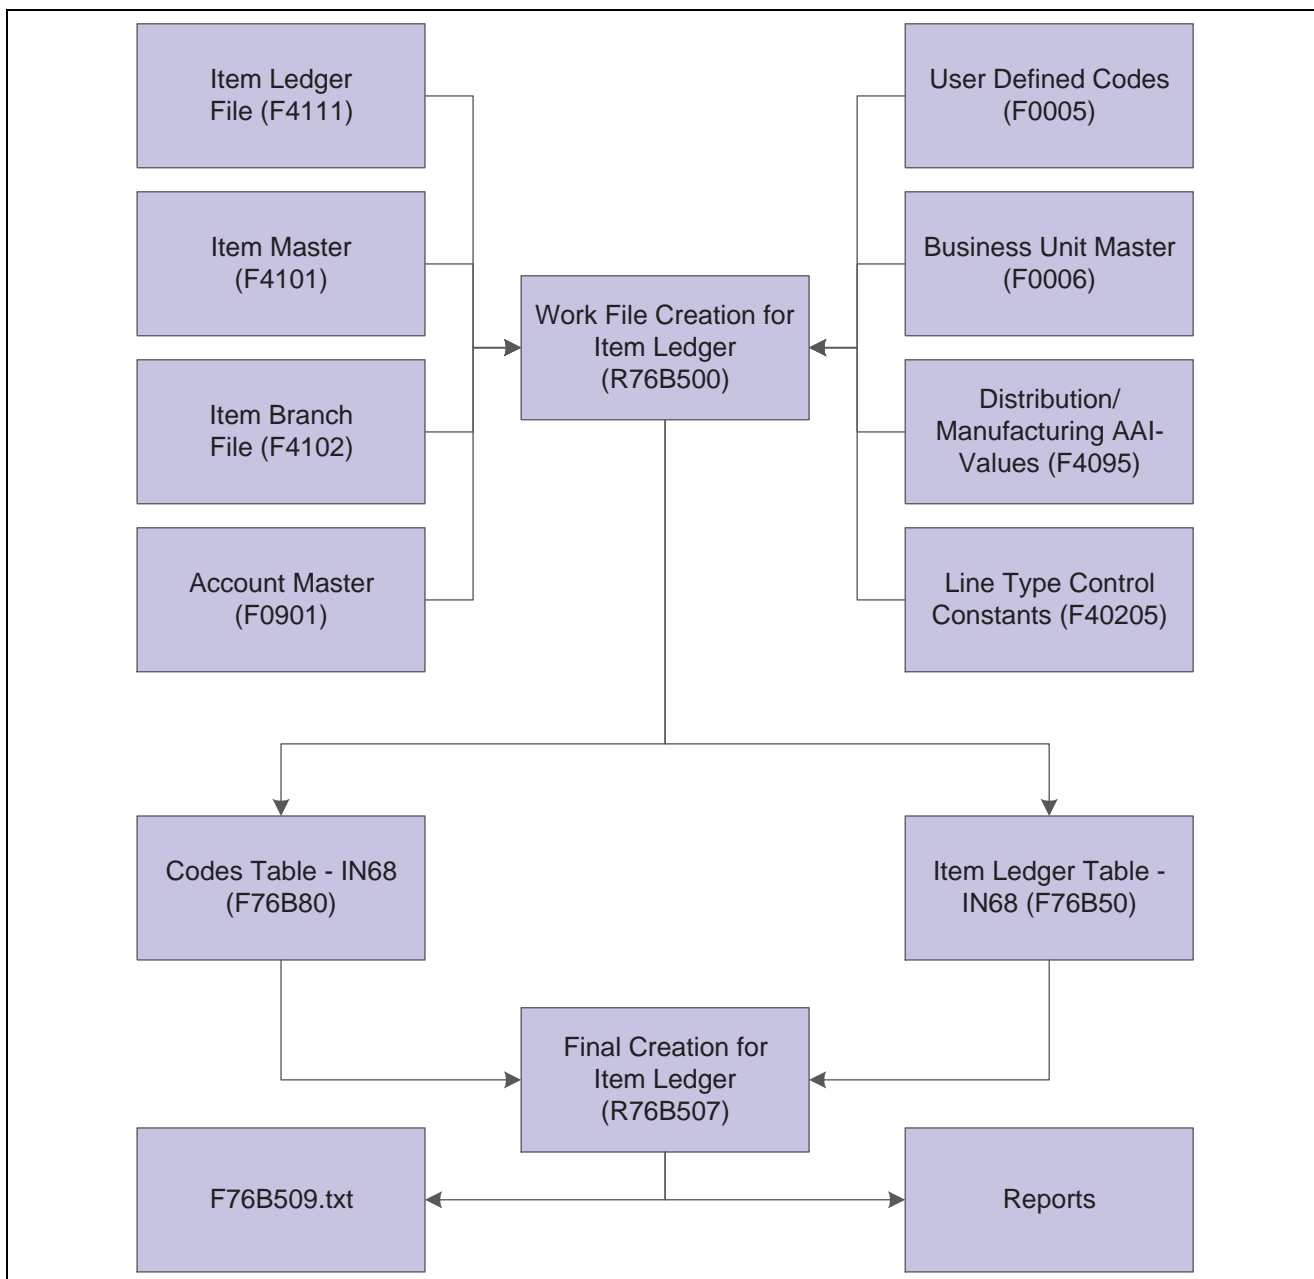

Understanding Item Ledger Records for IN68

To generate Item Ledger records for IN68, you run the Work File Creation for Item Ledger - IN68 batch process (R76B500) to generate the Item Ledger Table - IN68 (F76B50). Table F76B50 is the work file that contains a subset of data from these files:

- Item Ledger File (F4111).
- Item Master (F4101).
- Item Branch File (F4102).
- Account Master (F0901).
- User-Defined Codes (F0005).
- Business Unit Master (F0006).
- Distribution/Manufacturing - AAI Values (F4095).
- Line Type Control Constants (F40205).

After you generate the work file, you can use the Revision of Item Ledger - IN68 program (P76B504) to review and make any necessary changes to the work file. After you make necessary changes, you run the Final Creation for Item Ledger - IN68 batch process (R76B507) to create a report and the text file that you send to the tax authority.

This graphic shows how the system processes item ledger records for IN68 tax reporting:

Item ledger records for IN68

Understanding the Work File Creation for Item Ledger Program (R76B500)

You run the Work File Creation for Item Ledger - IN68 program (R76B500) to generate the Item Ledger Table - IN68 (F76B50). The Work File Creation for Item Ledger - IN68 program also populates records in the Physical and Legal Person Table - IN68 table (F76B70) and the Codes Table - IN68 table (F76B80).

Using Data Selection, you determine the records in the Item Ledger File table (F4111) that the system should consider for IN68. The system provides a default data selection on the XJDE0001 version for this batch process.

For each selected F4111 record, the Work File Creation for Item Ledger - IN68 program writes records to these tables:

- Item Ledger Table - IN68 (F76B50).
- Physical and Legal Person Table - IN68 (F76B70).
- Codes Table - IN68 (F76B80).

Before writing a record to table F76B50, the Work File Creation for Item Ledger - IN68 program:

- Verifies that the address number that appears in the F4111 record exists in the Address Book Master table (F0101).
- Identifies each address that is read from table F0101 with the description of the Search Type field in the User-Defined Codes table (F0005).

For example, if the description for the search type is *Customer*, the record is identified as a customer record. You set up search types in the 01/ST UDC.

- Writes values to table F76B50 according to the input in the Nature of Stock, Operation Type, and Document Type processing options.
- Determines the Debit/Credit Indicator according to the arithmetic operator (>, <) in the Gross Amount field in the Customer Ledger table (F03B11).

After writing a record to table F76B50, the Work File Creation for Item Ledger - IN68 program:

- Populates table F76B70
- Populates table F76B80

Understanding the Final Creation for Item Ledger Program (R76B507)

The Final Creation for Item Ledger program (R76B507) lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report. The batch process names the text file F76B509.txt and saves it to the directory that you enter in the processing options. If a file with this name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate. You must generate and save the file on a client machine; you cannot generate or save the file on a server. The batch process writes records to the F76B509.txt file only after it evaluates the records in the Physical and Legal Person Table - IN68 table (F76B70) and the Codes Table - IN68 table (F76B80).

Using Data Selection, you determine the records in the Item Ledger Table - IN68 (F76B50) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each selected record in table F76B50, the Final Creation for Item Ledger program writes a record to the F76B509.txt file if table F76B80 contains a record that meets all of these requirements:

- A Code of 01, the G/L Date is less than or equal to the G/L Date of the F76B50 record read, and the Used Code is equal to the Chart of Accounts of the F76B50 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 02, the G/L Date is less than or equal to the G/L Date of the F76B50 record read, and the Used Code is equal to the Operation Type of the F76B50 record read.

If the process does not find a record in the table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 03, the G/L Date is less than or equal to the G/L Date of the F76B50 record read, and the Used Code is equal to the Cost Center of the F76B50 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 06, the G/L Date is less than or equal to the G/L Date of the F76B50 record read, and the Used Code is equal to the Document Type of the F76B50 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 14, the G/L Date is less than or equal to the G/L Date of the F76B50 record read, and the Used Code is equal to the Products of the F76B50 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 23, the G/L Date is less than or equal to the G/L Date of the F76B50 record read, and the Used Code is equal to the Nature of Stock of the F76B50 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

After it processes the information in tables F76B50, F76B70, and F76B80, the Final Creation for Item Ledger program writes this information to the report:

- Total amount of the product.
- Number of records.

Forms Used Add and Revise Records for Tables F76B50

| Form Name | FormID | Navigation | Usage |
|--------------------------------------|----------|--|------------------------------|
| Revision of Item Ledger - [Research] | W76B504A | Maintenance and Inquiries - IN68 (G76BIN682), Revision of Item Ledger - IN68 | Locate records to revise. |
| Revision of Item Ledger - [Register] | W76B504B | On the Revision of Item Ledger - [Research] form, click Add. | Add records to table F76B50. |

Running the Work File Creation for Item Ledger Program (R76B500)

Select Filter Programs (G76BIN681), Work File Creation for Item Ledger-IN68.

Setting Processing Options for the Work File Creation for Item Ledger - IN68 Program (R76B500)

These processing options specify values for the stock type, document type, and operation type that appear in reports and text files.

The program provides three processing options for defining the nature of stock. Use the Nature of Stock processing option to choose a value that the system validates. If you do not want to choose one of the valid values that is listed in the Nature of Stock processing option, you can complete the Nature of Stock Override and the Nature of Stock Description to enter a value that the system does not validate.

Each record that the system writes to the Item Ledger Table - IN68 (F76B50) contains a document or order type. When the system writes a description of the document or order type to table F76B50, it uses the document type code and description from the Item Ledger table (F4111) unless you specify a different code and description on the document type and operation type processing options.

Values

1. Select the field to be used for Nature of Stock Specify the field that the system uses for the nature of stock value. Values are:

1: SHCM

2: STKT

3: LNTY

Leave blank to use the code entered in processing option 2.

2. Values for field Nature of the Stock Specify the code that the system uses for the nature of the stock field. The code might indicate whether an inventory item has special conditions that might affect the method of storage. Examples of such conditions are:

- Perishable material
- Flammable material
- Toxic substances
- Hazardous material
- Stacking limitations
- Loading limitations

Note. Use this field only when processing option 1 is left blank.

Enter an additional, user-defined description for the code.

3. Document Type

Specify the code that the system uses for the Document Type, such as a nota fiscal. If left blank, the system uses the document type of the stock movement (ILDCT or ILDCTO).

Enter an additional, user-defined description for the code.

4. Operation Type

Specify the code that the system uses for the Operation Type field. If left blank, the system uses the document type of the stock movement (ILDCT or ILDCTO).

Enter an additional, user-defined description for the code.

Processing

1. Enter '1' to clear tables F76B50 before processing. Specify whether the system clears table F76B50 before processing. Values are:

Blank: Appends records to the table.

1: Clears the table before processing.

Adding Records to Table F76B50

Access the Revision of Item Ledger - [Register] form.

| | |
|---------------------------------------|---|
| G/L Date (general ledger date) | <p>Enter a date that identifies the financial period to which the transaction is to be posted.</p> <p>The company constants specify the date range for each financial period. You can have as many as 14 periods. Generally, period 14 is used for audit adjustments. The system validates this field for PBCO (posted before cutoff), PYEB (prior year ending balance), PACO (post after cutoff), and WACO (post way after cutoff) messages.</p> |
| Storage Requirements Code | <p>Enter a code that indicates whether an inventory item has special conditions that might affect the method of storage. Examples are:</p> <p>Perishable material</p> <p>Flammable material</p> <p>Toxic substances</p> <p>Hazardous material</p> <p>Stacking limitations</p> <p>Loading limitations</p> |
| Document Type | Enter the type of document, such as a <i>nota fiscal</i> . You must set up valid document types in the Document Type UDC (00/DT). |
| Series/Sub Series | Enter the document series and subseries of the <i>nota fiscal</i> . |
| Document Number | <p>Enter a number that identifies the original document, such as a voucher, invoice, or journal entry. On entry forms, you can assign the document number or let the system assign it using the Next Numbers program (P0002). Matching document numbers (DOCM) identify related documents in the JD Edwards EnterpriseOne Accounts Receivable and JD Edwards EnterpriseOne Accounts Payable systems. Examples of original and matching documents are:</p> <p>Accounts Payable</p> <p>Original document - voucher</p> <p>Matching document - payment</p> <p>Accounts Receivable</p> <p>Original document - invoice</p> <p>Matching document - receipt</p> <hr/> <p>Note. In the JD Edwards EnterpriseOne Accounts Receivable system, these transactions simultaneously generate original and matching documents: deductions, unapplied receipts, chargebacks, and drafts.</p> <hr/> |
| Service Contract Number | Enter the identifying number of the contract for servicing an item. |
| Serial Number | Enter an identifying number that is assigned by the item manufacturer. |
| Transaction Quantity | Enter a value that represents the available quantity, which might consist of the on-hand balance minus commitments, reservations, and backorders. You enter this value in the Branch/Plant Constants program (P41001). |
| Unit Cost | Enter the amount per unit, derived by dividing the total cost by the unit quantity. |

| | |
|--|---|
| Extended Cost | For accounts receivable and accounts payable, enter the invoice (gross) amount. For sales orders and purchase orders, enter the unit cost times the number of units. |
| Unit Cost - Lot. (6) | Enter the cost of one unit for the particular layer or lot. |
| Extended Cost/Price | Enter the extended cost or price value of an inventory transaction for an inventory item. |
| Project Number | Enter either a subsequent business unit or a project number. A subsequent business unit specifies where to charge costs (or revenues) when the original business unit has been closed or suspended. For example, the subsequent business unit can be used in corporate reorganizations when you close a business unit and direct all costs to the subsequent business unit. In this situation, you must enter journal entries to transfer existing balances. A project number is used to group business units within an overall business unit. For example, you can group jobs by project. In this case, the project business unit can also have accounts for tracking overhead costs that can be allocated to jobs. |
| Object Account Thru Thru Subsidiary | Enter a value that identifies the ending object account in a range of accounts. Enter a number that specifies the ending subsidiary account in a range of accounts. The system uses the accounts in this range to determine the basis for the allocation. Only posted amounts in the account range are included. |
| SubLedger - Resulting | Enter a code that indicates the subledger and the subledger type for a transaction. You can specify a subledger and subledger type, or use one of these values: * <i>SRC</i> : Use the subledger and subledger type from the workfile transaction. * <i>WO</i> : Use the work order number and the subledger type W. * <i>CUST</i> : Use the address number for the customer and the subledger type A. * <i>CC</i> : Use the business unit from the workfile transaction and the subledger type C. * <i>EMP</i> : Use the employee or supplier address number from the workfile transaction and the subledger type A. * <i>AUTH</i> : Use the address book number of the tax authority and the subledger type A. The tax authority is associated with the tax rate area that is assigned to the workfile transaction. This value is only for the Tax Liability - Credit billing AAI (4815). |
| Operation Type | Enter the type of operation. |
| Location | Enter the current physical location of an asset. The location must have a valid business unit or job number in the Business Unit Master table (F0006). |

Running the Final Creation for Item Ledger Program (R76B507)

Select Final Generation and Integrities - IN68 (G76BIN683), Final Creation for Item Ledger.

Setting Processing Options for the Final Creation for Item Ledger Program (R76B507)

These processing options specify whether the system generates a text file and where the system stores the text file.

Report Generation

- 1. Report Output** Specify the report output. Values are:
- Blank: Report and the .txt file.
- I: Report only.

Directory TXT

- 1. Directory Name** Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file.
- For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory:
- C:\B9\

Working with Inventory Records for IN68

This section provides overview of inventory records for IN68 and describes how to:

- Run the Work File Creation for Inventory Records program (R76B510).
- Set processing options for the Work File Creation for Inventory Records program (R76B510).
- Add records to table F76B51.
- Run the Final Creation for Inventory Records program (R76B517).
- Set processing options for the Final Creation for Inventory Records program (R76B517).

Understanding Inventory Records for IN68

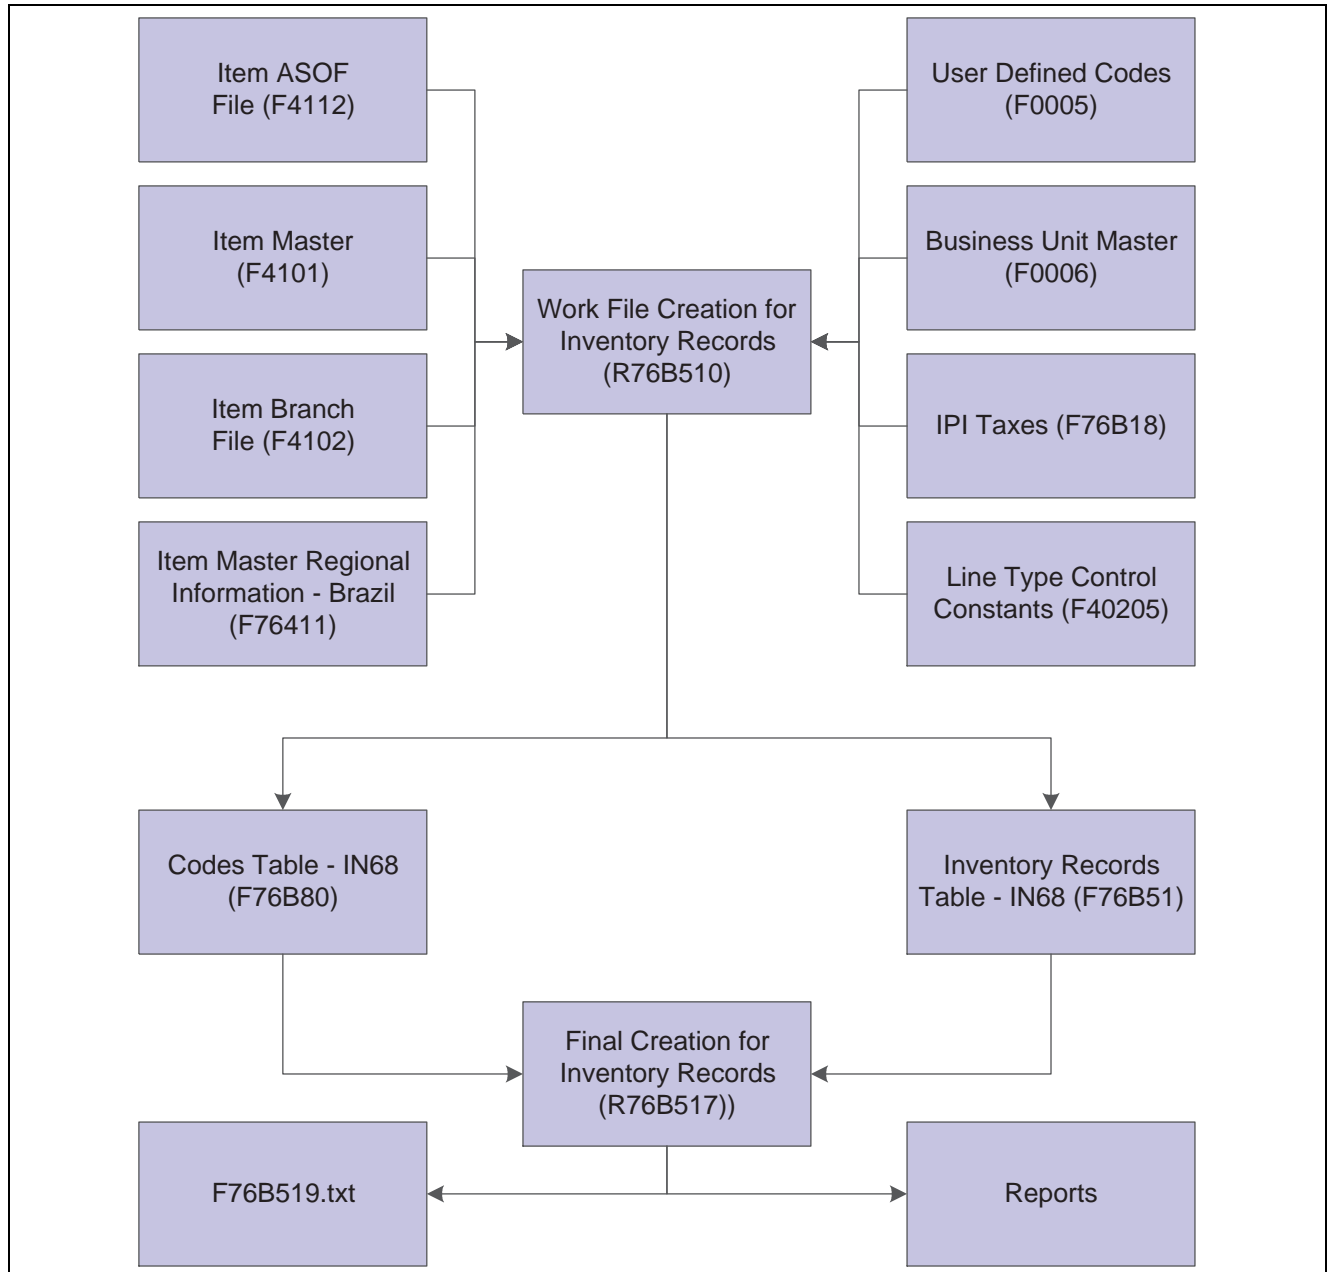

To generate Inventory records for IN68, you run the Work File Creation for Inventory Records - IN68 batch process (R76B510) to generate the Inventory Records Table - IN68 (F76B51). Table F76B51 is the workfile that contains a subset of data from these files:

- Item ASOF File (F41112).
- Item Master (F4101).
- Item Branch File (F4102).
- User-Defined Codes (F0005).
- Business Unit Master (F0006).

- Item Master Regional Information - Brazil (F76411).
- Line Type Control Constants File (F40205).
- IPI Taxes (F76B18).

After you generate the workfile, you can use the Revision of Inventory Records - IN68 program (P76B514) to review and make any necessary changes to the workfile. After you make the necessary changes, you run the Final Creation for Inventory Records - IN68 batch process (R76B517) to create a report and the text file that you send to the tax authority.

This graphic shows how the system processes inventory records for IN68 tax reporting:

Inventory records for IN68

Understanding the Work File Creation for Inventory Records Program (R76B510)

You run the Work File Creation for Inventory Records program (R76B510) to generate the Inventory Records Table - IN68 (F76B51). The Work File Creation for Inventory Records program also populates records in the Codes Table- IN68 table (F76B80).

Using Data Selection, you determine the records in the Item ASOF File table (F41112) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each selected F41112 record, the batch process writes records to these tables:

- Item Ledger Table - IN68 (F76B51).
- Codes Table - IN68 (F76B80).

Before writing a record to table F76B51, the Work File Creation for Inventory Records program:

- Verifies that the address number that appears in the F41112 record exists in the Address Book Master table (F0101).
- Writes values to the Inventory Records Table - IN68 (F76B51) according to the input in the Nature of Stock processing option.

After writing a record to table F76B51, the Work File Creation for Inventory Records program populates the Codes Table - IN68 table (F76B80).

Understanding the Final Creation for Inventory Records Program (R76B517)

The Final Creation for Inventory Records program (R76B517) lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report. The Final Creation for Inventory Records program names the text file F76B519.txt and saves it to the directory that you enter in the processing options. If a file with this name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate. You must generate and save the file on a client machine; you cannot generate or save the file on a server. The batch process writes records to the F76B519.txt file only after it evaluates the records in the Codes Table - IN68 table (F76B80).

Using Data Selection, you determine the records in the Inventory Records Table - IN68 (F76B51) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each selected record in table F76B51, the Final Creation for Inventory Records program writes a record to the F76B519.txt file if table F76B80 contains a record that meets all of these requirements:

- A Code of 03, the G/L Date is less than or equal to the G/L Date of the F76B51 record read, and the Used Code is equal to the Cost Center of the F76B51 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record to the report.

- A Code of 10, the G/L Date is less than or equal to the G/L Date of the F76B51 record read, and the Used Code is equal to the Localization of the F76B51 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record to the report.

- A Code of 14, the G/L Date is less than or equal to the G/L Date of the F76B51 record read, and the Used Code is equal to the Products of the F76B51 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record to the report.

- A Code of 15, the G/L Date is less than or equal to the G/L Date of the F76B51 record read, and the Used Code is equal to the Unit of Measure of the F76B51 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record to the report.

- A Code of 18, the G/L Date is less than or equal to the G/L Date of the F76B51 record read, and the Used Code is equal to the Fiscal Classification of the F76B51 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record to the report.

- A Code of 23, the G/L Date is less than or equal to the G/L Date of the F76B51 record read, and the Used Code is equal to the Nature of Stock of the F76B51 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record to the report.

After it processes the information in tables F76B51 and F76B80, the Final Creation for Inventory Records program writes this information to the report:

- Total amount of the product.
- Number of records.

Forms Used Add and Revise Records for Table F76B51

| Form Name | FormID | Navigation | Usage |
|--|----------|--|------------------------------|
| Revision of Inventory Records - [Research] | W76B514A | Maintenance and Inquiries - IN68 (G76BIN682), Revision of Inventory Records - IN68 | Locate records to revise. |
| Revision of Inventory Records - [Register] | W76B514D | On the Revision of Inventory Records - [Research] form, click Add. | Add records to table F76B51. |

Running the Work File Creation for Inventory Records Program (R76B510)

Select Filter Programs - IN68 (G76BIN681), Work File Creation for Inventory Records.

Setting Processing Options for the Work File Creation for Inventory Records Program (R76B510)

These processing options specify values for the stock type, document type, and operation type that the program uses when processing the Inventory Records Table - IN68 (F76B51) table. The program provides three processing options for defining the nature of stock. Use the Nature of Stock processing option to choose a value that the system validates. If you do not want to choose one of the valid values listed in the Nature of Stock processing option, you can complete the Nature of Stock Override and the Nature of Stock Description to enter a value that the system does not validate.

Each record that the system writes to table F76B51 contains a document or order type. When the system writes a description of the document or order type to table F76B51, it uses the document type code and description from the Item Ledger File table (F4111) unless you specify a different code and description in the document type and operation type processing options.

Values

- 1. Select the field to be used for Nature of Stock** Specify the field that the system uses for the nature of the stock. Values are:
1: SHCM
2: STKT
3: LNTY
 Leave blank to use the code entered in processing option 2.
- 2. Values for field Nature of the Stock** Specify the description that the system uses for the nature of the stock code.
- 3. Enter the base date for inventory records.** Specify the base date that the system uses for inventory records.

Processing

- 1. Enter '1' to clear tables F76B51 before processing.** Specify whether the system clears table F76B51 before processing. Values are:
 Blank: Appends records to the table.
1: Clears the table before processing.

Adding Records to Table F76B51

Access the Revision of Inventory Records - [Register] form.

- | | |
|-----------------------------------|---|
| Date Last Changed - Julian | Enter the date (Julian format) a master or transaction record was last changed. For example, October 31, 2001 would be entered 10/31/2001. |
| Storage Requirements Code | Enter a code that indicates whether an inventory item has special conditions that might affect the method of storage. Examples are: Perishable material Flammable material Toxic substances Hazardous material Stacking limitations Loading limitations |
| Location | Enter the current physical location of an asset. The location must have a valid business unit or job number in the Business Unit Master table (F0006). |
| Fiscal Class | Enter a code that specifies groups of products, as defined by the local tax authorities. The product groups are based on taxing conventions and other national statistics. The system uses this code to determine the applicable tax rate for a product. |

| | |
|------------------------------|--|
| U/M (unit of measure) | Enter a user-defined code (00/UM) that indicates the quantity in which to express an inventory item, for example, CS (case) or BX (box). |
| Quantity | Enter the quantity of units affected by this transaction. |
| Unit Cost | Enter the amount per unit, derived by dividing the total cost by the unit quantity. |
| Extended Cost | For accounts receivable and accounts payable, enter the invoice (gross) amount. For sales orders and purchase orders, enter the unit cost times the number of units. |
| Localization Flag | Localization flag. |

Running the Final Creation for Inventory Records Program (R76B517)

Select Final Generation and Integrities (G76BIN683), Final Creation for Inventory Records.

Setting Processing Options for the Final Creation for Inventory Records Program (R76B517)

These processing options specify whether the system generates a text file and where the system stores the text file.

Report Generation

- 1. Report Output** Specify the report output. Values are:
- Blank: Report and the .txt file.
- I: Report only.

Directory TXT

- 1. Directory Name** Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file.
- For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory:
- C:\B9\

Working with Product Data Records for IN68

This section provides overviews of product data records and describes how to:

- Run the Work File Creation for Data of Products program (R76B600).

- Set processing options for the Work File Creation for Data of Products program (R76B600).
- Add records to tables F76B60 and F76B61.
- Run the Final Creation for Data of Products program (R76B607).
- Set the processing options for Final Creation for Data of Products program (R76B607).

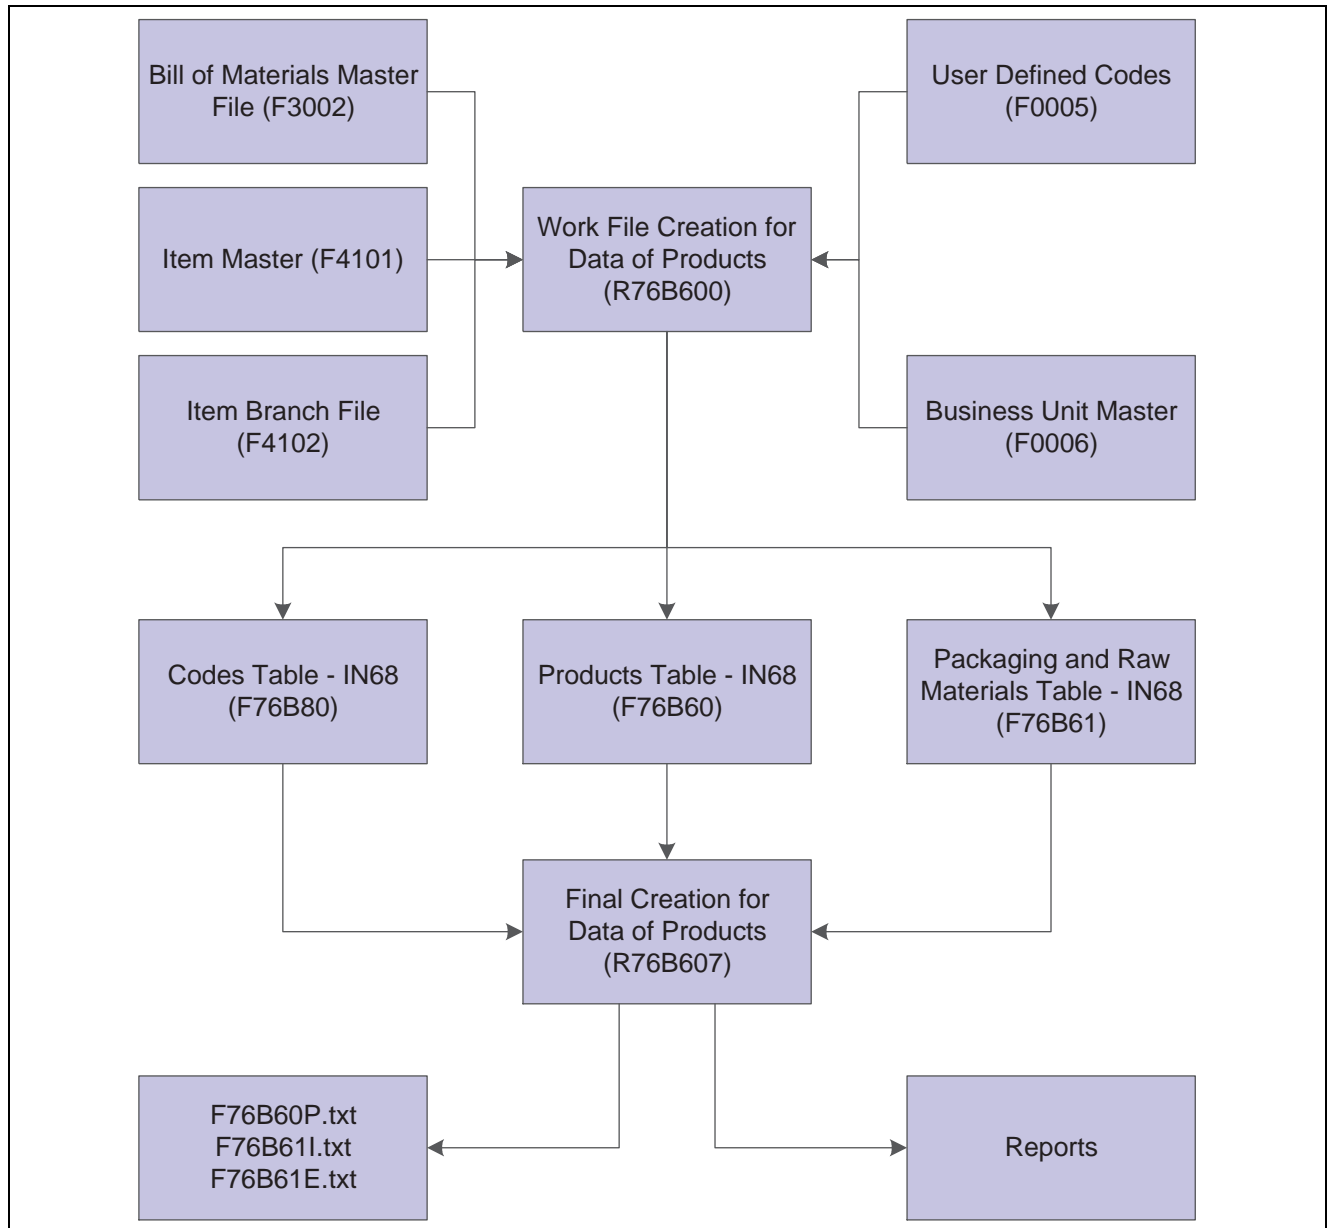

Understanding Product Data Records for IN68

To generate product data records for IN68, you run the Work File Creation for Data of Products - IN68 batch process (R76B600) to generate the Products Table - IN68 (F76B60) and the Packing and Raw Material Table - IN68 (F76B61). These tables are the work files that contains a subset of data from these files:

- Bill of Materials Master File (F3002).
- Item Master (F4101).
- Item Branch File (F4102).
- User-Defined Codes (F0005).
- Business Unit Master (F0006).

After you generate the work file, you can use the Revision of Data of Products - IN68 program (P76B604) to review and make any necessary changes to the work file. After you make the necessary changes, you run the Final Creation for Data of Products - IN68 batch process (R76B607) to create a report and the text file that you send to the tax authority.

This graphic shows how the system processes product data records for IN68 tax reporting:

Product data records for IN68

Understanding the Work File Creation for Data of Products Program

Using Data Selection, you determine the records in the Bill of Material Master File table (F3002) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

The batch process writes data about finished products to the Products Table - IN68 table (F76B60) and writes data about raw materials to the Packing and Raw Material Table - IN68 table (F76B61). You use processing options to specify which items are finished or raw materials.

After writing a record to table F76B60 or table F76B61, the Work File Creation for Data of Products program populates the Codes Table - IN68 table (F76B80).

Understanding the Final Creation for Data of Products Program (R76B607)

The Final Creation for Data of Products program (R76B607) lets you generate reports and text files for IN68 reporting. You can also choose to generate only a report.

The Final Creation for Data of Products program writes qualifying records from the Products Table - IN68 (F76B60) and the Packing and Raw Material Table - IN68 (F76B61) as shown in this table:

| Originating Table | Report and Text File |
|-------------------|---|
| F76B60 | F76B60P report F76B60P.txt text file |
| F76B61 | If Record Type in table F3002 is equal to I: <ul style="list-style-type: none"> • F76B61I report • F76B61I.txt text file If Record Type in table F3002 is equal to E: <ul style="list-style-type: none"> • F76B61E report • F76B61E.txt text file |

If a file with the same name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate. The batch process saves the text files to the directory that you enter in the processing options. You must generate and save the file on a client machine; you cannot generate or save the file on a server. The batch process writes records to the text files only after it evaluates the records in the Codes Table - IN68 table (F76B80)

Using Data Selection, you determine the records in table F76B60 that the system should consider for IN68. The system automatically selects the corresponding records in table F76B61. The XJDE0001 version for this batch process contains default data selection.

For each selected record in table F76B60, the Final Creation for Data of Products program writes a record to the appropriate text files if table F76B80 contains a record that meets all of these requirements:

- A Code of 03, the G/L Date is less than or equal to the G/L Date in the F76B60 record read, and the Used Code is equal to the Cost Center in the F76B60 record.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 14, the G/L Date is less than or equal to the G/L Date of the F76B60 record read, and the Used Code is equal to the Products in the F76B60 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 15, the G/L Date is less than or equal to the G/L Date of the F76B60 record read, and the Used Code is equal to the Unit of Measure in the F76B60 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

For each selected record in table F76B61, the Final Creation for Data of Products program writes a record to the appropriate text files if table F76B80 contains a record that meets these criteria:

- A Code of 15, the G/L Date is less than or equal to the G/L Date of the F76B61 record read, and the Used Code is equal to the Unit of Measure in the F76B61 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 24, the G/L Date is less than or equal to the G/L Date of the F76B61 record read, and the Used Code is equal to the Raw Material in the F76B61 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 25, the G/L Date is less than or equal to the G/L Date of the F76B61 record read, and the Used Code is equal to the Packing in the F76B61 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

Forms Used Add and Revise Records for Tables F76B60 and F76B61

| Form Name | FormID | Navigation | Usage |
|--|----------|--|---|
| Revision of Data of Products - IN68 - Research | W76B604A | Maintenance and Inquiries - IN68 (G76BIN682), Revision of Data of Products - IN68 | Locate records to revise. |
| Revision of Data of Products - IN68 - Register Products | W76B604C | On the Revision of Data of Products - [Research] form, click Add. | Add records to tables F76B60 and F76B61. |

Running the Work File Creation for Data of Products Program

Select Work Filter Programs - IN68 (G76BIN681), Work File Creation for Data of Products.

Setting Processing Options for the Work File Creation for Data of Products Program (R76B600)

These processing options specify how the system validates finished products, raw materials, and packing materials, and whether the system clears records from the Products Table - IN68 (F76B60) and the Packing and Raw Materials Table - IN68 (F76B61).

Values

1. Finished Product

Specify which field in the Item Branch table (F4102) the system uses to identify finished products. The system validates the value you select against the Finished Product UDC (76B/PA). Values are:

1: Shipping Commodity Class

2: Stocking Type

3: Line Type

4: Data Selection. When you select Data Selection, you must run this program twice; once for raw materials and once for packing materials. For each type

2. Raw Materials and Packing Materials

of material, set the Record Type processing option to the correct type of material and make a data selection.

Specify which field in the Item Branch table (F4102) the system uses to identify raw materials and packing materials. The system validates the value you select against the Raw Materials UDC (76B/SC) and the Packing Materials UDC (76B/EM). Values are:

I: Shipping Commodity Class

2: Stocking Type

3: Line Type

4: Data Selection

When you select Data Selection, you must run this program twice; once for raw materials and once for packing materials. For each type of material, set the Record Type processing option to the correct type of material and make a data selection.

3. Record Type

Specify the type of material to which the data selection in the Raw Materials and Packing Materials processing option applies. Values are:

I: Raw Materials

E: Packing Materials

Processing

1. Clear Table Flag

Specify whether the system clears the Data of Products Table - IN68 (F76B60) and the Packaging and Raw Materials Table - IN68 (F76B61) when you generate the work file for product data records. If you do not clear the table, the system appends new records to any records already in the table. Values are:

Blank: Do not clear. The system appends records generated to existing records, if any.

I: Clear.

Adding Records to Tables F76B60 and F76B61

Access the Revision of Data of Products - [Register Products] form.

Quantity

Enter the quantity of units affected by this transaction.

Unit of Measure

Enter a user-defined code (00/UM) that identifies the unit of measurement for an amount or quantity. For example, it can represent a barrel, box, cubic meter, liter, hour, and so on.

Percent of Average Daily Stock Balance

Enter a percentage that identifies the gain or loss of the average daily stock balance. View the amount of stock that is gained or lost compared to the amount of stock normally kept.

The calculation is as follows:

Add up the opening stock for each of the reporting days.

Divide the total by the number of days to arrive at the average stock.

Divide the gain or loss by the average stock.

| | |
|--------------------------|--|
| R T (record type) | Enter the record type associated with change request text. |
| Percent Scrap | Enter the percentage of unusable component material that is created during the manufacture of a particular parent item. During DRP/MPS/MRP generation, the system increases gross requirements for the component item to compensate for the loss. Enter percentages as whole numbers, for example, 5 percent as 5.0. <hr/> Note. Inventory shrink and scrap are compounded to calculate the total loss in the manufacture of a particular item. Accurate shrink and scrap factors support more accurate planning calculations. <hr/> |
| Actual Start Date | Enter the House Schedule Actual Start Date. The user manually enters this date into the Schedule master file. |
| Ending Date | Enter the date on which the item, transaction, or table becomes inactive, or through which you want transactions to appear. This field is used generically throughout the system. It could be a lease effective date, a price or cost effective date, a currency effective date, a tax rate effective date, or whatever is appropriate. |

Running the Final Creation for Data of Products Program (R76B607)

Select Final Generation and Integrities - IN68 (G76BIN683), Final Creation for Data of Products.

Setting Processing Options for the Final Creation for Data of Products Program (R76B607)

These processing options specify whether the system generates a text file and where the system stores the text file.

Report Generation

- 1. Enter '1' to only generate the report.**
- Specify the report output. Values are:
- Blank: Report and the .txt file.
- 1: Report only.

Directory TXT

- 1. Directory Name**
- Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file.
- For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory:
- C:\B9\

Working with Fixed Assets Records for IN68

This section provides overviews of fixed assets records for IN68 and describes how to:

- Run the Work File Creation for Fixed Assets (R76B620) program.
- Set processing options for the Work Table Creation for Fixed Assets - IN68 program (R76B620).
- Add records to table F76B62.
- Run the Final Creation for Fixed Assets - IN68 program (R76B627).
- Set processing options for the Final Creation for Fixed Assets - IN68 program (R76B627).

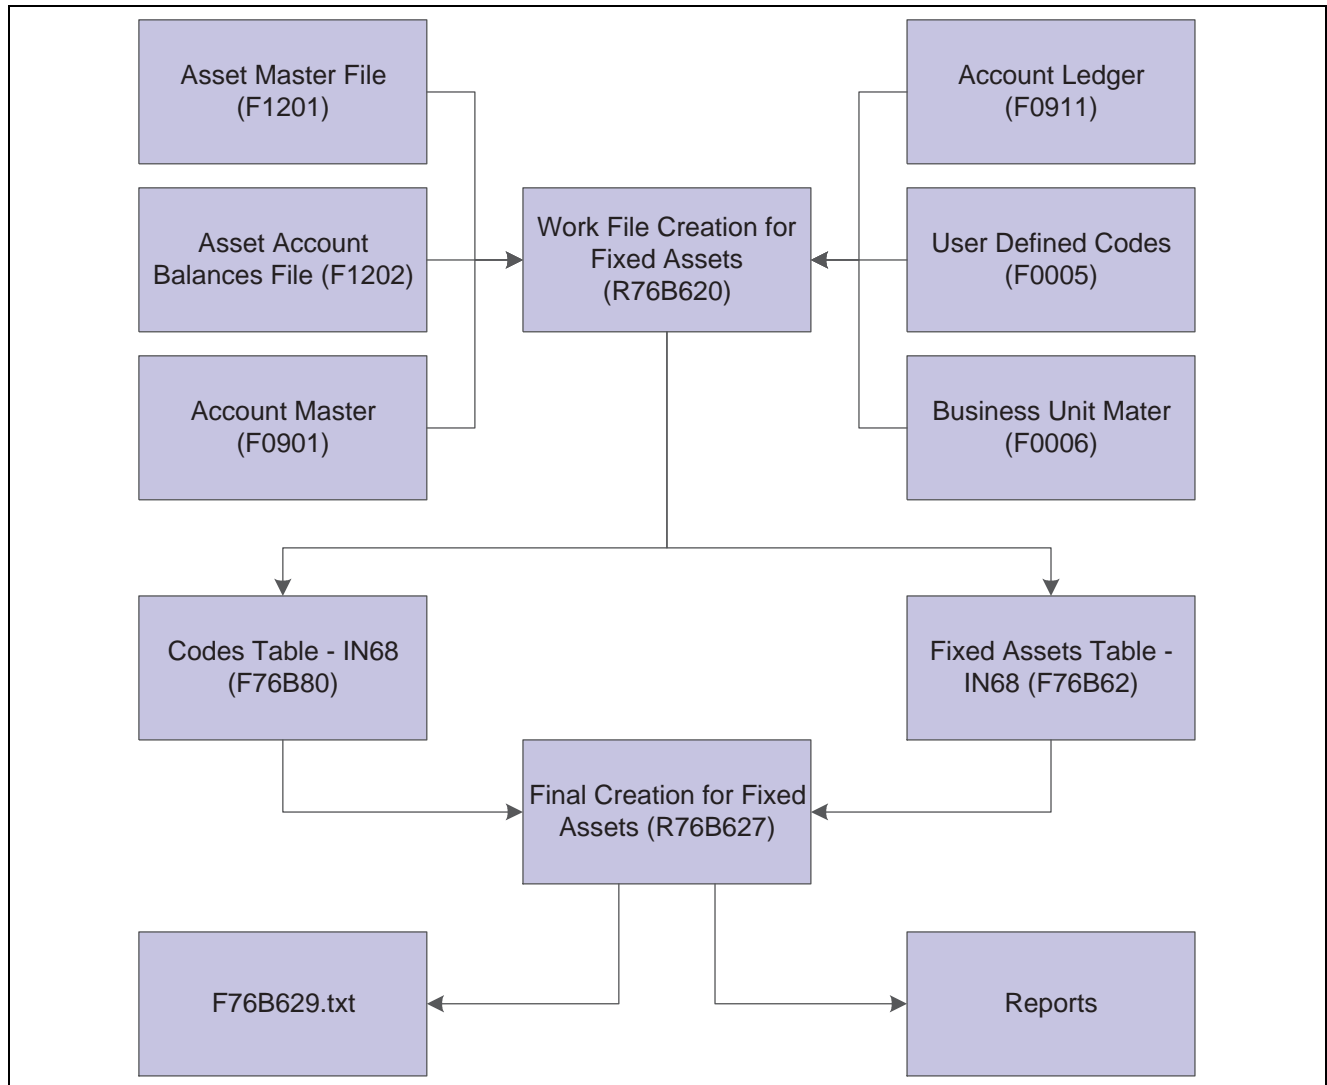

Understanding Fixed Assets Records for IN68

To generate fixed asset records for IN68, you run the Work Table Creation for Fixed Assets - IN68 batch process (R76B620) to generate the Fixed Assets Table - IN68 (F76B62). Table F76B62 is the work file that contains a subset of data from these files:

- Asset Master File (F1201).
- Asset Account Balance File (F1202).
- Account Master (F0901).
- Account Ledger (F0911).
- User-Defined Codes (F0005).
- Business Unit Master (F0006).

After you generate the work file, you can use the Revision of Fixed Assets program (P76B62) to review and make any necessary changes to the work file. After you make the necessary changes, you run the Final Creation for Fixed Assets - IN68 batch process (R76B627) to create a report and the text file that you send to the tax authority.

This graphic shows how the system processes fixed asset records for IN68 tax reporting:

Fixed asset records for IN68

Understanding the Work File Creation for Fixed Assets Program (R76B620)

You run the Work Table Creation for Fixed Assets - IN68 program (R76B620) to generate the Fixed Assets Table - IN68 (F76B62). The Work Table Creation for Fixed Assets program also populates records in the Codes Table - IN68 table (F76B80).

Using Data Selection, you determine the records in the Asset Master table (F1201) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each selected F1201 record, the batch process writes records to these tables:

- Fixed Assets Table - IN68 (F76B62).
- Codes Table - IN68 (F76B80).

After writing a record to table F76B62, the Work Table Creation for Fixed Assets program populates table F76B80.

Understanding the Final Creation for Fixed Assets - IN68 Program (R76B627)

The Final Creation for Fixed Assets - IN68 program (R76B627) lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report. The batch process names the text file F76B629.txt and saves it to the directory that you enter in the processing options. If a file with this name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate. You must generate and save the file on a client machine; you cannot generate or save the file on a server. The batch process writes records to the F76B629.txt file only after it evaluates the records in the Codes Table - IN68 table (F76B80).

Using Data Selection, you determine the records in the Fixed Assets Table - IN68 (F76B62) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each selected record in table F76B62, the Final Creation for Fixed Assets program writes a record to the F76B629.txt file if table F76B80 contains a record that meets all of these requirements:

- A Code of 01, the G/L Date is less than or equal to the G/L Date of the F76B62 record read, and the Used Code is equal to the Account field of the F76B62 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 01, the G/L Date is less than or equal to the G/L Date of the F76B62 record read, and the Used Code is equal to the Depreciation Account field of the F76B62 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 04, the G/L Date is less than or equal to the G/L Date of the F76B62 record read, and the Used Code is equal to the Expense of the F76B62 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 06, the G/L Date is less than or equal to the G/L Date of the F76B62 record read, and the Used Code is equal to the Document Type of the F76B62 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

- A Code of 27, the G/L Date is less than or equal to the G/L Date of the F76B62 record read, and the Used Code is equal to the Fixed Asset Situation of the F76B62 record read.

If the process does not find a record in table F76B80 that meets the requirements for inclusion in the text file, the process writes an error record on the report.

Forms Used Add and Revise Records for Table F76B62

| Form Name | FormID | Navigation | Usage |
|---------------------------------------|---------|---|------------------------------|
| Consultation Register of Goods - IN68 | W76B62A | Maintenance and Inquiries - IN68 (G76BIN682), Fixed Asset Revision - IN68 | Locate records to revise. |
| Maintenance Register of Goods - IN68 | W76B62B | On the Consultation Register of Goods - IN68 form, click Add. | Add records to table F76B62. |

Running the Work File Creation for the Fixed Assets Program (R76B620)

Select Filter Programs - IN68 (G76BIN681), Work Table Creation for Fixed Assets.

Setting Processing Options for the Work Table Creation for Fixed Assets - IN68 Program (R76B620)

These processing options specify whether the system generates a text file and where the system stores the text file.

Values

- 1. Document Type** Enter a value for the Document Type. The system writes this value to the Fixed Assets Table - IN68 (F76B62) and the Code Table - IN68 (F76B80). Valid values for the document type are those values that exist in the Document Type UDC (00/DT). If you enter an invalid value or leave this option or the Document Type Description option blank, the system uses the Document Type from the Account Ledger table (F0911).
- 2. Description** Enter the description for the document type that you entered for the Document Type processing option. If you entered an invalid value the Document Type option, or left that option or this option blank, the system uses the description from the Account Ledger table (F0911).

Processing

- 1. Clear F76B62 Table Flag** Enter a value to specify whether to clear the Fixed Assets Table - IN68 (F76B62) when you generate the workfile for fixed asset records. If you do not clear the table, the system appends new records to any records already in the table. Values are:

1 Clear.

 Blank: Do not clear. The system appends records generated to existing records, if any.

Adding Records to Table F76B62

Access the Maintenance Register of Goods - IN68 form.

- | | |
|----------------------------|---|
| Date Updated | Enter the date that specifies the last update to the file record. |
| Fixed Asset ID | Enter the fixed asset identification number. |
| Expense Cost Center | Enter the cost center that is charged with expenses for the asset. |
| Date Acquired | <p>Enter the date the asset was acquired. This date is typically the start depreciation date, but you can specify a different start depreciation date on the Depreciation Information form.</p> <p>If you are using the half-year convention, you must adjust the start depreciation date manually.</p> |

| | |
|---|--|
| Accum Depr - BU (accumulated depreciation - business unit) | Enter the business unit to which the system charges accumulated depreciation amounts. |
| Acquisition Document Number | Enter the document number of the <i>nota fiscal</i> for the item. |
| Series Number | Enter the series number. |
| Fixed Asset Situation Code | Enter a user-defined code (12/ES) that identifies the equipment or disposal status of an asset. For example, you might identify the equipment or disposal status as available, down, or disposed. |
| Acquisition Amount | Enter the fixed asset value. |
| Index Quantity | Enter the quantity in the index. |
| Acronym | Enter the acronym code. |
| Entry Number | Enter the release number. |
| Initial Currency Conversion Date | Enter the initial date of the currency conversion. |
| Depreciation/Amortization | Enter the rate at which depreciation or amortization is charged. |
| Initial Depreciation Date | Enter the date that depreciation of the asset began. |
| Asset Cost Account - BU | Enter the business unit to which the system charges original acquisition cost and any supplemental capital additions. The system uses a default value for this field based on the business unit that you specify on the Asset Master Revisions form when you create a new asset master record. You can change this default value on the Depreciation Information form only if you have not entered any transactions for the account. |

Running the Final Creation for Fixed Assets - IN68 Program (R76B627)

Select Final Generation and Integrities - IN68 (G76BIN683), Final Creation for Fixed Assets - IN68.

Setting Processing Options for the Final Creation for Fixed Assets - IN68 Program (R76B627)

Processing options enable you to specify the default processing for programs and reports.

Report Generation

- 1. Report Generation** Specify whether the system prints a report and generates a text file, or only prints the report. Values are:
I: Report only
Blank: Report and the text file
- 2. Directory** Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local

machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file.

For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory:

C:\B9\

Working with Fixed Assets with Depreciation on Hold Records for IN68

This section provides overview of fixed assets with depreciation and describes how to:

- Run the Table Creation for Fixed Assets w/Depr on Hold - IN68 (R76B630) program.
- Set processing options for the Table Creation for Fixed Assets w/Depr on Hold - IN68 program (R76B630).
- Add records to table F76B63.
- Run the Final Creation for Fixed Assets w/ Depr on Hold - IN68 program (R76B637).
- Set processing options for the Final Creation for Fixed Assets w/ Depr on Hold - IN68 program (R76B637).

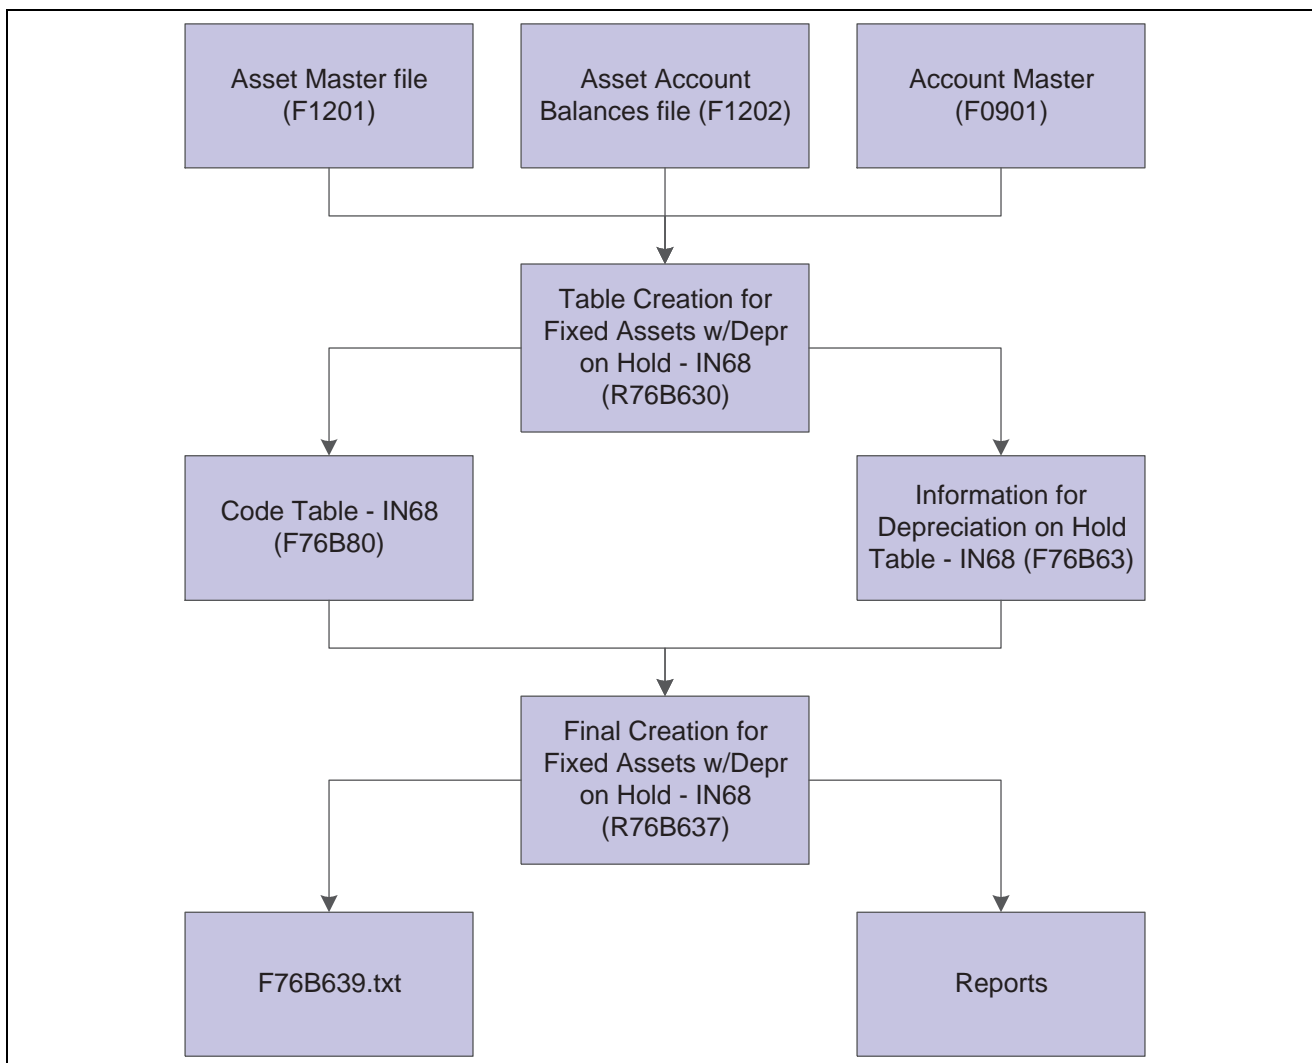

Understanding Fixed Assets with Depreciation on Hold Records

To generate fixed asset with depreciation on hold records for IN68, you run the Table Creating for Fixed Assets w/ Depr on Hold - IN68 program (R76B630) to generate the Information for Depreciation on Hold Table - IN68 (F76B63). Table F76B63 table is the work file that contains a subset of data from these files:

- Asset Master File (F1201).
- Asset Account Balances File (F1202).
- Account Master (F0901).

After you generate the work file, you can use the Revision of Fixed Assets with Depreciation on Hold - IN68 program (P76B63) to review and make any necessary changes to the work file. After you make the necessary changes, you run the Final Creation for Fixed Assets w/ Depr on Hold - IN68 batch process (R76B637) to create a report and the text file that you send to the tax authority.

This graphic shows how the system processes fixed assets with depreciation on hold records for IN68 tax reporting:

Fixed assets with depreciation on hold records for IN68

Understanding the Table Creation for Fixed Assets w/Depr on Hold - IN68 Program (R76B630)

You run the Table Creation for Fixed Assets w/Depr on Hold - IN68 program (R76B630) to generate the Information for Depreciation on Hold Table - IN68 (F76B63). The Table Creation for Fixed Assets w/ Depr on Hold - IN68 program also populates records in the Codes Table - IN68 (F76B80).

Using Data Selection, you determine the records in the Asset Master table (F1201) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

For each selected F1201 record, the batch process writes records to these tables:

- Information for Depreciation on Hold Table - IN68 (F76B63).
- Codes Table - IN68 (F76B80).

After writing a record to table F76B63, the batch process populates table F76B80.

Understanding the Final Creation for FAs w/ Depr on Hold Program (R76B637)

The Final Creation for FAs w/ Depr on Hold program (R76B637) lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report. The Final Creation for FAs w/ Depr on Hold program names the text file F76B639.txt and saves it to the directory that you enter in the processing options. If a file with this name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate. You must generate and save the file on a client machine; you cannot generate or save the file on a server. The batch process writes records to the F76B639.txt file only after it evaluates the records in the Codes Table - IN68 table (F76B80).

Using Data Selection, you determine the records in the Information for Depreciation on Hold Table - IN68 (F76B63) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

Forms Used Add and Revise Records for Table F76B63

| Form Name | FormID | Navigation | Usage |
|---|---------|---|------------------------------|
| Consults Suspension of Depreciation | W76B63A | Maintenance and Inquiries - IN68 (G76BIN682), Fixed Asset Revision w/ Depr on Hold - IN68 | Locate records to revise. |
| Maintenance of Suspension of Depreciation | W76B63C | On Consults Suspension of Depreciation, click Add. | Add records to table F76B63. |

Running the Table Creation for Fixed Assets w/Depr on Hold - IN68 Program (R76B630)

Select Filter Programs - IN68 (G76BIN681), Table Creation for Fixed Assets w/ Depr on Hold - IN68.

Setting Processing Options for the Table Creation for Fixed Assets w/Depr on Hold - IN68 Program (R76B630)

Processing options enable you to specify the default processing for programs and reports.

Values

1. Suspension Date

Specify whether the system uses the value in the Date Depreciation Started field (DSD) in the Asset Account Balances table (F1202) as the beginning, ending, or beginning and ending date for suspension of depreciation of an asset. Values are:

1: Value in the Date Depreciation Started field is the beginning date for suspension of depreciation.

2: Value in the Date Depreciation Started field is the ending date for suspension of depreciation. This is the default value.

3: Value in the Date Depreciation Started field is the beginning and the ending date for suspension of depreciation.

Processing

- 1. Clear F76B63 Table Flag** Specify whether the system clears the Information for Depreciation on Hold Table - IN68 (F76B63) when you generate the workfile for fixed asset records. If you do not clear the table, the system appends new records to any records already in the table. Values are:

1: Clear.

Blank: Do not clear. The system appends records generated to existing records, if any.

Adding Records to Table F76B63

Access the Maintenance of Suspension of Depreciation form.

Depre Date (depreciation date) Enter the date that depreciation of the asset began.

Susp Date (suspension date) Enter the initial date of suspension.

Running the Final Creation for FAs w/ Depr on Hold Program (R76B637)

Select Final Generation and Inquiries - IN68 (G76BIN683), Final Creation for FAs w/ Depr on Hold - IN68.

Setting Processing Options for the Final Creation for Fixed Assets w/ Depr on Hold - IN68 Program (R76B637)

Processing options enable you to specify the default processing for programs and reports.

Report Generation

These processing options specify whether the system generates a text file and where the system stores the text file.

- 1. Report Generation** Specify whether the system prints a report and generates a text file, or only prints the report. Values are:

1: Report only

Blank: Report and the text file

- 2. Directory Name** Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file.

For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory:

C:\B9\

Working with Fixed Assets with Currency Corrections for IN68

This section provides an overview of fixed assets with currency corrections and describes how to:

- Add records to table F76B64.
- Run the Final for Balances/JEs w/ Currency - IN68 Program (R76B647).
- Set processing options for Final for Balances/JEs w/ Currency - IN68 Program (R76B647).

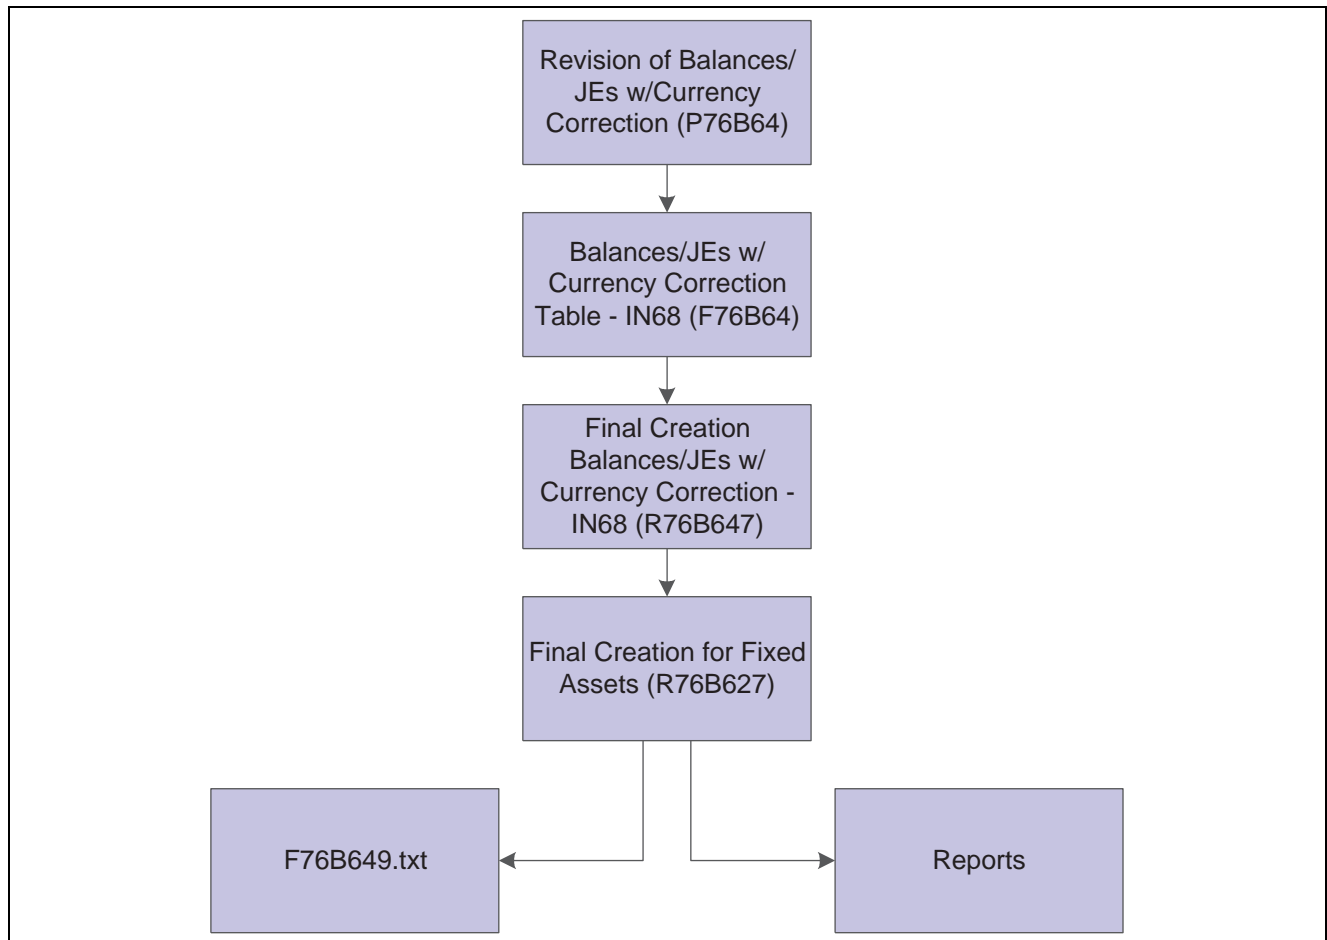

Understanding Fixed Assets with Currency Corrections

To generate fixed asset with currency correction records for IN68, you must manually populate the Balances/JEs w/ Currency Correction Table - IN68 (F76B64).

You use the Revision of Balances/JEs w/ Currency Correction - IN68 program (P76B64) to add records to the Balances/JEs w/ Currency Correction Table - IN68 (F76B64). Only records that you add to the table appear in the Fixed Assets with Currency Conversion Text File and Report for IN68. You can also revise existing records.

After you populate the table, you run the Final Creation Balances/JEs w/ Currency Correction - IN68 batch process (R76B647) to create a report and the text file that you send to the tax authority.

This graphic shows how the system processes fixed assets with currency corrections for IN68 tax reporting:

Fixed assets with currency corrections for IN68

Understanding the Final for Balances/JEs w/ Currency - IN68 Program (R76B647)

The Final for Balances/JEs w/ Currency - IN68 program (R76B647) lets you generate a report and a text file for IN68 reporting. You can also choose to generate only a report. The batch process names the text file F76B649.txt and saves it to the directory that you enter in the processing options. If a file with this name exists in the directory that you specify, the system replaces the existing file with the new text file that you generate. You must generate and save the file on a client machine; you cannot generate or save the file on a server. The batch process writes records to the F76B649.txt file only after it evaluates the records in the Codes Table - IN68 table (F76B80).

Using Data Selection, you determine the records in the Balances/JEs w/ Currency Correction Table - IN68 (F76B64) that the system should consider for IN68. The XJDE0001 version for this batch process contains default data selection.

Forms Used Add Records to Table F76B64

| Form Name | FormID | Navigation | Usage |
|---|---------|--|------------------------------|
| Revision of Balances/JE w/ Currency - [Inquiry for Corrections] | W76B64A | Maintenance and Inquiries - IN68 (G76BIN682), Revision of Balances/JE w/ Currency - IN68 | Locate records. |
| Revision of Balances/JE w/ Currency - [Maintenance] | W76B64B | On the Revision of Balances/JEs w/ Currency - [Inquiry for Corrections] form, click Add. | Add records to table F76B64. |

Adding Records to Table F76B64

Access the Revision of Balances/JEs w/ Currency - [Maintenance] form.

| | |
|-----------------------|--|
| Move Type | Enter the type of the movement. |
| Amount | Enter a number that identifies the amount that the system will add to the account balance of the associated account number. Enter credits with a minus sign (-) either before or after the amount. |
| Index Quantity | Enter the quantity in the index. |
| Acronym | Enter the acronym code. |

Running the Final for Balances/JEs w/ Currency - IN68 Program (R76B647)

Select Final Generation and Inquiries - IN68 (G76BIN683), Final for Balances/JEs w/ Currency - IN68.

Setting Processing Options for the Final Creation Balances/JEs w/ Currency Correction - IN68 Program (R76B647)

Processing options enable you to specify the default processing for programs and reports.

Report Generation

- 1. Report Generation Flag** Specify whether the system prints a report and generates a text file, or only prints the report. Values are:
- I*: Report only
 - Blank: Report and the text file
- 2. Directory Name** Specify where the system saves the text file that it generates. The directory path you specify must be on a client machine because you can only generate and save the file on a client machine; the program runs only on a local machine. When you specify the directory path, you must enter the character \ at the end of the directory name. If you do not specify a directory, or if the directory name is invalid, the system does not create the text file.
- For example, on a client machine that has a directory named B9 on a C drive, you could enter this as a valid directory:
- C:\B9\

CHAPTER 38

(CHL) Understanding Country-Specific Functionality for Chile

This chapter provides an overview of Chile-specific setup and processes that you use in addition to the standard setup and processes that are provided in the base software.

Understanding Additional Address Book Information for Chile

Address book records for Chile require additional tax information. The system stores the additional information in the F76H101 table. The following subsections discuss the additional information that is required for Chile:

R.U.T Validation

The Tax Unique Register (*Registro Unico Tributarios [R.U.T]*) number is the tax identification number. In addition to entering the tax identification number, you specify a legal document type that specifies whether the system must validate the R.U.T number. The system validates that:

- The number does not have more than 10 digits and the last number corresponds to the verifier digit.
- The verifier digit is correct.
- The number does not already exist within the system.

Duplicate R.U.T numbers are not allowed.

Withholding

For suppliers, you must specify whether a tax exemption certificate was entered and, if so, enter the due date. If a supplier has a tax exemption certificate, the system does not require you to enter withholding amounts during voucher entry.

VAT Status

Specify whether the supplier or customer is registered for taxes using the Registered for Taxes field. Enter *N* to indicate that the supplier or customer is not registered, and *Y* to indicate that they are registered.

Address Book Category Codes

To process sales orders and invoices correctly, you must select values from the associated user-defined code tables for Category Codes 05 (Supplier Group), 06 (Supplier Class), 09 (Customer Class), and 10 (Customer Group) on the Address Book Revision form. If you leave these fields blank, the system generates an error message when you attempt to process sales orders and invoices.

Company Lines of Business

Set up an address book category code to include company activity codes (line of business). The category code value is included in legal reports.

After you have specified which category code an organization uses to store line-of-business information, you can then enter the line of business code on the appropriate Cat Code tab on the Address Book Revisions form for the company.

See [Chapter 40, “\(CHL and PER\) Setting Up Functionality for Chile and Peru,” \(CHL and PER\) Setting Up Lines of Business for Chile and Peru, page 889.](#)

Chile-Specific Setup and Processes

This table lists the country-specific setup and functionality for Chile.

| Setup or Process | Description |
|---------------------------|---|
| User-defined codes (UDCs) | <p>In addition to the standard UDC setup, for Chile, set up UDCs to process:</p> <ul style="list-style-type: none"> • Legal documents • Legal companies • Statutory reporting • Fixed assets • Address book validations • Inventory management <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up UDCs for Chile and Peru, page 883.</p> <p>You also set up UDCs to work with accounts receivable draft processing.</p> <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” (ARG, CHL, and PER) Setting Up UDCs for Accounts Receivable Drafts, page 66.</p> |

| Setup or Process | Description |
|--|--|
| Automatic accounting instructions (AAIs) | <p>In addition to the standard AAI setup, verify that these AAIs are set up to process transactions for Chile:</p> <ul style="list-style-type: none"> FR1, FR2, or FR3 to revalue assets. <p>See Chapter 43, “(CHL and PER) Working With Fixed Assets for Chile and Peru,” Revaluing Assets for Chile and Peru, page 915.</p> <ul style="list-style-type: none"> FCxx and FDxx to retrieve the amounts that are associated with the cost and accumulated depreciation accounts, which the system prints on the fixed asset report. <p>See Chapter 43, “(CHL and PER) Working With Fixed Assets for Chile and Peru,” Generating the Fixed Asset Ledger, page 916.</p> <ul style="list-style-type: none"> 3910 and 3911 for inflation adjustments. <p>See Chapter 46, “(CHL and PER) Calculating Inventory Adjustment and Actual Cost,” Understanding Inventory Adjustments for Raw Materials and Resale Goods, page 958.</p> |
| Next numbers | <p>In addition to the standard setup for next numbers, for Chile, set up next numbers for:</p> <ul style="list-style-type: none"> Legal documents <p>See Chapter 41, “(CHL and PER) Setting Up the System for Chile and Peru Legal Requirements,” Setting Up Next Numbers for Legal Documents for Chile and Peru, page 906.</p> <ul style="list-style-type: none"> Fixed assets legal reports <p>See Chapter 43, “(CHL and PER) Working With Fixed Assets for Chile and Peru,” Generating the Fixed Asset Ledger, page 916.</p> <p>You can void individual next numbers and sequences of next numbers.</p> <p>See Chapter 44, “(CHL and PER) Numbering and Printing Legal Documents for Chile and Peru,” Voiding Legal Numbers for Chile and Peru, page 927.</p> |

| Setup or Process | Description |
|----------------------|---|
| Address book records | <p>In addition to the standard setup for address book records, for Chile:</p> <ul style="list-style-type: none"> Set the processing options for Address Book Regional Information - CHI - 01 (P76H101) <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL) Setting the Processing Option for Address Book Regional Information - CHI - 01 (P76H101), page 897.</p> <ul style="list-style-type: none"> Set up corresponding versions of Address Book Regional Information - CHI - 01 (P76H101) and Address Book Revisions (P01012). <p>In addition to the standard process for entering address book records, for Chile:</p> <ul style="list-style-type: none"> Enter Tax ID information. Enter supplier withholding information. Enter value-added taxes (VAT) status information. Enter address book category codes to specify a company’s line of business. Enter address book category codes to process sales orders and invoices. <p>See Chapter 38, “(CHL) Understanding Country-Specific Functionality for Chile,” Understanding Additional Address Book Information for Chile, page 857.</p> <p>See <i>JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide</i>, “Entering Address Book Records,” (CHL) Entering Additional Address Book Information.</p> <p>In addition to the standard process for using batch processing for address book records:</p> <ul style="list-style-type: none"> Set the processing options for the PO - Address Book Batch Upload program (R76H101Z1). <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL) Setting Processing Options for Address Book Batch Upload (R76H101Z1), page 898.</p> <ul style="list-style-type: none"> Set up corresponding versions of the PO - Address Book Batch Upload program (R76H101Z1) and the Address Book Batch Upload program (R01010Z). <p>See <i>JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide</i>, “Processing Batch Address Book Records,” Setting Processing Options for Address Book Batch Upload (R01010Z).</p> <ul style="list-style-type: none"> Provide proper data to the additional address book fields that are required for Chile in the F76H101T table. |

| Setup or Process | Description |
|------------------|--|
| Companies | <p>In addition to the standard setup for companies, for Chile:</p> <ul style="list-style-type: none"> • Set up the AB Legal Document Types UDC (76H/DA) to validate tax ID numbers. <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up UDCs for Address Book Validations for Chile and Peru, page 885.</p> <ul style="list-style-type: none"> • Set up legal companies. • Associate transactional companies with legal companies. • Set up company constants. <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up Legal Companies for Chile and Peru, page 890.</p> |
| Customers | <p>Set up customer activity codes (line of business) for customers so that the line of business appears on legal vouchers.</p> <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up Lines of Business for Chile and Peru, page 889.</p> |
| Suppliers | <p>Use the Rents Withholding Certificate program (R76H4030) to obtain the annual fees withholding certificate by supplier and legal company for the specified year. | Tax processing | <p>In addition to the standard setup for tax processing, for Chile, set up columns for the IGV purchase ledger based on tax explanation codes.</p> <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(CHL and PER) Reporting Taxes,” (CHL and PER) Setting Up the IGV Purchase Ledger.</p> <p>Functionality for Chile exists to:</p> <ul style="list-style-type: none"> • Work with nonreimbursable VAT. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (CHL and PER) Non-Reimbursable VAT Processing.</p> <ul style="list-style-type: none"> • Print VAT sales and VAT purchasing reports. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(CHL and PER) Reporting Taxes”.</p> |
| Financial reports | <p>Functionality exists for Chile to:</p> <ul style="list-style-type: none"> • View by company the documents that are included in the VAT Purchasing Report and the Rent Withholding Ledger reports by using the Documents Printed on AP Legal Reports program (P76H401). <p>See Chapter 49, “(CHL and PER) Working With Other Functionality for Chile and Peru,” (CHL) Verifying Documents in Reports for Chile, page 982.</p> <ul style="list-style-type: none"> • List all accumulated balances for a fiscal period by object account using the Account Balance by Object Account (R76H9001) program. • List all journal entries for a specific period and assign the legal number to each entry using the General Journal (R76H9003) program. • Print legal company information, report heading titles, and page numbers, based on processing option settings using the Print Number (folio) Blank Pages (R76H9005) program. • List all transactions for a specific period by object account using the Account Ledger by Object Account (R76H9421) program. • List all transactions for a specific period by category code using the Account Ledger by Category Code (R76H9470) program. <p>See Appendix C, “JD Edwards EnterpriseOne Country-Specific Reports,” (CHL and PER) Reports for Chile and Peru, page 1813.</p> |

CHAPTER 39

(PER) Understanding Country-Specific Functionality for Peru

This chapter provides an overview of address book information for Peru and discusses how to complete Peru-Specific setup and processes.

Understanding Address Book Information for Peru

Address book records for Peru require additional tax information. The system stores the additional information in the Address Book Tag File - PER - 01 table (F76P101T). The following subsections discuss the additional information required for Peru.

N.I.T Validation

The N.I.T number (*Número de Identificación Tributaria [NIT]*) is the tax identification number. In addition to entering the tax identification number, you specify a legal document type that specifies whether the system must validate the N.I.T. number. The system performs the following validations:

- The number cannot have more than 11 digits, and the last number must correspond to the verifier digit.
- The verifier digit must be correct.
- The number cannot already exist within the system.

Duplicate N.I.T. numbers are not allowed.

Withholding

For suppliers, you must specify whether a tax exemption certificate was entered and, if so, you must enter the due date. If a supplier has a tax exemption certificate, the system does not require you to enter withholding amounts during voucher entry.

You must also specify whether the supplier has a Solidaridad withholding exemption and, if so, you must enter the due date.

VAT Status

Specify whether the supplier or customer is registered for taxes using the Registered for Taxes field. Enter *N* to indicate that the supplier or customer is not registered, and *Y* to indicate that they are registered.

Peru-Specific Setup and Processes

This table lists the country-specific setup and functionality for Peru:

| Setup or Process | Description |
|---------------------------|---|
| User-defined codes (UDCs) | <p>In addition to the standard UDC setup, for Peru you must set up UDCs to process:</p> <ul style="list-style-type: none"> • Legal documents • Legal companies • Fixed assets • Address book validations • Inventory management • Supplier withholding <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up UDCs for Chile and Peru, page 883.</p> <p>You also set up UDCs to work with accounts receivable draft processing.</p> <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” (ARG, CHL, and PER) Setting Up UDCs for Accounts Receivable Drafts, page 66.</p> |

| Setup or Process | Description |
|--|---|
| Automatic accounting instructions (AAIs) | <p>In addition to the standard AAI setup, verify that these AAIs are set up to process transactions for Peru:</p> <ul style="list-style-type: none"> FR1, FR2, or FR3 to revalue assets. <p>See Chapter 43, “(CHL and PER) Working With Fixed Assets for Chile and Peru,” Revaluing Assets for Chile and Peru, page 915.</p> <ul style="list-style-type: none"> FCxx and FDxx to retrieve the amounts associated with the cost and accumulated depreciation accounts, which the system prints on the fixed asset report. <p>See Chapter 43, “(CHL and PER) Working With Fixed Assets for Chile and Peru,” Generating the Fixed Asset Ledger, page 916.</p> <ul style="list-style-type: none"> 3910 and 3911 for inflation adjustments. <p>See Chapter 46, “(CHL and PER) Calculating Inventory Adjustment and Actual Cost,” Understanding Inventory Adjustments for Raw Materials and Resale Goods, page 958.</p> <ul style="list-style-type: none"> Payables Trade (PC) AAI with the document type for SPOT vouchers as defined in the Legal Company Constants (P76P002) program. For example, if you set up IG as the document type, set up this AAI as PCIG. <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up AAIs for Chile and Peru, page 888.</p> |
| Next numbers | <p>In addition to the standard setup for next numbers, for Peru, set up next numbers for:</p> <ul style="list-style-type: none"> Legal documents <p>See Chapter 41, “(CHL and PER) Setting Up the System for Chile and Peru Legal Requirements,” Setting Up Next Numbers for Legal Documents for Chile and Peru, page 906.</p> <ul style="list-style-type: none"> Fixed assets legal reports <p>See Chapter 43, “(CHL and PER) Working With Fixed Assets for Chile and Peru,” Generating the Fixed Asset Ledger, page 916.</p> <p>You can void individual next numbers and sequences of next numbers.</p> <p>See Chapter 44, “(CHL and PER) Numbering and Printing Legal Documents for Chile and Peru,” Voiding Legal Numbers for Chile and Peru, page 927.</p> |

| Setup or Process | Description |
|----------------------|--|
| Address book records | <p>In addition to the standard setup for address book records, for Peru:</p> <ul style="list-style-type: none"> • Set the processing options for Address Book Regional Information - PER - 01 (P76P101) <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (PER) Setting the Processing Option for Address Book Regional Information - PER - 01 (P76P101), page 898.</p> <ul style="list-style-type: none"> • Set up corresponding versions of Address Book Regional Information - PER - 01 (P76P101) and Address Book Revisions (P01012). <p>In addition to the standard process for entering address book records, for Peru you must enter:</p> <ul style="list-style-type: none"> • Tax ID information. • Supplier withholding information. • Value-added tax (VAT) status information. • Address book category codes to process sales orders and invoices. <p>See Chapter 39, “(PER) Understanding Country-Specific Functionality for Peru,” Understanding Address Book Information for Peru, page 869.</p> <p>See <i>JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide</i>, “Entering Address Book Records,” (PER) Entering Additional Address Book Information.</p> <p>In addition to the standard process for using batch processing for address book records:</p> <ul style="list-style-type: none"> • Set the processing options for the PO - Address Book Batch Upload program (R76P101Z1). <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (PER) Setting the Processing Option for Address Book Regional Information - PER - 01 (P76P101), page 898.</p> <ul style="list-style-type: none"> • Set up corresponding versions of the PO - Address Book Batch Upload program (R76P101Z1) and the Address Book Batch Upload program (R01010Z). <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL) Setting Processing Options for Address Book Batch Upload (R76H101Z1), page 898.</p> <ul style="list-style-type: none"> • Provide proper data to the additional address book fields required for Chile in the F76P101ZT table. <p>See Appendix A, “(ARG, CHL, PER) Mapping Fields for Batch Invoice Processing,” page 1775.</p> |

| Setup or Process | Description |
|------------------|---|
| Companies | <p>In addition to the standard setup for companies, in Peru:</p> <ul style="list-style-type: none"> • Set up legal companies. • Associate transactional companies with legal companies. • Set up company constants. <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up Legal Companies for Chile and Peru, page 890.</p> |
| Suppliers | <p>In addition to the standard setup for suppliers, to work with supplier withholding in Peru you must specify whether the supplier is an individual and complete other relevant information.</p> <p>See Chapter 42, “(PER) Setting Up Withholding,” Setting Up Suppliers for Peru, page 913.</p> |
| Customers | <p>Set up customer activity codes (line of business) for customers so that the line of business appears on legal vouchers.</p> <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up Lines of Business for Chile and Peru, page 889.</p> |

| Invoice processing | <p>In addition to the standard setup for invoice processing, in Chile:</p> <ul style="list-style-type: none"> • Set up legal document types. <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up UDCs for Legal Documents for Chile and Peru, page 884.</p> <ul style="list-style-type: none"> • Set up associations between legal document types and legal document groups, set up next numbers, and set up print templates. <p>See Chapter 41, “(CHL and PER) Setting Up the System for Chile and Peru Legal Requirements,” page 903.</p> <p>In addition to the standard invoice processing, in Peru:</p> <ul style="list-style-type: none"> • Associate credit notes to invoices in the JD Edwards EnterpriseOne Accounts Receivable system. <p>See Chapter 49, “(CHL and PER) Working With Other Functionality for Chile and Peru,” (CHL and PER) Processing Invoices for Chile and Peru, page 987.</p> <ul style="list-style-type: none"> • Create print batches when working in the JD Edwards EnterpriseOne Accounts Receivable system. • Assign legal numbers to invoices in print batches. • Print legal documents in print batches. <p>See Chapter 44, “(CHL and PER) Numbering and Printing Legal Documents for Chile and Peru,” page 921.</p> <p>To process batch invoices for Chile and Peru, run the standard processes for batch invoice processing, and then copy data to country-specific tables.</p> <p>See Chapter 49, “(CHL and PER) Working With Other Functionality for Chile and Peru,” (CHL and PER) Working with Batch Invoices for Chile and Peru, page 991.</p> |

| Setup or Process | Description |
|--------------------------------------|--|
| Accounts receivable draft processing | <p>In Peru, you can use the Drafts Entry program (P76A8000) to enter multiple payments (drafts) for a receipt.</p> <p>In addition to the standard setup for draft processing, for Peru, set up UDCs for draft processing.</p> <p>See Chapter 4, “(ARG) Setting Up Country-Specific Functionality for Argentina,” (ARG, CHL, and PER) Setting Up UDCs for Accounts Receivable Drafts, page 66.</p> <p>To work with accounts receivable draft processing for Peru:</p> <ul style="list-style-type: none"> • Enter massive drafts. • Applying draft receipts to invoices. • Create draft registers. • Remit drafts. • Collect drafts. • Delete or void drafts. • Print, review, and revise drafts. • Create credit or debit notes for exchange rate differences. • Enter receipts with the government-issued Provincial Obligation Letters (Lecops) as the payment instrument. • Use the Report Control Draft - ARG - 03B (R76A8510) program to print a list of all receipts with the Lecops payment instrument. <p>See Reports for Argentina in the appendix.</p> <p>See Chapter 11, “(ARG, CHL, and PER) Processing Accounts Receivable Drafts for Argentina, Chile, and Peru,” page 205.</p> |

| Setup or Process | Description |
|--------------------|---|
| Tax processing | <p>In addition to the standard setup for tax processing, for Peru:</p> <ul style="list-style-type: none"> Set up columns for the IGV purchase ledger based on tax explanation codes. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(CHL and PER) Reporting Taxes,” (CHL and PER) Setting Up the IGV Purchase Ledger.</p> <ul style="list-style-type: none"> Set up tax/rate areas. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (ECU, PER, and VEN) Understanding Tax Rate/Areas for Ecuador, Peru, and Venezuela.</p> <p>Functionality for Peru exists to:</p> <ul style="list-style-type: none"> Work with non-reimbursable VAT. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “Setting Up Tax Information,” (CHL and PER) Non-Reimbursable VAT Processing.</p> <ul style="list-style-type: none"> Print VAT sales, VAT purchasing, PDT sales, and PDT purchasing reports. <p>See <i>JD Edwards EnterpriseOne Tax Processing 8.12 Implementation Guide</i>, “(CHL and PER) Reporting Taxes”.</p> |
| Payment processing | <p>In addition to the standard payment processing setup, in Peru, set up corresponding versions of PO - PCG process - PER (P76P470) and Work With Payment Groups (P04571).</p> <p>To work with payment processing in Peru, note that the system enables the Work With Payment Groups (P04571) program differently for Peruvian transactions to calculate IGV withholding and account for SPOT vouchers.</p> <p>See Chapter 48, “(PER) Working with Accounts Payable Functionality for Peru.” Understanding Payment Groups for Peru, page 973.</p> <p>See Chapter 48, “(PER) Working with Accounts Payable Functionality for Peru.” Understanding IGV Withholding Calculations for Peru, page 973.</p> |

| Setup or Process | Description |
|------------------|--|
| Fixed assets | <p>In addition to the standard setup for fixed assets, in Peru:</p> <ul style="list-style-type: none"> Set up country-specific UDCs See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up UDCs for Fixed Assets for Chile and Peru, page 885. Set up AAIs See Chapter 43, “(CHL and PER) Working With Fixed Assets for Chile and Peru,” Revaluing Assets for Chile and Peru, page 915. See Chapter 43, “(CHL and PER) Working With Fixed Assets for Chile and Peru,” Generating the Fixed Asset Ledger, page 916. Set up revaluation accounts and limits See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (PER) Setting Up Revaluation Accounts and Limits for Peru, page 899. Set up columns and specify how the system determines the amounts to print for the Fixed Asset Ledger. See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up the Fixed Asset Ledger for Chile and Peru, page 900. <p>In addition to the standard fixed asset functionality, in Peru:</p> <ul style="list-style-type: none"> Revalue assets See Chapter 43, “(CHL and PER) Working With Fixed Assets for Chile and Peru,” Revaluing Assets for Chile and Peru, page 915. Generate the Fixed Asset ledger report. See Chapter 43, “(CHL and PER) Working With Fixed Assets for Chile and Peru,” Generating the Fixed Asset Ledger, page 916. |

| Setup or Process | Description |
|------------------------|---|
| Sales order processing | <p>In addition to the standard setup for sales order processing, in Peru:</p> <ul style="list-style-type: none"> Set up legal document types. <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up UDCs for Legal Documents for Chile and Peru, page 884.</p> <ul style="list-style-type: none"> Set up associations between legal document types and legal document groups, set up next numbers, and set up print templates. <p>See Chapter 41, “(CHL and PER) Setting Up the System for Chile and Peru Legal Requirements,” page 903.</p> <ul style="list-style-type: none"> Associate versions of the Voucher Print (P76H3B30) program to legal document types and companies. <p>See Chapter 45, “(CHL and PER) Working With Sales Order Processing for Chile and Peru,” (CHL and PER) Associating Legal Document Types and Companies to Voucher Print Versions for Chile and Peru, page 931.</p> <p>In addition to the standard sales order processing, in Peru:</p> <ul style="list-style-type: none"> Assign legal numbers to shipment notes in print batches. Print legal documents in print batches. <p>See Chapter 44, “(CHL and PER) Numbering and Printing Legal Documents for Chile and Peru,” page 921.</p> <ul style="list-style-type: none"> Print invoices, shipping guides, credit and debit notes, and other legal documents. <p>See Chapter 45, “(CHL and PER) Working With Sales Order Processing for Chile and Peru,” (CHL and PER) Working with Billing Information for Chile and Peru, page 937.</p> <ul style="list-style-type: none"> Inquire on sales orders and other legal documents. <p>See Chapter 45, “(CHL and PER) Working With Sales Order Processing for Chile and Peru,” (CHL and PER) Inquiring on Sales Orders for Chile and Peru, page 933.</p> <ul style="list-style-type: none"> Run the Lot of Printing Review (P76H3B50) program to number and print invoices before running the Update Customer Sales program (R42800). Relate sales orders to credit or debit notes <p>See Chapter 45, “(CHL and PER) Working With Sales Order Processing for Chile and Peru,” (CHL and PER) Processing Credit Notes and Debit Notes Related to Documents for Chile and Peru, page 932.</p> |

| Setup or Process | Description |
|----------------------|---|
| Inventory management | <p>In addition to the standard setup for managing inventory, in Peru you set up the system for actual costs.</p> <p>See Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up the System for Actual Costs for Chile and Peru, page 895.</p> <p>To calculate inventory adjustments and actual costs in Peru:</p> <ul style="list-style-type: none"> • Enter indirect costs, bill of material information, and actual costs. • Update the localized cardex. • Inquire on localized cardexes. • Print the inventory ledger. • Set up the system for inflation adjustments for raw materials and resale goods. • Calculate inventory adjustments for raw materials and resale goods. <p>See Chapter 46, “(CHL and PER) Calculating Inventory Adjustment and Actual Cost,” page 945.</p> |

| Setup or Process | Description |
|--------------------------|--|
| General ledger reporting | <p>In addition to the standard general ledger reporting, for Peru you can:</p> <ul style="list-style-type: none"> • Review the ledger by legal number. • Review account balances by account and category code. • Review debit and credit balances by month. • Repost the Account Ledger Tag file. |
| Financial reports | <p>Functionality exists for Peru to:</p> <ul style="list-style-type: none"> • List all accumulated balances for a fiscal period by object account using the Account Balance by Object Account (R76H9001) program. • List all journal entries for a specific period and assigns the legal number to each entry using the General Journal (R76H9003) program. • Print legal company information, report heading titles, and page numbers, based on processing option settings using the Print Number (folio) Blank Pages (R76H9005) program. • List all transactions for a specific period by object account using the Account Ledger by Object Account (R76H9421) program. • List all transactions for a specific period by category code using the Account Ledger by Category Code (R76H9470) program. <p>See Appendix C, “JD Edwards EnterpriseOne Country-Specific Reports.” (CHL and PER) Reports for Chile and Peru, page 1813.</p> |

CHAPTER 40

(CHL and PER) Setting Up Functionality for Chile and Peru

This chapter discusses how to set up:

- (CHL and PER) User-defined codes (UDCs).
- (CHL and PER) Automatic accounting instructions (AAIs).
- (CHL and PER) Next numbers.
- (CHL and PER) Corresponding versions of country-specific and standard software programs.
- (CHL and PER) Lines of business.
- (CHL and PER) Legal companies.
- (CHL and PER) The system for actual costs.
- (CHL) Processing options for Address Book Regional Information - CHI - 01 (P76H101).
- (PER) Processing options for Address Book Regional Information - PER - 01 (P76P101).
- (CHL) Processing options for Address Book Batch Upload (R76H101Z1).
- (PER) Processing options for Address Book Batch Upload (R76P101Z1).
- (CHL) Processing options for Chilean Add Vouchers Set Up (P76H0411)
- (PER) Revaluation accounts and limits.
- (CHL and PER) The fixed asset ledger.

(CHL and PER) Setting Up UDCs for Chile and Peru

Setting up Chile-specific and Peru-specific UDCs enables you to use country-specific functionality. You also set up some base software UDCs with country-specific values.

In addition to the standard UDC setup, set up these UDCs for Chile and Peru to process:

- (CHL and PER) Legal documents
- (CHL and PER) Legal companies
- (CHL and PER) Fixed assets
- (CHL and PER) Address book validations
- (CHL and PER) Inventory management
- (PER) Supplier withholding

- (CHL) Statutory reporting

(CHL and PER) You also set up UDCs to work with accounts receivable draft processing.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” \(ARG, CHL, and PER\) Setting Up UDCs for Accounts Receivable Drafts, page 66.](#)

(CHL and PER) Setting Up UDCs for Legal Documents for Chile and Peru

Set up legal documents to enable tax processing on various types of documents, such as vouchers and invoices.

Cancellation Codes (76H/CC)

Set up this UDC with values that describe why a legal document is cancelled. For example, you might set up codes for damaged goods, errors, and so on.

Legal Document Types Groups (76H/DG)

The system uses UDC table 76H/DG to identify the processing for each legal document type. This table shows the hard-coded values for legal document types groups:

| Code | Description 01 |
|------|-------------------------|
| 01: | Invoice |
| 02: | <i>Boleta</i> (ticket) |
| 03: | Credit Note |
| 04: | Debit Note |
| 05: | Exportation Invoice |
| 06: | Exportation Credit Note |
| 07: | Exportation Debit Note |
| 08: | Shipment Guide |
| 09: | Proforma Invoice |
| 10: | Receipt |
| 99: | Others |

(CHL and PER) Setting Up UDCs for Legal Companies for Chile and Peru

Set up legal companies to associate transactional companies to legal companies and to set tax parameters.

Address Book Category Code (01/xx)

Set up an address book category code UDC to specify the activities of customers, suppliers, or companies. You then specify the category code used to identify the activities when you set up legal company constants. The system uses the values in the UDC when you generate reports.

See [Chapter 40, “\(CHL and PER\) Setting Up Functionality for Chile and Peru,” \(CHL and PER\) Setting Up Lines of Business for Chile and Peru, page 889.](#)

(CHL and PER) Setting Up UDCs for Fixed Assets for Chile and Peru

In addition to the standard UDCs for fixed asset processing, set up these country-specific UDCs.

Asset Ledger Column Name (76P/CN)

Use the values in this UDC for the Fixed Asset Ledger Setup program (P76P502) to link the amounts to retrieve by document type to the column, according to the column name that you assign. The system uses this information when you run the Fixed Asset Ledger (R76P5020).

The values in this table are hard-coded and should not be changed:

| Code | Description |
|------|--------------------------|
| AJI | Inflation Adjustment |
| CTO | Cost |
| DCB | Exchange Rate Difference |
| DPR | Depreciation |
| IRE | Revaluation |
| MEJ | Improvements |
| RET | Deductions |

Asset Ledger Setup Code (76P/CO)

Enter the code that you want to use to link the columns and document types to include on the Fixed Asset Ledger. The Fixed Asset Ledger retrieves the columns and corresponding document types to use to retrieve amounts based on the value of the Set up Code field that you assign in the Fixed Asset Ledger Set up program and in the processing option of the Fixed Asset Ledger (R76P5020).

Ledger Types to Process (76H/LL)

Set up the ledgers that you want the system to include on the Fixed Assets Ledger report (R76P5020).

(CHL and PER) Setting Up UDCs for Address Book Validations for Chile and Peru

The system validates tax ID numbers when you set up these UDCs.

AB Legal Document Types (76H/DA)

R.U.T number validation values specify whether the system performs validation on the tax identification number. Values are:

1: Validate the R.U.T number. You must also enter *1* in the special handling code for this UDC value for the system to perform validation.

2: Do not validate the R.U.T number.

V.A.T Registration Status (76H/02)

V.A.T registration status values specify whether a customer or supplier has registered for V.A.T tax. Values are:

N: Not registered.

Y: Registered.

(CHL) Address Book Search Types (76H/ST)

Address book search types indicate for which search types the system should perform R.U.T number validation. Examples include:

C: Customer

S: Supplier

(CHL and PER) Setting Up UDCs for Inventory Management for Chile and Peru

Set up these UDCs before working with the inventory management system.

76A/CA (Adjustment Codes)

Adjustment codes identify adjustment indexes.

76A/ED (Excluded Documents)

Excluded documents are used to identify purchase orders to be excluded from the inventory adjustment calculation.

41/xx (Item Currency)

The item currency code must be defined in the category codes by branch/plant, and is used only for imported items.

(PER) Setting Up UDCs for Supplier Withholding for Peru

Set up these UDCs before calculating supplier withholding.

IGV Withholding Concept (76P/01)

These values specify the type of IGV withholding. Values are:

IG1: Prueba

IG2: Prueba

IG3: Prueba 3

IGV: Generic IGV Concept

SPOT Concept (76P/02)

These values specify the type of SPOT withholding. Values are:

01: SPOT 1 CONCEPT

02: SPOT 2 CONCEPT

03: SPOT 3 CONCEPT

Type Code (01/W0)

The Type Code (01/W0) UDC table includes values that the system uses in the Who's Who (P0111) program. You must set up codes for suppliers who are classified as individuals to specify the names of the supplier's mother and father. This information is required when reporting withholding for these suppliers.

Withholding Document Type (76H/HO)

Set up UDC 76H/HO to include the internal document types that you use to enter fees for withholding.

Amount Type to Use (76P/AT)

The software provides hard-coded values to identify the basis on which the system calculates taxes. For example, when you use a value in this UDC, you can specify that the system calculates taxes based on the gross amount of the voucher.

TAXC (H00/TA)

Set up this UDC to include codes that the system uses to identify the names of the supplier's mother and father. The system uses this information when you run reports for suppliers who are individuals.

(CHL) Setting Up UDCs for Statutory Reporting for Chile

Set up this UDC before you generate general ledger reports.

Account Category Codes (09/01–43)

You can combine object accounts into groups for financial reporting purposes. For each group, you set up an account category code in UDC table 09/01–43. These codes describe your organizational structure for higher level or selective reporting.

Account category codes are commonly used to provide a second chart of accounts. For example, you might need a chart of regulatory accounts for government reporting as well as your internal chart of accounts. The system provides 43 category codes; 23 of them can accommodate secondary account numbers.

Depending on the number of characters needed for accounts:

- Use types 01–20 for 3-character codes.
- Use types 21–43 for 10-character codes.

Chile and Peru use category codes 21–23 for statutory reporting.

Account category codes are stored in the Account Master table (F0901).

(CHL and PER) Setting Up AAIs for Chile and Peru

Set up AAIs to work with accounts receivable drafts, assets, asset revaluation, inflation adjustments, and the localized cardex.

See [Chapter 4, “\(ARG\) Setting Up Country-Specific Functionality for Argentina,” Setting Up AAIs for Draft Processing for Argentina, page 76.](#)

See [Chapter 43, “\(CHL and PER\) Working With Fixed Assets for Chile and Peru,” Understanding the Calculations for the Revaluation Journal, page 915.](#)

See [Chapter 43, “\(CHL and PER\) Working With Fixed Assets for Chile and Peru,” Understanding the Fixed Asset Ledger, page 916.](#)

See [Chapter 46, “\(CHL and PER\) Calculating Inventory Adjustment and Actual Cost,” Understanding Inventory Adjustments for Raw Materials and Resale Goods, page 958.](#)

See [Chapter 46, “\(CHL and PER\) Calculating Inventory Adjustment and Actual Cost,” Understanding the Localized Cardex, page 953.](#)

(PER) Set up the Payables Trade (PC) AAI with the document type for SPOT vouchers as defined in the Legal Company Constants (P76P002) program. For example, if you set up IG as the document type, set up this AAI as PCIG.

See *JD Edwards EnterpriseOne Accounts Payable 8.12 Implementation Guide*, “Setting Up the Accounts Payable System,” Understanding Accounts Payable AAIs.

(CHL and PER) Setting Up Next Numbers for Chile and Peru

You set up next numbers for legal documents and to number pages in the fixed asset ledger.

See [Chapter 41, “\(CHL and PER\) Setting Up the System for Chile and Peru Legal Requirements,” Setting Up Next Numbers for Legal Documents for Chile and Peru, page 906.](#)

See [Chapter 43, “\(CHL and PER\) Working With Fixed Assets for Chile and Peru,” Understanding the Fixed Asset Ledger, page 916.](#)

See Also

[Chapter 44, “\(CHL and PER\) Numbering and Printing Legal Documents for Chile and Peru,” Voiding Legal Numbers for Chile and Peru, page 927](#)

(CHL and PER) Setting Up Corresponding Versions of Programs for Chile and Peru

Some country-specific functionality requires that you create versions of the same name for a country-specific program and a base software program. For example, to have the system access the processing options for a country-specific voucher program, you might need to set up a version named XYZ for the country-specific voucher program, and a version named XYZ of the Standard Voucher Entry (P0411) program.

Set up corresponding versions for these programs:

| Chile or Peru Program | Standard Software Program |

(CHL and PER) Setting Up Lines of Business for Chile and Peru

This section provides an overview of setting up lines of business and discusses how to specify the address book category code the represents a company’s line of business.

Understanding the Setup for Lines of Business

You must set up the system to ensure that the customer’s activity or line of business appears on the legal vouchers. To specify the line of business, or activity, for a company, you:

- Set up an address book category code UDC with values that represent lines of business or activities for companies.

For example, you might set up UDC table 01/25 with codes for the lines of business.

- Specify the value from the address book category code when you enter information about the company on one of the Cat Code tabs of the Address Book Revisions form.
- Specify in the Legal Company Constants (P76H002) or (P76P002) program the address book category code that is set up for the lines of business/activity codes.

Forms Used to Set Up Lines of Business

| Form Name | FormID | Navigation | Usage |
|---|----------|--|--------------------------------------|
| Legal Company Constants - Work With Legal Company Constants | W76P002A | <ul style="list-style-type: none"> • (CHL) General Configuration G76H00, Legal Company Constants • (PER) General Configuration G76P00, Legal Company Constants | Add and revise company constants. |
| Legal Company Constants - Enter Legal Company Constants | W76P002B | Enter a value in the Activity Category Code Nr (number) field and click OK on the Legal Company Constants - Work With Legal Company Constants form. | Add a line of business to a company. |

Set Up Lines of Business

Access the Legal Company Constants - Work With Legal Company Constants form.

Activity Category Code Nr. Enter the code that specifies the address Book category code that is used to store the company's activity code, or line of business. The category code value is included in legal reports. Activity must be defined as an address book category code value. This field is used to indicate the category code number where the company's activity has been defined.

After you have specified which category code an organization uses to store line of business information, you can then enter the appropriate line of business code in the appropriate Cat Code tab on the Address Book Revisions form for the company.

(CHL and PER) Setting Up Legal Companies for Chile and Peru

This section provides overviews of legal companies and legal company constants, list prerequisites, and discusses how to:

- Set up a default legal company.
- Associate transactional companies with a legal company.
- Set up company constants.

Understanding Legal Companies for Chile and Peru

Legal company and transactional company relationships enable many companies to be unified in one legal company and to produce combined accounts payable reports. You can associate the companies that you use for transaction processing (transactional companies) with companies that you use for legal reporting (legal companies) so that legal reports can contain data for more than one transactional company. At a minimum, a legal company and a transactional company relationship must exist for the default company.

When you activate a legal company, the same company is automatically activated in the corresponding localized table. If the legal company is different from the transactional company, you must modify it manually.

Understanding Legal Company Constants for Chile and Peru

You use the Legal Company Constants program (P76H002) to specify whether value-added tax (VAT) reimbursement validation is defined in days or months. This program complies with the VAT law provisions. An invoice does not charge a tax area with a fiscal credit if the number of days or months between the dates defined in the constants exceeds the number allowed by law.

If the VAT reimbursable validation is defined in months, only the fiscal credit can be taken within the two tax periods for an invoice. If it is defined in days, the fiscal credit applies to days.

This table provides an example of the relationships between the From and Thru dates that you define in the legal company constants:

| From Date | Thru Date | Relationship |
|-----------|-----------|-----------------------------|
| Y | Y | G/L Date - Service Date |
| Y | N | G/L Date - Invoice Date |
| N | Y | Today's Date - Service Date |
| N | N | Today's Date - Invoice Date |

Chapter 41, “(CHL and PER) Setting Up the System for Chile and Peru Legal Requirements,” page 903

Prerequisites

Before you complete the tasks in this section:

- Ensure that companies have been set up in the Company Names & Number program (P0010).
- Set up one or more default business units.
- Set up the chart of accounts.
- Set up a default company in the JD Edwards EnterpriseOne Address Book system.

Forms Used to Set Up a Legal Company

| Form Name | FormID | Navigation | Usage |
|---|-----------|--|---|
| Work With Legal Company | W76H010A | (CHL) General Configuration (G76H00), Legal Company (PER) General Configuration (G76P00), Legal Company | Review a list of legal companies. |
| Legal Company Revision | W76H010B | On Work With Legal Company, click Add. | Set up a legal company. |
| Company Localized Data | W7400010A | Organization & Account Setup (G09411), Company Names & Numbers On the Work With Companies form, select Regional Info from the Row menu. | Associate transactional companies with legal companies. |
| Work With Legal Company Constants (CHL) | W76H002A | (CHL) General Configuration (G76H00), Legal Company Constants | (CHL) Review the constants for legal companies. |
| Enter Legal Company Constants (CHL) | W76H002B | On Work With Legal Company Constants, click Add. | (CHL) Enter information about legal assignees, dates used to determine reimbursable VAT, professional fee withholding, and the tax explanation code for sales order processing. |
| Work With Legal Company Constants (PER) | W76P002A | (PER) General Configuration (G76P00), Legal Company Constants | (PER) Review the constants for legal companies. |
| Enter Legal Company Constants (PER) | W76P002B | On Work With Legal Company Constants, click Add. | (PER) Enter information about legal assignees, dates used to determine reimbursable VAT, and professional fee and solidarity withholding. |

Setting Up a Default Legal Company for Chile and Peru

Access the Legal Company Revision form.

Associating Transactional Companies with Legal Companies for Chile and Peru

Access the Company Localized Data form.

Company Enter the transactional company with which to associate a legal company.

Legal Company Enter the legal company with which to associate a transactional company.

(CHL) Setting up Company Constants for Chile

Access the Enter Legal Company Constants form.

General

Activity Category Code Number Enter the address book category code that you set up to contain the lines of business or activity codes that apply to companies, customers, or suppliers.
If this field is left blank, the system does not print this information in the AP report heading.

Legal Assignee 01 and Legal Assignee 02 Enter the address book number of the representative.
If this field is left blank, the system does not print this information in the AP report heading.

Reembosabilidad del IVA (VAT Reimbursability)

Use Service Date as Date From Date Select this check box to use the service date as the from date. If this option is not selected, the system uses the invoice date.

Use G/L Date as Date Thru Select this check box to use the GL date as the through date. If this option is not selected, the system uses today's date.
The system calculates the number of days and months between the selected dates to determine whether the VAT is reimbursable or non-reimbursable.

Number of Days / Months to check reimbursability Enter the number of days or months that the VAT should be considered as reimbursable or non-reimbursable. Select the corresponding Dias (days) or Meses (months) option.

Non Reimbursable Tax Explanation Code Enter a value that exists in the Tax Explanation Code (00/EX) UDC table that the system uses if a tax is not reimbursable. Use this code during invoice entry to specify whether the VAT of the invoice is reimbursable.

Withholding

Withhold Professional Fee Select this check box if the company is a fees withholding agent.

Professional Fee Minimum Amount Enter the minimum amount that the system applies to the fees withholding .

SOP (Sales order processing)

Cantidad de Días / Meses para Reembolsabilidad (Number of Days / Months to check reimbursability) Enter the number of days or months that the VAT should be considered as reimbursable or non-reimbursable. Select the corresponding Dias (days) or Meses (months) option.

Código de Explicación Fiscal Reembosabilidad (Non Reimbursable Tax Explanation Code) Enter a value that exists in the Tax Explanation Code (00/EX) UDC table that the system uses if a tax is not reimbursable. Use this code during invoice entry to specify whether the VAT of the invoice is reimbursable.

(PER) Setting up Company Constants for Peru

Access the Enter Legal Company Constants form .

General

| | |
|--|--|
| Activity Category Code Number | Enter the address book category code that you set up to contain the lines of business or activity codes that apply to companies, customers, or suppliers. If this field is left blank, the system does not print this information in the AP report heading. |
| Legal Assignee 01 and Legal Assignee 02 | Enter the address book number of the representative. If this field is left blank, the system does not print this information in the AP report heading. |
| Document Type Payment Order | Enter a values that exists in the Document Type (00/DT) UDC table to specify the document types used for payment orders. |

VAT Reimbursability

| | |
|---|---|
| Use Service Date as Date From Date | Select this check box to use the service date as the from date. If this option is not selected, the system uses the invoice date. |
| Use G/L Date as Date Thru | Select this check box to use the GL date as the through date. If this option is not selected, the system uses today's date. The system calculates the number of days and months between the selected dates to determine whether the VAT is reimbursable or non-reimbursable. |
| Number of Days / Months to check reimbursability | Enter the number of days or months that the VAT should be considered as reimbursable or non-reimbursable. Select the corresponding Dias (days) or Meses (months) option. |
| Non Reimbursable Tax Explanation Code | Enter a value that exists in the Tax Explanation Code (00/EX) UDC table that the system uses if a tax is not reimbursable. Use this code during invoice entry to specify whether the VAT of the invoice is reimbursable. |

Withholding

| | |
|--|---|
| Withhold Professional Fee | Select this check box if the company is a fees withholding agent. |
| Professional Fee Minimum Amount | Enter the minimum amount that the system applies to the fees withholding. |
| Withhold Solidarity | Select this check box if the company is a solidarity withholding agent. |
| Solidarity Withholding Minimum Amount | Enter the minimum amount that the system applies to the solidarity withholding. |

(CHL and PER) Setting Up the System for Actual Costs for Chile and Peru

The account and cost type relationship must be set up in order to perform the overheads allocation process.

This section provides an overview of the account and cost type relationship and discusses how to:

- Set up the account/cost type relationship.
- Set processing options for overheads for the Actual Cost Process Header (P76H6001) program.

Understanding the Account and Cost Type Relationship

The relationship between an account and a cost type must be set up in order to establish the relationship between the account where the cost was charged and the cost object tracking in the JD Edwards Enterprise One Advanced Cost Accounting system. For example, power expenses and the cost component type that implies such expense in the F30026 table.

For example, the 00200977 GL account ID where the accounting charge of machinery expenses was made in relation to the X1 machinery expenses type of the F30026 table.

Allowed Order Type/WO Type (P76H6006) Program

To generate the actual bill of materials, you must specify the types of documents to be taken into account for the actual cost process. For example, WO Document type and S Order calculation type.

Forms Used to Set Up the Account/Cost Type Relationship

| Form Name | FormID | Navigation | Usage |
|--|-----------|--|---|
| Work with Account ID / Cost Type Relationship | W76H6005A | (CHL) Actual Cost (G76H31), Account ID / Cost Type Relationship. (PER) Actual Cost (G76P31), Account ID / Cost Type Relationship. | View and select existing records. |
| Account ID/Cost Type Relationship | W76H6005B | Select Add on the Work with Account ID / Cost Type Relationship form. | Set up the account/cost type relationship. |
| Work with Order Type / Type W.O. Allowed for Actual Cost | W76H6006A | (CHL) Actual Cost (G76H31), Order Type / Type WO Allowed (PER) Actual Cost (G76P31), Order Type / Type WO Allowed | View and select existing records. |
| Order Type / Type W.O. Allowed for Actual Cost | W76H6006C | Select Add on the Work with Order Type / Type W.O. Allowed for Actual Cost form. | Set up the allowed order type/work order type relationship. |

Setting Up the Account and Cost Type Relationship

Access the Account ID / Cost Type Relationship form.

Account ID / Cost Type Relationship form

| | |
|-----------------------|--|
| Ledger Type | Enter a value that exists in the Ledger Type (09/LT) UDC table to specify the ledger type to which you associate a cost type. |
| Account ID | Specify the general ledger account. |
| Subledger | Specify the subledger for the account. |
| Subledger Type | Enter a value that exists in the Subledger Type (00/ST) UDC table to identify the subledger type. |
| Cost Type | Enter a value that exists in the Cost Component Add-Ons (30/CA) UDC table to specify the cost type to which you associate a ledger type. |

Setting Processing Options for Overheads for Actual Cost Process Header (P76H6001)

Processing options enable you to specify the default processing for programs and reports.

Indirect Cost

| | |
|------------------------------|--|
| ITM Cost Object Type | Enter the cost object type used by the actual cost process to identify a product. |
| MCU Cost Object Type | Enter the cost object type used by the actual cost process to identify the branch/plant. |
| LOCN Cost Object Type | Enter the cost object type used by the actual cost process to identify the location. |
| LOTN Cost Object Type | Enter the cost object type used by the actual cost process to identify a batch. |
| Costing Method | Enter the costing method used for calculating the actual cost. |

Important! Enter the method 02 Weighted Average Cost required by the legislation.

| | |
|-------------------------------------|---|
| Ledger Type | Enter the general ledger type of the expenses accounts derived from the JD Edwards EnterpriseOne Advanced Cost Accounting system. |
| Actual Bill of Material | |
| 1. Work Order Selection Date | <p>Enter the date to use for the work order. Values are:</p> <p><i>1</i>: Required date.</p> <p><i>2</i>: End date.</p> <p>This date is used to obtain the WO that is taken into account in the actual cost calculation process. To add the WO to the actual bill of materials calculation, the system compares the date entered by the user with the period selected to run the actual cost process.</p> |
| 2. WO Status | The status that WO must have in order to be taken into account in the actual cost process. If you leave this field blank, the system does not use the WO status. |
| Bill of Materials Type | The system creates an actual bill of materials in the F3002 table using the value in this field. |
| GL Generation | |
| Doc Type | <p>Enter the document type to be used to indicate journal entries.</p> <p>You should enter a special document type in order to differentiate movements by the actual cost difference.</p> |
| Ledger Type | Enter the GL type to identify where journal entries generated by cost difference should be sent. |
| Batch Type | Enter the batch type that you want to use to generate journal entries. The recommended value is <i>N</i> . |

(CHL) Setting the Processing Option for Address Book Regional Information - CHI - 01 (P76H101)

Set these processing options before you enter address book records for Chile. Access the processing option for this program using the Interactive Versions program.

| | |
|--|--|
| 1. Enter “1” to allow duplicate tax identification. | <p>Specify whether to allow users to enter duplicate tax identification numbers. Values are:</p> <p>Blank: Do not allow duplicate tax identification numbers.</p> <p><i>1</i>: Allow duplicate tax identification numbers.</p> |
|--|--|

(PER) Setting the Processing Option for Address Book Regional Information - PER - 01 (P76P101)

Set these processing options before entering address book records for Peru. Access the processing option for this program using the Interactive Versions program.

1. Enter '1' to allow duplicate tax identification. Specify whether the system allows the entry of duplicate tax identification numbers. Values are:

Blank: Do not allow duplicate tax identification numbers.

1: Do not allow duplicate tax identification numbers.

(CHL) Setting Processing Options for Address Book Batch Upload (R76H101Z1)

Select Address Book (G76H01), Address Book Batch Upload.

Set these processing options before using the standard batch upload programs for address book records.

General

Allow Tax ID Duplicate Enter *1* to allow duplicate tax identification numbers.

(PER) Setting Processing Options for PO - Address Book Batch Upload (R76P101Z1)

Select Address Book – Peru (G76P01), Address Book Batch Upload.

Set these processing options before using the standard batch upload programs for address book records.

General

Allow Tax ID Duplicate Enter *1* to allow duplicate tax identification numbers.

(CHL) Setting Processing Options for Chilean Add Vouchers Set Up (P76H0411)

Set these processing options before you process vouchers for Chile. You must set up a corresponding version of the Chilean Add Vouchers Set Up program and the Standard Voucher Entry program (P0411).

General

Legal Number Validation Enter *N* to suppress validation of the legal number when you enter vouchers. Leave this processing option blank to have the system perform the validation.

(PER) Setting Up Revaluation Accounts and Limits for Peru

This section provides an overview of the setup requirements for revaluating assets for Peru and discusses how to:

- Set up default revaluation accounts.
- Set up revaluation limits.

Understanding the Information to Set Up for Revaluation

When you revalue assets in Peru, the legislation requires that you set up revaluation accounts that are different from those accounts used to record the initial value and accumulated depreciation. You set up the revaluation accounts to for each cost code using the Default Revaluation Accounts program (P76P501). The program enables you to link the cost account, by company, to a revaluation asset cost account and revaluation accumulated depreciation account. When you run the Revaluation Journal (R12845), the system uses the accounts that are set up in P76P501 for the journal entries that the system generates. The system stores default revaluation account information in table F76P501.

In addition to setting up revaluation accounts to use, you must also set up revaluation limits. The Peruvian legislation states that assets cannot be revalued at an amount that is greater than the current market value (replacement value) of the asset. To accommodate this requirement, you must set up the revaluation limit for each asset before you run the Revaluation Journal. You use the Revaluation Limit program (P76P503) to set up the market value for each asset with an ending date. When you run the revaluation process, the system uses the limit that you establish if the calculation results in an amount that is greater than the limit. The system stores the revaluation limit records in table F76P503.

JD Edwards EnterpriseOne Fixed Assets 8.12 Implementation Guide, “Setting Up the Fixed Assets System,” Setting Up Revaluation Indexes

Forms Used to Set Up Revaluation Information

| Form Name | FormID | Navigation | Usage |
|---|----------|---|---|
| Work With Default Assets Revaluation Accounts | W76P501A | Fixed Asset (G76P12), Default Revaluation Accounts | Review and select revaluation account records. |
| Default Assets Revaluation Accounts Revisions | W76P501B | Click Add on Work With Default Assets Revaluation Accounts. | Add and revise default revaluation account information. |
| Work With Regional Constants by Asset Number | W76P503A | Fixed Asset (G76P12), Revaluation Limit | Review and select revaluation limit records. |
| Regional Constants Revision by Asset Number | W76P503C | Click Add on Work With Regional Constants by Asset Number. | Add and revise revaluation limit records by asset. |

Setting Up Default Revaluation Accounts

Access the Default Assets Revaluation Accounts Revisions form.

| | |
|---|--|
| Asset Cost Object | Enter the object and subsidiary of the account associated with the asset that you want to revalue. |
| Reval. Asset Cost (revaluation asset cost) | Enter the account to update with the revaluated cost when you run the Revaluation Journal (R12845). Enter the account using the standard format BU.OBJ.SUB. |
| Reval. Accum. Depreciation (revaluation accumulation depreciation) | Enter the account to update with the revaluated accumulated depreciation amount when you run the Revaluation Journal (R12845). Enter the account using the standard format BU.OBJ.SUB. |

Setting Up Revaluation Limits

Access the Regional Constants Revision by Asset Number form.

| | |
|--------------------------|--|
| Revaluation Limit | Enter the current market value of the asset. The system uses this amount if the asset is revalued at a higher amount when you run the Revaluation Journal. The adjusted value of the asset cannot be greater than the replacement value. |
| Ending Date | Enter the date on which the revaluation limit expires. |

(CHL and PER) Setting Up the Fixed Asset Ledger for Chile and Peru

This section provides an overview of the setup requirements for the Fixed Asset Ledger (R76P5020) and discusses how to set up the fixed asset ledger.

Understanding the Setup Requirements for the Fixed Asset Ledger

Before you can run the Fixed Asset Ledger (R76P5020), you must set up the information that the system uses to retrieve the fixed asset information using the Fixed Asset Ledger Set up program (P76P502). You use the Fixed Asset Ledger Set up program to specify which amounts to print, according to document type, in the corresponding column, which you identify by assigning a value from the Asset Ledger Column Name (76P/CN) UDC table as the column name. The UDC values are hard-coded to work with the Fixed Asset Ledger program and should not be changed.

You set up the document type and column association information in the Asset Ledger Setup Code (76P/CO) UDC table. You enter the values you set up in the processing options of the Fixed Asset Ledger (R76P5020). The system uses the setup code to retrieve the document types for the corresponding columns by legal company. For example, if you set up the value *GENERAL* in UDC 76P/CO and use it as the setup code for the Fixed Asset Ledger Setup program, when you run the Fixed Asset Ledger, the system retrieves all the set up information that corresponds to the setup code GENERAL for the legal company specified. You can establish as many setup codes as necessary for the fixed asset document types that you use for each legal company.

Forms Used to Set Up the Fixed Asset Ledger

| Form Name | FormID | Navigation | Usage |
|---|----------|---|---|
| Work With Asset Ledger Set up | W76P502A | <ul style="list-style-type: none"> (CHL) Fixed Assets (G76H12), Fixed Asset Ledger Setup (PER) Fixed Asset (G76P12), Fixed Asset Ledger Setup | Review and select asset ledger setup records. |
| Default Assets Revaluation Accounts Revisions | W76P502B | Click Add on Work With Asset Ledger Set up. | Add and revise asset ledger setup records. |

Setting Up the Fixed Asset Ledger

Access the Default Assets Revaluation Accounts Revisions form.

| | |
|------------------------------|---|
| Legal Company | Enter the legal company number that represents the transaction companies for which you generate the fixed asset ledger transactions. |
| Set up Code | Enter the UDC code (76P/CO) to identify the document types to use to retrieve the asset amounts to print on the Fixed Asset Ledger report in the corresponding columns. |
| Do Ty (document type) | Enter the document type to use to retrieve the asset amounts to print on the Fixed Asset Ledger report in the corresponding column that is set up in the Column Name field. |
| Column Name | Enter the UDC (76P/CN) that indicates the column for which the system prints the fixed asset amounts for the document type entered in the Do Ty field. |

CHAPTER 41

(CHL and PER) Setting Up the System for Chile and Peru Legal Requirements

This chapter discusses how to:

- Set up legal document types.
- Set up relationships for legal document types.
- Set up next numbers by legal documents.
- Set up print templates for legal documents.

Setting Up Legal Document Types for Chile and Peru

This section provides an overview of legal document types and discusses how to set up legal document types.

Understanding Legal Document Types

You set up legal document types to specify how the system handles taxes for a type of document, whether the system must print the document on one page, and whether multiple payment terms are allowed for a document. You use the Legal Document Types program (P76H005) to associate the legal document types that you create with the legal document type groups that exist in the Legal Document Type Group UDC table (76H/DG).

When you create legal document types, you assign a legal document type group to each document type by selecting a value from the Legal Document Type Group UDC table (76H/DG).

This table shows the allowed values for the Discriminate Taxes field for each legal document type group:

| Legal Document Type Group (76H/DG) | Allowed Values for Discriminate Taxes |
|------------------------------------|---------------------------------------|
| 01 | Y |
| 02 | N |
| 03, 04 | Y, N |
| 05, 06, 07, 08 | X |
| 09 | Y, N |
| 10 | X |
| 11 | Y, N, X |

The system stores the legal document types in the F76H005 table.

Important! (CHL) The legal document type group 09 is not applicable in Chile.

Forms Used to Set Up Legal Document Types

| Form Name | FormID | Navigation | Usage |
|--------------------------------|----------|--|--|
| Work With Legal Document Types | W76H005A | <ul style="list-style-type: none"> General Configuration (G76H00), Legal Document Types General Configuration (G76P00), Legal Document Types | Access existing legal document type associations. |
| Legal Document Types Revision | W76H005C | On the Work With Legal Document Types form, click Add. | Associate legal document types to legal document groups and specify whether taxes apply. |

Setting Up Legal Document Types

Access the Legal Document Types Revision form.

| | |
|----------------------------------|---|
| Legal Document Type | Enter a code to describe the legal document type. |
| Description | Enter the description of the legal document. |
| Legal Document Type Group | Enter a value that exists in the Legal Document Type Group (76H/DG) UDC table that defines the legal document type group. |
| Discriminate Taxes | Enter a code that specifies whether the document must discriminate taxes. Values are: <i>Y</i> : Discriminates tax <i>N</i> : Does not discriminate tax <i>X</i> : Not applicable |

Setting Up Relationships for Legal Document Types for Chile and Peru

This section provides an overview of legal document types relationships and discusses how to set up legal document types relationships.

Understanding Relationships for Legal Document Types

You associate the values in the Document Type (00/DT) UDC table with the values that you create for legal document types.

You use the Legal Document Types program (P7400002) to create legal document types, then use the Legal Document Types Relationship program (P76H006) to create the relationships between legal document types and internal document types.

For Peru, the system stores the relationships in the F76P006 table.

For Chile, the system stores the relationships in the F76H006 table.

Forms Used to Set Up Relationships for Legal Document Types

| Form Name | FormID | Navigation | Usage |
|--|--------------------|--|--|
| Work With Legal Document Types Relationship | W76H006A, W76P006A | <ul style="list-style-type: none"> (CHL) General Configuration (G76H00), Legal Document Types Relationship (PER) General Configuration (G76P00), Legal Document Types Relationship | Access existing associations between document types and legal document types. |
| (CHL) Enter Document Type - Legal DCT Relationship | W76H006B | On the Work With Legal Document Types Relationship form, click Add. | (CHL) Establish the relationship between the legal document type and the customer taxpayer condition defined in the Registered for Taxes (76H/02) UDC table. |
| (PER) Legal Document Type Relationship | W76P006B | On the Work With Legal Document Types Relationship form, click Add. | (PER) Establish the relationship between the legal document type and the customer taxpayer condition defined in the Registered for Taxes (76H/02) UDC table. |

Setting Up Relationships for Legal Document Types

(CHL) Access the Enter Document Type - Legal DCT Relationship form.

(PER) Access the Legal Document Type Relationship form

| | |
|-----------------------------|---|
| Document Type | Enter the document type that you want to associate with the legal document type. You must enter a value that exists in the Document Types UDC table (00/DT) and the Document Types - Invoices Only UDC table (00/DI). |
| Registered for Taxes | Enter a user-defined code from UDC 76H/02 that defines the taxpayer condition. |
| Legal Document Type | Enter a document type that you set up in the Legal Document Types program (P76H005) that defines the legal document type that you want to associate with the internal document type. |

Setting Up Next Numbers for Legal Documents for Chile and Peru

This section provides an overview of next numbers for legal document types and discusses how to:

- Set processing options for the Next Legal Numbers Setup program (P76H001)
- Set up next numbers for legal documents.

Understanding Next Numbers for Legal Documents

The numbering for each type of legal document must be consecutive. Because you can print some of the legal documents from more than one JD Edwards EnterpriseOne program, you set up next numbers for legal documents so that the system assigns a valid next number no matter which program you use to print a document.

The system stores the next numbering schemes in the F76H001 table.

Forms Used to Set Up Next Numbers for Legal Documents

| Form Name | FormID | Navigation | Usage |
|-----------------------|----------|--|--|
| Work With Next Number | W76H001A | <ul style="list-style-type: none"> • (CHL) Sales Order (G76H42), Legal Numbers Set Up Complete the processing options and click OK. • (CHL) Accounts Receivable (G76H03B), Legal Numbers Set Up Complete the processing options and click OK. • (PER) Sales Order (G76P42), Legal Numbers Set Up Complete the processing options and click OK. • (PER) Accounts Receivable (G76P03B), Legal Numbers Set Up Complete the processing options and click OK. | Access existing next number schemes. |
| Edit Next Number | W76H001B | On the Work With Next Number form, click Add. | Set up next numbers for legal documents. |
| Change Status | W76H001C | On the Work With Next Number form, select a record and then select Change Status from the Row menu. | Change the status for a legal number sequence. You can specify that a numbering sequence is active, inactive, closed, or in use. |

Setting Processing Options for the Next Legal Numbers Setup (P76H001)

Processing options enable you to specify the default processing for programs and reports.

General

Although processing options are set up during implementation, you can change processing options each time you run a program.

Enter '1' to show the Expiration Date on the Form

Specify the expiration date of the next legal number sequence.

Enter the digits for the Emission Serial or zero in case of not required.

Specify the place of issue for the legal document. Enter a zero if this step is not required.

Setting Up Next Numbers for Legal Documents

Access the Edit Next Number form.

Legal Company

Specify the company for which you set up the next numbers.

Legal Document Type

Enter a document type that you set up in the Legal Document Types program (P76H005) that defines the legal document type that you want to associate with the internal document type.

Emission Serial

Specify the issue place where the company generates invoices.

This field is enabled only when you set the processing options to enable it.

Sequence

Specify the quantity of issue places that the legal documents have.

Legal Doc Type – Same As

Enter a value that you set up in the Legal Document Types program (P76H005) that the system will treat as is it is the same document type as you specified in the Legal Document Type field.

Next Legal Number - From

Specifies the beginning of the range for this series.

Next Legal Number - To

Specifies the end of the range for this series.

Next Legal Number

Specify the number that precedes the number that the system uses as the first number in the next numbering scheme. For example, if you enter 99, the system uses 100 as the first number in the next numbering scheme for the legal document type that you specify.

Next Legal Number Status

Specifies whether a legal numbers sequence is available for use. Values are:

I: Inactive

A: Active

C: Closed

Next Legal Number Expiration Date

Enter the expiration date of the numbering sequence.

This field appears only when you set the processing options to display the field.

Setting Up Print Templates for Legal Documents for Chile and Peru

This section provides an overview of print layouts for legal documents and discusses how to:

- Set up print layouts for legal documents.
- Attach print templates to legal documents.

Understanding Print Templates for Legal Documents

You set up print templates to define the types of information that print in the legal document, header and detail data, and the maximum space capacity in the voucher. After you set up the print template definitions, you assign legal document types to the definitions so that the system uses the correct template for each legal document type.

The system stores information about the print templates in the F76H007 table.

The system stores information about the relationships between print templates and legal documents in the F76H3B30 table.

Forms Used to Work With Print Templates for Legal Documents

| Form Name | FormID | Navigation | Usage |
|---|-----------|--|--|
| Work with Print Template Definition | W76H3B30A | <ul style="list-style-type: none"> • (CHL) Sales Order (G76H42), Print Template Definition Legal Document • (CHL) Accounts Receivable (G76H03B), Print Template Definition Legal Document • (PER) Sales Order (G76P42), Print Template Definition Legal Document • (PER) Accounts Receivable (G76P03B), Print Template Definition Legal Document | Access existing print template definitions. |
| Print Template Definition | W76H3B30B | On the Work with Print Template Definition form, click Add. | Define print templates. |
| Work with Legal Document Type - Print Template ID | W76H007A | <ul style="list-style-type: none"> • (CHL) General Configuration (G76H00), Legal Document Type/Format Relationship • (PER) General Configuration (G76P00), Legal Document Type/Format Relationship | Access existing associations between legal document types and print templates. |
| Legal Document Type - Print Template ID | W76H007B | On the Work with Legal Document Type - Print Template ID form, click Add. | Attach print templates to legal document types. |

Setting Up Print Layouts for Legal Documents

Access the Print Template Definition form.

| | |
|--|---|
| Layout ID | Enter the name assigned to the print template. |
| Description | Enter a description for the print template. |
| Print header attached data | Select this option to attach sales order header data to the print template. This option does not apply to the accounts receivable module. |
| Header attached data lines number | Enter the attached data lines number to print in the voucher header. This field does not apply to the accounts receivable module. |
| Print line attached data | Select this option to attach sales order lines (for the sales order management module) or invoice lines (for the accounts receivable module). |

Number of lines for detail lines Enter the number of lines that the system can include in the attached data.

Detailed section rows total number Enter the total number of lines or rows to print in the detail by voucher line.

Attached data line length Enter the allowed page width for the attached data.

Attaching Print Templates to Legal Documents

Access the Legal Document Type - Print Template ID form.

Print template ID Enter a code that identifies the legal document print template.

CHAPTER 42

(PER) Setting Up Withholding

This chapter provides an overview of supplier withholding for Peru and discusses how to:

- Set up withholding percentages for *Impuesto General a la Venta* (IGV).
- Set up *Sistema de Pago de Obligaciones Tributarias* (SPOT) withholding.
- Set up suppliers.

See Also

[Chapter 40, “\(CHL and PER\) Setting Up Functionality for Chile and Peru,” \(PER\) Setting Up UDCs for Supplier Withholding for Peru, page 886](#)

[Chapter 40, “\(CHL and PER\) Setting Up Functionality for Chile and Peru,” \(PER\) Setting up Company Constants for Peru, page 894](#)

Understanding Supplier Withholding for Peru

When you process payments for vouchers, the system calculates general sales tax (IGV) withholding for suppliers if you set up the supplier for withholding. You must set up suppliers for IGV withholding when you process real estate sales transactions for the supplier or process the rendering of services and construction contracts that are subject to the tax.

You also set up withholding percentages for vouchers for the tax duty payment system (SPOT) withholding. When you process SPOT vouchers for payment, you also withhold a tax amount from the supplier and send the payment to the National Bank. The values that you set up in the Spot Maintenance Percentage (P76P410) program determine whether the system generates a payment to the National Bank and the percentage that is withheld from the supplier.

Setting Up Withholding Percentages for IGV

This section provides an overview of withholding percentages and discusses how to enter withholding percentages for IGV.

Understanding Withholding Percentages

You set up withholding percentage amounts for each supplier by IGV concept, minimum withholding amounts, and effective dates. You can set up multiple percentages for a supplier by using different minimum withholding amounts and effective dates. The system uses the percentages that you set up to calculate IGV withholding amounts for payments.

Forms Used to Enter Withholding Percentages

| Form Name | FormID | Navigation | Usage |
|--------------------------------------|----------|---|--|
| Work with IGV Withholding Percentage | W76P405A | Accounts Payable (G76P04), Withholding Percentage | View or select existing records. |
| IGV Withholding Percentage Revisions | W76P405B | Click Add on the Work with IGV Withholding Percentage form. | Set up withholding percentages for companies by IGV concept, minimum withholding amount, and effective date. |

Entering Withholding Percentages

Access the IGV Withholding Percentage Revisions form.

| | |
|--------------------------------|--|
| IGV Withholding Concept | Enter the code that identifies the type of IGV withholding. The code that you enter must exist in the IGV Withholding Concept (76P/01) UDC table. |
| Withholding Percentage | Enter the percentage that specifies the withholding percentage on taxes. The maximum valid amount is 999,99. |
| WH Minimum Amount | Enter the minimum taxable amount to generate the withholding. If the total payment taxable amount is less than the amount specified in this field, the withholding is not applied. |
| Amnt Type (amount type) | Enter the code that identifies the basis of the minimum amount. For example, you can specify that the system uses the gross amount of the voucher or the taxable amount of the voucher when determining if the voucher amount meets the withholding minimum amount requirement. The code that you enter must exist in the Amount Type to Use (76P/AT) UDC table. |

Setting Up SPOT Withholding Information for Peru

This section provides an overview of SPOT withholding and discusses how to enter SPOT withholding percentages.

Understanding SPOT Withholding Information

You set up codes for the tax duty payment system (*Sistema de Pago de Obligaciones Tributarias* [SPOT]) that the system uses when you enter vouchers for the tax duty. When you set up the codes, you enter the withholding percentage, the minimum amount on which the system calculates the tax, and the amount type on which the system bases the calculation.

See Also

[Chapter 48, “\(PER\) Working with Accounts Payable Functionality for Peru,” Processing SPOT Vouchers for Peru, page 977](#)

Forms Used to Enter SPOT Withholding Information

| Form Name | FormID | Navigation | Usage |
|------------------------------------|----------|---|---|
| Work with Spot WH Percentage - 76P | W76P410A | Accounts Payable (G76P04), Spot Maintenance Percentage | View or select existing records. |
| Spot Wh Percentage Revisions | W76P410B | Click Add on the Work with Spot WH Percentage - 76P form. | Enter the withholding percentage, the minimum amount on which the system calculates the tax, and the amount type on which the system bases the calculation. |

Entering SPOT Withholding Information

Access the Spot Wh Percentage Revisions form.

SPOT Concept

Enter the code that identifies the type of SPOT withholding. The code that you enter must exist in the SPOT Concepts (76P/02) UDC table.

Comparison Amount

Enter the code that identifies the basis of the minimum amount. For example, you can specify that the system uses the total of the voucher or the taxable amount of the voucher when determining if the voucher amount meets the withholding minimum amount requirement. The code that you enter must exist in the Amount Type to Use (76P/AT) UDC table.

Setting Up Suppliers for Peru

When you set up suppliers for Peru, you must specify whether the supplier is an individual. If the supplier is an individual, you complete the Person/Corporation field on the Supplier Master Revision form in the Supplier Master Information (P04012) program with *01*. You must also complete the fields in the Who's Who program in the JD Edwards EnterpriseOne Address Book system to include the names of the supplier's mother and father. This information is required for reporting to the tax authorities.

See *JD Edwards EnterpriseOne Accounts Payable 8.12 Implementation Guide*, "Entering Supplier Information," Entering Supplier Master Information.

See *JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide*, "Entering Address Book Records," (PER) Entering Additional Address Book Information.

See *JD Edwards EnterpriseOne Address Book 8.12 Implementation Guide*, "Entering Address Book Records," Adding Who's Who Information to Address Book Records.

CHAPTER 43

(CHL and PER) Working With Fixed Assets for Chile and Peru

This chapter discusses how to:

- Revalue assets.
- Generate the Fixed Asset Ledger.

See Also

Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (PER) Setting Up Revaluation Accounts and Limits for Peru, page 899

JD Edwards EnterpriseOne Fixed Assets 8.12 Implementation Guide, “Revaluating Assets”

Chapter 40, “(CHL and PER) Setting Up Functionality for Chile and Peru,” (CHL and PER) Setting Up the Fixed Asset Ledger for Chile and Peru, page 900

Revaluating Assets for Chile and Peru

This section provides an overview of the calculations for the Revaluation Journal and discusses how to run the Revaluation Journal (R12845) report.

Understanding the Calculations for the Revaluation Journal

When you run the Revaluation Journal (R12845) for Chilean or Peruvian assets, the program uses the existing revaluation indexes to calculate a new rate that it uses to revalue the assets. The system retrieves these indexes to calculate the new rate:

- The index that corresponds to the last day of month prior to the revaluation date. The system uses this index as the numerator factor.
- The index that corresponds to the last day of the month that is previous to the revaluation date. For example, if the last revaluation was calculated in December 2005, the system uses the index that corresponds to November 30 of 2005. The system uses this index as the denominator factor.

Note. If the acquisition asset date is later than the last revaluation date, the system uses the index that corresponds to the last day of the month that is previous to the acquisition date.

The system calculates a new rate using the formula: (Numerator Factor) / (Denominator Factor). The system rounds the result to one decimal.

To calculate the revaluation amount, the system multiplies the new rate by the accumulated asset balance as of the last revaluation date ((revaluation amount) = (last revaluation balance) × (new rate)). After the system calculates the revaluation amount, it calculates the adjustment amount using the formula: (revaluation amount) – (current asset balance).

The system generates journal entries for the adjustment amount and assigns the transaction a document type of AR and a batch type of AR. The system debits the account in which the adjustment occurs and credits the offset account that it retrieves from the one of the AAI items: FR1, FR2, or FR3, depending on the account associated with the asset that was revalued.

Prerequisites

Complete these tasks before you run the Revaluation Journal:

- Set up revaluation indexes.

See *JD Edwards EnterpriseOne Fixed Assets 8.12 Implementation Guide*, “Setting Up the Fixed Assets System,” Setting Up Revaluation Indexes.

- (PER) Set up revaluation accounts.

See [Chapter 40, “\(CHL and PER\) Setting Up Functionality for Chile and Peru,” \(PER\) Setting Up Revaluation Accounts and Limits for Peru, page 899.](#)

- (PER) Set up revaluation limits.
- Set up UDCs.

See [Chapter 40, “\(CHL and PER\) Setting Up Functionality for Chile and Peru,” \(CHL and PER\) Setting Up UDCs for Fixed Assets for Chile and Peru, page 885.](#)

Running the Revaluation Journal (R12845)

Use one of these navigations:

- (CHL) Fixed Assets (G76H12), Revaluation Journal.
- (PER) Fixed Asset (G76P12), Revaluation Journal.

Generating the Fixed Asset Ledger

This section provides an overview of the fixed asset journal, lists prerequisites, and discusses how to:

- Generate the fixed asset ledger.
- Set processing options for Fixed Asset Ledger (R76P5020).

Understanding the Fixed Asset Ledger

After you run the Revaluation Journal and post the adjustments to the general ledger, you can generate the Fixed Asset Ledger report to send to the government. The system uses the information that is set up for the legal company in the Fixed Asset Ledger Set up program (P76P502) to determine the amounts to retrieve for each column on the report. Because the amounts to retrieve are based on a specific document type, which is set up in program P76P502, the person reviewing the report can see the movement of the asset from the initial setup, through the accumulated depreciation and the revaluation process.

You can generate the fixed asset ledger in either proof or final mode. The report is the same regardless of the mode that you select, however, in final mode, the system assigns a folio number to each page that it retrieves from the Next Numbers table (F0002). Because this folio number is a legal document number, you should validate that the information on the report is correct before you generate it in final mode.

When you run Fixed Asset Ledger, the system retrieves the information that prints on the report from these tables:

- F1201

The system retrieves information about the asset, such as the asset number, description, and acquisition date.

- F1202

The system retrieves the beginning balance and period net posting amounts for the asset.

- F0911

The system retrieves the amounts for each column that you specify in the Fixed Asset Ledger Setup program based on the corresponding document type. The system uses the asset setup code, which you enter in a processing option, to determine which setup records to retrieve. For example, if you set up document type DP for the Depreciation column, the system retrieves the amounts associated with document type DP for each asset for the period and year specified.

The system prints the information that it retrieves in these columns on the report:

- Begin Balance
- Revaluation
- Exchange Rate Differences
- Improvements
- Deductions
- Depreciation
- Inflation Adjustment

The system also uses the AAI items FCxx and FDxx to retrieve the amounts associated with the cost and accumulated depreciation accounts which it prints on the report.

When you run the program in final mode, the system assigns the next number for each page based on the company and fiscal year.

Note. This report must be generated to print on legal paper. You must customize the program to accommodate this requirement; otherwise, the report does not display all of the columns or the required folio number.

Prerequisites

Before you run the Fixed Asset Ledger, complete these tasks:

- Verify that the legal company for which you want to generate the fixed asset ledger is set up in the Fixed Asset Ledger Setup program (P76P502).

See [Chapter 40, “\(CHL and PER\) Setting Up Functionality for Chile and Peru.” \(CHL and PER\) Setting Up the Fixed Asset Ledger for Chile and Peru, page 900.](#)

- Verify that all transactions are posted to the general ledger and fixed assets.
- Verify that the next numbers are set up for the company and fiscal year for which you generate the report.

Generating the Fixed Asset Ledger

Use one of these navigations:

- (CHL) Fixed Assets (G76H12), Fixed Assets Ledger.
- (PER) Fixed Asset (G76P12), Fixed Asset Ledger.

Setting Processing Options for Fixed Assets Ledger (R76P5020)

Set these processing options before you run the Fixed Asset Ledger.

General

Use these processing options to specify how the system runs the report.

- 1. Legal Company** Specify the legal company number to use to retrieve the fixed asset information for the transaction companies. If you leave this processing option blank, the system produces a blank report.
- 2. Century** Specify the first two digits of the four-digit fiscal year to use to retrieve information for the report. For example, if you run the program for fiscal year 2005, enter 20. If you run the program for fiscal year 1999, enter 19.
- 3. Fiscal Year** Specify the two-digit fiscal year to use to retrieve information for the report.
- 4. Period Number - General Ledger** Specify the period number through which the system retrieves transactions for the report. For example, if you enter 6, the system retrieves information for the first six periods of the fiscal year and century that you specify.
- 5. Suppress Zero Amounts** Specify whether to print assets that do not have a balance. Values are:
Blank: Print all assets that regardless of the balance.
1: Do not print assets that have a zero balance.
- 6. Account Category Code** Specify whether to print the standard account number associated with the asset or the category code value. Values are:
Blank: Print the standard account number (business unit.object.subsidiary).
21: Print the value of category code 21.
22: Print the value of category code 22.
23: Print the value of category code 23.
- 7. User Defined Code Table** Specify the UDC table to use to retrieve the ledger types for which you want the system to retrieve corresponding transactions.

Product Code

Enter the product code of the UDC table that contains the ledger types for which you want to retrieve transactions for the report. If you leave this processing option blank, the system uses product code *76H*.

User-Defined Codes

Enter the UDCs of the UDC table that contains the ledger types for which you want to retrieve transactions for the report. If you leave this processing option blank, the system uses *LL*.

- 8. Asset Number** Specify the number to print on the report to identify the asset. Values are:
Blank or *1*: Print the asset number.
2: Print the unit number.
3: Print the serial number.
- 9. Assets Ledger Setup Code** Specify the asset ledger setup code to use to retrieve the column and document type information to print on the report. The system includes only information that is set up for the asset ledger setup code specified.
- 10. Mode** Specify whether to run the report in proof or final mode. Values are:
Blank: Proof mode. The system prints the report and assigns 1 as the page number.
1: Final mode. The system prints the report and assigns each page a folio number that it retrieves from the Next Numbers table (F0002) based on the value that you enter in the Document Type processing option.

Print

Use these processing options to specify how the system prints the report.

- 1. Document Type** Specify the document type to use to retrieve the number from the Next Numbers table (F0002) that the system assigns to each page of the report. The system uses the number associated with the document type for the company specified, or for company 00000, if the document type is not set up for the specific company. If the system cannot locate a next number for the document type specified or if you leave this processing option blank, the system does not assign a folio number to each page of the report.
- 2. Report Title** Specify whether to print the title that is entered in the two Title fields on the report. Values are:
Blank: Print the title that is entered in the Title fields.
1: Do not print the title.
- 3. Legal Company** Specify whether to print the legal company information, such as the name and address, on the report. Values are:
Blank: Print the company information.
1: Do not print the company information.

CHAPTER 44

(CHL and PER) Numbering and Printing Legal Documents for Chile and Peru

This chapter provides an overview of legal documents processing, lists prerequisites, and discusses how to:

- Work with legal documents.
- Void legal numbers.

Understanding Legal Documents Processing for Chile and Peru

After you enter invoices in the JD Edwards EnterpriseOne Accounts Receivable system, you create and print batches of legal documents that conform to legal requirements for Chile and Peru. For example, you create invoices that do not exceed one page.

The process of generating legal documents for invoices that are entered in the JD Edwards EnterpriseOne Accounts Receivable system includes these tasks:

1. Create legal document print batches.
2. Assign legal numbers to invoices in print batches.
3. Print legal documents in print batches.

When you create legal document print batches, you manually select invoices in the JD Edwards EnterpriseOne Accounts Receivable system for which you want to assign legal numbers, and the system assigns a batch number to the group of invoices. Then, you select print batches for which you want to assign legal numbers, and the system assigns legal numbers based on the legal document type next numbers setup and legal document type relationship. Finally, you select print batches for which legal numbers are assigned, and the system prints invoices based on the print layout setup.

Prerequisites

Before completing the tasks in this chapter:

- Verify legal company setup.
- Verify legal document type setup.
- Verify legal document type relationship setup.
- Verify legal next numbers setup.

- Verify print layout setup.
- Set up versions of the Print Legal Documents program (R76H3B30) to specify which version the Lot of Printing Review program uses to print invoices in print batches.
- Post invoices for which legal document print batches are generated.

See [Chapter 41, “\(CHL and PER\) Setting Up the System for Chile and Peru Legal Requirements,” page 903](#).

Working With Legal Documents for Chile and Peru

This section provides an overview of legal document print batch features and discusses how to set processing options for Lot of Printing Review.

Understanding Legal Document Print Batch Features

To create and print legal documents, use the Lot of Printing Review program (P76H3B50). The Lot of Printing Review program enables you to:

- Create, modify and delete legal document print batches for invoices that are entered in the JD Edwards EnterpriseOne Accounts Receivable system.
- Verify legal number availability.

This feature enables you to verify availability of legal numbers prior to assigning legal numbers to print batches. This assists in preventing issues during the numbering process.

- Number and renumber legal documents.

After legal numbers are assigned to invoices in print batches, you can renumber legal numbers.

- Print legal documents.

The system submits the version of the Print Legal Documents program that you specify for the legal company, legal document type, and emission serial.

- Inquire on legal documents that are associated with invoices.

This feature enables you to review invoices that are in print batches.

- Review batch audit information.

This feature enables you to review information about print batches, including the user ID of the person who last modified the batch, the date and time when the batch was last modified, and so on.

Note. The Lot of Printing Review program is used in both the JD Edwards EnterpriseOne Accounts Receivable and JD Edwards EnterpriseOne Sales Order Management systems. However, the process of manually creating legal document print batches using the Lot of Printing Review program is necessary only for invoices that are entered in the JD Edwards EnterpriseOne Accounts Receivable system. When the Print Invoices program (R42565) in the JD Edwards EnterpriseOne Sales Order Management system is submitted, the system automatically creates legal document print batches.

See *JD Edwards EnterpriseOne Sales Order Management 8.12 Implementation Guide*, “Invoicing”.

Information for legal document print batches is stored in these tables:

- Lot of Printing — Header — CHI – 03B (F76H3B50)

- Lot of Printing — Detail — CHI — 03B (F76H3B51)

Legal Number Availability

After you create legal document print batches, you can verify the legal number availability before you assign legal numbers to invoices in print batches. Legal number availability performs these validations:

- Verifies that the range of next numbers, as defined in the sequence of legal next numbers, contain enough numbers to assign legal numbers to all invoices in print batches.

For example, if there are 30 invoices in a print batch and only 20 numbers are available in the sequence of legal next numbers, the system issues an error.

- Verifies that the sequence of legal numbers that the system assigns to invoices in print batches are active.
- Verifies that the sequence of legal numbers that the system assigns to invoices in print batches are not in use by another user.

Batch and Document Status

When you create and process print batches, the system assigns a batch status to identify the current status:

- *O*: Open

The print batch has been created, but legal numbers have not been assigned to the batch. The system also assigns this status to print batches for which legal numbers have been renumbered.

- *U*: Use

Legal numbers are in the process of being assigned to the print batch.

- *N*: Numbered

Legal numbers are assigned to invoices in the print batch. To print legal documents in a print batch, the print batch must be at this status.

- *P*: In Process

The print batch is being updated. For example, legal documents in the print batch are being printed.

- *C*: Closed

Legal documents are printed for the batch.

The system also assigns document statuses to invoices in print batches:

- *A*: Open

The invoice has not been processed. The print batch status is *O*.

- *N*: Numbered

The invoice has been assigned a legal number. The print batch status is *N*.

- *P*: Processed

The invoice has been printed. The print batch status is *C*.

- *R*: Renumbered

The invoice legal number has been renumbered. The print batch status is *O*.

- *E*: Error

The invoice has an error.

Forms Used to Work with Legal Documents

| Form Name | FormID | Navigation | Usage |
|---------------------|-----------|---|---|
| Lot Review | W76H3B50A | <ul style="list-style-type: none"> • (CHL) Accounts Receivable (G76H03B), Lot of Printing Review • (PER) Accounts Receivable (G76P03B), Lot of Printing Review | Review print batches. |
| Edit Lot | W76H3B50B | <ul style="list-style-type: none"> • On the Lot Review form, click Add. • On the Lot Review form, locate and select the print batch for which you want to review or renumber the associated invoices and then click Select. | Create, review and renumber invoices associated with print batches. |
| Select Invoices | W76H3B50H | On the Edit Lot form, complete the Legal Company, Legal Document Type, Emission Serial, and Mode (F) (currency mode) fields and then select <i>Selección de Fact.</i> (<i>Selección de Factura</i>) (select invoices) from the Form menu. | Select invoices for which legal document print batches are created. |
| Check Disponibility | W76H3B50 | On the Lot Review form, locate and select the print batch for which you want to verify legal number availability, and then select Check Disponibility from the Row menu. | Verify legal number availability prior to assigning legal numbers to invoices in print batches. |
| Send Lot to Print | W76H3B50D | On the Lot Review form, locate and select the print batch for which you want to assign legal numbers, and then select Generate Legal Num (Generate Legal Numbers) from the Row menu. | Assign legal numbers to invoices in print batches. |
| Print Invoices | W76H3B50J | On the Lot Review form, locate and select the print batch for which you want to print legal documents, and then select Print Invoices from the Row menu. | Print legal documents. |

| Page Name | Object Name | Navigation | Usage |
|-------------------|-------------|--|---|
| Audit Information | W76H3B50E | On the Lot Review form, locate and select the print batch for which you want to review audit information, and then select Audit Information from the Row menu. | Review audit information pertaining to a print batch, such as the user ID of the person who last modified the print batch and on what date. |

Setting Processing Options for Lot of Printing Review (P76H3B50)

Processing options enable you to specify the default processing for programs and reports.

General

These processing options specify how the system processes legal documents.

| | |
|-------------------------------|--|
| Reason Code | Specify the code from the Cancellation Codes (76H/CC) UDC table that the system assigns to legal numbers that are voided. |
| Transaction Originator | <p>Specify the types of invoices to display on the Lot Review form. You can review invoices that are generated in the JD Edwards EnterpriseOne Accounts Payable, JD Edwards EnterpriseOne Accounts Receivable, JD Edwards EnterpriseOne Sales Order Management systems; or for all three systems. Values are:</p> <p>Blank: Display invoices from the JD Edwards EnterpriseOne Accounts Payable, JD Edwards EnterpriseOne Accounts Receivable, and JD Edwards EnterpriseOne Sales Order Management systems.</p> <p><i>AP</i>: Display only invoices generated in the JD Edwards EnterpriseOne Accounts Payable system.</p> <p><i>AR</i>: Display invoices that are generated in JD Edwards EnterpriseOne Accounts Receivable.</p> <p><i>SOP</i>: Display invoices that are generated in JD Edwards EnterpriseOne Sales Order Management.</p> |

SOP

These processing options specify how the system processes legal documents for invoices generated in the JD Edwards EnterpriseOne Sales Order Management system.

| | |
|--|---|
| 1. Status Code - From and 2. Status Code - Thru | Specify the range of Activity/Status Codes (UDC 40/AT) for which the system displays invoices on the Lot Review form. |
| 3. Based on Status | <p>Specify whether the system selects invoices according to the last status or the next status. Values are:</p> <p><i>1</i>: Last status</p> <p><i>2</i>: Next status</p> |
| 4. Override Next Status Code | Specify the next standard step in the processing cycle for this order type. You set up the steps for the processing cycle on the Order Activity Rules form. |

| | |
|--------------------------------------|---|
| 5. Prevent Next Status Update | Specify whether the system allows updates to the Next Status field. Values are: Blank: Allow updates. <i>1</i> : Prevent updates. |
|--------------------------------------|---|

Note. It is recommended that you specify a value of *1* in this processing option. Otherwise, each time an invoice is renumbered the system updates the sales order status.

A/R

These processing options are used to specify how the system processes legal documents for invoices generated in the JD Edwards EnterpriseOne Accounts Receivable system.

| | |
|---|--|
| Print Invoices | Specify whether the system automatically prints invoices after assigning legal numbers to print batches. Values are: Blank: The system does not automatically print invoices. <i>1</i> : The system automatically prints invoices after assigning legal numbers. |
| Error Processing | Enter <i>1</i> to prevent invoices from being printed if errors are issued during the legal numbering process. |
| Emission Serial Processing | Enter <i>1</i> to allow the creation of print batches for invoices that have different emission serial numbers. |
| Lot - Printing Number | Displays the number that the system assigns as the batch number to the legal document print batch. |
| Legal Company | Enter the legal company for which you want to create legal document print batches. |
| Legal Document Type | Enter the legal document type for which you want to create legal document print batches. |
| Emission Serial | Enter the emission serial number. |
| Doc Co (document company), Do Ty (document type), and Document Number | Enter the invoice information for which you want to create a legal document print batch. If you do not know the invoice information, follow the steps to select invoices and display the invoice information in these fields. |
| Current Leg. Number (current legal number) and Last Leg. Number (last legal number) | Displays the legal number assigned to invoices as well as a prior legal number if the invoice legal number was renumbered. |

Voiding Legal Numbers for Chile and Peru

This section provides an overview of legal number voids and discusses how to:

- Void specific legal numbers.
- Void a sequence of legal numbers.

See Also

Chapter 41, “(CHL and PER) Setting Up the System for Chile and Peru Legal Requirements,” Setting Processing Options for the Next Legal Numbers Setup (P76H001), page 907

Understanding Legal Number Voids

You can void legal numbers using either of these methods:

- Void specific numbers in a sequence of legal next numbers.
- Void an entire sequence of legal next numbers.

After you void legal next numbers, you can use the Void Invoices program (P76H3B20) to review voided legal next numbers.

When you void legal numbers, the system updates these tables:

- Legal Document Next Number - CHI - 03B (F76H001).
- Invoices not Printed - CHI - 03B (F76H3B20).

Forms Used to Void Legal Numbers

| Form Name | FormID | Navigation | Usage |
|-----------------------|----------|--|--|
| Work with Next Number | W76H001A | <ul style="list-style-type: none"> • (CHL) Accounts Receivable (G76H03B), Legal Numbers Set Up Set the processing options, and then click OK. • (CHL) Sales Order (G76H42), Legal Numbers Set Up Set the processing options, and then click OK. • (PER) Accounts Receivable (G76P03B), Legal Numbers Set Up Set the processing options, and then click OK. • (PER) Sales Order (G76H42), Legal Numbers Set Up Set the processing options, and then click OK. | Review legal next numbers that are associated with legal companies and legal document types. |
| Edit Next Number | W76H001B | On the Work with Next Number form, find and select the sequence of next numbers in which you want to void specific legal next numbers and then click Select. | Void specific legal numbers in a sequence of legal next numbers. |
| Change Status | W76H001C | On the Work with Next Number form, find and select the sequence of numbers that you want to void, and then select Change Status from the Row menu. | Void an entire sequence of legal next numbers. Note. The sequence of legal next numbers must have a next number status of <i>A</i> (Active) to be voided (closed). |

Voiding Specific Legal Numbers

Access the Edit Next Number form.

To void specific legal numbers in a sequence of legal next numbers:

1. On Edit Next Number form, enter a number in the Next Legal Number field.
2. On Generate Invoice Not Printed, enter a value from UDC 76H/CC in the Cancellation Code field.
3. (Optional) Enter additional information in the Cancellation Detail field.
4. Click OK.

Voiding a Sequence of Legal Numbers

Access the Work with Next Number form.

To void a sequence of legal next numbers:

1. Find and select the sequence of legal next numbers that you want to void, and then select Change Status from the Row menu.
2. On Change Status, select the Close option.

Note. Only those legal next number sequences that are active can be changed to closed.

3. On Generate Invoice Not Printed, complete the Cancellation Code and Cancellation Detail fields.
4. Click OK.

| | |
|--|--|
| Next Legal Number | Enter the next number that the system assigns to invoices. The system voids the numbers that precede the number that you enter and that are after the original number in this field. For example, if this field contains a value of 200 and you enter 250, the system voids numbers 200 through 249. You cannot enter a number in this field that is less than the existing value. |
| Next Legal Number - From and Next Legal Number - To | Displays the range of legal next numbers that the system voids when you change the value in the Next Legal Number field. |
| Cancellation Code | Enter the reason code for voiding legal next numbers. Specify a value from UDC 76H/CC. |
| Cancellation Detail | (Optional) Enter additional information pertaining to the void of legal next numbers. |

CHAPTER 45

(CHL and PER) Working With Sales Order Processing for Chile and Peru

This chapter discusses how to:

- (CHL and PER) Associate legal document types and companies to Voucher Print versions.
- (CHL and PER) Process credit notes and debit notes.
- (CHL and PER) Inquire on sales orders.
- (CHL) Change the invoice date.

(CHL and PER) Associating Legal Document Types and Companies to Voucher Print Versions for Chile and Peru

This section provides an overview of voucher print and discusses how to select a version of the Print Legal Documents program.

Understanding Print Legal Documents

Use the Legal Document Print UBE/Version program (P76H3B39) to associate versions of the Print Legal Documents program (R76H3B30) to legal document types by company. The system stores all records in the Legal Documents Print UBE & Versions table (F76H3B39). When you print from the Lot Review Inquiry program, the system uses the version that you create for the Print Legal Documents program.

Forms Used to Associate Legal Document Types and Companies to Print Legal Documents Versions

| Form Name | FormID | Navigation | Usage |
|--|-----------|--|---|
| Work with Legal Documents UBE & Versions | W76H3B39A | <ul style="list-style-type: none"> • (CHL) Sales Order Processing (G76H42), Legal Document Print UBE/Version • (PER) Sales Order Processing (G76P42), Legal Document Print UBE/Version | Locate existing associations between versions of the Print Legal Documents program (R76H3B30) and legal document types and companies. |
| Legal Documents UBE & Versions | W76H3B39C | Click Add on the Work with Legal Documents UBE & Versions. | Add a version of Print Legal Documents by legal document and company. |

Associating a Print Legal Documents Version with Legal Document Types and Companies

Access the Work with Legal Documents UBE & Versions form.

(CHL and PER) Processing Credit Notes and Debit Notes Related to Documents for Chile and Peru

This section provides an overview of credit and debit notes for Peru, lists prerequisites, and discusses how to:

- Set processing options for Process Credit Notes and Debit Notes Related to Documents (P76H4210).
- Process credit notes and debit notes related to documents.

Understanding Credit and Debit Notes for Peru

You can inquire on legal document numbers and relate them to a sales order. For example, you can relate a credit note to one or more invoices, or you can relate a debit note to one or more credit notes.

You must enter *1* in the processing options of PO – Sales Order Entry (P4210) (P76H4210) to relate sales orders to a credit note or to one or more invoices.

Note. Any changes that you make by using this program affect the entire order. When you relate one or more invoices to a credit order and legal numbers of related invoices, this information prints in the credit note. By law, invoices related to credit notes must belong to the same customer.

The system stores records for credit notes or debit notes related to invoices or credit notes in the NC/ND - Invoice Related - CHI - 42 - 76H table (F76H215).

If the tax rate changes when the program generates a credit or debit note related to an invoice; the credit note that the program creates must be the same tax rate in the related document. You must create and relate a credit note with a tax area with the same tax rate as the related invoice.

Prerequisites

Verify that the processing option for PO – Sales Order Entry (P4210) (P76H4210) is active.

Set up corresponding versions of the Sales Order Entry (P4210) program and the PO – Sales Order Entry (P4210) (P76H4210) program.

Forms Used to Process Credit Notes and Debit Notes Related to Documents

| Form Name | FormID | Navigation | Usage |
|-------------------------------|-----------|--|--|
| Enter Order Headers | W4210H | Sales Order Processing (G4210), Enter Order Headers | Review and select sales orders. |
| NC/ND Related to Sales Orders | W76H4210A | Select an order and select Document Inquiry from the Form menu on NC/ND Related to Sales Orders. | Select an order to attach a credit note. |
| Select Related Order Document | W76H4210B | Select an order and click Close on Select Related Order Document. | Relate an order to a credit note. The system places a check mark on the row with order to indicate there is a related credit note. |

Setting Processing Options for Process Credit Notes and Debit Notes Related to Documents (P76H4210)

Processing options enable you to specify the default processing for programs and reports.

General

Although processing options are set up during system implementation, you can change processing options each time you run a program.

1. Related Sales Order Enter *I* to enter SO related invoices.

Process Credit Notes and Debit Notes Related to Documents

Use one of these navigations:

- (CHL) Select Sales Order (G76H42), PO – Sales Order Entry. Select the version to run.
- (PER) Select Sales Order (G76P42), PO – Sales Order Entry. Select the version to run.

Before you process this program, complete the steps to relate a credit note to an order.

(CHL and PER) Inquiring on Sales Orders for Chile and Peru

This section provides an overview of sales order inquiries for Chile and Peru, lists a prerequisite, and discusses how to set the processing options for the Order Inquiry by Legal Document (P76H2012) program.

Understanding Sales Order Inquiries for Chile and Peru

Sales Order inquiries must meet Chilean and Peruvian legal requirements. Using the localized inquiries enables you to display vouchers' legal numbers (invoice, ticket, export invoice, and so on) and the shipping guide, with the internal number generated by the sales order number and type.

Customer Service

You use the Customer Service program (P4210) to check the information for a customer's sales orders and items in the Sales Orders Detail (F4211) table or in the Historical Sales Orders Detail (F42119) table. Using the localization menu selections, you can display the legal document number and type (invoices, tickets, shipping guides, export invoices, and so on) with a sales order. You can also view the shipping guide with the internal number generated by the sales order number and type.

Sales Ledger History

You can review information in the sales ledger for any order that has been through the sales order process. You can also view the legal document number with a sales order.

Orders Inquiry by Internal Document

Using Orders Inquiry by Internal Document, you can access the legal document numbers and document types for a sales order. You can inquire by internal document type and document number or by sales order number and type.

Note. When you review a sales order line, there is a row for each voucher line. For example, there are two rows for order line 1000: one line corresponding to the legal invoice number and the other to the legal shipping guide number.

Order Inquiry by Legal Document

You can inquire on a sales order using the legal number. You can also inquire by legal document type and number, order type and number, and invoice internal document type and number.

Sales Order – Batch Inquiry

You can use this inquiry to locate sales orders by batch.

Voided Documents Inquiry

You can use this inquiry to locate voided legal documents for the JD Edwards EnterpriseOne Accounts Receivable system and the JD Edwards EnterpriseOne Sales Order Management system.

Prerequisite

Verify that all voucher types are set up in user-defined code (UDC) 76H/DG.

Forms Used for Sales Order Inquiries

| Form Name | FormID | Navigation | Usage |
|--|--------|--|--|
| Customer Service - Customer Service Inquiry | W4210E | Sales Orders Inquiry (G42112), Customer Service | Locate customer sales orders and items. |

| Page Name | Object Name | Navigation | Usage |
|---|-------------|---|---|
| Sales Legal Document Inquiry by Internal Document | W76H2011A | <ul style="list-style-type: none"> • (CHL) Sales Order (G76H42), Sales Legal Document Inquiry by Internal Document <p>Alternatively, select an order and then select Order, Regional Information from the Row menu on the Customer Service - Customer Service Inquiry form.</p> <ul style="list-style-type: none"> • (PER) Sales Order (G76P42), Sales Legal Document Inquiry by Internal Document <p>Alternatively, select an order and then select Order, Regional Information from the Row menu on the Customer Service - Customer Service Inquiry form.</p> | Review sales order legal document numbers and types associated. |
| Sales Ledger History Inquiry - Work With Sales Ledger Inquiry | W42025A | Sales Orders Inquiry (G42112), Sales Ledger History Inquiry | Review sales ledger information. |
| Sales Legal Document Inquiry by Legal Number | W76H2012A | <ul style="list-style-type: none"> • (CHL) Sales Order (G76H42), Sales Legal Document Inquiry by Legal Number • (PER) Sales Order (G76P42), Sales Legal Document Inquiry by Legal Number | Review sales orders by legal number. |
| Sales Order /Lot Inquire | W76H2013A | <ul style="list-style-type: none"> • (CHL) Sales Order (G76H42), Order Lot – Inquiry • (PER) Sales Order (G76P42), Order Lot – Inquiry | Locate sales orders by batch. |
| Void Invoices - Work with Legal Next Numbers for Cancellation | W76H3B20A | <ul style="list-style-type: none"> • (CHL) Sales Order (G76H42), Void Invoices • (PER) Sales Order (G76P42), Void Invoices | Locate voided legal documents for the JD Edwards EnterpriseOne Accounts Receivable and JD Edwards EnterpriseOne Sales Order Management systems. |

| Page Name | Object Name | Navigation | Usage |
|--|-------------|--|--------------------------------|
| Void Invoices - Work with Invoices not Printed | W76H3B20C | Select an invoice and then select Invoices not Printed from the Row menu on Void Invoices - Work with Legal Next Numbers for Cancellation. | Review voided legal documents. |

Setting Processing Options for Order Inquiry by Legal Document (P76H2012)

Processing options enable you to specify the default processing for programs and reports.

General

You must enter document types in the UDC 76H/DG to inquire by legal number by document type. Enter the value without spaces and commas in each processing option. For example, if you want the shipping guide number of an order to display in column 1 and the invoice or ticket number in column 2, you might enter *08* for column 1 and *0102* for column 2.

- | | |
|---|---|
| 2. Legal document types group of UDC 76H/DG for column 1 | Specify a legal document type that the system uses to select records to display in column 1 in the Sales Legal Document Inquiry by Legal Number form. The value that you enter must exist in the Legal Document Type Group (74/DG) UDC table. |
| 3. Legal document types group of UDC 76H/DG for column 2 | Specify a legal document type that the system uses to select records to display in column 2 in the Sales Legal Document Inquiry by Legal Number form. The value that you enter must exist in the Legal Document Type Group (74/DG) UDC table. |
| 4. Legal document types group of UDC 76H/DG for column 3 | Specify a legal document type that the system uses to select records to display in column 3 in the Sales Legal Document Inquiry by Legal Number form. The value that you enter must exist in the Legal Document Type Group (74/DG) UDC table. |

Versions

Enter the program version that you want to use for order inquiry.
