Customer Support

- <https://metalink.oracle.com>

When contacting Customer Support, please provide:

- Product version and program/module name.
- Functional and technical description of the problem (include business impact).
- Detailed step-by-step instructions to recreate.
- Exact error message received.
- Screen shots of each step you take.

Note: Information contained in this document may not match your application exactly. This is due to configuration changes and customizations that may have been made for the version that you are working with.

Introduction

Oracle Retail® Merchandise Financial Planning Retail™ is part of the Oracle Retail Predictive Planning Suite. Oracle Retail Merchandise Financial Planning Retail provides strategic and financial product planning functions. These functions support industry planning standards for pre-season and in-season processes. Functions and processes that are a part of the Merchandise Financial Planning Retail solution include:

- Setting and passing targets
- Creating a financial plan in a structured method
- Plan reconciliation
- Plan approval
- Plan maintenance
- Re-planning
- Plan monitoring

Merchandise Financial Planning Retail role definition and security control the functions a user may perform.

This chapter discusses a basic planning process and how it has been incorporated into the Merchandise Financial Planning Retail solution.

About this User Guide

This document is intended for Merchandise Financial Planning Retail users who create, manage, and modify financial plans. It is a guide for understanding basic aspects of planning and how to use Merchandise Financial Planning Retail.

This user guide provides detailed information about the Merchandise Financial Planning Retail solution and functions and is intended as a reference in everyday work. The chapters are presented in an order to help you understand the application quickly, beginning with strategic planning functionality and process and progressing to pre-season and in-season planning features.

About Oracle Retail Predictive Planning

Oracle Retail Predictive Planning products are flexible applications providing top-down, bottom-up, middle-out functionality for developing, reconciling, and approving plans. Supported by an industry standard process, the Oracle Retail Predictive Planning products are scalable to allow planning at many levels of detail, from high-level strategic planning to in-season financial management.

Built on powerful predictive engines, the Oracle Retail Predictive Planning products use integrated demand forecasting to provide an accurate view of customer demand with little human intervention. Exception management functions flag affected areas of a plan that a user may not notice when they are managing large amounts of data.

Process for using Oracle Retail Predictive Planning Products

Oracle Retail Predictive Planning supports the planning lifecycle processes from including high-level strategic planning to detailed financial planning. Product and Channel (specifically location) planning components are supported with a pre-season planning process. Product planning is also supported with an in-season planning process. The diagram below illustrates the business process supported by Oracle Retail Predictive Planning.

Merchandise Financial Planning Retail Components and Key Processes

This section introduces Merchandise Financial Planning Retail key components and features. These provide the basis for standard processes and activities that are necessary for a planner to perform their planning functions.

The key components introduced in this section include:

- **Workbooks** – the primary element used in building a plan. A planner will use a workbook to build and maintain their plans throughout the season.
- **Worksheets** – contained within workbooks. The worksheets are displayed in a tab format and contain pre-defined lists of measures. The worksheets are arranged to reflect a standard planning process, allowing a user to work in a logical path to build a plan.
- **Worksheet data** – Saving, Committing, and editing plan data
- **Planning roles** – Each Merchandise Financial Planning Retail user is assigned to a specific role. These roles control the application functions that are available. They play an integral part in how plans are created.
- **Plan versions** – Merchandise Financial Planning Retail functionally provides the capability to have more than one version of the plan. This allows users to track actual data against the original plan, then re-plan the current season and save to a new plan.
- **Plan reconciliation and approvals** – Plan reconciliation is a process used to bring data together from multiple plans or compare two different plans. Plan approval is a built-in application process that allows a planner to submit a plan for approval to a manager, who then can approve or reject it.

For more information on application functions, see RPAS Online Help or the RPAS 11.0 User Guide.

Workbooks

A Merchandise Financial Planning Retail user accomplishes multiple planning tasks using workbooks. A workbook is a user-defined data subset (of a master database) that includes selected hierarchical dimensions. These workbooks consist of worksheets and graphical charts that are used for planning, viewing, and analyzing business measures. Workbooks organize related planning information and divide levels of user responsibility. This framework allows a user to easily view, create, modify, and store data sets that are common to repeated tasks.

A workbook structure consists of the following elements:

- Product levels and members - for example, Department, Class, Sub-Class for Men's Sweater Department
- Time levels and members - for example, Season, Month, Week for Spring 2004 Season
- Location levels and members - for example, these members may reflect multiple channels within an organization at their aggregate level such as total Brick & Mortar divisions, Catalog and /or e-Commerce. In the ChannelPlan workbooks the members might be Region, District, Store for North America- East Coast
- Plan versions - for example, Working Plan (Wp), Original Plan (Op), Current Plan (Cp), and Last Year (Ly)
- Measures and corresponding business rules - for example, Sales, Receipts, Markdowns, Inventory

For more on Product, Time, and Location hierarchies, see RPAS Online Help or the RPAS 11.0 User Guide.

Workbooks can be built automatically, via a batch process, or manually using the Planning Workbook wizard. Each workbook contains the planning windows, measures, and business rules needed for a complete plan.

Data in a workbook can be displayed using both multi-dimensional spreadsheets and charts. The data can be viewed at a detailed level or at an aggregate level, with the ease of a mouse click.

For descriptions of the Oracle Retail Merchandise Financial Planning Retail workbooks, see the remaining chapters of this user guide. For more information on manipulating data in the worksheets, see RPAS Online Help or the RPAS 11.0 User Guide.

Worksheets

Planning worksheets are multi-dimensional spreadsheets that provide users with views of the data contained in a workbook. Oracle Retail Predictive Planning comes with a series of built-in worksheets that support an industry standard business process. Each worksheet can contain its own unique product, time, and metric information. This approach enables users across an organization to use a standard planning process.

Worksheets can be customized for each user. Rotating, pivoting, and format functions allow a user to create individual views within a worksheet. Each user may also display the data in a graphical format by using the charting function.

For descriptions of the Oracle Retail Merchandise Financial Planning Retail worksheets, see Chapters 2 and 3. Measure calculations are discussed in Chapter 4, and a comprehensive list of Merchandise Financial Planning Retail measures is available in Chapter 5. For more information on manipulating data in the worksheets, see RPAS Online Help or the RPAS 11.0 User Guide.

Editing Worksheet Data

Users may edit data at many levels of each hierarchy (product, location, time). If the data is modified at an aggregate level (a level with one or more lower levels beneath it), the modifications are distributed to the lower levels within the hierarchy. This function is called spreading. If data is modified at a level that has a higher level above it (parent), the data changes are reflected in those higher levels. This is known as aggregation.

Users edit and enter data in the worksheets. The solution's business rules are implemented throughout the worksheets to ensure consistent edit behavior regardless of where (on which worksheet) the edit is performed.

Measure Aggregation and Spreading

Each measure that is used in the Merchandise Financial Planning Retail solution is assigned a default aggregation and spreading behavior. A measure's aggregation method controls how data is calculated at aggregate levels of the hierarchy, such as month or department. A measure's spread method controls how data is spread to lower levels of a hierarchy when the user enters data at an aggregate level. The aggregation and spread methods that are used in Merchandise Financial Planning Retail are described in the following tables

Aggregation Methods

Aggregation (Agg) Methods	Result	Types of Measures
Total	Values are summed up the hierarchy dimensions.	Value or Unit measures such as Sales, Markdowns, and Receipts.
Recalc	Value is recalculated at aggregate levels based on it's rule calculation.	% measures such as GM R %, Markdown %, Customer Returns %; also other calculated measures such as TO, Forward Cover.
PST – Period Start Total	Value is summed up non-calendar hierarchies. Value at aggregate time equals the same value as the 1 st child period's value belonging to the aggregate parent.	Beginning of Period Inventory (BOP).
PET – Period End Total	Value is summed up non-calendar hierarchies. Value at aggregate time equals the same value as the last child period's value belonging to the aggregate parent.	End of Period Inventory (EOP).
AMBG	All values within and across hierarchies are equal otherwise a “?” is displayed at aggregate levels.	Used by informational text measures such as “Event Information” or pick list “Approve/Reject”.
B_AND	For Boolean types only referring to situations that are either “true” or “false”. Value is “on” or “true” at an aggregate level if all values within a hierarchy level are “on”.	Boolean (check box) “Submit”.

Spread Methods

Spread Methods	Result	Types of Measures
Proportional	Typically used in conjunction with Total Agg Type. Value is spread proportionally to the child dimensions when a value is entered at an aggregate level.	Value or Unit measures such as Sales, Markdowns, and Receipts.
None	The result of the edit is passed to another measure. The spread method for the measure that inherits the edit is used to spread the new value to the child dimensions. For example, an edit to Wp Sales var Ly R% at an aggregate level (Month) results first in the Sales R value being recalculated at the Month level, reflecting the edited percent increase over Ly Sales R; then the new Sales R value is spread to the week level proportionally. Finally, the Wp Sales var to LY R% is recalculated at the week level.	Variance measures such as Wp Sales var to Ly R%, Wp Mkd var to Op R%.
PS (Period Start)	For edits at an aggregate level, the edited value is placed into the first logical child dimension beneath the level of the edit, for example, an edit to BOP Inv at the Month level will spread the edited BOP Inv value to the first week reporting to the Month.	
PE (Period End)	For edits at an aggregate level, the edited value is placed into the last logical child dimension beneath the level of the edit. For example, an edit to EOP Inv at the Month level will spread the edited EOP Inv value to the last week reporting to the Month.	Typically used in conjunction with EOP Inv, Avg Inv.

When editing cells at an aggregate hierarchy level, the default spread method for a measure can be overridden by typing a numeric value into the cell followed by an “r” (replicate), “e” (even), “d” (delta) or “p” (proportional).

Overriding Default Spread Methods

A measure's default spread method can be overridden on a data entry by using the override spread method function. The default spread method is overridden for that specific data edit and is not permanently changed. To use an alternate spread method, enter a number in a data cell at an aggregate level followed by an r, e, p, or d. This will apply the Replicate, Even, Proportional, or Delta distribution function to spread that number to the lowest level.

Note: Save information in the workbook before trying these features. If you are not comfortable with the results, simply use the Edit > Revert command to undo the changes. The Revert command will reset the workbook back to its state after that last SAVE was issued.

Explanation of Spread Types

Assume the following hierarchy and values are in place:

	February	Week1	Week2	Week3	Week4
Department1	570	155	170	100	145
Class1	120	20	20	40	40
Class2	100	25	25	25	25
Class3	200	100	50	20	30
Class4	150	10	75	15	50

- **Replicate** – Copies the entered value to all cells below the aggregate dimension. This method can be used for measures that have an aggregation method of Total or Recalc.

If a value is entered at more than one aggregate dimension (such as aggregate product and time), then the value is copied to ALL lower-level base cells below the aggregate time and product.

Example

Enter 50r for Feb/Department1, the values at every intersection of week and class belonging to Feb/Department1 are changed to 50. The aggregate total is then recalculated as the sum of the lower-level cells, 800. See results below.

	February	Week1	Week2	Week3	Week4
Department1	800	200	200	200	200
Class1	200	50	50	50	50
Class2	200	50	50	50	50
Class3	200	50	50	50	50
Class4	200	50	50	50	50

- ♦ **Even** – Divides the entered value evenly to all cells below the aggregate dimension. This method can be used for measures that have an aggregation method of Total or Recalc.

If a value is entered at more than one aggregate dimension (such as aggregate product and time), then the value is copied to ALL lower-level base cells below the aggregate time and product.

Example

Enter 600e for Feb/Department1, the value at every intersection of week and class belonging to Feb/Department1 changes to 37.5. The aggregate total is then recalculated as the sum of the lower-level cells, 600. See results below

	February	Week1	Week2	Week3	Week4
Department1	600	150	150	150	150
Class1	150	37.5	37.5	37.5	37.5
Class2	150	37.5	37.5	37.5	37.5
Class3	150	37.5	37.5	37.5	37.5
Class4	150	37.5	37.5	37.5	37.5

- ♦ **Proportional** – Spread the difference between the original and entered value to all cells below the aggregate dimension based on that cell's percent contribution to the original value in the edited cell. This method can be used for value or unit measures that have an aggregation method of Total.

If a value is entered at more than one aggregate dimension (such as aggregate product and time), then the value is copied to ALL lower-level base cells below the aggregate time and product.

Example

Enter 1140p for Feb/Department1, the value for every intersection of week and class belonging to Feb/Department1 doubles (the % contribution of the base cell to the aggregate remains unchanged). See results below.

	February	Week1	Week2	Week3	Week4
Department1	1140	310	340	200	290
Class1	240	40	40	80	80
Class2	200	50	50	50	50
Class3	400	200	100	40	60
Class4	300	20	150	30	100

- **Delta** – Spread the difference between the original and entered value evenly to all cells below the aggregate dimension. This method can be used for value or unit measures that have an aggregation method of Total.

If a value is entered at more than one aggregate dimension (such as aggregate product and time), then the value is copied to ALL lower-level base cells below the aggregate time and product.

Example

Enter 670d for Feb/Department1, the value for every intersection of week and class belonging to Feb/Department1 increases by the same value, 100/16 or 6.25.

	February	Week1	Week2	Week3	Week4
Department1	670	155	170	100	145
Class1	120	26.25	26.25	46.25	46.25
Class2	100	31.25	31.25	31.25	31.25
Class3	200	106.25	56.25	26.25	36.25
Class4	150	16.25	81.25	21.25	56.25

Saving Worksheet Data

Two options are available to ensure that data is saved during the planning process.

1. **Save** - Data is saved to a user database and does not affect the master database. This allows you to manipulate details and evaluate the impact of the changes without changing the master data. Any data saved via the Save option is saved to a local copy of the database (usually your computer or network folder). Other users are not able to view the saved data by default. You may save the workbook with “global access” enabling others to view your local workbook.
2. **Commit** – Data is saved to the master database. Data (including changed) is accessible to all users once their workbooks are rebuilt or refreshed.

There are two methods for retrieving updated data from the master database to a local workbook:

1. **Refresh** - A user can use the Refresh option to retrieve data from the master database to an existing workbook. A user may retrieve data for all measures in a workbook or select specific measures.
2. **Build** - A user may build a new workbook manually. As an alternative for building a workbook manually, a Merchandise Financial Planning Retail administrator can run a batch process (delivered with Merchandise Financial Planning Retail) to automatically build a new workbook.

For more information about editing data, saving changes, aggregation, and spreading, see RPAS Online Help or the RPAS 11.0 User Guide.

Planning Roles

Planning roles serve these purposes:

- They identify the organizational level at which planning occurs.
- They set the product level at which that role will plan.
- They set the time period at which that role will plan.

Each role is part of a bottom-up and/or a top-down process (see the reference chart below). The role's base intersection defines the lowest level of time and product to which that role will have access when building a plan. The planning role defines the range of planning responsibilities and also controls the measures shown in planning worksheets and those measures' accessibility.

While the planning roles can be customized during implementation, a standard set of planning roles is supplied with Merchandise Financial Planning Retail:

- Executive (Ex)
- Manager (Mg)
- Planner (Pl)

The range of planning and the role relationships for these roles are as follows:

Role	Base intersection	Range of planning	Lowest-level time period	Bottom-up rule	Top-down rule
Executive (Ex)	Group/Month	Company – Group	Month	Manager	None
Manager (Mg)	Department/Week	Group – Department	Week	Planner	Executive
Planner (Pl)	Subclass/Week	Department - Subclass	Week	KeyPlan Planner	Manager

Plan Versions

The strategic and financial planning processes supported by Merchandise Financial Planning Retail use plan versions to designate different plan types that are used throughout the planning horizon. These version names and their abbreviations are used frequently in planning worksheets, for example, to distinguish measures.

The plan versions that are visible to Merchandise Financial Planning Retail users depend on the users' planning roles, and are as follows:

Plan version	Planner	Manager	Executive
Working Plan (Wp)	X	X	X
Last Year (Ly)	X	X	X
Forecast (FrcPr, FrcIn)	X	X	X
Target (Tgt) *	X	X	X
Original Plan (Op)	X	X	X
Current Plan (Cp)	X	X	X
Waiting for Approval (Wa)	X	X	

* Planner has access to the target passed from the Manager. The Manager has access to the target passed from the Executive, as well as their own published targets. The Executive has visibility to his own published targets.

The following sections describe each plan version in more detail.

Working Plan (Wp)

- The plan version that is editable for a particular pre-season or in-season period. This plan version is used initially to develop and revise plans.
- This plan version is used to develop and revise plan data.
- Actual data values are loaded into the Wp (and Cp) version for all elapsed time periods.

Last Year (Ly)

A plan version that provides a reference to last year's actual historical data.

Forecast (FrcPr, FrcIn)

The plan versions that provides reference to the Pre-Season and In-Season Demand sales forecasts. They are automatically generated and updated from Oracle Retail Demand Forecasting (RDF).

Target (Tgt)

- Target measures contain values set by a "higher" role that are then passed to a "lower" role. For example, the Manager receives a Target plan version from the Executive, and the Planner receives a Target plan version from the Manager.
- Targets are created by the role via the "Publish Targets" process, which is initiated by the user. Once the data is committed to the database, those targets become available to the next lower role.

Waiting for Approval (Wa)

- A plan that is awaiting approval by the planner's manager in a superior role. The planner submits their plan for approval, which copies the plan data from the Wp version to the Wa version.
- The Manager and Planner access the same Wa version. The planner role owns this version, and the Manager reads from this version to populate measures. The Wa version is read-only for both roles.
- If the plan is approved, a Waiting for Approval plan is promoted to either the Original Plan (Op) version or Current Plan (Cp).
- If the plan is rejected, the Working Plan (Wp) version is not promoted to Original Plan or Current Plan. Needed adjustments are made before the plan is resubmitted for approval.

Original Plan (Op)

- A pre-season plan that has been approved and promoted from Waiting for Approval (Wa) to Original Plan (Op) version.
- The Planner's plan is the only plan that is approved and becomes the Original Plan.
- All Roles have visibility to the OP version measures.

Current Plan (Cp)

- An in-season plan that has been approved and promoted from Waiting for Approval (Wa) to Current Plan (Cp) version.
- The Planner's plan is the only plan that is approved and becomes the Original Plan.
- All Roles have visibility to the CP version measures.
- Actual data values are loaded into the Cp (and Wp) version for all elapsed time periods.

Plan Reconciliation

The goal of plan reconciliation, an important step of the financial planning process, is to achieve a single, unified plan that all contributing parties have reviewed and approved. As planners generate plans, they move through a reconciliation phase, and on to the plan approval phase.

Seeding the Plan

Seeding is a process that populates certain data elements/measures with data from either an external system, or a previous year's Merchandise Financial Planning Retail plan. Seeding facilitates the ability to create a plan by providing seasonal curves across time and relationships between products and locations. Once edits are made to a Working Plan measure that has been seeded, the new edit will spread to lower hierarchical members based on the data that has already been seeded, maintaining the seasonal curves and relationships between products and locations.

Generally, planners rely on two types of data, Actual (for pre-season planning, this is Last Year data) and Forecast. Actual data is historical information. Forecast data is scientifically projected based on certain rules, functions, and algorithms and attempts to estimate certain key data elements. Both Actual and Forecast data is gathered or generated by other systems such as, Oracle Retail Merchandising System (RMS) or Oracle Retail Demand Forecasting (RDF), and fed into Merchandise Financial Planning Retail via an interface program.

Plan Approval

In Merchandise Financial Planning Retail, the Manager and Planner roles participate in the plan approval process. Additional roles may be added to the process, if required.

The planner uses the Approval worksheet to submit plans to the manager for approval. The planner also uses this worksheet to view the status of their submitted plans. The manager will use their approval worksheet to approve or reject the submitted plans.

Submit for approval functionality is available through a custom menu option named Merchandise Financial Planning Retail. Under this menu, the "Submit for approval" option allows a user to submit the plan and move the data to the Wa version. This process also automatically commits the data to the database.

For more about plan approval, see "Approval Worksheet" in Chapter 3 – Financial Planning.

Publishing Targets

In Merchandise Financial Planning Retail, the Manager and Executive roles may set target values for key measures. Each role then makes these targets available to the role below them in the planning process.

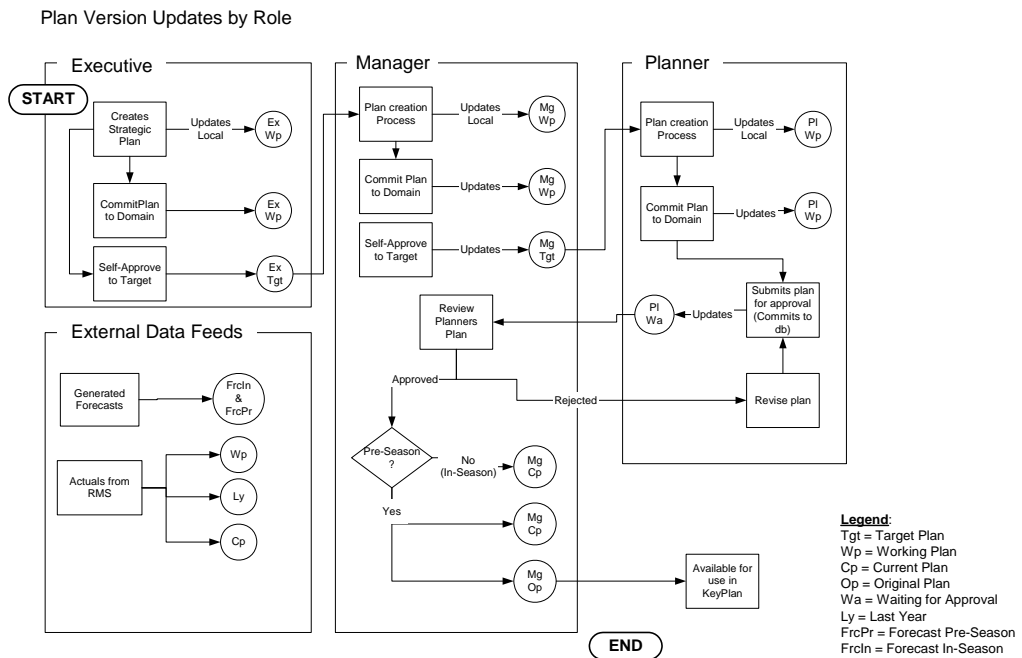

Executives create their plan and will use their Publish worksheet to update their target measures with the data in their plan. The data is committed to the database automatically when they invoke the "Publish" custom menu. Then managers have access to these target values in their workbooks.

Managers create their targets in the same method as the Executive. Managers create their plan and use their Approval worksheet to update their target measures with the data in their plan. The manager's approval worksheet has two windows displayed, one for publishing targets and the other for approving plans. The manager's target data is committed to the database automatically when they invoke the "Publish" custom menu. Then planners have access to these target values in their workbooks.

For more about plan approval, see "Approval Worksheet" in Chapter 3 – Financial Planning.

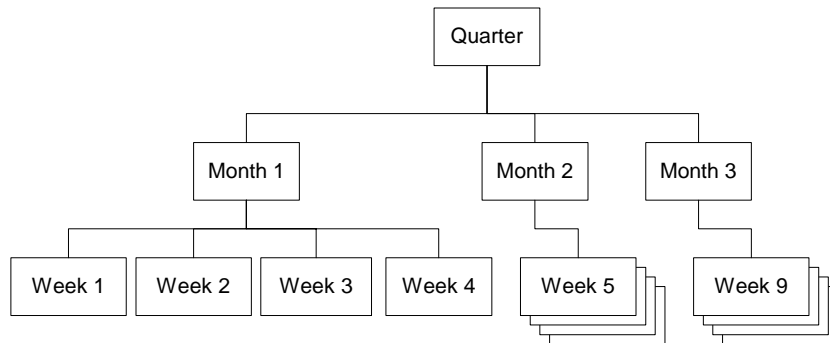

Plan Versions, Roles, and Process Flows

The following diagram shows how the different Merchandise Financial Planning Retail processes and activities affect or update each plan version.

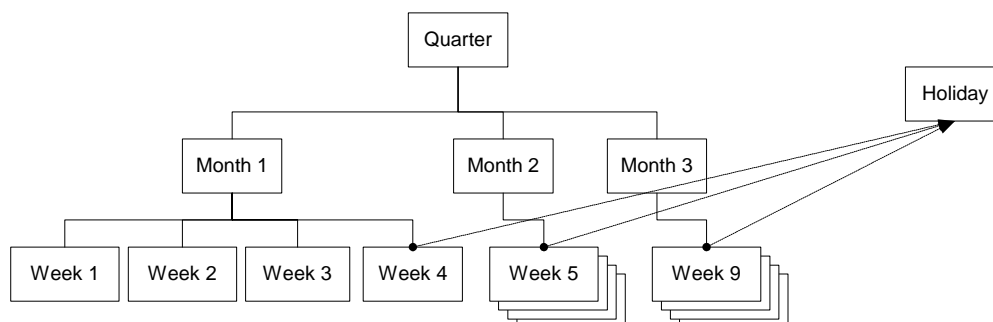

Alternate Hierarchies

When Oracle Retail Predictive Solutions are installed, implementation scripts define the dimensions and hierarchical structures specific to your organization. For example, the system can be built to recognize that weeks roll up into months, that months roll up into quarters. The following diagram shows standard time hierarchy:

However, it may be necessary to define time periods based on an alternate roll-up design to suit a particular business need. Arbitrary periods in the time hierarchy can be grouped together for use in functions such as planning, forecasting, and measure analysis. These user-defined groupings act as normal dimensional levels; that is, they allow data aggregation from the lower to the higher levels of the hierarchy, and allow spreading from the higher to the lower levels of the hierarchy. For example, an Easter holiday period may consist of 2 weeks of February and 2 weeks of March.

Another example is a dimension, in this case called Holiday, made up of specific weeks surrounding all the holiday periods in the year. In the diagram below, the alternate time hierarchy, Holiday consists of Week 4, Week 5, and Week 9. When the Holiday time period is displayed in a workbook, the user will see these three weeks displayed once the Holiday period is expanded. The user can see the total Holiday measures (such as total Holiday sales), as well as be able to drill-down to the specific weeks within Holiday to see if any one particular week performed better than the others.

For more information about creating Alternate Hierarchies, see RPAS Online Help or the RPAS 11.0 User Guide.

Printing and Reporting

Merchandise Financial Planning Retail users can print planned data at any time using the File > Print option. This option will print the current worksheet and any measures listed on it.

If reporting requirements dictate more sophisticated reports, Oracle Retail Data Warehouse (RDW) provides the added benefit. Merchandise Financial Planning Retail data interfaces with RDW for storage and reporting purposes. Once Original and Current plans are approved, those figures are sent to RDW for analysis and reporting.

Exception Management – Alerts and Exceptions

Alerts are automatic notifications that the values of a specified metric either fall outside of an acceptable range or do not match a given value. Alerts are generated to let you know that a measure may need to be examined and possibly amended in a workbook.

Alerts are used to automatically identify predefined issues and opportunities within your business, and to notify members of your business when these issues and opportunities occur. By setting alert parameters intelligently, you ensure that opportunities and issues that might normally go unrealized or unresolved are quickly identified.

Alerts

The alert capability in Merchandise Financial Planning Retail highlights specific conditions to a user. These conditions are built using the Alert Manager. The conditions (or alerts) consist of a business measure (the data to be analyzed) and a mathematical rule (the rule for determining the alert). These conditions often are used to direct users to exceptions or targets including OTB opportunities, stock outages, sales performance against a plan, and margin opportunities.

A background program called the Alert Finder processes the alerts in a batch mode and finds the areas of a plan that fall outside the thresholds declared by the alert. This will create a message, or alert, that is flagged through the Alert Manager window. You can then go directly to the alerted areas of the workbook and perform the take appropriate action.

The Alert Manager is more sophisticated than simple exception reporting, as it directs you to the specific area of the plan that requires attention.

For more information about creating Alerts, see RPAS Online Help or the RPAS User 11.0 Guide.

Exceptions

Users also have the ability to set a user-defined exception on any measure within their plan workbook. A user-defined exception consists an upper and lower boundary, and a text format for each. The exception is designed to allow you to assign special formatting to be applied in the event the measure value falls outside one of the two boundaries. You may set different formats for the upper and lower boundary values. The exception is displayed on the worksheet when the data meets the exception criteria.

For more information about alerts and exceptions, see the RPAS Online Help or the RPAS 11.0 User Guide.

Merchandise Financial Planning Retail Administration

Administration activities for Merchandise Financial Planning Retail are grouped into two areas: solution administration and RPAS administration.

The solution administration process is performed using three workbooks that are designed to perform specific activities:

- Inventory Initialization - used to establish Beginning of Period and End of Period inventory values using loaded Stock on Hand data
- Seeding Administration – used to copy data from a selected plan version to the working plan version prior to starting the Pre-Season plan.
- Merchandise Financial Planning Retail Administration – used to set Store Counts and map historical data to account for time shifts.

RPAS Administration consists of the following activities:

- User and Group Management (add, delete, change users)
- Security Management (control access to workbooks, hierarchies, and dimensions)

There are specific workbooks the administrator uses to perform these activities.

For more information about the RPAS Administration workbooks, see the Merchandise Financial Planning Retail System Administration guide, the RPAS Online Help, or the RPAS 11.0 User Guide.

Strategic Planning

Strategic planning is the process by which an “executive” planner develops an executive, high-level plan. This is usually developed once a year as part of pre-season planning. The strategic plan provides the vehicle to set targets for key planning measures such as sales, markdowns, profit, average inventory, and turnover. Typically, the Executive, perhaps a general merchandise manager (GMM), sets the targets. A Strategic plan often encompasses multiple years in the future.

An Executive plan is comprised of the following elements:

- Product Hierarchy – Total Company, Division to Group
- Time Hierarchy – Total Time, Year to Month
- Measures – Values only (no units); Sales, Markdowns, Gross Margin, Average Inventory and Turnover
- Plan Versions – Working, Forecast, Last Year,

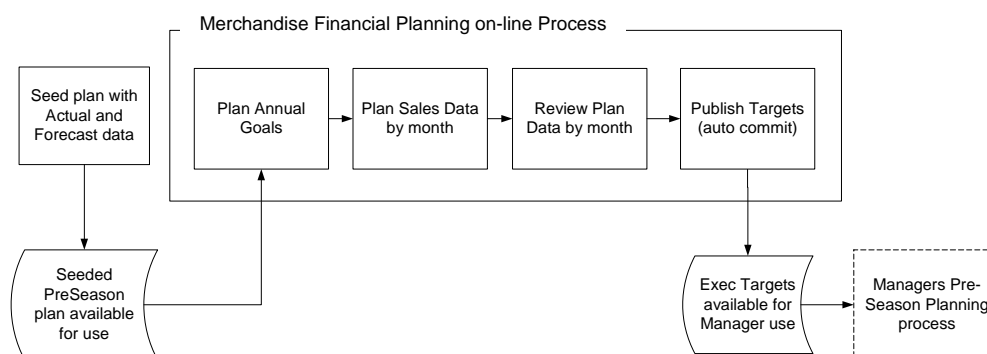

Once the plans are complete, the executive makes the targets available to the manager. The targets provide a foundation on which more detailed Financial Plans will be created. For more information on developing Financial Plans, see Chapter 3 – Financial Planning.

Strategic Planning Process

Executive-level planners use the Pre-Season and In-Season Plan workbooks to develop a high-level view of financial targets. Executives can then “send” these target numbers to the system, which allows lower-level roles (Managers and Planners) to access them and use them in their planning processes.

The following diagram shows the steps in the Strategic Planning process:

Merchandise Financial Planning - Strategic Planning
Executive Role - Strategic Product Planning Workflow Process (Pre-Season, Plan Targets)

Pre-Season Planning Workbook

The Executive Pre-Season Plan workbook contains five worksheets that support the Executive planning process:

- Annual Goals
- Sales
- Value Summary
- Original Plan
- Approval

Note: A workbook can be built in one of two ways. It can be created as part of the automated workbook build process. This is a batch program that creates the plan workbook based upon pre-defined parameters (product, location, time). You can also build the workbook manually by running the Planning Workbook wizard via the **New** button on the Toolbar or through the main menu: File > New.

Assumptions

Seeding has taken place for LY measures. Measures that are typically seeded for the Executive role are:

- Sales
- Markdowns

LY measures are read-only and cannot be updated.

Forecast measures are updated with data fed from an external forecasting system such as Oracle Retail Demand Forecasting (RDF). The forecast data is viewable via the FrcPr Demand R measure in the Pre-Season workbook.

Annual Goals Worksheet

This worksheet is used to plan annual targets for Gross Margin, Sales, Markdowns, Turnover, and Average Inventory.

Measure List

Measure	Access	Result
FrcPr Demand R	Read	Updated via feed from Forecasting system
Wp Sales R	Write	Sales var Demand Pre-Season R %, Sales var Ly R % recalculate. Markdown R recalculates based on Markdown R %. GM R recalculates using GM R %. TO recalculates. Avg Inv. recalculates based on TO.

Measure	Access	Result
Wp Sales var Demand Pre-Season R %	Write	Sales R recalculates.
Ly Sales R	Read	
Wp Sales var Ly R %	Write	Sales R is recalculated to reflect the % to Ly value entered. Entering 0 into the field Sales var Ly R % copies Sales Ly R to Sales R.
Wp Markdown R	Read	Calculated via Markdown R %.
Wp Markdown R %	Write	Markdown R recalculates.
Ly Markdown R	Read	
Ly Markdown R %	Read	
Wp Mkd var Ly R %	Write	Calculated with a change to Markdown R or Sales R.
Wp GM R	Read	Recalculates with a change to GM R 5 or Sales R.
Wp GM R %	Write	GM R recalculates. GM R % recalculates at each higher level of the hierarchy where the % was modified, based on the aggregated GM R values.
Ly GM R	Read	
Ly GM R %	Read	
Wp GM var Ly R %	Read	Calculated with a change to GM R or Sales R.
Wp TO R (viewable at Season Calendar level only)	Write	Avg Inv R and Avg Inv var LY R % recalculate. TO recalculates at each higher level of the hierarchy where the Avg Inv R value was modified.
Ly TO R	Read	
Wp Avg Inv R	Read	Calculated with a change to TO.
Ly Avg Inv R	Read	Calculated using Last Year Sales.
Wp Avg Inv var Ly R %	Read	Calculated with a change to Avg Inv R.
Wp GMROI R	Read	Calculated with a change to GM R or Avg Inv R.
Ly GMROI R	Read	

Sales Worksheet

This worksheet is used by the Executive to plan monthly sales targets (usually for the current plan year only). Additional measures are available on this worksheet to enable the Executive to plan based on contribution to product and time.

Measure List

Measure	Access	Result
FrcPr Demand R	Read	
Wp Sales R	Write	Wp Sales var Demand, Wp Sales var LY R %.
Wp Sales var Demand Pre-Season R %	Write	Sales R recalculates based on % of Demand entered.
Ly Sales R	Read	
Wp Sales var Ly R %	Write	Sales R recalculates.
Wp Sales Contribution to Product R %	Read	<p>Sales R recalculates based on the % of the aggregate product hierarchy.</p> <p>Sales Contribution to Product R % for the other members of the product hierarchy, where the value was edited, is adjusted up or down, opposite of the value entered, so that the total contribution to Product % for the hierarchy is 100 %.</p>
Ly Sales Contribution to Product R %	Read	Calculated using Last Year Sales Retail.
Wp Sales Contribution to Time R %	Read	<p>Sales R recalculates based on the % of the aggregate time hierarchy.</p> <p>Sales Contribution to Time R % for the other members of the time hierarchy, where the value was edited, is adjusted up or down, opposite of the value entered, so that the total contribution to Time % for the hierarchy is 100 %.</p>
Ly Sales Contribution to Time R %	Read	Calculated using Last Year Sales Retail.
Wp Sales Build Rate R	Read	Calculated using Working Plan Sales Retail.

Measure	Access	Result
Ly Sales Build Rate R	Read	Calculated using Last Year Sales Retail.

Value Summary Worksheet

The Executive uses the Value Summary worksheet to review and adjust monthly sales targets. This worksheet includes the values from the Annual Goals and Sales tabs.

Measure List

Measure	Access	Result
Wp Sales R	Write	Sales var Ly R %, Markdown R, GM R, GM R %, TO, Avg Inv. Recalculate.
Ly Sales R	Read	
Wp Sales var Ly R %	Write	Sales R is recalculated to reflect the % to LY value entered. Entering 0 into the field Sales var Ly R % copies Sales Ly R to Sales R.
Wp Markdown R	Read	Calculated via an edit to Markdown R %.
Wp Markdown R %	Write	Markdown R recalculates. Markdown R % recalculates at each higher level of the hierarchy where the % was modified, based on the aggregated Markdown R value.
Ly Markdown R	Read	
Ly Markdown R %	Read	
Wp GM R	Read	
Wp GM R %	Write	GM R Recalculates.
Ly GM R	Read	
Ly GM R %	Read	
Wp GM var Ly R %	Read	Calculated via an edit to GM R % or Sales R
Wp TO R	Write	Avg Inv R and GMROI R recalculate.
Ly TO R	Read	
Wp Avg Inv R	Read	Updated with an edit to TO R or Sales R.
Ly Avg Inv R	Read	
Wp Avg Inv var Ly R %	Read	
Wp GMROI R	Read	Updated with an edit to TO or GM R.
Ly GMROI R	Read	

Original Plan Worksheet

The Executive uses the Original Plan worksheet to review Original Plan and adjust monthly sales targets. This worksheet includes the values from the Strategic Plan and Monthly Sales targets. The Original Plan values are made available to the Executive when Managers approve a pre-season plan to the database.

Measure List

Measure	Access	Result
Wp Sales R	Write	Recalculates Sales var Op, Sales var Ly R %, Avg Inv R.
Op Sales R	Read	
Wp Sales var Op R %	Write	Sales R recalculates.
Ly Sales R	Read	
Wp Sales var Ly R %	Write	Sales R recalculates.
Wp Markdown R	Read

Wp Avg Inv var Ly R %	Read	
Wp TO R	Write	Avg Inv recalculates.
Op TO R	Read	

Measure	Access	Result
Ly TO	Read	

Publish Worksheet

This worksheet contains the measures the Executive uses to publish their plan targets.

Steps for publishing targets

1. Mark the “Publish” checkbox for the time periods, products, and channels for which targets should be published, press **Calculate**. Checking a box at an aggregate time or product will mark the boxes for the lower level dimensions.
2. Navigate to the Merchandise Financial Planning Retail menu (located to the left of the Window menu); select the “Publish” option in the Merchandise Financial Planning Retail menu.

A message box is displayed indicating the rule groups have executed successfully. If the message box indicates “success” then the approval process completed successfully.

Data is automatically committed to the database and the workbook is refreshed. The workbook is not automatically saved.

Measure List

Measure	Access	Result
Wp Publish	Write	Does not affect other measures.
Wp Publish Comment	Write	Does not affect other measures.
Wp Publish Date	Read	Populated with the current date upon successful completion of the rule group execution.

Pre-Season Extra Measures

Measures in the following table are available within Executive pre-season worksheets, but must be added via Show/Hide. See the RPAS online help or Users Guide for more information on adding measures to worksheets.

Measure Label	Access
Al Sales R	Read

Wp MMU var LY R %	Read

In-Season Planning Workbook

The Executive In-Season Plan workbook contains five worksheets that support the Executive planning process:

- Annual Goals
- Sales
- Value Summary
- Original Plan
- Publish

Note: A workbook can be built in one of two ways. It can be created as part of the automated workbook build process. This is a batch program that creates the plan workbook based upon pre-defined parameters (product, location, time). You can also build the workbook manually by running the Planning Workbook wizard via the **New** button on the Toolbar or through the main menu: File > New.

Assumptions

Seeding has taken place for LY measures. Measures that are seeded are typically:

- Sales
- Markdowns

LY measures are read-only and cannot be updated.

Cp measures are loaded with Actual data up to the current period.

Wp measures are loaded with Actual data up to the current period.

Forecast measures are updated with data fed from an external forecasting system such as Oracle Retail Demand Forecasting. The forecast data is viewable via the FrcIn Demand R measure in the In-Season workbook

Annual Goals Worksheet

This worksheet is used by the Executive to monitor the in-season progress toward annual goals set for GM, Sales, Markdowns, Turnover, and Average Inventory.

Measure List

Measure	Access	Result
FrcIn Demand R	Read	Updated via feed from Forecasting system.
Wp Sales R	Write	Sales var Demand In-Season R %, Sales var Ly R % recalculate. Markdown R recalculates based on Markdown R %. GM R recalculates using GM R %. Avg Inv. Recalculates based on TO.
Wp Sales var Demand In-Season R %	Write	Sales R is recalculated to reflect the % to Fcst value entered. Entering 0 into the field Sales var Demand Pre-Season R % copies Sales Fcst R to Sales R.
Ly Sales R	Read	
Wp Sales var Ly R %	Write	Sales R is recalculated to reflect the % to Ly value entered. Entering 0 into the field Sales var Ly R % copies Sales Ly R to Sales R.
Wp Markdown R	Read	Calculated via Markdown R %.
Wp Markdown R %	Write	Markdown R recalculates.
Ly Markdown R	Read	
Wp Mkd var Ly R %	Write	Markdown R recalculates based on the % value entered.
Wp GM R	Read	Calculated using GM R % and Sales R.

Measure	Access	Result
Wp GM R %	Write	GM R recalculates. GM R % recalculates at each higher level of the hierarchy where the % was modified, based on the aggregated GM R values.
Ly GM R	Read	
Ly GM R %	Read	
Wp GM var Ly R %	Read	Recalculates with a change to GM R or Sales R.
Wp TO R	Write	Avg Inventory recalculates.
Ly TO R	Read	
Wp Avg Inv R	Read	Recalculates with a change to TO.
Ly Avg Inv R	Read	Calculated using Last Year Sales.
Wp Avg Inv var Ly R %	Read	Avg Inv R and Avg Inv var LY R % recalculate. TO recalculates at each higher level of the hierarchy where the Avg Inv R value was modified.
Wp GMROI R	Read	Recalculates with a change to Avg Inv or GM R.
Ly GMROI R	Read	

Sales Worksheet

This worksheet is used by the Executive to review monthly sales targets. Additional measures are available on this worksheet to enable the Executive to plan based on contribution to product and time.

Measure List

Measure	Access	Result
Wp Sales R	Write	Sales var Demand Pre-Season R %, Sales var Ly R %, Sales Contribution to Time R %, Sales Contribution to Product R %, Sales Build Rate R recalculate.
FrcIn Demand R	Read	Updated via feed from Forecasting system.
Ly Sales R	Read	
Wp Sales var Ly R %	Write	Sales R is recalculated to reflect the % to Ly value entered. Entering 0 into the field Sales var Ly R % copies Sales Ly R to Sales R.

Measure	Access	Result
Wp Sales var Demand In-Season R %	Write	Sales R is recalculated to reflect the % to Fcst value entered. Entering 0 into the field Sales var Demand Pre-Season R % copies Sales Fcst R to Sales R.
Wp Sales Contribution to Time R %	Read	Sales R recalculates based on the % of the aggregate time hierarchy. Contribution to Time R % for the other members of the time hierarchy, where the value was edited, is adjusted up or down, opposite of the value entered, so that the total contribution to Time % for the hierarchy is 100 %.
Ly Sales Contribution to Time R %	Read	Calculated using Last Year Sales Retail.
Wp Sales Contribution to Product R %	Read	Sales R recalculates based on the % of the aggregate product hierarchy. Sales Contribution to Product R % for the other members of the product hierarchy, where the value was edited, is adjusted up or down, opposite of the value entered, so that the total contribution to Product % for the hierarchy is 100 %.
Wp Sales Build Rate	Read	Calculated using Working Plan Sales Retail.
Ly Sales Build Rate	Read	Calculated using Last Year Sales Retail.

Value Summary Worksheet

The Executive uses the Review Plan worksheet to review and adjust monthly sales targets. This worksheet includes the values from the Strategic Plan and Monthly Sales targets. The manager values are made available to the Executive when managers commit their data to the database.

Measure List

Measure	Access	Result
Wp Sales R	Write	Sales var Ly R %, Markdown R, GM R, GM R %, TO, Avg Inv. Recalculate.
Ly Sales R	Read	
Wp Sales var Ly R %	Write	Sales R is recalculated to reflect the % to LY value entered. Entering 0 into the field Sales var Ly R % copies Sales Ly R to Sales R.

Measure	Access	Result
Wp Markdown R	Read	Calculated via an edit to Markdown R %.
Wp Markdown R %	Write	Markdown R recalculates. Markdown R % recalculates at each higher level of the hierarchy where the % was modified, based on the aggregated Markdown R value.
Ly Markdown R	Read	
Ly Markdown R %	Read	
Wp GM R	Read	Calculated via an edit to GM R %.
Wp GM R %	Write	GM R recalculates.
Wp GM var Ly R %	Read	Recalculates with a change to GM R.
Wp TO R	Write	Avg Inv recalculates.
Ly TO R	Read	
Wp Avg Inv R	Read	Recalculates with a change to Sales R, TO.
Ly Avg Inv R	Read	
Wp Avg Inv var Ly R %	Read	Recalculates with a change to Avg Inv R.
Wp GMROI R	Read	Recalculates with a change to GM R or Avg Inv R.
Ly GMROI R	Read	

Original Plan Worksheet

The Executive uses the Original Plan worksheet to review and adjust monthly sales targets. This worksheet includes the values from the Strategic Plan and Monthly Sales targets. The manager values are made available to the Executive when managers commit their data to the database.

Measure List

Measure	Access	Result
Wp Sales R	Write	Sales var Op, Sales var Ly R %, TO R recalculates.
FrcIn Demand R	Read	
Wp Sales var Demand In-Season R %	Write	Sales R recalculates.

Financial Planning

Financial planning is the workhorse of the product planning process. Multiple users perform their planning duties using the financial planning workbooks. Pre-season and in-season processes are supported with sales and profit projections, Open to Buy (OTB) management, and value and unit calculations. Oracle Retail Predictive Planning 2.0 will support two levels of planning within this process, Management and Planner Level. These two areas of responsibility are tightly linked, yet each person will manage unique planning data. The reconciliation process brings the plans together ultimately through plan approval. This ensures that one version of the plan is approved and used as a foundation against which the company manages its business.

Both Managers and Planners create Financial Plans. Managers create an initial plan using Targets from the Executive, a generated Sales Demand Forecast, and Last Year data. Key parts of the manager's plan are made available to the planner in the form of targets. Planners then manipulate and adjust their plan numbers and submit their plan to the Manager for approval. The planning activities performed by the Manager and Planner are nearly identical, except for the plan approval process. This chapter describes Merchandise Financial Planning Retail functionality for both the planner and the manager.

Pre-Season Financial Planning Process

The pre-season financial plan is used to develop a plan before the selling period begins. This process begins with the Executive's Strategic Plan and continues with the Manager's Financial Plan. The Manager performs some initial planning, and passes those numbers down to the Planners as targets.

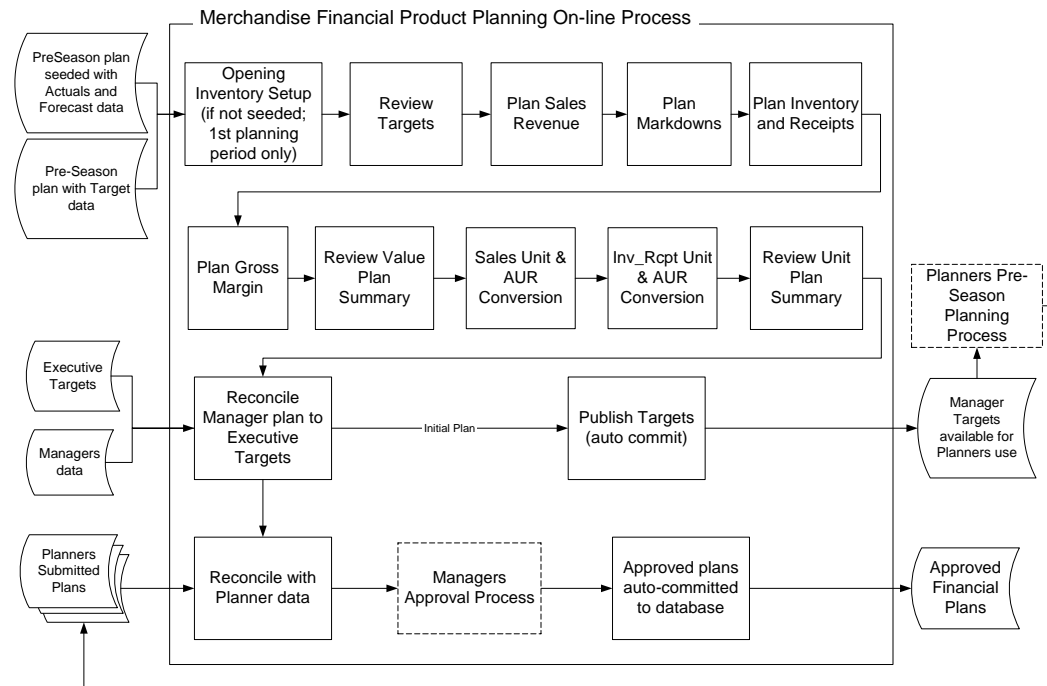

Manager's Process

The Manager's Financial Plan is comprised of the following elements:

- Product Hierarchy – Division, Group, Department
- Time Hierarchy – Total Time, Year to Week
- Measures – Values and units
- Plan Versions – Working Plan, Original Plan, Current Plan, Last Year, Target, Waiting for Approval, Pre-Season Forecast

The following diagram shows the process steps covered by the Manager Pre-Season Planning process:

Pre-Season Merchandise Financial Planning
Managers Role - Product Planning Workflow Process (Division to Department)

(*****This bitmap is a modified version of the one in the Scope Document, showing only the financial planning process supported by the first release of Predictive Planning. Future releases will support key item planning.*****)

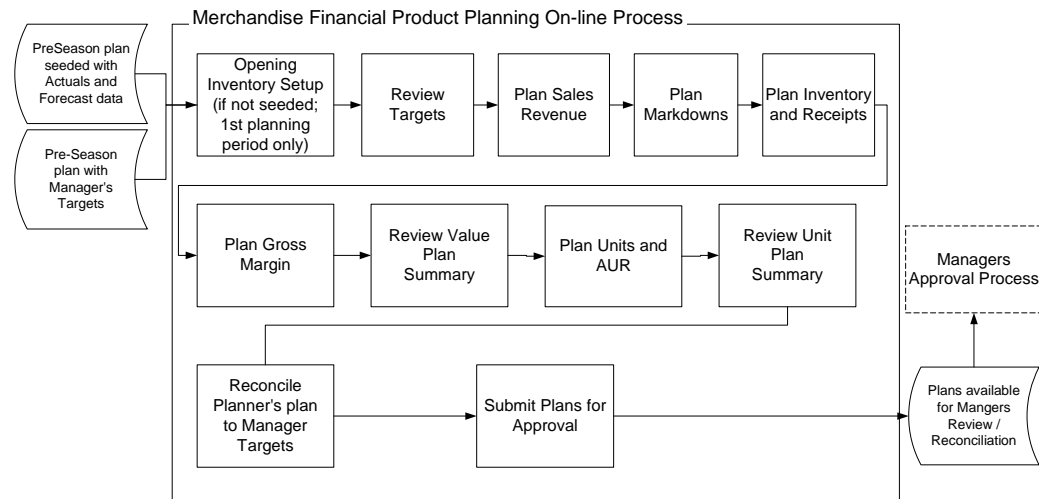

Planner's Process

Once the Manager sets the initial plan values, these numbers are made available to the planners as Targets when the Manager commits the data to the database. The Planner uses the Financial Plan Workbook to plan and adjust both values and units for the season. Characteristics of this plan are nearly identical to that used by the manager and include:

- Product Hierarchy – Department, Class, Sub-Class
- Time Hierarchy – Total Time, Year to Week
- Measures – Values and units
- Plan Versions – Working Plan, Original Plan, Current Plan, Last Year, Target, Pre-Season Forecast, Waiting for Approval

The following diagram shows the Planner's steps in the Planner Pre-Season Financial Planning process:

Pre-Season Merchandise Financial Planning
Planners Role - Product Planning Workflow Process (Department to Subclass)

Pre-Season Financial Plan Worksheets

The Pre-Season Financial Plan workbook contains the following worksheets that support the financial planning process:

- Opening Inventory
- View Targets
- Sales
- Markdowns
- Inventory / Receipts
- Gross Margin
- Value Summary
- Sales Unit Conversion
- Inv_Rcpt Unit Conversion
- Unit Summary
- Reconcile Submitted Plan (manager only)
- Reconcile (planner only)
- Approval

Note: A workbook can be built in one of two ways. It can be created as part of the automated workbook build process. This is a batch program that creates the plan workbook based upon pre-defined parameters (product, location, time). You can also build the workbook manually by running the Planning Workbook wizard via the **New** button on the Toolbar or through the main menu: File > New.

Assumptions

Seeding has taken place for LY measures. Measures that are seeded for the Manager and Planner roles are:

- Sales (all sales type components)
- Markdowns (all markdown type components)
- Shrink
- Employee Discount
- Receipts

LY measures are read-only and cannot be updated.

Forecast measures are updated with data fed from an external forecasting system such as Oracle Retail Demand Forecasting (RDF).

Opening Inventory Worksheet

A manager or planner uses the Opening Inventory worksheet to populate initial inventory values in the plan workbook. In certain instances, these initial values are available from an external system (such as RMS). If so, then they can be extracted from that system and fed into Merchandise Financial Planning Retail into the initial inventory values. Initial inventory values may also be copied from the prior Merchandise Financial Planning Retail planning period's ending inventory plan. If either of these two methods is used, then the values will display on this worksheet. If the values are not available, they must be entered using this worksheet.

Use this worksheet to set initial BOP retail, cost and unit inventory values for the Pre-Season.

Usage Notes

- The Calendar hierarchy must be displayed in Outline mode with the ALL [Calendar] dimension displayed to view the Beginning of Season (BOS) measures.
- A change to any one of the BOS value measures in this worksheet performed at the All Calendar rollup results in the following data movement to the lower levels of the time hierarchy:
- The changed value is replicated down to the Year, 1st Season in the year, 1st qtr in the season, 1st month in the qtr, and 1st week in that month contained within the All Calendar period.
- BOS R, BOS C, BOS U, BOS AUR are all writable measures that are synchronized to their BOP measure counterparts. Because of the solution's rule design, not all BOP measures are editable.

Measure List

Measure	Access	Result
Wp BOS Inv R	Write	Value entered is copied to BOP Inv R for the All Calendar, Year, 1st Season, 1 st Qtr, 1 st Month, 1 st Week time periods. BOS U recalculates if BOS AUR <> 0.
Wp BOS Inv IMU R %	Write	BOS Inv C is recalculated.

Measure	Access	Result
Wp BOS Inv C	Write	BOS Inv IMU R % is recalculated. BOS Inv C is copied to BOP Inv C for the All Calendar, Year, 1st Season, 1 st Qtr, 1 st Month, 1 st Week time periods.
Wp BOS Inv U	Write	BOS Inv U is copied to BOP Inv U for the All Calendar, Year, 1 st Season, 1 st Qtr, 1 st Month, 1 st Week time periods. BOS AUR recalculates.
Wp BOS Inv AUR	Write	BOS U recalculates.
Wp BOP Inv R	Write	BOP Inv R is copied to any lower time periods (1 st position only) and to BOS INV R. IMU BOS Inv R % is BOS INV C & BOP C are adjusted to reflect the change to BOS Inv R (based on IMU BOS Inv R%). BOP Inv AUR holds, BOS Inv U and BOP Inv U recalculate.
Wp BOP Inv C	Read	Populated via edit to BOS Inv C.
Wp BOP Inv IMU R %	Read	Calculated via change to BOP Inv R or BOP Inv C.
Wp BOP Inv U	Read	Populated via edit to BOS Inv U.
Wp BOP Inv AUR	Read	Populated via edit to BOS Inv AUR.

View Targets Worksheet

Use the View Targets worksheet to review the goals and targets created by the Executive (if Manager) or Manager (if Planner). You may use this worksheet to compare Working Plan to Targets, Last Year, or Forecast.

Usage Notes

- Manager's target values (Ex Tgt measures) are displayed only if the Group product dimension (or higher) and Month (or higher) time dimension are displayed.
- Planner's target values (Tgt measures) are displayed only if the Department product dimension (or higher) is displayed.

Measure List

Measure	Access	Result
FrcPr Demand R	Read	Updated from external feed from Forecasting System or the automatically generated sales forecast from RDF embedded in Merchandise Financial Planning Retail.
Ex Tgt Sales R (manager) or Tgt Sales R (planner)	Read	Updated by Executive (for manager role).
Wp Sales R	Write	Shrink R recalculates based on Shrink %. Markdown R recalculates based on Markdown % Receipts R recalculates (to hold EOP). TO recalculates. Avg Inv recalculates. Sales var Demand R %, Sales var Ly R %, Sales var Tgt R % recalculate to reflect the change to Sales R.
Wp Sales var Tgt R %	Write	Wp Sales R is recalculated to reflect the % to Tgt value entered. Entering 0 into the field Sales var Tgt R % will copy Wp Sales Tgt R to Wp Sales R.
Wp Sales var Demand Pre-Season R %	Write	Wp Sales R is recalculated to reflect the % to Demand value entered. Entering 0 into the field Wp Sales var Demand Pre-Season R% will copy FrcPr Demand R to Wp Sales R.

Measure	Access	Result
Ly Sales R	Read	
Wp Sales var Ly R %	Write	Wp Sales R is recalculated to reflect the % to Ly value entered. Entering 0 into the field Sales var Ly R % will copy Wp Sales Ly R to Wp Sales R.
Ex Tgt Markdown R (manager) or Tgt Markdown R (planner)	Read	Updated by Executive (if manager role). Updated by Manager (if planner role).
Ex Tgt Markdown R % (manager) or Tgt Markdown R % (planner)	Read	Updated by Executive (if manager role). Updated by Manager (if planner role).
Wp Markdown R	Write	Markdown % recalculates based on the \$ entered.
Wp Markdown R %	Write	Markdown \$ recalculates based on the % entered.
Ly Markdown R	Read	
Ly Markdown R %	Read	
Ex Tgt Avg Inv R (manager) or Tgt Avg Inv R (planner)	Read	Updated by Executive (if manager role). Updated by Manager (if planner role).
Wp Avg Inv R	Read	Updated with a change to BOP Inv R or EOP Inv R.
Wp Avg Inv var Tgt R %	Read	Recalculates with a change to Avg Inv R.
Ly Avg Inv R	Read	
Wp Avg Inv var Ly R %	Read	Recalculates with a change to Avg Inv R.
Ex Tgt TO R (manager) or Tgt TO R (planner)	Read	Updated by Executive (if manager role). Updated by Manager (if planner role).

Sales Worksheet

Use the Sales worksheet to plan Sales, Sales Types and Customer Returns in the Pre-Season Planning process. This worksheet includes variances and other sales analysis measures such as contribution to time and contribution to product.

A Manager may initially set a plan for a defined product, location, and time period. Usually the manager will set plans for aggregate levels of the hierarchy, such as season/month, and department/class. A Planner is typically responsible for setting the detailed month/week and class/sub-class plans.

Usage Notes

- Sales R is the sum of Regular, Promo and Clearance Sales values.
- Edits made to Sales R when one or more of the sales types is 0 will spread the changed amount only to those sales types that are non-zero (for example, Merchandise Financial Planning Retail will not change a component markdown value from 0 to non-zero when spreading a number entered at a total level).
- An edit made to Sales R when the sales types are all equal to 0 place the value into Regular Sales.
- Sales contribution to Time R % reflects that period's contribution to the YEAR, or the highest aggregate time period in the workbook.
- Sales contribution to Product R % is used to calculate Sales contribution of SubClass, Class, Department, Group, Division to the highest dimension of the product hierarchy in the workbook.
- Sales Build Rate R % is used to calculate the Ratio of Sales for a specific period (such as. week 10) to the Sales for the prior displayed period (such as week 11).

Measure List

Measure	Access	Result
FrcPr Demand R	Read	Updated from external feed from Forecasting System or the automatically generated sales forecast from RDF embedded in Merchandise Financial Planning Retail.
Wp Sales R	Write	<p>Sales var Demand Pre-Season R %, Sales var LY R %, Sales Contribution to Time R %, Sales Contribution to Product R %, Sales var Tgt R %, Sales Build Rate R %, are recalculated.</p> <p>Sales R is spread proportionally to Regular, Promo, Clearance Sales if they are populated (at the lower level hierarchy), and reaggregated.</p> <p>If Regular, Promo and Clearance Sales are not populated, Sales R will spread to Regular Sales R by default.</p> <p>Regular, Prom, Clearance Sales var LY R % are recalculated.</p> <p>Regular, Prom, Clearance Sales contribution to Sales R % are recalculated.</p>
Ly Sales R	Read	
Wp Sales var Ly R %	Write	<p>Wp Sales R is recalculated to reflect the % to Ly value entered.</p> <p>Entering 0 into the field Wp Sales var Ly R % will copy Wp Sales Ly R to Wp Sales R.</p>
Wp Regular Sales R	Write	<p>Sales R is updated to reflect the change to Regular Sales.</p> <p>Regular Sales cont Sales R, Regular Sales var Ly R % recalculate.</p>
Wp Promo Sales R	Write	Same result as for Regular Sales above, except the Promo Sales contribution and variances are recalculated.
Wp Clearance Sales R	Write	Same result as for Regular Sales above, except the Clearance Sales contribution and variances are recalculated.

Measure	Access	Result
Wp Regular Sales Contribution to Sales R %	Write	Regular Sales R recalculates to reflect the % of total sales (Sales R) entered. Prom Sales cont Sales R %, Clearance Sales cont Sales R % recalculate.
Wp Promo Sales Contribution to Sales R %	Write	Same result as for Regular Sales contribution to Sales above, except changes are made to the Promo Sales R, Promo contribution, and Promo variances recalculate.
Wp Clearance Sales Contribution to Sales R %	Write	Same result as for Regular Sales contribution to total above, except changes are made to the Clearance Sales R, Clearance contribution, and Clearance variances recalculate.
Ly Regular Sales R	Read	
Ly Promo Sales R	Read	
Wp Regular Sales var Ly R %	Write	Regular Sales R updated to reflect the % var to LY entered.
Wp Promo Sales var Ly R %	Write	Same result as for Regular Sales variance to LY above, except changes are made to Promo Sales R.
Wp Clearance Sales var Ly R %	Write	Same result as for Regular Sales variance to LY above, except changes are made to Clearance Sales R.
Ly Clearance Sales R	Read	
Wp Sales Contribution to Time R %	Read	
Ly Sales Contribution to Time R %	Read	
Wp Sales Contribution to Product R %	Read	
Ly Sales Contribution to Product R %	Read	
Wp Sales Build Rate R	Read	
Ly Sales Build Rate R	Read	

Markdowns Worksheet

Use the Markdowns worksheet to plan markdowns, markdown components, shrink, and employee discount. The Markdown values can be created using a variety of methods, including:

- Entering values into any of the markdown types, or total markdowns
- Entering the markdown percent to sales for any of the markdown types or total markdowns

Usage Notes

- Markdown R is the sum of Permanent, Clearance, and Promotional Markdown values.
- Edits made to Markdown R when one or more of the markdown types is 0 will only spread the changed amount to those markdown types that are non-zero (for example, Merchandise Financial Planning Retail will not change a component markdown value from 0 to non-zero when spreading a number entered at a total level).
- An edit made to Markdown R when the markdown types are all equal to 0 place the value into Clearance Markdown.

Measure List

Measure	Access	Result
Wp Sales R	Write	Markdown R is recalculated based on the change to Sales R and the existing Markdown %.
Ly Sales R	Read	
Wp Markdown R	Write	Markdown R is spread proportionally to Markdown Perm, and Markdown Clear. Markdown %, Markdown Clear %, Markdown Perm % are recalculated. Markdown Promo R and % are unchanged.
Wp Markdown R %	Write	Markdown R is recalculated based on the % entered.
Ly Markdown R	Read	
Ly Markdown R %	Read	
Wp Markdown Promo R	Write	Edits to Markdown Promo R have the same results as edits to Markdown Clear.
Wp Markdown Promo R %	Write	Edits to Markdown Promo % have the same results as edits to Markdown Clear.
Ly Markdown Promo R	Read	
Ly Markdown Promo R %	Read	

Measure	Access	Result
Wp Markdown Clear R	Write	Markdown Clear % is recalculated. (Total) Markdown R is recalculated. (Total) Markdown % is recalculated.
Wp Markdown Clear R %	Write	Markdown Clear R is recalculated based on the % entered. (Total) Markdown R is updated. (Total) Markdown % is recalculated.
Ly Markdown Clear R	Read	
Ly Markdown Clear R %	Read	
Wp Markdown Perm R	Write	Edits to Markdown Perm R have the same results as edits to Markdown Clear.

Wp Shrink R	Read	Calculated based on edit made to Shrink R %.
Wp Shrink R %	Write	Shrink R is recalculated based on the % entered.
Ly Shrink R %	Read	
Wp Employee Disc R	Read	Calculated from Employee Disc R %.
Wp Employee Disc R %	Write	Employee Disc R is recalculated based on the % entered.
Ly Employee Disc R %	Read	

Inventory/Receipts Worksheet

Plan pre-season Receipts R and Inventory R using this worksheet. Additionally, plan other measures that affect the EOP Inv R position including RTV R, Transfers In and Out R, Inventory Adjustments R.

You also plan the corresponding IMU% for each of the Inventory addition and reduction measures.

Usage Notes

- An edit made to EOP Inv R will move Receipts between the period the edit is made and the following period. The current period's Forward Cover R is recalculated.
- Edits to BOP Inv R will also shift Receipts between the period the edit is made and the prior period. The prior periods EOP R adjusts to match the BOP R edit, the prior periods Forward Cover R recalculates and Receipts R for the current and prior periods adjusts.
- Edits to Sales, Markdowns, Markups, Inventory Adjustment, RTV, Transfer In/Out, Reclass In/Out, will recalculate EOP Inv R and all subsequent BOP Inv R and EOP Inv R.
- When input as a positive number, the following measures will **reduce** the value in EOP Inv R:
 - Sales
 - Markdowns
 - Returns to Vendor
 - Reclass Out
 - Transfer Out
 - Inventory Adjustment
- When input as a positive number, the following measures will **increase** the value in EOP Inv R:
 - Receipts
 - Reclass In
 - Transfer In
 - Markups
- When input as a negative number, the following measures will **increase** the value in EOP Inv R:
 - Inventory Adjustment

Gross Margin Worksheet

You may review and affect Gross Margin and review resulting CMU % and GMROI using the Gross Margin worksheet.

Usage Notes

- Gross Margin R is defined as Sales R less Cost of Goods Sold (COGS).
- Gross Margin is recalculated on this worksheet from edits made to Receipt IMU % (lower time and product levels), Sales, Markdown %, Employee Discount %, Shrink % or Receipts.
- IMU % reflects the Initial Markup on Receipts
- CMU % reflects the markup on the cumulative inventory position at any point in time. The calculation includes BOS Inv, Receipts, Return to Vendor, Reclass In/Out, Transfer In/Out, Markups, Inventory Adjustment and Freight and is always calculated from the first period of the workbook.

Measure List

Measure	Access	Result
Wp Sales R	Write	GM R and GM R % recalculate based on the change to sales.

Sales Unit Conversion Worksheet

You may use this worksheet to convert the sales-related measure values to their corresponding unit value. You may also enter/view Average Unit Retail (AUR) for certain measures. The measures on this worksheet are represented in three forms, Retail, AUR, and Units.

Usage Notes

- A change made to the Unit measure will result in the corresponding AUR being updated. The retail value will not change.
- An update to Retail will result in Units being recalculated. AUR will not change.
- A change made to the AUR measure will result in the corresponding Unit being updated.

Measure List

Measure	Access	Result
Wp Sales R	Write	<p>Recalculates Sales U, Sales AUR is unchanged.</p> <p>Recalculates Regular, Promo, Clear. Inv_Receipt Unit Conversion Worksheet

You may use this worksheet to convert the inventory and receipts-related measure values to their corresponding unit value. You may also enter/view Average Unit Retail (AUR) for certain measures. The measures on this worksheet are represented in three forms, Retail, AUR, and Units.

Usage Notes

- Retail values and AUR's may be entered without Units being present.
- A change made to the Unit measure will result in the corresponding AUR being updated. The retail value will not change.
- An update to Retail will result in Units being recalculated. AUR will not change.
- A change made to the AUR measure will result in the corresponding Unit being updated.
- BOP Inv U and EOP U result from a unit balance set calculation and are not editable. BOP Inv AUR and EOP AUR are calculated based on their retail and unit measures.

Measure List

Reconcile Submitted Plan Worksheet

Managers may use this worksheet to compare the targets, which they passed to the Planner, to the plan values submitted by the Planner for approval. Last year plan values are also displayed for informational purposes.

Managers reconcile the Planners' data using the Waiting for Approval version and to the (Executive) Strategic Targets using their Ex Tgt plan version.

Usage Notes

- Wa measures are updated via the Planner submitting those measures for approval.
- The Mg role portion of the measure label is displayed here to distinguish the Executive Target measures from the Manager Target measures in the manager workbooks.

Approval Worksheet

The planning role determines which actions are allowed on this worksheet. Planners use this worksheet to submit plans for approval and view the status of submitted plans. Managers use the Approval worksheet to approve or reject submitted plans. The manager also uses a separate worksheet on this Tab to publish their targets to the planner.

If the workbook is a pre-season workbook, the approval process promotes the plan from Submitted Waiting for Approval (Wa) to both Original Plan (Op) and Current Plan (Cp). If the workbook is an in-season workbook, the approval process promotes the plan from Submitted Waiting for Approval (Wa) only to Current Plan (Cp). The Original Plan approved during the pre-season planning process is considered the locked “plan of record” and no changes are allowed. The frequency of the approval process can be different for each season – usually once for pre-season and monthly or as desired for in-season.

Manager Processes

Steps for publishing targets

1. Mark the “Publish” checkbox for the time periods, products, and channels for which targets should be published, press **Calculate**. Checking a box at an aggregate time or product will mark the boxes for the lower level dimensions.
2. Navigate to the Merchandise Financial Planning Retail menu (located to the left of the Window menu); select the “Publish” option in the Merchandise Financial Planning Retail menu.
 - A message box is displayed indicating the rule groups have executed successfully.
 - Data is automatically committed to the database and the workbook is refreshed. The workbook is not automatically saved.
 - Any targets previously created for the same time periods will be overwritten when the publish process is run.

Measure List – Manager Publish Window

The Manager’s Approval Worksheet contains two separate windows, one that contains the measures related to the publish targets process, the other that contains the approval measures. These measures are used for publishing targets.

Measure	Access	Result
Wp Publish	Write	Tgt measures are updated for the time periods, products, channels that are selected.
Wp Publish Comment	Write	None.
Wp Publish Date	Read	Updated when the publish target process completes.

Steps for Approving the Plan

1. Select “Approve” in the measure “Approve/Reject” for the time periods, products, and channels for which the plan should be approved, press **Calculate**. Checking a box at an aggregate time or product will mark the boxes for the lower level dimensions.
2. Navigate to the Merchandise Financial Planning Retail menu (located to the left of the Window menu); select the “Approve Plan” option in the Merchandise Financial Planning Retail menu.
 - A message box is displayed indicating the rule groups have executed successfully.
 - Data is automatically committed to the database and the workbook is refreshed. The workbook is not automatically saved.
 - Any targets previously created for the same time periods will be overwritten when the publish process is run.

Approval Notes

- The manager can approve the plan only after the planner has submitted the plan. The measure “Submitted Version” must be “WA” prior the manager approving the plan. If the submitted version is not set to WA, then the Op/Cp plans will not be updated.
- When the approval process is complete, the Submitted Version will change to Wp for the approved components of the plan.
- To reject a plan that has been submitted for approval, select the “Reject” value instead of “Approve” from the measure “Approve/Reject”.

Measure List – Manager – Approve Plan Window

Measure	Access	Result
Wp Submitted Version	Read	If a plan has not been submitted for approval, the Version will display WP. If a plan has been submitted and is waiting for approval, the Version will display WA. If the plan is approved or rejected, the Version will change back to WP.
Wp Submitted By	Read	User ID of the planner who submitted the plan is displayed. Automatically updated when the planner submits the plan and commits the data to the database.
Wp Submit Comment	Read	Any entered comments are stored and displayed to the user. These are comments entered by the planner and are read only in the manager workbook.
Wp Submitted Date	Read	System populates with current date when planner submits plan for approval Automatically updated when the planner submits the plan and commits the data to the database.
Wp Approve/Reject	Write	Selected from a drop-down list by the manager: “Approve” for those time periods or departments approved by the manager. “Reject” for those time periods or departments rejected by the manager.

Measure	Access	Result
Wp Submitted Date	Read	System populates with current date when planner submits plan for approval Automatically updated when the planner submits the plan and commits the data to the database.
Wp Approval Comment	Write	Optionally entered when the plan is approved or rejected.
Wp Approved By	Read	Manager's Merchandise Financial Planning Retail ID is displayed for those values approved by the manager Automatically updated with the manager's Merchandise Financial Planning Retail ID when the manager approves or rejects the plan.
Wp Approve Date	Read	System populates with current date when manager approves the plan.
Wp Reject Date	Read	System populates with current date when manager Rejects the plan.
Wp Approval Comment	Write	Optionally entered when the plan is approved or rejected.

Planner Processes

Steps for Submitting a Plan for Approval

1. Select "Approve" in the measure "Approve/Reject" for the time periods, products, and channels for which the plan should be approved, press **Calculate**. Checking a box at an aggregate time or product will mark the boxes for the lower level dimensions.
2. Navigate to the Merchandise Financial Planning Retail menu (located to the left of the Window menu); select the "Approve Plan" option in the Merchandise Financial Planning Retail menu.
 - A message box is displayed indicating the rule groups have executed successfully.
 - Data is automatically committed to the database and the workbook is refreshed. The workbook is not automatically saved.
 - Any targets previously created for the same time periods will be overwritten when the publish process is run.

Submit Notes

- The planner can submit the plan only if the planning periods have not been submitted previously, or if the manager has either rejected or approved the plan. The measure “Submitted Version” must be “WP” before the plan can be submitted. If the submitted version is not set to WP then the planner data will not move to the Wa version.

Note: Currently there is no functionality in Merchandise Financial Planning Retail that will prevent the user from attempting to submit the plan when the Submitted Version is Wa. Although it appears as if the submit process works, the data does not actually move to the Wa version. Data only moves from Planner Wp to Wa when the Submitted version equals Wp.

- When the submit process is complete, the Submitted Version will change to WA for the submitted components of the plan.

Measure List - Planner

The Planner’s Approval Worksheet contains the following measures.

Measure	Access	Result
Wp Submit	Write	Checked items are submitted to the manager for approval when the planner commits the data to the database.
Wp Submit Comment	Write	Optionally entered when the plan is submitted for approval. Any comments the planner enters are stored and displayed in this measure. This is read only in the manager workbook
Wp Submitted By	Read	User ID of the planner who submitted the plan is displayed Automatically updated when the planner submits the plan and commits the data to the database.
Wp Submitted Date	Read	System populates with current date when planner submits plan for approval Automatically updated when the planner submits the plan and commits the data to the database.

Measure	Access	Result
Wp Submitted Version	Read	If a plan has not been submitted for approval or has been approved or rejected, the Submitted Version will display WP. If a plan has been submitted and is waiting for approval, the Submitted Version will display WA.
Wp Approve/Reject	Read	Populated with “Approve” for those time periods or departments approved by the manager. Populated with “Reject” for those time periods or departments rejected by the manager.
Wp Approval Comment	Read	Optionally entered when the plan is approved or rejected. This measure is writable only in the manager workbook.
Wp Approved By	Read	The userid of the person who approved/rejected the plan.
Wp Approval Comment	Read	Optionally entered when the plan is approved or rejected. This measure is writable only in the manager workbook.
Wp Approve Date	Read	Automatically updated when the manager approves the plan.
Wp Reject Date	Read	Automatically updated when the manager rejects the plan.

In-Season Financial Planning Process

Once the selling period begins, you use the In-Season Planning worksheets to review progress against the plan and make adjustments to the plan.

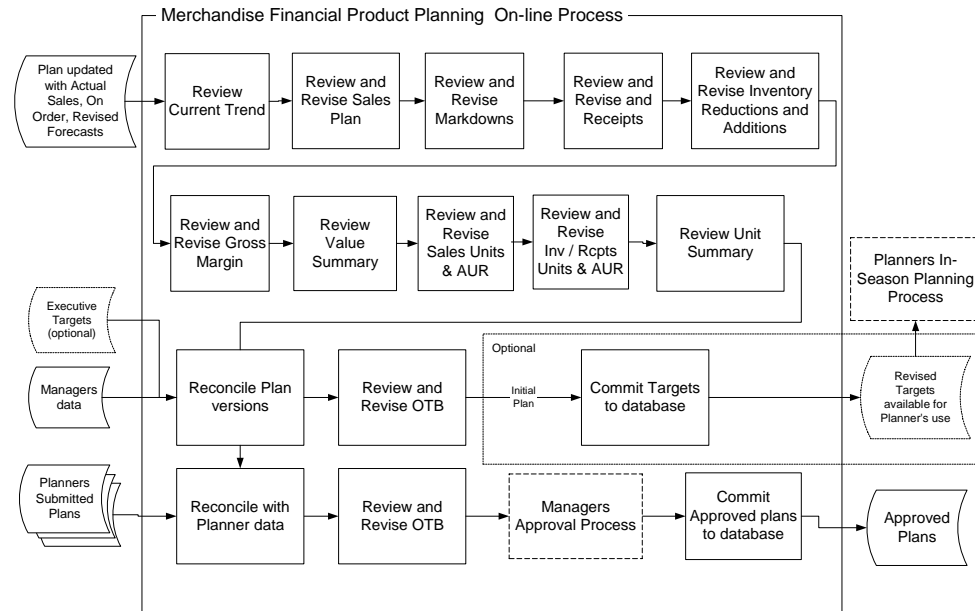

In-season financial planning is performed using the In-Season Financial Plan workbook. The worksheets in this workbook include measures that show how the selling season is performing relative to plan. This workbook includes all worksheets that are part of the Pre-Season workbook, and two additional ones. Two Open-To-Buy (OTB) worksheets are available to assist you in controlling OTB and to identify opportunities and actions.

Two plan versions are updated with data as during the In-Season Planning process, the Working Plan and the Current Plan. Most Working Plan (Wp) measures (such as Sales, Markdowns and Receipts) are updated weekly with Actual data. A regenerated demand sales forecast (Fcst) is updated to take into account the loaded actuals. Using the loaded data and the current plan, a user may adjust the Working plan measures for future non-elapsed time. When the new plan is approved, the Current Plan (Cp) measures are updated with the changed data. The Original Plan approved during the Pre-Season planning process is never changed.

Manager's Process

The following diagram shows the manager's steps in the In-Season Planning process:

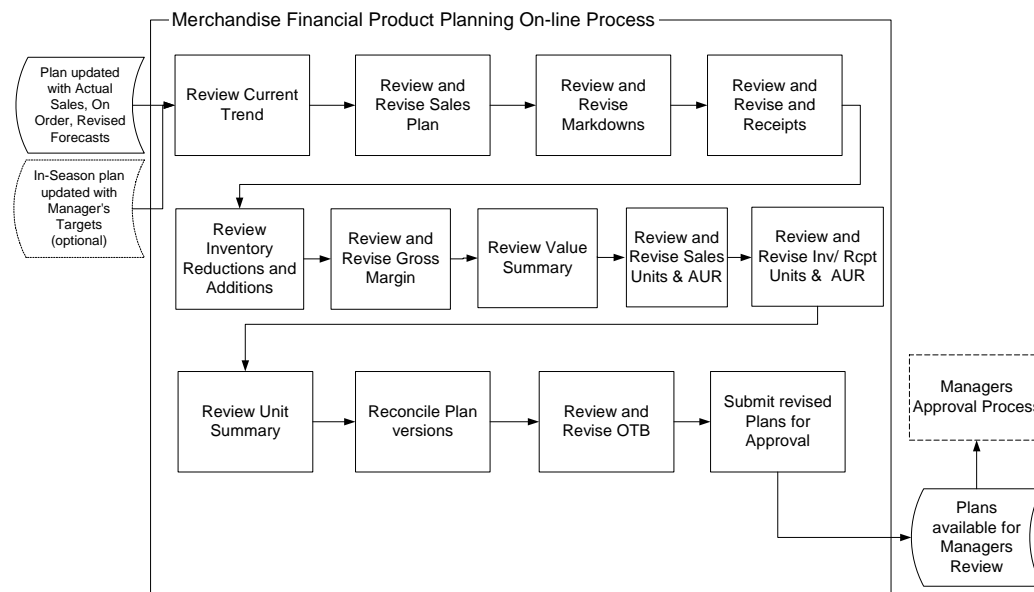

In-Season Merchandise Financial Planning
Managers Role - Product Planning Workflow Process (Division to Department)

Planner's Process

The following diagram shows the planner's steps in the In-Season Planning process:

In-Season Merchandise Financial Planning
Planners Role - Product Planning Workflow Process (Department to Subclass)

In-Season Financial Plan Worksheets

The In-Season Financial Plan workbook contains the following worksheets:

- Review Trend
- Sales
- Markdowns
- Receipts
- Inventory
- Gross Margin
- Value Summary
- Sales Unit Conversion
- Inv_Rcpt Unit Conversion
- Unit Summary
- Reconcile Submitted Plan (manager only)
- Reconcile (planner only)
- Value OTB
- Unit OTB
- Approval

The workbook can be initially created as part of the regular automated workbook build process. The workbook can also be built manually by running the Planning Workbook Wizard.

A workbook can be built in one of two ways. It can be created as part of the automated workbook build process. This is a batch program that creates the plan workbook based upon pre-defined parameters (product, location, time). You can also build the workbook manually by running the Planning Workbook wizard via the New button on the Toolbar or through the main menu: File > New.

Note: If during the workbook build process a user does not select a time period that contains the current date, the entire workbook will be read-only. The application must have the current date included in the workbook to determine the “elapsed” weeks in an In-Season workbook.

Assumptions

- The In-Season plan is automatically seeded with Current Plan data as a starting point for key planning metrics such as Sales, Markdowns, Shrink, and Receipts.
- The Working Plan and Current Plan versions are automatically updated with Actual data for elapsed time periods and cannot be changed.
- Current Plan values cannot be changed directly on the worksheet. Current Plan is updated when the Working Plan is submitted for approval and approved by the manager.
- If a value or variance is changed at a time level that includes historical data (Actual), the data in the Actual time periods will not change. The aggregate changed value will be spread/replicated to non-elapsed time only.

Review Trend Worksheet

Users may use the Review Trend worksheet to review current values for sales, markdowns, receipts, inventory (including turn), and gross margin, and compare them to the current plan and forecasted sales. This worksheet provides you with a snapshot of the current state of many of the key planning performance indicators including variances to LY and Current Plan (CP). This worksheet is similar to the View Targets – Pre-Season worksheet, except the comparisons in this worksheet are primarily to the Current Plan instead of Target.

Measure List

The Review Trend worksheet contains the following measures. See the measure list for View Targets Pre-Season worksheet or the Merchandise Financial Planning Retail Measure List for a description of the measure and its calculation.

Sales Worksheet

On the Sales worksheet, you may review values and change variances or change sales values for any forward time period in the workbook. You may use the Sales worksheet to view actual Sales and Sales Types values and variances to the current plan. This worksheet includes variances and other sales analysis measures, such as contribution to time, contribution to product, and sales build rate.

Assumptions

- The plan is automatically seeded with Current Plan data as a starting point for key planning metrics such as Sales, Markdowns, Shrink, and Receipts.
- The Working Plan and Current Plan version are automatically updated with Actual data for elapsed time periods and cannot be changed.
- If a value or variance is changed at a time level that includes historical data (Actual), the data in the Actual time periods will not change. The aggregate changed value will be spread/replicated to non-expired time only.

Measure List

The Sales worksheet contains the following measures. See the measure list for Sales Pre-Season worksheet or the Merchandise Financial Planning Retail Measure List for a description of the measure and its calculation.

Markdowns Worksheet

You may use the Markdowns worksheet to review the three types of markdowns: Promotional, Clearance, and Permanent. Other measures such as Markdown percentages, Employee Discount and Shrinkage percentages are also included and are editable in forward time periods.

Measure List

The Markdowns worksheet contains the following measures. See the measure list for Markdowns Pre-Season worksheet or the Merchandise Financial Planning Retail Measure List for a description of the measure and its calculation.

Measure	Access
Wp Sales R	Write
Cp Sales R	Read

Wp Shrink R %	Write
Cp Shrink R %	Read
Ly Shrink R %	Read
Wp Employee Disc R	Read
Wp Employee Disc R %	Write
Cp Employee Disc R %	Read
Ly Employee Disc R %	Read

Receipts Worksheet

You may use the Receipts worksheet to review actual values for Receipts and On-Order in the In-Season Planning process. Receipts are editable for future time periods so the user can manipulate and balance the stock/sales position. Initial Markup Percents (IMU%) for receipts and on-order are included on this sheet. IMU Percents for Receipts only (future time periods) are editable.

You may edit Commitments and On-Order Cancel measures so that an accurate On-Order value may be achieved. Commitments are used to account for orders that have been approved in the purchase order system. On-Order Cancel is used to account for orders cancelled since the last on-order file was loaded. Changes to Commitments and On Order Cancel will affect the amount of Open to Buy available; they do not impact Receipts.

Assumptions

- The plan is automatically seeded with Ly data as a starting point for key planning metrics such as Sales, Markdowns, Shrink, and Receipts.
- The Working Plan and Current Plan versions are automatically updated with Actual data for elapsed time periods and cannot be changed.

Note: If a value or variance is changed at a time level that includes historical data (Actual), the data in the Actual time periods will not change. The aggregate changed value will be spread/replicated to non-expired time only.

Measure List

The Receipts worksheet contains the following measures. See the measure list for Receipts Pre-Season worksheet or the Merchandise Financial Planning Retail Measure List (Section 4) for a description of the measure and its calculation.

Inventory Worksheet

You may review inventory and receipt values using the Inventory worksheet. BOP inventory, EOP inventory, Receipts, and the forward cover are editable for future time periods. Additional inventory additions and reduction measures are available that when changed, will affect EOP: Returns to Vendor, Transfers In, Transfers Out, Reclassifications In and Reclassifications Out.

Receipt changes will flow through to all forward EOP R's and BOP R's. Editing EOP R has a smoothing effect on Receipts in that they are shifted between the period the edit is made and the following period. Edits to BOP R will also shift Receipts between the period the edit is made and the prior period provided the prior period is not expired time.

Measure List

The Inventory worksheet contains the following measures. See the measure list for Receipts Pre-Season worksheet or the Merchandise Financial Planning Retail Measure List (Section 4) for a description of the measure and its calculation.

Gross Margin Worksheet

You may review and adjust gross margin with the Gross Margin worksheet. If an issue is identified here, you usually adjust the specific values on the other planning worksheets. On this worksheet, you can adjust sales, markdowns (total), Shrink %, Employee Disc %, or EOP (which adjusts projected receipts) to affect Gross Margin R and Gross Margin R %.

Measure List

The Gross Margin worksheet contains the following measures. See the measure list for Gross Margin Pre-Season worksheet or the Merchandise Financial Planning Retail Measure List for a description of the measure and its calculation.

Value Summary Worksheet

You may review all values using the Summary Values worksheet. This worksheet is similar to the Plan Summary – Values worksheet for pre-season planning except it includes the Current Plan (Cp) version. You may compare plan variances to Current Plan (Cp) and LY.

Measure List

The Summary Values worksheet contains the following measures. See the measure list for Summary Values Pre-Season worksheet or the Merchandise Financial Planning Retail Measure List (Chapter 4) for a description of the measure and its calculation.

Sales Unit Conversion Worksheet

Using the Sales Units worksheet, you may review actual values, units and Average Unit Retail (AUR). You may change future Retail values, which will recalculate future units, or you may adjust unit amounts to recalculate the AUR. If you edit units, the retail values will remain unchanged.

Measure List

The Sales Unit Conversion worksheet contains the following measures. See the measure list for Sales Unit Conversion Pre-Season worksheet or the Merchandise Financial Planning Retail Measure List for a description of the measure and its calculation.

Inv_Receipt Unit Conversion Worksheet

You may use this worksheet to convert the inventory and receipts-related measure values to their corresponding unit value. You may also enter/view Average Unit Retail (AUR) for certain measures. The measures on this worksheet are represented in three forms, Retail, AUR, and Units.

Measure List

The Inv_Receipt Unit Conversion worksheet contains the following measures. See the measure list for Inv_Receipt Unit Conversion Pre-Season worksheet or the Merchandise Financial Planning Retail Measure List for a description of the measure and its calculation.

Reconcile Worksheet

Planners may use this worksheet to compare the Current Plan to Working Plan and Last Year versions during the In-season Planning process.

Planners can reconcile their data to the Managers In-Season Targets if created, using the Tgt (Target) plan version which is available on this worksheet.

Measure List

The Reconcile worksheet contains the following measures. See the measure list for Reconcile Pre-Season worksheet or the Merchandise Financial Planning Retail Measure List for a description of the measure and its calculation.

Measure	Access	Result
Wp BOP Inv R	Write	Recalculates Receipts R in the prior and current periods, adjusts prior period EOP Inv R.

Value OTB Worksheet

Use the Value OTB worksheet during the In-Season Planning period to review retail measures and determine future Open to Buy action.

The Open to Buy Retail measure is calculated by subtracting Wp On Order Retail and Wp Commitments Retail from Current Plan Receipts Retail and adding Wp On Order Cancellations Retail. Using this worksheet, you may determine further actions, such as whether to buy additional goods, shift future On Order or add to On Order cancellations.

Measure List

Measure	Access

Unit OTB Worksheet

Use the Unit OTB worksheets during the In-Season Planning process to review unit measures and determine future Open to Buy action.

The Open to Buy Unit measure is calculated by subtracting Wp On Order Units and Wp Commitment Units from Current Plan Receipts Units and adding back in any Wp On Order Cancellations Units. Using this worksheet, you may determine further actions, such as whether to buy additional goods, shift future On Order or add to On Order cancellations.

Approval Worksheet

The planning role determines the allowed actions on this worksheet. Planners use this worksheet to submit plans for approval and view the status of submitted plans. Managers use the Approval worksheet to approve or reject submitted plans. The manager also uses this worksheet to publish their targets to the planner.

If the workbook is a pre-season workbook, the approval process promotes the plan from Submitted Waiting for Approval (Wa) to both Original Plan (Op) and Current Plan (Cp). If the workbook is an in-season workbook, the approval process promotes the plan from Submitted Waiting for Approval (Wa) only to Current Plan (Cp). The Original Plan approved during the pre-season planning process is considered the locked “plan of record” and no changes are allowed. The frequency of the approval process can be different for each season – usually once for pre-season and monthly or as desired for in-season.

Manager Processes

Steps for publishing targets

1. Mark the “Publish” checkbox for the time periods, products, and channels for which targets should be published, press **Calculate**. Checking a box at an aggregate time or product will mark the boxes for the lower level dimensions.

Note: Only future time periods can be “published”

2. Navigate to the Merchandise Financial Planning Retail menu (located to the left of the Window menu), select the “Publish” option in the Merchandise Financial Planning Retail menu.
 - A message box is displayed indicating the rule groups have executed successfully.
 - Data is automatically committed to the database and the workbook is refreshed. The workbook is not automatically saved.
 - Any targets previously created for the same time periods will be overwritten when the publish process is run.

Measure List – Manager Publish Window

The Manager’s Approval Worksheet contains two separate windows, one that contains the measures related to the publish targets process, the other that contains the approval measures.

Measure	Access	Result
Wp Publish	Write	Tgt measures are updated for the time periods, products, channels that are selected.
Wp Publish Comment	Write	None.
Wp Publish Date	Read	Updated when the publish target process completes.

Steps for Approving the Plan

1. Select “Approve” in the measure “Approve/Reject” for the time periods, products, and channels for which the plan should be approved, press **Calculate**. Checking a box at an aggregate time or product will mark the boxes for the lower level dimensions.

Note: Only future time periods can be “approved”. If a month is partially elapsed, only the non-elapsed time periods in that month will be marked for approval and subsequently approved.

2. Navigate to the Merchandise Financial Planning Retail menu (located to the left of the Window menu); select the “Approve Plan” option in the Merchandise Financial Planning Retail menu.
 - A message box is displayed indicating the rule groups have executed successfully.
 - Data is automatically committed to the database and the workbook is refreshed. The workbook is not automatically saved.
 - Any targets previously created for the same time periods will be overwritten when the publish process is run.

Approval Notes

- The manager can approve the plan only after the planner has submitted the plan. The measure “Submitted Version” must be “WA” prior the manager approving the plan. If the submitted version is not set to WA, then the Cp plans will not be updated.
- When the approval process is complete, the Submitted Version will change to Wp for the approved components of the plan.
- To reject a plan that has been submitted for approval, select the “Reject” value instead of “Approve” from the measure “Approve/Reject”.

Measure List – Manager Approve/Reject Window

The Manager's Approval Worksheet contains two separate windows, one that contains the measures related to the publish targets process, the other that contains the approval measures. These measures are used in the approval process.

Measure	Access	Result
Wp Submitted Version	Read	<p>If a plan has not been submitted for approval, the Version will display WP.</p> <p>If a plan has been submitted and is waiting for approval, the Version will display WA.</p> <p>If the plan is approved or rejected, the Version will change back to WP.</p>
Wp Submitted By	Read	<p>User ID of the planner who submitted the plan is displayed</p> <p>Automatically updated when the planner submits the plan and commits the data to the database.</p>
Wp Submit Comment	Read	Any comments the planner enters are stored and displayed in this measure. This is read only in the manager workbook
Wp Submitted Date	Read	System populates with current date when planner submits plan for approval Automatically updated when the planner submits the plan and commits the data to the database.
Wp Approve/Reject	Write	<p>Selected from a drop-down list by the manager:</p> <p>“Approve” for those time periods or departments approved by the manager.</p> <p>“Reject” for those time periods or departments rejected by the manager.</p>

Measure	Access	Result
Wp Submitted Date	Read	System populates with current date when planner submits plan for approval Automatically updated when the planner submits the plan and commits the data to the database.
Wp Approval Comment	Write	Optionally entered when the plan is approved or rejected.
Wp Approved By	Read	Manager's Merchandise Financial Planning Retail ID is displayed for those values approved by the manager Automatically updated with the manager's Merchandise Financial Planning Retail ID when the manager approves or rejects the plan
Wp Approve Date	Read	System populates with current date when manager approves the plan
Wp Reject Date	Read	System populates with current date when manager Rejects the plan
Wp Approval Comment	Write	Optionally entered when the plan is approved or rejected.

Planner Processes

Steps for Submitting a Plan for Approval

1. Select “Approve” in the measure “Approve/Reject” for the time periods, products, and channels for which the plan should be approved, press **Calculate**. Checking a box at an aggregate time or product will mark the boxes for the lower level dimensions.

Note: Only future time periods can be “approved”. If a month is partially elapsed, only the non-elapsed time periods in that month will be marked for approval and subsequently approved.

2. Navigate to the Merchandise Financial Planning Retail menu (located to the left of the Window menu); select the “Approve Plan” option in the Merchandise Financial Planning Retail menu.
 - A message box is displayed indicating the rule groups have executed successfully.
 - Data is automatically committed to the database and the workbook is refreshed. The workbook is not automatically saved.
 - Any targets previously created for the same time periods will be overwritten when the publish process is run.

Submit Notes

- The planner can submit the plan only if the planning periods have not been submitted previously, or if the manager has either rejected or approved the plan. The measure “Submitted Version” must be “WP” before the plan can be submitted. If the submitted version is not set to WP then the planner data will not move to the Wa version.

Note: Currently there is no functionality in Merchandise Financial Planning Retail that will prevent the user from attempting to submit the plan when the Submitted Version is Wa. Although it appears as if the submit process works, the data does not actually move to the Wa version. Data only moves from Planner Wp to Wa when the Submitted version equals Wp.

- When the submit process is complete, the Submitted Version will change to WA for the submitted components of the plan.

Measure List - Planner

The Planner's Approval Worksheet contains the following measures.

Measure	Access	Result
Wp Submitted Version	Read	System updates the version once the planner marks the plan (or portion of the plan) to be approved, and commits the plan to the database
Wp Submit	Write	Checked items are submitted to the manager for approval when the planner commits the data to the database.
Wp Submit Comment	Write	If a plan has not been submitted for approval, the Ad Version will display WP. If a plan has been submitted and is waiting for approval, the Ad Version will display WA.
Wp Submitted By	Read	User ID of the planner who submitted the plan is automatically updated when the planner submits the plan and commits the data to the database.
Wp Submitted Date	Read	System populates with current date when planner submits plan for approval Automatically updated when the planner submits the plan and commits the data to the database.
Wp Submitted Version	Write	If a plan has not been submitted for approval, the Ad Version will display WP. If a plan has been submitted and is waiting for approval, the Ad Version will display WA.

Measure	Access	Result
Wp Approve/Reject	Read Only	Populated with “Approve” for those time periods or departments approved by the manager. Populated with “Reject” for those time periods or departments rejected by the manager.
Wp Approved By	Read Only	The userid of the person who approved/rejected the plan
Wp Approval Comment	Read Only	Optionally entered when the plan is approved or rejected.
Wp Approve Date	Read Only	Automatically updated when the manager approves the plan
Wp Reject Date	Read Only	Automatically updated when the manager rejects the plan

In-Season Extra Measures

Measures in the following table are available within in-season worksheets, but must be added via Show/Hide. See the RPAS users guide for more information on adding measures to worksheets

Measure Calculations

This chapter provides a summary of specific measure calculations and a summary of common, repeated calculations that are contained within the Merchandise Financial Planning Retail solution. Some measures in Merchandise Financial Planning Retail can be calculated one of two ways, depending on the specific edit made. You can view which calculation is in effect for a measure by right-clicking on the measure and selecting Show Measure Status after an edit is made but before calculating.

The goal of this chapter is to document some key measure calculations and repeatedly used calculations, not to document every calculation for every rule in the solution.

Commonly Used Calculations

Measure Type	Primary Calculation Method	Example
AUR measures	Calculated by dividing the corresponding Retail measure by the Unit Measure	$\text{Sales AUR} = \text{Sales R} / \text{Sales U}$
Wp variance measures	Calculated by subtracting the designated variance version measure from the Wp measure and dividing by the Wp measure	$\text{Wp Sales var Ly R\%} = (\text{Wp Sales R} - \text{Ly Sales R}) / \text{Wp Sales R}$
Contribution to Product % or Contribution to Time %	Calculated by taking a measure at a specific product or time period and determining it's % contribution to the highest product or time period in the workbook	$\text{Sales contribution to Time R \% (at a week level)} = \text{Sales R (at that week)} / \text{Sales R (at the year)} * 100$
IMU % measures	Calculated by taking the Retail measure minus the Cost measure divided by the retail measure	$\text{BOP IMU R \%} = (\text{BOP R} - \text{BOP C}) / \text{BOP R}$
Calculating Cost measures in Retail Accounting	If the cost measure has a corresponding IMU %, then the Cost value is calculated from the Retail measure and IMU % measure	$\text{Receipt C} = \text{Receipt R} * (1 - \text{Receipt IMU R \%})$
MMU R measures	Calculated as the difference between the Retail measure less the Cost measure	$\text{MMU R} = \text{Sales R} - \text{Sales C}$

Measure Type	Primary Calculation Method	Example
Cumulative measures	The values displayed at base time periods represent calculations from the beginning of the workbook through and including the current period. The beginning and end point for the cumulative calculation cannot extend outside the workbook.	CMU – calculates for the current time period using BOS as the starting point Avg Inv – calculates for the current time period using BOS as the starting point
KeyPlan contribution measures	Calculated by taking the Current Plan KeyPlan measure divided by the Current Plan Merchandise Financial Planning Retail measure	$\text{Cp KP contrib TP BOP R \%} = \frac{\text{KCp BOP R}}{\text{MCp BOP R}}$

Specific Measure Calculations

Units of measure have been removed to simplify the following table. In many instances, there are Retail and Unit versions of the measures (for example, Avg Inv R and Avg Inv U). Unless noted, the basic calculation is the same for both the retail and unit measures.

Measure	Calculation
Avg Inv	Executive Role: Sales / Turn Over
	Manager and Planner Roles: $(\text{BOP} + \text{cumulative EOP}) / (\# \text{ periods} + 1)$
Avg Store Inv	$(\text{EOP} / \text{Store Count \#})$
Avg Store Sales	$(\text{Sales} / \text{Store Count \#})$
BOP	Lag (EOP)
Cash Discount C	$(\text{Cash Discount C \%} * \text{Receipts C})$
Cash Discount C %	$(\text{Cash Discount C} / \text{Receipts C})$
CMU %	$\frac{[(\text{BOS R}) + \text{cumulative Receipts R} + \text{cumulative Markups R} + \text{cumulative Transfer In R} - \text{cumulative Transfer Out R} + \text{cumulative Reclass In R} - \text{cumulative Reclass Out R} - \text{cumulative RTV R} - \text{Inv Adj R}] - [(\text{BOS C}) + \text{cumulative Receipts C} + \text{cumulative Transfer In C} - \text{cumulative Transfer Out C} + \text{cumulative Reclass In C} - \text{cumulative Reclass Out C} - \text{cumulative RTV C} + \text{cumulative Freight C} + \text{cumulative Out Freight C} - \text{Inv Adj C}]}{[(\text{BOS R}) + \text{cumulative Receipts R} + \text{cumulative Markups R} + \text{cumulative Transfer In R} - \text{cumulative Transfer Out R} + \text{cumulative Reclass In R} - \text{cumulative Reclass Out R} - \text{cumulative RTV R} - \text{Inv Adj R}]}$
COGS C	$((\text{Sales R} + \text{Markdown R} + \text{Shrink R} + \text{Employee Discount R}) * (1 - \text{CMU\%}))$
Customer Returns	$(\text{Customer Returns \%} * \text{Sales})$

Measure	Calculation
Customer Returns %	(Customer Returns / Sales)
Employee Discount R	(Employee Discount R % * Sales R)
Employee Discount R %	(Employee Discount R / Sales R)
EOP	(BOP + Receipts + Markup - Sales - Markdown– Shrink - RTV + Transfer In– Transfer Out + Reclass In - Reclass Out– Inv Adj – Employee Discount)
Forward Cover	(EOP / (Sum of forward period Sales for the number of periods that the EOP will cover)
Freight C (Inbound Freight C)	(Receipts C * Freight C %)
Freight C % (Inbound Freight C %)	(Freight C / Receipts C)
GM %	(Gross Margin R / Sales R)
GM R	Executive Role: (Gross Margin % * Sales R)
	Manager and Planner Roles: (Sales R – COGS C)
GMROI	(Gross Margin R / Average Inventory C)
Gross Sales	(Sales + Customer Returns)
In Transit	(BOP – Selling Store On Hand)
Markdowns R %	(Markdown R / Sales R)
Perm Markdowns R %	(Perm Markdown R / Sales R)
Promo Markdowns R %	(Promo Markdown R / Sales R)
Clear Markdowns R %	(Clear Markdown R / Sales R)
Markdown R	(Markdown % * Sales R) also (Markdown Clearance R + Markdown Perm R + Markdown Promo R)
Clear Markdowns R	(Clear Markdown R % * Sales R)
Promo Markdowns R	(Promo Markdown R % * Sales R)
Perm Markdowns R	(Perm Markdown R % * Sales R)
OTB	(Cp Receipts – On Order - Commitments + On Order Cancel)
Outbound Freight C	(Return to Vendor C * Outbound Freight C%)
Outbound Freight C %	(Outbound Freight C/ Returns to Vendor C)
Receipts	If EOP is edited, Receipts is calculated from the following rule: (EOP – BOP + Sales + Markdowns – Markups + Shrink + Return to Vendor – Reclass In + Reclass Out – Receipts - Transfer In + Transfer Out + Employee Disc - Inv Adj)
Sell Thru %	(Sales / (BOP + Receipts))

Measure Calculations

Measure	Calculation
Shrink R	$(\text{Shrink \%} * \text{Sales})$
Shrink %	$(\text{Shrink} / \text{Sales})$
Sales Build Rate	$(\text{Sales Current Period} / \text{Sales Last Period})$
Sales	$(\text{Regular Sales} + \text{Promo Sales} + \text{Clearance Sales})$
Regular Sales contribution to Sales	$(\text{Regular Sales} / \text{Sales R})$
Promo Sales contribution to Sales	$(\text{Promo Sales} / \text{Sales R})$
Clear Sales contribution to Sales	$(\text{Clear Sales} / \text{Sales R})$
Stock Adjustment	$(\text{BOP} - \text{Stock On Hand})$
Stk/Sls	$(\text{BOP Inv} / \text{Sales})$
TO	$\text{Sales} / \text{Avg Inv}$
Ttl Ret Process Fee C	$(\text{Return To Vendor U} * \text{Ret Process Fee C})$
WOS	$(\text{BOP Inv} / (\text{Sales} / \text{number of weeks in period}))$

Merchandise Financial Planning Retail Measures List

The following table contains a complete list of the measures that are delivered with Merchandise Financial Planning Retail. Every measure has four components: Role, Version, Metric, and Unit of Measure.

Measure Name	Measure Label	Measure Description	Access
COpAvgInvR	Ch Op Avg Inv R	Channel Plan Average Inventory Value	Read
COpSlsR	Ch Op Sales R	Channel Planning Original Plan Sales Value	Read
COpTORr	Ch Op TO R	Channel Planning Turnover Value	Read
ETgAvgInvR	Tgt Avg Inv R	Average Inventory Retail	Read
ETgCMURp	Tgt CMU R %	Cumulative Markup Percentage	Read
