Primary Authors: Debapriya Datta, Shiladitya Guha

Contributing Authors: Don Gosselin, Lyju Vadassery, Venkatasubramaniam Iyer

The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

Oracle, JD Edwards, PeopleSoft, and Siebel are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

---

---

# Preface

*Oracle Identity Manager Connector Guide for Siebel* provides information about integrating Oracle Identity Manager with Siebel.

---

---

**Note:** This is a transitional release following Oracle's acquisition of Thor Technologies. Some parts of the product and documentation still refer to the original Thor company name and Xellerate product name and will be rebranded in future releases.

---

---

## Audience

This guide is intended for users who want to deploy the Oracle Identity Manager connector for Siebel.

## Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at

<http://www.oracle.com/accessibility/>

### Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

### Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

### TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, seven days a week. For TTY support, call 800.446.2398.

## Related Documents

For more information, refer to the following documents in the Oracle Identity Manager documentation set:

- *Oracle Identity Manager Release Notes*
- *Oracle Identity Manager Installation and Upgrade Guide for JBoss*
- *Oracle Identity Manager Installation and Upgrade Guide for WebLogic*
- *Oracle Identity Manager Installation and Upgrade Guide for WebSphere*
- *Oracle Identity Manager Administrative and User Console Guide*
- *Oracle Identity Manager Administrative and User Console Customization Guide*
- *Oracle Identity Manager Design Console Guide*
- *Oracle Identity Manager Tools Reference Guide*
- *Oracle Identity Manager Audit Report Developer Guide*
- *Oracle Identity Manager Best Practices Guide*
- *Oracle Identity Manager Connector Framework Guide*

## Documentation Updates

Oracle is committed to delivering the best and most recent information available. For information about updates to the Oracle Identity Manager 9.0.1 connector documentation set, visit Oracle Technology Network at

<http://www.oracle.com/technology/documentation/index.html>

## Conventions

The following text conventions are used in this document:

| <b>Convention</b> | <b>Meaning</b>   |
|-------------------|--|
| <b>boldface</b>   | Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.         |
| <i>italic</i>     | Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.                          |
| monospace         | Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter. |

---

---

## About the Connector

Oracle Identity Manager automates access rights management, security, and provisioning of IT resources. Oracle Identity Manager connectors are used to integrate Oracle Identity Manager with third-party applications. The connector for Siebel is used to integrate Oracle Identity Manager with Siebel.

---

---

**Note:** Oracle Identity Manager connectors were referred to as *resource adapters* prior to the acquisition of Thor Technologies by Oracle.

---

---

This chapter contains the following sections:

- [Supported Functionality](#)
- [Reconciliation Module](#)
- [Provisioning Module](#)
- [Files and Directories That Comprise the Connector](#)

### Supported Functionality

The following table lists the functions that are available with this connector.

| Function                   | Type         | Description                             |
|----------------------------|--------------|---|
| Create User                | Provisioning | Creates a user                          |
| Delete User                | Provisioning | Deletes a user                          |
| Add Position to User       | Provisioning | Adds a position to a user               |
| Add User Responsibility    | Provisioning | Adds a responsibility to a user         |
| Delete User Position       | Provisioning | Deletes the position of a user          |
| Delete User Responsibility | Provisioning | Deletes the responsibility of a user    |
| Time Zone Updated          | Provisioning | Updates the time zone of a user         |
| Email Updated              | Provisioning | Updates the e-mail address of a user    |
| Alias Updated              | Provisioning | Updates the alias of a user             |
| MI Updated                 | Provisioning | Updates the middle name of a user       |
| Work Phone Updated         | Provisioning | Updates the work phone number of a user |
| First Name Updated         | Provisioning | Updates the first name of a user        |

| <b>Function</b>                  | <b>Type</b>    | <b>Description</b>  |
|----------------------------------|----------------|---|
| Last Name Updated                | Provisioning   | Updates the last name of a user   |
| Title Updated                    | Provisioning   | Updates the title of a user   |
| Home Phone Updated               | Provisioning   | Updates the home phone number of a user   |
| Fax Updated                      | Provisioning   | Updates the fax number of a user  |
| Preferred Communications Updated | Provisioning   | Updates the preferred communications setting of a user  |
| Extension Updated                | Provisioning   | Updates the extension number of a user  |
| Employee Type Updated            | Provisioning   | Updates the employee type of a user   |
| Job Title Updated                | Provisioning   | Updates the job title of a user   |
| Reconciliation Delete Received   | Reconciliation | Deletes the user from Oracle Identity Manager if the user has been deleted from the target system |
| Reconciliation Insert Received   | Reconciliation | Inserts a user in Oracle Identity Manager   |
| Reconciliation Update Received   | Reconciliation | Updates a user in Oracle Identity Manager   |

## Reconciliation Module

This section discusses the elements that the reconciliation module extracts from the target system to construct reconciliation event records.

Reconciliation can be divided into the following types:

- [Lookup Fields Reconciliation](#)
- [User Reconciliation](#)

### Lookup Fields Reconciliation

Lookup fields reconciliation involves reconciling the following lookup fields:

- `Lookup.Siebel.TimeZone`
- `Lookup.Siebel.PreferredCommunications`
- `Lookup.Siebel.Position`
- `Lookup.Siebel.EmployeeTypeCode`
- `Lookup.Siebel.Responsibility`
- `Lookup.Siebel.PersonalTitle`

### User Reconciliation

User reconciliation involves reconciling the fields discussed in this section.

#### Reconciled Resource Object Fields

The following fields are reconciled:

- UserID
- First Name

- Last Name
- Middle Name
- Alias
- JobTitle
- EmployeeType
- PersonalTitle
- E-mail
- Fax
- Phone
- Time Zone
- Position
- Responsibility
- Preferred Communications
- IT Resource Type

#### **Reconciled Xellerate User Fields**

The following fields are reconciled only if reconciliation is implemented in trusted mode:

- UserID
- Password
- Organization
- FirstName
- LastName
- Xellerate Type
- Xellerate
- Role

## **Provisioning Module**

The following fields of Siebel are provisioned:

- UserID
- First Name
- Last Name
- Middle Name
- Alias
- Job Title
- EmployeeType
- PersonalTitle
- E-mail

- Fax
- Phone
- Time Zone
- Position
- Responsibility
- Preferred Communications
- IT Resource Type

## Files and Directories That Comprise the Connector

The files and directories that comprise this connector are compressed in the following ZIP file on the installation media:

Enterprise Applications\Siebel Enterprise Applications\Siebel User Management Rev 1.0.0.zip

These files and directories are listed in the following table.

| File in the Installation Media Directory  | Description  |
|---|--|
| xml\SiebelEmpResourceObject.xml   | This file contains the following components of the connector: <ul style="list-style-type: none"><li>■ IT resource type</li><li>■ Custom process form</li><li>■ Process task and rule-generator adapters (along with their mappings)</li><li>■ Resource object</li><li>■ Pre-populate rules</li></ul> |
| xml\SiebelEmpXLResourceObject.xml   | This file contains the configuration for the Xellerate User. You must import this file only if you plan to use the connector in trusted source reconciliation mode.  |
| lib\xlSiebel.jar  | This JAR file contains connector code that is used to interact with the target system for provisioning and reconciliation.   |
| For Siebel 7.5, the lib\Siebel7.5.zip file contains the following files:<br>SiebelJI.jar<br>SiebelJI_Common.jar<br>SiebelJI_enu.jar | These files contain the class files required for provisioning and reconciliation. The files to be used while deploying the connector depend on the version of Siebel that you use.   |
| For Siebel 7.8, the lib\Seibel7.8.zip file contains the following files:<br>Siebel.jar<br>SiebelJI_enu.jar                          |  |
| Troubleshoot\log.properties   | This file contains the settings required to create a log file for output generated by the troubleshooting utility.   |

| <b>File in the Installation Media Directory</b> | <b>Description</b>  |
|---|---|
| Troubleshoot\troubleShoot.properties            | This file contains the connection details that are required to connect to the target system. It also contains details about the commands to be run. |
| Troubleshoot\TroubleShootingUtility.class       | This is the standalone class that interacts with the target system. This class contains the code for running the troubleshooting test cases.        |
| docs\B31138_01.pdf<br>docs\html                 | These are PDF and HTML versions of this guide, which provides instructions to deploy the connector.   |

The "[Step 2: Copying the Connector Files and External Code](#)" section on page 2-1 provides instructions to copy these files into the required directories.

---

---

## Deploying the Connector

Deploying the connector involves the following steps:

- [Step 1: Verifying Deployment Requirements](#)
- [Step 2: Copying the Connector Files and External Code](#)
- [Step 3: Importing the Connector XML Files](#)
- [Step 4: Configuring Reconciliation](#)
- [Step 5: Compiling Adapters](#)
- [Step 6: Configuring the Target System for Encryption](#)

This chapter also discusses the following topic:

- [Activating and Deactivating Employee Accounts](#)

### Step 1: Verifying Deployment Requirements

The following table lists the deployment requirements for the connector.

| Item                         | Requirement  |
|------------------------------|--|
| Oracle Identity Manager      | Oracle Identity Manager release 8.5.3 or later   |
| Target systems               | Siebel 7.5 or Siebel 7.8   |
| Target system host platforms | Microsoft Windows 2000 or Microsoft Windows 2003   |
| External code                | For Siebel 7.5:<br><br>SiebelJI.jar, SiebelJI_Common.jar, and SiebelJI_enu.jar<br><br>For Siebel 7.8:<br><br>Siebel.jar and SiebelJI_enu.jar |

### Step 2: Copying the Connector Files and External Code

The connector files and external code files to be copied and the directories to which you must copy them are given in the following table.

**Note:** The directory paths given in the first column of this table correspond to the location of the connector files in the following ZIP file on the installation media:

Enterprise Applications\Siebel Enterprise Applications\Siebel User Management Rev 1.0.0.zip

Refer to "[Files and Directories That Comprise the Connector](#)" on page 1-4 for more information about these files.

| File in the Installation Media Directory  | Destination Directory                                     |
|---|---|
| The following files in the xml directory:<br>SiebelEmpResourceObject.xml<br>SiebelEmpXLResourceObject.xml   | <i>xellerate_home</i> \xellerate\Siebel1.0.0\xml          |
| lib\xlSiebel.jar  | <i>xellerate_home</i> \xellerate\JavaTasks                |
| If you are using Siebel 7.5, then extract the following files from the lib\Siebel7.5.zip file:<br><br>SiebelJI.jar<br>SiebelJI_Common.jar<br>SiebelJI_enu.jar | <i>xellerate_home</i> \xellerate\JavaTasks                |
| If you are using Siebel 7.8, then extract the following files from the lib\Siebel7.8.zip file:<br><br>Siebel.jar<br>SiebelJI_enu.jar                          |   |
| The following files in the Troubleshoot directory:<br><br>log.properties<br>troubleShoot.properties<br>TroubleShootingUtility.class                           | <i>xellerate_home</i> \xellerate\Siebel1.0.0\Troubleshoot |
| The following contents of the docs directory:<br>B31138_01.pdf<br>html  | <i>xellerate_home</i> \xellerate\Siebel1.0.0\docs         |

## Step 3: Importing the Connector XML Files

To import the connector XML files into Oracle Identity Manager:

1. Open the Oracle Identity Manager Administrative and User Console.
2. Click the **Deployment Management** link on the left navigation bar.
3. Click the **Import** link under Deployment Management. A dialog box for locating files is displayed.
4. Locate and open the `SiebelEmpResourceObject.xml` file, which is in the `xellerate_home\XELLERATE\SIEBEL1.0.0\xml` directory. Details of this XML file are shown on the File Preview page.
5. Click **Add File**. The Substitutions page is displayed.

6. Click **Next**. The Confirmation page is displayed.
7. Click **Next**. The Provide IT Resource Instance Data page for the SIEBEL IT Resource IT resource is displayed.
8. Specify values for the parameters of the SIEBEL IT Resource IT resource. Refer to the table in the "[Defining IT Resources](#)" section on page 2-3 for information about the values to be specified.
9. Click **Next**. The Provide IT Resource Instance Data page for a new instance of the SIEBEL IT Resource Definition IT resource type is displayed.
10. Click **Skip** to specify that you do not want to define another IT resource. The Confirmation page is displayed.

**See Also:** If you want to define another IT resource, then refer to *Oracle Identity Manager Tools Reference Guide* for instructions.

11. Click **View Selections**.

The contents of the XML file are displayed on the Import page. You may see a cross-shaped icon along with some nodes. You must remove these nodes. To do this, right-click each such node and then select **Remove**.

12. Click **Import**. The connector XML file is imported into Oracle Identity Manager.
13. If you plan to use the connector in trusted source reconciliation mode, then perform the same procedure to import the `SiebelEmpXMLResourceObject.xml` file. This file is in the `xellerate_home\XELLERATE\SIEBEL1.0.0\xml` directory.

---

**Caution:** Only one connector can be configured as a trusted source. If you import the `SiebelEmpXMLResourceObject.xml` file while you have another trusted source configured, then both connector reconciliations would stop working.

---

After you import the connector XML file, proceed to the "[Step 4: Configuring Reconciliation](#)" section on page 2-4.

## Defining IT Resources

You must specify values for the SIEBEL IT Resource IT resource parameters listed in the following table.

| Parameter Name    | Description                           | Sample/Default Value |
|-------------------|---------------------------------------|----------------------|
| EnterpriseServer  | Name of the Enterprise server         | siebel               |
| GatewayServer     | Name of the Gateway server            | STS_TESTING          |
| GatewayServerPort | Port of the Gateway server            | 2320                 |
| Language          | Language                              | enu                  |
| ObjectManager     | Name of the object manager            | SCCObjMgr_enu        |
| Password          | Password of the Siebel administrator  | sadmin               |
| SiebelServer      | Name of the Siebel server             | STS_TESTING          |
| UserName          | User name of the Siebel administrator | sadmin               |

| Parameter Name | Description  | Sample/Default Value  |
|----------------|--|---|
| Encryption     | Type of encryption for secure communication<br><br><b>Note:</b> The value of this parameter is case-sensitive.   | RSA (if encryption is required)<br><br>or<br><br>None (if encryption is not required) |
| Version        | Version of Siebel supported by this connector  | 7.5 or 7.8  |
| TimeStamp      | The value is empty for the first-time reconciliation. From then onward, this parameter stores the time at which the last reconciliation run was completed. | Apr 16, 2006 at<br>11:35:00<br>GMT+05:30  |

After you specify values for these IT resource parameters, go to Step 9 of the procedure to import connector XML files.

## Step 4: Configuring Reconciliation

Configuring reconciliation involves creating scheduled tasks for lookup fields and user reconciliations. To create these scheduled tasks:

1. Open the Oracle Identity Manager Design Console.
2. Expand the **Xellerate Administration** folder.
3. Select **Task Scheduler**.
4. Click **Find**. The details of the predefined scheduled tasks are displayed on two different tabs.
5. Enter a number in the **Max Retries** field. This number represents the number of times Oracle Identity Manager should attempt to complete the task before assigning the **ERROR** status to the task.
6. Ensure that the **Disabled** and **Stop Execution** check boxes are cleared.
7. In the Start region, double-click the **Start Time** field. From the date-time editor that is displayed, select the date and time at which you want the task to run.
8. In the Interval region, set the following schedule parameters:
  - To set the task to run on a recurring basis, select the **Daily**, **Weekly**, **Recurring Intervals**, **Monthly**, or **Yearly** option.  
  
If you select the **Recurring Intervals** option, then you must also specify the time interval at which you want the task to run on a recurring basis.
  - To set the task to run only once, select the **Once** option.
9. Provide values for the attributes of the scheduled task. Refer to the appropriate table in the "[Specifying Values for the Scheduled Task Attributes](#)" section on page 2-5 for information about the values to be specified.

**See Also:** *Oracle Identity Manager Design Console Guide* for information about adding and removing task attributes

10. Click **Save**. The scheduled task is created. The `INACTIVE` status is displayed in the **Status** field, because the task is not currently running. The task is run at the date and time that you set in Step 7.

11. Repeat Steps 5 through 10 to create the second scheduled task.

After you create both scheduled tasks, proceed to the ["Step 5: Compiling Adapters"](#) section on page 2-6.

## Specifying Values for the Scheduled Task Attributes

This section provides information about the attribute values to be specified for the following scheduled tasks:

- [Lookup Fields Reconciliation Scheduled Task](#)
- [User Reconciliation Scheduled Task](#)

### Lookup Fields Reconciliation Scheduled Task

You must specify values for the following attributes of the lookup fields reconciliation scheduled task.

---

---

**Note:** Attribute values are predefined in the connector XML file that you import. Specify values only for those attributes that you want to change.

---

---

| Attribute Name | Description             | Default/Sample Value |
|----------------|-------------------------|----------------------|
| ITResource     | Name of the IT resource | SIEBEL IT Resource   |

After you specify values for these scheduled task attributes, go to Step 10 of the procedure to create scheduled tasks.

### User Reconciliation Scheduled Task

You must specify values for the following attributes of the user reconciliation scheduled task.

---

---

**Note:** Attribute values are predefined in the connector XML file that you import. Specify values only for those attributes that you want to change.

---

---

| Attribute Name | Description                          | Default/Sample Value   |
|----------------|--------------------------------------|------------------------|
| Organization   | Oracle Identity Manager users        | OIM Users              |
| Xellerate Type | Type of Oracle Identity Manager user | End user Administrator |
| Role           | Default role                         | Consultant             |
| ITResource     | Name of the IT resource              | SIEBEL IT Resource     |
| ResourceObject | Resource object name                 | SIEBEL Resource Object |

| Attribute Name | Description  | Default/Sample Value   |
|----------------|--|--|
| isTrusted      | Specifies whether or not trusted source reconciliation must be performed<br><br>This parameter is set to <code>true</code> for trusted source reconciliation. It is set to <code>false</code> for target resource reconciliation.  | False (Nontrusted reconciliation)<br><br>True (Trusted reconciliation) |
| Password       | Password of the Oracle Identity Manager user   | Dummy123   |
| isDeleteRecon  | Specifies whether or not delete users reconciliation must be performed<br><br>If this parameter is set to <code>true</code> , then the users that are deleted from the target system are deleted from Oracle Identity Manager. If this parameter is set to <code>false</code> , then the users that are deleted from the target system are not deleted from Oracle Identity Manager.<br><br>Note: This parameter is provided only for optimization, because Siebel does not maintain the records of deleted users. | True or False  |

After you specify values for these scheduled task attributes, go to Step 10 of the procedure to create scheduled tasks.

## Step 5: Compiling Adapters

The following adapters are imported into Oracle Identity Manager when you import the connector XML file. You must compile these adapters before you can use them to provision accounts on the target system.

- PrePopulate SIEBEL Form
- Siebel Delete User
- Siebel Modify User
- Siebel Add Position
- Siebel Create User
- Siebel Remove Position
- Siebel Add Responsibility
- Siebel Remove Responsibility

To compile adapters by using the Adapter Manager form:

1. Open the Adapter Manager form.
2. To compile all the adapters that you import into the current database, select the **Compile All** option.

To compile multiple (but not all) adapters, select the adapters you want to compile. Then, select the **Compile Selected** option.

3. Click **Start**. Oracle Identity Manager compiles the adapters that you specify.

To view detailed information about an adapter:

1. Highlight the adapter in the Adapter Manager form.
2. Double-click the row header of the adapter, or right-click the adapter.
3. Select **Launch Adapter** from the shortcut menu that is displayed. Details of the adapter are displayed.

---

---

**Note:** To compile multiple adapters simultaneously, use the Adapter Manager form. To compile one adapter at a time, use the Adapter Factory form. Refer to *Oracle Identity Manager Tools Reference Guide* for information about how to use these forms.

---

---

## Step 6: Configuring the Target System for Encryption

---

---

**Note:** Perform this procedure only if you want to use RSA encryption on the target system. If you set the value of the `Encryption IT` resource parameter to `None`, then this step is not required.

---

---

You can configure encryption to secure communication between the Siebel server and Oracle Identity Manager.

### Configuring Siebel for RSA Encryption

This section describes how to configure Siebel to use RSA encryption for Siebel Internet Session API (SISNAPI) communication between the Siebel server and Oracle Identity Manager.

To enable RSA encryption for Siebel:

1. Start the Siebel Software Configuration Wizard.

This wizard is started automatically when you install Siebel. You can also open it manually.

**See Also:** The "[Starting the Siebel Software Configuration Wizard](#)" section on page 2-8 for information about starting the wizard manually.

2. On the Encryption Type page of the wizard, select one of the following encryption settings:
  - **RSA:** Select this option if you want to use the RSA Security Systems 128-bit strong encryption feature for Siebel components.
  - **None:** Select this option if you do not want to use encryption.
3. Review the settings, and exit the wizard.
4. Restart the server.

### Configuring the Siebel Web Server Extension for RSA Encryption

After you configure Siebel for RSA encryption, perform the same procedure to configure the Siebel Web Server Extension for RSA encryption.

## Enabling RSA Encryption for the Siebel Call Center Application

To enable RSA encryption for the Siebel Call Center Application:

1. Start the Siebel Call Center Application.
2. Navigate to **Sitemap, Server Administration, Components, and Component Parameters**.
3. Query for **Call Center Object Manager (ENU)** in the Components List Applet.
4. In the Component Parameter List applet, select the **Encryption Type** parameter and select **RSA**. If RSA encryption is not required, then select **None** instead of **RSA**.

## Starting the Siebel Software Configuration Wizard

This section provides information about starting the Siebel Software Configuration Wizard.

The Siebel Software Configuration Wizard opens automatically after the installation of most server components. If required, you can use one of the following methods to manually start the wizard on a Microsoft Windows computer:

- From the Microsoft Windows desktop:
  1. Click **Start**.
  2. Select **Programs, Siebel Servers 7.0, and Configure *Server\_Type***, where ***Server\_Type*** is the server you want to configure. For example, ***Server\_Type*** can be Siebel Gateway.
- From a command window:
  1. Open a command window and navigate to the `bin` subdirectory component to configure components in the `SIEBEL_ROOT` directory. For example, `D:\sea700\siebsrvr\bin`.
  2. Depending on the component that you want to configure, enter one of the following commands:
    - To configure the Siebel Database Server, enter the following command:

```
ssincfgw -l LANGUAGE -v y
```
    - To configure any component except the Siebel Database Server, enter the following command:

```
ssincfgw -l LANGUAGE
```

In these commands, *LANGUAGE* is the language in which the Siebel Software Configuration Wizard must run. For example, `ENU` for U.S. English or `DEU` for German. When you run any one of these commands, a menu of configuration modules for each installed component is displayed.

## Activating and Deactivating Employee Accounts

---

---

**Note:** This is not part of the deployment procedure.

---

---

To activate an employee account in Siebel, assign any responsibility from Oracle Identity Manager.

To deactivate an employee account in Siebel, delete all the responsibilities of the employee from Oracle Identity Manager.

---

---

## Testing the Connector

After you deploy the connector, you must test it to ensure that it functions as expected.

This chapter contains the following sections:

- [Running Test Cases](#)
- [Troubleshooting](#)

### Running Test Cases

This section discusses test cases that you can implement by using the troubleshooting utility.

You can use the troubleshooting utility to directly use the connector for identifying the cause of problems associated with connecting to the target system server and performing basic operations on the target system.

Before you use the troubleshooting utility, you must set the required values in the `troubleShoot.properties` file. This file is in the `xellerate_home\xellerate\Siebell1.0.0\Troubleshoot` directory. The following table describes the sections of this file.

| Section Name                 | Information   |
|------------------------------|---|
| Siebel Connection Parameters | Connection parameters required to connect to the target system  |
| Create User                  | Values required to create a user on the target system   |
| Modify User                  | Values required to modify a user  |
| Delete User                  | User ID of the user to be deleted   |
| Reconciliation               | Date from which modified data is to be reconciled<br>The To Date value is taken as the current date and time. |

Depending on the version of Siebel that you are using, set the classpath to the JAR files listed in the "[Step 2: Copying the Connector Files and External Code](#)" section on page 2-1.

Then, perform the following tests:

- Create a user as follows:

```
java
-DTproperties=xellerate_home/xellerate/Siebell1.0.0/Troubleshoot/troubleShoot.pr
operties-Dlog4j.configuration=file:/xellerate_home/xellerate/Siebell1.0.0/Troubl
eshoot/log.properties TroubleShootingUtility C
```

- Modify a user as follows:

```
java
-DTproperties=xellerate_home/xellerate/Siebel1.0.0/Troubleshoot/troubleShoot.pr
operties-Dlog4j.configuration=file:/xellerate_home/xellerate/Siebel1.0.0/Troubl
eshoot/log.properties TroubleShootingUtility M
```

- Delete a user as follows:

```
java
-DTproperties=xellerate_home/xellerate/Siebel1.0.0/Troubleshoot/troubleShoot.pr
operties-Dlog4j.configuration=file:/xellerate_home/xellerate/Siebel1.0.0/Troubl
eshoot/log.properties TroubleShootingUtility D
```

- Reconcile data as follows:

```
java TroubleShootingUtilityLdap -java -DTproperties=
xellerate_home/xellerate/Siebel1.0.0/Troubleshoot/troubleShoot.properties
-Dlog4j.configuration=file:/xellerate_home/xellerate/Siebel1.0.0/Troubleshoot/l
og.properties TroubleShootingUtility R
```

---

---

**Note:** Ensure that the location of the `troubleShoot.properties` and `log.properties` files is correctly specified.

---

---

## Troubleshooting

The following sections list solutions to some commonly encountered errors of the following types:

- [Connection Errors](#)
- [Create User Errors](#)
- [Delete User Errors](#)
- [Edit User Errors](#)

### Connection Errors

The following table lists the solution to a commonly encountered connection error.

| Problem Description   | Solution   |
|---|--|
| Oracle Identity Manager cannot establish a connection to Siebel.<br><b>Returned Error Message:</b><br>SIEBEL Connection exception | <ul style="list-style-type: none"> <li>■ Ensure that the Siebel server is running.</li> <li>■ Ensure that Oracle Identity Manager is working (that is, the database is running).</li> <li>■ Ensure that all the adapters have been compiled.</li> <li>■ Examine the Oracle Identity Manager record (from the IT Resources form). Ensure that values for all the IT resource parameters have been correctly specified.</li> </ul> |

### Create User Errors

The following table lists the solution to a commonly encountered Create User error.

| <b>Problem Description</b>                    | <b>Solution</b>                                       |
|---|---|
| Oracle Identity Manager cannot create a user. | A user with the assigned ID already exists in Siebel. |
| <b>Returned Error Message:</b>                |   |
| User already exists                           |   |
| <b>Returned Error Code:</b>                   |   |
| SIEBEL.EMPLOYEE_ALREADY_EXIST                 |   |

## Delete User Errors

The following table lists the solution to a commonly encountered Delete User error.

| <b>Problem Description</b>                    | <b>Solution</b>                                 |
|---|---|
| Oracle Identity Manager cannot delete a user. | The specified user ID does not exist in Siebel. |
| <b>Returned Error Message:</b>                |   |
| User does not exist in target system          |   |
| <b>Returned Error Code:</b>                   |   |
| SIEBEL.EMPLOYEE_DOES_NOT_EXIST                |   |

## Edit User Errors

The following table lists the solution to a commonly encountered Edit User error.

| <b>Problem Description</b>                    | <b>Solution</b>                  |
|---|----------------------------------|
| Oracle Identity Manager cannot update a user. | Review the log for more details. |
| <b>Returned Error Message:</b>                |                                  |
| User does not exist in target system          |                                  |
| <b>Returned Error Code:</b>                   |                                  |
| SIEBEL.EMPLOYEE_DOES_NOT_EXIST                |                                  |

---

---

## Known Issues

The following are known issues associated with this release of the connector:

- During provisioning, the Set/Reset Password function cannot be run because there is no JDB\_API support.
- During provisioning, the primary position assigned for the user in Siebel cannot be removed through Oracle Identity Manager.
- During reconciliation, an employee's password cannot be fetched because there is no JDB\_API support.
- During reconciliation, the value of the (GMT+13:00) Nuku'alofa time zone cannot be inserted into the database.
- The Lock/Unlock and Disable/Enable functions cannot be run because Siebel does not support these functions.
