

## **Oracle® Identity Manager**

Connector Guide for Novell GroupWise

Release 9.0.2

**B32162-01**

September 2006

Copyright © 2006, Oracle. All rights reserved.

Primary Authors: Debapriya Datta, Shiladitya Guha

Contributing Authors: Don Gosselin, Lyju Vadassery

The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

Oracle, JD Edwards, PeopleSoft, and Siebel are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

---

# Preface

*Oracle Identity Manager Connector Guide for Novell GroupWise* provides information about integrating Oracle Identity Manager with Novell GroupWise.

---

---

**Note:** Some parts of the product and documentation still refer to the original Thor company name and Xellerate product name and will be rebranded in future releases.

---

---

## Audience

This guide is intended for users who want to deploy the Oracle Identity Manager connector for Novell GroupWise.

## Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at

<http://www.oracle.com/accessibility/>

### Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

### Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

### **TTY Access to Oracle Support Services**

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, seven days a week. For TTY support, call 800.446.2398.

## Documentation Updates

Oracle is committed to delivering the best and most recent information available. For information about updates to the Oracle Identity Manager 9.0.2 connector documentation set, visit Oracle Technology Network at

<http://www.oracle.com/technology/documentation/index.html>

## Conventions

This document uses the following text conventions:

| Convention             | Meaning  |
|------------------------|--|
| <b>boldface</b>        | Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.         |
| <i>italic</i>          | Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.                          |
| <code>monospace</code> | Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter. |

---

# What's New in the Oracle Identity Manager Connector for Novell GroupWise?

This chapter provides an overview of the updates made to the connector and documentation for Novell GroupWise in release 9.0.2 of the Oracle Identity Manager connector pack.

The updates discussed in this chapter are divided into the following categories:

- [Software Updates](#)

These include updates made to the connector software.

- [Documentation-Specific Updates](#)

These include major changes made to the connector documentation. These changes are not related to software updates.

**See Also:** *Oracle Identity Manager Release Notes*

## Software Updates

This section discusses the following software updates implemented in this release of the connector.

### **Incorporation of Multilanguage Support**

In addition to English, this release of the connector supports the French and Japanese languages. The following are documentation updates pertaining to the incorporation of this feature:

- The installation media directory includes resource bundle files for the languages supported by the connector. These resource bundle files are described in the "[Files and Directories That Comprise the Connector](#)" section on page 1-3.
- The "[Step 2: Copying the Connector Files and External Code](#)" section on page 2-2 specifies the destination directory into which you must copy the resource bundle files during the deployment procedure.
- The "[Step 3: Configuring the Oracle Identity Manager Server](#)" section on page 2-2 describes the procedure to change to the required input locale and to clear content related to connector resource bundles from the server cache.
- Changes have been made in the procedure described in the "[Running Test Cases](#)" section on page 3-1 to accommodate the multilanguage support feature.
- [Chapter 4, "Known Issues"](#) discusses a new issue related to the use of non-English locales.

## Determining the Release Number of the Connector

Instructions to determine the release number of the connector are given in the ["Determining the Release Number of the Connector"](#) section on page 1-5.

## Documentation-Specific Updates

The following documentation-specific updates have been made in this release of the guide:

- In the ["Supported Functionality"](#) section on page 1-1, the descriptions of some of the functions have been reworded.
- The `debugGW.log` file has been removed from the table in the ["Files and Directories That Comprise the Connector"](#) section on page 1-3.
- The following changes have been made in the ["Step 1: Verifying Deployment Requirements"](#) section on page 2-1:
  - Oracle Identity Manager uses a Novell GroupWise user account to connect to and exchange data with Novell GroupWise. Information about the minimum rights that must be assigned to this user account has been added.
  - A diagram showing the operating environment architecture of the connector has been added.
- Instructions to copy the connector JAR files and adapter files to all the nodes of a clustered environment have been added in the following sections:
  - [Step 2: Copying the Connector Files and External Code](#) on page 2-2
  - [Step 3: Configuring the Oracle Identity Manager Server](#) on page 2-2
  - [Step 6: Compiling Adapters](#) on page 2-11
- Instructions to use Oracle Identity Manager for linking multiple installations of Novell GroupWise are given in the ["Configuring the Connector for Multiple Installations of the Target System"](#) section on page 2-12.
- [Appendix A](#) provides information about attribute mappings between Oracle Identity Manager and Novell GroupWise.

---

## About the Connector

Oracle Identity Manager automates access rights management, security, and provisioning of IT resources. Oracle Identity Manager connectors are used to integrate Oracle Identity Manager with third-party applications. The connector for Novell GroupWise is used to integrate Oracle Identity Manager with Novell GroupWise.

---

**Note:** Oracle Identity Manager connectors were referred to as *resource adapters* prior to the acquisition of Thor Technologies by Oracle.

---

This chapter contains the following sections:

- [Supported Functionality](#)
- [Multilanguage Support](#)
- [Reconciliation Module](#)
- [Provisioning Module](#)
- [Files and Directories That Comprise the Connector](#)
- [Determining the Release Number of the Connector](#)

### Supported Functionality

The following table lists the functions that are available with this connector.

| Function                           | Type         | Description  |
|------------------------------------|--------------|--|
| Create Mailbox                     | Provisioning | Creates a mailbox  |
| Delete Mailbox                     | Provisioning | Deletes a mailbox  |
| Disable Mailbox                    | Provisioning | Disables a mailbox   |
| Enable Mailbox                     | Provisioning | Enables a mailbox  |
| Move Post Office                   | Provisioning | Moves a user from one post office to another               |
| Update User                        | Provisioning | Updates the specified Novell GroupWise attribute of a user |
| Add User To Distribution List      | Provisioning | Adds a user to a distribution list                         |
| Remove User From Distribution List | Provisioning | Removes a user from a distribution list                    |

| Function                           | Type           | Description   |
|------------------------------------|----------------|---|
| Add Nickname to User               | Provisioning   | Adds a nickname or alias for a user   |
| Delete Nickname of User            | Provisioning   | Deletes the nickname or alias of a user   |
| Reset User Password                | Provisioning   | Updates a user's Novell GroupWise password  |
| Create Mailbox                     | Reconciliation | Adds a user's mailbox information   |
| Delete Mailbox                     | Reconciliation | Deletes a user's mailbox information  |
| Disable Mailbox                    | Reconciliation | Disables a user's mailbox   |
| Enable Mailbox                     | Reconciliation | Enables a user's mailbox  |
| Update User                        | Reconciliation | Updates the user's profile by using user information retrieved from the Novell GroupWise system                                   |
| Add User To Distribution List      | Reconciliation | Adds the user's distribution group membership information by using user information retrieved from the Novell GroupWise system    |
| Remove User From Distribution List | Reconciliation | Removes the user's distribution group membership information by using user information retrieved from the Novell GroupWise system |
| Add Nickname to User               | Reconciliation | Adds the user's nickname information by using user information retrieved from the Novell GroupWise system                         |
| Delete Nickname of User            | Reconciliation | Removes the user's nickname by using user information retrieved from the Novell GroupWise system                                  |

## Multilanguage Support

In addition to English, this release of the connector supports the following languages:

- French
- Japanese

---

---

**Note:** Novell GroupWise does not support the entry of non-ASCII characters. Refer to [Chapter 4, "Known Issues"](#) on page 4-1 for more information about this limitation.

---

---

## Reconciliation Module

This section discusses the elements that the reconciliation module extracts from the target system in order to construct a reconciliation event record.

Reconciliation can be divided into the following types:

- [Lookup Fields Reconciliation](#)
- [User Reconciliation](#)

### Lookup Fields Reconciliation

Lookup fields reconciliation involves reconciling the Distribution List and Post Office List lookup fields.

## User Reconciliation

The following fields are reconciled:

- User ID
- Visibility
- File ID
- Exp Date
- Gateway Account ID
- Gateway Access
- Distribution List
  - Dist List
  - Participation
- Nick Names
  - Nick Name
  - NNVisibility
- eDir Server Name
- GW Server Name

## Provisioning Module

The following fields are provisioned:

- User ID
- Visibility
- File ID
- Exp Date
- Gateway Account ID
- Gateway Access
- Distribution List
  - Dist List
  - Participation
- Nick Names
  - Nick Name
  - NNVisibility
- eDir Server Name
- GW Server Name

## Files and Directories That Comprise the Connector

The files and directories that comprise this connector are compressed in the following ZIP file on the installation media:

Collaboration and Messaging Applications\Novell GroupWise\Novell GroupWise Rev

2.2.0.zip

These files and directories are listed in the following table.

| File in the Installation Media Directory  | Description   |
|---|---|
| xml\xliGroupWise65UserObject.xml  | This file contains definitions for the following components of the connector: <ul style="list-style-type: none"><li>■ IT resource type</li><li>■ Custom process form</li><li>■ Process task and rule-generator adapters (along with their mappings)</li><li>■ Resource object</li><li>■ Provisioning process</li><li>■ Pre-populate rules that are used with this connector</li></ul> |
| lib\xliGroupWise65.jar  | This JAR file contains the class files required for provisioning and reconciliation.  |
| lib\tcGroupWise65.dll   | This DLL file contains the native code required to communicate with the Novell GroupWise client.  |
| Files in the resources directory  | Each of these files contains locale-specific information that is used by the connector.   |
| troubleshoot\tstGroupWise65.jar   | This file contains the wrapper files and the test utility class.  |
| troubleshoot\tcGroupWise65.dll  | This file contains the native code required to interface with Novell GroupWise.   |
| troubleshoot\config.properties  | In this configuration file, connection information about Novell eDirectory and Novell GroupWise and other related parameters are specified.   |
| troubleshoot\log4j.properties   | This file is used to specify the directory in which the log file is to be created when you run the troubleshooting utility.   |
| troubleshoot\log4j-1.2.8.jar  | This file creates a log file for troubleshooting utility operations.  |
| troubleshoot\testcreate.bat<br>troubleshoot\testmodify.bat<br>troubleshoot\testdelete.bat | These batch files are used to run specific tests on the connector. They call the appropriate method in the test utility class.  |
| docs\B32162_01.pdf  | This guide, which provides instructions to deploy the connector.  |

---

**Note:** The files in the troubleshoot directory are used only to run tests on the connector.

---

The ["Step 2: Copying the Connector Files and External Code"](#) section on page 2-2 provides instructions to copy these files into the required directories.

## Determining the Release Number of the Connector

You can determine the release number of the connector at any of the following stages:

### Before Deployment

To determine the release number of the connector before you deploy it:

1. Extract the contents of the `xliGroupWise65.jar` file. This file is in the `lib` directory inside the installation media directory.
2. Open the `manifest.mf` file in a text editor, which is one of the files bundled inside the `xliGroupWise65.jar` file.

In the `manifest.mf` file, the release number of the connector is displayed as the value of the `Version` property.

---

**Note:** If you maintain a copy of the `xliGroupWise65.jar` file after deployment, you can use this method to determine the release number of the connector at any stage. However, after you deploy the connector, it is recommended that you use the [After Deployment](#) method.

---

### During Deployment

To determine the release number of the connector while deploying the connector, refer to Step 4 of the procedure described in the ["Step 4: Importing the Connector XML File"](#) section on page 2-4.

### After Deployment

To determine the release number of the connector after deploying the connector:

**See Also:** *Oracle Identity Manager Design Console Guide*

1. Open the Oracle Identity Manager Design Console.
2. In the Form Designer, open the process form. The release number of the connector is the value of the **Version** field.

---

## Deploying the Connector

Deploying the connector involves the following steps:

- [Step 1: Verifying Deployment Requirements](#)
- [Step 2: Copying the Connector Files and External Code](#)
- [Step 3: Configuring the Oracle Identity Manager Server](#)
- [Step 4: Importing the Connector XML File](#)
- [Step 5: Configuring Reconciliation](#)
- [Step 6: Compiling Adapters](#)
- [Step 7: Configuring SSL](#)

If you want to configure the connector for multiple installations of Novell GroupWise, then perform the following procedure:

- [Configuring the Connector for Multiple Installations of the Target System](#)

### Step 1: Verifying Deployment Requirements

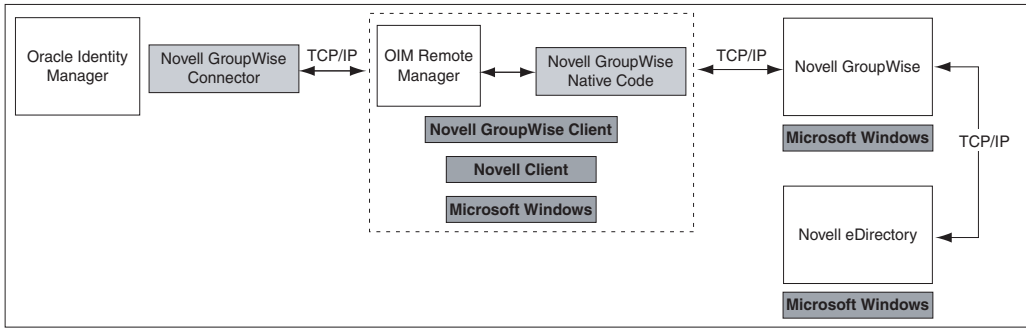

The following table lists the deployment requirements for the connector.

| Item                         | Requirement  |
|------------------------------|--|
| Oracle Identity Manager      | Oracle Identity Manager release 8.5.3  |
| Target systems               | Novell GroupWise 6.5   |
| Target system host platforms | Microsoft Windows 2000   |
| Other systems                | Novell eDirectory 8.7.3  |
| External code                | tcGroupWise65.dll  |
| Target system user account   | Novell GroupWise user account to which the Supervisor right has been assigned<br>You provide the credentials of this user account while performing the procedure in the <a href="#">"Defining IT Resources"</a> section on page 2-5. |

In addition to the requirements listed in this table, you must also ensure that Novell Client and the remote manager are installed and running.

**See Also:** *Oracle Identity Manager Installation Guide* for instructions about installing the remote manager

The following diagram shows the operating environment architecture of the connector.

## Step 2: Copying the Connector Files and External Code

The connector files and external code files to be copied and the directories to which you must copy them are given in the following table.

**Note:** The directory paths given in the first column of this table correspond to the location of the connector files in the following ZIP file on the installation media:

Collaboration and Messaging Applications\Novell GroupWise\Novell GroupWise Rev 2.2.0.zip.

Refer to the ["Files and Directories That Comprise the Connector"](#) section on page 1-3 for more information about these files.

| File in the Installation Media Directory | Destination Directory   |
|--|---|
| xml\xliGroupWise65UserObject.xml         | OIM_home\xellerate\groupwise\xml  |
| lib\xliGroupWise65.jar                   | OIM_home\xellerate\JavaTasks  |
| lib\tcGroupWise65.dll                    | Copy this DLL file into a directory that is included in the PATH environment variable on the remote manager server. |
| Files in the resources directory         | OIM_home\xellerate\connectorResources   |
| Files in the troubleshoot directory      | OIM_home\xellerate\groupwise\troubleshoot   |
| docs\B32162_01.pdf                       | OIM_home\xellerate\docs\groupwise   |

**Note:** While installing Oracle Identity Manager in a clustered environment, you copy the contents of the installation directory to each node of the cluster. Similarly, you must copy the connectorResources directory and the JAR files to the corresponding directories on each node of the cluster.

## Step 3: Configuring the Oracle Identity Manager Server

Configuring the Oracle Identity Manager server involves performing the following procedures:

---

**Note:** In a clustered environment, you must perform this step on each node of the cluster.

---

- [Configuring the Date Format](#)
- [Changing to the Required Input Locale](#)
- [Clearing Content Related to Connector Resource Bundles from the Server Cache](#)

## Configuring the Date Format

You must perform the following steps to configure the date format on the Oracle Identity Manager server:

1. Open the Oracle Identity Manager Design Console.
2. Open the Xellerate Administration\System Configuration form.
3. Add a new entry in the *Server* category. The following are the details:
 

Name: `Default date format`

Keyword: `XL.DefaultDateFormat`

Value: `yyyy-MM-dd hh:mm:ss`
4. Click **Save**.

## Changing to the Required Input Locale

Changing to the required input locale involves installing the required fonts and setting the required input locale.

To set the required input locale:

---

**Note:** Depending on the operating system used, you may need to perform this procedure differently.

---

1. Open Control Panel.
2. Double-click **Regional Options**.
3. On the Input Locales tab of the Regional Options dialog box, add the input locale that you want to use and then switch to the input locale.

## Clearing Content Related to Connector Resource Bundles from the Server Cache

Whenever you add a new resource bundle file in the *OIM\_home\xellerate\connectorResources* directory or make a change in an existing resource bundle file, you must clear content related to connector resource bundles from the server cache.

To clear content related to connector resource bundles from the server cache:

1. In a command window, change to the *OIM\_home\xellerate\bin* directory.
2. Enter one of the following commands:

---

---

**Note:** You must perform Step 1 before you perform this step. If you run the command as follows, then an exception is thrown:

`OIM_home\xellerate\bin\batch_file_name`

---

---

- On Microsoft Windows:

`PurgeCache.bat ConnectorResourceBundle`

- On UNIX:

`PurgeCache.sh ConnectorResourceBundle`

In this command, `ConnectorResourceBundle` is one of the content categories that you can remove from the server cache. Refer to the following file for information about the other content categories:

`OIM_home\xellerate\config\xlConfig.xml`

---

---

**Note:** You can ignore the exception that is thrown when you perform Step 2.

---

---

## Step 4: Importing the Connector XML File

To import the connector XML file into Oracle Identity Manager:

1. Open the Oracle Identity Manager Administrative and User Console.
2. Click the **Deployment Management** link on the left navigation bar.
3. Click the **Import** link under Deployment Management. A dialog box for locating files is displayed.
4. Locate and open the `xliGroupwise65UserObject.xml` file, which is in the `OIM_home\xellerate\groupwise\xml` directory. Details of this XML file are shown on the File Preview page.
5. Click **Add File**. The Substitutions page is displayed.
6. Click **Next**. The Confirmation page is displayed.
7. Click **Next**. The Provide IT Resource Instance Data page for the GroupWise XRM IT resource is displayed.
8. Specify values for the parameters of the GroupWise XRM IT resource. Refer to the table in the ["Defining IT Resources"](#) section on page 2-5 for information about the values to be specified.
9. Click **Next**. The Provide IT Resource Instance Data page for a new instance of the Remote Manager resource type is displayed.
10. Repeat Steps 7, 8, and 9 for the Groupwise IT Resource and eDirectory IT Resource IT resources.
11. Click **Skip** to specify that you do not want to define another IT resource. The Confirmation page is displayed.

**See Also:** If you want to define another IT resource, then refer to *Oracle Identity Manager Tools Reference Guide* for instructions.

12. Click **View Selections**.

The contents of the XML file are displayed on the Import page. You may see a cross-shaped icon along with some nodes. Remove these nodes by right-clicking each node and then selecting **Remove**.

**13. Click Import.** The connector file is imported into Oracle Identity Manager.

After you import the connector XML file, proceed to the ["Step 5: Configuring Reconciliation"](#) section on page 2-8.

## Defining IT Resources

This section provides information about the parameters for the following IT resources:

- [GroupWise XRM](#)
- [eDirectory IT Resource](#)
- [Groupwise IT Resource](#)

### GroupWise XRM

You must specify values for the Groupwise XRM IT resource parameters listed in the following table.

| Parameter    | Description  |
|--------------|--|
| Service Name | Name of the remote manager<br>Default value: RManager  |
| URL          | Host name or IP address of the server hosting the remote manager<br>Sample value: //10.0.0.1:12345 |

After you specify values for these IT resource parameters, proceed to Step 9 of the procedure to import connector XML files.

### eDirectory IT Resource

You must specify values for the eDirectory IT Resource IT resource parameters listed in the following table.

| Parameter      | Description   |
|----------------|---|
| Admin Id       | DN of the user who has administrator rights on the target LDAP<br><br>If this administrator has read/search rights, then that would be sufficient because this administrator is used only to search for existing users and no modification is done in Novell eDirectory.<br>Sample value: cn=Admin,ou=People, o=xyz |
| Admin Password | Password of the administrator<br>Sample value: password   |
| Server Address | Host name or IP address of the server hosting Novell eDirectory   |
| Root DN        | Base DN from where the search for the user starts<br>Sample value: o=xyz  |

| Parameter                   | Description   |
|-----------------------------|---|
| Port                        | Port number of the Novell eDirectory server<br>Sample value: 389  |
| SSL                         | Specifies whether or not SSL is to be used to secure communication between Oracle Identity Manager and Novell GroupWise<br>The value can be <code>true</code> or <code>false</code> . If it is set to <code>true</code> , then you must import the certificate of the eDirectory server into Oracle Identity Manager.   |
| Last Recon TimeStamp        | For the first reconciliation run, the timestamp value is not set. For subsequent rounds of reconciliation, the time at which the previous round of reconciliation was completed is stored in this parameter.<br>Sample value: 2006-06-02 12:08:06   |
| Prov Attribute Lookup Code  | Name of the lookup definition that has the target attribute mappings required for provisioning<br>The value must be <code>AttrName.Prov.Map.EDIR</code> .   |
| Recon Attribute Lookup Code | Name of the lookup definition that has the target attribute mappings required for reconciliation<br>The value must be <code>AttrName.Recon.Map.EDIR</code> .  |
| Use XL Org Structure        | If set to <code>true</code> , then the Oracle Identity Manager Organization structure is used during provisioning and reconciliation.<br>If set to <code>false</code> , then the value of the Organization field in the process form is used for provisioning and the organization or container in the target Oracle Internet Directory is used for reconciliation. |

After you specify values for these IT resource parameters, proceed to Step 9 of the procedure to import connector XML files.

### Groupwise IT Resource

You must specify values for the Groupwise IT Resource IT resource parameters listed in the following table.

| Parameter                   | Description   |
|-----------------------------|---|
| GroupWise Domain DN or Path | Refer to <a href="#">"GroupWise Domain DN or Path"</a> on page 2-7 for detailed information about this parameter.   |
| Admin User ID               | DN of the user who has administrator rights on the target Novell GroupWise server<br>This administrator must have read/write access to the Novell GroupWise system/domain database.<br>Ensure that this DN is entered in the dot format and not in the comma format. For example:<br><code>cn=admin.ou=admgrp (valid)</code><br><code>cn=admin,ou=admgrp (invalid)</code> |
| Admin Password              | Password of the administrator   |

| Parameter                   | Description  |
|-----------------------------|--|
| eDir Context                | <p>The eDirectory context below which the administrator is present. The administrator ID plus this context should be the complete DN of the administrator. This context is usually one level below the eDirectory tree.</p> <p>For example:</p> <p>Suppose the DN of the administrator is as follows:</p> <pre>cn=admin.ou=admgrp.o=marketing</pre> <p>Then, the value of this parameter can be either <code>o=marketing</code> or <code>marketing</code>.</p> |
| eDir Server Address         | Host name or IP address of the server hosting Novell eDirectory  |
| eDir Tree                   | <p>Name of the Novell eDirectory tree under which the Novell GroupWise domain and the administrator are present</p> <p>This is the topmost level in Novell eDirectory.</p> <p>Sample value: <code>AcmeWidgets</code></p>   |
| UseEDirAuth                 | <p>Specifies whether the target Novell GroupWise uses eDirectory password or GroupWise password for authentication.</p> <p>If it is set to <code>true</code>, then the password is sent as an empty string when the Create Mailbox and Change User password/Reset Password functions are run. The password specified by the user is ignored. If it is set to <code>false</code>, then the password specified is set as the mailbox password.</p>               |
| Last Recon TimeStamp        | The value is empty for the first reconciliation run. After that, the time at which the last reconciliation run was completed is stored in this parameter.  |
| Recon Attribute Lookup Code | <p>Contains the target attributes to be reconciled</p> <p>Sample lookup definition:</p> <pre>AttrName.Recon.Map.GW</pre>   |

### GroupWise Domain DN or Path

The complete DN of the Novell GroupWise domain or the path of the domain folder must be specified in one of the following ways:

#### ■ Local System Path

The local system path can be specified in any one of the following ways:

- By using the Domain DN path as follows:

```
Domain DN: 'cn=GWdomain.ou=org_unit_name.dc=companyname.dc=com.o=org_name'
```

For example:

```
Domain DN: 'cn=MyGWdomain.ou=MyDomains.dc=AcmeWidgets.dc=com.o=ACME'
```

---

**Note:** Use dots (not commas) to separate the object classes as shown in the preceding example.

---

- By using the local directory path as follows:

```
drive:\\domain_directory_path
```

For example:

```
f:\\groupwise\\testdomain
```

- **UNC Path**

The UNC path can be specified in any one of the following ways:

- By using the host name as follows

```
\\hostname\\share\\domainfolder
```

For example

```
\\testsvr\\myshare\\testdomain
```

- By using the IP address as follows:

```
\\IPAddress\\share_name\\domain_name
```

For example:

```
\\10.0.0.1\\myshare\\testdomain
```

The recommended method is to use the DN or the local directory path. If the domain is on a different computer, then map that folder locally and mention the local path. Use this method if you are not able to connect to the domain by using the DN.

After you specify values for these IT resource parameters, proceed to Step 9 of the procedure to import connector XML files.

## Step 5: Configuring Reconciliation

Configuring reconciliation involves creating the reconciliation scheduled tasks as follows:

1. Open the Oracle Identity Manager Design Console.
2. Expand the **Xellerate Administration** folder.
3. Select **Task Scheduler**.
4. Click **Find**. The details of the predefined scheduled tasks are displayed on different tabs.
5. For the first scheduled task, enter a number in the **Max Retries** field. This number represents the number of times Oracle Identity Manager must attempt to complete the task before assigning the **ERROR** status to the task.
6. Ensure that the **Disabled** and **Stop Execution** check boxes are not selected.
7. In the Start region, double-click the **Start Time** field. From the date-time editor that is displayed, select the date and time at which you want the task to run.
8. In the Interval region, set the following schedule parameters:
  - To set the task to run on a recurring basis, select the **Daily**, **Weekly**, **Recurring Intervals**, **Monthly**, or **Yearly** option.  
  
If you select the **Recurring Intervals** option, then you must also specify the time interval at which you want the task to run on a recurring basis.
  - To set the task to run only once, select the **Once** option.

9. Provide values for the attributes of the scheduled task. Refer to the ["Specifying Values for the Scheduled Task Attributes"](#) section on page 2-9 for information about the values to be specified.

**See Also:** *Oracle Identity Manager Design Console Guide* for information about adding and removing task attributes

10. Click **Save**. The scheduled task is created. The `INACTIVE` status is displayed in the **Status** field, because the task is not currently running. The task is run at the date and time that you set in Step 7.
11. Repeat Steps 5 through 10 to create the remaining scheduled tasks.

After you create the remaining scheduled tasks, proceed to the ["Step 6: Compiling Adapters"](#) section on page 2-11.

## Specifying Values for the Scheduled Task Attributes

This section provides information about the values to be specified for the following scheduled tasks:

- [User Reconciliation Scheduled Task](#)
- [Distribution List Lookup Field Reconciliation Scheduled Task](#)
- [Post Office List Lookup Fields Reconciliation Scheduled Task](#)

### User Reconciliation Scheduled Task

You must specify values for the following attributes of the user reconciliation scheduled task.

---

**Note:** Attribute values are predefined in the connector XML file that you import. Specify values only for those attributes that you want to change.

---

| Attribute            | Description  | Sample/Default Value   |
|----------------------|--|------------------------|
| ITResourceName       | Name of the IT resource for setting up a connection to Novell GroupWise  | Groupwise IT Resource  |
| eDirITResourceName   | Name of the IT resource for setting up a connection to Novell eDirectory   | eDirectory IT Resource |
| RemoteResourceName   | Name of the IT resource in which the remote service name and URL is specified  | GroupWise XRM          |
| ResourceObjectName   | Name of the resource object into which users need to be reconciled   | Groupwise User         |
| XLDeleteUsersAllowed | If this attribute is set to true, then the Delete reconciliation event is started. Users who are deleted from the target system are removed from Oracle Identity Manager. This requires all the users on the target system to be compared with all the users in Oracle Identity Manager.<br><br><b>Note:</b> This process affects performance. | true                   |

After you specify values for these task attributes, proceed to Step 10 of the procedure to create scheduled tasks.

### Distribution List Lookup Field Reconciliation Scheduled Task

You must specify values for the following attributes of the Distribution List lookup fields reconciliation scheduled task.

---

---

**Note:** Attribute values are predefined in the connector XML file that you import. Specify values only for those attributes that you want to change.

---

---

| Attribute      | Description  | Sample/Default Value         |
|----------------|--|------------------------------|
| LookupCodeName | Name of the master distribution list lookup code table   | Lookup.NGW.DistributionLists |
| ITResourceName | Name of the IT resource for setting up a connection to Novell eDirectory   | eDirectory IT Resource       |
| SearchContext  | Name of the Novell GroupWise context   | O=mpaf_tree                  |
| ObjectClass    | Name of the object class for the distribution list object  | groupWiseDistributionList    |
| ReconMode      | Specify REFRESH to completely refresh the existing lookup.<br><br>Specify UPDATE to update the lookup with the new values. | Refresh                      |

After you specify values for these task attributes, proceed to Step 10 of the procedure to create scheduled tasks.

### Post Office List Lookup Fields Reconciliation Scheduled Task

You must specify values for the following attributes of the Post Office List lookup field reconciliation scheduled task.

---

---

**Note:** Attribute values are predefined in the connector XML file that you import. Specify values only for those attributes that you want to change.

---

---

| Attribute      | Description  | Sample/Default Value   |
|----------------|--|------------------------|
| LookupCodeName | Name of the master Post Office List lookup code table                    | Lookup.NGW.PostOffices |
| ITResourceName | Name of the IT resource for setting up a connection to Novell eDirectory | eDirectory IT Resource |
| SearchContext  | Name of the Novell GroupWise context                                     | O=mpaf_tree            |
| ObjectClass    | Name of the object class for the Post Office List object                 | groupWisePostOffice    |

| Attribute | Description  | Sample/Default Value |
|-----------|--|----------------------|
| ReconMode | Specify REFRESH to completely refresh the existing lookup.<br><br>Specify UPDATE to update the lookup with new values. | Refresh              |

After you specify values for these task attributes, proceed to Step 10 of the procedure to create scheduled tasks.

## Step 6: Compiling Adapters

The following adapters are imported into Oracle Identity Manager when you import the connector XML file:

- NGW Create Mailbox
- NGW Delete Mailbox
- NGW Disable Mailbox
- NGW Enable Mailbox
- NGW Move User to PostOffice
- NGW Add User to Distribution List
- NGW Remove User from Distribution List
- NGW Add Nickname to User
- NGW Reset Password
- NGW Change User Password
- NGW PP String
- NGW Delete Nickname of User

You must compile these adapters before you can use them to provision accounts on the target system.

To compile adapters by using the Adapter Manager form:

1. Open the Adapter Manager form.
2. To compile all the adapters that you import into the current database, select **Compile All**.

To compile multiple (but not all) adapters, select the adapters you want to compile. Then, select **Compile Selected**.

---

**Note:** Click **Compile Previously Failed** to recompile only those adapters that were not compiled successfully. Such adapters do not have an OK compilation status.

---

3. Click **Start**. Oracle Identity Manager compiles the selected adapters.
4. If Oracle Identity Manager is installed in a clustered environment, then copy the compiled adapters from the `OIM_home\xellerate\Adapter` directory to the same directory on each of the other nodes of the cluster. If required, overwrite the adapter files on the other nodes. Then, restart each node.

To view detailed information about an adapter:

1. Highlight the adapter in the Adapter Manager form.
2. Double-click the row header of the adapter, or right-click the adapter.
3. Select **Launch Adapter** from the shortcut menu that is displayed. Details of the adapter are displayed.

---

**Note:** To compile one adapter at a time, use the Adapter Factory form. Refer to *Oracle Identity Manager Tools Reference Guide* for information about using the Adapter Factory and Adapter Manager forms.

---

## Step 7: Configuring SSL

---

**Note:** This is an optional step of the deployment procedure.

---

To set up SSL connectivity between Oracle Identity Manager and the Novell GroupWise server:

1. Import the certificate from the target system into the JSDK (the JSDK that is used during installation of Oracle Identity Manager) `cacerts` keystore as follows:

```
keytool -import -alias alias_name -file  
certificate_file_name_with_complete_path -keystore  
java_home\jre\lib\security\cacerts
```

Here, *java\_home* is the JDK directory used for Oracle Identity Manager.

2. Restart Oracle Identity Manager.
3. In the eDirectory IT Resource IT resource:
  - Set the `SSL` parameter value to `true`.
  - Set the `Port` parameter value to the SSL port number. Typically, this number is 636.

## Configuring the Connector for Multiple Installations of the Target System

---

**Note:** Perform this procedure only if you want to configure the connector for multiple installations of Novell GroupWise. Refer to *Oracle Identity Manager Design Console Guide* for detailed instructions on performing each step of this procedure.

---

To configure the connector for multiple installations of the target system:

1. Create and configure one resource object for each target system installation.

The Resource Objects form is in the Resource Management folder. The `Groupwise User` resource object is created when you import the connector XML file. You can use this resource object as the template for creating the remaining resource objects.
2. Create and configure one IT resource for each resource object. Ensure that the IT resources are of the same IT resource type.

The IT Resources form is in the Resource Management folder. The Groupwise IT Resource IT resource is created when you import the connector XML file. You can use this IT resource as the template for creating the remaining IT resources, of the same resource type.

**3. Design process forms for each resource object.**

The Form Designer form is in the Development Tools folder. The following process forms are created when you import the connector XML file:

- UD\_NGWS\_USR (main form)
- UD\_NGW\_NICK (child form for multivalue attributes)
- UD\_NGW\_DIST (child form for multivalue attributes)

You can use these process forms as templates for creating the remaining process forms.

**4. Create and configure one process definition per resource object.**

The Process Definition form is in the Process Management folder. The Groupwise User process definition is created when you import the connector XML file. You can use this process definition as the template for creating the remaining process definitions.

While creating process definitions for each target system installation, the following steps that you must perform are specific to the creation of each process definition:

- From the **Object Name** lookup field, select the resource object that you create in Step 1.
  - From the **Table Name** lookup field, select the process form that you create in Step 3.
  - While mapping the adapter variables for the IT Resource data type, ensure that you select the IT resource that you create in Step 2 from the **Qualifier** list.
- 5. Configure reconciliation for each target system installation.** Refer to the "[Step 5: Configuring Reconciliation](#)" section on page 2-8 for instructions. Note that only the values of the following attributes are to be changed for each reconciliation scheduled task:
- ITResourceName
  - ResourceObjectName

When you use the Administrative and User Console to perform provisioning, you can specify the IT resource corresponding to the Novell GroupWise installation to which you want to provision the user.

---

## Testing and Troubleshooting

After you deploy the connector, you must test it to ensure that it functions as expected. This chapter discusses the following topics related to connector testing:

- [Running Test Cases](#)
- [Troubleshooting](#)

### Running Test Cases

You can use the troubleshooting utility to identify the cause of problems associated with connecting to the target system and performing basic operations on the target system.

To use the troubleshooting utility:

1. Specify the required values in the `config.properties` file.

This file is in the `OIM_home\xellerate\groupwise\troubleshoot` directory. The following table describes the sections of this file in which you must provide information for running the tests.

| Section                                 | Information   |
|---|---|
| Novell eDirectory Connection Parameters | Connection parameters required to connect to the Novell eDirectory system<br><br>Refer to the " <a href="#">Defining IT Resources</a> " section on page 2-5 for information about the values that you must provide. |
| Novell GroupWise Connection Parameters  | Connection parameters required to connect to the Novell GroupWise system<br><br>Refer to the " <a href="#">Defining IT Resources</a> " section on page 2-5 for information about the values that you must provide.  |
| Create Mailbox Parameters               | Values required to create a mailbox   |
| Modify Mailbox Parameters               | Values required to modify a mailbox   |
| Delete Mailbox Parameters               | Values required to delete a mailbox   |

2. In the `log4j.properties` file in the same directory:
  - a. Set the path of the directory in which you want to create the log files as the value of the following parameter:

```
log4j.appender.logfile.File=log_file_path
```

Here, *log\_file\_path* is the path of the directory in which you want to create the log file.

**b.** Specify any one of the following log levels:

- DEBUG
- INFO
- WARN
- ERROR
- FATAL

For example, if the log level for DEBUG is to be enabled, then you must add the following entry file:

```
log4j.rootLogger=DEBUG,A1,logfile
```

3. Use a text editor to open each of the BAT files in the *OIM\_home\xellerate\groupwise\troubleshoot* directory. The names of the JAR files that must be added to the CLASSPATH environment variable are given in these BAT files. Copy these JAR files into the same directory as the BAT files and then add them to the CLASSPATH environment variable.
4. Run the appropriate BAT file to test the creation, modification, and deletion of users in Novell GroupWise:
  - Create a user by running the *testcreate.bat* file.  
After you run the BAT file, check if the user is created in Novell GroupWise according to the details given in the *config.properties* file. If you run this BAT file from a command window, then the *User\_Creation\_Successful* message is displayed.
  - Modify the user by running the *testmodify.bat* file.  
After you run the BAT file, check if the user is modified in Novell GroupWise according to the details given in the *config.properties* file. If you run this BAT file from a command window, then the *User\_Modification\_Successful* message is displayed.
  - Delete the user by running the *testdelete.bat* file.  
After you run the BAT file, check if the user is deleted from Novell GroupWise. If you run this BAT file from a command window, then the *User\_Deletion\_Successful* message is displayed.

When you run troubleshooting utility, the *debugGW.log* file is created in the *OIM\_home\xellerate\groupwise\troubleshoot* directory.

## Troubleshooting

This section provides solutions to the following commonly encountered errors associated with the connector:

- [Remote Method Invocation Errors](#)
- [Novell GroupWise Connector Errors](#)

### Remote Method Invocation Errors

The following are steps to resolve remote method invocation errors:

- Verify that the URL has been correctly specified in the GroupWise XRM IT resource definition.
- In the remote manager form, ensure that the **Running** check box is selected for the GroupWise XRM IT resource. If it is not selected, then the remote manager may not be running.

## Novell GroupWise Connector Errors

Errors discussed in this section are divided on the basis of response codes:

- [Common Response Codes for All Use Cases](#)
- [Use Case-Specific Response Codes](#)

### Common Response Codes for All Use Cases

The errors discussed in the following table correspond to common response codes for all use cases.

| Problem Description  | Solution  |
|--|---|
| <p>Oracle Identity Manager cannot establish a connection with Novell eDirectory.</p> <p><b>Returned Error Message:</b></p> <p>Unable to communicate with the eDirectory server</p> <p><b>Returned Error Code:</b></p> <p>GW_EDIR_COMMUNICATION_ERROR</p> | <ul style="list-style-type: none"> <li>■ Ensure that the Novell eDirectory server is running.</li> <li>■ Ensure that Oracle Identity Manager is running.</li> <li>■ Ensure that all the adapters have been compiled.</li> <li>■ Use the IT Resources form to examine the Oracle Identity Manager record. Ensure that the IP address, admin ID, and admin password are correct.</li> <li>■ Check if the SSL IT resource parameter is set to <code>false</code>. It must be set to <code>true</code> if the Novell eDirectory server is accepting only SSL connections.</li> <li>■ Check if the specified eDirectory connection values (in the Novell eDirectory IT resource) are correct.</li> </ul> |
| <p>Target not available.</p> <p><b>Returned Error Message:</b></p> <p>eDirectory server is probably unavailable</p> <p><b>Returned Error Code:</b></p> <p>GW_EDIR_TARGET_UNAVAILABLE_ERROR</p>   | <ul style="list-style-type: none"> <li>■ Check if Novell eDirectory is running.</li> <li>■ Check if the Novell eDirectory connection values specified in the eDirectory IT resource definition are correct.</li> <li>■ Check if the server IP address in the Novell eDirectory/GroupWise connection information is correct.</li> </ul>  |
| <p>Authentication error</p> <p><b>Returned Error Message:</b></p> <p>Unable to authenticate to the Novell eDirectory server</p> <p><b>Returned Error Code:</b></p> <p>GW_EDIR_AUTHENTICATION_ERROR</p>   | <ul style="list-style-type: none"> <li>■ Check if the Novell eDirectory connection values, especially the admin credentials, specified in the IT resource definition are correct.</li> <li>■ Check if the SSL IT resource parameter is set to <code>false</code>. It must be set to <code>true</code> if SSL has been enabled on the Novell eDirectory server.</li> </ul>   |
| <p>Naming error</p> <p><b>Returned Error Message:</b></p> <p>Naming exception occurred while trying to connect to the Novell eDirectory server</p> <p><b>Returned Error Code:</b></p> <p>GW_EDIR_INVALID_NAMING_ERROR</p>                                | <p>Check if the Novell eDirectory connection values specified in the IT resource definition are correct.</p>  |

| Problem Description   | Solution   |
|---|--|
| <p>Oracle Identity Manager cannot establish a connection to Novell Directory Services (NDS).</p> <p><b>Returned Error Message:</b><br/>NDS Connection failed</p> <p><b>Returned Error Code:</b><br/>GW_NDS_CONNECTION_FAILED</p>                | <ul style="list-style-type: none"> <li>■ Ensure that Novell eDirectory is running.</li> <li>■ Ensure that Oracle Identity Manager is running.</li> <li>■ Ensure that all the adapters have been compiled.</li> <li>■ Use the IT Resources form to examine the Oracle Identity Manager record. Ensure that the IP address, admin ID, and admin password are correct.</li> <li>■ Check if the Novell GroupWise connection values specified in the IT resource definition are correct.</li> <li>■ Check if some other user is connected to the NDS server through Novell Client. If yes, then close that connection.</li> </ul> |
| <p>Oracle Identity Manager cannot establish a connection to Novell Directory Services (NDS).</p> <p><b>Returned Error Message:</b><br/>Invalid NDS eDirectory credentials</p> <p><b>Returned Error Code:</b><br/>GW_NDS_INVALID_CREDENTIALS</p> | <ul style="list-style-type: none"> <li>■ Check if the Novell GroupWise connection values, especially the admin credentials, specified in the IT resource definition are correct.</li> <li>■ Check if some other user is connected to the NDS server through Novell Client. If yes, then close that connection.</li> </ul>  |
| <p>Oracle Identity Manager cannot establish a connection to Novell GroupWise.</p> <p><b>Returned Error Message:</b><br/>Failed to create instance of GroupWise class</p> <p><b>Returned Error Code:</b><br/>GW_FAILED_TO_CREATE_INSTANCE</p>    | <ul style="list-style-type: none"> <li>■ Check if Novell Client has been installed on the computer on which the remote manager is installed.</li> <li>■ Check if the Novell GroupWise client has been installed on the computer on which the remote manager is installed.</li> </ul>   |

### Use Case-Specific Response Codes

The errors discussed in the following table correspond to response codes that are specific to use cases. For all the errors listed in the table, you must review the log file to determine the exact error.

| Problem Description  | Solutions   |
|--|---|
| Oracle Identity Manager cannot create a user or mailbox in Novell GroupWise.<br><b>Returned Error Message:</b><br>Create Mailbox failed<br><b>Returned Error Code:</b><br>GW_MAILBOX_CREATE_FAILED | Review the log file to determine the exact error. |

| Problem Description  | Solutions  |
|--|--|
| <p>Oracle Identity Manager cannot delete a user or mailbox in Novell GroupWise.</p> <p><b>Returned Error Message:</b></p> <p>Delete Mailbox failed</p> <p><b>Returned Error Code:</b></p> <p>GW_MAILBOX_DELETE_FAILED</p>                    | <p>Review the log file to determine the exact error.</p>   |
| <p>Oracle Identity Manager cannot disable a user or mailbox in Novell GroupWise.</p> <p><b>Returned Error Message:</b></p> <p>Disable Mailbox failed</p> <p><b>Returned Error Code:</b></p> <p>GW_MAILBOX_DISABLE_FAILED</p>                 | <p>Review the log file to determine the exact error.</p>   |
| <p>Oracle Identity Manager cannot add a nickname to the user.</p> <p><b>Returned Error Message:</b></p> <p>Nickname add failed</p> <p><b>Returned Error Code:</b></p> <p>GW_NICKNAME_ADD_FAILED</p>  | <p>A nickname already exists for the specified user. Review the log file to determine the exact error.</p> |
| <p>Oracle Identity Manager cannot remove the nickname of a user.</p> <p><b>Returned Error Message:</b></p> <p>Nickname remove failed</p> <p><b>Returned Error Code:</b></p> <p>GW_NICKNAME_REMOVE_FAILED</p>                                 | <p>Review the log file to determine the exact error.</p>   |
| <p>Oracle Identity Manager cannot add a user to a distribution list.</p> <p><b>Returned Error Message:</b></p> <p>Add user to distribution list failed</p> <p><b>Returned Error Code:</b></p> <p>GW_DISTLIST_USERADD_FAILED</p>              | <p>Review the log file to determine the exact error.</p>   |
| <p>Oracle Identity Manager cannot remove a user from a distribution list.</p> <p><b>Returned Error Message:</b></p> <p>Remove user from distribution list failed</p> <p><b>Returned Error Code:</b></p> <p>GW_DISTLIST_USERREMOVE_FAILED</p> | <p>Review the log file to determine the exact error.</p>   |
| <p>Oracle Identity Manager cannot reset the password of a user.</p> <p><b>Returned Error Message:</b></p> <p>Password reset failed</p> <p><b>Returned Error Code:</b></p> <p>GW_PASSWORD_RESET_FAILED</p>                                    | <p>Review the log file to determine the exact error.</p>   |

| Problem Description   | Solutions   |
|---|---|
| <p>Oracle Identity Manager cannot move a user to the specified post office.</p> <p><b>Returned Error Message:</b></p> <p>Move user to postoffice failed</p> <p><b>Returned Error Code:</b></p> <p>GW_POSTOFFICE_MOVEUSER_FAILED</p> | <p>Review the log file to determine the exact error.</p>  |
| <p>Oracle Identity Manager cannot modify an attribute of a user.</p> <p><b>Returned Error Message:</b></p> <p>User attribute modify failed</p> <p><b>Returned Error Code:</b></p> <p>GW_USER_ATTRIBUTE_SET_FAILED</p>               | <p>The specified attribute name may be invalid. Review the log file to determine the exact error.</p> |

---

## Known Issues

The following are known issues associated with this release of the connector:

- The user search operation is based on the user ID only.
- Changes in distribution list data and nickname list data are not reconciled because the connector does not update the `modifyTimeStamp` field.
- If the distribution list or nickname list is empty, then reconciliation is performed with the `[None]` string value as the Distribution List and Nick Name List values in Oracle Identity Manager.
- Fields in the `AttrName.Recon.Map.GW` lookup table that do not begin with the `ldap` prefix cannot have duplicate values.
- Versions 6.5 and 7.0 of Novell GroupWise do not support the entry of non-ASCII characters. Therefore, you cannot transfer non-ASCII data through the connector. However, error messages and response codes would be displayed in Oracle Identity Manager in the language corresponding to the locale that you select.

## Attribute Mappings Between Oracle Identity Manager and Novell GroupWise

The following table discusses attribute mappings between Oracle Identity Manager and Novell GroupWise.

| Oracle Identity Manager Attribute | Novell GroupWise Attribute   | Description   |
|-----------------------------------|--|---|
| User ID                           | cn   | User's login ID   |
| Visibility                        | nGWVisibility  | Visibility of user in GroupWise system                                  |
| File ID                           | nGWFileID  | GroupWise users unique FileID   |
| Post Office                       | nGWPostOffice  | PostOffice for addressing Messages                                      |
| Exp Date                          | nGWMailboxExpirationTime   | GroupWise Mailbox expiration time                                       |
| Account ID                        | nGWAccountID   | User's GateWay account ID   |
| Gateway Access                    | nGWGatewayAccess   | Restricts access to a GroupWise gateway                                 |
| ldapObjectClass                   | objectclass  | Named group of attributes   |
| ldapUserObjectClass               | inetOrgPerson  | Objectclass to create a user  |
| ldapUserDNPrefix                  | cn   | common name   |
| ldapTargetResourceTimeStampField  | modifyTimestamp  | Modified time stamp of the user   |
| ldapMultiValAttr                  | Distribution List, Dist List, Participant, Nick Names, Nick Name, NNVisibility | Multivalue Attributes   |
| Dist List                         | distlist   | Public address list   |
| Participant                       | participant  | Participation type (To, Cc, or Bcc)                                     |
| Nick Name                         | nickname   | Alternative address   |
| NNVisibility                      | visibility   | Determines which post office the object's information is distributed to |
