Typographical Conventions and Visual Cues

This section discusses:

- Typographical conventions.
- Visual cues.
- Country, region, and industry identifiers.
- Currency codes.

- The date on which a change of address becomes effective.
- The date on which a lease becomes effective.
- The date on which a price becomes effective.
- The date on which the currency exchange rate becomes effective.
- The date on which a tax rate becomes effective.

Fiscal Period and Fiscal Year

Enter a number that identifies the general ledger period and year. For many programs, you can leave these fields blank to use the current fiscal period and year defined in the Company Names & Number program (P0010).

G/L Date (general ledger date)

Enter the date that identifies the financial period to which a transaction will be posted. The system compares the date that you enter on the transaction to the fiscal date pattern assigned to the company to retrieve the appropriate fiscal period number and year, as well as to perform date validations.

JD Edwards EnterpriseOne Virtual Autopilot Preface

This preface discusses Oracle's JD Edwards Virtual Autopilot companion documentation.

JD Edwards Virtual Autopilot Companion Documentation

Additional, essential information describing the setup and design of Oracle's JD Edwards EnterpriseOne Tools resides in companion documentation. The companion documentation consists of important topics that apply to Oracle's JD Edwards Virtual Autopilot as well as other JD Edwards Tools. You should be familiar with the contents of these companion guides:

- JD Edwards EnterpriseOne Tools Autopilot
- JD Edwards EnterpriseOne Tools Foundation

3. Install JD Edwards Virtual Autopilot	JD Edwards EnterpriseOne installation documentation for your platform.

5. When you have decided on the content and order of the master script, click the Save Master Script button.

The VSMEEditor saves the master script as a .vsm file. The file includes:

- Master script version
- Checksum value to verify file integrity
- RandomStart parameter (a value of 1 means that the first script to run is chosen randomly)
- List of JD Edwards Virtual Autopilot Script files

CHAPTER 6

Understanding Special Considerations for Simulated Playback

This chapter discusses:

- Simulated playback issues.
- Playback timing.
- Call level.
- Synchronous and asynchronous calls.
- Think times.

Simulated Playback Issues

JD Edwards EnterpriseOne Virtual Autopilot from Oracle solves several simulated playback issues. All of the issues in one way or another revolve around the tool's ability to simulate accurately the workings of the JD Edwards EnterpriseOne runtime engine. The Virtual Autopilot Script Editor and the Virtual Script Player work together; the Virtual Autopilot Script Editor stores key playback information and passes it to the Virtual Script Player, which in turn uses the information to assume the role of the runtime engine. This section explains important simulated playback issues and the ways that JD Edwards Virtual Autopilot resolves them.

Playback Timing

This section discusses:

- Event synchronization.
- API playback timing.
- Interthread timing.
