

Oracle Enterprise Single Sign-on Password Reset (ESSO-PR) provides the capability to replace the standard ESSO-PR GINA stub with a bitmap of your choice.

To replace the GINA stub:

1. Create a bitmap 417 pixels wide by 25 pixels high, and 256 colors.
2. Copy the bitmap image to the directory of your choice.
3. Add to the registry:

Reg Key: HKEY_LOCAL_MACHINE\SOFTWARE\Passlogix\SSPR\WindowsInterface
Value Name: Bitmap
Value Type: REG_SZ
Value Data: Full path to the custom bitmap file

You must add the registry key and copy the bitmap to the same location on each Client workstation.

4. Restart Windows.

If the registry key is not turned on, or ESSO-PR does not find the bitmap based on the information in the Value Data registry entry, it defaults to the standard bitmap.
