Preface

The Agile PLM documentation set includes Adobe® Acrobat PDF files. The [Oracle Technology Network \(OTN\) Web site](http://www.oracle.com/technology/documentation/agile.html) <http://www.oracle.com/technology/documentation/agile.html> contains the latest versions of the Agile PLM PDF files. You can view or download these manuals from the Web site, or you can ask your Agile administrator if there is an Agile PLM Documentation folder available on your network from which you can access the Agile PLM documentation (PDF) files.

Note To read the PDF files, you must use the free Adobe Acrobat Reader version 7.0 or later. This program can be downloaded from the [Adobe Web site](http://www.adobe.com) <http://www.adobe.com>.

The [Oracle Technology Network \(OTN\) Web site](http://www.oracle.com/technology/documentation/agile.html) <http://www.oracle.com/technology/documentation/agile.html> can be accessed through Help > Manuals in both Agile Web Client and Agile Java Client. If you need additional assistance or information, please contact [support](http://www.oracle.com/agile/support.html) <http://www.oracle.com/agile/support.html> (<http://www.oracle.com/agile/support.html>) for assistance.

Note Before calling Agile Support about a problem with an Agile PLM manual, please have the full part number, which is located on the title page.

TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, 7 days a week. For TTY support, call 800.446.2398. Outside the United States, call +1.407.458.2479.

Readme

Any last-minute information about Agile PLM can be found in the Readme file on the [Oracle Technology Network \(OTN\) Web site](http://www.oracle.com/technology/documentation/agile.html) <http://www.oracle.com/technology/documentation/agile.html>

Agile Training Aids

Go to the [Oracle University Web page](http://www.oracle.com/education/chooser/selectcountry_new.html) http://www.oracle.com/education/chooser/selectcountry_new.html for more information on Agile Training offerings.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Resolved Issues

This chapter includes the following:

▪ Install and Test Notice	7
▪ Oracle Agile Patch Note	7
▪ Common Services	7
▪ Install and Upgrade.....	12
▪ Integration.....	15
▪ Product Collaboration	22
▪ Product Cost Management	28
▪ Product Portfolio Management	30
▪ Product Quality Management	35

This section lists issues that were resolved during this release. Numbers in bold (for example, 123456) are Customer Support ID numbers from customer-reported issues.

Install and Test Notice

Important Install and test this release on a designated development server before installing it on your production environment. Your development environment should mirror your production environment as closely as possible to provide accurate testing results. It is important to validate the installation of this release, and confirm your integrations are working correctly as part of your minimum due diligence. Any problems or questions noted during your development system testing should be resolved before installing this release on your production environment.

Oracle|Agile Patch Note

Note	The contents of this release include the following Patches: Oracle Agile PLM 9.2.1.3HF52, 9.2.1.4HF23, 9.2.2.2HF17, 9.2.2.3HF3, 9.2.2.3HF4, and 9.2.2.3HF6.
------	-------------------------------------------------------------------------------------------------------------------------------------------------------------

Common Services

281281/ 18973482.6

282585/ 18974748.6

283219/ 18975322.6

Standard Reports

Issue: Report titles are showing the attribute name and not the actual configured name.

Root Cause: Using internal attribute name of the Item Manufacturer tab.

Resolution: Replace the name with display names.

Verification: Follow the steps below to verify the resolution:

1. In Java Client, go to Data Settings > Classes > Parts class > User Interface tab > Select BOM > Attributes: BOM tab.
2. Rename BOM.List01 (both name and the description fields) and enable the field to be visible.
3. Go to Reports and Analytics > Standard Reports > Run Where Used Report report from Web Client.
4. Select the Default Layout and make necessary changes for the field to be visible.
5. In generated report, the attribute name will display the customized one. If the customized attribute name is the same for both Part and Document object, there will be one customized name displayed in the generated report. If Document and Part have different attribute name for the same attribute, the report output will display both of these two names.

282366/ 18974548.6

Standard Reports

Issue: Item description changes on the Where Used report results.

Root Cause: A hard-coded Rev and Site information is passed to the report server side so the report displays a wrong description.

Resolution: Remove the code and pass the Rev and Site information to report server side.

Verification: Follow the steps below to verify the resolution:

1. Log into Web Client.
2. Create a Part.
3. Ensure this part has at least 2 or 3 revisions and change the part description in each revision (Release the part using ECO).
4. Execute the Where Used Report.
5. Select this Part, and note the latest part description is shown.
6. In the Report Output window note the Part Description, this shows the Part description of the latest released revision.

284426/ 18976596.6

Custom Report

Issue: Problems from saving and modifying personal reports.

Root Cause: Each user has a personal report folder, although the folder names are the same. The report is stored in User1's personal folder, so when user2 performs a SaveAs on the report, the new report will still be stored in the User1's personal folder. From this view, the behavior is correct, but

from the security view, this behavior is not acceptable. So when performing these two actions, additional logic should be applied to avoid this case.

Resolution: Do not perform a SaveAs Custom report into another users' personal folder. Check the folder type first. If the folder type is a personal folder and the folder does not belong to the user, then the folder information will be blank when user2 does a SaveAs action.

Verification: Follow the steps below to verify the resolution:

1. User1 sends a link from their personal reports to User2.
2. User2 performs a SaveAs from that link creating a new version of the report.
3. The new version is automatically saved. Meanwhile, the *Folder* field on the Cover Page will not display the Personal folder in the newly created report.

296849/ 18994642.6

Searches

Issue: List of available values in an Advanced Search on manufacturers.General Info.State/Province/Region do not change when the List that the attribute is linked to changes.

Verification: Follow the steps below to verify the resolution:

1. In Java Client as administrator, go to Data Settings > Classes and open Manufacturers > User Interface Tabs > General Information > State/Province/Region.
2. Change Visible to Yes if it is not already.
3. Change List to another list that has some values or create a new list with values for this attribute to be linked to.
4. Save changes.
5. Open another session (either Web or Java).
6. Open a Manufacturer object and verify that the available values are consistent with your new list.
7. Start an advance search with following criteria:
 - Object Type: Manufacturers
 - Field: General Info.State/Province/Region
 - Match if: In
8. Next, click on Values for the search and see that it remains linked to the Region/Province/State list instead of the new list that you linked the attribute to.
9. The values for the list is changed to new list values.

297171/ 18995108.6

Standard Reports

Issue: Mfr Names that contain three blanks export to Microsoft Excel with only one blank.

Root Cause: Browser behavior. If the content contains several blanks, browser just displays them

with only one blank. Essentially the exported report is not a native Excel but a web file.

Resolution: Convert the blank characters to entity () first.

Verification: Follow the steps below to verify the resolution:

1. Create a Manufacturer (Mfr) with three blanks in its name.
2. Create a Custom Report; include the Mfr Name in the Report Output field.
3. Execute the report; export the result into two formats: xls and csv; in the exported file the Mfr name can be displayed with three blanks correctly.

Note	Not for BI publisher report. In BI Publisher report the 3 blanks will be auto-convert into 1 Blank in an exported report.
------	---------------------------------------------------------------------------------------------------------------------------

297954/ 18996234.6

Category

Issue: Deleted sites appear in the user configuration report.

Root Cause: When deleting the site, did not delete site reference, for example the user_assignment table.

Resolution: Handle and filter out those sites which delete_flag is 1.

Verification: Follow the steps below to verify the resolution:

1. Create Site A, assign it to User01.
2. Disable and delete Site A.
3. Execute User Configuration Report and check User01 column; the deleted site is no longer displayed in generated report.

298145/ 18996524.6

302584/ 19004202.6

Attachments

Issue: Checkout on the Content tab is not downloading the file correctly.

298169/ 18996566.6

Standard Reports

Issue: Users Configuration Report does not provide Geography Information.

Root Cause: Missing the Get function for this attribute value.

Resolution: Added a new Integer (CMType.ATT_USER_GEOGRAPHY), 'getGeography' in the

methods variable of UserConfiguration.java.

Verification: Follow the steps below to verify the resolution:

1. Fill in the Geography field of the user in his profile.
2. Go to Reports and Analytics.
3. Expand Standard Reports.
4. Expand Administrator Reports.
5. Execute Users Configuration Report.
6. Geography field can be displayed with correct value.

301186/ 19001704.6

Searches

Issue: A deleted item search takes too long.

Root Cause: SQL Generated uses NVL function and Order by clause.

Verification: Follow the steps below to verify the resolution:

1. Log into Web Client.
2. Search out about 600 items and soft delete them.
3. Click on the Search Folder icon on the left hand pane.
4. Go to Recycle Bin Searches > Deleted Items.
5. The results are presented normally.

301992/ 19003062.6

300478/19000378.6

Web Client

Issue: Wrong search result when using Prompt and searches for item number with leading zero.

Verification: Follow the steps below to verify the resolution:

1. Create items with item numbers:
900002, 090004 (leading zero and leading number)
2. Create and save a search with the following definition:
Object: Items (or Parts)
Title Block. Number Starts With
3. Run the search and enter "09" as the parameter.
4. The result will be 090004.

302646/ 19004324.6

305367/ 19009564.6

305375/ 19009580.6

306241/ 19011300.6

Web Client

Issue: Hanging OC4J process leads to high CPU usage.

Root Cause: Issue was with the Hashmap where multiple objects/threads were trying to access the same hashmap and was going into infinite loop.

Resolution: Modified the code to synchronize the hashmap.

302891/ 19004740.6

Web Client

Issue: The user is unable to create multiple groups within an advanced search.

Root Cause: Because of the wrong condition, adding multiple groups was not allowed.

Resolution: Fixed the issue by modifying the condition to allow multiple groups and also not allowing adding nested brackets.

Verification: Follow the steps below to verify the resolution:

1. Log into Web Client and create a new advanced search.
2. Search for Change Orders; add some search criteria such as: Workflow.Approver\ Workflow.Approver Action\ Workflow.Next Status\ Workflow.Workflow Status etc.
3. Try to add two criteria as one [group1], and another two as another [group2].
4. In Web Client, the Add [Group] is not grayed out and it is allowing adding multi-[groups].

Install and Upgrade

19002010.6

AUT

Issue: AUT did not add the Enable for Search Criteria field to custom attributes.

Root Cause: While deleting notify_template entries before creating a new one, it should not delete the customer created notify_templates. While deleting notify_template we should delete the rows with customized=0.

Resolution: Scripts are added so that it will delete notify_template entry row where customized=0. It will avoid deleting customer created notify entries.

Verification: Follow the steps below to verify the resolution:

1. Working in the DB, create a list attribute with the name PAGETWO_LISTXXX, where XXX is greater than 25.
2. Now upgrade the same DB to 9.2.2.5 using AUT1.5.6.
3. Open the newly created attribute and the open attribute.
4. Check that the Enable For Search Criteria field in the attribute is now created.

294758/ 18992074.6

301374/ 19002064.6

AUT

Issue: Files without any file type and which are in a FileFolder are not migrated.

Root Cause: Attachment_map table's FILE_ID column had become NULL for file type equal to Folder in the customer database while upgrading.

Resolution: This is fixed by setting FILE_ID equal to '0' in 85to90post upgrade script.

Verification: Follow the steps below to verify the resolution:

1. Upgraded the DB to 9.2.2.5 using AUT156.
2. Connected to the Appserver and checked for all the attachments that were created using different scenarios.
3. Able to view all three attachments:
 - a) URL
 - b) Single File Attachment and
 - c) Multiple attachments within a file folder.

298933/ 18997792.6

Schedule Management

Issue: Deletion of project objects in the recycle bin leaves orphan records in Activity_baseline table

Root Cause: The AVerify test case is checking whether all parent ids in Activity Baseline table are valid ids in Activity. This is incorrect because after the baseline is created, the parent activities (not the root task) could have been soft deleted and later hard deleted. So there will be some rows in Baseline table with parent ids that are no longer valid ids in Activity table.

Resolution: Different error conditions included for testcase:

- a. 1. Baseline ID does not exist in Activity table where parent_id=0 and root_id=0
 - b. 2. Activity_baseline with Activity ID=Root_id does not exist
 - c. 3. Activity_baseline with Activity ID=parent_id does not exist
- Verification: Follow the steps below to verify the resolution:
1. Upgraded DB to current Agile release using AUT156.

2. From Web Client, created a program and added some phases to the schedule tab of this program. Created a baseline now.
3. Added few more phases to the scheduled tab and created another baseline.
4. Now deleted the root program from the actions menu and after that from Recycle Bin Searches --> Deleted programs.
5. Ran the AVerify testcase that is modified and now the AVerify reports are correct.

300795/ 19000962.6

AUT/AVerify

Issue: AVerify Error AGIL-00155006.

Root Cause: In the migrate_pgc package NO_DATA_FOUND exception was not handled well, if NO_DATA_FOUND exception arises for one row the whole procedure was coming out without updating other rows.

Resolution: Added NO_DATA_FOUND exception. Even if exception arises it will not affect remaining rows.

301206/ 19001744.6

302662/ 19004356.6

AVerify

Issue: Adding line to set NSL_LANG in averify.bat.

Root Cause: Running AVerify 1.5.X on Japanese DB environment without setting NLS_LANG=American_America.utf8. Notice that you will get error: ORA-00904.

Resolution: NLS parameter has been included in AVerify.properties file with default value American_america.utf8.

Verification: Follow the steps below to verify the resolution:

1. Checked for the new parameter that has been added to averify.properties file with default value AMERICAN_AMERICA.UTF8.

302757/ 19004546.6

AVerify

Issue: AVerify log performs incorrect checking.

Root Cause: The POOL_IDS column was added to the activity table in agile version 9.2. These test cases were not checking the version before running, therefore it was throwing POOL_IDS invalid identifier error for 9.2 previous versions.

Resolution: Fixed by including Version check for the testcases AGIL-00015002 and AGIL-00105034.

Verification: Follow the steps below to verify the resolution:

1. Version check has been added to handle these kinds of errors.
2. Checked for the added code in the problematic AVerify testcases.

Integration

Agile 9.2.2.5 SDK

Agile 9.2.2.5 SDK User Guide contains a What's New section on page 4 that should be reviewed. The following summarizes the new features and enhancements implemented in this release of the SDK:

- Building and deploying URL-Based process extensions on a WLS platform.
- New code samples for Working with RFQ Responses
- Discrepancy between the actual Project Start dates and SDK returned dates.
- SDK support for Price Lookup and Cost Rollup functions in Product Cost Management (PCM) module. The following two new APIs enable using the SDK to perform these PCM functions:
 - `lookupPrices(Object, lookupParams)`
 - `costRollup()`

Important The PG&C constants and the relationships table functionality in AgileAPI.jar Release 9.2.2 and subsequent releases of Agile PLM are incompatible with the ones in the earlier versions of AgileAPI.jar .

18996472.6

PX

Issue: Process Extension action menu is not showing up after changing workflow

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client as admin.
2. Go to Data Settings > Process Extension.
3. Create following two PXs that Initiate from Actions menu:
 - PX-A
 - PX-B
4. Go to Data Settings > Classes.
5. Open property of Base Class 'Changes'.
6. Go to Process Extension tab, and set PX-A.
7. Open property of Sub Class 'ECO'.

8. Go to Process Extension tab, and set PX-B.
9. Go to Workflow Settings.
10. Save As 'Default Change Orders' workflow and name it as 'TEST'.
11. Re-login to Java Client and create ECO X.
12. Set workflow 'Default Change Orders'.
13. Select Process Extension from Actions menu. Make sure that both PX-A and PX-B are enabled
14. Change workflow to 'TEST'.
15. Select Process Extension from Actions menu.

19005164.6

PX

Issue: PX menu shows up in order of creation for Tools Menu but not for Actions Menu.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client as admin.
2. Create PX with below names in below order:

C1

B1

A1

Note	Make it available to initiate from both 'Tools Menu' and 'Actions Menu'
------	-------------------------------------------------------------------------

3. Go to Data Settings > Classes.
4. Open property for 'Change Orders' class and go to the Process Extensions tab.
5. Add in order of C1, B1, A1.
6. Go to Tools > Process Extension. Verify that PX should be in the below order:
 - A1
 - B1
 - C1
7. Create ECO and go to the Process Extensions from the Action menu. Verify that PX should be in the below order:
 - A1
 - B1
 - C1

6886892.994

Export

Issue: Hard disk would be exhausted when exporting multiple large files.

Root Cause: The extract code for the BOM item information was not correctly checking if the BOM tab was selected for inclusion in the export, which resulted in too much data getting exported.

Resolution: Code was changed to properly check that the BOM tab was selected for the export.

Verification: Follow the steps below to verify the resolution:

1. Create a Part, P1.
2. On P1's BOM tab, add P2.
3. Export P1, making sure to not select the BOM tab.
4. Open the output file and ensure that P2 is not included in the output.

298246/ 18996692.6

Import

Issue: AML import terminates unexpectedly.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client and go to Admin > Data settings > Classes > Manufacturer Parts > User Interface Tabs > General Information.
2. Modify mfrpart.number.maxlength as 5.
3. Create an Excel file for importing AML's so that value for at least some mfr.partnumbers should be more than 5 characters and import the file.
4. Import does not get terminated unexpectedly. It shows error messages for the manufacturer parts that could not be imported due to exceeding the maximum length.

298818/ 18997598.6

Issue: Import does not ignore WorkflowMatchingCriteriaAttributeModification SmartRule.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client and set SmartRule : WorkflowMatchingCriteriaAttributeModification = Warning.
2. Create criteria as "change.ai.rev equal A" and assign to a new workflow "my eco workflow".
3. Create Change C00001 and add Part P0001 as affected item and set the new workflow for C00001.
4. Go to Tools -> Import and navigate to Preferences and set SmartRules Warning Violation Behavior = Reject.
5. Import the Excel file (containing data related to Item.num and Item.rev).

6. Displays the error for the SmartRule violation behavior.

299249/ 18998258.6

Import

Issue: Fatal error while performing and Import.

Root Cause: Import server tried to load ref-des for the BOM row without checking if it is enabled during re-import with same change order.

Resolution: The fix is checking if the ref-des is enabled when loading it.

Verification: Follow the steps below to verify the resolution:

1. Set visible property to NO of Ref Des attribute of BOM tab of parts class from Java Client.

2. Import the file with content as the following:

```
parent_item, parent_rev, child_item, qty, find_no  
'P01', 'B', 'P03', 2, 10
```

3. Set the Change mode to Redlining and set to new change.

4. Map the fields as below and save the map file.

```
Import File  Agile attribute (default name)
```

```
-----
```

```
parent_item -> Parts.Title Block.Number
```

```
parent_rev -> Parts.Title Block.Rev
```

```
child_item -> Parts.BOM.Item Number
```

```
qty -> Parts.BOM.Qty
```

```
find_no -> Parts.BOM.Find Num
```

5. Do Import successfully.

6. Re-import with the same file with new ECO (ECO3).

7. Import is successful.

8. Do another re-import; change the quantity of the previous imported file and with redlining on ECO3.

9. Import is successful without fatal error.

300130/ 18999782.6

Import

Issue: Unable to Import Item Description into Agile 9.2.2.1.

Root Cause: Import server update item object cover page first, and then add the object into the affected item of the change. The description will be added into the new rev for this case; it is why the update description will fail.

Resolution: Switch the order for update cover page and adding the item to the affected item table. Then the rev is created when updating the description into the new rev.

Verification: Follow the steps below to verify the resolution:

1. User has no modify privilege for Affected Item's description of change.
2. The item was not added into the change.
3. Import source with redline mode (standard template) as the following:
 item, description
 item001, desc001
4. Appropriate error message should be displayed to the user after importing an item in the redline mode with no privilege for the description of change affected item.

300414/ 19000280.6

Export

Issue: Export does not package all of the manufacturer data when extracting the manufacturer tab from the Part record.

Resolution: The issue was resolved by the implementation of other fixes.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client.
2. Enable one test field on mfg page two.
3. Enable the same field on part's mfg tab attribute.
4. Give Read and Modify privileges to the user.
5. Setup ACS - item filter - BOM options=Tab and Items, First level, AML Options=Tab and mfg parts.
6. Create a part.
7. Create a transfer order and release it.
8. Verify the output pdx data.
9. All the data should be exported.

300506/ 19000426.6

SDK

Issue: Adding a group to a User's User Groups table using SDK ITable.createRow() removes its existing Groups

Root Cause: Server deletes existing usergroups and adds new ones. SDK implementation was written to add user groups to existing list.

Resolution: SDK implementation gets current user group list and then adds to the list. The updated list is used to add user groups. Add users one by one to user group list for a user object. Each time the list should increase showing new user group.

Verification: Follow the steps below to verify the resolution:

1. Create one User [U].
2. Create two user groups [UG1 and UG2].
3. Add UG1 to User Group table of user [U].
4. Add UG2 to User Group table of U.
5. Verify that User group table size is 2.

300896/ 19001156.6

Import

Issue: Import creates items when required fields are blank.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client.
2. Go to System Settings > My Assignments tab.
3. Click on the order tab to have the list according to the order.
4. Un-check any one column name.
5. Save it and check the sorting order.
6. Only one column gets unchecked and the sorting order is retained.

300936/ 19001236.6

ChangeCAST

Issue: ChangeCAST in 9.2.2 is adding an extra space.

Verification: Follow the steps below to verify the resolution:

1. Create an ECO.
2. Add space in the 'ECO number' as prefix.
3. Create a profile in the ChangeCAST for Change Order.
3. Enable and transfer the profile in ChangeCAST.
4. Verify the output axml file.
5. The extra space is truncated in the output axml file

301420/ 19002146.6

SDK

Issue: Updating list field using Customers list is very slow with SDK, causes the application server to crash when using WSX.

Root Cause: Originally customer list can be enumerated, which cause the performance issue.

Resolution: Make customer list non-enumerable.

Verification: Follow the steps below to verify the resolution:

1. Create 50000 customers.
2. Make PageTwo List11 and List12 fields visible and set List=customer.
3. Get 3 random customer numbers and update List11 and List12 fields.
4. Verify that the fields of all three customers are updated within a few minutes [About 5 minutes].
5. Now perform the above steps using WSX.

301607/ 19002340.6

301608/ 19002342.6

ACP

Issue: ACP cannot find the attribute because it has a trailing white space.

Resolution: Changed the XML parser to preserve spaces when reading the Applied-to attribute names.

301675/ 19002460.6

ACP

Issue: Java Parameters are not being set in WAS environment.

Root Cause: Unable to quote the value due to a Unix limitation. This means that the path to the WAS authentication property files must not have any spaces anywhere in the path.

Resolution: Moved the double quote (") to make the command valid.

302055/ 19003184.6

ACS

Issue: The CTO cannot go to the Completed status for a file or FTP.

Root Cause: The Response Expected attribute of an ACS destination was being saved with the destination, even for those destination types where it was not applicable (File and FTP).

Resolution: The code has been modified to ignore this attribute for the destination types for which it is not applicable.

Verification: Follow the steps below to verify the resolution:

1. In Java Client, go to Admin, System Settings, ACS, Destinations.
2. Create a new destination.
3. In the create new destination dialog, set the Response Expected to Yes, then set the rest of the attributes for a File destination.
4. Save and the destination should now work properly when a CTO is released using it.

Product Collaboration

244530/ 18936692.6

300301/ 19000086.6

Web Client

Issue: The GoTo option in the Bill of Material fails.

Verification: Follow the steps below to verify the resolution:

1. Log in Web Client as administrator/power user.
2. Open an item that has multiple BOMs.
3. Click "Go To" button, fill in Item Number, and select all levels.
4. Click Find Next. It will find the item and no IE error present.

294866/ 18992188.6

STS

Issue: When ordering on the Manufacturer/Redline Mfr tab, it will not order correctly unless you click the Refresh button on the top pane.

Root Cause: The sort by site is by site ID originally.

Resolution: Use site name instead of site ID.

Verification: Follow the steps below to verify the resolution:

1. Log into Web Client and create 5 Sites as below and enable them:

1 Suzhou

Apple

Banana

Eggplant

San Jose

2. Create a Part and add above Sites to its Site tab.
3. Add site-specific BOM for each site.
4. Add site-specific Manufacturer Part for each site.
5. Create an ECO against the Part.
6. Sort table by Site Name column for Part's Site tab, BOM tab, Manufacturer tab, Redline BOM tab, Redline Manufacturers tab and ECO's AI tab.

It shows as below when Ascending:

1Suzhou
Apple
Banana
Eggplant
San Jose

It shows as below when Descending:

San Jose
Eggplant
Banana
Apple
1Suzhou

298115/ 18996472.6

Java Client

Issue: Process Extension action menu is not showing up after changing workflow.

Resolution: The issue was resolved by the implementation of other fixes.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client as admin.
2. Go to Data Settings > Process Extension.
3. Create the following two PXs that Initiate from Actions menu:
 - PX-A
 - PX-B
4. Go to Data Settings > Classes.
5. Open property of Base Class 'Changes'.
6. Go to Process Extension tab and set PX-A.
7. Open property of Sub Class 'ECO'.
8. Go to Process Extension tab and set PX-B.
9. Go to Workflow Settings.

10. SaveAs 'Default Change Orders' workflow and name it as 'TEST'.
11. Re-login to Java Client and create ECO X.
12. Set workflow 'Default Change Orders'.
13. Select Process Extension from Actions menu. Make sure that both PX-A and PX-B is enabled.
14. Change workflow to 'TEST'.
15. Select Process Extension from Actions menu. The menu displays correctly.

298261/ 18996716.6

301259/ 19001846.6

Changes

Issue: Reject from user under Transfer Authority does not trigger status demotion.

Root Cause: When adding approvers in the process of changeStatus, it treats user group as user in BaseServiceRoute::appendAppObsIDs().

Resolution: Get all users in the user group and add them into approvers.

Verification: Follow the steps below to verify the resolution:

1. Create two users (user1, user2) with Approve/Reject Change privileges.
2. Create two user groups (UG1, UG2), assign user1 into UG1, assign user2 into UG2.
3. Create a Transfer Authority for all changes to start immediately: From user1 to user2.
4. In the change workflow, set the 'If rejected set status to' to Pending for a review status.
5. Create a change, assign this workflow and move to the review status, add UG1 as approver.
6. Log in as user2, open the change from Workflow Routings and reject it.
7. The change is demoted to Pending status automatically as expected.

300787/ 19000946.6

Web Client

Issue: Problem expanding BOM Assemblies (by clicking '+' sign) on BOM Tab.

Verification: Follow the steps below to verify the resolution:

1. Create an Item 'part1' and add one or two Items to the BOM Tab.
2. Create an Item 'PART-A' and add an Item to the BOM Tab.
3. Create a Change ECO1 and release 'PART-A'.
4. Create another Change ECO2 --> Add PART-A to the AI Tab.
5. Add the Assembly 'Part1' created in first step to the BOM of 'PART-A' in Redline Window.
6. Now Open 'PART-A' --> Select Pending Rev --> you can see the Assembly part-1.

7. Click on '+' sign of part-1 to expand the BOM.
8. BOM will expand and display correctly.

301181/ 19001694.6

Java Client

Issue: User is unable to access the Attachment tab in Web Client.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client.
2. Select "Reference Designator Range Indicator List" and try to delete.
3. Should not allow deleting this list.

301209/ 19001750.6

Changes

Issue: Notification is sent to user without Discovery status when changing status.

Root Cause: When routing change, system needs to remove 'noPrivileged' users from 'Notify' field, original design is not consider discover privilege (just read).

Resolution: Set 'true' for ReadDiscover when calling checkDiscReadSignoffPrivileges in removeNoPrivUser() method.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client.
2. Create user1 with below privilege:

Read Change

Note Make sure this user does not have Discovery privilege for Change.

3. Create an ECO.
4. Click Send and set user1 to To field and Send.
5. You will get error 'The following user does not have Discover/Read privileges'. This is OK.
6. Change status.
7. When changing status to CCB, set user1 to Notify field and Route.
8. Error message will prompt 'The following user does not have Discover/Read privileges'.

301258/ 19001844.6

Java Client

Issue: Opening History tab of Change object from search result points to Attachment tab.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client as admin user.
2. Search out changes by Simple Search.
3. From Search Results window, right click on the Change with Attachment, and Open > History Tab.
4. Wait for less than 10 seconds; it will open the Change's History tab instead of Attachment tab.

301979/ 19003036.6

Changes

Issue: When performing an 'Audit Status' on an ECR from the SSR Subclass, this error message appears: "Node 0 does not exist in the cache. It may have been deleted already."

Root Cause: Doing audit on the object with related object does not deal with the workflow without release status.

Resolution: When auditing related object set the right to Status of the workflow without release status.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client as admin user.
2. Save workflow "Default Change Requests" as a new one "Test wlf for ECR".
3. Delete all "Release" and "Complete" status, set Pass Release Audit as Yes for Review status, and then enable this workflow.
4. Create an ECR and select "Test wlf for ECR" in Workflow field.
5. Route the ECR to Review status, Audit Status for this ECR.
6. It will not display "Node 0 does not exist in the cache. It may have been deleted already."

301988/ 19003054.6

303813/ 19006554.6

Changes

Issue: Affected Items Number field width is not adjusted automatically for the items added after row 20.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client.
2. Create 20 items with 6 characters as the item number (i.e. P00001-P00020).
3. Create an item with 30 characters (i.e. P1234678901234567890123456789).
4. Create an ECO and go to the Affected Items tab, and then add one part with 6 characters as the

item number (i.e. P00001).

5. Add item with the 30 characters item number (i.e. P1234678901234567890123456789).
6. Notice that Affected Items tab Item Number field width is adjusted automatically.
7. Remove the item with the 30 characters item number from the Affected Items tab.
8. Add the rest of the items with 6 characters so that there will be a total of 20 affected items listed.
9. Add item with the 30 characters item number from Affected Items tab again and the Item number field width will be adjusted automatically.

302504/ 19004046.6

Changes

Issue: Special character causes the Ref Des field to not display.

Verification: Follow the steps below to verify the resolution:

1. Create a Part and add one BOM.
2. Modify the BOM row and type <SCH> in the Ref Des field.
3. Save the modification. The value for the Ref Des displays correctly for both Java Client and Web Client.

303162/ 19005274.6

Changes

Issue: Releasing a change no longer displays changes where redlines will be lost.

Root Cause: ChangeService::additionalAuditCheck() around L1525 warning message does not match the ExceptionID, the Java Client Warning reserve wrong ExceptionID, the warning message will not display.

Resolution: The issue was resolved by the implementation of other fixes.

Verification: Follow the steps below to verify the resolution:

1. Create a part with a manufacturer part.
2. Release the part with an ECO.
3. Create three MCOs on that part.
4. Go to the three MCOs and redline the part, for example, on the same cost field.
5. Try to release one of the three MCOs.
6. Get two warning messages in the same window as:

'xxxx, releasing this change will cause another change to lose redlines' and 'Pending change(s) XXXX, XXXX contains conflicting redlines in AML that will become non-displayable if you release this change. Would you like to continue releasing this change anyway?'

304023/ 19006962.6

Changes

Issue: Changes having more number of approvers/observers are having huge impact on performance.

Root Cause: The check of current user is a transfer authority or an Escalation takes huge time and multiple sql calls when approvers are many.

Resolution: Changed the algorithm of the check.

Verification: Follow the steps below to verify the resolution:

1. Create 500 users and assign with Change Analyst role.
2. Create an ECO and route to CCB status, and then add some of the above users as approvers and others as observers.
3. Login as another user and try to open the above ECO.
4. It will take about three seconds on Java Client and about five seconds on Web Client to open that ECO.

Product Cost Management

299626/ 18998926.6

Sourcing Project

Issue: Cannot set Privileges or Advanced searches based on Authorized User field

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client.
2. Click on Classes and Go to Sourcing Project > General Info
3. Open Authorized supplier field.
4. Set yes to Enable for Search Criteria field.
5. Log into Web Client.
6. Create Sourcing Project with Authorized user as administrator.
7. Go to advanced search and search for Sourcing Project > Authorized users > Equal to > admin.
8. From Advanced Search drop-down select sourcing project Authorized users field is present in permitted search.

300620/ 19000646.6

Sourcing Project

Issue: Show/Hide AML is inconsistent

Root Cause: Missing RFQ Line attributes for buyer and planner which led to unnecessary filtering of AML rows (Buyer/planner are not AML fields).

Resolution: Introduced new attributes on RFQ line for buyer/planner. These new attributes are used to construct buyer/planner filters for Analysis and Response tabs.

Verification: Follow the steps below to verify the resolution:

1. Enable Buyer attribute in Java Client via the AML-->Items table and configure the display for Project-->Analysis and RFQ-->Response attributes.
2. Create an Item with AML in a Sourcing Project. Assign a value to Buyer field for the item. Run the Buyer filter on Analysis to filter this value.
3. AML row appears based on Show AML/Hide AML configuration.

301656/ 19002424.6

Sourcing Project

Issue: Global selection does not work on Analysis tab responses export with Best Response Filter.

Verification: Follow the steps below to verify the resolution:

1. Create a sourcing project with items displayed on several pages.
2. Create RFQ and send it to suppliers.
3. Do Set as best in Analysis tab.
4. Analysis tab | Filter for Parts with Best Responses
5. Do global select and check the count of items 3. Responses | Export ... to Excel 4. Check the resulting file - AML is exported only when it is a best response. Best Response column has only 'Yes' value for all the Items in Excel file.

302332

Sourcing Project

Issue: Supplier Assembly Cost Report (ACR) error on deleted AML.

Root Cause: Supplier ACR computation uses deleted AML entry instead of the current live entry for determining pricing.

Resolution: Sql that pulls best AML and its' price for supplier ACR now excludes deleted AML entries.

Verification: Follow the steps below to verify the resolution:

1. Create a sourcing project on a BOM that contains MPN components.
2. In Sourcing Project.AML table, delete the MPN in the leaf component and add the same MPN back.
3. Create an RFQ on the BOM and make sure to share the Cost BOM view.

4. Open RFQ to supplier.
5. Log in as the supplier and enter responses.
6. From Report/Standard Reports/Sourcing Reports folder, run Assembly Cost Report and the report runs without errors.

302408/ 19003864.6

Sourcing Project

Issue: Fails to pull commodity manager information into the PCM Sourcing Project.

Root Cause: User created flex attributes mapping.

Resolution: Changed administrator to filter out the user created flex attributes in the attribute map data to list for PCM classes (Sourcing Project, RFQ, RFQ Response and Price).

Verification: Follow the steps below to verify the resolution:

1. Create user created attributes in items/mfr part/price page2 or page3.
2. Navigate to sourcing project AML.Items/AML table, select the attribute of matching data types for example text.
3. Make sure the user created attributes are not displayed in the Map Data To attribute list.

Product Portfolio Management

18996524.6

19004202.6

Verification Steps: Follow the steps below to verify the resolution:

1. Log into Web Client.
2. Go to Tools > My Settings > Preferences.
3. Click on Edit and change the file productivity components to Standard and click on Save.
4. Create a program and navigate to Content tab.
5. Add a Part or any other content.
6. From preview pane of part add file to its attachments table.
7. Then click on checkout.
8. It should prompt the user with download file options (Open, Save and Cancel)

295512/ 18993022.6

Java Client

Issue: My Assignments configuration has problems with Sort function.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client.
2. Go to System Settings > My Assignments Tab.
3. Click on the order tab to have the list according to the order.
4. Un-check any one column name.
5. Save it and check the sorting order.
6. Only one column gets unchecked and the sorting order is retained.

295592/ 18993128.6

Web Client

Issue: Hard Delete distorts returned list view of Subscriptions.

Root Cause: On soft deletion of the activity, all contents are deleted for the activity. As part of this content removal the rows in Subscriptions table corresponding to this activity is also deleted. Since subscriptions table stores User subscriptions' also, the user subscriptions' for this activity is also deleted. If the subscription table for the user who had subscribed for this activity is already accessed then this information is cached. Since the subscription was deleted from DB and the cache information is out of sync, the rows are not displayed correctly.

Resolution: Collect all the user(s) subscribed for the soft deleted activities before deletion of content and invalidate Users.Subscription table for all these users.

Verification: Follow the steps below to verify the resolution:

1. Log into Web Client and create a program.
2. Subscribe to it and check subscriptions tab on the user's profile.

Note Note that activity is displayed.

3. Now soft delete and then hard delete the program and go back to check the subscriptions.
4. Subscriptions tab does not display deleted activity.

296628/ 18994300.6

Notifications

Issue: No privilege shows on the notification to a team member.

Root Cause: To create a discover object for PPM, the ACL of the object looked up instead of loading team members from DB. This was done to improve performance. As part for this only those ACLs that have valid roles will be added to the Discover object. When any update operation performed on

PPM object, the discover object corresponding to that object is cleaned from cache and reloaded on demand. In most the cases the existing code works, as the object is referenced immediately (because reloads/refreshes the page) after any modification operation is done. However, when there are some modifications that are run in the background when the discover object is not reloaded immediately instead is loaded and con Demand. If this reload happens from a background tasks then the con is NULL and hence the implementation to check for valid PPM roles (mentioned above to construct discover object) is a remote call to Admin module and this call fails as context is NULL.

Resolution: The implementation of `ActivityDiscoverBuilder.getActivityApplicableRoleIds()` has to be changed to load the roles from metadata cache directly instead of remote call.

Verification: Follow the steps below to verify the resolution:

1. Program Manager creates program with a subtask Task1
2. Program Manager adds a team Member, UserA to a Task1.
4. Changes status of Task1 to in-process, and add UserA as Approver.
3. UserA receives notification.
4. Check the subject and body of the notification.
5. Notification is displayed correctly without any 'No Privilege' message.

298708/ 18997464.6

Notifications

Issue: Product Collaboration notifications are not going to users.

Verification: Follow the steps below to verify the resolution:

1. Log into Web Client as admin.
2. Create newUser with only My User Profile Role.
3. For Default Activities workflow add newUser as approver to in-process Status.
4. Create a Program A and add newUser with team member role.
5. Add a Content ECO with a rule set on it as ECO -> Submitted then A->InProcess
6. Go to ECO cover page and change the status to submitted, which will trigger the change status on A and moves it to In Process.
7. Approver newUser will receive the notification. NewUser is getting notification without any No privilege error message.

Note	When the notification threw a No privilege error in notification, then the pc notifications were not working. With this fix, user should not see a No Privilege error.
------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------

8. Now create a part and sent it to a User. User gets notification.

299374/ 18998474.6

299659/ 18998974.6

301380/ 19002076.6

Dashboard

Issue: View Due this week in Agile 9.2.2.1 is incorrect.

Verification: Follow the steps below to verify the resolution:

1. Log into Web Client.
2. Go to Tools > My Settings > Preferences.
3. Click on Edit and change the language to Simplified Chinese and Traditional Chinese and then click on Save.
4. Log out and log back in.
5. Go to My Assignments.
6. Select View Due This Week or any other view. Data is correctly displayed.

299847/ 18999292.6

302285/ 19003626.6

Web Client

Issue: Agile does not check the create privilege correctly.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client.
2. Create a user (UserA) from User Settings -> users.
3. Create a role (role01) from User Settings -> roles.
4. Add create privilege on phase, read and discover all programs privilege.
5. Log into Web Client as UserA
6. Create a program and navigate to Schedule tab.
7. Click on Create button.

Note UserA should be able to create all phase, task and gate under it since he is the owner.

8. Now search for a program that is not created by UserA and navigate to Schedule tab.
9. Click on Create button and check the drop-down list. Drop-down list should have only phase as UserA has Create privilege only on Phase.

300200/ 18999902.6

Web Client

Issue: The General Info.Parent is not working for the criteria.

Root Cause: VOCell.getValueString() is used while evaluating criteria and VOCellObject.getValueString() [Actual Implementation is VOCellID baseclass] return id as String.

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client. Go to Workflow settings- workflows.
2. Create a PPM workflow as PPM_Workflow with Object type as Programs and Matching Criteria as All Activities. And click ok.
3. Go to Status tab add new status of type- Pending, Review and Complete.
4. Select Pending Status and Put ""All Activities"" criteria for pending.
5. Select Complete Status and Put ""All Activities"" criteria for complete.
6. Create criteria from Data setting - Criteria with following details: Name: GeneralinfoParent Object type: Task Attribute: General info.parent contain 'D Phase'
7. Go back to workflow and select Review status and assign above created criteria.
8. Log into Web Client.
9. Create a program ""D Phase 123""; (Program object) with 'D Phase'(Task object) as child. Add Task1 (Task object) as child to 'D Phase' and assign PPM_Workflow to D Phase and Task1.

Note Task1 will move to review state.

302389/ 19003826.6

Issue: Unable to use modify privilege when criteria is specifically restricted by the status of the Activity object.

Root Cause: The edit button is enabled on the General Info tab based on the total number of server rows in P1, P2 & P3. Since for P2 & P3, this value is not being set correctly for PPM object i.e. VOTable.getTotalCacheRows() return default value (-1), the Edit button is disabled.

Resolution: Set the TotalCacheRows correctly when building P2 or P3 table in ActivityHelper.java by calling IBaseServerTable.setTotalCacheRows().

Verification: Follow the steps below to verify the resolution:

1. Log into Java Client.
2. Create criteria (Data settings - Criteria) with object type as task and criteria as General Info.Status=Default Activities.Not Started.
3. Create Modify Privilege (User Settings- Privileges) by using above criteria with only P2, P3 as applied to fields.
4. Add this privilege to a new role (User Settings -Roles) and assign this role to a user (user01)
5. Also add Create, Discover, and Read for all programs privilege to the Demo Role.

6. Now log into Web Client as user01.
7. Search for existing tasks.
8. Open any of the task objects and navigate to the General Info page.
9. Click Edit and edit some P2, P3 fields and then click Save. The Edit button is enabled.

304032/ 19006980.6

306169/ 19011156.6

6925831.993

Gantt

Issue: There is unknown code when we open the GCX file format. Japanese characters become illegible in Gantt chart when opening from saved file.

Verification: Follow the steps below to verify the resolution:

1. Log into Web Client and launch Gantt chart for any program.
2. In Gantt, add child activities with name in Chinese or Japanese language.
3. Update and save it as a .GCX file.
4. Open that file and check the names.
5. Program name will be displayed correctly without any junk characters.

305840/ 19010504.6

Resource Management

Issue: Unable to add a resource pool owner to a task.

Root Cause:

Resolution:

Verification: Follow the steps below to verify the resolution:

1. Log in as User 1.
2. Create a program, such as "Delegate Owner test".
3. Log in as User 2 (Should have delegate privilege).
4. Search for the program created in step 2 (Delegate Owner test).
5. Delegate the task to User 2.
6. Delegation operation will be successful both from Web Client and Gantt chart.

Product Quality Management

303587/ 19006110.6

Issue: CAR is requiring revision of affected item, but the revision is automatically filled in.

Root Cause: CAPA.AI.Item_Rev is a special list, which should not deal with as a static list when getting its cell.

Resolution: Reload the cell of the attribute and then able to get the correct value.

Verification: Follow the steps below to verify the resolution:

1. Create a workflow for QCR class. Set the Exit Required Fields of Pending as:
'Corrective and Preventive Actions.Affected Items.Item Rev;'
2. Create a Part, create a Change for this part, and release this Change.
3. Set the REV as 'A01'.
4. Create a QCR object, assign the workflow created in Step 1.
5. Add the part of Step2 as AffectedItem to the QCR object; select the ItemRev as 'A01'.
6. Try to route this QCR object from Pending to next status.
7. You will not get an Error saying, 'Error: The following required fields are missing: xxxx/Affected Items.Item Rev'.

Known Issues

This chapter includes the following:

▪ Known Issue Disclaimer	37
▪ Common Services	37
▪ Install and Upgrade.....	38
▪ Integration.....	40
▪ Product Cost Management.....	40
▪ Product Portfolio Management	41

This section contains a list of known issues for this release. These were deferred from this release, but may be fixed in a future release. Numbers in this section are for Oracle|Agile internal use only.

Known Issue Disclaimer

This list of Known Issues consists of those found at the time of the initial release. The product may have additional issues found after the initial release and therefore this list is subject to change and is not always comprehensive. Oracle support will continue to track known issues of this product release found on MetaLink. Please check for updates.

Common Services

7142367

Doc Management

Issue: Not able to replace the file which has a "CHECKSUM ERROR" in Web Client.

Workaround: Open the same object in Java Client to replace the file which has Checksum Error.

7175002

Reports

Issue: BI Publisher report is not supported on WebSphere.

Workaround: No workaround solution is available.

7200782

Doc Management

Issue: TA/Escalation will not work on FileFolder object.

Workaround: No workaround solution is available.

7218394

Doc Management

Issue: Viewer will not pick the correct files when the file category is set differently in FileFolders.

Workaround: No workaround solution is available.

Install and Upgrade

7236877

Service Pack Installer

Issue: Error in DEFAULT_GROUP~HOME~DEFAULT_GROUP~1.log before the 9.2.2.5 PLM starts up.

Root Cause: Error was introduced by the Russian language support to the schema in 9224L10N.

Workaround: No workaround solution is available.

7264298

Issue: AUT.sh cannot be started on AIX platform.

Root Cause: Need to modify aut.sh to work on AIX platform.

Workaround: Remove "-hotspot -ms64m -mx64m" entry in aut.sh and encryptpwd.sh.

7277320

Issue: LDAPUTIL.JAR does not get updated in C:\AGILE9225\AGILEDOMAIN\LDAPLIB for 9.2.2.5 release.

Workaround: No workaround solution is available.

7264298

AUT

Issue: AUT.sh cannot be started on AIX platform.

Root Cause: Need to modify aut.sh to work on AIX platform.

Workaround: Remove "-hotspot -ms64m -mx64m" entry in aut.sh and encryptpwd.sh.

7277320

Issue: LDAPUTIL.JAR does not get updated in C:\AGILE9225\AGILEDOMAIN\LDAPLIB for 9.2.2.5 release.

Workaround: No workaround solution is available.

7525966, 7605185

Issue: The 9.2.2.5 International build cannot be updated with multi-byte character OS based on the 9.2.2.4 International GA build.

Steps to Reproduce:

1. Install 9224L10N on a multi-byte character OS.
2. Update to 9225L10N from 9224L10N.
3. Restart the server.
4. The server cannot be displayed with the following warning information:

The DB schema data version: 9.2.624

The server version: 9.2.614

The versions are not matching.

Workaround: The user needs to manually change the .cfg files. In the D:\Agile\Agile92\Install\config folder, backup all the existing .cfg files (Examples: agile_app.cfg, agile_api.cfg, agile_dfm.cfg, agile_ws.cfg etc.). Next, manually add the server configuration information in English for the different environments, such as WLS or OAS, before upgrading to the 9225NLS build when installing build on JP/CH/TW OS. Please modify the English code with the correct server configurations below and add the modified code into the head of the agile_app.cfg, agile_api.cfg, agile_dfm.cfg, agile_ws.cfg..etc files.

OAS:

Application Server Type=oas

Application Server Host=@APP_SERVER_HOST_NAME@

Application Server Virtual Path=@APP_SERVER_VIRTUAL_PATH@

Clustered=@CLUSTER_INSTALLED@

OAS Home=@OAS_HOME@

OAS HTTP Listen Port=@OAS_LISTEN_PORT@

Web Server Host=@WEB_SERVER_HOST_NAME@

Web Server Port=@WEB_SERVER_PORT_NUMBER@

WLS:

Application Server Type=wls

Application Server Host=@APP_SERVER_HOST_NAME@

Application Server Virtual

Path=@APP_SERVER_VIRTUAL_PATH@ Application Server Virtual Patch

Clustered=@CLUSTER_INSTALLED@

BEA Home=@BEA_HOME@ Where you installed BEA

application server Listen Port=@BEA_LISTEN_PORT@

Web Server Host=@WEB_SERVER_HOST_NAME@

Web Server Port=@WEB_SERVER_PORT_NUMBER@

Integration

7184509

SDK

Issue: Period start date of project is returning the wrong date value.

Root Cause: The problem happens because of converting date into time zone format and at some point of time when you create a project after the conversion the date stored in the PricePoint table is not the same as the current time.

Workaround: No workaround solution is available.

Product Cost Management

7260441

Sourcing Project

Issue: Prices are not getting carried into the reports, but they are visible in sourcing project analysis tab. The issue occurs only if we have a supplier (S1), which is a supplier for the source project and a partner for the other SP.

Workaround: No workaround solution is available.

Product Portfolio Management

7136843

Issue: After substituting a resource from the General Information page, the resource is not displayed in the Team tab.

Workaround: Do a global refresh to see resource.

7137170

Issue: Cloning is not supported for Design class objects.

Workaround: No workaround solution is available.

7261051

Issue: Irrelevant message is displayed when a user with only My User Profile is added as an approver and when the program status is changed from Not Started to In Process.

Workaround: No workaround solution is available.

7289829

Issue: A Parametric search with the attachment option selected along with the search criteria having a character is not working for programs.

Workaround: Use simple search.
