

Oracle Insurance IBRU Release Notes

Version 3.11

June 2009

Oracle Insurance Insbridge Rating and Underwriting Release Notes Version 3.11

The purpose of this document is to:

Describe the new features and resolved issues offered in the Insbridge Rating and Underwriting system Release 03.11.05. This document also provides a history of enhancements and bug fixes from past releases.

RELEASE 03.11.05

NEW FEATURES

No new features were released in 3.11.05.

ISSUE RESOLUTION

Oracle Bug DB	Product	Description
8535819	IBFA	<p>Impacted Area: ESI Create SRP</p> <p>Issue Impact: CreateSRP() method does not function properly. When the method was called, an error was returned, "Illegal character in path."</p> <p>Resolved by: IBFA was corrected and proper values are returned.</p>
8539737	SoftRater	<p>Impacted Area: SoftRater for WebLogic</p> <p>Issue Impact: A customer reported that when they rated a file using a SoftRater for WebLogic and an Oracle database, an error was generated on the P2P portion of the result.</p> <p>Resolved by: An issue with the SoftRater Lookup Variable table (DT) DDL was discovered and corrected. The DT DDL template was updated.</p>
8575750	RateManager	<p>Impacted Area: Driver Assignment Variables</p> <p>Issue Impact: A customer reported that driver-vehicle variables were not executed when repackaged or when new versions were created.</p> <p>Resolved by: This issue affected Personal Auto programs that had variables with a working category of Driver/Vehicle. The fix will now force all variables that are first referenced after Driver Assignment to run after the Driver Assignment scenario regardless of the working category.</p>
2965	RateManager	<p>Impacted Area: Packaging</p> <p>Issue Impact: A customer reported that they received a packaging error when packaging the Controller program and a P2P mapping is configured.</p> <p>Resolved by: This issue has been fixed and now functions correctly. Any deleted P2P mapping variables are now removed during packaging.</p>

Oracle Bug DB	Product	Description
3046	ScenarioManager	<p>Impacted Area: Shared Tab</p> <p>Issue Impact: Result files could not be deleted from the shared tab.</p> <p>Resolved by: The delete function is working correctly now and result files can be removed when necessary.</p>
8595715	SoftRater	<p>Impacted Area: SoftRater</p> <p>Issue Impact: Fixed "DoCall: Error: RunP2P()" error that occurs when test case is rated in debug mode and then immediately rated in non-debug mode.</p> <p>Resolved by: A change was made to clean debug object during P2P execution. The error no longer occurs and SoftRater works correctly.</p>

RELEASE 03.11.04

NEW FEATURES

No new features were released in 3.11.04.

ISSUE RESOLUTION

Oracle Bug DB	Product	Description
8450551 8440261	RateManager	<p>Impacted Area: Linked Variables</p> <p>Issue Impact: Users were unable to import more than 50 linked variables. When users tried to import a higher number of variables, an error would be generated.</p> <p>Resolved by: RateManager now supports a maximum of 100 linked variables associated with one single table.</p>
8449857	RateManager	<p>Impacted Area: Driver Assignment</p> <p>Issue Impact: Customers who were using version 3.6 and upgraded to a higher version were not able to use more than 8 driver/vehicle combinations. This is a result of changes made after version 3.6 that added system inputs for a total of 18 combinations. Users who remained at version 3.6 were free to use these same system inputs in other ways. When version 3.6 users upgraded to a higher version, an error was thrown if the system inputs were being used.</p> <p>Resolved by: IBRU now checks for system inputs values that are being used. If the system inputs are being used on the Vehicle Usage Options for the Driver Use Percentage on Vehicle and Vehicle Usage Percentage on Driver functions, then up to 16 Driver/Vehicles combinations can be used. This will affect legacy 3.6 customers only. Customers who started off with a higher version will still have 18 Driver/Vehicle combinations with no changes.</p>

Oracle Bug DB	Product	Description
8379517	SoftRater	<p>Impacted Area: Windows SoftRater Engine</p> <p>Issue Impact: When performing a Program to Program call, the SoftRater Engine for Windows was creating another database instance for all calls. Not sharing the program to program call database connections was forcing the connections to very high numbers if the customer was batch rating or multi-threading rating.</p> <p>Resolved by: This has been addressed and only one database instance per rate request occurs now.</p>
8490368	SoftRater	<p>Impacted Area: SoftRater Web Service</p> <p>Issue Impact: With the release of IBRU 3.7, the system added an EnvDef option to the SoftRater Web Service. If users did not update the client proxy with the new WSDL definition, an error would occur.</p> <p>Resolved by: This has now been fixed.</p>

RELEASE 03.11.03

NEW FEATURES

No new features were released in 3.11.03.

ISSUE RESOLUTION

Oracle Bug DB	Product	Description
8379526	RateManager	As of release 3.11.03, Oracle Insurance Insbridge Rating and Underwriting is certified on MS SQL Server 2005 SP2. A change was introduced in MS SQL Server 2005 SP3 that may result in errors when users go to create a package. A solution has been created if SP3 has been applied to the MS SQL Server 2005 database that will allow users to create packages.
8379527	RateManager	The Truncate Function, under a very unique condition, was causing unexpected results. The Truncate Function was updated to address this unique situation.
8379529	RateManager	Users were unable to open output mappings. This issue has been corrected.
Internal	RateManager	In Driver Assignment flag and rank Algorithms, an issue was discovered that the revision selected was not the revision that was rated. This item has been corrected and the proper revision is used.
8429902	RateManager	Custom output mapping error: The Driver-Vehicle Category was not being displayed on the custom output mapping screen when the program did not include driver vehicle results in the result mapping. This issue has been corrected.

Oracle Bug DB	Product	Description
8418740	RateManager	In Driver Assignments, the flag and rank algorithms were not using the user defined result variables as requested. When rating the XML in scenario manager, this issue was not allowing all of the factors to be totaled in later steps. This issue has been corrected.
Internal	ESI	An error occurred when the GetSRPList() for packages created from a custom line of business was used. The error will no longer be displayed and the issue was corrected.
	RateManager	Customer reported that they were experiencing longer than normal packaging times. Table index was applied to improve packaging times.

RELEASE 03.11.02

NEW FEATURES

No new features were released in 3.11.02.

ISSUE RESOLUTION

ID	Product	Description
2407	RateManager	Users were unable to view rating results (Scenario Manager) from the shared tab. This issue has been resolved and users can now view both report and xml files from the shared tab.
2395	RateManager	When executing Program to Program calls, an error may occur when attempting to call a program created before version 3.10. This error was occurring on programs created and saved prior to version 3.10 because schema changes were not being factored in for older programs. This issue has been corrected.
2296	RateManager	Mapped Variables that have Data with special characters were allowed to be imported but then failed when edited. Special characters are not fully supported in Insbridge and users should not be able to import data with special characters. This issue was corrected so that imported data with special characters will fail upon import, forcing users to correct their data before import.
1904	RateManager	Premiums were mismatched in a version 3.9 vs 3.10 /DriverAssignment comparison. The defect would allow linked variables to run later than expected. This occurred when a linked variable was referred to before the driver assignment and the other version referred to the linked variables after then driver assignment. This issue was corrected.
1793	ScenarioManager	A GL policy with more than 4 locations or 10 classes or coverages produced a lengthy report filled with unneeded items. This issue was fixed by adding in an option to exclude the results that are empty. Results that are zero will be included, results that are null will not.

RELEASE 03.11.01

NEW FEATURES

No new features were released in 3.11.01.

ISSUE RESOLUTION

ID	Product	Description
2188	RateManager	Incorrect Packaging Execution Order. When accessing result variables from calculated variables the cal variable and/or used mapped variable may run before the result variable being accessed is set.
2245	RateManager	Custom Rating- "Mapping not found" error when XSLT without identifier is used. This error has been corrected.
2247	RateManager	Users were getting SQL error when a package was copied from one release to another. Users can now copy without receiving a SQL error.

RELEASE 03.11

NEW FEATURES

ID	Product	Description
1666	RateManager	Oracle Insurance Insbridge Rating and Underwriting now includes an Extended Services Interface (ESI). ESI is a library module designed to provide remote services to the Insbridge Rating and Underwriting business services without directly utilizing the system User Interfaces. ESI Users can create a launch definition; add, copy and delete programs; add, update, delete and obtain lists of folders; add, and obtains lists of global items; add update and obtain lists of users; add and update LOBs; and obtain lists of secured and non-secured environments. ESI also lets users create, copy, delete, export, import, load, move, save and unload SRPS.
1107	RateManager	The Debug Report in ScenarioManager now looks and functions much like the debug report in Test Case Editor. There is more detailed information in a cleaner format. Large file debug reports can be displayed.
1445	SoftRater	SoftRater now works with JBoss. The cross-platform JBoss application server will run on any operating system that Java supports. SoftRater currently uses Version 4.2.3.

ISSUE RESOLUTION

ID	Product	Description
1511	RateManager	Online help is now embedded in the application, beginning with version 3.11
1632	RateManager	When batch rating programs that make a program to program call users may possibly see an XML error when executed with more than one thread.
2005	RateManager	The Reconcile option allows users to reconcile one program version against another. Version 3.11 will allow any unlocked program version to be available for reconciliation.
2171	RateManager	When you required that users change their password after a certain length of time, you had to enter the web.config file and enter the time in there. Admins now have the option to set the mandatory password change field in days on the Settings page under Administration.
2240	ScenarioManager	When rating custom XML from Scenario Manager using the default mapping created within RateManager, the transformation of the XML would not complete successfully. This issue has been fixed for the 3.11 release.
1282	SoftRater	In WebSphere, only the page that the user is on will be highlighted in a different color. In past releases, previously viewed pages were also displayed in a different color.
2029	SoftRater	In WebSphere, CACHE.LOG is now located along with the other directories. The logs directory that is specified in the Edit Options will be used for cache. Previously the CACHE.LOG was in a different location.
2086	SoftRater	If a database table needs to be created for a SoftRater for Oracle or SoftRater for DB2 at installation or any other time, the location of the DDL directory is now in the IBFA Installation directory under the SoftRater/DDL folder.
2098	SoftRater	For a WebSphere app install, the install folder now contains the insbridge.net.softraterconfig.xml file. Clients do not have to obtain this file from the .ear file.
