Important Installation Instructions

This document contains important information about the McDATA QPM installed in Sun™ storage area networks (SANs).

Read this document so that you are aware of issues or requirements that can affect the installation and operation of the McDATA QPM in a Sun SAN.

Note – Sun is not responsible for the availability of third-party web sites mentioned in this document. Sun does not endorse and is not responsible or liable for any content, advertising, products, or other materials that are available on or through such sites or resources. Sun will not be responsible or liable for any actual or alleged damage or loss caused by or in connection with the use of or reliance on any such content, goods, or services that are available on or through such sites or resources.

This document contains the following sections:

Upgrading Firmware and Software for the QPM Blade

The McDATA QPM 4Gb/s Blade for the Intrepid 6140 Director requires EOS 9.0 firmware.

You can use any of the following three methods to manage the 6140 Director:

- Command Line Interface
 - Enterprise Fabric Connectivity Manager (EFCM) Basic (formerly known as SANpilot)
 - EFCM 8.9
-

Note – EFCM is not required to manage the 6140 or the QPM 4Gb/s blade. If you have been previously using EFCM and want to use it to manage the QPM 4Gb/s blade, you must install EFCM 8.9 server for Windows.

You may install the EFCM 8.9 client software on the Solaris platform, but the EFCM 8.9 server software is unavailable for Solaris.

The next version of EFCM will again support Solaris as a server platform and will support the QPM 4Gb/s blade. If you want to continue to use a Solaris host to administer your switches, then Sun recommends you use EFCM Basic or CLI to manage the QPM 4Gb/s blade and wait for the next release of EFCM for Solaris.

Caution – This document describes how to migrate from EFCM for Solaris to EFCM 8.9 for Windows. Migrating back to a future EFCM version for Solaris and maintaining the configuration will not be supported. The EFCM configuration data will have to be recreated. **Consider this carefully before choosing to migrate from EFCM 8.x for Solaris to EFCM 8.9 for Windows.**

This document describes two activities:

1. Upgrading to the EOS 9.0 firmware
 2. Upgrading to the EFCM 8.9 server for Windows
-

Note – The EFCM 8.9 Call Home Feature is not supported by Sun. Disregard any instructions to turn on this feature.

Upgrading to the EOS 9.0 Firmware

Note – All switches in the fabric must be upgraded to the EOS 9.0 firmware.

If your 6140 Director is currently running EOS 7.x firmware, follow these steps to upgrade to EOS 9.0 firmware:

1. Upgrade to EOS 8.2 using Sun patch 119554-01.
2. Upgrade from EOS 8.2 to EOS 9.0 using Sun patch 122187-01.

To download these patches, go to Sunsolve at <http://sunsolve.sun.com>.

Note – If you are using any EOS prior to 7.x, contact Sun support.

Upgrading to EFCM 8.9 Software

Note – EFCM is not required to manage the 6140 or the QPM 4Gb/s blade. If you have been previously using EFCM and want to use it to manage the QPM 4Gb/s blade, you must install EFCM 8.9 server for Windows.

You may install the EFCM 8.9 client software on the Solaris platform, but the EFCM 8.9 server software is unavailable for Solaris.

The next version of EFCM will again support Solaris as a server platform and will support the QPM 4Gb/s blade. If you want to continue to use a Solaris host to administer your switches, then Sun recommends you use EFCM Basic or CLI to manage the QPM 4Gb/s blade and wait for the next release of EFCM for Solaris.

Caution – This document describes how to migrate from EFCM for Solaris to EFCM 8.9 for Windows. Migrating back to a future EFCM version for Solaris and maintaining the configuration will not be supported. The EFCM configuration data will have to be recreated. **Consider this carefully before choosing to migrate from EFCM 8.x for Solaris to EFCM 8.9 for Windows.**

If you are currently running EFCM Lite 7.x for the Solaris Operating System (OS), and if you are under software maintenance, you will need to obtain one or all of the following upgrades, depending on which version of EFCM Lite you currently have:

- EFCM Serialized upgrade from Solaris 8.07 to Windows 8.09 software, Sun part number 791-4828-01, including the required serial number and license keys.
- EFCM Serialized upgrade from 7.x to version 8.01 software, Sun part number 791-4882-01.
- EFCM Non-serialized upgrade from Solaris 8.x to Windows 8.07 software, Sun part number 791-4829-01.

Note – If you are using any EFCM prior to 7.x, contact Sun support.

Upgrading from EFCM Lite 7.x for the Solaris OS to EFCM 8.9 for Windows involves three software upgrade steps:

1. Upgrading from EFCM Lite 7.x for Solaris to EFCM Lite 8.1 for Solaris.
2. Upgrading from EFCM Lite 8.1 for Solaris to EFCM Lite 8.7 for Solaris.
3. Upgrading from EFCM Lite 8.7 for Solaris to EFCM 8.9 for Windows.

The following sections describe the steps needed for each upgrade.

Note – If you are currently running EFCM 8.x for Solaris, start the upgrade process at “[Upgrading from EFCM Lite 8.1 to EFCM Lite 8.7 for the Solaris OS](#)” on page 8.

Upgrading from EFCM Lite 7.x to EFCM Lite 8.1 for the Solaris OS

1. Install EFCM Lite 8.1 for the Solaris OS from the CD set.

Follow the instructions for installing version 8.1 in the *EFC Manager Software Upgrade Instructions Release 8.7* (McDATA part number 958-000336-040). You can download this document from <http://www.mcdata.com>.

2. Migrate your 7.x database to EFCM 8.1.

Follow the instructions in the document mentioned in the previous step.

3. Obtain the Product Feature Enablement (PFE) license key from <https://mcdata.getkeys.com>

Enter the serial number from the CD jewel case to get the license.

4. After the upgrade, verify the integrity of the database by verifying that any customizations to the zone library and user accounts are preserved.

Upgrading from EFCM Lite 8.1 to EFCM Lite 8.7 for the Solaris OS

1. Install EFCM Lite 8.7 for the Solaris OS and migrate from version 8.1 to version 8.7 by following the instructions in the *EFC Manager Software Upgrade Instructions, Release 8.7*.

2. After the upgrade, verify the integrity of the database by verifying that any customizations to the zone library and user accounts are preserved.

Upgrading from EFCM Lite 8.7 for the Solaris OS to EFCM 8.9 for Windows

3. Obtain a new Product Feature Enablement (PFE) License key from
<https://mcdatalite.getkeys.com>

Enter the serial number from the CD jewel case to get the new license for EFCM 8.9 for the Windows platform.

4. Copy the entire EFCM 8.7 installation directory from /opt/EFCM87, or wherever EFCM is installed on your Solaris system, to the EFCM 8.9 Windows platform.

Use a method such as transferring over FTP, copying to a CD, or a making a network copy. Be sure to maintain the directory structure during the copying process.

Note – Copying only the client and server directories from the Solaris platform EFCM 8.7 to the Windows EFCM server is not sufficient. You must copy the entire EFCM installation directory to the Windows EFCM server.

5. Install EFCM 8.9 from the software CD on a Windows server:

- a. Launch the EFCM configuration wizard, if it did not start automatically.
 - b. In the Copy Data and Settings from Version 8.x screen, specify the Windows location of the EFCM Install Directory copied over from the Solaris server.
6. Replace the old license key information with the new license key information you obtained in Step 1.
