

Tables and fields exported to XER when exporting Projects

This document details the table and field mappings for the XER file that is generated when exporting projects from Primavera Contractor.

Note: When exporting data, the export file may contain data elements not supported in Primavera Contractor. This can occur when you import project data from a project created in other Primavera project management applications, then export the same project data. Unsupported data elements are saved to the database when you import project data, however you cannot view them in Primavera Contractor. These data elements will be included in the export file when you export project data. The tables in this document represent all tables and fields that may possibly contain export data.

ACCOUNT - (Cost Accounts)

acct_descr	Cost Account Description
