This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, duplication, disclosure, modification, and adaptation shall be subject to the restrictions and license terms set forth in the applicable Government contract, and, to the extent applicable by the terms of the Government contract, the additional rights set forth in FAR 52.227-19, Commercial Computer Software License (December 2007). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

This software is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications which may create a risk of personal injury. If you use this software in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of this software. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners. Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark licensed through X/Open Company, Ltd.

This software and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

VDI 3.1.1 Release Notes

These notes contain important information about the Sun VDI Core, including requirements and supported platforms as well as issues and workarounds. Be sure to read this document before you begin using Sun VDI 3.1.1.

VDI Package Software

Sun Virtual Desktop Infrastructure software is a layered software solution that requires a virtualization platform, user directory, database, desktop access software, and VDI Core software. For more information about the full Sun Virtual Desktop Infrastructure architecture, refer to the [Architecture](#) page.

Bundled Software

- Sun Virtual Desktop Infrastructure Software 3.1.1
 - Sun VDI Core
 - Sun Ray Software 5 - including the SPARC (140993-01 and 143214-02) and x86 (140994-01 and 143215-02) [patches](#)
 - MySQL Cluster 7.0.8a
- Sun VirtualBox for VDI 3.1 (Solaris 10 x86 only)

Sun Ray Windows Connector (SRWC) 2.3 is not supported with Oracle Virtual Desktop Infrastructure Software, Release 3.1 or 3.1.1

Additional Supported Software

- Sun Secure Global Desktop 4.50 (SGD) and above
- Sun VirtualBox for VDI 3.1 (additional platforms for creating desktop templates)

Localization

The VDI components are available in the following languages after installing the VDI Core software. No additional package installation is required.

- VDI Software:
VDI Manager: Chinese (simplified), English, French, Japanese, and Swedish
VDI Desktop Selector: Chinese (simplified), Chinese (traditional), English, French, German, Japanese, Korean, Spanish, and Swedish
VDI CLI: English
- VDI Documentation:
Installation and Administration pages: [Chinese \(simplified\)](#), English, [French](#), [Japanese](#), and [Swedish](#)
Demo Guides and Troubleshooting information: English

Third-Party Software

Sun VDI 3.1.1 includes software originating from third parties that is subject to GPL/LGPL licenses. The corresponding source code is available via the links below:

- [Sun VirtualBox for VDI](#) contains modified GPL code.
The source code is available at: <http://download.virtualbox.org/virtualbox/3.0.12/VirtualBox-3.0.12-OSE.tar.bz2>

Hardware Requirements

Sun VDI has very basic hardware requirements. VDI customers can use new or existing hardware as long as it meets the CPU requirements. Hardware sizing is a very important part of planning a VDI installation. For more information on sizing, refer to the [Deployment Guide](#).

Host	CPU Type
VDI hosts	all x86 or all SPARC CPU
VirtualBox host	x86 CPU
Microsoft Hyper-V host	x86 CPU
VirtualBox or Hyper-V storage server	x86 CPU
VMware hosts	x86 CPU
Microsoft Remote Desktop Server	x86 CPU

VDI 3.1.1 Software Requirements

This section includes support tables for VDI Core host operating systems, virtualization platforms, storage servers, desktop guest systems. For more information about VDI Support, see [VDI Configurations](#).

VDI Core Host and VirtualBox Virtualization Host Operating Systems

Software	Supported in VDI 3.1.1
Solaris 10 10/09 SPARC and x86 (64-bit)	✓
Solaris 10 5/09 SPARC and x86 (64-bit)	✓

Attention

Solaris SPARC will not be supported as VDI Core Host in upcoming VDI product releases.

Virtualization Platforms and Desktop Providers

Software	VirtualBox Virtualization Platform	VMware Infrastructure Virtualization Platform	Microsoft Hyper-V Virtualization Platforms	Microsoft Remote Desktop Platform	Not Supported
----------	--	--	--	---	------------------

Sun VirtualBox for VDI (VirtualBox 2.0.10, 3.0.12, 3.0.14)					
All other VirtualBox versions					
VMware VirtualCenter server 2.5					
VMware VirtualCenter server 2.5 Updates 1, 2, 3, 4					
VMware vCenter server 4					
VMware vCenter server 4 Update 1					
VMware ESX server 3.5					
VMware ESX server 3.5 Updates 1, 2, 3, 4					
VMware ESX server 4					
VMware ESX server 4 Update 1					
VMware ESXi server 3.5					
VMware ESXi server 3.5 Updates 1, 2, 3, 4					
VMware ESXi server 4					
VMware ESXi server 4 Update 1					
Microsoft Hyper-V Server 2008					
Microsoft Windows Server 2008					
Microsoft Windows Server 2003					

Storage Servers

Software	VirtualBox Virtualization Platforms	VMware Infrastructure Virtualization Platforms	MS Hyper-V Virtualization Platforms
Solaris 10 10/09		Qualified by VMware	
Solaris 10 5/09		Qualified by VMware	
OpenSolaris 2008.11		Qualified by VMware	
OpenSolaris 2009.06		Qualified by VMware	
Sun Unified Storage 7000 Series 2010.Q1.x		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q3.2.0		Qualified by VMware	

Sun Unified Storage 7000 Series 2009.Q3.1.0		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q3.0.0		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q2.5.1		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q2.5.0		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q2.4.0		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q2.3.1		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q2.3.0		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q2.2.1		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q2.2.0		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q2.1.1		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q2.1.0		Qualified by VMware	
Sun Unified Storage 7000 Series 2009.Q2.0.0		Qualified by VMware	
Sun Unified Storage 7000 Series 2008.Q4.2.3		Qualified by VMware	
Sun Unified Storage 7000 Series 2008.Q4.2.2		Qualified by VMware	
Sun Unified Storage 7000 Series 2008.Q4.2.1		Qualified by VMware	
Sun Unified Storage 7000 Series 2008.Q4.2.0		Qualified by VMware	
Sun Unified Storage 7000 Series 2008.Q4.1.1		Qualified by VMware	
Sun Unified Storage 7000 Series 2008.Q4.1.0		Qualified by VMware	
Sun Unified Storage 7000 Series 2008.Q4.0.1		Qualified by VMware	
Sun Unified Storage 7000 Series 2008.Q4.0.0		Qualified by VMware	
Solaris 10 10/09 with Sun Modular Storage (ST2530, ST2540, ST6140, ST6180, ST6540, ST6580, ST6780)		Qualified by VMware	
Solaris 10 5/09 with Sun Modular Storage (ST2530, ST2540, ST6140, ST6180, ST6540, ST6580, ST6780)		Qualified by VMware	

OpenSolaris 2008.11 with Sun Modular Storage (ST2530, ST2540, ST6140, ST6180, ST6540, ST6580, ST6780)	✓	Qualified by VMware	✓
OpenSolaris 2009.06 with Sun Modular Storage (ST2530, ST2540, ST6140, ST6180, ST6540, ST6580, ST6780)	✓	Qualified by VMware	✓

**Attention**

OpenSolaris will not be supported as VDI Core Host in upcoming VDI product releases.

**Tip**

For more information about the Sun Unified Storage 7000 Series, see the [Fishworks Documentation](#).

Desktop Guest Systems

Software	VirtualBox Virtualization Platforms	VMware Infrastructure Virtualization Platforms	MS Hyper-V Virtualization Platforms	Not Supported
Windows XP SP2/3 (32bit and 64bit)	✓	✓	✓	
Windows Vista Enterprise	✓	✓	✓	
Windows 7	✓ *	✓ *		
Windows 2000 SP4	✓			
Ubuntu 8.10 (Intrepid Ibex)	✓			
Ubuntu 9.04 (Jaunty Jackalope)	✓			
Ubuntu 9.10 (Karmic Koala)	✓			
OpenSolaris 2009.06	✓			
SUSE Linux Enterprise 11	✓			

**Attention**

OpenSolaris will not be supported as Desktop Guest System in upcoming VDI product releases.

* Some media enhancements in SRWC are not available for Windows 7. For more information, refer to the [SRWC 2.2 Release Notes](#).

Web Browser for VDI Manager

	Firefox 3	Firefox 3.5	Internet Explorer 6	Internet Explorer 7	Internet Explorer 8
Windows	✓	✓	✗	✓	✓
Solaris	✓	✓	N/A	N/A	N/A

Linux			N/A	N/A	N/A
-------	---	---	-----	-----	-----

Known Issues and Limitations

Source volumes are deleted if copy jobs fail or get canceled. (Bug ID 6987825)

If the "Copy to Desktop", "Copy to Template" and "Duplicate" actions of the VB and HV desktop providers fail, either because of an exception or because they are canceled, they delete the volume of the copy source as well as all its descendants. A hotfix is available.

Suspended Hyper-V desktops are not restored in previous state after host or storage maintenance. (Bug ID 6919755)

When a host or storage associated with a Hyper-V desktop provider is put into maintenance mode, any running desktops associated with that host or storage are suspended. If the maintenance work on the host or storage causes the disk number associated with the desktops disk to change, VDI will need to reassign the disk when it next starts the desktop. As Hyper-V desktops are read-only when suspended, VDI has to power off the desktop in order to reassign the disk. This causes the state associated with the desktop to be lost.

All desktops should be powered off when putting a Hyper-V host or storage into maintenance mode.

VDI cannot start desktops on Hyper-V hosts running locales other than English. (Bug ID 6918323)

VDI 3.1.1 relies on the output of the command `iscsicli ReportTargetMappings` to establish the details of the iSCSI LUN associated with a desktop. If the Hyper-V host is running a locale other than English, the output of the `iscsicli` command will change, and VDI will not be able to establish the disk number that has been assigned to the iSCSI LUN.

cacao does not start automatically after installing the latest Solaris 10 Update 7 patch cluster. (Bug ID 6896674)

After installing the latest Solaris 10 Update 7 patch cluster on a VDI host and rebooting, cacao doesn't start automatically and, as a result, vdi services are not available. In this case, cacao can be started manually using the "cacaoadm start" command. The problem does not occur after second and subsequent reboots of the VDI host.

VDI sessions cannot always connect to Windows Vista desktops. (Bug ID 6901532)

Windows setup on Vista does not always honour the NetworkLocation setting in the unattend.xml file. If this happens you may experience problems obtaining kiosk sessions for cloned Vista desktops. To workaround this problem, connect to the cloned desktop and set the Network Location using Control Panel, Network and Sharing Center, Customize.

When a desktop powers off, uttsc freezes for a long time. (Bug ID 6817710)

If a desktop is powered down while a user session is connected using uttsc, uttsc may fail to recognise that the desktop is no longer available and may freeze for a long period of time.

Adding a VMware vCenter Desktop Provider may fail on the first attempt. (Bug ID 6842069)

Sometimes, an initial attempt to add a VMware vCenter Desktop Provider may fail with the error "Unable to Contact VMware VirtualCenter" and the reason "The host is not reachable at port 443". To workaround this issue, simply provide the relevant information again and add the Desktop Provider a second time.

Solaris hosts must have adequate swap space. (Bug ID 1225025)

Solaris hosts running VirtualBox must have swap space equal to, or greater than the host's physical memory size. For example, 16GB physical memory would require at least 16GB swap. This can be configured during a Solaris 10 install by choosing a 'custom install' and changing the default partitions.

For existing Solaris 10 installs you will need to create a swap image file on the local filesystem and mount it. The swap file image size should be: Physical Memory - Current Swap = Additional Swap Required. For example, 16GB physical memory - 1GB = 15GB of additional swap required. To add the swap to your system:

For ZFS:

```
# zfs create -V 16gb _<ZFS volume>_/swap
# swap -a /dev/zvol/dsk/_<ZFS volume>_/swap
```

To have the swap mounted after a reboot, add the following line to `/etc/vfstab`:

```
/dev/zvol/dsk/_<ZFS volume>_/swap - - swap - no -
```

For UFS:

```
# mkfile 15g /path/to/swap.img
# swap -a /path/to/swap.img
```

To have the swap mounted after a reboot, add the following line to `/etc/vfstab`:

```
/path/to/swap.img - - swap - no -
```

Memory for ARC cache should be restricted to a lower limit when using ZFS on S10u7. (Bug ID 6844780)

When all VDI components (VDI host, VirtualBox host, and ZFS storage) are installed on a single box (x86 platform, running S10u7), VirtualBox will not be able to start any desktops.

Cause - ZFS uses any memory available (up to the limit) for an ARC cache. If other programs try to access the memory, ZFS should release it. Unfortunately, VDI evaluates the memory before trying to start a virtual machine and recognizes that not enough memory is available to start the virtual machine. Full details are available here

http://www.solarisinternals.com/wiki/index.php/ZFS_Evil_Tuning_Guide#ARCSIZE.

Solution - The memory for the ARC cache can be limited to a max value by adding an entry in `/etc/systems` file.

For example, to restrict the memory to 2GB, in `/etc/system` add:

```
set zfs:zfs_arc_max = 2147483648
```

It has been verified that keeping this value to as low as 512MB and importing a file of 2.7G will work as desired.

Suspend/Resume functionality requires all hosts to execute VirtualBox with the same UID (User ID). (Bug ID 6878370)

When installing each VirtualBox host, take care to ensure that each user executing the VirtualBox web service has the same UID. Installing VirtualBox to run as 'root' (UID=0) is the easiest way of ensuring this. This is required for suspend and resume functionality to work as expected.

Suspend/Resume Functionality Requires Identical CPU Make and Model. (Bug ID 6872361)

To avoid errors when using the suspend and resume functionality, ensure that all VirtualBox hosts have identical CPU manufacturers and identical (or very similar) CPU models. Attempting to resume a virtual machine on hardware that is different from the hardware it was suspended on will often result in failures. These errors occur because the virtual machine may attempt to use a CPU flag or instruction that is no longer available upon being resumed.

Using the VDI CLI in parallel with the VDI Manager. (Bug ID 6770476)

Using the CLI to modify some data, while having a VDI Manager session running, might generate errors in the VDI Manager and log you out. At the following login, the VDI Manager will be working fine again.

RDS hosts appear unresponsive in the VDI Manager. (Bug ID 6876911)

One or more RDS hosts might be reported as unresponsive by the VDI Manager even if the host can be reached and serve new RDS sessions. If some but not all hosts from the Microsoft Remote Desktop provider are unresponsive, the status of the desktop

provider on the summary page will be reported as "Major Issues. Some hosts are unresponsive."

If all hosts from the Microsoft Remote Desktop provider are unresponsive, the status of the desktop provider on the summary page will be reported as "Critical. The desktop provider cannot serve any desktops. Check hosts."

Solution- Reboot the RDS hosts reported as unresponsive.

Users with "@" characters in their passwords cannot authenticate. (Bug ID 6801620)

Due to a Java SE 6 bug, users whose passwords contain the "@" character are unable to authenticate using the VDI Desktop Selector. To work around this problem, you can configure the Desktop Selector to use an alternative Java SE installation. You should choose either Java SE 5 or Java SE 6u14 or later.

The Java SE installation used by the Desktop Selector can be configured using the "-j" option of the VDI Sun Ray Kiosk Session. For more information on setting VDI Sun Ray Kiosk Session options, please see the [How to Adapt the Bundled Sun Ray Kiosk Session](#) page.

Fixed Bugs

6886469 - Sun Storage 7000 2010Q1 release not supported
 6915733 - MySQL data corruption during update from VDI 3.0 to VDI 3.1
 6914575 - Pre-existing utpresave data in the /var/tmp folder causes the 3.1 update procedure to fail
 6884133 - A '^' character in password prevents RDP broker login
 6897588 - VDI should not create virtual machines on Hyper-V hosts at desktop creation
 6902002 - Service tag is not being created on a updated VDI multi-host setup
 6910982 - Chinese characters not supported while specifying Base DN in User Directory wizard
 6914177 - VDI takes too long to obtain IP address for Hyper-V desktops
 6916916 - Update from VDI 3.0 to VDI 3.1 causes an error when trying to convert a desktop to a template
 6910177 - Unable to set locale as 'ko:IME' for Sun Ray RDP settings of pools on using VDI Manager
 6906966 - Cannot create database tables when using utf8 charset
 6890572 - Aborted unresponsive desktops are not being recycled
 6877119 - Passthru login into VM image fails when the Domain NetBIOS doesn't match FQDN (disjointed name space)
 6918428 - Third and following template revisions are not used for cloning
 6916455 - Functionality issues in Internet Explorer
 6914193 - VDI should allow the VLAN ID to be set for Hyper-V desktops
 6912237 - Failing to connect VM using SGD if hash "#" character is the very first char in password
 6910191 - Forward slash in user DN causes VDA services to fail.
 6908379 - Clone job fails with Sysprep on Hyper-V (2 out of 5 attempts)
 6907323 - The current FAT12 implementation cannot handle files > 14 sectors
 6905611 - LDAP queries time out too quickly
 6905326 - Desktop console doesn't work when French locale is used in browser
 6904283 - Desktop Access Client disabled after an update to VDI 3.1
 6899827 - User names of the form "firstname.lastname" are not being associated with tokens correctly
 6887739 - It is not possible to expand the number of sessions in a simple way
 6923702 - Desktop requests fail until previously used desktop has been recycled
 6923349 - ESC: Failure to add Windows 2008 R2 farm as Desktop Provider
 6918326 - VDI should reuse MAC addresses created for Hyper-V desktops
 6921783 - Deadlock error in external MySQL innnoDB database
 6926798 - Reduce frequency of 'storage size' query
 6925951 - Right clicking in the vm console produces the flash menu as opposed to a desktop menu
 6925054 - Frattina should handle job cancelations and failures better
 6924739 - CREATE_REVISION jobs for the same revision can run in parallel
 6924191 - Cacao start/restarts while VBox hosts are unresponsive causes UI to be almost unresponsive

Reporting Problems and Providing Feedback

To report a bug in the software or to ask a question, please contact the VDI Team Community at the [Sun VDI Software Forum](#). If you need a fix for a bug, and have a Standard or Premium Support Agreement, you should open a case with Support.

If you are reporting a bug, please provide the following information where applicable:

- Description of the problem, including the situation, where the problem occurs, and its impact on your operation.
- Machine type, operating system version, browser type and version, locale and product version, including any patches you have applied, and other software that might be affecting the problem.
- Detailed steps on the method you have used, to reproduce the problem.
- Any error logs or core dumps.

Contacting Sun Specialist Support

If you have a Sun Standard or Premium Support Agreement, we would like to encourage you to contact the Sun Virtual Desktop Infrastructure support team directly for immediate technical assistance. If unknown, you may first want to find the correct [Service Center](#) for your country, then contact Sun Services to open a ticket directly.

The responding attendant will need the following information to get started:

- Your Sun Service Contract number. (ex: "NK11111111")
- The product you are calling about. ("Sun Virtual Desktop Infrastructure")
- A brief description of the problem you would like assistance with. (ex: "I am having problems updating to VDI 3.1.1")
