This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS

Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, duplication, disclosure, modification, and adaptation shall be subject to the restrictions and license terms set forth in the applicable Government contract, and, to the extent applicable by the terms of the Government contract, the additional rights set forth in FAR 52.227-19, Commercial Computer Software License (December 2007). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

This software is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of this software. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software in dangerous applications.

Oracle is a registered trademark of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

This software and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

Where an Oracle offering includes third party content or software, we may be required to include related notices. For information on third party notices and the software and related documentation in connection with which they need to be included, please contact the attorney from the Development and Strategic Initiatives Legal Group that supports the development team for the Oracle offering. Contact information can be found on the Attorney Contact Chart.

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your beta trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, and timing of any features or functionality described in this document remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Software License and Service Agreement, which has been executed and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Generate Documents in OIPA	8

OVERVIEW

Oracle Insurance Policy Administration (OIPA) provides users with the ability to dynamically generate documents in PDF format. Transactions that are configured with an attached GenerateDocument business rule can access OIPA data to generate a dynamic document.

The document generating system uses Crystal Reports XI. The standard Crystal Reports report file, which has the *.rpt* file extension, is used as the document template. Each individual transaction can be configured to use a specific template.

A web service, DocumentGenerator, is used by OIPA to process the document generator. The DocumentGenerator WSDL can be accessed by entering the server name and port for OIPA in the address below:

<http://<OIPA-SERVER:PORT>/PASJava/service/DocumentGenerator?wsdl>

IMPORTANT: Since the Document Generator uses Crystal Reports XI, appropriate licenses and media must be obtained from the vendor prior to proceeding.

INSTALLATION

DIRECTORY STRUCTURE

Two directories must be created: one to store the templates and one for the generated documents. Each of these directories must be accessible by the application server and OIPA instance. In the example below, the *Documents* directory is used to store the document templates, while the *GeneratedDocuments* directory is used to store the generated documents.

Example:

```
document.documentPath=/opt/Oracle/OIPA/Documents
document.generatedDocumentRootPath=/opt/Oracle/OIPA/GeneratedDocuments
```

REQUIRED LIBRARIES

Twenty required libraries must be placed in the class loader of the application server. Each of these files is included with Crystal Reports, and is not included with OIPA.

CrystalCharting.jar	CrystalCommon.jar	CrystalContentModels.jar	CrystalExporters.jar
CrystalExportingBase.jar	CrystalFormulas.jar	CrystalQueryEngine.jar	CrystalReportEngine.jar
CrystalReportingCommon.jar	Concurrent.jar	CRDBJavaServerCommon.jar	CRDBXMLServer.jar
icu4j.jar	jrccerom.jar	keycodeDecoder.jar	MetafileRenderer.jar
rascore.jar	rpoifs.jar	Serialization.jar	URIUtil.jar

CONFIGURATION FILES

The Crystal Reports configuration file, *CRConfig.xml*, must be placed in the class pass of the OIPA instance. In most cases, the class path will already contain a directory where the other OIPA configuration files are housed. The *CRConfig.xml* configuration file can be placed in that directory.

The *CRConfig.xml* configuration file is included with Crystal Reports and is not included with OIPA.

OIPA PROPERTIES FILE

The OIPA configuration file, *PAS.properties*, must be modified to include the necessary configuration. Refer to the **System Properties** document in the Oracle Insurance Policy Administration 9.3.0.0 documentation library published on the Oracle Technology Network (OTN) for additional information on the *PAS.properties* file.

document.crystalConnectionCount	Maximum concurrent connections
document.documentPath	The path of the document template directory
document.generatedDocumentRootPath	The path of the directory used to store generated documents.
document.documentGeneratorUrl	The address of the DocumentGenerator WSDL.

Example:

```
document.crystalConnectionCount=1
document.documentPath=/opt/Oracle/OIPA/Documents
document.generatedDocumentRootPath=/opt/Oracle/OIPA/GeneratedDocuments
document.documentGeneratorUrl=http://localhost:8080/PASJava/service/DocumentGenerator?wsdl
```

USING THE DOCUMENT GENERATOR

CONFIGURE IN THE RULES PALETTE

After the installation steps are complete, the Rules Palette provides the tools to configure the necessary components of the Document Generator. The following configuration requirements are necessary to implement this functionality.

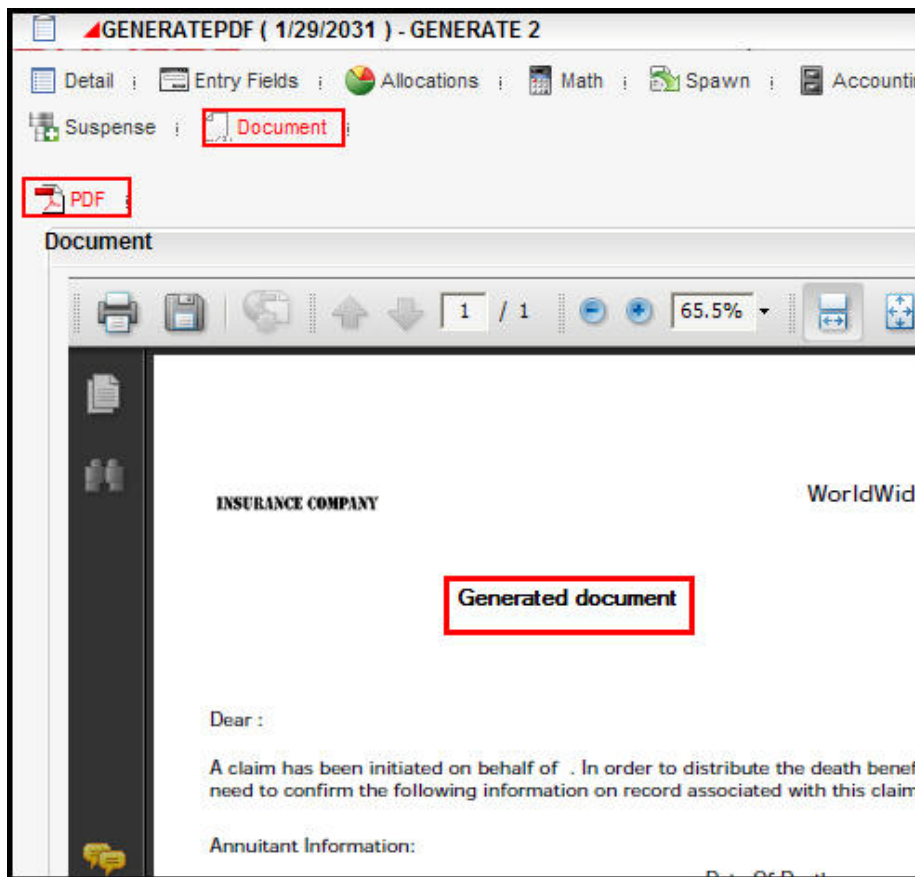

- A transaction configured to generate a PDF file.
- ExternalProcess rule attached to the transaction. This rule is configured to trigger the GenerateDocument rule.
- GenerateDocument business rule overridden at the transaction level. This rule is not listed in the TransactionBusinessRulePacket for GeneratePDF. GenerateDocument calls a template that is located on the server to dynamically generate a PDF file based on input gathered from a SQL query in the GenerateDocument rule.
- File template added to the server at the path specified in the PAS.properties file. This file name should match the name specified in the GenerateDocument configuration. This was added during the installation process described earlier in this document.

Note: Refer to the Rules Palette help system for complete instructions on configuring the Document Generator. This information can be found under **Main Explorer Folders | Prototypes | View PDF Documents**. The help is located inside the Rules Palette application. Click the Help option on the Main menu to reveal the link to the help.

GENERATE DOCUMENTS IN OIPA

When the components of the Document Generator are properly configured in the Rules Palette, an OIPA user can generate a document by simply adding the PDF generating activity to the Activity screen and then processing it. Once the activity is active, the user may click the Activity Detail icon to the left of the activity. The Activity window will open. A **Document** link should be visible along the top of the window.

Note: Refer to the OIPA help system for complete instructions on working with PDF generating activities. The help is located in the Oracle Insurance Policy Administration 9.3.0.0 documentation library on the OTN.
