

An Oracle White Paper  
April 2012  
Introduced in Release 6.0  
E29331-01

# Text Wrapping

## Overview

Applications: All applications

Focus Area: Single- and multi-select windows

Data presented in a multi or single select control will wrap the data so that the full content of an entry is visible in the window. Please note: if a single entry is larger than the screen and the entry does not contain a space then text wrapping will not occur.

## The Basics

In this example an NPD brand displays the functionality and limitations of text wrapping.

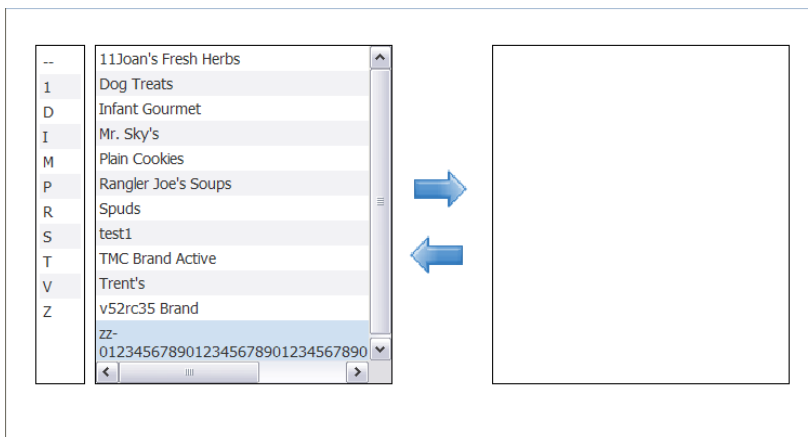

Figure 1. Example of text wrapping

The brand's full name is "zz - 01234567890123456789012345678901234567890123456789". The numeric portion of the name has no spaces. Therefore the field wraps after the dash, but does not wrap the numeric portion of the name.

In addition, highlighting has been added to assist in differentiating the lines.
