# About This Guide

This guide provides detailed instructions and supporting information for installing and configuring Oracle Knowledge iConnect for Oracle CRM On Demand Self-Service Portal for use with an Oracle Knowledge application. This guide is intended for application developers and systems administrators who need to plan for and perform integration of the On Demand Self-Service Portal with an Oracle Knowledge application and a supported Oracle CRM application.

This preface includes information on the general organization of this guide.

## In This Guide

The Oracle Knowledge iConnect for CRM On Demand Integration Guide is divided into the following sections:

<b>Chapter 1, CRM On Demand Configuration</b>	This chapter describes Oracle Knowledge CRM On Demand configuration.
<b>Chapter 2, CRM On Demand Mapping Tool Setup</b>	This chapter describes how to configure the CRM On Demand mapping tool components that make Oracle Knowledge applications available to the CRM application.
<b>Chapter 3, Self-Service CRM On-Demand Configuration</b>	This chapter describes Oracle Knowledge On Demand Self-Service Portal configuration.
<b>Chapter 4, SSP Mapping Tool Setup</b>	This chapter describes how to configure the On Demand Self-Service Portal mapping tool components that make Oracle Knowledge applications available to the SSP application.
<b>Chapter 5, Configuring Oracle Knowledge</b>	This chapter describes how to configure the Oracle Knowledge System Manager and Information Manager components.
<b>Chapter 6, Self-Service Portal User Administration</b>	This chapter describes how to implement and administer the SSP.
<b>Chapter 7, Reports Configuration</b>	This chapter describes how to configure reporting tools.
<b>Appendix A: Build Configuration Updates</b>	This appendix provides a reference for configuration updates.
<b>Appendix B: Troubleshooting</b>	This appendix contains information on troubleshooting the XML sent by Information Manager and Intelligent Search.
<b>Appendix C: Crawler Support for Multiple Web Applications</b>	This appendix contains information on customizing the crawler URL Builder to support multiple web applications.

## Screen and Text Representations

The product screens, screen text, and file contents depicted in the documentation are examples. This guide attempts to convey the product's appearance and functionality as accurately as possible. Application screen content is compared for overall accuracy with screen shots in the guide prior to release. Updates are made where necessary. However, the actual product contents and displays might differ from the published examples.

## References to Web Content

For your convenience, this guide refers to Uniform Resource Locators (URLs) for resources published on the World Wide Web, when appropriate. We attempt to provide accurate information; however, these resources are controlled by their respective owners and are therefore subject to change at any time.

## Examples of Product Screens and Text

The product screens, screen text, and file contents depicted in the documentation are examples. We attempt to convey the product's appearance and functionality as accurately as possible; however, the actual product contents and displays may differ from the published examples.

## Operating System Variations in Examples and Procedures

We generally use Linux screen displays and naming conventions in our examples and procedures. We include other operating system-specific procedures or steps as noted in section headings, or within topics, as appropriate.

We present command syntax, program output, and screen displays:

- in Linux format first
- in other Unix-specific variants only when necessary for proper operation or to clarify functional differences
- in Windows format only when necessary for clarity

# CRM On Demand Configuration

For iConnect functionality, you must configure the CRM On Demand application.

iConnect for CRMOD has the following requirements:

- Ability to embed Oracle Knowledge answers page (An External Website) as a Web Applet in the Service Request Detail page.
- Ability to pass a set of key information to Oracle Knowledge Find Answers Portal
- Ability to Link/Unlink/Get Linked Oracle Knowledge Answers for a Service Request (Oracle Knowledge Answers are in turn stored in one of the Web Service 1.0 Custom Objects1 - 3)

## Steps for Embedding Oracle Knowledge Search Site within CRM On Demand

- 1 Logon to the CRM On Demand Application.
- 2 Click the **Admin** link on the top right corner.
- 3 Click the **Application Customization** link.
- 4 Under *Record Type Setup*, click the **Service Request** link.
- 5 Under *Page Layout Management* click on **Service Request Web Applet** link.
- 6 Click the **New** button and enter the following information **Save**:

Field	Value
<b>Name</b>	Find Answers
<b>Location</b>	Detail Page
<b>Type</b>	HTML
<b>Web Applet HTML<sup>1</sup></b>	<pre>&lt;iframe width="100%" height="280" scrolling="auto" frameborder="no" name="myframe"src="https://staging.InQuira.com:8226/iconnect/index?page=ccaMain&amp;sr_key=%%SR_Number%%&amp;question_box=%%Abstract%%&amp;cca_types=solution_id,+resolution_id&amp;ui_mode=question&amp;cca_connected=true&amp;cca_system=crmod&amp;user=%%User id%%&amp;fname=%%User first name%%&amp;lname=%%User last name%%&amp;email=%%User email%%&amp;locale=%%User locale code%%&amp;ssoToken=%%SSO Token%%&amp;CONTACT_ID=%%Contact_Id%%&amp;CONTACT_EMAIL=%%Contact_Email%%&amp;cca_case_desc=%%Abstract%%&amp;url=https://secure-ausomxapa.crmondemand.com?id="iconnect"&gt;&lt;/iframe&gt;</pre>

1. Note:

- **src** is the Oracle Knowledge web application URL, it should be `http://<servername>:<port>/support/index?`
- **iconnect** is the iconnect web application name deployed. In this case, Application type "iConnect" has been deployed as "iconnect"
- **url** is the On Demand CRM application access url for customers. This is unique for each customer.
- Make certain to note where there are spaces and where there are none. "=" never has a space after it.

7 Click **Save**.

8 Go to any Service Request Detail page and click **Edit Layout** in the top right corner and move the 'Find Answers' from **Available Related Information** to **Displayed Related Information**.

## WALK-THRU

1 Logon to CRM On Demand Application

## Setting Up a Symbolic Link

A *symbolic link* is a context-dependent link that has variables embedded in it. Variables embedded in a symbolic link may include user and or environment specific information.

The url specified in the src attribute of the iframe is the symbolic link to access the answers.

Parameter Key	Value
<b>Main URL</b>	http://<server-name>:<port>/<iconnect application context-name>/index?page=ccaMain<other_parameters> e.g. http://staging:8226/ssp/index?page=ccaMain <b>Note:</b> <application context-name> is used to deploy the iConnect Web Application. Note this name and make certain that the iConnect web application is registered with the same name.
<b>sr_key</b>	%%%SR_Number%%%
<b>question_box</b>	%%%Abstract%%%
<b>cca_types</b>	solution_id,+resolution_id
<b>ui_mode</b>	question
<b>cca_connected</b>	true
<b>cca_system</b>	crmod
<b>user</b>	%%%User id%%%
<b>fname</b>	%%%User first name%%%
<b>lname</b>	%%%User last name%%%
<b>email</b>	%%%User email%%%
<b>locale</b>	%%%User locale code%%%
<b>ssoToken</b>	%%%SSO Token%%%
<b>SSP Authentication URL</b>	&url=https://secure-ausomxapa.crmondemand.com"
<b>CONTACT_ID</b>	%%%Contact_Id%%%
<b>CONTACT_EMAIL</b>	%%%Contact_Email%%%

## Authenticate the SSO Token

Refer to Oracle Knowledge documentation “How to use and test SSO”.

### Single Sign-on

Oracle Knowledge accepts the user credentials (user id and password) that are passed and automatically logs on the user when the user initiates the first search request for a case, if the user is known. If the user is unknown, then the user appears as an anonymous user.

The user is mapped to a user Role, which dictates the privileges for that user that are displayed within the Oracle Knowledge application.

This password encryption/decryption only affects the autologin for system integration. It does not affect the normal login process, being native Oracle Knowledge implementation, LDAP, or any custom made implementation through IAuthenticate.

Using HTTPS communication between CCA and InfoCenter/iConnect further improves the security for sensitive data.

If using Single Sign-on products, such as Site Minder, a customized SSO can replace the AUTOLOGIN delivered.

## Steps for Linking/Unlinking/Get Linked Answers

- 1 Customize the Custom Objects and add new fields specific to Oracle Knowledge.
- 2 Map the Custom Object to the Oracle Knowledge business object.

### Customizing the Custom Objects

iConnect for CRMOD only supports Web Service 1.0 Objects. Only three custom objects are supported in WS 1.0:- CustomObject1, CustomObject2 and CustomObject3.

Oracle Knowledge answers linked to a Service Request must be stored in one of the three custom objects. However at one point of time, only one object must be chosen to represent the Oracle Knowledge answer.

The following example demonstrates configuration for Custom Object 2.

**Note:** Choosing a different custom object, once answers have been associated to a particular custom object and after this custom object has been associated to Service Request, may result in loss of data and data corruption.

The following fields are need to be created for Custom Objects in CRM On Demand :-

Field Display Name	CRM Data Type
IQTitle	Text (Long)
IQExcerpt	Text (Long)
IQIMDocId	Text (Short)
IQDocType	Text (Short)
IQDocGUID	Text (Long)
IQDocVersion	Text (Short)

IQLinkedDate	Text (Short)
IQDocUrl	Text (Long)

**STEPS:-**

- 1 Logon to CRM On Demand Application.
- 2 Click on the 'Admin ' link on the top right corner.
- 3 Click on the 'Application Customization' link.
- 4 Under 'Record Type Setup', click on 'Custom Object 2' link.
- 5 Select 'Custom Object 02 Field Setup' under Field Management section.
- 6 Click on 'New Field' button.
- 7 Set Display Name to 'IQTitle', Field Type to 'Text(Long)' and click 'Save'.
- 8 Repeat step 6 and 7 for rest of the fields.

**WALK-THRU**

## Create Administrator User for SSP integration with iConnect

**Note:** It is recommended to create a separate administrator user to be used in the integration between CRM and Oracle Knowledge. This is not mandatory. This user ID will be used wherever an administrator ID is required in the CRM integration with iConnect/ SSP.

- 1 Log to CRM On Demand Application.
- 2 Click the [Admin](#) link in the top right corner.
- 3 Click **User Management and Access Controls**.
- 4 Click **User Management**.
- 5 Click the **New User** button.

The screenshot shows the 'User List' page in CRM On Demand. At the top, there is a navigation bar with links: Home, Calendar, Leads, Accounts, Contacts, Opportunities, Service, Reports, and Dashboard. Below this, the 'User List' section has a breadcrumb: 'Back to User Management and Access Controls'. There are buttons for 'Menu', 'New User' (highlighted with a red arrow), and 'Quick Add'. A table below lists existing users with columns: Last Name, First Name, Work Phone #, Email, Role, Reports To (Alias), and Status. The table contains five rows of user data.

Last Name	First Name	Work Phone #	Email	Role	Reports To (Alias)	Status
Albright	Sean	1 (310) 483-7799	salbright@inquiria.com	Administrator		Inactive
Chakravarti	Nav	1 (323) 319-3590	nchakravarti@inquiria.com	Administrator		Inactive
Jarugula	Sarath	1 (650) 246-5023	sjarugula@inquiria.com	Administrator		Active
Mojahed	Darius	1 (650) 246-5001	dmojahed@inquiria.com	Administrator		Active

# CRM On Demand Mapping Tool Setup

## Introduction

Mapping Tool is a web-based configuration tool for setting up the communication between Oracle Knowledge and CRM On-Demand. It has the following functions:-

- Ability to set up CRM OD Connection Properties
- Ability to set the CRM Objects to Use for mapping
- Ability to view CRM Object Fields (Attributes)
- Ability to map the individual attributes between Oracle Knowledge and CRMOD

Mapping Tool is deployed as part of Intelligent Search's System Manager Advanced Configuration utility.

## Accessing the Mapping Tool

To access the mapping tool:

- 1 Access the System Manager by opening a web browser and navigating to:  
`http://<hostname>:<port>/inquirawb/`
- 2 Log in with the appropriate credentials.
- 3 Click **Tools** and select *Advanced Config*.
- 4 Click **CRM Mapping Configuration** from the Advanced Config window.

# CRM On-Demand Connection Properties

This feature provides a mechanism for users to define the connection properties needed for the Web Service Calls.

The following properties are required to be defined:

Property	Description
<b>Enable Login</b>	Select <b>Yes</b> to enable the object.
<b>User Name</b>	CRM On-Demand Administrator Login
<b>Password</b>	CRM On-Demand Administrator Password
<b>Property</b>	<b>Description</b>
<b>URL</b>	URL to access Oracle CRM On-Demand, For example, <code>https://secure-&lt;server&gt;.crmondemand.com/</code>
<b>Max Active Collections</b>	Enter the maximum number of active collections. Default is 5. If you use state-less connections, set this to 1 (see below).
<b>Display Activity in SSP</b>	Enter whether to display Contact Center activity in SSP. Default is <b>Y</b> .
<b>Package Name for InQuira Objects</b>	The package name of the Oracle Knowledge-specific Value Objects (including SSP) that are mapped to CRM Objects [Case, CaseAnswerLinkInfo and CaseActivity] are stored, typically <code>com.inquirea.crm.vo</code>

## State Management (state-full / state-less)

Property	Description
<b>State-full Connections</b>	This setting applies to SSP only. To continue using the current form of session management, set to <b>On</b> . To configure using server side session management, set to <b>Off</b> . For either setting, do not change any other parameters. Using state-less connections reduces the number of web-service requests and can improve performance. Default is <b>On</b> .
<b>URN</b>	The default is <code>urn:crmondemand/ws</code> . Do not change this setting.
<b>Client Name</b>	The default is <code>Oracle KM</code> . Do not change this setting.

Configuration Properties:View/Edit

Security and Login

Enable Login : ☒ On ☐ Off

User Name :

Password :

Basic Information

URL :

Max Active Connections :

Display Activity In SSP :

Package name for InQuira Objects :

State Management (state-full / state-less)

State-full connections : ☒ On ☐ Off

Disabling state-full sessions will reduce the number of web-service requests enhancing the performance of the application. However, additional parameters are required (below) and you may need to upgrade your CRM application to be compatible.

URN :

Client Name :

**Important!** Export the configuration properties and copy them to locations accessible by the Self Service Portal at runtime (i.e. `$INQUIRA_ROOT/appserverim/webapps/ssp/WEB-INF/classes`).

## CRMOD Session Management

### iConnect Related Configuration for CRMOD Session Management

**Note:** If you plan to use state-less sessions, make the modifications in this section. Not setting these values allows the system to continue using state-full sessions.

To configure this for iConnect:

- 1 Enter the following values in the scheduler:

Property	Value
CRMOD_STATEFUL_SESSIONS	If this value is set to null or "TRUE" or "true", this indicates that iConnect for CRMOD should use Stateful sessions
CRMOD_STATELESS_CLIENTNAME	Set this value to Oracle Knowledge if setting CRMOD_STATEFUL_SESSIONS to any value other than true
CRMOD_STATELESS_URN	Set this value to urn : /crmondemand/ws

- 2 Run a synchronization.
- 3 Restart the runtime.

or

: CRMOD\_request [Edit List](#)

: CRMOD\_response [Edit List](#)

: https://secure-<server>.crmondemand.com

# Set CRM Object

This feature allows users to define the mapping at the Object level between CRM On-Demand installed Objects (*Service Request*, *Custom Object 1*, *Custom Object 2*, *Activity*) and Oracle Knowledge-Specific Value Objects (*Case*, *CaseAnswerLinkInfo*, *CaseActivity*).

**Note:** Note that package name of the Oracle Knowledge-Specific Value Objects must match the property 'Package Name for Oracle Knowledge Objects' defined in the 'CRM On-Demand Connection Properties' section.

**Note:** The Oracle Knowledge objects and CRMOD objects, discovered by the mapping tool, must be present in the classpath of the mapping tool web application.

Oracle Knowledge Object	CRMOD Installed Object
Case	Service Request
CaseActivity	Activity
CaseAnswerLinkInfo	<Custom Objects>

INQUIRA | CRM On Demand Mapping Configuration

# Field Mapping

This is one of the most important feature allows users to define the mapping at the Field level between CRM On-Demand OOB Objects (Service Request, Custom Object 1, Custom Object 2, Activity) and Oracle Knowledge-Specific Value Objects (Case, CaseAnswerLinkInfo, CaseActivity).

**Note:** The Oracle Knowledge objects and CRMOD objects, discovered by the mapping tool, must be present in the classpath of the mapping tool web application.

**Note:** CRMOD Customization of Custom Objects is the pre-requisite for Field Mapping

Case	Service Request	
Attribute Name	Display Name	Field Name
caseNumber	Service Number	SRNumber
linkedAnswerFlag	IQAnswersLinkedFlag	<Determined during CRMOD customization>
Status	Status	Status

CaseAnswerLinkInfo	Custom Object 1 – 3	
Attribute Name	Display Name	Field Name
caseNumber	Service Request	serviceRequestNumber
key	External Unique Id	externalSystemId
title	IQTitle	<Determined during CRMOD customization>
excerpt	IQExcerpt	<Determined during CRMOD customization>
IMDocId	IQIMDocId	<Determined during CRMOD customization>

# Self-Service CRM On-Demand Configuration

For Self Service functionality, configuration is required on the CRM On Demand application.

Following are the configuration tasks:-

- Customize Contact
  - Add custom fields to Contact Object
  - Add a new section to display Self Service Portal information
  - Add a new web link 'Register New User' for CRM agent to register on behalf of a new user
- Customize Activity
  - Add 2 new types for Task Activity (UserUpdate & UserTopic)
  - Add a new web link 'Topic Link' for Task Activity
  - Enable the 'Topic Link' web link only for Type 'UserTopic'

## Contact Customization

### Add Custom Fields to Contact

The following fields need to be created for Custom Objects in CRM On Demand :-

Field Display Name	CRM Data Type
• IQAutoPassword	• Checkbox
• IQPassword	• Text (Long)
• IQRegistrationDate	• Date/Time
• IQResetReminder	• Text (Short)
• IQUserRole	• Picklist (Editable)
• IQUserStatus	• Picklist (Editable)
• IQUserType	• Picklist (Editable)

#### **STEPS:**

- 1 Logon to CRM On Demand Application
- 2 Click on the 'Admin ' link on the top right corner
- 3 Click on the 'Application Customization' link
- 4 Under 'Record Type Setup', click on 'Contact' link

- 5 Select 'Contact Field Setup' under Field Management section
- 6 Click on 'New Field' button
- 7 Set Display Name to 'IQAutoPassword', Field Type to 'Checkbox' and click 'Save'
- 8 Repeat step 6 and 7 for rest of the fields
- 9 Click on 'Edit Picklist' for Display Name 'IQRUserRole'
- 10 Enter the Picklist values as 'Restricted', 'View My Cases', 'Update My Cases', 'View Company Cases' at the appropriate Order and click on 'Save & New' button
- 11 Enter the Picklist values as 'Update Company Cases' at the appropriate Order and click on 'Save & Close' button
- 12 Click on 'Edit Picklist' for Display Name 'IQRUserStatus'
- 13 Enter the Picklist values as 'Needs Approval', 'Approved', 'Registration in process' in the appropriate Order and click on 'Save & New' button
- 14 Enter the Picklist values as 'Denied' at the appropriate Order and click on 'Save & Close' button
- 15 Click on 'Edit Picklist' for Display Name 'IQRUserType'
- 16 Enter the Picklist values as 'Internal' and click on 'Save & New' button
- 17 Enter the Picklist values as 'External' and click on 'Save & Close' button
- 18 Click on 'New Field' button and Set Display Name to 'Register Self-Service User', Field Type to 'Weblink' and click 'Save'
- 19 Click on 'Edit Web Link' and update the properties as below:-

Property	Value
Display Text	Register Self-Service User
Web Link Target	Open in New Window
Refresh Parent Window	Check
Display Options	Detail Page
Url	http://<server>:<port>/ssp/index?page=register&rp=home&contactId=%%Id%%&contactFirstName=%%First_Name%%&contactLastName=%%Last_Name%%&contactEmail=%%Email_Address%%

## Add a New Section to Display Self Service Portal Information

### STEPS:

- 1 Logon to CRM On Demand Application
- 2 Click on the 'Admin ' link on the top right corner
- 3 Click on the 'Application Customization' link
- 4 Under 'Record Type Setup', click on 'Contact' link
- 5 Select 'Contact Page Layout' under Page Layout Management section and then click "Copy" button next to "Contact Page Standard Layout"
- 6 Enter 'CustomContact' (User can set Layout Name however they want) for Layout Name and click 'Finish' button
- 7 Click on 'Edit Sections' under Contact Page Layout
- 8 Change the display name to 'Self Service Portal Information' for any one of the unused 'Available Section' and click 'Save' button

- 9 Click on 'Edit' under Contact Page Layout
- 10 Click on 'Field Layout [Step 3]' in the Page Layout Wizard
- 11 Select IUserRole, IUserStatus, IUserType and IQRegistration date from the Available fields  
and click on , Move it to the right-most section under 'Self Service Portal information'
- 12 Click on finish
- 13 Go back to 'Admin Home Page' and click on 'User Management & Access Controls'
- 14 Click on 'Role Management'
- 15 Click on 'Edit' link under Administrator
- 16 Click on the 'Page Layout Assignment' [Step 6]
- 17 Change the Contact Call Page Layout Name to 'CustomContact'(or any name that was set in the step 6) and click on 'Finish' button.
- 18 Go to any Contact Details page. The 'Self Service Portal Information' Section should show up as shown below

## Create Dynamic Layout

### STEPS:

- 1 Go To “Activity Application Customization” and Click on “Task Dynamic Layout”
- 2 Click on “New Layout” and put Dynamic Layout Name as “UserTopicDynLayout”.
- 3 Assign “User Topic Layout” as the layout for Activity Type “UserTopic” and “NonUserTopicLayout” for rest of the Activity Types and click on Finish

### WALK-THRU:-

- 1 Go To “Activity Application Customization” and Click on “Task Dynamic Layout”

#### Dynamic Layout Management

Manage Dynamic Layouts by associating different page layouts with different values of the picklist that controls page display at runtime.

Appointment Dynamic Layout

Task Dynamic Layout

- Click on “New Layout” and put Dynamic Layout Name as “UserTopicDynLayout”.

**Dynamic Layout Wizard: Task: UserTopicDynLay...** | [Back to Task Dynamic Layout](#) [Help](#)

Step 1  
Specify Name

Step 2  
Assign Layouts

[Next](#) [Finish](#) [Cancel](#)

Specify Name

The Task Detail and Task Edit pages may require process driven layouts - i.e, the page layouts must change dynamically based on the values of a specific field.

Please specify a name for the Dynamic Layout and a picklist field whose values will determine which layout is seen by the users. Additionally, please specify a default Layout name.

Specify Name

**Dynamic Layout Name\***

**Driving Picklist\***

**Default Layout\***

Modified By **Santosh Chakrapani** 02/10/2010 11:52:44

Description

- Assign “User Topic Layout” as the layout for Activity Type “UserTopic” and “NonUserTopicLayout” for rest of the Activity Types and click on Finish.

Field Type	Layout Name*
Answer	NonUserTopicLayout
Call	NonUserTopicLayout
Callback	NonUserTopicLayout
Correspondence	NonUserTopicLayout
Demonstration	NonUserTopicLayout

# SSP Mapping Tool Setup

## Introduction

Mapping Tool is a web-based configuration tool for setting up the communication between Oracle Knowledge and CRM On-Demand. It has the following functions:-

- Ability to set up CRMOD Connection Properties
- Ability to set the CRM Objects to Use for mapping
- Ability to view CRM Object Fields (Attributes)
- Ability to map the individual attributes between Oracle Knowledge and CRMOD

Mapping Tool is deployed as part of Intelligent Search's System Manager Advanced Configuration utility. See "Accessing the Mapping Tool" on page 14 for access information.

## CRM On-Demand Connection Properties

This feature provides a mechanism for users to define the connection properties needed for the Web Service Calls. See "CRM On-Demand Connection Properties" on page 15 for further instructions.

## Set CRM Object

This feature allows users to define the mapping at the Object level between CRM On-Demand installed Objects (*Service Request, Contact, Activity, Custom Object X*) and SSP-Specific Value Objects (*SSPCase, SSPCase2, SSPActivity, SSPContact, SSPQueryCase2*).

**Note:** Note that package name of the SSP-Specific Value Objects must match the property 'Package Name for SSP Objects' defined in the 'CRM On-Demand Connection Properties' section.

**Note:** The SSP objects and CRMOD objects, discovered by the mapping tool, must be present in the classpath of the mapping tool web application.

Oracle Knowledge Object	CRMOD Installed Object
Case	Service Request
CaseActivity	Activity
CaseAnswerLinkInfo	<Custom Objects>
SSPCase	Service Request
SSPContact	Contact
SSPActivity	Activity
SSPCase2	Service Request2
SSPQueryCase2	Service Request2 Query

Default Mapping Settings

Help Save

CRM Object Name for mapping "SSPCase" : Service Request

CRM Object Name for mapping "SSPAttachment" : - None -

CRM Object Name for mapping "Case" : Service Request

CRM Object Name for mapping "CaseActivity" : Activity

CRM Object Name for mapping "SSPCase2" : Service Request2

CRM Object Name for mapping "CaseAnswerLinkInfo" : Custom Object 1

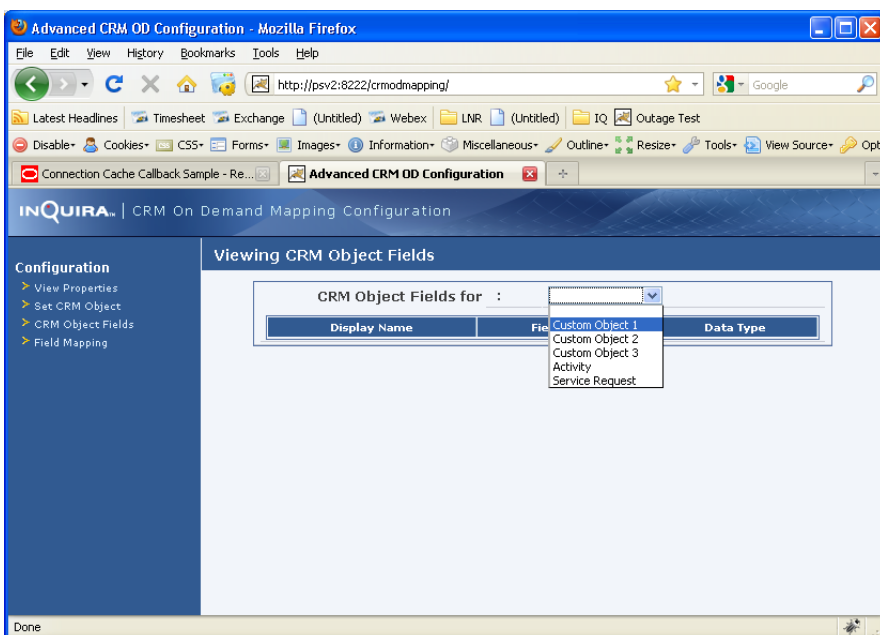

CRM Object Name for mapping "SSPContact" : Contact

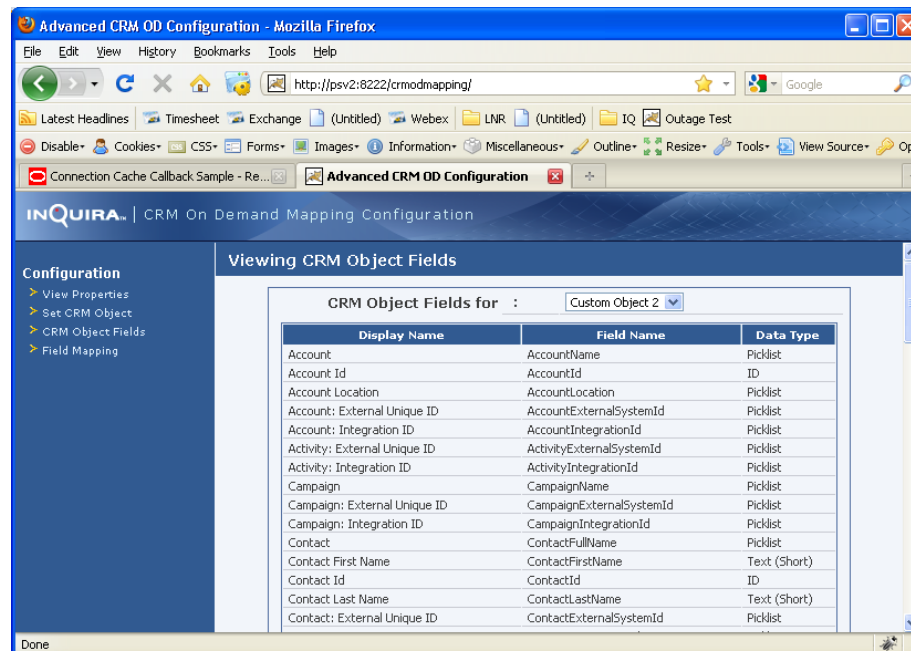

CRM Object Name for mapping "SSPActivity" : Activity

CRM Object Name for mapping "SSPQueryCase2" : Service Request2 Query

## View CRM Object Attributes

This functionality allows users to view all the configured attributes of CRM OD Objects. The following attributes are shown: Display Name, Field Name and Data Type.

## Field Mapping

This feature allows users to define the mapping at the Field level between CRM On-Demand installed Objects (*Service Request, Contact, Activity, Custom Object X*) and SSP-Specific Value Objects (*SSPCase, SSPCase2, SSPActivity, SSPContact, SSPQueryCase2*).

**Note:** CRMOD Customization of Custom Objects is the pre-requisite for Field Mapping.

SSPContact	Contact	
Attribute Name	Display Name	Field Name
contactId		contactId
accountId		accountId
description		description
contactType		contactType
createdDate		createdDate

### Example Mapping of Service Request

After Mapping is complete, user should see the following:-

SSPCase	ServiceRequest_Type
 serviceRequestId	 serviceRequestId
 createdDate	 createdDate
 modifiedDate	 modifiedDate
 accountName	 accountName
 accountId	 accountId
 accountLocation	 accountLocation
 area	 area
 cause	 cause
 closedTime	 closedTime
 contactEmail	 contactEmail
 contactFirstName	 contactFirstName
 contactFullName	 contactFullName
 contactId	 contactId
 contactLastName	 contactLastName
 createdByName	 createdByName
 subject	 subject
 description	 description
 ownerId	 ownerId
 owner	 owner
 SRNumber	 SRNumber
 status	 status
 priority	 priority
 listOfAttachment	 listOfAttachment
 listOfActivity	 listOfActivity

### Mapping of the Source Field for SSPCase and CRMOD Service Request

If you choose to use the default value of CRMOD Service Request field "source" as the value of the "source" field for SSPCase, set the default value of CRMOD service Request field "source" in CRMOD side and no additional configuration is necessary.

SSPCase	ServiceRequest_Type
<input checked="" type="checkbox"/> serviceRequestId	<input checked="" type="checkbox"/> serviceRequestId
<input checked="" type="checkbox"/> createdDate	<input checked="" type="checkbox"/> createdDate
<input checked="" type="checkbox"/> modifiedDate	<input checked="" type="checkbox"/> createdDate
<input checked="" type="checkbox"/> accountName	<input checked="" type="checkbox"/> accountName
<input checked="" type="checkbox"/> accountId	<input checked="" type="checkbox"/> accountId
<input checked="" type="checkbox"/> accountLocation	<input checked="" type="checkbox"/> accountLocation
<input checked="" type="checkbox"/> area	<input checked="" type="checkbox"/> area
<input checked="" type="checkbox"/> cause	<input checked="" type="checkbox"/> cause
<input checked="" type="checkbox"/> source	<input checked="" type="checkbox"/> source
<input checked="" type="checkbox"/> closedTime	<input checked="" type="checkbox"/> closedTime
<input checked="" type="checkbox"/> contactEmail	<input checked="" type="checkbox"/> contactEmail
<input checked="" type="checkbox"/> contactFirstName	<input checked="" type="checkbox"/> contactFirstName

If you choose to set the value of the "source" field for SSPCase not using the default value of CRM Service Request field "source", complete the following additional configuration steps:

- 1 While doing the field mapping configuration, you also must do the field mapping for field "source" of SSPCase and CRM Service Request in System Manager side.
- 2 Do the configuration to set the value of field "source" of SSPCase in "infocenter.properties". The related key is "DEFAULT\_CASE\_SOURCE" and the configured value should be one valid value of the field "source" of CRM Service Request. For example, "Portal" is one valid value of the field "source" of CRM Service Request, so users can set it like this "DEFAULT\_CASE\_SOURCE=Portal". After that, the field "source" of all CRM Service Request from SSP will be set as "Portal".

```

infocenter.properties
305 ERROR_MULTI_USER_EXISTS=Duplicate records found, please contact Customer Support for registration
306 #Rules
307 #RULE_CREATENEW_ON_MULT_EMAIL: Create a new contact in CRM On Demand if there

331 DEFAULT_CASE_SOURCE=

```

# Optional Additional Setup

Follow the additional steps in the sections below based on functionality that needs to be enabled for your setup.

## Mapping Picklist Other than Type

To use picklist other than Type in CRMOD activity:

- 1 Identify a field or create a new field in CRMOD. This should be a checkbox or picklist field in CRMOD.
- 2 Determine the value for the field which indicates that the activity will be displayed in SSP.
- 3 Navigate to the mapping application and add a mapping for the `displayActivityInSSP` field (part of `SSPActivity`). Map this field to the field identified in step 1 above.
- 4 Navigate to the “View Properties” section in the mapping application.
- 5 In the “Display Activity in SSP” field, enter the value determined in step 2 above.

**From Type**

com.inquiria.crm.vo.SSPActivity

- owner
- subject
- dueDate
- priority
- status
- type
- serviceRequestId
- description
- contact
- createdById
- createdByName
- createdDate
- currencyCode
- display
- externalSystemId
- modifiedById
- modifiedDate
- modifiedBy
- ownerId
- parentActivityId
- startTime
- endTime
- primaryContactId
- \_private
- createdBy
- activityId
- displayActivityInSSP**

**New field in InQuira VO. This field if mapped, will be used as a filter while displaying activities in SSP. This field should be mapped only to a picklist or checkbox field in CRMOD. In the CRM View Properties section, you can define the specific case sensitive value that SSP should look for to identify additional activities that should be displayed. Activities of Type "UserTopic" and "UserUpdate" are always displayed.**

## Support For Additional Mappings On Create Case

`ViewCase` and `ViewCases` tags support an additional optional parameter called `useExtendedFunctionality`. If this is set to “true”, SSP uses mappings that are defined for value objects `SSPCase2` and `SSPQueryCase2` while displaying cases. While submitting cases for create or update, submitting a parameter called `useExtendedFunctionality`, with the value set to “true” causes the

mappings defined for `SSPCase2` to be used while creating and updating cases. Fields in the `HTTPRequest` object that have the same name as a `SSPCase2` field and also contain a defined mapping for `SSPCase2` are submitted to CRM On Demand for processing.

`SSPCase2` must be mapped to:

```
crmondemand.ws2.servicerequest.ServiceRequestData.
```

`SSPQueryCase2` must be mapped to:

```
crmondemand.ws2.servicerequest.ServiceRequestQuery.
```

Procedures for creating and editing these mappings are similar to how mappings are created in general.

Calling the `ViewCases` tag with the `useExtendedFunctionality` parameter set to “true” causes the tag to return a collection of `SSPCase2` objects. Fields that are defined in the mapping for `SSPQueryCase2` are populated and returned to the UI, allowing presentation of additional fields in the case grid view (for both “My Cases” and “My Company Cases”)

Calling the `ViewCase` tag with the `useExtendedFunctionality` parameter set to “true” causes the tag to return a `SSPCase2` object. Fields that are defined in the mapping for `SSPCase2` are populated and returned to the UI, allowing presentation of additional fields in the case detail view.

Both the `ViewCase` tag and `ViewCases` tag contain an additional optional parameter called `searchspec`. Callers of the tag can pass filter values that conform to CRM On Demand Syntax in to this field, thereby imposing additional restrictions on data retrieved by these tags. This feature can be enabled to restrict service requests that are retrieved based on specific criteria. Callers of this tag are responsible for ensuring that adverse performance impacts are not caused by using inappropriate values in this field. This feature can be used by adding a field mapping for the `searchspec` field from `SSPQueryCase2` to `ServiceRequestQuery`.

Oracle Knowledge includes a packaged demonstration of how to use these new tags and features in JSP files. These are located in:

```
(Tomcat) $INQUIRA_ROOT/instances/<instance_name>/appserverim/webapps/  
<ssp_app_name>/apps/infocenter/system/components/crmssp/
```

```
(WebLogic) $INQUIRA_ROOT/instances/<instance_name>/webapps/<ssp_app_name>/app/  
apps/infocenter/system/components/crmssp
```

These file names end with the suffix `2.jsp`.

To see these new examples in action, a systems implementer must:

- 1 Edit `infocenter.properties` and modify the following entries to point to the new files:

```
caseDetailViewClass=/apps/infocenter/system/components/crmssp/  
c_case_detail_box2.jsp  
caseDetailedEditClass=/apps/infocenter/system/components/crmssp/  
c_case_detail_edit2.jsp  
caseDetailNewClass=/apps/infocenter/system/components/crmssp/  
c_case_detail_new2.jsp  
searchCasesClass=/apps/infocenter/system/components/crmssp/  
c_search_cases_box2.jsp  
viewCasesClass=/apps/infocenter/system/components/crmssp/  
c_view_cases_box2.jsp  
viewCompanyCasesClass=/apps/infocenter/system/components/crmssp/  
c_view_company_cases_box2.jsp
```

- 2 Add additional mappings as described above for `SSPCase2` and `SSPQueryCase2`.
  - a `SSPQueryCase2` mappings control the fields that are made available for display in the grid view (My Company Cases, My cases). To avoid run time exceptions, at the least, all fields that were mapped for the old `SSPCase` object should be mapped here as well.
  - b `SSPCase2` mappings control which fields are available for display/create/update purposes in the Case Create, Edit and detail views. To avoid run time exceptions, at the least, all fields that were mapped for the old `SSPCase` object should be mapped here as well.
- 3 Export the configuration properties to a location accessible to the Self Service portal at run time.
- 4 Restart the Oracle Knowledge Information Manager instance that contains the Self Service Portal deployment.

# Configuring Oracle Knowledge

## Export Properties

Use the Export Properties feature to export the CRMOD configuration files for Oracle Knowledge webapp's integration with CRMOD.

Field	Description
Export CRMOD config files to:	Enter the full file path for the location where the CRMOD integration configuration properties files to be exported. The exported files are <code>appconfig.properties</code> , <code>crmconfig.properties</code> and <code>mapping.properties</code> . Click <b>Export</b> .

If the specific directories do not exist, the user will be asked to create the directory first.

If the directories and files already exist, the exported files will over write the existing files.

When completed, the system displays this message: The properties files are exported successfully.

## Setting Up Contact Center Advisor in System Manager

You must complete the Contact Center Advisor setup in System Manager. See *iConnect Developers Guide*, Chapter 3, "Deploying iConnect in a CRM Environment" for details on completing this setup.

Use the following parameters:

Parameter	Description
<b>cca-response-handler-impl</b>	
Item name	cmrod
cca-response-handler-impl	com.InQuira.response.cca.CCACRMODLinkedAnswersResponseHandler
<b>cca-request-handler-impl</b>	
Item name	cmrod
cca-request-handler-impl	com.InQuira.request.cca.CCACRMODHandler
<b>Call Center Adviser</b>	
cca-request-handler	cmrod (select from picklist)
cca-response-handler-impl	cmrod (select from picklist)

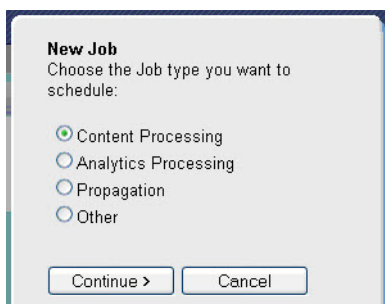

Parameter <i>(continued)</i>	Description <i>(continued)</i>
Base URL	This is the crmod URL provided to the customer.
User Name	User name with admin privilege created on CRMOD.
Password	Password of above user.

## Propagate number.xml file to Synch with Runtime

- 1 Logon to Oracle Knowledge System Manager at `http://<server-name>:<port>` (if required) >/InQuirawb/app
- 2 Create the schedule job to synch. Go to Schedule->New

- 3 Select **Content Processing** and click **Continue**.

The Job Setup page displays.

**Job Setup** Step 1: Define Job 1 2 3 4

Name your Job and configure the Tasks involved.

**Job Name:**   
 (Warning: The name cannot be changed once saved.)

**Job Type:** Content Processing \*

**Valid Environments:** ☒ Development  
☐ Staging  
☐ Production

**Job Tasks** Show all tasks

**Content Processing: Collection**

☐ Status Reset ☐ Incremental Document Conversion (Subcoll)  
☐ Content Update ☐ Collection Maintenance  
☐ Incremental Index (Subcoll)

**Content Processing: Cross-Collection**

☒ Classification  
☒ Global Maintenance  
☒ Mark Revisions for Synchronization

**Environment Communication**

☒ Synchronization (Cleanup)

Next > Cancel

4 Enter the parameters provided below and click **Next**.

Parameter	Entry
Job Name:	cca-synch
Valid Environments:	Select <b>Development</b> .
<b>Job Tasks</b>	
Content Processing: Collection	Leave all fields clear
Content Processing: Cross-Collection	Select all.
Environment Communication	Select <b>Synchronization (cleanup)</b> .

5 Click **Next**.

**Job Setup: cca-synch** Step 3: Schedule Run Times 1 2 3 4

Determine when the Job will run and how often it will repeat.

How often do you want to run this Job?

Repeat:

< Back Next > Cancel

6 Click **Save**.

**Job Setup: cca-synch** Step 4: Configure Notifications

Configure who will be notified of Job processing events.

Send e-mail notification to:  
Administrators

When the Job...

☐ starts  
☐ succeeds  
☒ fails

< Back Save Cancel

- 7 Select the job and click More Actions-> Start Job Now.

JOB	STAT	NEXT START TIME	ENV
testFullCollection	Succ		D S P

cca-synch	On D		D S P

Current System Time: 03/23/2010 06:38 PM

**Start Job cca-synch**

☒ Start Job now  
☐ Temporarily modify job before starting  
☐ Continue Job Processing  
☐ Restart from Failure

Continue > Cancel

View... Edit... New... More Actions

- 8 Click **Continue**.  
Allow the job to run to completion.

## Information Manager Setup and Configuration

The following sections describe:

- **Updating System Configuration**

## Updating System Configuration

- 1 Login to Information Manager Console from Web Application server. (<http://<servername>:<port>/InfoManager>).

ORACLE Knowledge

Please enter your username, password and repository to log into Knowledge

User Name

Password

Repository

Log in 

Forgot Password? 

- 2 Go to "Tools->System:Configure-> Go to Expert Mode" as shown below.

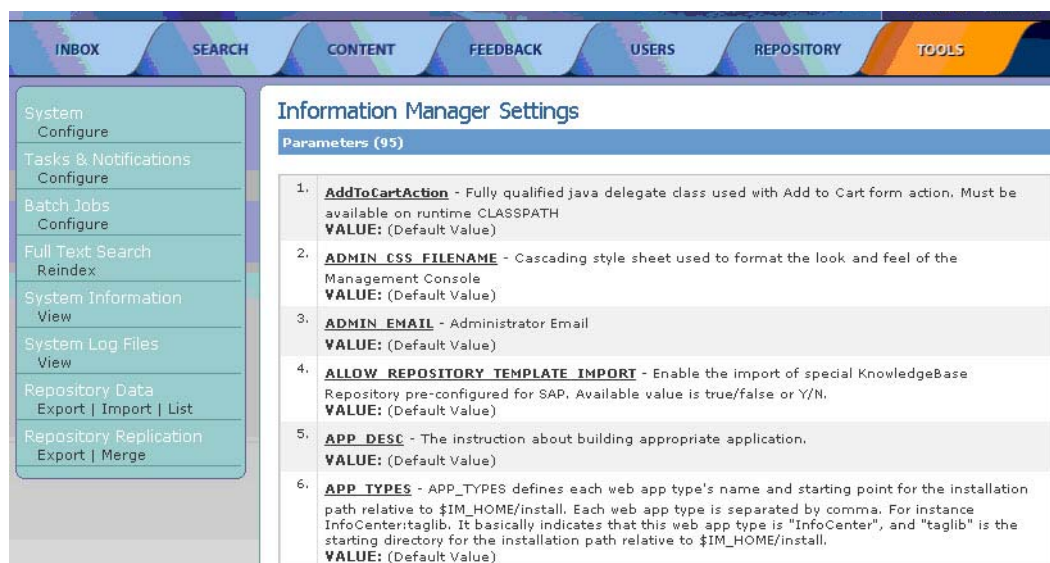

The screenshot shows the Information Manager Console interface. The top navigation bar includes tabs for INBOX, SEARCH, CONTENT, FEEDBACK, USERS, REPOSITORY, and TOOLS. The left sidebar contains a list of system configuration options, with 'System Configure' highlighted. The main content area displays 'Information Manager Settings' with a table of current configurations. A red arrow labeled '1' points to the 'TOOLS' tab, and another red arrow labeled '2' points to 'System Configure' in the sidebar. A third red arrow labeled '3' points to the 'Go to Expert Mode' link at the bottom right of the settings table.

Current Configuration	
1. <a href="#">Resource Configuration</a>	<a href="#">Instructions</a> (??)
2. <a href="#">LDAP Configuration</a>	
3. <a href="#">Email Configuration</a>	
4. <a href="#">InQura Search Configuration</a>	
5. <a href="#">Delegate Classes Configuration</a>	
6. <a href="#">Delegate Translation</a>	

[Go to Expert Mode](#) (??)

The following screen appears:

The screenshot shows the 'Information Manager Settings' page. The left sidebar is the same as in the previous screenshot. The main content area displays a list of parameters (95) with their descriptions and default values. A red arrow labeled '3' points to the 'Go to Expert Mode' link in the previous screenshot.

Parameters (95)	
1. <b>AddToCartAction</b>	- Fully qualified java delegate class used with Add to Cart form action. Must be available on runtime CLASSPATH <b>VALUE:</b> (Default Value)
2. <b>ADMIN_CSS_FILENAME</b>	- Cascading style sheet used to format the look and feel of the Management Console <b>VALUE:</b> (Default Value)
3. <b>ADMIN_EMAIL</b>	- Administrator Email <b>VALUE:</b> (Default Value)
4. <b>ALLOW_REPOSITORY_TEMPLATE_IMPORT</b>	- Enable the import of special KnowledgeBase Repository pre-configured for SAP. Available value is true/false or Y/N. <b>VALUE:</b> (Default Value)
5. <b>APP_DESC</b>	- The instruction about building appropriate application. <b>VALUE:</b> (Default Value)
6. <b>APP_TYPES</b>	- APP_TYPES defines each web app type's name and starting point for the installation path relative to \$IM_HOME/install. Each web app type is separated by comma. For instance InfoCenter:taglib. It basically indicates that this web app type is "InfoCenter", and "taglib" is the starting directory for the installation path relative to \$IM_HOME/install. <b>VALUE:</b> (Default Value)

**Note:** This example shows a partial page. All parameters listed below appear on the full page.

- 3 Click on a parameter link to modify/configure the value. Follow the below table for the parameters that need to be changed and their corresponding values.

Parameter Name	Description
<b>LDAP_SINGLE_SIGN_ON</b>	
Parameter Value	Set to <b>true</b> if you wish to enable single sign-on for repositories with LDAP authentication; otherwise set to false.
Allow administrators to edit value	<b>Select.</b> Specifies whether repository administrators can edit the value of this parameter. If FALSE, only the SUPER admin or designated SUPPORT person can change this value.
Encrypt Value	<b>Clear.</b> Used to encrypt the value stored in the <code>config.properties</code> file. It is not necessary to encrypt this parameter.
Save to default value	<b>Select.</b> If this is selected, this value replaces the default value for subsequent new repositories and any existing repository that has not overridden the value.
<b>REMOTE_AUTHENTICATION_CLASS</b>	
Parameter Value	<code>com.inquiraservices.ldapservices.CRMODSSOAuthenticator</code> , for example.
Allow administrators to edit value	Select
Encrypt Value	Clear
Save to default value	Select
<b>REMOTE_AUTHENTICATION_ENABLED</b>	
Parameter Value	True
Allow administrators to edit value	Select
Encrypt Value	Clear
Save to default value	Select
<b>REMOTE_CRM_CHECKEMAILFORUSER_ENABLED</b>	
Parameter Value	True
Allow administrators to edit value	Select
Encrypt Value	Clear
Save to default value	Select
<b>REMOTE_CRM_CHECKROLEANDVIEW_ENABLED</b>	
Parameter Value	False
Allow administrators to edit value	Select
Encrypt Value	Clear
Save to default value	Select

# Self-Service Portal User Administration

## User Registration Introduction

Oracle Knowledge's Self Service Portal is an online case (Service Request) management system that enables companies implement web self-service. Self Service integrates Intelligent Search, Discussion Forums, and Information Manager together with Case Management capabilities into a comprehensive knowledge portal that reduces the cost of implementation and ensures consistency of information across all user constituencies, including customer, employees and partners.

It is important to understand that the portal user is represented as a Contact on CRM On Demand with additional custom fields specific to Self Service Portal.

Self Service portal supports escalation processes where a user can submit a case (Service Request) themselves through the knowledge portal. It uses Intelligent Search to attempt to deflect the case or email by providing potential answers to the user's question. Customers can open and track cases online. Employees of a company (Customer) can open and track company cases. They can create topics in discussion forums from their specific case context. They can create notes, upload attachments for a case.

Portal has Time Zone Support for end-users. User can specify the time zone they belong to during the time of registration; they can also modify their time zone settings.

Self Service portal supports new user registration and user account activation triggered via email notification. A newly registered user is created as a contact in CRM On Demand with default status and roles needed to access the portal.

Once a user completes registration, CRM Agents may need to update user's self-service status and roles, and sometimes perform new user registration on behalf of the user if users are unable to do so by themselves.

After a case (Service Request) is created by a Self Service User, CRM Agents can assign the case (Service Request) to appropriate owners, they can communicate with end-users (CRM On Demand Contacts) via special type of notes. Apart from these, CRM agents will work on Service Requests as they would normally do.

CRM agents can also view the topics that the self-service end-users post from the context of a case. Further, agents can view the search history and document history of a case created by an end-user giving some insight to what the user was searching for and what documents they viewed before submitting a case (Service Request).

## Registering Users

Self-Service portal allows new users to register themselves. But there are times when users may not be able to perform self-registration. For example, if the user already exists as a contact in CRM On- Demand or if there are multiple contacts matching their email id. It is also possible that there are multiple contacts in the CRM On Demand with matching email ids. It is CRM agent's responsibility to determine if the user, requesting to register, already exist as contacts in CRM On-Demand and if there are multiple contacts for the same user, identify the right user. Verify if the users already have an Infocenter account (by asking the users), if so then they need not go through the registration process as the portal automatically creates a contact in CRM On Demand when the users logs in into Self Service Portal using Infocenter login and password.

External user registration allows for an email address to entered as the user ID. The field accepts a maximum of 50 characters. If the user does not select the option **Display Name to Public?**, the registration page prompts for an alias. Information Manager creates the web user record with First Name, Last Name, User ID, and the CRM OD contact ID. If the user selected Use my user ID as my email address, Information Manager stores the email address as the User ID. The contact ID is used when creating or updating activities in CRM OD.

The following CRM OD contact record fields and Oracle Knowledge web user record fields are required for SSP user registration.

### CRM OD Contact Record Required Fields

First Name	
Last Name	
Email Address	
IQAutoPassword	Defaults to Yes to initiate password reset upon login.
IQRegistrationDate	import date
IQUserRole	DEFAULT_CRMOD_USER_ROLE from infocenter.properties file
IQUserStatus	DEFAULT_CRMOD_USER_STATUS from the infocenter.properties file
IQUserType	DEFAULT_CRMOD_USER_TYPE from the infocenter.properties file

### Oracle Knowledge Web User Record Required Fields

First Name	
Last Name	
User ID	
Password	Set to default password.
Email Address	
showName	<b>Display Name to Public?</b> option. When enabled, SSP displays the user's name.
Alias	Required ONLY if the user <i>does not</i> select the <b>Display Name to Public?</b> option.

# Remote Authentication Configuration

To complete the require remote authentication configuration:

- 1 Log in to IM System Manager.
- 2 Navigate to Tools > System(Configure) > ExpertMode.
- 3 Select REMOTE\_FIELD\_BUILDER\_CLASS from the list.
- 4 Enter **com.inquiria.services.Idapservices.CRMODFieldBuilder** as input value.
- 5 Save changes.

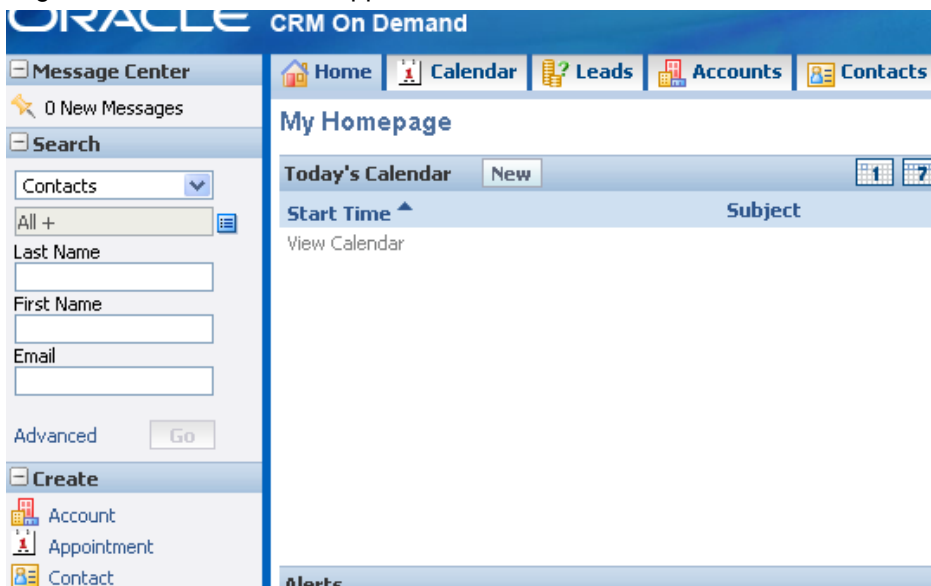

## New User Registration

Steps to register a new user:

- 1 Log on to CRM On Demand application and search Contacts
  - 2 If the contact does not already exist, create a contact (First Name, Last Name, and Email required). If the contact already exists and is not an existing SSP user, Click on the 'Register Self-Service User' web link. First Name, Last Name and Email Id are automatically pre-populated.
  - 3 Enter a user id of the callers choice
  - 4 Click on 'Register'
- If the registration fails, appropriate error messages will be displayed.

### WALK-THRU

- 1 Logon to CRM On Demand application and search Contacts

- 2 If the contact does not already exist, create a contact (First Name, Last Name, and Email required), If the contact already exists and is not an existing SSP user, Click the [Register Self-Service User](#) link.

The screenshot shows the CRM interface with a top navigation bar containing links for Home, Calendar, Leads, Accounts, Contacts, and Opportunities. On the left, there is a 'Message Center' and a 'Search' section. The main area displays the 'Contact List' with a search bar and a 'New Contact' button highlighted by a red arrow. Below the search bar, there is a table with columns: Last Name, First Name, Account, Work Phone, and Cellular Phone. The first row of data shows 'User', 'Test', 'Account1', and empty phone fields.

#### Self Service Portal Information

Register SelfService User [Register Self-Service User](#)

IQRegistrationDate

Description

'New User Registration' page opens in a new browser window. First Name, Last Name, and Email Id are automatically pre-populated.

Home > Registration

## New User Registration

Use the form below to edit your profile and settings. All fields are required.

The screenshot shows the 'New User Registration' form. It is divided into two main sections: 'Account Information' and 'Additional Requests (Optional)'. The 'Account Information' section includes fields for User ID, First Name, Last Name, Display Name to Public, Email, Display Email Address to public, and My Time Zone. There are checkboxes for 'Use my user id as my email address' and 'Display Email Address to public'. The 'Additional Requests (Optional)' section includes a checkbox for 'I would like to manage cases online'.

- 3 Enter the 'User ID' of the callers choice
  - 4 Click on 'Register'
- The following message displays on the SSP Home page.

In case registration fails because the User id is already taken, you will see the following error message, choose another User Id and try again

## New User Registration

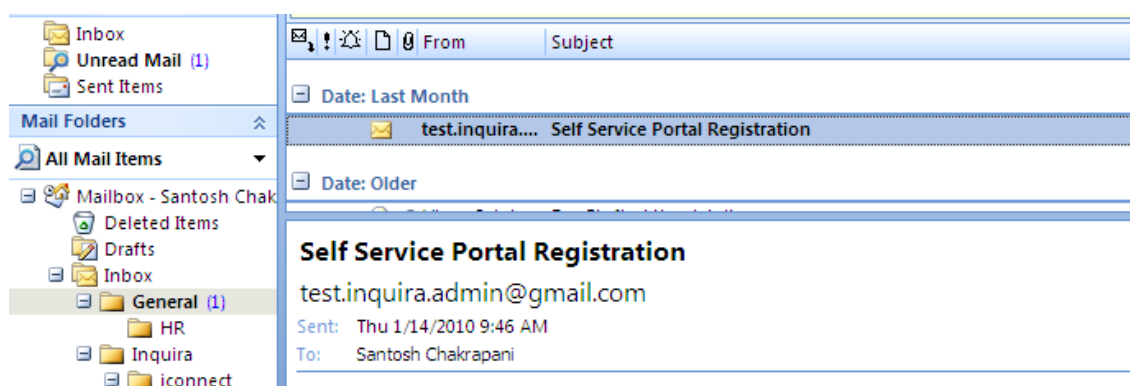

In case registration fails because the User Email id is already taken, you will see the following error message. Remind the user that this email id is already taken. Ask the user if they recall creating a self-service portal or an existing Infocenter account

## New User Registration

## Account Activation

- 1 If registration process was successful, notify the user (if still on the phone) that an activation email will be sent to the user. Users will receive an email as below:-

- 2 Email contains the steps required to activate the newly registered user

### Self Service Portal Registration

test.inquiraa.admin@gmail.com

Sent: Thu 1/14/2010 9:46 AM

To: Santosh Chakrapani

Hi Santosh,

Thanks for registering with Self Service Portal.

1. Click the following link to complete your activation process:-

[Click here to complete registration](#)

2. After successful activation, you may login with following credentials :-

Login: schakrapani

Password: 22fdc

Note: You may not be able to access case management if you login without activating your account!

- 3 Self-Service portal user should follow the steps provided in the email and complete the registration process and activate the user account.
- 4 Upon activation via email, the following status are possible depending upon portal configuration

**Note:** User passwords between Information Manager and CRMOD must be synchronized manually.

(1)

IUserRole View My Cases  
IUserStatus Approved  
IUserType External

(2)

IUserRole View My Cases  
IUserStatus Needs Approval  
IUserType External

(3)

IUserRole Restricted  
IUserStatus Approved  
IUserType External

(4)

IUserRole Restricted  
IUserStatus Needs Approval  
IUserType External

- 5 By default all contacts created via the new user registration process are considered as 'External' User Type. External User types are Web Users in Infocenter. 'Internal' User types are Console Users in Infocenter. Case Management for Internal users is not supported in the current version of the portal.

## Managing Self-Service User Privileges

The Self-Service Portal uses the following parameters to determine access to various functions:

- User Type
- User Status
- User Role

## User Type

**User Type:** A user type represents the level of security a user is assigned within the portal. Every portal user is assigned a user type. The assigned user type determines the functions user can perform when they are logged into Self-Service Portal. A user type is assigned to upon approval of the registration request and/or by a CRM On-Demand Agent or Administrator.

The allowed values for Portal User are:

User Type	Definition
<b>External</b>	An end-user who has issues with the products, searches the Infocenter to look for solutions to issues, creates cases via web self-service and has limited access to advanced Infocenter capabilities.
<b>Internal</b>	Internal users are typically employees of a company who have administrative capabilities of Infocenter. Internal users have no access to case management.

## User Status

**User Status:** User status is an indication of the state of the user within the Self-Service Portal.

The following User Statuses are supported:

User Status	Definition
<b>Approved</b>	This is the normal state for a fully functional portal user after a user has activated and completed the registration process. External Users can access case management only if their User Status is <b>Approved</b> .
<b>Needs Approval</b>	Alternative initial state after the user has activated and completed the registration process. The CRM Agent manually updates the status to <b>Approved</b> after reviewing the request.
<b>Registration in Process</b>	A user has registered but must complete the process by clicking the link in the verification email sent by the portal to confirm that the user is at the email address given upon registration. In this state, users can sign-in but external users cannot access Case Management capabilities.
<b>Denied</b>	A denied user cannot access case management capabilities ever. A denied user can still access limited Infocenter capabilities if the user is an external user and an internal user can access advanced Infocenter capabilities.

## User Role

**User Role:** User Role describes the type of actions the user are allowed to perform in the context of Case Management. Upon registration, a default role is assigned to the user based on portal configuration. If the user wishes to modify the assigned role, they must contact the assigned organization.

The following user roles are supported:

User Role	Definition
<b>Restricted</b>	This role restricts all access to case management. The internal user is assigned this role. Depending on portal configuration, an external user could be assigned this role upon registration.
<b>View My Cases</b>	This role is valid only for External user type and allows read-only access to cases that the users own. A user with View My Cases can submit a case but does not have sufficient privileges to update the case once it has been submitted, or view others cases.
<b>Update My Cases</b>	This role is valid only for External users and allows update access to all cases that a user owns. A user with Update My Cases can submit a case, and update user's own cases; however they cannot delete a case or view others cases.
<b>View Company Cases</b>	This role is valid only for External users and allows update access to the all cases that a user owns and read-only access to the cases of users that this user manages. A user with View Company Cases can submit a case, update own, and view company cases; however they cannot delete any case.
<b>Update Company Cases</b>	This role is valid only for External users and allows update access to the all cases that a user owns and also the cases of users that this user manages. A user with Update Company Cases can submit a case, update own or company cases; however they cannot delete a case.

## Setting Up Role Change Notification Workflow

- 1 Go to the Admin Homepage.

The screenshot displays the Admin Homepage with a navigation bar at the top containing 'Admin Homepage', 'Back to Contact List', 'Help', and 'Printer Friendly'. The main content area is divided into two columns of management sections:

- Company Administration**: Manage your company profile and global information, including currencies and active languages. Monitor usage and set password policies. Define company Fiscal Calendars. Create Homepage alerts.
- User Management and Access Controls**: Create and manage user profiles and relationships. Set up user roles that define data access levels, privileges to various application features and presentation of information. Manage groups of users to share data and calendar entries.
- Territory Management**: Define the hierarchy that makes up your company's Territory.
- Data Management Tools**: Import and Export Tools - Import your company data, export your company data, or view the import and export queues. Batch Delete Queue - View the batch delete requests (active and completed).
- Web Services Integration**: Web Services Administration - View and download web services. Web Services Utilization - Review a summary of services used by your company.
- Application Customization**: Customize application specific to your company; create custom page layouts, homepage layouts, search result layouts, and dynamic layouts; change field names, modify picklist values, create custom fields, specify cascading picklists, define custom web tabs and applets, set up custom audit trail and rename record types.
- Business Process Management**:
  - Workflow Configuration**: Extend business processes with workflow rules to send emails, create, update or delete information, wait for a time period and enable outbound integration requests. Workflow rules and actions will not be processed unless the "Enable Workflow" checkbox is checked on the Company Profile Page.
  - Workflow Monitor**: Monitor and manage active instances of waiting workflows, and review workflow error messages.
  - Data Rules & Assignment**: Define the data rules for your company, including automatic assignment of records, forecasting, and sales methodologies.
- Content Management**: Define your company Product list and hierarchy. View, delete and replace all of your company's Attachments. Manage access to Reports Folders and define visibility to shared custom analyses folders. Define your company's assessments templates.

- 2 Click [Workflow Configuration](#) in the **Business Process Management** section.
- 3 Click **New**.

# Managing User Activities

During the course of case management, users may update their cases by adding notes, creating topics in the context of the case. Note that ‘Notes’ created by the user in the portal are not directly related to the term ‘Notes’ in CRM On-Demand. In fact when a user adds notes to a case, an activity of the type ‘UserUpdate’ is created against the Service Request in CRM On-Demand. Similarly when a user posts a topic to the community in the context of a case, an activity of the type ‘UserTopic’ is created against the Service Request in CRM On-Demand.

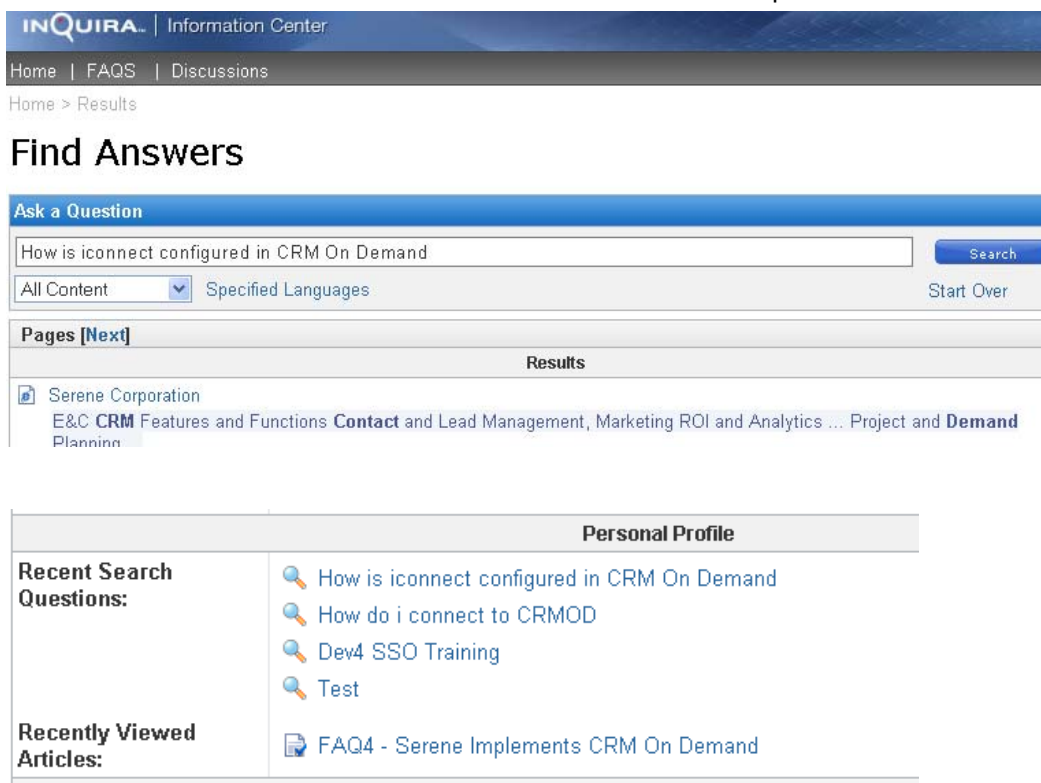

CRM Agents can utilize the feature of user notes to communicate with a portal user by creating an activity of the type ‘UserUpdate’ in a service request, with relevant information for the end-user to view. CRM Agents can view the topics posted to the community by the user in order to get a better understanding of the issue faced by the users and in-turn provide better case handling.

Activities are also created within CRM On-Demand that indicates the recent searches and documents viewed by the user within the Oracle Knowledge portal before submitting a case. These could provide significant insight to what the user was searching for before he/she decided to create a case online.

## Activity with Self-Service Context Information

- 1 [Self-Service Portal] User performs some searches and views some documents in Self-Service portal. Recent searches and documents viewed are stored in infocenter profiles.

## User Topics as an Activity

Self-Service portal has discussion forums where users can post topics, recommend solutions based on their privileges. Portal supports posting topics from the context of a Case

- 1 [Self-Service Portal] Users can post topics from the context of their cases.

The screenshot shows a web browser window titled 'InQuira InfoCenter - Discussions - Post Topic - Windows Internet Explorer'. The main content area is titled 'Post New Topic' and contains the following fields and options:

- Discussion:** A dropdown menu with 'Integration Issues' selected.
- Forum:** A dropdown menu with 'InQuira Forum' selected.
- Subject:** A text input field containing 'Updating notes for a closed case'.
- Message:** A rich text editor with a toolbar. The text entered is: 'I am facing some issues with updating notes for a closed case. I would like to add some notes even though the case is closed requesting not to close the case as my issue is not yet resolved'.
- Topic Type:** A dropdown menu with 'Normal Topic' selected. Below it is a note: 'Mark this topic as a question - this encourages people to answer for points and helps you track answers.'
- Case Number:** A text input field containing '480430-243526023'.

At the bottom right of the form are two buttons: 'Post Topic' and 'Cancel'. At the bottom of the browser window, a footer reads: 'InQuira Information Center Copyright ©2010, InQuira Inc., All Rights Reserved Version 8.2.2.0'.

# Reports Configuration

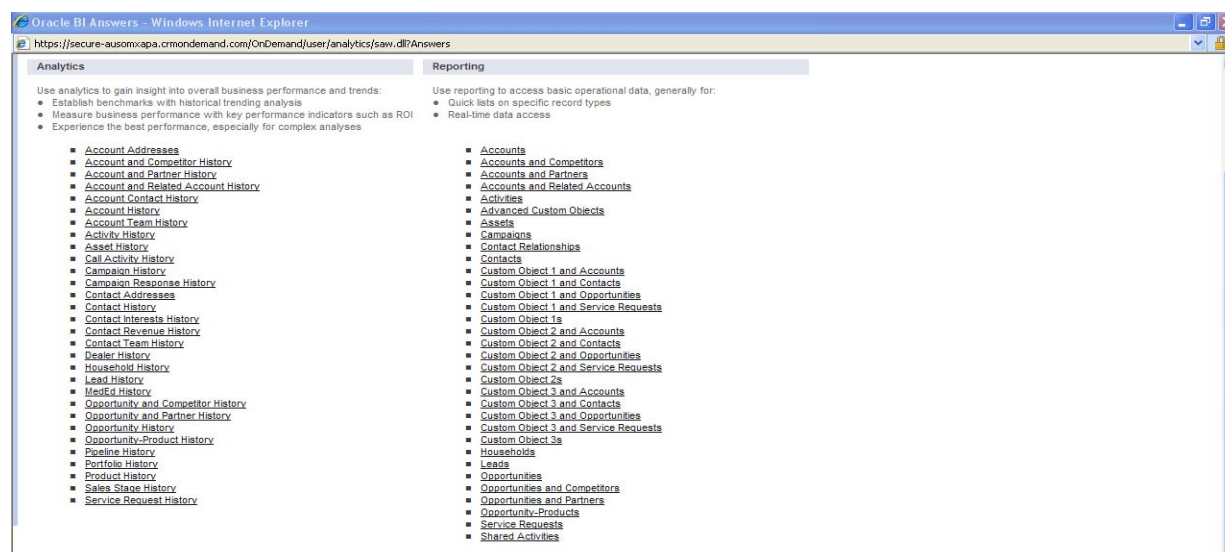

This chapter describes configuration for the following reports:

- **Participation Rate Report**
- **Participation Rate Report by User**
- **Add To Service Home Page: Participation Report (optional)**

## Participation Rate Report

The following Oracle CRM On Demand analytics report is a calculated metric to provide management guidance for measuring effectiveness of knowledge articles in solving ALL service cases.

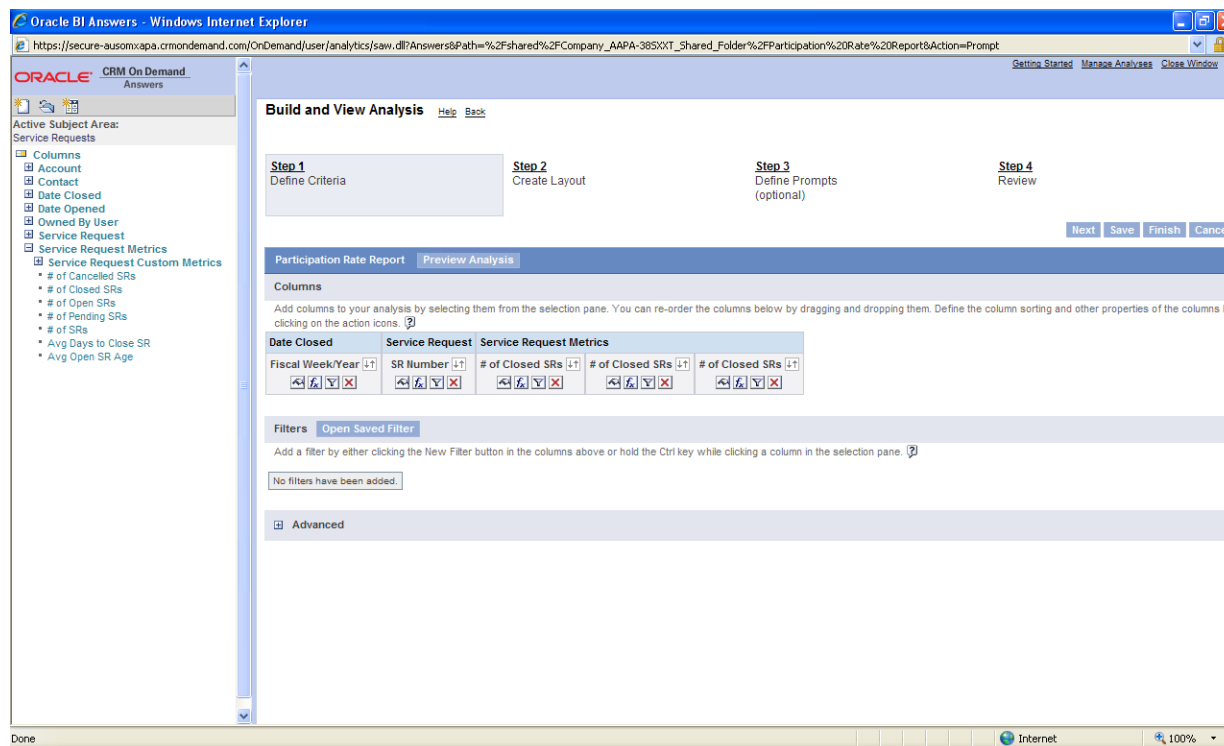

- 1 Login as an Oracle CRM On Demand user with the Administrator role.
- 2 From the Report screen (tab) select the Design Analyses link. Then, click on the 'Service Requests' subject area in the Reporting Column.

- 3 Add columns from left hand pane to the right pane as follows:

**Note:** To add columns in the following steps simply click and drag the choice. This will then populate the column in the section on the right of the screen to begin building the formula.

- a Add the column - **Fiscal Week/Year** from Date Closed section from left hand pane to the right pane.
- b Add the column - **SR Number** from Service Request section from left hand pane to the right pane.
- c Add the column - **# of Closed SRs** from the Service Request Metrics from the left pane to the right. We will be using this column to store some calculated values. **TIP:** Repeat this step three (3) times so that you have a template to work from for subsequent steps.

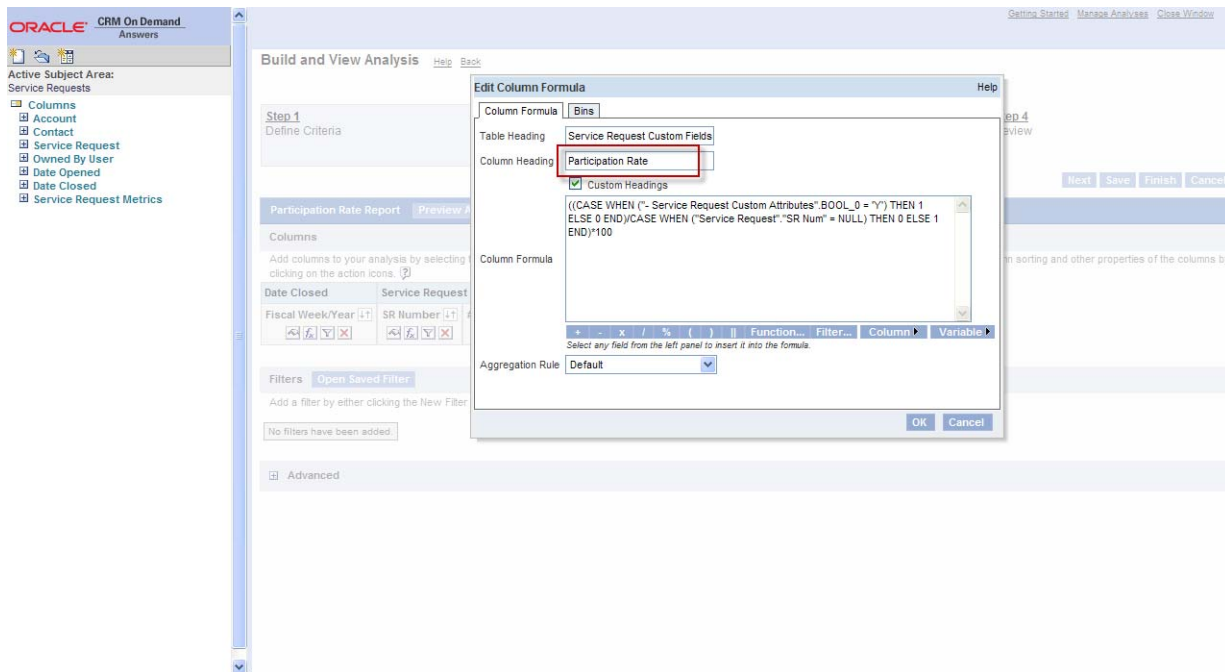

- 4 Rename one of the **# of Closed SRs** columns to **Participation Rate**. Check the 'Custom Headings' check box and then type the new name.
- 5 Create the following formula in the Column Formula field:
 

```
((CASE WHEN ("Service Request Custom Attributes".BOOL_0 = 'Y') THEN 1
      ELSE 0 END)/CASE WHEN ("Service Request"."SR Num" = NULL) THEN 0 ELSE 1
      END) * 100
```

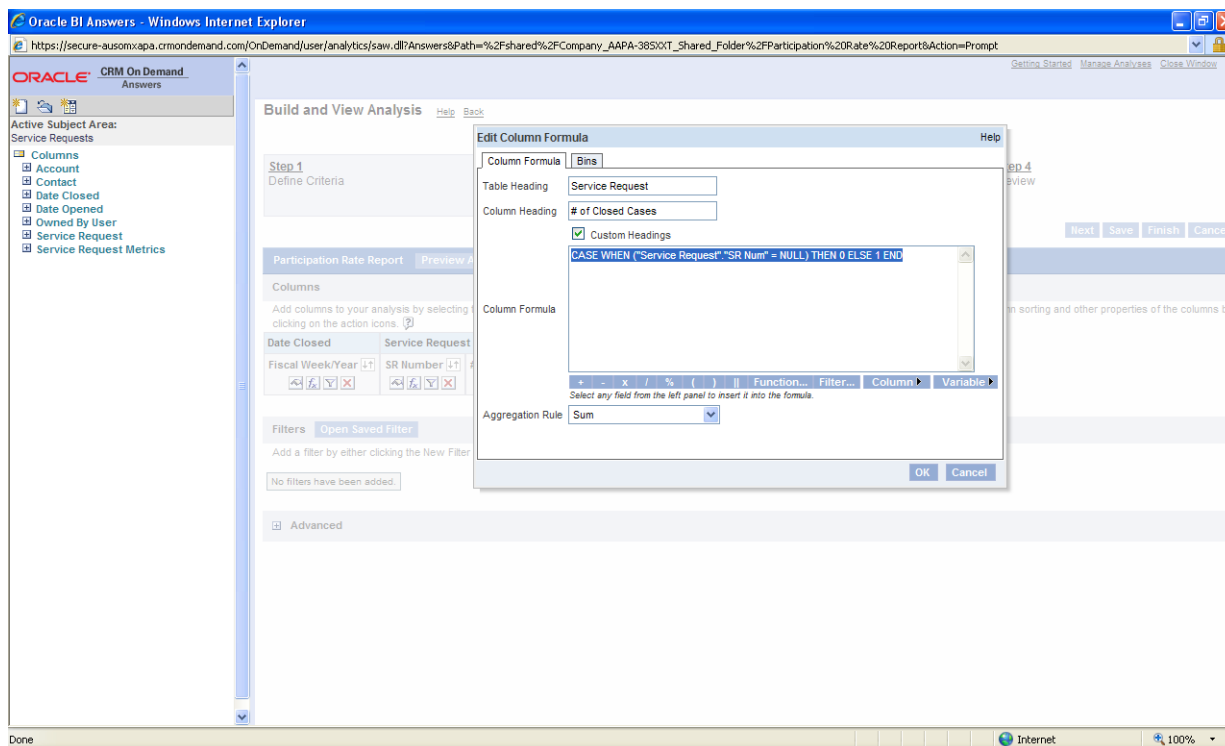

You may copy and paste the formula from above.

- 6 Set the Aggregation Rule value as "default" and set Table Heading as "Service Request Custom Fields".

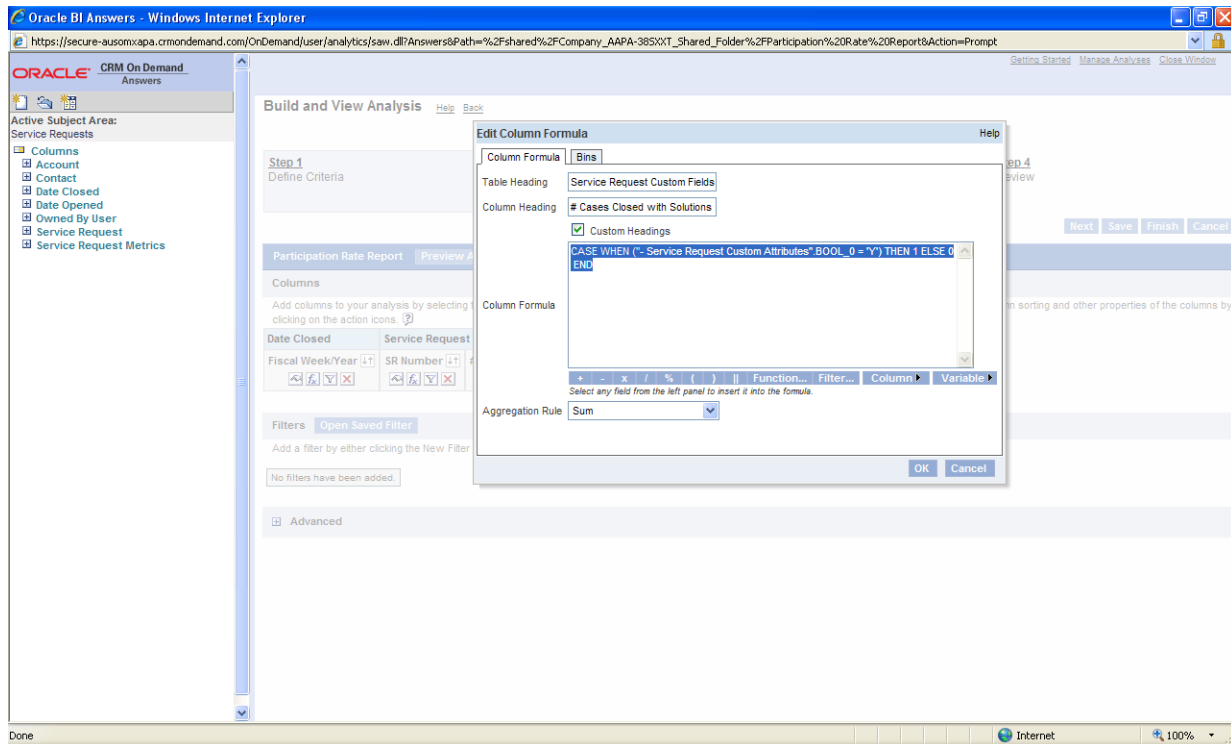

- 7 Rename one of the **# of Closed SRs** columns to **# of Closed Cases**. Check the 'Custom Headings' check box and then type the new name.
- 8 Create the following formula in the Column Formula field. And set Aggregation Rule's value as "Sum" and set Table Heading as "Service Request".

CASE WHEN ("Service Request"."SR Num"=NULL) THEN 0 ELSE 1 END.

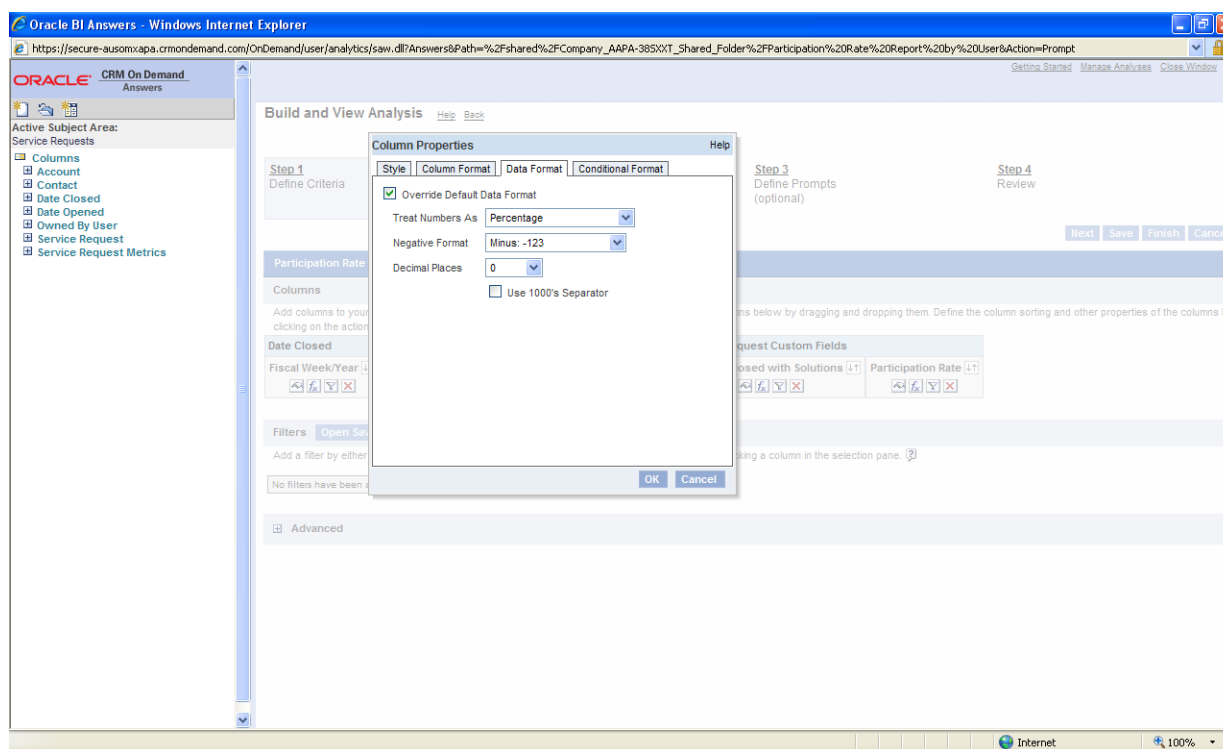

- 9 Rename one of the **# of Closed SRs** columns to **# of Closed Cases with Solutions**. Check the 'Custom Headings' check box and then type the new name.
- 10 Create the following formula in the Column Formula field. And set Aggregation Rule's value as "Sum", set Table Heading's value as "Service Request Custom Fields".

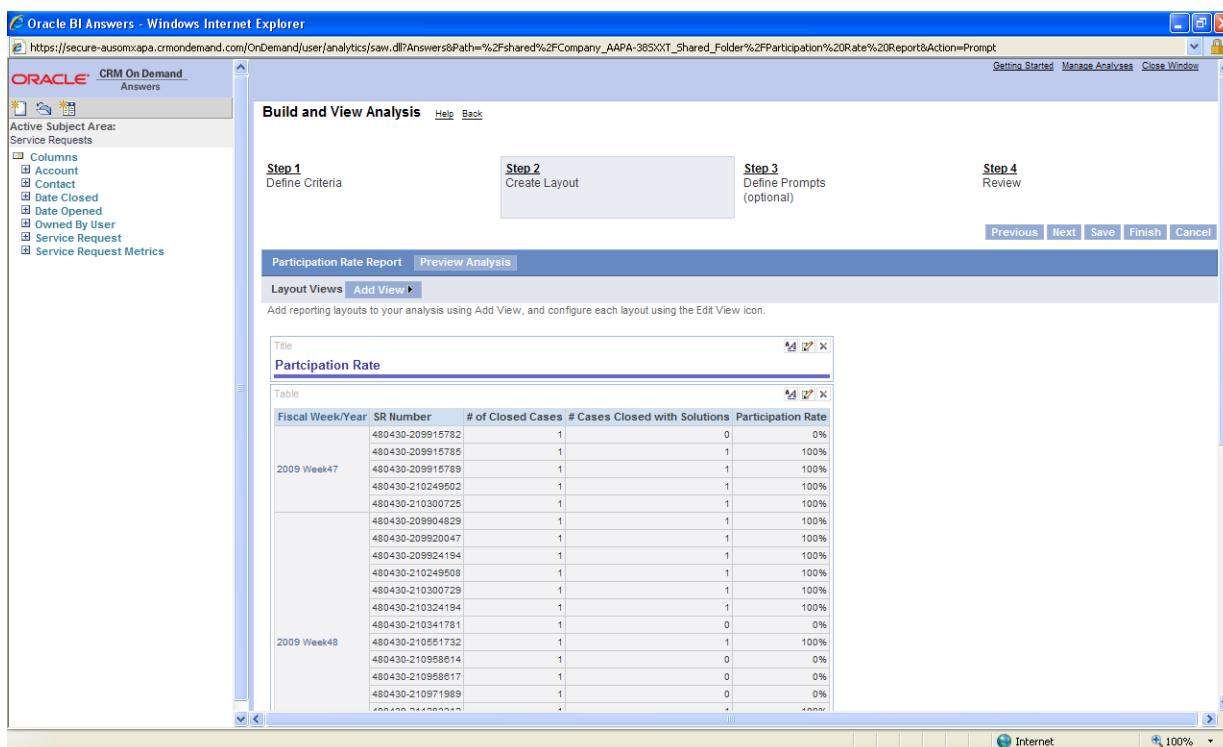

```
CASE WHEN (" - Service Request Custom Attributes".BOOL_0='Y') THEN 1 ELSE 0 END
```

- 11 From the column 'Participation Rate' click the Column Properties icon (hand icon). Check the box 'Override Default Data Type', and change the 'Treat Numbers As' dropdown to **Percentage**.

12 Click **Next** to go to Step 2, Create Layout.

13 Click **Add View** and select 'Pivot Table' from the list.

**Build and View Analysis** Help Back

**24** Save the Report in the Company Wide Shared Folder by clicking on the Save Button.

25 Finally Run the report from the Saved location to check that it has saved correctly.

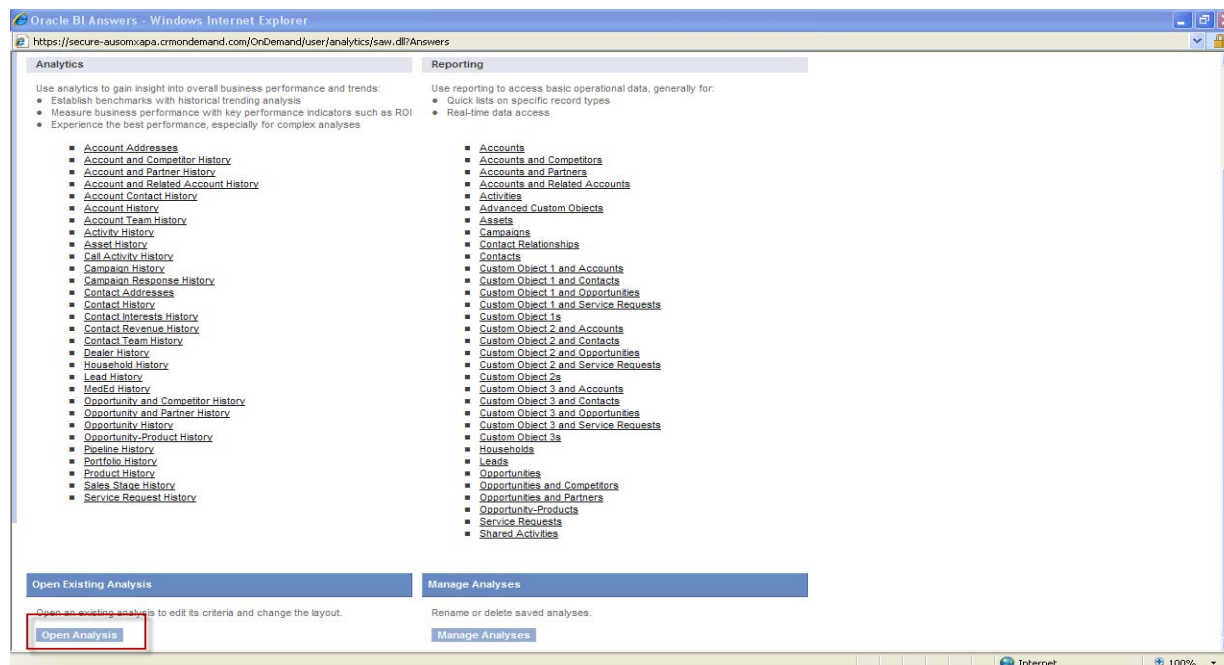

This completes the setup of the Participation Rate Report. See “Add To Service Home Page: Participation Report (optional)” on page 113.

# Participation Rate Report by User

The following Oracle CRM On Demand analytics report is a calculated metric to provide management guidance for measuring effectiveness of the Users' ability to close cases using knowledge articles.

The steps below detail creating the Participation Rate report from scratch for Users.

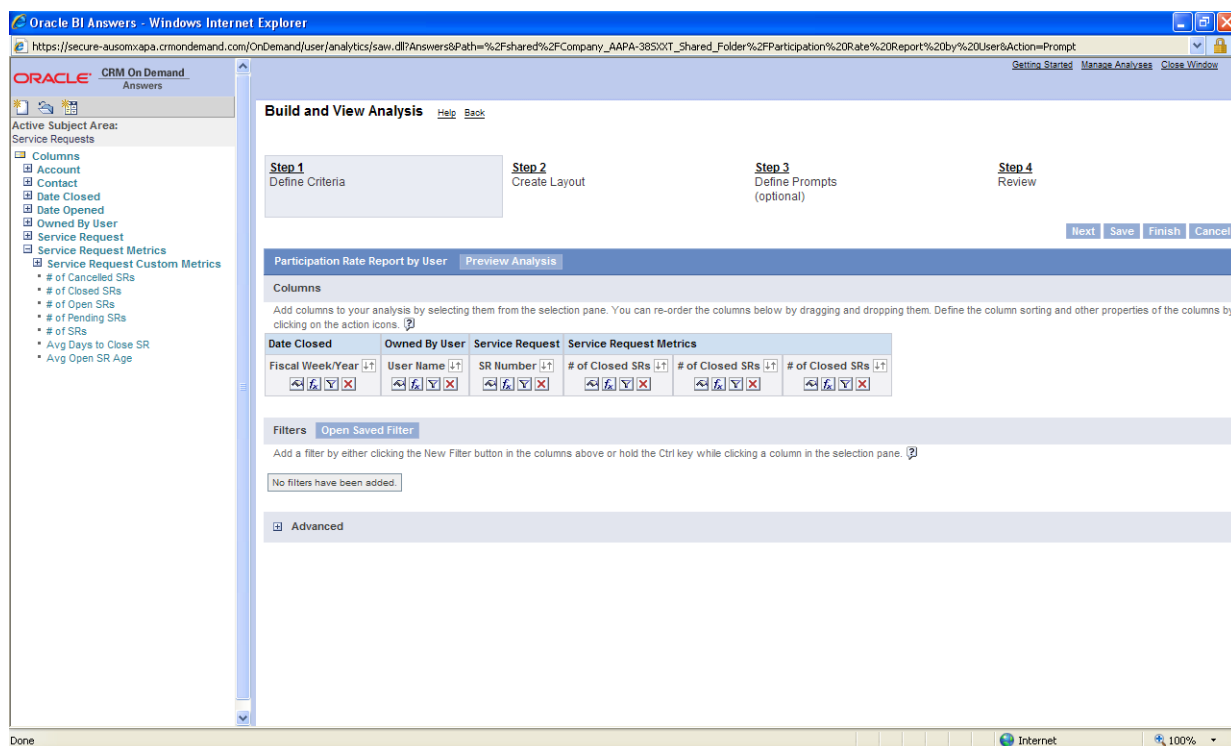

- 1 Login as an Oracle CRM On Demand user with the Administrator role.
- 2 From the Report screen (tab) select the Design Analyses link. Then, click on the 'Service Requests' subject area in the Reporting Column.

- 3 Add columns from left hand pane to the right pane as follows:

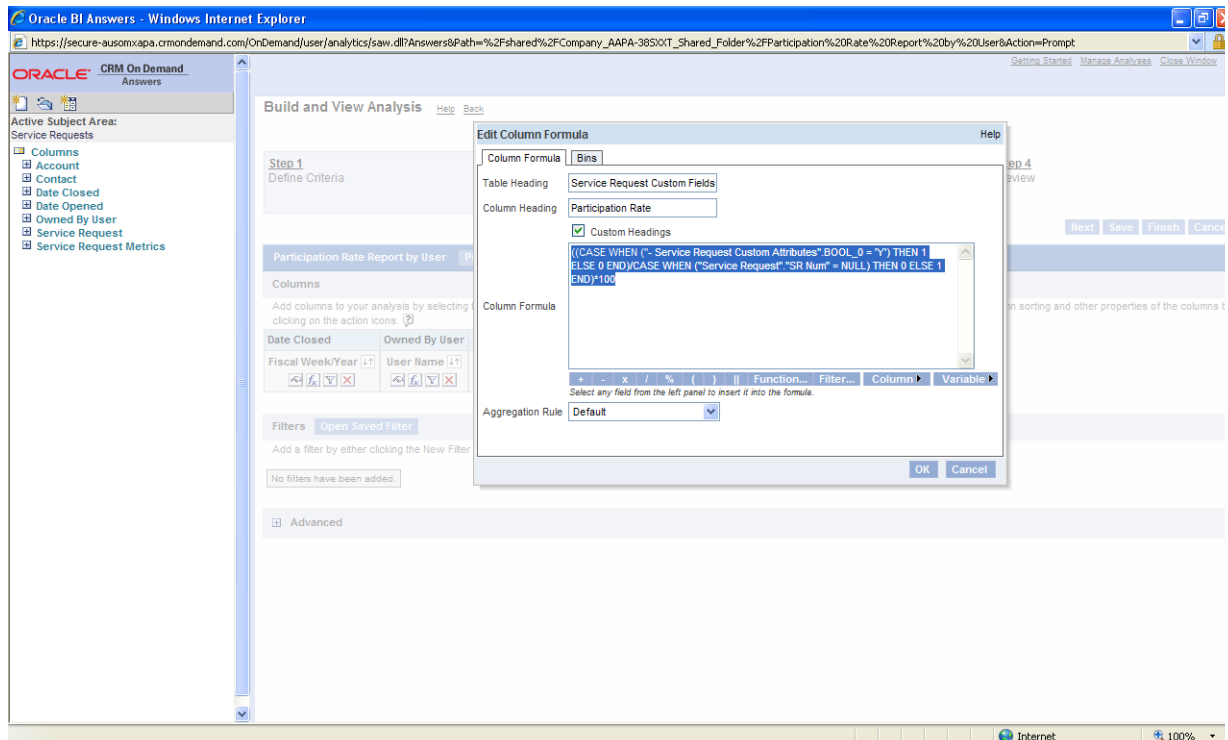

**Note:** To add columns in the following steps simply click and drag the choice. This will then populate the column in the section on the right of the screen to begin building the formula.

- a Add the column – **Fiscal Week/Year** from Date Closed section from left hand pane to the right pane.
- b Add the column – **SR Number** from Service Request section from left hand pane to the right pane.
- c Add the column – **User Name** from the Owned by User section from the left hand pane to the right pane. This new variable, when added to report created in "Participation Rate Report", creates Participation Rate Report by User.
- d Add column - **# of Closed SRs** from the Service Request Metrics from the left pane to the right. Repeat this step three times so that you have the same column three times. We will be using this column to store some calculated values.

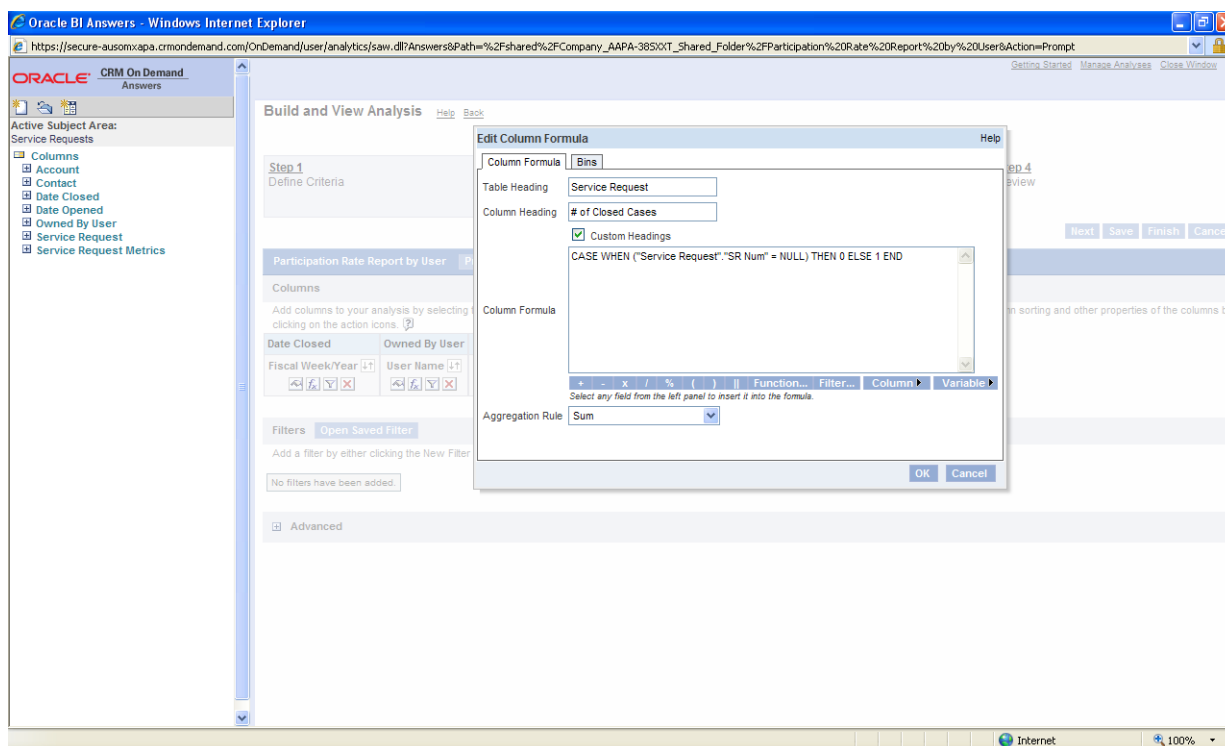

- 4 Rename one of the **# of Closed SRs** columns to **Participation Rate**. Check the 'Custom Headings' check box and then type the new name.
- 5 Create the following formula in the Column Formula field. You may cut and paste the formula from below.

```
((CASE WHEN (" - Service Request Custom Attributes".BOOL_0 = 'Y') THEN 1
ELSE 0 END)/CASE WHEN ("Service Request"."SR Num" = NULL) THEN 0 ELSE 1
END) *100
```

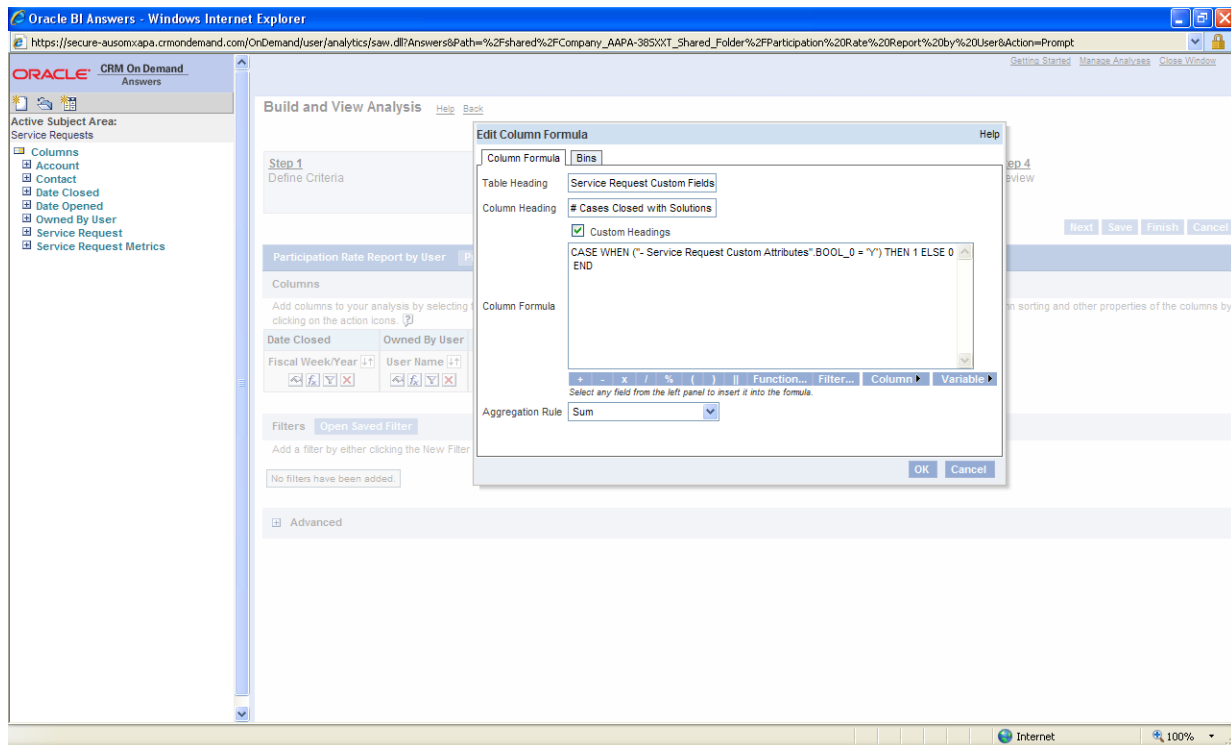

- 6 Rename one of the **# of Closed SRs** columns to **# of Closed Cases**. Check the 'Custom Headings' check box and then type the new name.
- 7 Create the following formula in the Column Formula field.  
`CASE WHEN ("ServiceRequest"."SR Num"=NULL) THEN 0 ELSE 1 END`

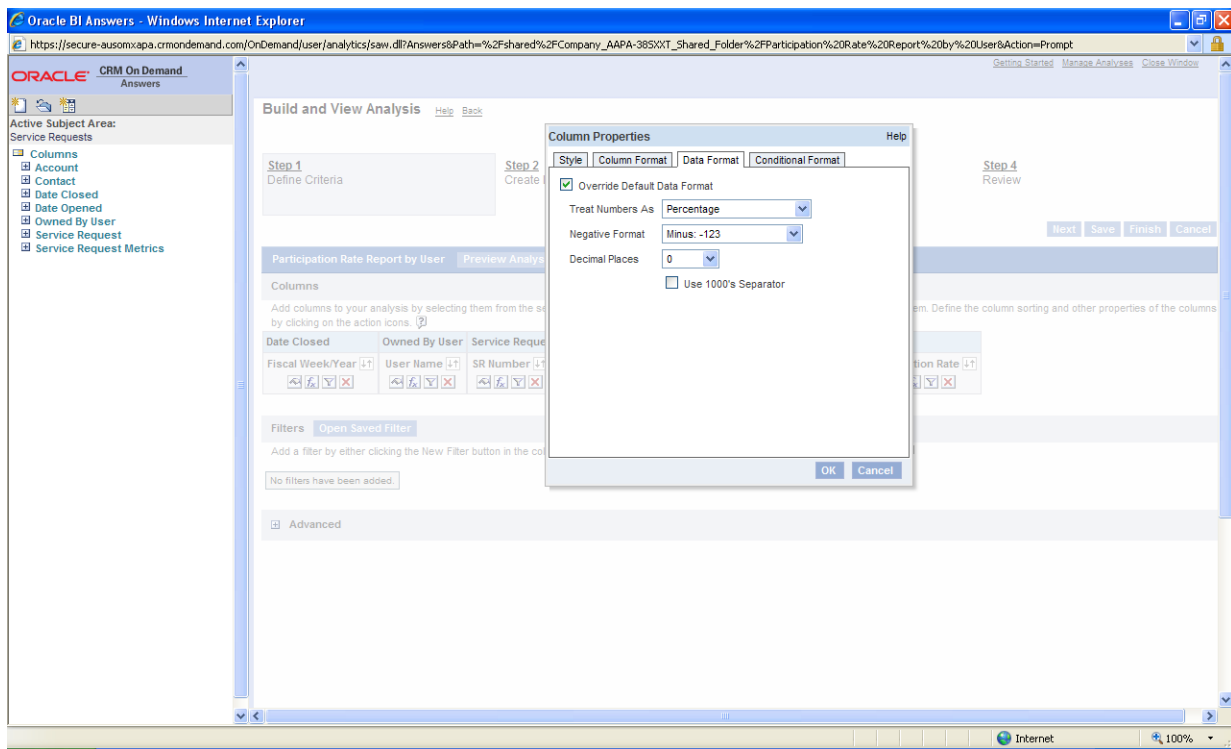

- 8 Rename one of the **# of Closed SRs** columns to **# of Closed Cases with Solutions**. Check the 'Custom Headings' check box and then type the new name.
- 9 Create the following formula in the Column Formula field.

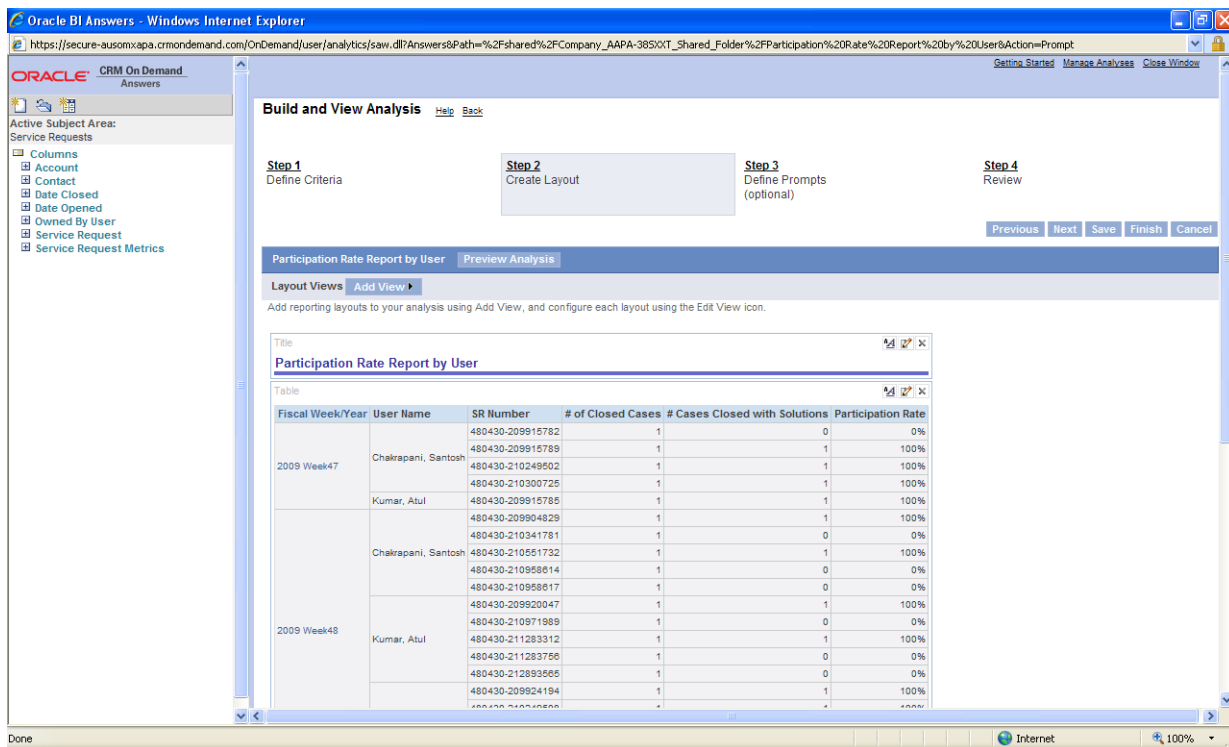

```
CASE WHEN (" - Service Request Custom Attributes".BOOL_0 = 'Y') THEN 1
ELSE 0 END
```

- 10 From the column 'Participation Rate' click the Column Properties icon (hand icon). Check the box 'Override Default Data Type', and change the 'Treat Numbers As' dropdown to **Percentage**.

### 11 Click on Next to go to Step 2, Create Layout.

### 12 Click Add View and select 'Pivot Table' from the list

The screenshot shows the Oracle BI Answers interface in a Windows Internet Explorer browser. The URL is [https://secure-ausomx.apa.crmondemand.com/OnDemand/user/analytics/saw.dll?Answers&Path=%2Fshared%2FCompany\\_AAPA-385%2FShared\\_Folder%2FParticipation%20Rate%20Report%20by%20User&Action=Prompt](https://secure-ausomx.apa.crmondemand.com/OnDemand/user/analytics/saw.dll?Answers&Path=%2Fshared%2FCompany_AAPA-385%2FShared_Folder%2FParticipation%20Rate%20Report%20by%20User&Action=Prompt). The interface is titled 'Build and View Analysis' and includes a sidebar with 'Active Subject Area: Service Requests' and a list of columns: Account, Contact, Date Closed, Date Opened, Owned By User, Service Request, and Service Request Metrics. The main area shows a four-step process: Step 1 (Define Criteria), Step 2 (Create Layout), Step 3 (Define Prompts (optional)), and Step 4 (Review). Below this, there are buttons for 'Previous', 'Next', 'Save', 'Finish', and 'Cancel'. The 'Participation Rate Report by User' is selected, and a 'Preview Analysis' button is visible. A 'Layout Views' section shows 'Add View' and 'Edit View' options. The main table displays data for 'Participation Rate Report by User' with columns: Fiscal Week/Year, User Name, SR Number, # of Closed Cases, # Cases Closed with Solutions, and Participation Rate. The data is organized by week (2009 Week 47 and 2009 Week 48) and user (Chakrapani, Santosh and Kumar, Atul).

Fiscal Week/Year	User Name	SR Number	# of Closed Cases	# Cases Closed with Solutions	Participation Rate
2009 Week 47	Chakrapani, Santosh	480430-209915782	1	0	0%
		480430-209915789	1	1	100%
		480430-210249502	1	1	100%
	Kumar, Atul	480430-210300725	1	1	100%
		480430-209915785	1	1	100%
		480430-209904828	1	1	100%
2009 Week 48	Chakrapani, Santosh	480430-210341781	1	0	0%
		480430-210551732	1	1	100%
		480430-210958614	1	0	0%
	Kumar, Atul	480430-210958617	1	0	0%
		480430-209920047	1	1	100%
		480430-210971989	1	0	0%
		480430-211283312	1	1	100%
		480430-211283756	1	0	0%
		480430-212893565	1	0	0%
		480430-209924194	1	1	100%

**13** Move the following three (3) columns to the Measures Section on the right.

- # of Closed Cases
- # of Closed Cases with Solutions
- Participation Rate

**14** Move the Service Request column to the Excluded section which is just to the right of the Measures section.

- 15 Click the More Options small rectangle box next to the **# of Closed Cases** column, then go to the 'Aggregation Rule' option and select **Sum**.

- 16 Click the More Options small rectangle box next to the **# of Closed Cases with Solutions** column, go to the 'Aggregation Rule' option and select **Sum**.

The screenshot shows the Oracle BI Answers interface in a Windows Internet Explorer browser. The 'Build and View Analysis' step is active. The 'Participation Rate Report by User' is displayed. The 'More Options' menu is open for the '# of Closed Cases with Solutions' column, and 'Sum' is selected under the 'Aggregation Rule' option.

Fiscal Week/Year	User Name	# of Closed Cases	# Cases Closed with Solutions	Participation Rate
2009 Week47	Chakrapani, Santosh	4	3	75%

**27** Save the Report in the Company Wide Shared folder by clicking on the Save Button.

28 Finally Run the report from the Saved location to check that it has saved correctly.

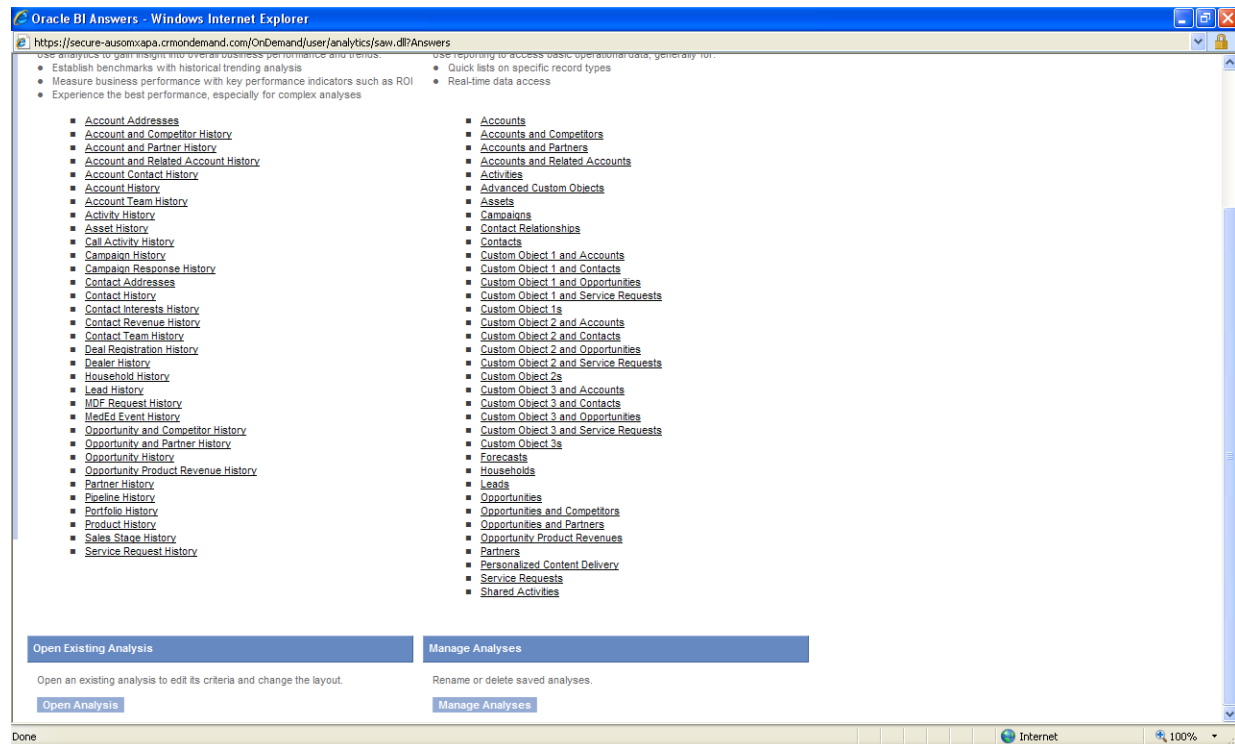

This completes the setup of the Participation Rate Report by User.

## Add To Service Home Page: Participation Report (optional)

This optional step is provided as an example for a Service Manager, typically, that wishes to see this metric when they login to Oracle CRM On Demand. This will save clicks one would otherwise have to navigate to the Reports screen and drill into to see the results. Following is an example of but one way to incorporate with other CRM On Demand analytics.

- 1 Login as an Oracle CRM On Demand user with the Administrator role.
- 2 Go to the Design Analysis link on the Reports Home. Choose Open Analysis from the section Open Existing Analysis on the lower left side of the browser window.

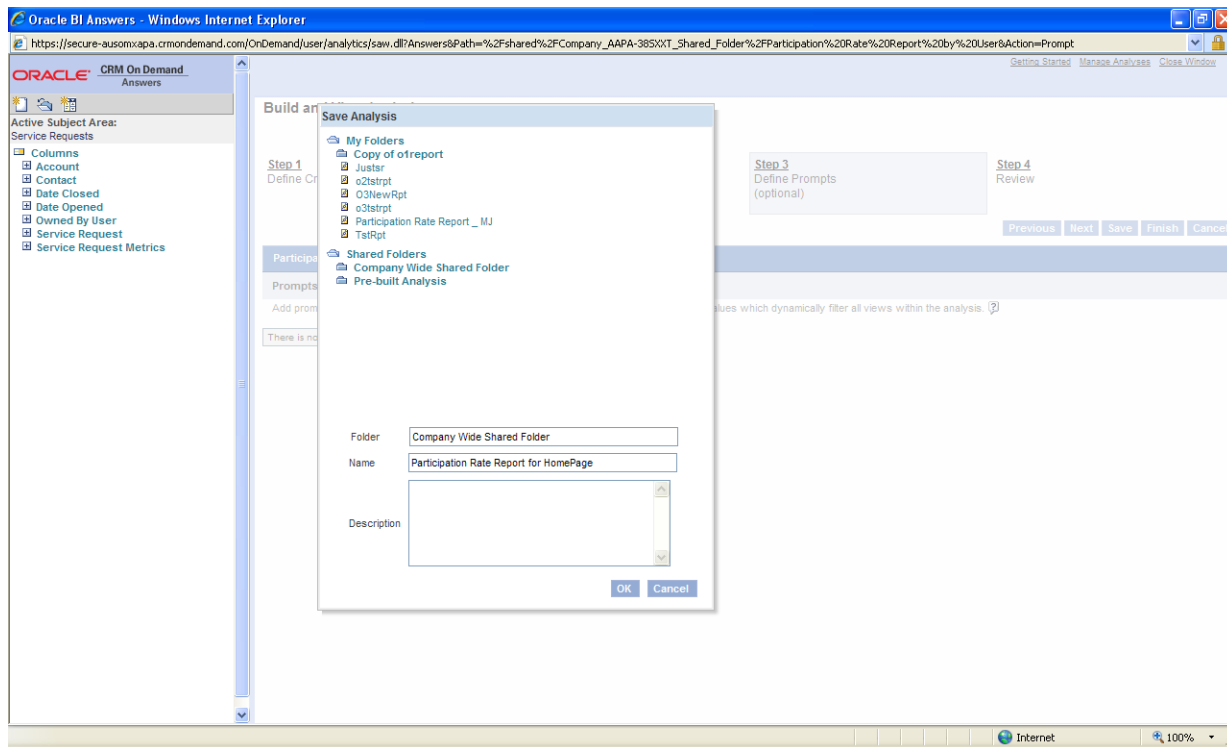

- 3 Open the Participation Rate Report. Navigate to the same folder where the reports have been saved as noted in sections A and B above.

- 4 Go to the Prompts Section and delete the previously created prompt. If this was not defined in section B then you may skip this step.

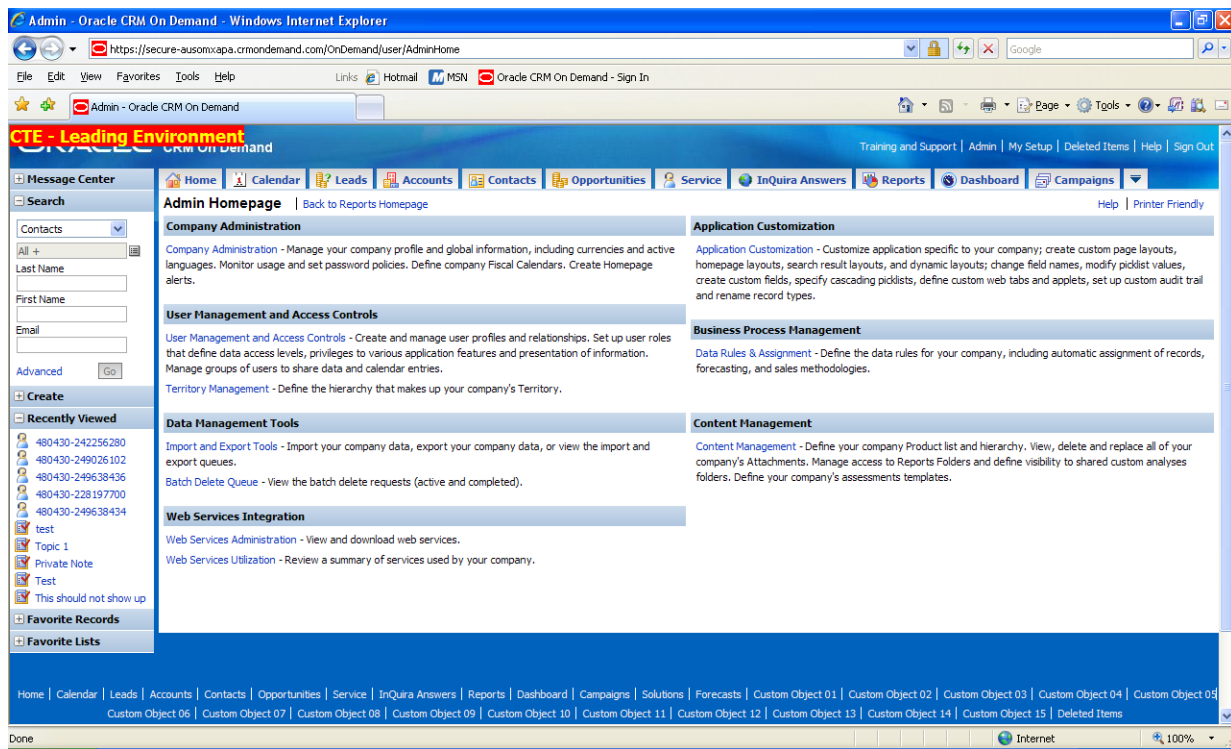

- 5 Save this report under a different Name e.g. **Participation Rate Report for HomePage**. You may close the window after Saving.

- 6 Click the Admin link on the top right corner of your screen.

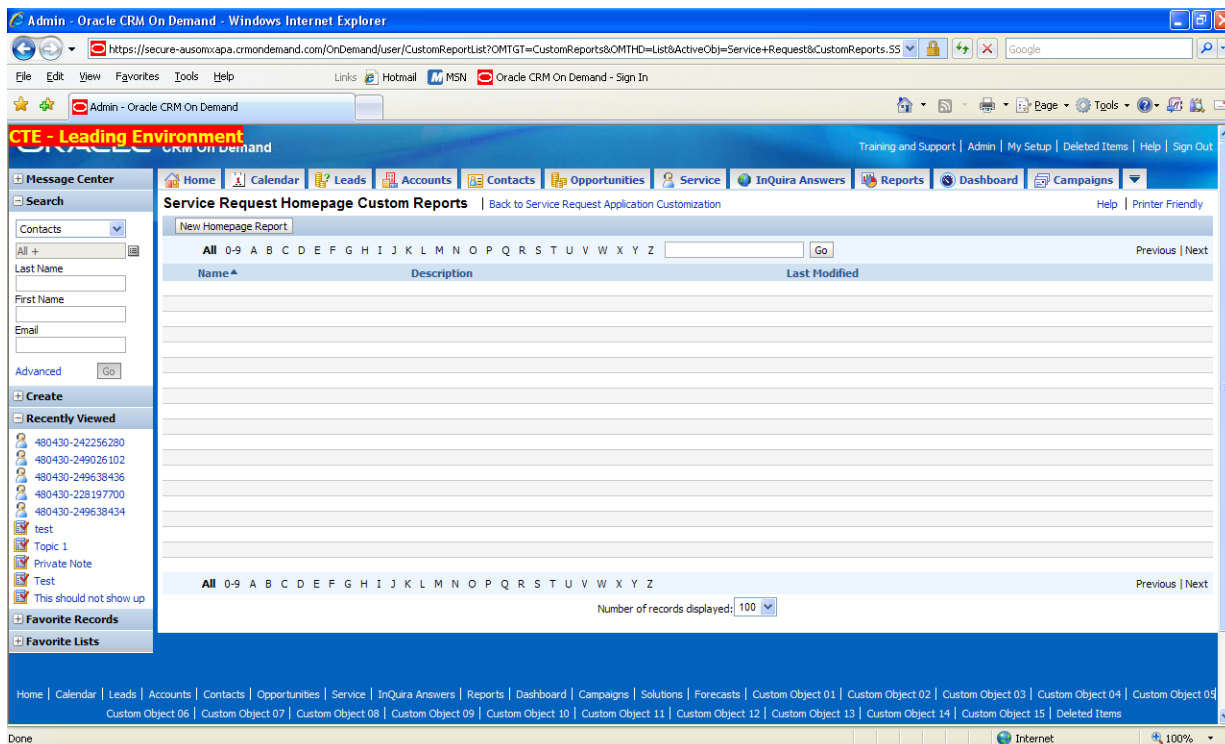

- 7 Click 'Application Customization' and Then 'Service Request' Link. Then Select the Service Request Homepage Custom Report.

8 Click on the 'New Homepage Report' button.

9 Give the Homepage Report a Name e.g, Participation Report HP. The report path will change depending on the name of the report you are putting on the homepage. Enter the following Report Path value. **NOTE:** This must be the same name as specified during creation else it will error out.

Homepage Custom Report Save Cancel

Specify the homepage custom report properties. If you want the report to span the entire homepage from left to right, set the width to Double. If you set the height to Double, the report will be twice the height of the other sections on the homepage. The report path is defined when you save the report. To view the path, navigate to the Save Analyses window in the Build and View Analysis wizard. The path is constructed by cutting and pasting the value in the Folder field, followed by a colon (:) and a space, and then adding the value in the Name field. For example: Shared Folders : Pre-built Analysis : Sales Stage History Analytics : Team Sales Stage History Analysis

Name\* Participation Report HP

10 Click Save and Exit.

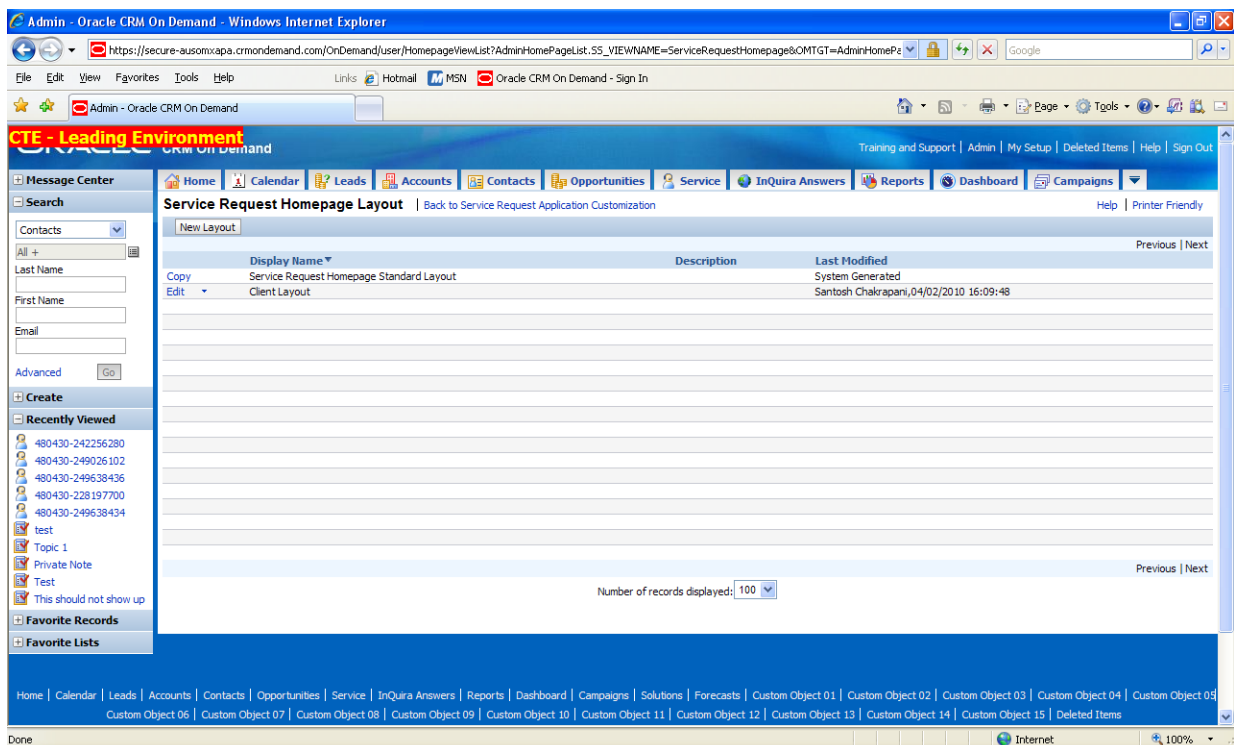

11 Now Select the 'Service Request Homepage' Layout. Click the copy link to create a copy of the out-of-the-box homepage layout. Choose any name you want for the layout.

- 12 Click 'Next', on the next screen swap the out-of-the-box 'Open Service Request Analysis' for the 'Participation Report HP' – the custom report we created in the previous steps.

### 13 Click Finish.

### 14 Now you have a separate homepage layout for the 'Participation Rate' report. You can now use this Service Page layout and Associate it to any Role Name.

15 Next step is to show the Report on the Service Home Page.

a Go to the Service Home Page and Click on the Edit Layout link.

b Swap the out-of-the-box 'Open Service Request Analysis' for the 'Participation Report HP' – the custom report we created in the previous steps. When finished, click Save.

c You should now see the Participation Rate Report by User on the Service Homepage.

**Note:** Due to performance of generating the report, it will not automatically render. To see the report as shown below click on the link.

# Build Configuration Updates

To build configuration updates:

- 1 Under <target name="infocenter-init"> add the following entry:

```
<!-- SSP InfoCenter root -->
<property name="ssp-infocenter.rootdir" value="${infocenter.rootdir}/ssp" />
<!-- SSP InfoCenter destination-->
<property name="ssp.dest" value="${basedir}/Build/IM_HOME/install/ssp" />
```

- 2 Under <target name="infocenter" depends="infocenter-init">, append the following entry to <copy todir="\${infocenter.dest}">

```
<exclude name="ssp/**" />
```

- 3 Create a new target for SSP.

```
<target name="ssp-infocenter" depends="infocenter-init,infocenter">
  <mkdir dir="${ssp.dest}" />
  <!-- Copy everything except app/infocenter/system/pages folder to ssp destination. -->
  <copy todir="${ssp.dest}">
    <fileset dir="${infocenter.dest}">
      <!--<exclude name="apps/infocenter/system/pages/**" /> -->
    </fileset>
  </copy>

  <!-- copy ssp's file to destination and may replace the same ones with InfoCenter-->
  <copy todir="${ssp.dest}" overwrite="true">
    <fileset dir="${ssp-infocenter.rootdir}">
      <exclude name="WEB-INF/**/*.*.properties"/>
    </fileset>
  </copy>

  <!-- copy crmservice jar and other ssp related jar to ssp-infocenter -->
  <copy todir="${ssp.dest}/WEB-INF/lib" overwrite="true">
    <fileset dir="CRMSelfService/lib"/>
    <fileset dir="Build/Frameworks/CRMSelfService.framework/Resources/Java"
      includes="**/*.jar"/>
  </copy>

  <mergeProperties oriConfig="${infocenter.dest}/WEB-INF/infocenter.properties"
    overConfig="${ssp-infocenter.rootdir}/WEB-INF/infocenter.properties"
    destConfig="${ssp.dest}/WEB-INF/infocenter.properties" />

  <mergeProperties
    oriConfig="${infocenter.dest}/WEB-INF/classes/ApplicationResources.properties"
    overConfig="${ssp-infocenter.rootdir}/WEB-INF/classes/ApplicationResources.properties"
    destConfig="${ssp.dest}/WEB-INF/classes/ApplicationResources.properties" />
</target>
```

- 4 Add ssp-infocenter as dependency to <target name="dist"../>.

**5** Add the following target for building CRMSelfService jar.

```
<target name="CRMSelfService" description="Build CRMSelfService.framework">
<ant dir="CRMSelfService"/>
<emma enabled="${emma.enabled}">
  <instr destdir="${emma.instr.dir}"
    metadatafile="${emma.coverage.dir}/crmselfservice.emma"merge="no" mode="full-
    copy">
    <instrpath>
      <fileset dir="Build/Frameworks/CRMSelfService.framework/Resources/Java"
        includes="**/*.jar"/>
    </instrpath>
  </instr>
</emma>
</target>
```

**6** Add the CRMSelfService as dependency to target 'dev'.

```
<target name="dev" depends=".., ,CRMSelfService">
```

# Troubleshooting

This appendix contains information on troubleshooting the XML sent by Information Manager and Intelligent Search.

## Troubleshooting the CRM OnDemand XML Files

### Self-Service Portal InfoCenter(IM)

- 1 Stop the Information Manager server if it is running.
- 2 Open the file `$IM_HOME\config\SSP_Repository\log4j.properties`.  
If it does not exist, then create a new `log4j.properties` under `$IM_HOME\config\SSP_Repository`.
- 3 Add the following contents into the `log4j.properties`:
 

```
log4j.logger.org.apache.axis.transport.http.HTTPSender=DEBUG, LOGFILE
# LOGFILE is set to be a File appender using a PatternLayout.
log4j.appender.LOGFILE=org.apache.log4j.FileAppender
log4j.appender.LOGFILE.File=axis.log
log4j.appender.LOGFILE.Append=true
log4j.appender.LOGFILE.Threshold=DEBUG
log4j.appender.LOGFILE.layout=org.apache.log4j.PatternLayout
log4j.appender.LOGFILE.layout.ConversionPattern=%-4r [%t] %-5p %c %x - %m%n
```
- 4 Restart the Information Manager server.

The SOAP message appears in `$IM_instance\axis.log` if there is a webservice call from Information Manager. See “Self-Service Portal Axis Log” on page 127 for an example.

### Runtime (Search)

- 1 Stop the Runtime server if it is running.
- 2 Open the `$Runtime_instance\appserver\webapps\inquiragw.war`, unzip the file `inquiragw.war\WEB-INF\lib\merged.jar`.
- 3 Open the unzipped `merged.jar`, unzip the file `log4j.properties`.
- 4 Add a new line:
 

```
log4j.logger.org.apache.axis.transport.http.HTTPSender=DEBUG, LOGFILE
```

 to the `log4j.properties` file.
- 5 Change the value of

```
log4j.appender.LOGFILE.Threshold
to DEBUG.
```

Here is the file content after making the preceding changes:

```
# Set root category priority to INFO and its only appender to CONSOLE.
log4j.rootCategory=INFO, CONSOLE
#log4j.rootCategory=INFO, CONSOLE, LOGFILE
log4j.logger.org.apache.axis.transport.http.HTTPSender=DEBUG, LOGFILE
# Set the enterprise logger category to FATAL and its only appender to
CONSOLE.
log4j.logger.org.apache.axis.enterprise=FATAL, CONSOLE
# CONSOLE is set to be a ConsoleAppender using a PatternLayout.
log4j.appender.CONSOLE=org.apache.log4j.ConsoleAppender
log4j.appender.CONSOLE.Threshold=INFO
log4j.appender.CONSOLE.layout=org.apache.log4j.PatternLayout
log4j.appender.CONSOLE.layout.ConversionPattern=- %m%n
# LOGFILE is set to be a File appender using a PatternLayout.
log4j.appender.LOGFILE=org.apache.log4j.FileAppender
log4j.appender.LOGFILE.File=axis.log
log4j.appender.LOGFILE.Append=true
log4j.appender.LOGFILE.Threshold=DEBUG
log4j.appender.LOGFILE.layout=org.apache.log4j.PatternLayout
log4j.appender.LOGFILE.layout.ConversionPattern=-4r [%t] %-5p %c %x - %m%n
```

- 6 Add the new log4j.properties into merged.jar.
- 7 Copy the new merged.jar to inquiragw.war\WEB-INF\lib.
- 8 Restart the Runtime server.

The SOAP message appears in \$Runtime\_instance\axis.log when there is a webservice call (link/unlink in iConnect) from Runtime. See "Runtime Axis Log" on page 153 for an example.

## Disable Transfer-encoding for the Transportation Layer in Axis

The following instructions describes how to change the configuration for the underlying transportation layer used by Oracle Knowledge web service calls. This configuration change disables the "chunked" transfer-encoding for the transportation layer in the Axis web service library for Oracle Knowledge web services calls.

**Note:** The underlying web service call library loads the configuration of axis2\_default.xml from its default location. The deployment of another axis2.xml in the classpath does not get loaded.

- 1 Stop Oracle Knowledge Search runtime instance.
- 2 Find the Oracle Knowledge Search runtime .war file at:  
\$inquiraproduct\_root\instances\search\_runtime\_instance\appserver\webapps\inquiragw.war.  
Copy this war file to a temporary folder.
- 3 Unjar this copied inquiragw.war file to \$unjar\_root.
- 4 Find the Axis jar file from \$unjar\_root\WEB-INF\lib\axis2-kernal-1.4.jar and copy the axis2-kernal-1.4.jar to another temporary folder.
- 5 Unjar the copied axis2-kernal-1.4.jar to \$axis-jar\_root.
- 6 Find the file axis2\_default.xml in \$axis-jar\_root\org/apache/axis2/deployment/.

**7** Open the `axis2_default.xml` in an XML or text editor.

**8** Find the configuration node:

```
<transportSender name="http"
  class="org.apache.axis2.transport.http.CommonsHTTPTransportSender">
  <parameter name="PROTOCOL">HTTP/1.1</parameter>
  <parameter name="Transfer-Encoding">chunked</parameter>
</transportSender>
```

**9** Edit so that:

**a** `<parameter name="Transfer-Encoding">chunked</parameter>` is removed or commented out.

**b** (Optional) Change HTTP protocol from version 1.1 to 1.0 `<parameter name="PROTOCOL">HTTP/1.0</parameter>`

**10** Save the changed file `axis2_default.xml`.

**11** Jar the entire `$axis-jar_root` with the original path back to `axis2-kernal-1.4.jar`.

**12** Copy this `axis2-kernal-1.4.jar` back to `$unjar_root\WEB-INF\lib\`

**13** Jar the entire `$unjar_root` with the original path back to `inquiragw.war`.

**14** Copy this `inquiragw.war` back to `$inquire_product_root\instances\search_runtime_instance\appserver\webapps`

**15** Re-start the Oracle Knowledge Search runtime instance.

# Crawler Support for Multiple Web Applications

This appendix contains information on customizing the crawler URL Builder to support multiple web applications.

## Customizing the Crawler URL Builder

A search collection which is crawling Information Manager content includes the configuration of a URL Builder and a Prefix for the URL which identifies the specific web application name to display search results.

For example the following configuration parameters for an Information Manager collection enable the display of Information Manager content as search results in InfoCenter on the **Company support** system.

Parameter	Value
<b>URL Builder</b>	IMURLBuilder
<b>Protocol</b>	http
<b>Host</b>	company.inquiria.com
<b>Port</b>	
<b>Prefix</b>	/support/index?page=content&id=
<b>Suffix</b>	&actp=search

The **Prefix** identifies the web application named `support`.

## Multiple Web Applications

In the case that there are multiple web applications returning the content as search results then the **Prefix** specified for the collection cannot be specific to one web application. For example, in the case of the two web applications used with the integration to CRMOD, iConnect and SSP, the crawled content must display in either web application. In this case, a web application name variable must be provided in the **Prefix**. The specific variable is `{instanceContext}`. The parameters for the IM collection then change to the following:

Parameter	Value
<b>URL Builder</b>	IMURLBuilder
<b>Protocol</b>	http
<b>Host</b>	company.inquiria.com
<b>Port</b>	
<b>Prefix</b>	/[{instanceContext}]/index?page=content&id=
<b>Suffix</b>	&actp=search

The `{instanceContext}` is replaced when the URL is built as part of the search response. When the content is displayed in the iConnect web application, the URL includes the name iConnect to identify the path to the iConnect web application. When the content is displayed in the SSP web application, the URL includes the name SSP to identify the path to the SSP web application. The content detail pages differ in the iConnect and SSP web applications.
