## Preface

### Audience

This guide is intended for client programmers involved with integrating Oracle Agile Product Lifecycle Management for Process. Information about using Oracle Agile PLM for Process resides in application-specific user guides. Information about administering Oracle Agile PLM for Process resides in the *Agile Product Lifecycle Management for Process Administrator User Guide*.

### Variability of Installations

Descriptions and illustrations of the Agile PLM for Process user interface included in this manual may not match your installation. The user interface of Agile PLM for Process applications and the features included can vary greatly depending on such variables as:

- Which applications your organization has purchased and installed
- Configuration settings that may turn features off or on
- Customization specific to your organization
- Security settings as they apply to the system and your user account

### Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

### Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

### Software Availability

Oracle Software Delivery Cloud (OSDC) provides the latest copy of the core software. Note the core software does not include all patches and hot fixes. Access OSDC at: <http://edelivery.oracle.com>.

## Introducing Ready Reports

### Purpose

This guide describes how to install, configure, and use the Ready Reports Solution Pack. Solution packs are designed to be pluggable modules that can be added to the Agile PLM for Process application suite without modifying the existing release code base.

### Overview

Ready Reports allow users to quickly access data they need in the context they need it. Ready reports are saved entity query tool (EQT) searches that are available for business objects in Agile PLM for Process. Since ready reports has its own administration interface, reports can be created and managed by business users. No technical report writing skills are necessary.

Reports can be saved as local browser bookmarks or individually shared with other users. Reports can even be shared to the entire user community by adding new navigation items throughout Agile PLM for Process applications. Refer to the *Agile Product Lifecycle Management for Process Navigation Configuration Guide* for more information

### Usage Examples

The possibilities around how you use ready reports are virtually endless. Here are a few common use cases that can be accomplished with ready reports.

1. Find all finished goods with the allergen of X, created in the last 90 days.
2. Show me all packaging specifications that will be effective in the next 20 days.
3. Find all completed recalls performed in the last year.
4. Show all supplier documents associated to this material specification.
5. Find all facility audits that are due in the next 120 days.
6. Find all companies that could potentially source this material.
7. Show me all raw materials that are currently owned by Employee X.
8. Find all NPD projects in stage 2, 3 or 4 slotted for plant X.
9. Find all PQS sessions performed in the last 10 days at this location.

## Business Objects

Ready reports are available for the following business objects:

Application	Object
ADMN	Custom Section
ADMN	Extended Attribute
CC	Component Catalog Term
DRL	DRL Document
eQ	Material eQuestionnaire
eQ	Packaging eQuestionnaire
eQ	Printed Packaging eQuestionnaire
eQ	Product eQuestionnaire
eQ	Trade eQuestionnaire
GSM	Delivered Material Packing Specification
GSM	Equipment Specification
GSM	Formulation Specification
GSM	Global Succession Request
GSM	GSM Activity
GSM	Labeling Specification
GSM	LIO Profile
GSM	Master Specification
GSM	Material Specification
GSM	Menu Item Specification
GSM	Nutrient Profile
GSM	Packaging Specification
GSM	Packing Config Specification
GSM	Printed Packaging Specification
GSM	Product Specification
GSM	Testing Protocol
GSM	Trade Specification
NPD	Innovations/Sales Pipeline
NPD	Project
NPD	Strategic Brief
NSM	Nutrient Analysis
NSM	Nutrient Composite
PQM	Action
PQM	Audit
PQM	Issue
PQS	Lot Sample
PQS	Session
PQS	Scorecard
SCRM	Company
SCRM	Company/Facility SDM
SCRM	Facility
SCRM	Non-Spec Sourcing Approval
SCRM	Non-Spec Sourcing Approval SDM
SCRM	Spec Related Sourcing Approval
SCRM	Spec Sourcing Approval SDM

Application	Object
UGM	Group
UGM	User
WFA	GSM Workflow Process Template
WFA	PQM Workflow Process Template
WFA	SCRM Workflow Process Template

## Installing/Upgrading and Configuring Ready Reports

*Note:* You must have a minimum of v6.1.1.1.0 of PLM for Process installed to use this solution pack.

### Installing the Solution Pack

To install Ready Reports solution pack:

1. Unzip the contents of ExtensibilityPack\_v3.9\_Release.zip.
2. Unzip the contents of the SolutionPacks\ReadyReports\ReadyReports.zip and note the location.

### Database Setup

Database scripts need to be executed for new installations and upgrades of Ready Reports.

1. Create a backup of the Prodika database.
2. Apply the Database Scripts
  - a. SQL Server
    - i. Open a command prompt and navigate to the directory where you unzipped the solution pack.
    - ii. Change directories (cd) to the Database directory.
    - iii. Apply the scripts using the following call to the ApplyScripts.exe utility:  
`ApplyScripts -c "server=<database_server>;uid=<user>;password=<password>;database=<database>" -f ReadyReports.xml`
    - iv. After the ApplyScripts call, you can confirm that the database scripts have been applied successfully when the system prompts you with the following message:  
`"Complete - with no errors"`
  - b. Oracle
    - i. Open a command prompt and navigate to the directory where you unzipped the solution pack.
    - ii. Change directories (cd) to the Database directory.
    - iii. Apply the scripts using the following call to the ApplyScripts.exe utility:  
`ApplyScripts -c "User Id=<user>;Password=<password>; Data Source=<datasource>" -dbvendor="orcl" -f ReadyReports-orcl.xml`
    - iv. After the ApplyScripts call, you can confirm that the database scripts have been applied successfully when the system prompts you with the following message:  
`"Complete - with no errors"`

## Application Installation/Upgrade

The ReadyReportsSetup.exe file supports [installation](#) and [upgrade](#) of the Ready Reports Solution Pack.

### Installation

1. Ensure the [Database Setup](#) has been completed.
2. Run the ReadyReportsSetup.exe file from the location where you unzipped the solution pack and follow the on-screen instructions to install the necessary files to your specified PLM for Process home directory. A backup folder called SolutionPacks611Backup is created during the installation to facilitate the uninstall process. Inside of that folder, a new folder called ReadyReports will be created to hold the files that were changed during the installation.

*Note:* The installer creates a new application pool in IIS for ready reports. If you are using Integrated Security, you will need to set the identity of the new application pool to match the other application pools for your site.

3. Restart IIS.

*Note:* One of the files copied in step 2 is the navigation extension that adds Ready Reports to the Application Navigation:

```
<MenuItem DisplayText="**Ready Reports" ID="lblReadyReports"
NavigateUrl="{dc:ReadyReports}/Main.aspx?ContentKey=ListReadyReports"
SecurityProfileRef="ReadyReportAdmins" SkinRef="DefaultSkin"
SortOrder="9999" /></MenuItem>
```

To learn more about navigation extensibility and creating security profiles, see the *Agile Product Lifecycle Management for Process Navigation Configuration Guide* in the Extensibility Pack.

4. Login to the application.

### Upgrade

1. Ensure the [Database Setup](#) has been completed.
2. If you have made changes to any of the following, make sure to backup the files before running the upgrade:
  - a. PRODIKA\_HOME\config\extensions\extensionviews.xml
  - b. PRODIKA\_HOME\config\extensions\ReadyReports.xml
  - c. PRODIKA\_HOME\config\extensions\ReadyReportsDisplayExtensions.xml
3. Run ReadyReportsSetup.exe and follow the on-screen instructions to perform the upgrade.
4. Once the installer has completed, merge any of your changes to the files listed above into the new files from the installer.
5. Restart IIS.
6. Login to the application.

## Alternative Installation Option

For environments where the PQM application has been installed against a different database than the other PLM4P applications, a 2nd Ready Reports application will need to be setup to allow users to run Ready Reports against the PQM objects. In order to setup Ready Reports for this configuration you will need to re-run the Ready Reports installation on the other environment.

## Assigning Roles

Two roles exist for Ready Reports. The user must have one of these roles to access the ready reports administration application. Roles can be added using the UGM application.

**[READY\_REPORT\_ADMIN]**—This role allows a user to access the ready reports administration application. This user can create ready reports as well as edit reports they originated.

**[READY\_REPORT\_SUPER\_ADMIN]**— This role allows everything READY\_REPORT\_ADMIN allows however this role allows the user to adjust the Max Results field. Editing the Max Results field could greatly affect performance so this role should be reserved for a more technical administrator.

## Accessing Ready Reports

Once a ready report is installed, the administrator accesses them by clicking **Ready Reports** in the top menu bar or in the left navigation panel of the application.

**Figure 1. Ready Reports option, top menu bar**

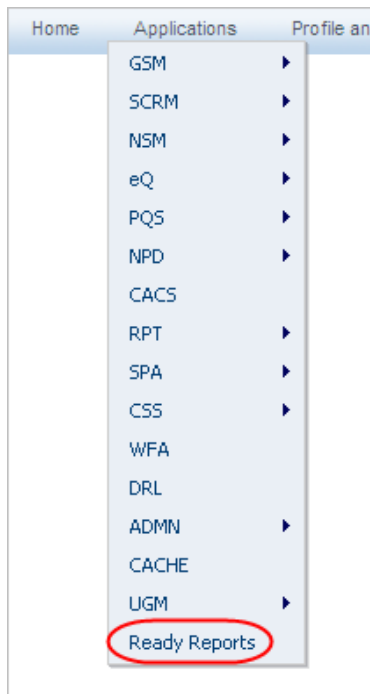

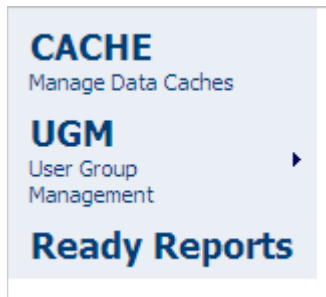

Figure 2. Ready Reports option, left navigation panel

Choosing these options shows the Ready Reports listing page, which lists saved ready reports and is used to create new reports, shown below.

## Ready Reports Listing Page

Figure 3. Ready Reports listing page

The screenshot shows the 'Ready Reports' listing page. At the top, there is a navigation bar with 'Home', 'Applications', and 'Profile and Preferences' links. Below the navigation bar, the title 'Ready Reports' is displayed next to a magnifying glass icon. The main content area contains a table with the following data:

	Report ID #	Report Name	
11	1293	Supplier Documents - Expire Next Month	✖
12	1291	Material Questionnaires - Returned This Week	✖
13	1290	Supplier Documents - Expire in 2 weeks	✖
14	1289	Project - Prototypes Project Blue	✖
15	1288	Project - Created Yesterday	✖
16	1287	Project - Prototypes Sunny Days	✖
17	1286	Supplier Documents	✖
18	1285	Prototypes Assigned to this Project	✖
19	1282	Approved formulations where this material is used	✖
20	1281	Where Used-Trade Spec	✖

Below the table, there is a pagination control showing '10' items per page and a series of page numbers: 1, 2, 3, 4, and an ellipsis followed by 4. The page number '2' is highlighted.

- To preview a report, click the view details icon (🔍).
- To edit a report, click anywhere in the corresponding row. The Ready Reports Details page is displayed, as shown on page 15.
- To delete a report, click the delete icon (✖). You will be prompted to confirm the deletion; click **OK** to delete the report, or **Cancel** to cancel.
- To create a new report, click the **Create New** icon (📄) or select **New** from the action menu. The Ready Reports Creator Page is displayed. Its use is described on page 16.

## Ready Report Details Page

This page displays when the administrator selects a report from the Ready Reports listing page. The report opens in edit mode.

**Figure 4. Ready Report details page**

The screenshot shows a web application interface for editing a report. At the top, there's a title bar with a dropdown arrow, a save icon, a print icon, and a refresh icon. Below this is the report title "Supplier Documents - Expire in 30 days (1290)" and a "Ready Report" icon. The main content area is divided into three sections: "Summary Information", "Search Information", and "Search Criteria".

**Summary Information**

- Report Name:** Supplier Documents - Expire in 30 days
- Originator:** User, Business
- Report ID:** 1290
- Report URL:** <http://corpsystem4.us.oracle.com/ReadyReports/ReadyReports.aspx?pkid=1108481fc7eb-eae0-45d2-a2e4-2b56c17af798>
- Max Results:** 500 (Max Results over 500 require a performance evaluation)
- Hide Criteria:** ☐

**Search Information**

- Target Object:** Spec Sourcing Approval SDM
- Report View:** ManagedDocumentMultiSelect

**Search Criteria**

Expiration Date:  Next (Today + X)  30 day(s)

## Ready Reports Creator Page

This page displays when the user creates a ready report by selecting the **New** menu option or the **Create New** icon (  ). This page allows users to build a ready report. Results can be previewed by clicking **Preview**.

*Note:* If the report is using active object, the Preview button will not display search results. Instead a message is displayed indicating search results are not available.

**Figure 5. Ready Reports Creator Page**

The ready report page is comprised of the Summary Information and Search Information sections.

### Summary Information

This section defines the ready report. Key fields include:

Field Name	Description
<b>Report Name</b>	The Name associated with the ready report. This will be used as the title for the popup where the ready report is displayed. This is a required field.
<b>Originator</b>	System-assigned user who created the report. Only the originator can view and edit this report in the ready reports administration application.
<b>Report ID</b>	System-assigned ID.

Field Name	Description
<b>Report URL</b>	The actual URL to be used to access the ready report. This could be used on its own or included as part of a navigation extension. For more information on the navigation extensions, please refer to the <i>Agile Product Lifecycle Management for Process Navigation Configuration Guide</i> .  <i>Note:</i> When active object contextual variables are included in criteria, this URL has to be accessed using a navigation extension.
<b>Max Results</b>	Maximum number of search results returned. This field is visible to users with the [READY_REPORT_SUPER_ADMIN] role. <i>Note:</i> Use caution when adjusting this field beyond 500 items; doing so could have large performance implications.
<b>Hide Criteria</b>	If checked, search criteria are hidden in consumed ready reports. This allows you to lock down a ready report criteria set. When it is essential that end users are not allowed to adjust the ready report results, then it should be hidden.

### Search Information

This section contains two fields that define the search:

Field Name	Description
<b>Target Object</b>	Target object defines the object the search will be performed against. This could be any of the objects defined in the Overview section on page 8.
<b>Report View</b>	Report view defines the fields that can be used in the search criteria as well as the search result columns. Views and available fields are detailed beginning on page 26.

### Search Criteria

The search criteria define the actual data that will be used to determine the report results. Criteria available will depend on the report view that is selected. There are two types of criteria that can be added as search criteria:

Field Name	Description
<b>Manual Criteria</b>	The ready report itself declares the search item. The search item is manually saved by the ready report administrator. For example, Classification equals "Critical". Critical was manually placed by the ready report administrator and will always be "Critical" no matter where the ready report is executed from. See below for more information on using the search criteria tool.

Field Name	Description
<b>Contextual Criteria</b>	When using contextual criteria, the object the user is on when executing the ready report will decide the search item. For example, assume the user is on a material specification with the classification of "Active Ingredient." When the user executes the ready report from that material specification, the criteria will be Classification equals "Active Ingredient." If the user was on a material specification with a classification of "Critical," then the criteria would use "Critical" as the search item. See the Using Contextual Variables section on page 19 for more information about the available contextual variables.

To find an object using the search page, set search criteria using a combination of three basic fields in the Search Criteria section.

Field Name	Description
<b>Key Field List</b>	Select from a list of fields to search in. This list varies based on the report view that you chose.
<b>Operator</b>	Select from a list of operators based on the criteria that you chose in the key field list. A few examples include Equals, Not Equals, Contains, and Starts With.
<b>Search Term</b>	The actual word or words that you are looking for. If this field is preceded by an add data icon (  ), click it to view a dialog box with available choices. You can also enter a percent sign (%) to perform a wildcard search.

The search page includes the following buttons:

**Reset** — Clears all search criteria fields and results.

**Preview** — Previews your search results including the Search Results section in a pop-up window. If the search includes an active object contextual variable, clicking this button returns an error message.

The more criteria icon (  ) displays to the right of the search term field. When clicked, more criteria creates another row of the main three search fields. You can use additional rows to enter additional search parameters. For example, you can search for all specification names that contain "Milk" that are in the "Approved" status.

This less criteria icon (  ) appears when additional search rows are added using the more criteria icon.

Additional buttons appear to the right of the search term field if contextual variables are available, as described on page 19.

### Additional Notes about Search Criteria

1. At this time “blind” searches, where search criteria are empty, are not allowed. While the system allows you to save a blind search, when the search is run, an error is returned stating no search criteria were defined.
2. When searching using only additional search criteria, you must include a wildcard search in the main search criteria section. For example, **Spec Name Contains %**, then the additional search criteria for the extended attribute, breakdown item, or custom section.
3. The maximum number of criteria rows is 10, unless you are using relative dates. Relative dates count as 2 rows, so the maximum number of relative date fields without other criteria would be 5. If other criteria are defined, the number of date fields will vary. For example, if you have 8 other fields defined, you would only be able to use one relative date.

### Search Results

The search results show the actual data that will be returned from the search that was created. Search result columns are determined by the report view. If the search includes an active object contextual variable, an error message is returned instead of results.

After completing the fields above, click **Save** () or **Save & Close** () to save the report.

### Using Contextual Variables

Ready reports allow you to use contextual variables. This means a ready report can use the user’s context, location in the application, or date as search criteria. For example, a user can be on a material specification and run a ready report that finds all formulation specifications that use that material specification as an input that they are the owner of that are effective in the next 30 days.

Note: Contextual Variables that pull data from objects in other applications will not work for PQM object reports when PQM is configured to use a different database than the rest of the PLM4P applications. PQM could also be set up to use a 3rd party application(s) instead of GSM, SCRM & NPD. Contextual variables that pull data from those areas that are configured to use third party applications will not work.

**Figure 6. Sample consumed ready report, delivered material specification.**

Spec #	Spec Name	Status	Category	Supersedes
5077481-001	Corrugated Case Pack with Poly Liner	Developmental	Cardboard and Paper » Primary » *No Category Available	
5077514-001	Wax Lined Boxes	Draft	Multi Material » Primary » *No Category Available	
5077516-001	Shipping Carton	Draft	Cardboard and Paper » Primary » *No Category Available	

There are currently three categories of contextual variables available:

Field Name	Description
<b>Object</b>	Allows you to use values from fields on an active object as input to the search criteria. For example, “Show me all supplier documents associated to this material.” From a material or packaging specification the ready report can find all specification-related sourcing approval documents associated to the active specification the user is on.
<b>User</b>	Allows you to use the current user running the report as input to the search criteria. For example, you can use the active user as a variable. This allows you to create reports like “Show me all trade specifications that I own” or “Show me all material specifications that I created.”
<b>Date</b>	<p>Allows you to use date variables as search criteria. For example, to say the “Next 30 days” the system assumes today's date and adds 30 days to today's date for search criteria. Options available are:</p> <p><b>Last (Today - X)</b> for the last X days  <b>Next (Today + X)</b> for the next X days  <b>Between (Today +/- X)</b> for a date range, for example, Today + or - 20 days</p> <p>This allows you to create reports like “Show me all company supplier documents that expire in the next 30 days.”</p>

You can add contextual variables in your search criteria by selecting one of the following icons:

- Click the active object icon (  ) to add the current active object as the search term
- Click the active user icon (  ) to add the current active user
- Click the relative date icon (  ) to add the current relative date.

The clear icon (  ) appears once you add the active object, active user, or relative date.

Not all criteria support contextual variables. For a full listing of supported variables see the Contextual Variables Index on page 31.

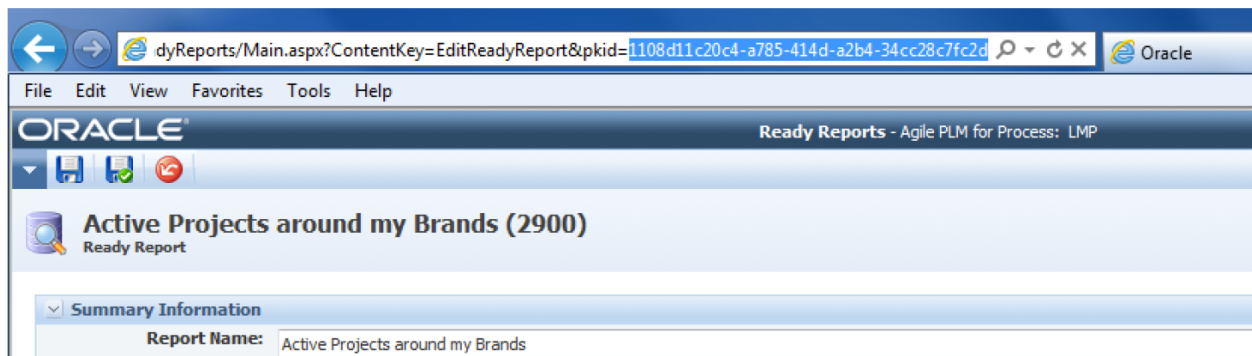

*Note:* When using active object variables, ready reports can only be executed from contextual locations. This means they have to be added as navigation items and cannot be used as personal bookmarks or standalone URLs. This is because the context actually drives the report criteria; if executed from a bookmark the system has no context to pull criteria from.

To test your ready report with active object contextual variables without adding it to the navigation, the following URL can be used once your report is saved.

<http://<URL>/ReadyReports/readyreports.aspx?pkid=<READYREPORTPKID>&ao=<ACTIVEOBJECTPKID>>

Field Name	Description
<b>READYREPORTPKID</b>	This pkid can be found in the browser's address bar when you have the ready report open in Ready Report Administration. See Figure 7 below.
<b>ACTIVEOBJECTPKID</b>	This pkid can be found in the browser's address bar when you have the specification/object open. <i>Note:</i> Not all objects will have the pkid in the browser's address bar. For these objects a navigation item has to be added to test the report.

**Figure 7. URL for testing ready reports containing contextual variables**

## Using Ready Reports in Agile PLM for Process Applications

Reports can be saved as local browser bookmarks or individually shared with other users. Reports can even be shared to the entire user community by adding new navigation items throughout Agile PLM for Process applications.

### Local Browser Bookmarks

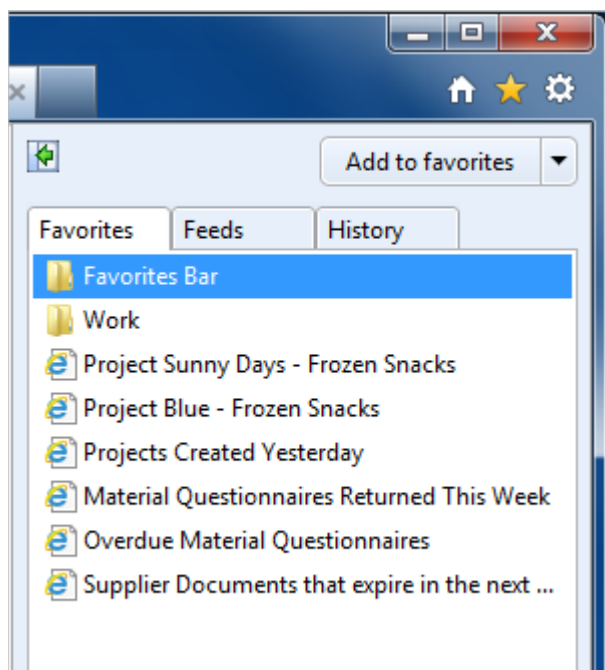

The fastest and easiest way for a user to use a ready report would be to save the report as a local browser bookmark. This allows users to create relevant groupings of objects. For example, you can create a report that finds all formulations tied to a specific NPD project. Now the user will have one click access to every formulation they are currently working on within that project.

*Note:* By nature of design, reports containing active objects cannot be bookmarked.

Once you have a ready report created, follow these steps to bookmark your report:

1. Open the Ready Reports Administration application.
2. Locate the ready report you would like to bookmark in the ready report listing.
3. Select view details icon (🔍).
4. Your ready report will open in a new browser window and from there you can now add this page to your favorites by clicking **Add to favorites** in your browser, as Figure 8 shows below.

**Figure 8. Adding a Favorite to your browser**

Or

1. Open the Ready Reports Administration application.
2. From the Ready Reports Details page, click the favorites icon (  ) to the right of the Report URL field.

A ready report can be shared with other users just by sharing the system-generated URL.

1. Open the Ready Reports Administration application.
2. Open the ready report you would like to share.
3. Copy the Report URL.
4. Paste the URL in email or instant message to share with other users.

*Note:* By nature of design, reports containing active object contextual variables cannot be shared via URL link.

### Sharing with the Entire User Base

Reports can even be shared with the entire user community by adding new navigation items throughout Agile PLM for Process applications. Navigation items can have their own security rules so based on your configuration only the users you want to share the link with will see the link. Navigation items can be added to any application and context can be very specific. For example, you can provide a report that allows users to see all expired supplier documents. It can be linked only to a material specification and seen by users in the group “Supplier Managers”. The figures below show how navigation items might be added for NPD.

*Note:* Reports containing active objects can be shared using this method.

**Figure 9. Icon from NPD**

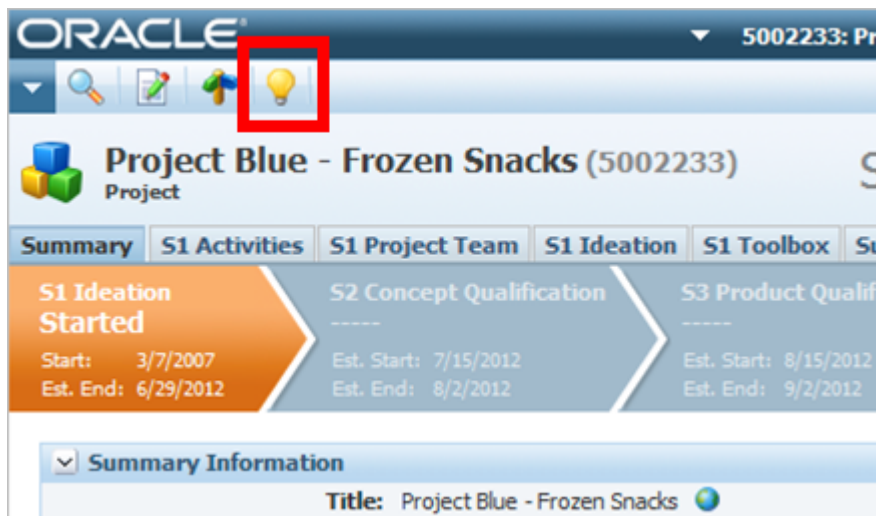

Figure 10. Navigation menu example from NPD

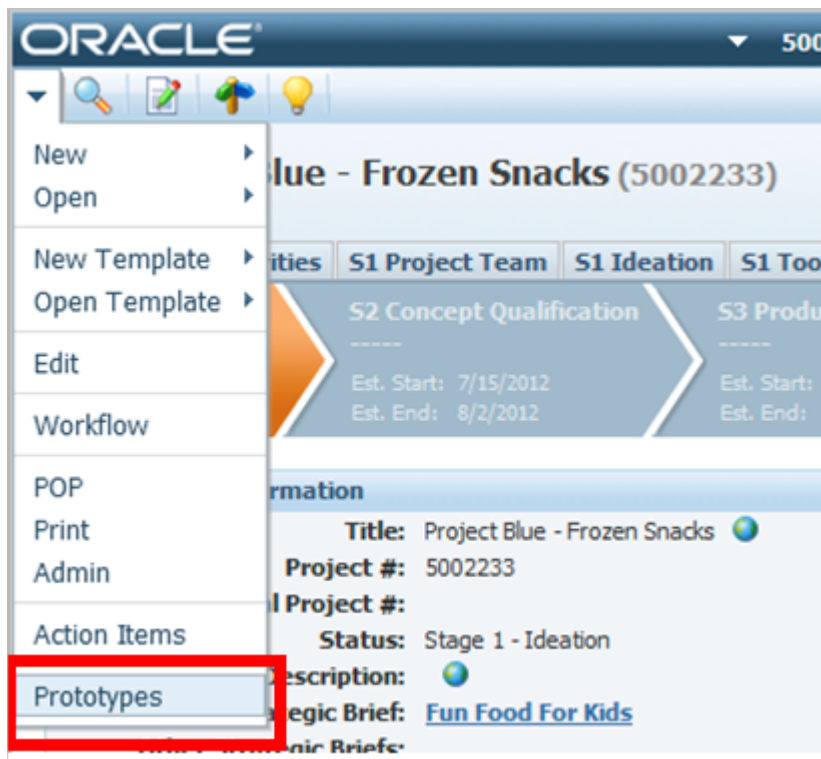

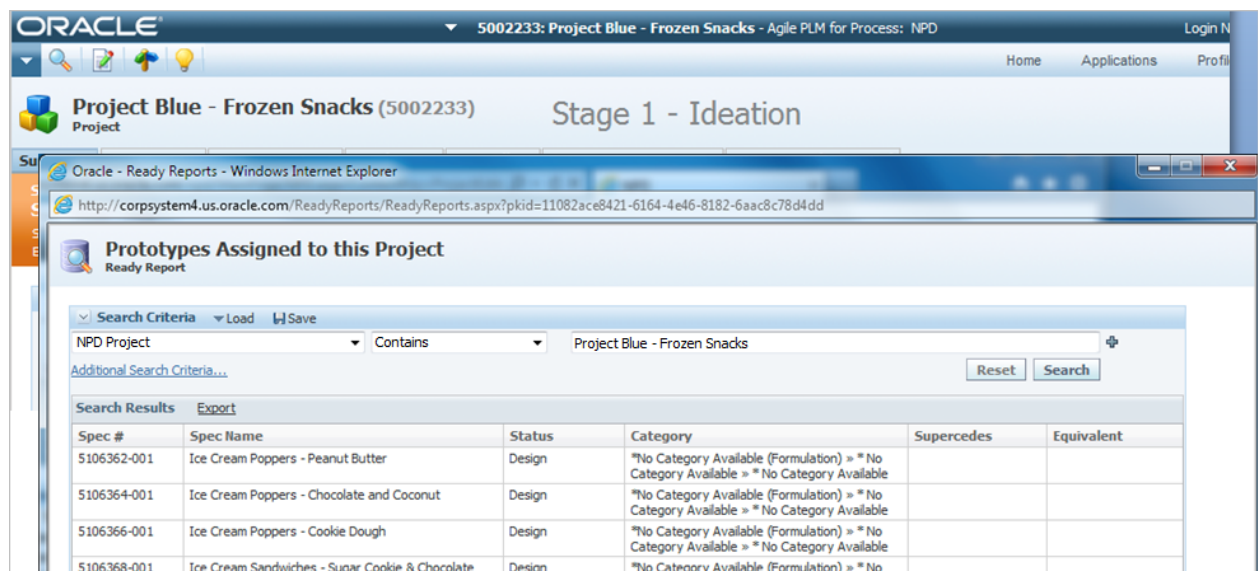

Figure 11. Report run from NPD

Refer to the *Agile Product Lifecycle Management for Process Navigation Configuration Guide* for more information.

## Security and Access

### Security

All ready reports support GSM and SCRM business unit (BU) security. See the *Agile Product Lifecycle Management for Process Security Configuration Guide* for more information.

### Visibility

All ready reports respect BU and workflow visibility.

### Site Access

Individual site access controls which ready reports administrators and end users have access to. For example, if users only have site access to SCRM but they are a ready report administrator, they will only see target objects related to the SCRM application. All other application objects are hidden from their view.

The same goes for end users. If the end users only have site access for GSM, they will not be able to execute a ready report that uses an SCRM target object. If attempted, the users see a No Permissions error. Site access is assigned in UGM. Refer to the *Agile Product Lifecycle for Process Administrator User Guide* for more information.

*Note:* Users with the NPD\_PARTNER role will not be able to execute any NPD ready report, regardless of site access. Access to DRL is role-based so, users must have one of the following roles to access DRL: [DRL\_CREATOR], [DRL\_EDITOR], or [DRL\_VIEWER].

### Ready Report Veto Plugin

If the out of the box security filters do not cover your specific use cases, the specification veto plugin can be used. For example, a user may have site access to GSM, but you do not want them to access a ready report that returns formulation specifications. A veto plugin can be deployed that checks the UGM user group and exact target object restricting the user's access.

### Specification Veto Plugin

The ready reports framework uses a veto handler to extend security logic. Custom security rules can be evaluated when determining the ability to execute a ready report. The specification veto plugin is an extension point available to all ready reports. The custom class evaluates the current ready report and returns a true or false giving access to the results of the report or not.

### Technical Documentation

Refer to the PluginExtensions document, located in the Extensibility Pack  
ReferenceImplementations\PluginExtensions\Documentation folder for more details.

### Available Reference Implementations

This plugin is an example of a ready report veto handler. In this example, if the users' last name is Janjua or ready report model is based on material specification, they will not be able to see a report.

The reference implementation file can be found in:

SolutionPacks\ReadyReports\ReferenceImplementations\ReadyReportVetoHandlerPluginDemo.cs

## Adjusting Report Views

Report Views can be extended. A report view allows you to customize the result columns returned for a ready report. There is a limit of 20 columns that can be returned as search results. To perform this extension, you will need to have access to the configuration files and permissions to reset IIS.

The choices of result columns are limited to what is included in the Models Index.

**WARNING:** When the ready reports application is upgraded, you will need to apply these configuration changes again. Comments are recommended so you can easily see which views were added.

## Terminology

Here are some general terms that are used.

Term	Description
<b>Models</b>	Models define which criteria and search result columns are available.
<b>Views</b>	Views define which criteria and result columns are actually shown to the user.
<b>Mandatory Property</b>	A property used in a view that filters data returned based on security, visibility or configuration rules.

## Configuration Files

New report views should be added to the ExtensionViews.xml file located inside the config\Extensions folder by completing the following steps:

1. Back up the **ExtensionViews.xml** file.
2. Make adjustments to the **ExtensionViews.xml** file.
3. Reset IIS and review your new report view within the ready reports UI.

## Report Views Structure

The report view node structure looks like this:

```
< ReportViewName >
<AllowedModels>
<Model>
    <MandatoryProperty>
    <SearchableProperties>
    <DisplayColumns>
        <ColumnInfo>
    </DisplayColumns>
```

```
</Model>
</AllowedModels>
</ReportViewName>
```

## Model

This represents the search model being used in the view. The name will generally tell you what target object you are running your report against. For example, most target objects in GSM are named: “Main [Type] Specification”. A specific example, the packaging specification search page, uses the following view:

```
<Model active="true" name="Main Packaging Specification" alias="lblType1009"
orderByColumns="-" captionColumn="0" primaryKeyColumnName="SpecID">
```

## MandatoryProperty

This represents the filters being applied to the search view. **These should not be edited.**

## SearchableProperties

This node is generally used to exclude certain search criteria based on configurations.

## DisplayColumns

This node represents the actual result columns that are displayed to the user. Here is where columns can be removed or added.

The example below shows the result columns for the main packaging specification search in GSM.

```
<DisplayColumns>
  <ColumnInfo width="79" dataField="SpecNumber" dataFieldCaption="lblSpecNumber"/>
  <ColumnInfo width="256" dataField="SpecName" dataFieldCaption="lblSpecName"/>
  <ColumnInfo width="87" dataField="CurrentStatus"
dataFieldCaption="lblSpecSummaryStatus"
dataTransformer="Singleton:Xeno.Prodika.EQTService.DataTransformers.WorkflowStatusDataColumnTr
ansformerFactory,EQTService"/>
  <ColumnInfo width="225" dataField="Taxonomy" dataFieldCaption="lblTaxonomy"/>
  <ColumnInfo width="102" dataField="Supercedes" dataFieldCaption="lblSupercedes"
dataTransformer="Singleton:Xeno.Prodika.EQTService.DataTransformers.SpecSupercedesDataTransfor
merFactory,PlatformExtensions"/>
  <ColumnInfo width="100" dataField="ctxSysEquiv"
dataFieldCaption="lblContextSensitiveSysEquivCtlEquivalent"
dataTransformer="Singleton:Xeno.Prodika.EQTService.DataTransformers.GSMContextSensitiveEquival
entDataTransformerFactory,PlatformExtensions"
enableHandler="Class:Xeno.Prodika.EQTService.SearchablePropertyHandlers.FeaturePropertyItemEna
bledResolverFactory,EQTService$GSM.EQT.CrossReferences.Enabled"/>
</DisplayColumns>
```

## ColumnInfo

The ColumnInfo node represents the actual result column. It has the following available attributes:

Attribute	Description
<b>dataField</b>	The actual id for the data to be returned. Please refer to the included Available Views and Models Index for the ids that can be used.
<b>dataFieldCaption</b>	The translatable label that will be used as the column header. Please refer to the included Available Views and Models Index for the data field captions that can be used.
<b>Width</b>	This is the column width designated in pixels. Make sure when you remove or add a column the new total width remains at 849 pixels. For example, if you were to add a column that was 150 pixels in width that would bring the total to 999. You must remove width from the other existing columns so that it once again equals 849 pixels.
<b>dataTransformer</b>	This is code that transforms the data returned in a recognizable string to the user.
<b>isAggregatable</b>	Used to display results that have more than one value. If set to true, the results will be combined into a single row, otherwise, one row will be returned for each value. For example, multiple Business Units can be added to a specification so the report will return multiple values for a single column.
<b>aggregationDelimiter</b>	Character used to divide the aggregated results.

*Important Note:* Columns that are added will be sortable. However, these columns will only be sorting the string of text returned. So if you are returning a date or number in your column, sorting will not appear to be functioning correctly.

### Example: Adding Business Unit to Packaging Search Results

1. Find the “Main Packaging Specification” search view inside **ExtensionViews.xml**.
2. Find the **<DisplayColumns node>**.

```
<DisplayColumns>
    <ColumnInfo width="79" dataField="SpecNumber"
dataFieldCaption="lblSpecNumber"/>
    <ColumnInfo width="256" dataField="SpecName" dataFieldCaption="lblSpecName"/>
    <ColumnInfo width="87" dataField="CurrentStatus"
dataFieldCaption="lblSpecSummaryStatus"
dataTransformer="Singleton:Xeno.Prodika.EQTService.DataTransformers.WorkflowStatusDataC
olumnTransformerFactory,EQTService"/>
    <ColumnInfo width="225" dataField="Taxonomy" dataFieldCaption="lblTaxonomy"/>
    <ColumnInfo width="102" dataField="Supersedes"
dataFieldCaption="lblSupersedes"
dataTransformer="Singleton:Xeno.Prodika.EQTService.DataTransformers.SpecSupersedesDataT
ransformerFactory,PlatformExtensions"/>
</DisplayColumns>
```

```

        <ColumnInfo width="100" dataField="ctxSysEquiv"
dataFieldCaption="lblContextSensitiveSysEquivCtlEquivalent"
dataTransformer="Singleton:Xeno.Prodika.EQTService.DataTransformers.GSMContextSensitive
EquivalentDataTransformerFactory,PlatformExtensions"
enableHandler="Class:Xeno.Prodika.EQTService.SearchablePropertyHandlers.FeatureProperty
ItemEnabledResolverFactory,EQTService$GSM.EQT.CrossReferences.Enabled"/>
    </DisplayColumns>

```

3. Add a new Column node after the Equivalent column (ctxSysEquiv) using the Approved Business Unit dataField id, FieldCaption label, and appropriate width. Since the Approved Business Unit column can contain multiple values, the aggregation and dataTransformer attributes have been defined.

```

        <ColumnInfo width="125" dataField="ApprovedForUseBUDisplayName"
dataFieldCaption="lblBusinessUnit"
dataTransformer="Singleton:Xeno.Prodika.EQTService.DataTransformers.BusinessUnitDataColu
mnTransformerFactory,EQTService" isAggregatable="true" aggregationDelimiter=", " />

```

```

<DisplayColumns>
    <ColumnInfo width="79" dataField="SpecNumber"
dataFieldCaption="lblSpecNumber"/>
    <ColumnInfo width="256" dataField="SpecName" dataFieldCaption="lblSpecName"/>
    <ColumnInfo width="87" dataField="CurrentStatus"
dataFieldCaption="lblSpecSummaryStatus"
dataTransformer="Singleton:Xeno.Prodika.EQTService.DataTransformers.WorkflowStatusDataC
olumnTransformerFactory,EQTService"/>
    <ColumnInfo width="225" dataField="Taxonomy" dataFieldCaption="lblTaxonomy"/>
    <ColumnInfo width="102" dataField="Supersedes"
dataFieldCaption="lblSupersedes"
dataTransformer="Singleton:Xeno.Prodika.EQTService.DataTransformers.SpecSupersedesDataT
ransformerFactory,PlatformExtensions"/>
    <ColumnInfo width="100" dataField="ctxSysEquiv"
dataFieldCaption="lblContextSensitiveSysEquivCtlEquivalent"
dataTransformer="Singleton:Xeno.Prodika.EQTService.DataTransformers.GSMContextSensitive
EquivalentDataTransformerFactory,PlatformExtensions"
enableHandler="Class:Xeno.Prodika.EQTService.SearchablePropertyHandlers.FeatureProperty
ItemEnabledResolverFactory,EQTService$GSM.EQT.CrossReferences.Enabled"/>
    <ColumnInfo width="125" dataField="ApprovedForUseBUDisplayName"
dataFieldCaption="lblBusinessUnit"
dataTransformer="Singleton:Xeno.Prodika.EQTService.DataTransformers.BusinessUnitDataCol
umnTransformerFactory,EQTService" isAggregatable="true" aggregationDelimiter=", " />
</DisplayColumns>

```

4. To support 1024x768 resolutions, make sure your total width matches what it was before your addition. In this example the total width was 849 pixels. So you will need to remove 125 pixels of width from pre-existing column(s), like specification name.

```
<ColumnInfo width="131" dataField="SpecName" dataFieldCaption="lblSpecName"/>
```

5. Reset IIS.
6. Go to a Ready Report and select the **Packaging Specification** target object and verify the new column appears.

## Adding New Report Views

New report views can be added by copying an existing view and changing the view name and corresponding attributes. This allows you to offer multiple report views per target object.

The report view node structure looks like the following. [ReportViewName] will appear in the report view dropdown for the target object specified in the <Model> node.

```
<ReportViewName>
<AllowedModels>
<Model>
  <MandatoryProperty>
  <SearchableProperties>
  <DisplayColumns>
    <ColumnInfo>
  </DisplayColumns>
</Model>
</AllowedModels>
</ReportViewName>
```

## Contextual Variables Index

The following contextual variables are supported in search criteria. Refer to the **ReadyReports.xml** configuration file for further details.

### DRL

Search Model	Available Variables
DRL Document	Catalogs Classification Document Date Effective Date Expiration Date Originator Status
