Preface

The *Agile Product Lifecycle Management for Process Nutrition Surveillance Management User Guide* explains how to use the Nutrition Surveillance Management (NSM) application to track nutrient surveillance results and compare them to existing nutrient values for raw material or finished goods. Nutrient data is saved and managed from individual samples or composited to be compared against current nutrient values of materials and finished goods. NSM also enables you to compare nutrient information between NSM and Global Specification Management (GSM).

This Preface contains these topics:

- [Audience](#)
- [Variability of Installations](#)
- [Documentation Accessibility](#)
- [Software Availability](#)
- [Related Documents](#)
- [Conventions](#)

Audience

This guide is intended for end users who are responsible for creating and managing information in Agile Product Lifecycle Management (PLM) for Process. Information about administering the system resides in the *Oracle Agile Product Lifecycle Management for Process Administrator User Guide*.

Variability of Installations

Descriptions and illustrations of the Agile PLM for Process user interface included in this manual may not match your installation. The user interface of Agile PLM for Process applications and the features included can vary greatly depending on such variables as:

- Which applications your organization has purchased and installed
- Configuration settings that may turn features off or on
- Customization specific to your organization
- Security settings as they apply to the system and your user account

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Software Availability

Oracle Software Delivery Cloud (OSDC) provides the latest copy of the core software. Note the core software does not include all patches and hot fixes. Access OSDC at: <http://edelivery.oracle.com>.

Related Documents

For more information, see the following documents in the Oracle Agile Product Lifecycle Management for Process documentation set:

- *Agile Product Lifecycle Management for Process Administrator User Guide*
- *Agile Product Lifecycle Management for Process Global Specification Management User Guide*
- *Agile Product Lifecycle Management for Process Release Notes*. Up-to-date Release Notes and other documentation are posted on Oracle Technology Network (OTN) at this location:

<http://www.oracle.com/technetwork/documentation/agile-085940.html#plmprocess>

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
<code>monospace</code>	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Introduction to Nutrition Surveillance Management

You can use Nutrition Surveillance Management (NSM) to accurately track nutrient surveillance results and compare them to existing nutrient values for raw material or finished goods. You can save and manage nutrient data from individual samples or create composites and then compare these values to those that are declared on the approved specifications.

NSM acts as the clearinghouse for nutrient information. NSM can be the source of nutrient data for products and materials in GSM. Data from NSM can be imported into nutrient profiles or nutrient compositions, which in turn are used to generate nutrient information for labeling and communication to the supply chain.

Nutrient analysis and nutrient composites form the core features of NSM. NSM also has functionality to compare nutrient data in nutrient analyses, nutrient composites, and GSM specifications.

Touch Points with Other Oracle Agile Applications

Nutrition Surveillance Management interfaces with the Global Specification Management (GSM) application in the following ways:

- Nutrient information from nutrient analyses are used by specifications in GSM.
- Nutrient information from nutrient composites are used by specifications in GSM.

The Nutrient Comparison feature enables you to compare the nutrient values currently assigned to the specification in GSM against those of one or multiple specifications, nutrient composites, or nutrient analyses.

These topics are covered in this guide. For more information, refer to the *Agile Product Lifecycle Management for Process Global Specification Management User Guide*.

Getting Started with Nutrition Surveillance Management

To access the Nutrition Surveillance Management application, select NSM from the left navigation panel as shown in [Figure 1-1](#), or select NSM from the Applications menu of the top menu bar, as shown in [Figure 1-2](#).

Figure 1–1 NSM on the left navigation panel

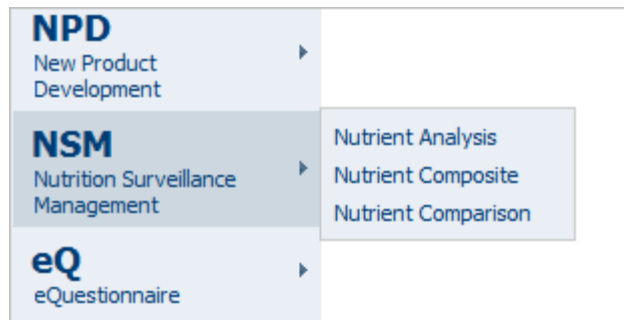

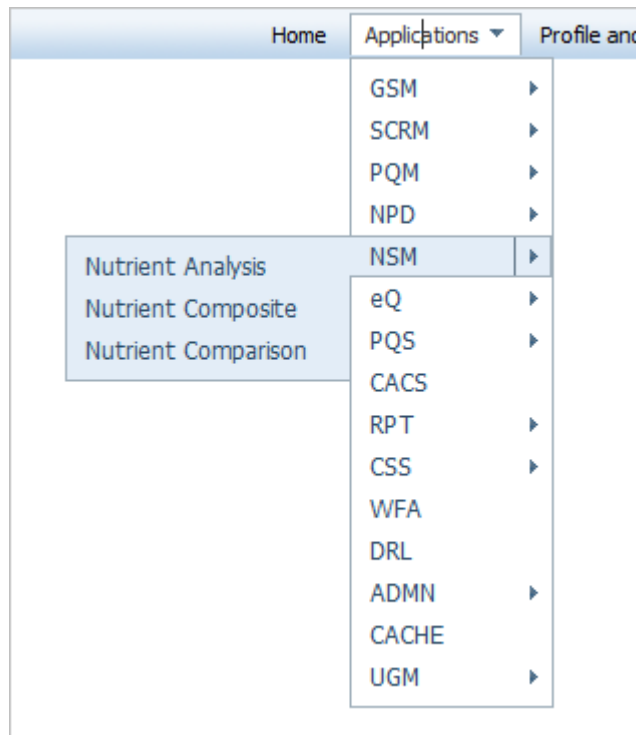

Figure 1–2 NSM on the Applications menu of the top menu bar

For more information on using Agile PLM for Process software, see the *Agile Product Lifecycle Management for Process Getting Started Guide*.

Using Nutrition Surveillance Management

This chapter presents basic information about using the Nutrition Surveillance Management (NSM) application. Topics in this chapter include:

- [Nutrient Analysis](#)
- [Nutrient Composite](#)
- [Nutrient Comparison](#)

Nutrient Analysis

You can navigate to a nutrient analysis by clicking **Nutrient Analysis** in the left navigation panel. Provide search criteria in the Nutrient Analysis search page and then click **Search**. The search results display the analysis number and the specification name in addition to information such as date, description, and sample type, as [Figure 2-1](#) shows:

Figure 2-1 Search results

The screenshot shows the 'Nutrient Analysis Search' application window. At the top, there's a title bar with a menu icon and the text 'Nutrient Analysis Search'. Below the title bar is a toolbar with buttons for 'Search Criteria', 'Load', 'Save', and 'Customize'. To the right of the toolbar is a 'Recent Items' section. The main search area contains a 'Specification' dropdown menu, a 'Contains One' dropdown menu, and a text input field with the value '5077438-001, 5077446-001, 5077488-001, 5077493-001, 5080561-001, 5080965-001, 5080'. There are 'Reset' and 'Search' buttons to the right of the input field. Below the search area is a 'Search Results' section with an 'Export' link. The results are displayed in a table with the following columns: Analysis Number, Specification, Description, Date of Analysis, Sample Type, Sample #, GTIN/UPC, and Composite(s). The table contains two rows of data.

Analysis Number	Specification	Description	Date of Analysis	Sample Type	Sample #	GTIN/UPC	Composite(s)
0000126	Chili Powder (5077438-001)		Sep 20, 2006				
0000136	Onion Powder - Premium (5077493-001)	Onion Powder - Test for nutrition - Supplier samples from lot #2378783	Oct 02, 2007	Supplier	41-28298		

Some important fields displayed in the results are:

Analysis Number—A unique identifier assigned to each nutrient analysis in NSM. This is an auto-generated number.

Specification—The name of the GSM specification that the nutrient analysis is tied to. The specification number and issue number are displayed in parentheses.

Composite(s)—This column lists all the nutrient composites where this nutrient analysis is consumed.

Click anywhere in a row to open an analysis.

Nutrient Analysis Page

The Nutrient Analysis page consists of two tabs: Summary and Related Specs.

Summary Tab

As [Figure 2–2](#) shows, the Summary tab has two sections: Summary Information and Nutrient Analysis.

Figure 2–2 Nutrient Analysis page, Summary tab

Summary Information Section

The Summary Information section contains general information about the nutrient analysis:

- **Analysis Number**—Auto-generated analysis number. This field cannot be changed.
- **Specification**—The GSM specification the analysis is tied to. The specification number and issue number are also displayed. Click the hyperlinked specification name to view the specification in GSM.
- **Context**—Available when the selected specification is a material created by a formulation specification. Select the formulation specification context from the drop down list to show which formulation specification the material being tested was created from.
- **Source Facility**—The facility where the sample is sourced. Click the hyperlinked facility name to view the facility profile in Supply Chain Relationship Management (SCRM). The message "Not authorized to see facility" appears if the user does not have access to the facility associated to the nutrient analysis.
- **Sample Number**—User-defined number for the sample. This can be alpha or numeric.
- **GTIN/UPC**—Free-text field identifying reference codes.
- **Sample Type**—User-defined field denoting the type of sample, such as raw material or finished product.
- **Segment(s)**—Business segment for the analysis. This field affects visibility.
- **Business Unit(s)**—Business units the analysis is tied to.
- **Date of Analysis**—Date of the analysis.
- **Date of Last Update**—Date of the last save of the analysis.
- **Date Sent to Lab**—Date the analysis was sent to the lab.
- **Date Received from Lab**—Date the analysis was received from the lab.
- **Description**—Description of the analysis.
- **Originator**—The name of the user who created the analysis. This field is auto-generated and cannot be changed.

Nutrient Analysis Section

The Nutrient Analysis section holds the nutrient information for the sample. The columns in this section are:

- **Nutrient**—The name of the nutrient.
- **Per 100g**—The amount of nutrient per 100 grams.
- **Method**—Lists the testing method.
- **Source**—If the nutrient information is from an external source like a standard reference library or a lab, it is included here. This list is managed by an administrator. Refer to the *Agile Product Lifecycle Management for Process Administrator User Guide* for more information.
- **Comments**—Additional comments about this particular nutrient.

Related Specs Tab

As [Figure 2–3](#) shows, the Related Specs tab consists of two sections: Related Specifications and Related Composite(s).

Related Specifications Section

The Related Specifications section lists all the specifications in GSM that have imported values from and are still referencing this particular nutrient analysis.

Related Composites Section

The Related Composites section lists all the nutrient composites that are built using this nutrient analysis.

Figure 2–3 *Related Specifications and Related Composites sections*

Distilled Vinegar Sampling #9 (0002241)
Nutrient Analysis

Summary **Related Specs**

▼ **Related Specifications**

Spec #	Specification Name	Specification Type	Status

▼ **Related Composite(s)**

Composite	Specification	Date	Title
0000637	Vinegar - Distilled - White - 100 Grain (5077413-001)	May 11, 2011	Vinegar Composite

Creating a Nutrient Analysis

To create a nutrient analysis:

1. In the NSM application, select **New > Nutrient Analysis** from the left navigation panel. NSM creates a new nutrient analysis.
2. In the Summary Information section, complete the following fields:

Specification—The name of the GSM specification that the nutrient analysis is tied to. This is a required field. Select a specification by clicking the search icon. The specification search page displays. Select a specification type from the drop down list, enter search criteria, then click **Search**. Select a specification from the search results. That specification and its related specification number and issue number populate this field.

Source Facility—Select the source facility for this sample by clicking the search icon. A search page displays. Search for and select a facility. The facility name populates this field.

Business Unit—If the analysis applies to specific business units, select business units by clicking the search icon. NSM displays the business unit dialog box. Select business units and click **Done** to populate this field.
3. Click **Save**. To add nutrients to the analysis, complete the steps described below in "[Adding Nutrients to a Nutrient Analysis](#)". The Nutrient Analysis section, shown

in [Figure 2-2](#), hosts all the analysis data for all the nutrients tested for in the product sample.

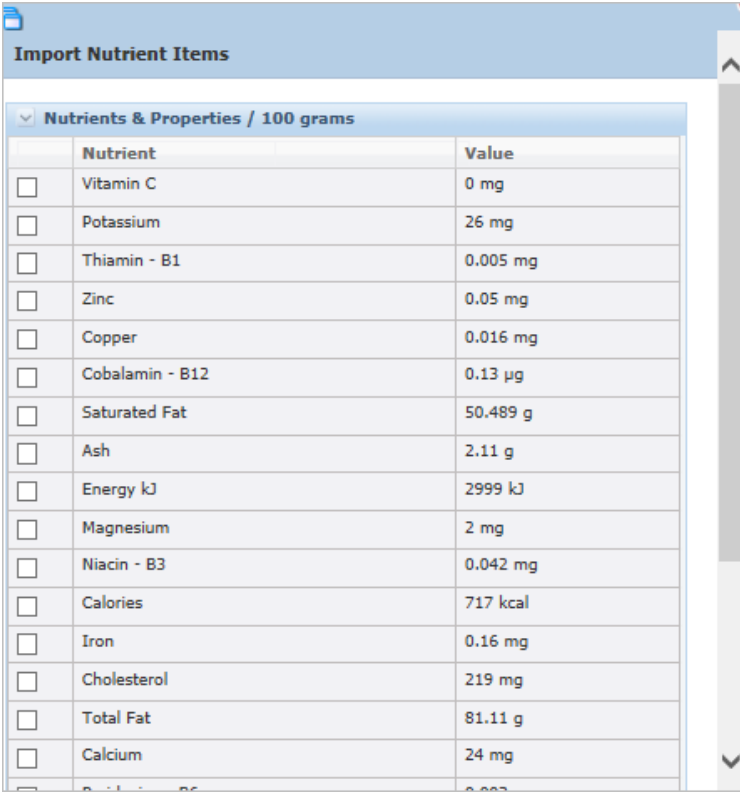

Adding Nutrients to a Nutrient Analysis

There are three ways to add nutrients to a nutrient analysis. You can manually add nutrients that are already defined in the application, you can import nutrients from Food Composition Library (FCL), or you can leverage existing analyses.

To add nutrients to a nutrient analysis, select one of the following methods:

1. **Adding Nutrients**—With the Nutrient Analysis, Summary page in edit mode, click **Add**. A dialog box displays. Select nutrients to include in this analysis. Note that when you manually add nutrients, only the names of the nutrients are added. The rest of the columns must be manually entered. Click **Done**. Click **Save**.
2. **Importing Nutrients from FCL**—With the Nutrient Analysis, Summary page in edit mode, click **Import**. A search page displays with Food Composition Library selected in the drop down list. Enter the search criteria, then click **Search**. Select the food item name by clicking anywhere in the row in the Search Results section. You now see the nutrient composition of that particular food item. Select the nutrients you want to import and click **Import**. The nutrients that you selected are imported along with the values in the Per 100g column and the Source column on the Nutrient Analysis page. Click **Save**. [Figure 2-4](#) shows nutrients in a food item from FCL. For more details on FCL, please refer to the *Agile Product Lifecycle Management for Process Global Specification Management User Guide*.

Figure 2-4 Nutrients in a food item

The screenshot shows a software interface titled "Import Nutrient Items". It features a table with the following data:

Nutrients & Properties / 100 grams		
	Nutrient	Value
<input type="checkbox"/>	Vitamin C	0 mg
<input type="checkbox"/>	Potassium	26 mg
<input type="checkbox"/>	Thiamin - B1	0.005 mg
<input type="checkbox"/>	Zinc	0.05 mg
<input type="checkbox"/>	Copper	0.016 mg
<input type="checkbox"/>	Cobalamin - B12	0.13 µg
<input type="checkbox"/>	Saturated Fat	50.489 g
<input type="checkbox"/>	Ash	2.11 g
<input type="checkbox"/>	Energy kJ	2999 kJ
<input type="checkbox"/>	Magnesium	2 mg
<input type="checkbox"/>	Niacin - B3	0.042 mg
<input type="checkbox"/>	Calories	717 kcal
<input type="checkbox"/>	Iron	0.16 mg
<input type="checkbox"/>	Cholesterol	219 mg
<input type="checkbox"/>	Total Fat	81.11 g
<input type="checkbox"/>	Calcium	24 mg

3. **Importing Nutrients from Other Analyses**—Instead of using FCL, select nutrients from existing nutrient analyses. With the page in edit mode, click **Import**. On the

search page, select **Nutrient Analysis** from the drop down list. Enter the search criteria, then click **Search**. Select the analysis by clicking anywhere in the row in the Search Results section. A page similar to [Figure 2-4](#) above is displayed. Select the nutrients you want to import and click **Import**. They are imported into the new nutrient analysis along with their associated per 100 g values. Click **Save**.

[Figure 2-5](#) shows examples of nutrients that are either manually added or imported. The Source column tells you where the nutrient information was obtained from.

Figure 2-5 Nutrient Analysis section, added nutrients

Nutrient Analysis					
Nutrient	Per 100g		Method	Source	Comments
Calories	100.00000	kcal			
Protein	1.10000	g			
Carbohydrates	4.00000	g			
Carbohydrate (Available)	3.00000	g			
Dietary Fiber	1.10000	g			
Total Fat	9.00000	g			
<input type="button" value="Add"/> <input type="button" value="Import"/> <input type="button" value="Compare"/>					

Modifying Values

[Figure 2-6](#) shows the Nutrient Analysis page in edit mode. To update the Per 100g value, you can either click the edit icon next to each nutrient, or click the edit icon next to the Per 100g column header, shown in [figure 2-5](#) above.

You can update nutrient values as well as the sources in this page. Click the apply changes icon next to the Per 100g column header to save the changes. If you modify a nutrient value that was imported from FCL or nutrient analysis, the source column is cleared.

Figure 2-6 Modifying a nutrient value

Nutrient Analysis					
Nutrient	Per 100g		Method	Source	Comments
Calories	100.00000	kcal	Calculated		
Protein	1.10000	g			
Carbohydrates	4.00000	g	Calculated		
Carbohydrate (Available)	3.00000	g			
Dietary Fiber	1.10000	g	AOAC Method 985.29 (Modified)		
Total Fat	9.00000	g			
<input type="button" value="Add"/> <input type="button" value="Import"/> <input type="button" value="Compare"/>					

Once done, click **Save** or **Save & Close**.

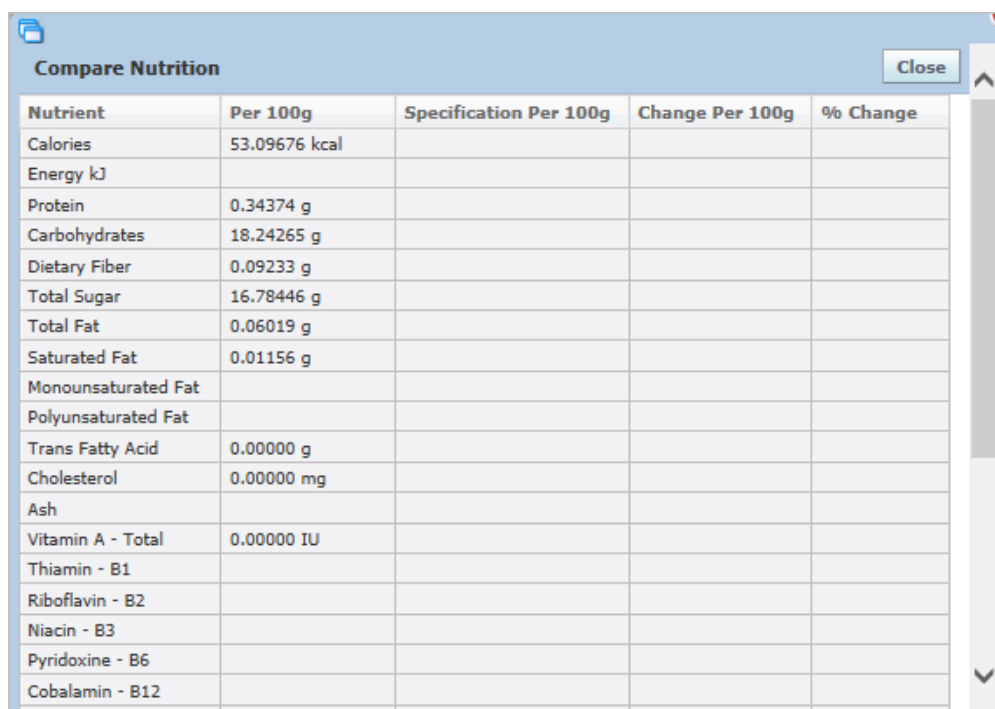

Comparing Nutrient Analyses

The nutrient comparison feature enables you to compare the nutrient values currently assigned to the specification in GSM against the nutrient values declared in this particular nutrient analysis. In order to compare nutrient information, open a nutrient analysis and scroll to the bottom of the Summary tab. Click **Compare**. The Compare Nutrition dialog box displays. It shows the compared nutrient information.

The Compare Nutrition dialog box, shown in [Figure 2-7](#), contains the following columns:

- **Nutrient**—Lists the name of the nutrient.
- **Per 100 g**—Displays the amount of nutrient in 100g sample. This value is from the nutrient analysis.
- **Specification Per 100g** — Displays the amount of nutrient per 100g declared on the specification. This value is from the specification in GSM.
- **Change per 100g**—Difference between the nutrient values in the specification and the nutrient analysis.
- **% Change**—The difference in percentage.

Figure 2-7 Compare Nutrition dialog box

Nutrient	Per 100g	Specification Per 100g	Change Per 100g	% Change
Calories	53.09676 kcal			
Energy kJ				
Protein	0.34374 g			
Carbohydrates	18.24265 g			
Dietary Fiber	0.09233 g			
Total Sugar	16.78446 g			
Total Fat	0.06019 g			
Saturated Fat	0.01156 g			
Monounsaturated Fat				
Polyunsaturated Fat				
Trans Fatty Acid	0.00000 g			
Cholesterol	0.00000 mg			
Ash				
Vitamin A - Total	0.00000 IU			
Thiamin - B1				
Riboflavin - B2				
Niacin - B3				
Pyridoxine - B6				
Cobalamin - B12				

Copying a Nutrient Analysis

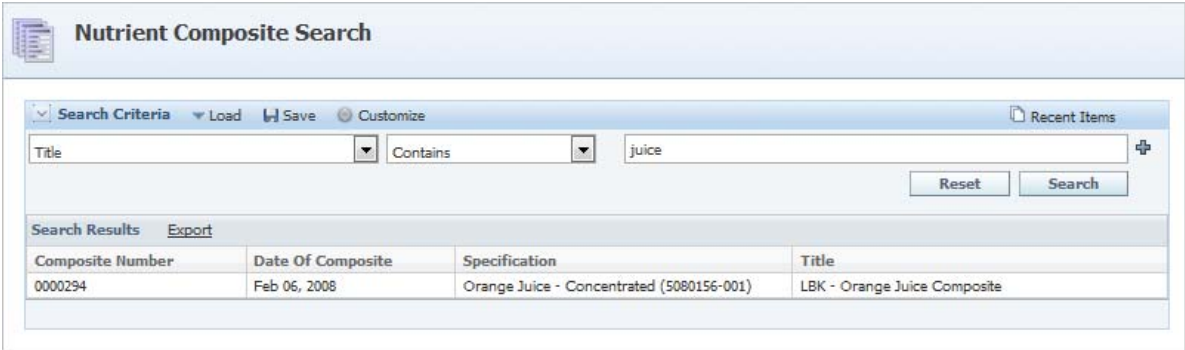

To copy a nutrient analysis, click **Create Copy**. A new analysis is created. The relevant information from the Summary tab of the current nutrient analysis is copied into the new one. Data from the Related Spec tab is not copied to the new analysis. The new analysis is opened in edit mode by default.

Nutrient Composite

NSM has the ability to composite sample values to obtain representative nutrient values from a number of sample analyses. You can use this feature to create composites for data obtained from multiple suppliers, from multiple labs, or from multiple samples. Nutrient information from nutrient composites can be leveraged by specifications in GSM.

In order to access nutrient composites, navigate to NSM and click **Nutrient Composite**. Just like in nutrient analysis, use the standard search tool to find the composites you are looking for. The search result page displays the nutrient composites that match your search criteria, as [Figure 2–8](#) shows.

Figure 2–8 Search results

The table includes the following columns:

- **Composite Number**—The auto-generated ID for the nutrient composite.
- **Date of Composite**—Displays the date that the nutrient composite was created.
- **Specification**—Displays the GSM specification that the nutrient composite refers to. The GSM specification number and issue number are displayed in parentheses.
- **Title**—Displays the name of the nutrient composite.

Click anywhere in a row to open the nutrient composite.

Nutrient Composite Page

The Nutrient Composite page, shown in [Figure 2–9](#), consists of two tabs: Summary and Related Specs.

Compare

The Summary tab consists of the following sections: Summary Information, Composite, and Results.

Summary Information Section

This section includes fields that describe the nutrient composite:

- **Composite Number**—Auto generated unique identifier assigned to each nutrient composite in NSM. This field cannot be changed.
- **Title**—The title of the nutrient composite. This is a required field.
- **Specification**—The name, number, and issue number of the GSM specification that the nutrient composite refers to. This is a required field.
- **Context**—Available when the selected specification is a material created by a formulation specification. Select the formulation specification context from the drop down list to show which formulation specification the material being tested was created from.
- **Segment(s)**—Business segment for the composite. This field affects visibility.
- **Business Unit(s)**—Business units tied to the nutrient composite.
- **Date of Composite**—Date the composite was saved.
- **Date of Last Update**—Date of the last save of the composite.
- **Description**—Detailed text describing the nutrient composite.
- **Originator**—The name of the user who created the nutrient composite. The system populates this field.

Composite Section

This section lists the nutrient analyses that form this composite, including:

- Analysis number
- GSM specification associated with the nutrient analysis. NSM displays the message “Not authorized the see facility” if the user does not have access to the facility associated to the nutrient composite.
- Date the analysis was created
- Weight of each nutrient analysis in the composite

Weight Analysis

Analyses can be weighted separately when building the composites, so that one analysis can be considered more heavily than another when aggregating the results for the composite. For example, if you have two nutrient analyses, one with 2 g of sugar and the other with 5 g, and they have a weight of 1 each, the resulting composite will have 3.5 g of sugar. The composite would be calculated as follows:

$$((2 \text{ g} \times 1) + (5 \text{ g} \times 1)) / 2 = 3.5 \text{ g}$$

However, if the weight of the second nutrient analyses is set to 2, the sugar value in the resulting composite is calculated as follows:

$$((2 \text{ g} \times 1) + (5 \text{ g} \times 2)) / 3 = 4 \text{ g}$$

Results Section

This section lists the composited nutrient information.

Related Specs Tab

The Related Specs tab, shown in [Figure 2-10](#), lists all the GSM specifications that have imported this nutrient composite.

Figure 2-10 *Related specifications*

Beef Jerky Ravioli (0000083) Nutrient Composite			
Summary Related Specs			
Related Specifications			
Spec #	Specification Name	Specification Type	Status
5081725-001	Beef Jerky Ravioli - US CU (5081725-001)	Nutrient Profile	Draft

The table includes the following columns:

- **Spec #**—Clicking the specification number link displays the specification in GSM.
- **Specification Name**—The name of the specification.
- **Specification Type**—The type of specification.
- **Status**—The status of the specification in GSM.

Creating a Nutrient Composite

To create a nutrient composite:

1. Click **New > Nutrient Composite** in the action menu, or click the create new icon. NSM creates a new nutrient composite.
2. In the Composite section, click **Add New** to include nutrient analyses in the nutrient composite. The Search page opens.
3. Search for a nutrient analysis.
4. On the results page, click anywhere in a row to include the analysis in the nutrient composite. The nutrient analysis is added in to the Composite section. You can make multiple selections.
5. Click **Done**.
6. If you need to change the weight, click the edit icon for the row to change. The row displays in edit mode. Change the weight and add necessary comments, as [Figure 2-11](#) shows.

Figure 2-11 *Editing a weight*

Composite					
	Analysis	Specification	Date	Weight	Comments
	0000136	Spice Tec-USF - Carol Stream / Spice Tec-USF Onion Powder - Premium (5077493-001)	Oct 02, 2007	1.00000	
	0000116	Speaco Foods - Kansas City / Speaco Foods, Inc. Beef - Seasoned Cooked Strips & Binder Product - Reduced Sodium - IQF (5077433-001)	Aug 11, 2006	1.00000	

Add New

- Click the apply changes icon to save changes to the row. The Results section displays the composited nutrients, as [Figure 2-12](#) shows:

Figure 2-12 *Composited nutrients*

- Click **Save** or **Save & Close** in the action menu.

Note: The Results section displays a warning message when nutrients are not present in all the nutrient analyses.

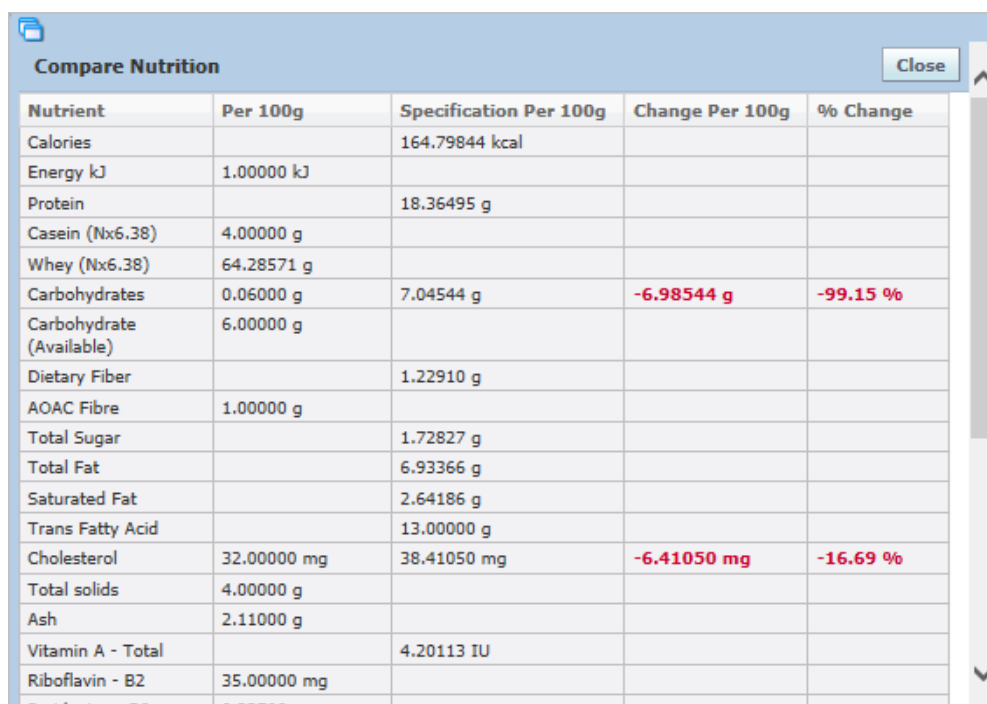

Comparing Nutrient Composites

The nutrient comparison feature allows you to compare the nutrient values currently assigned to the specification in GSM against nutrient make-up of a particular nutrient composite. In order to compare nutrient information, open a nutrient composite and scroll to the bottom of the Summary tab. Click **Compare**. The Compare Nutrition dialog box displays the compared nutrient information and includes the following columns:

- Nutrient**—Name of the nutrient.
- Per 100g**—Amount of nutrient in 100 g sample. This value is from the nutrient composite.
- Specification Per 100g**—Amount of nutrient in a 100 g sample of the specification. This value is from the specification in GSM.
- Change Per 100g**—Difference between the nutrient values in the specification and the nutrient analysis.
- % Change**—Difference in percentage.

Figure 2–13 shows the Compare Nutrition dialog box.

Figure 2–13 Compare Nutrition dialog box

The screenshot shows a software window titled "Compare Nutrition" with a "Close" button in the top right corner. The window contains a table with five columns: "Nutrient", "Per 100g", "Specification Per 100g", "Change Per 100g", and "% Change". The table lists various nutrients and their values, with some values highlighted in red to indicate differences or deficits.

Nutrient	Per 100g	Specification Per 100g	Change Per 100g	% Change
Calories		164.79844 kcal		
Energy kJ	1.00000 kJ			
Protein		18.36495 g		
Casein (Nx6.38)	4.00000 g			
Whey (Nx6.38)	64.28571 g			
Carbohydrates	0.06000 g	7.04544 g	-6.98544 g	-99.15 %
Carbohydrate (Available)	6.00000 g			
Dietary Fiber		1.22910 g		
AOAC Fibre	1.00000 g			
Total Sugar		1.72827 g		
Total Fat		6.93366 g		
Saturated Fat		2.64186 g		
Trans Fatty Acid		13.00000 g		
Cholesterol	32.00000 mg	38.41050 mg	-6.41050 mg	-16.69 %
Total solids	4.00000 g			
Ash	2.11000 g			
Vitamin A - Total		4.20113 IU		
Riboflavin - B2	35.00000 mg			
Niacin - B3	0.33300 mg			

Nutrient Comparison

Nutrient comparison enables you to compare nutrient analyses, nutrient composites, and GSM specifications against each other. Examples of comparisons are:

- One nutrient analysis against one or more nutrient analyses
- One nutrient analysis against a nutrient analysis and a nutrient composite
- One GSM specification against another GSM specification
- One GSM specification against a nutrient composite and several nutrient analyses

In general, you can compare nutrient information between two or more entities, either of the same type or of different types. Entities available for comparison are:

- Nutrient analysis
- Nutrient composite
- Material specification
- Product specification
- Menu item specification
- Trade specification

Note: To ensure optimal performance, your Agile administrator may limit the number of specifications that NSM can compare to a preset maximum.

Nutrient Comparison Page

Figure 2–14 shows a nutrient analysis, denoted by (na), being compared to a nutrient analysis (na) and a product specification (prod).

Figure 2–14 Comparison among nutrient analysis, product specification, and nutrient analysis

Nutrient Comparison

Compare Nutrition

Show Children: ☐ Yes ☒ No

Base Specification: 0000310 (na) -- BBQ Beef and Vegetable Dinner - 11 oz (5077539-001)

Compare With:

- 1) 0000752 (na) -- 4:1 Beef Patty (5084160-001)
- 2) 5084160-001 (prod) -- 4:1 Beef Patty

Compare

When you click **Compare**, the nutrient comparison of the three displays, as shown in [Figure 2–15](#).

Figure 2–15 Comparison results

Results					
Nutrient	0000310 (na)	1) 0000752 (na)		2) 5084160-001 (prod)	
	Per 100g	Per 100g	% Diff	Per 100g	% Diff
Calories		---			
Protein		1.000			
Carbohydrates				20.000	
Dietary Fiber				2.000	
Maltose		0.000			
Saturated Fat	1.000 g				
Cholesterol				100.000	
Vitamin C				5.000	
Vitamin D				5.000	
Calcium		---		10.000	
Iron	0.080 mg			15.000 mg	+18650.000 %
Magnesium		0.000			
Phosphorus		2.000			
Potassium	3.000 mg	3.000 mg	0.000 %		
Sodium	4.000 mg				
Zinc		99.999			
Copper		---			
Manganese		0.000			
Nitrogen				1.000	
Starch				1.000	

The % Diff values are calculated with respect to the base specification. Cells are grayed out if the nutrient is not defined for that column.

If you select a menu item specification as the base specification and then select **Yes** for Show Children, you can compare the nutrients of child specifications (top-level bill of materials) of the parent specification, as shown in [Figure 2–16](#).
