

## **Oracle Utilities Customer Care and Billing Release 2.4.0**

Utility Reference Model

4.1.1.1 Manage Adjustment and Adjustment  
Approval

December 2015

Oracle Utilities Customer Care and Billing Utility Reference Model 4.1.1.1 Manage Adjustment and Adjustment Approval, Release 2.4.0

Copyright © 2015, Oracle and/or its affiliates. All rights reserved.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

## 4.1.1.1 Manage Adjustment and Adjustment Approval

This section provides a description of the “Manage Adjustment and Adjustment Approval” business process, including:

- ♦ [Brief Description](#)
  - ♦ [Actors/Roles](#)
- ♦ [Business Process Diagrams](#)
  - ♦ [Manage Adjustment and Adjustment Approval Process Model - Page 1](#)
  - ♦ [Manage Adjustment and Adjustment Approval Process Model - Page 2](#)
  - ♦ [Manage Adjustment and Adjustment Approval Process Model - Page 3](#)
  - ♦ [Manage Adjustment and Adjustment Approval Process Model - Page 4](#)
- ♦ [Manage Adjustment and Adjustment Approval Detailed Process Model Description](#)
- ♦ [Installation Options - Control Central Alerts](#)
- ♦ [Adjustment Type Entities to Configure](#)
- ♦ [Algorithm Types for Adjustments](#)
- ♦ [Business Object Algorithms](#)
- ♦ [Related Training](#)

## Brief Description

**Business Process:** 4.1.1.1 CC&B Manage Adjustment and Adjustment Approval

**Process Type:** Sub-Process

**Parent Process:** 4.1.1 CC&B.Create Adjustment

**Sibling Processes:** n/a

This document describes the Adjustment and Adjustment approval process. An adjustment is used to change the amount of debt stored on a service agreement. Some adjustments need to be approved by one or more managers before they impact a customer's debt and the general ledger. This model will reflect the Adjustment Approval lifecycle, and incorporate the logic and sequence of business events.

When an Adjustment's Adjustment Type references an Approval Profile, the system will not allow the user to freeze the Adjustment. When the Adjustment is created, it is submitted for approval. CC&B determines the necessary approval levels and notifies the first approver. CC&B will freeze the Adjustment when last approver approves the Adjustment.

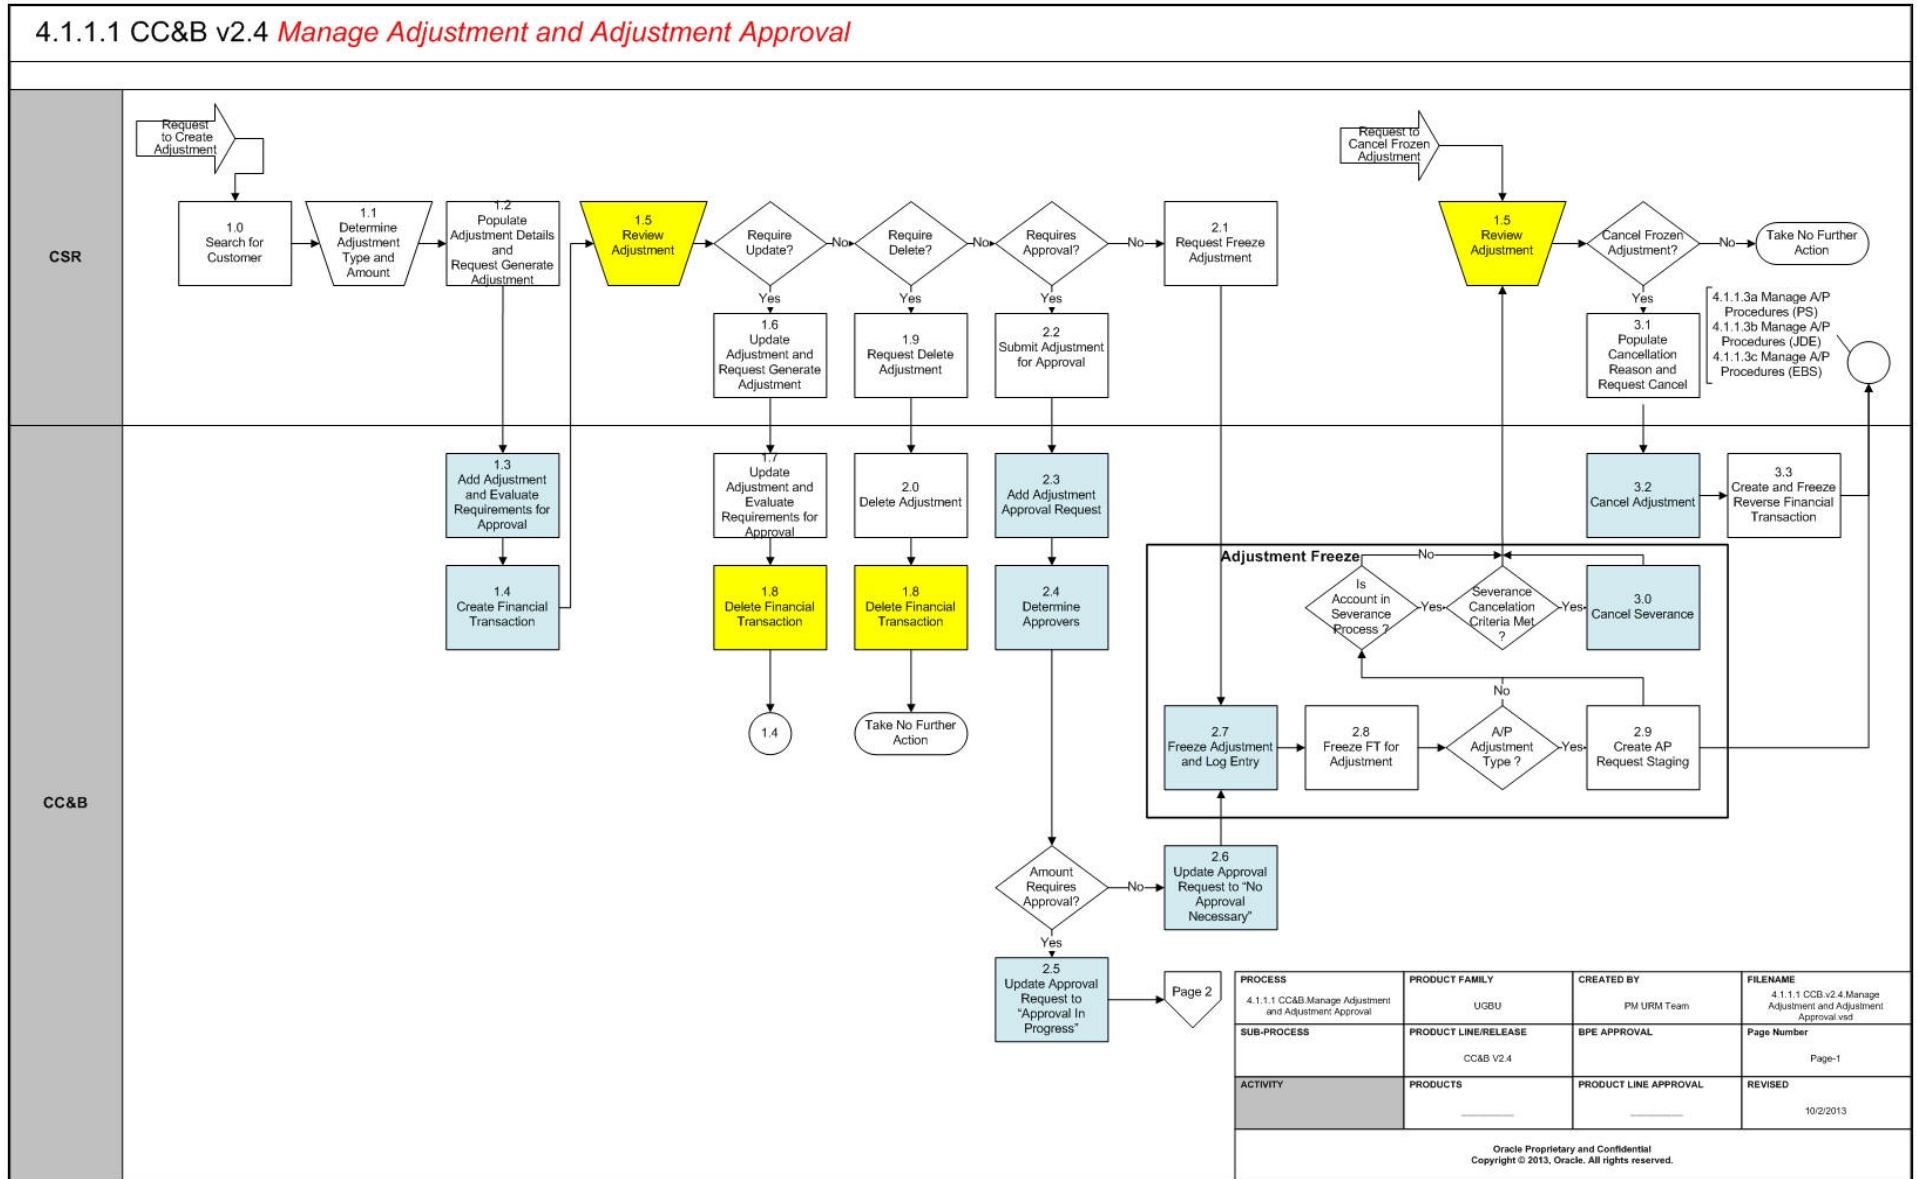

## Actors/Roles

The Manage Adjustment and Adjustment Approval business process involves the following actors and roles.

- **Authorized User (CCB):** CSR or Authorized User of the Customer Care and Billing application.
- **CC&B:** The Customer Care and Billing application. Steps performed by this actor/role are performed automatically by the application, without the need for user initiation or intervention.
- **Authorized User (PS):** CSR or Authorized User of Oracle PeopleSoft Financials for General Ledger and Accounts Payable.
- **PS:** Oracle PeopleSoft Financials for General Ledger and Accounts Payable.
- **BPEL:** Oracle Fusion middleware product, that manages cross-application business processes and coordinates the data flow and data mapping of the integration.

# Manage Adjustment and Adjustment Approval Detailed Process Model Description

This section provides a detailed description of the “Manage Adjustment and Adjustment Approval” business process, including:

- ♦ 1.0 Search for Customer
- ♦ 1.1 Determine Adjustment Type and Amount
- ♦ 1.2 Populate Adjustment Details and Request Generate Adjustment
- ♦ 1.3 Add Adjustment and Evaluate Requirements for Approval
- ♦ 1.4 Create Financial Transaction
- ♦ 1.5 Review Adjustment
- ♦ 1.6 Update Adjustment and Request Generate Adjustment
- ♦ 1.7 Update Adjustment and Evaluate Requirements for Approval
- ♦ 1.8 Delete Financial Transaction
- ♦ 1.9 Request Delete Adjustment
- ♦ 2.0 Delete Adjustment
- ♦ 2.1 Request Freeze Adjustment
- ♦ 2.2 Submit Adjustment for Approval
- ♦ 2.3 Add Adjustment Approval Request
- ♦ 2.4 Determine Approvers
- ♦ 2.5 Update Approval Request to "Approval In Progress"
- ♦ 2.6 Update Approval Request to "No Approval Necessary"
- ♦ 2.7 Freeze Adjustment and Log Entry
- ♦ 2.8 Freeze FT for Adjustment
- ♦ 2.9 Create AP Request Staging
- ♦ 3.0 Cancel Severance
- ♦ 3.1 Populate Cancellation Reason and Request Cancel
- ♦ 3.2 Cancel Adjustment
- ♦ 3.3 Create and Freeze Reverse Financial Transaction
- ♦ 3.4 Create To Do Entry for First Approver
- ♦ 3.5 Determine if Email is to Be Sent
- ♦ 3.6 Send Email
- ♦ 3.7 Evaluate Adjustment
- ♦ 3.8 Provide Approval Justification and Request Add Adjustment Approval Log
- ♦ 3.9 Add Adjustment Approval Log
- ♦ 4.0 Request Approve Adjustment
- ♦ 4.1 Complete To Do Entry
- ♦ 4.2 Update Approval Request to "Approved"
- ♦ 4.3 Create To Do Entry for Next Approver
- ♦ 4.4 Populate Reject Reason
- ♦ 4.5 Request Reject Adjustment
- ♦ 4.6 Update Approval Request to "Rejected"
- ♦ 4.7 Delete Adjustment
- ♦ 4.8 Evaluate Waiting Approval Period and Number of Reminders
- ♦ 4.9 Send a Reminder Email
- ♦ 5.0 Complete To Do Entry
- ♦ 5.1 Create New To Do Entry for the Supervisor (Timeout Role)
- ♦ 5.2 Send Adjustment Upload Information
- ♦ 5.3 Create Pending Adjustment Upload Staging Control Records
- ♦ 5.4 Create Pending Adjustment Upload Staging Records

- ♦ 5.5 Find Pending Adjustment Upload Staging Control Records
- ♦ 5.6 Validate Pending Adjustment Upload Staging Control Records
- ♦ 5.7 Set Status of Adjustment Staging Control Record to Error
- ♦ 5.8 Complete Existing ToDos
- ♦ 5.9 Create New To Do
- ♦ 6.0 Set Adjustment Staging Control Status to In-Progress
- ♦ 6.1 Identify Service Agreement for Adjustment
- ♦ 6.2 Update Adjustment Staging Record to Suspense
- ♦ 6.3 Link Adjustment to Service Agreement
- ♦ 6.4 Set Status of Upload Staging Record to Error
- ♦ 6.5 Identify Successfully Pre-Processed Pending Adjustment Staging Records
- ♦ 6.6 Add Frozen Adjustment and FT
- ♦ 6.7 Update Staging Record to Status Complete
- ♦ 6.8 Evaluate Suspended Adjustment Staging Records
- ♦ 6.9 Resolve Suspense Adjustment
- ♦ 7.0 Review and Resolve Adjustment Staging Error
- ♦ 7.1 Request to Update Staging Status to Pending
- ♦ 7.2 Update Staging Status to Pending
- ♦ 7.3 Request to Complete To Do

## 1.0 Search for Customer

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CSR

**Description:** The CSR or Authorized User accesses Control Central Search to locate the customer in CC&B.

**Entities to Configure**

- Installation Options ([Installation Options - Control Central Alerts](#))

## 1.1 Determine Adjustment Type and Amount

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CSR

**Description:** The CSR or Authorized User determines the adjustment type and adjustment debit or credit amount.

**Entities to Configure**

- Adjustment Type
- Adjustment Type Profile

## 1.2 Populate Adjustment Details and Request Generate Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CSR

**Description:** The CSR or Authorized User verifies Account, Service Agreement and Premise information for the Service Agreement being adjusted. CSR or Authorized User selects the Adjustment Type, populates the debit or credit Amount, adds comments if required, and requests to generate Adjustment.

## 1.3 Add Adjustment and Evaluate Requirements for Approval

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B adds the adjustment and evaluates the requirements for approval for the given Adjustment type and amount.

**Note:** If business requires calculate adjustment amount, system automatically calculates and populates adjustment amount if appropriate Adjustment Type is selected.

**Entities to Configure**

- Adjustment Type
- Adjustment Type Profile

**Business Objects**

- C1-Adjustment - Adjustment - Read Main Details
- C1-AdjustmentType - Adjustment Type - Main Details

**Available Algorithms**

- ADJG-RT - This adjustment generation algorithm is used to calculate an adjustment by calling rate application. Rate application returns a total amount and "bill lines" that show how the charge was calculated (these are derived from the rate's rate components).

Rate Schedule identifies the rate that's used to calculate the adjustment. This algorithm passes to this rate the adjustment's base amount as a service quantity and the calculation date as the effective date. The service quantity is identified by the Service Quantity Identifier (SQI), Time of Use (TOU) and Unit of Measure (UOM).

The next three parameters are used to apply taxes based on a bill-level threshold. If a bill's accumulated tax amount is less than the tax threshold amount defined on the Apply Taxation Threshold pre-bill completion algorithm, then taxes should not be charged. The pre-bill completion algorithm adds the Tax Not Applicable Characteristic to the adjustment. When the adjustment is regenerated to remove taxes, this characteristic is added into the characteristic collection used by rate application so that it is made available to rate component eligibility criteria to skip the tax calculation lines.

## 1.4 Create Financial Transaction

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B creates Financial Transactions.

**Entities to Configure**

- Adjustment Type

**Available Algorithms**

- ADJT-CA - Payoff Amt = 0 / Current Amt = Adj Amount (no GL)
- ADJT-NM - Payoff Amt = Adj / Current Amt = Adj
- ADJT-TA - Payoff Amt = Adj / Current Amt = 0
- CI\_FTGL-AD - Deferred Accrual Write Down Payoff = Current = Adj
- ADJT-AC - CASH ACCTING! Payoff = Current = Adj Amount,
- ADJT-AD - CASH ACCTING! Payoff = Current = Adj Amount
- ADJT-GL - FIX GL ONLY! Payoff = Current = 0 (GL only)
- ADJT-TC - CASH ACCTING! Payoff Amt = Adj / Current Amt = 0
- C1-ADJT-CL - This algorithm creates a financial transaction for non-rated adjustments where the calculation lines are used as the source of GL distribution codes.
- C1-FTGL-ADNM - This algorithm behaves in two different ways, depending on the type of adjustment.
- C1-FTGL-ADTC - Deferred Accrual Adj - Affects Payoff & GL

## 1.5 Review Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CSR

**Description:** The CSR or Authorized User reviews the generated adjustment to determine whether the adjustment needs to be updated, frozen, or deleted.

## 1.6 Update Adjustment and Request Generate Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CSR

**Description:** The CSR or Authorized User updates the adjustment information and requests the generation of adjustment with updated information.

## 1.7 Update Adjustment and Evaluate Requirements for Approval

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B updates the adjustment with the new information and then determines if approval would be necessary for the updated adjustment based on the approval profile settings.

### Entities to Configure

- Approval Profile
- Adjustment Type
- Rate Schedule

### Business Objects

- C1-Adjustment - Adjustment - Read Main Details
- C1-AdjustmentType - Adjustment Type - Main Details

### Available Algorithms

- ADJG-RT - This adjustment generation algorithm is used to calculate an adjustment by calling rate application. Rate application returns a total amount and "bill lines" that show how the charge was calculated (these are derived from the rate's rate components).

## 1.8 Delete Financial Transaction

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B removes the unfrozen Financial Transactions relating to the deleted or updated adjustment.

## 1.9 Request Delete Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CSR

**Description:** The CSR or Authorized User determines that the adjustment is invalid or incorrect. The CSR or Authorized User issues a request to delete the adjustment entry.

## 2.0 Delete Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B deletes the adjustment when the CSR or Authorized User confirms the deletion request. Financial Transactions linked to the Adjustment are deleted from the system along with the adjustment entry.

## 2.1 Request Freeze Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CSR

**Description:** The CSR or Authorized User issues a request to freeze the adjustment.

## 2.2 Submit Adjustment for Approval

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CSR

**Description:** The CSR or Authorized User submits the adjustment for approval when the adjustment type requires approval.

## 2.3 Add Adjustment Approval Request

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B adds the adjustment approval request once the CSR submits the adjustment for approval.

### Entities to Configure

- Approval Profile
- To Do Type
- To Do Role

### Business Objects

- C1-AdjustmentApprovalProfile

### Available Algorithms

- C1-ADJREQTDF - This algorithm creates an approval request for the adjustment that was submitted for approval. The approval profile for the request is derived from the adjustment type. The business object for the Adjustment Approval Request is used for a new approval request record.
- C1-ADJAP-DF - This algorithm is used to validate an adjustment approval profile.
- C1-ADJARI-DF - This algorithm formats the adjustment approval request information that appears throughout the system.
- C1-ADJAR-INF - This algorithm formats the adjustment approval request information that appears throughout the system
- C1-ADJAPVAL - This algorithm is used to validate an adjustment approval profile.

## 2.4 Determine Approvers

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B determines the approvers based on the adjustment amount against the threshold amounts for the approval request's approval profile.

**Entities to Configure**

- Approval Profile

**Business Objects**

- C1-AdjustmentApprovalRequest

**Available Algorithms**

- C1-DET-APRVR - The algorithm is responsible for determining the list of users responsible for approving an adjustment.
- The adjustment amount is compared to the list of threshold amounts for the approval request's approval profile. If the adjustment amount exceeds the threshold amount, the associated role is added to the list of approvers.
- If the adjustment amount is below the lowest threshold, the approval request will be transitioned to the 'No Approval Required' state, otherwise the approval request is transitioned to 'Approval In Progress'.

## 2.5 Update Approval Request to "Approval In Progress"

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** If adjustment requires approval and adjustment amount justifies approval (based on the approval profile settings), CC&B updates the Approval Request Log to "Approval In Progress".

**Business Objects**

- C1-AdjustmentApprovalRequest

## 2.6 Update Approval Request to "No Approval Necessary"

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** If adjustment requires approval but adjustment amount is lower than approval threshold (based on the approval profile settings), CC&B updates the Approval Request Log to "No Approval Necessary".

**Business Objects**

- C1-AdjustmentApprovalRequest

## 2.7 Freeze Adjustment and Log Entry

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Group:** Adjustment Freeze

**Actor/Role:** CC&B

**Description:** CC&B freezes the Adjustment. CC&B updates the Approval Request Log to “Frozen”. No further action is necessary.

### Entities to Configure

- To Do Type
- To Do Role
- Adjustment Type

### Business Objects

- C1-AdjustmentType - Adjustment Type - Main Details

### Available Algorithms

- ADFR-CRTODO - This algorithm type creates a To Do entry (using the To Do Type and To Do Role (if specified)) when an adjustment of a particular type is frozen.

The base package includes the To Do Type ADJFRZ to use for this parameter value, unless you've set up your own.

- C1-FRZ-ADJ - This algorithm is responsible for freezing the adjustments linked to the approved request.
- C1-DISPPBAP - This algorithm type is used to remove a prepaid customer from automatic payment. Note: to enable this functionality, ensure that the prepaid SA type's NSF adjustment type references this algorithm.
- C1-PPBADJFRZ - This algorithm type is used when creating a prepaid funds request adjustment.

## 2.8 Freeze FT for Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Group:** Adjustment Freeze

**Actor/Role:** CC&B

**Description:** CC&B freezes the Financial Transactions for the adjustment.

## 2.9 Create AP Request Staging

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Group:** Adjustment Freeze

**Actor/Role:** CC&B

**Description:** If the adjustment is an A/P adjustment, CC&B creates the A/P request staging for it.

### 3.0 Cancel Severance

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Group:** Adjustment Freeze

**Actor/Role:** CC&B

**Description:** After the Adjustment and the FT are frozen, CC&B determines if the account is in severance process and if it meets severance cancellation criteria; if so, CC&B cancels the severance.

**Entities to Configure**

- Debt Class
- Severance Process Template

**Available Algorithms**

- CI\_SPX\_CRIT - Severance Process Template - Cancel Criteria: Cancel Sev Process If SA Debt <= Threshold Amount
- CI\_DCSEVCAN - Debt Class - Severance Process Cancellation. Cancel Sev. Proc. If Debt Class Debt <= Threshold

### 3.1 Populate Cancellation Reason and Request Cancel

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CSR

**Description:** The CSR or Authorized User populates the adjustment cancellation reason and requests to cancel the frozen adjustment.

### 3.2 Cancel Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B cancels the frozen adjustment.

**Note:** Usually CC&B is configured to generate To Do only when the cancellation occurs as part of a background process.

**Available Algorithms**

- ADCA-CRTODO - This algorithm type creates a To Do entry using the input To Do Type when an adjustment of a particular type is canceled.

### 3.3 Create and Freeze Reverse Financial Transaction

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** Upon cancellation of the frozen adjustment, CC&B creates and freezes a reverse Financial Transaction to negate the amount of the original FT.

### 3.4 Create To Do Entry for First Approver

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B creates a To Do entry for the First Approver..

**Entities to Configure**

- To Do Type
- To Do Role

**Business Objects**

- C1-AdjustmentApprovalRequest

**Available Algorithms**

- C1-NTFY-APPR - This algorithm type is responsible for assigning the approval request to the next approval role. If there are more approval roles left in the approval list, a To Do entry is created for the next role in the approval list using the To Do type defined on the approval profile related to this approval request. The role is then removed from the approval list. Once the To Do entry is created, an entry is added to the approval request log referencing this To Do Id and the approval request's current approval To Do id is populated with this value as well. The algorithm also resets the Waiting Retry Count and sets the Waiting Start Date/Time to the current date/time.

### 3.5 Determine if Email is to Be Sent

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Group:** To Do Entry External Routing Process

**Actor/Role:** CC&B

**Description:** CC&B determines if an email is to be sent when the new To Do entry is created.

**Process Names**

- F1-TDEER - This batch process will read all To Do entries for a given batch control and run. For each To Do entry record read, it will invoke the external routing algorithm (defined on the entry's To Do type).

### 3.6 Send Email

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 1 on page 3](#) for the business process diagram associated with this activity.

**Group:** To Do Entry External Routing Process

**Actor/Role:** CC&B

**Description:** If an email should be sent, CC&B sends an email message as soon as the To Do entry is generated.

**Process Names**

- F1-TDEER - This batch process will read all To Do entries for a given batch control and run. For each To Do entry record read, it will invoke the external routing algorithm (defined on the entry's To Do type).

**Entities to Configure**

- Outbound Message Type
- External System

**Available Algorithms**

- C1-ADJAREQEM - This algorithm type creates an email outbound message requesting the user to respond to an approval request for the adjustment linked to the To Do entry being processed. The outbound message type and external system are determined by the first two parameters.

If the To Do is 'Open', the email will be sent to all users linked to the To Do Role. If the To Do is 'Being Worked On', only the assigned user will receive an email. The 'from' address for the email is determined by the third parameter (Email From Address).

The body of the email includes a hyperlink to navigate to the adjustment requiring approval.

### 3.7 Evaluate Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 2 on page 4](#) for the business process diagram associated with this activity.

**Actor/Role:** First Approver, Next Level Approver, Supervisor

**Description:** The First Approver, Next Level Approver, Supervisor or Authorized User evaluates the adjustment by drilling down on the adjustment approval To Do entry. This opens the Adjustment Approval portal which contains summary information about the adjustment approval.

### 3.8 Provide Approval Justification and Request Add Adjustment Approval Log

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 2 on page 4](#) for the business process diagram associated with this activity.

**Actor/Role:** First Approver, Next Level Approver, Supervisor

**Description:** The First Approver, Next Level Approver, Supervisor or Authorized User provides an adjustment approval reason and issues a request to add an adjustment approval log entry.

### 3.9 Add Adjustment Approval Log

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 2 on page 4](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B adds the adjustment approval log entry.

### 4.0 Request Approve Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 2 on page 4](#) for the business process diagram associated with this activity.

**Actor/Role:** First Approver, Next Level Approver, Supervisor

**Description:** The First Approver, Next Level Approver, Supervisor or Authorized User requests approval for the adjustment.

### 4.1 Complete To Do Entry

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 2 on page 4](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B completes any Pending Approval To Do Entry when there is a request to approve or reject the adjustment.

**Entities to Configure**

- To Do Type
- To Do Role

**Available Algorithms**

- F1-TODOCOMPL - This algorithm type completes To Do entries that are linked to an object when the object exits a given state.

The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.

## 4.2 Update Approval Request to "Approved"

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 2 on page 4](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B updates the adjustment approval request to Approved in the Approval Request Log. The adjustment is then frozen in the system.

**Business Objects**

- C1-AdjustmentApprovalRequest

**Available Algorithms**

- C1-FRZ-ADJ - This algorithm is responsible for freezing the adjustments linked to the approved request. An 'approved' log entry is created for the related adjustment. If this is a transfer adjustment, a second log is created for that adjustment id. If the adjustment type for the adjustment is configured to Freeze at Will the algorithm then freezes the adjustment. If the adjustment type is configured to Freeze at Completion, no further action is taken

## 4.3 Create To Do Entry for Next Approver

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 2 on page 4](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B creates a To Do entry for the Next Level Approver. Approval Profile for the adjustment determines whether a higher level of approval is required so that a new To Do entry is created to the next To Do role in the approval hierarchy.

**Business Objects**

- C1-AdjustmentApprovalRequest

**Available Algorithms**

- C1-NTFY-APPR - This algorithm type is responsible for assigning the approval request to the next approval role.

If there are more approval roles left in the approval list, a To Do entry is created for the next role in the approval list using the To Do type defined on the approval profile related to this approval request. The role is then removed from the approval list.

Once the To Do entry is created, an entry is added to the approval request log referencing this To Do Id and the approval request's current approval To Do Id is populated with this value as well.

The algorithm also resets the Waiting Retry Count and sets the Waiting Start Date/Time to the current date/time.

## 4.4 Populate Reject Reason

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 2 on page 4](#) for the business process diagram associated with this activity.

**Actor/Role:** First Approver, Next level Approver, Supervisor

**Description:** The First Approver, Next Level Approver, Supervisor or Authorized User populates the adjustment approval reject reason.

## 4.5 Request Reject Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 2 on page 4](#) for the business process diagram associated with this activity.

**Actor/Role:** First Approver, Next level Approver, Supervisor

**Description:** The First Approver, Next Level Approver, Supervisor or Authorized User issues a request to reject the adjustment approval request.

## 4.6 Update Approval Request to "Rejected"

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 2 on page 4](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B updates the adjustment approval request to "Rejected" in the Approval Request Log.

### Business Objects

- C1-AdjustmentApprovalRequest

### Available Algorithms

- C1-DEL-ADJ - This algorithm is responsible for deleting the adjustments linked to a rejected adjustment approval request.

A 'rejected' log entry is created indicating the SA of the related adjustment. If this is a transfer adjustment, a second log is created for the SA of the transfer adjustment.

The related adjustments are deleted and the approval request's adjustment id is reset.

## 4.7 Delete Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 2 on page 4](#) for the business process diagram associated with this activity.

**Actor/Role:** CC&B

**Description:** CC&B deletes the adjustment once the approval has been rejected. Financial Transactions generated by the adjustment are deleted as well.

### Entities to Configure

- Adjustment Type

### Available Algorithms

- C1-DEL-ADJ - This algorithm deletes the adjustment if it is rejected by the approver.

## 4.8 Evaluate Waiting Approval Period and Number of Reminders

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 3 on page 5](#) for the business process diagram associated with this activity.

**Group:** Approval In Progress Monitor

**Actor/Role:** CC&B

**Description:** CC&B evaluates the waiting approval period and the number of reminders to determine if the waiting time has exceeded the required threshold as set by the business, and if so, proceeds to re-route approval to upper management.

### Process Names

- C1-APRPR - This batch process invokes monitoring rules associated with the current state of approval requests. All monitoring rules throughout the approval request's business object's inheritance chain are considered.

By default, the process periodically monitors approval requests whose current state is not associated with a batch code.

### Entities to Configure

- To Do Type
- To Do Role

### Business Objects

- C1-AdjustmentApprovalRequest

### Available Algorithms

- C1-APR-TMOUT - This algorithm is responsible for determining if an adjustment approval request has been waiting too long. The algorithm will first determine if the current waiting time for the request exceeds the timeout threshold. If the maximum waiting time has been exceeded, the algorithm will then determine if the maximum number of reminders has been sent. If the number of reminders is below the threshold and the algorithm is configured to send another email reminder, the algorithm will reset the external routing batch control on the current To Do to trigger the creation of a new email. If the number of reminders is above the threshold, the request is deemed to have timed out. The algorithm will complete the current To Do if it's Open and create a new To Do, assigned to the timeout To Do role. Note that if the current To Do is Being Worked On it is not completed, but a new To Do assigned to the timeout To Do role is created.

## 4.9 Send a Reminder Email

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 3 on page 5](#) for the business process diagram associated with this activity.

**Group:** Approval In Progress Monitor

**Actor/Role:** CC&B

**Description:** CC&B sends an email reminder for a To Do entry that has been waiting too long for approval to the Current Approver.

### Process Names

- C1-APRPR - This batch process invokes monitoring rules associated with the current state of approval requests. All monitoring rules throughout the approval request's business object's inheritance chain are considered.

By default, the process periodically monitors approval requests whose current state is not associated with a batch code.

Batch parameters govern whether the processing is further restricted by batch code, approval profile, business object and status.

**Entities to Configure**

- To Do Type
- To Do Role

**Business Objects**

- C1-AdjustmentApprovalRequest

**Available Algorithms**

- C1-APR-TMOUT - This algorithm is responsible for determining if an adjustment approval request has been waiting too long. The algorithm will first determine if the current waiting time for the request exceeds the timeout threshold. If the maximum waiting time has been exceeded, the algorithm will then determine if the maximum number of reminders has been sent. If the number of reminders is below the threshold and the algorithm is configured to send another email reminder, the algorithm will reset the external routing batch control on the current To Do to trigger the creation of a new email. If the number of reminders is above the threshold, the request is deemed to have timed out. The algorithm will complete the current To Do if it's Open and create a new To Do, assigned to the timeout To Do role. Note that if the current To Do is Being Worked On it is not completed, but a new To Do assigned to the timeout To Do role is created.

## 5.0 Complete To Do Entry

**Group:** Approval In Progress Monitor

**Actor/Role:** CC&B

**Description:** CC&B completes the current To Do entry when the To Do has not been completed by the Approver and the timeout threshold has passed.

**Process Names**

- C1-APRPR - This batch process invokes monitoring rules associated with the current state of approval requests. All monitoring rules throughout the approval request's business object's inheritance chain are considered.

By default, the process periodically monitors approval requests whose current state is not associated with a batch code.

Batch parameters govern whether the processing is further restricted by batch code, approval profile, business object and status.

**Available Algorithms**

- F1-TODOCOMPL - This algorithm type completes To Do entries that are linked to an object when the object exits a given state.

The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.

## 5.1 Create New To Do Entry for the Supervisor (Timeout Role)

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 3 on page 5](#) for the business process diagram associated with this activity.

**Group:** Approval In Progress Monitor

**Actor/Role:** CC&B

**Description:** CC&B creates a new To Do entry for a Supervisor or Authorized User when the timeout threshold has passed.

### Process Names

- C1-APRPR - This batch process invokes monitoring rules associated with the current state of approval requests. All monitoring rules throughout the approval request's business object's inheritance chain are considered.

### Entities to Configure

- To Do Type
- To Do Role

### Business Objects

- C1-AdjustmentApprovalRequest

### Available Algorithms

- C1-NTFY-APPR - This algorithm type is responsible for assigning the approval request to the next approval role.

If there are more approval roles left in the approval list, a To Do entry is created for the next role in the approval list using the To Do type defined on the approval profile related to this approval request. The role is then removed from the approval list.

Once the To Do entry is created, an entry is added to the approval request log referencing this To Do Id and the approval request's current approval To Do Id is populated with this value as well.

The algorithm also resets the Waiting Retry Count and sets the Waiting Start Date/Time to the current date/time.

## 5.2 Send Adjustment Upload Information

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Actor/Role:** External System Authorized User

**Description:** Authorized User gathers the information needed for uploading the adjustments including adjustment amount, account id, and adjustment date, and creates the Adjustment Upload Flat File. This file is used by process X to upload the adjustments.

## 5.3 Create Pending Adjustment Upload Staging Control Records

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Process X - Adjustment Upload Staging

**Actor/Role:** CC&B

**Description:** This is a custom process. The following steps walk through the required information needed to populate various staging tables in CC&B.

When process X is executed, it requests CC&B to create Adjustment Upload Staging Control records in Pending status.

An adjustment upload staging control record is needed for each batch of adjustments to be uploaded into the system.

Depending on the business needs, an adjustment staging control characteristic record may also be defined for each characteristic you want to link to the adjustment staging control.

**Process Names**

- This is a completely custom process designed to add Pending records to the required staging tables in CC&B. Specifically, CI\_ADJ\_STG\_CTL and CI\_ADJ\_STG\_CTL\_CHAR may be affected.

## 5.4 Create Pending Adjustment Upload Staging Records

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Process X - Adjustment Upload Staging

**Actor/Role:** CC&B

**Description:** CC&B creates Adjustment Upload Staging records in Pending status. The adjustment information is from the adjustment upload flat file.

An adjustment upload staging record is created for each adjustment you want to upload. Depending on the business need, an adjustment characteristic upload staging record may also be defined for each characteristic you want to link to the adjustment upload staging.

**Process Names**

- This is a completely custom process designed to add Pending records to the required staging tables in CC&B. Specifically, CI\_ADJ\_STG\_UP and CI\_ADJ\_STG\_UP\_CHAR may be affected.

## 5.5 Find Pending Adjustment Upload Staging Control Records

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Pre-Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** Navigating the Adjustment Upload Staging Control table, CC&B finds each Control record in Pending state. These records will be validated and processed.

**Process Names**

- C1-ADUP1 - The upload adjustment pre-process batch control performs high level validation of the adjustment staging control and identifies the service agreement for each of the adjustment staging records.

## 5.6 Validate Pending Adjustment Upload Staging Control Records

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Pre-Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** CC&B validates each Pending adjustment Upload Staging Control record. If validation fails for a record, it changes the status to Error and created a new ToDo for it. If no errors are found, the status of the Adjustment Staging Control is set to In-Progress.

## 5.7 Set Status of Adjustment Staging Control Record to Error

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Pre-Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** If validation fails for a Control or Staging record, CC&B changes the status to Error and creates a new To Do for it.

## 5.8 Complete Existing ToDos

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Pre-Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** CC&B completes any existing ToDos that may exist for the current record.

## 5.9 Create New To Do

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:**

- Pre-Process Adjustment Upload
- Process Adjustment Upload
- Resolve Suspense Adjustment

**Actor/Role:** CC&B

**Description:** CC&B creates a new ToDo entry for the record in Error.

## 6.0 Set Adjustment Staging Control Status to In-Progress

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Pre-Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** If validation succeeds for a record, CC&B changes the status to In-Progress.

## 6.1 Identify Service Agreement for Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Pre-Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** For each Pending adjustment upload staging record that is linked to an In-Progress staging Control which does not have an SA ID, CC&B finds its SA ID and stamps it onto the upload staging record.

**Process Names**

- C1-SABYBADGE- This Determine SA algorithm type looks for a prepaid SA given a badge number. If a prepaid SA is not found, it will return the input Suspense Service Agreement.

## 6.2 Update Adjustment Staging Record to Suspense

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Pre-Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** When the adjustment upload pre-processor is unable to identify a valid SA ID for the adjustment upload staging record, it can put the adjustment in suspense. In this case, the Suspense flag is set to “In Suspense” on the adjustment upload staging.

Adjustments are put in suspense only if such logic is plugged in as the Determine SA algorithm on the Adjustment Type.

## 6.3 Link Adjustment to Service Agreement

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Pre-Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** Once the service agreement is identified, CC&B links the SA to the adjustment upload record by adding the SA ID to the upload staging record.

## 6.4 Set Status of Upload Staging Record to Error

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Pre-Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** If CC&B cannot find an SA ID for the upload staging record or encounters other errors, it will set the status of such staging record to Error.

## 6.5 Identify Successfully Pre-Processed Pending Adjustment Staging Records

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** Navigating the Adjustment Upload Staging table, CC&B finds each record in Pending state that has an SA ID in order to create an adjustment for it.

These are the upload records that have been pre-processed and validated.

### Process Names

- C1-ADUP2 - The upload adjustment process batch control finds all Pending adjustment upload staging records that reference a service agreement, and creates Frozen Adjustment for each.

## 6.6 Add Frozen Adjustment and FT

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** CC&B adds frozen adjustment for each upload staging record that was found having an SA ID. CC&B also adds the corresponding Financial Transaction.

## 6.7 Update Staging Record to Status Complete

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Process Adjustment Upload

**Actor/Role:** CC&B

**Description:** Once the adjustment is added successfully, CC&B updated the status of upload staging record to Complete.

## 6.8 Evaluate Suspended Adjustment Staging Records

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Resolve Suspense Adjustment

**Actor/Role:** CC&B

**Description:** CC&B selects all suspended adjustment staging records, and attempts to resolve the suspension.

### Process Names

- C1-ADURS - This batch process picks up all adjustment upload staging records that are In Suspense. For each record, it calls the 'Resolve Suspense' plug-in for the adjustment upload staging's adjustment type.

## 6.9 Resolve Suspense Adjustment

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Resolve Suspense Adjustment

**Actor/Role:** CC&B

**Description:** The Resolve Suspense algorithm checks if a valid SA can be found for the adjustment staging record in suspense. If a valid SA is found,

a new adjustment is created for the SA, and the SA is linked to the adjustment upload staging record, then the suspense adjustment is canceled.

If a valid SA is not found, it checks to see if the record has been in suspense for too long; and if so, it creates a To Do Entry for the upload staging.

### Process Names

- C1-CANSUSADJ - This Resolve Suspense algorithm checks if a valid customer SA can be found for an adjustment staging record in suspense.

For each adjustment upload staging record found in suspense, it attempts to find a valid SA.

- If a valid SA is found:
  - A new adjustment is created for the SA and linked to the adjustment upload staging.
  - The suspense adjustment is canceled but remains linked to the adjustment upload staging as an audit.
- If a valid SA is not found, check to see if the record has been in suspense for too long. If Number Of Days (parm 5) > 0 and To Do Type (parm 6) is supplied:
  - Calculate the number of days that the record has been in suspense.
  - Create a To Do Entry using the input To Do Type if the calculated number exceeds the input number of days.

**Entities to Configure**

- Adjustment type

## 7.0 Review and Resolve Adjustment Staging Error

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Exception Processing

**Actor/Role:** CSR

**Description:** CSR or Authorized User reviews and resolves the adjustment staging error.

### 7.1 Request to Update Staging Status to Pending

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Exception Processing

**Actor/Role:** CSR

**Description:** Once the Error is resolved, the CSR or Authorized user requests that the status of the upload staging to be set to Pending or In-Progress.

### 7.2 Update Staging Status to Pending

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Exception Processing

**Actor/Role:** CC&B

**Description:** CC&B changes the status of the upload staging to be set to Pending or In-Progress.

### 7.3 Request to Complete To Do

**Reference:** [Manage Adjustment and Adjustment Approval Process Model - Page 4 on page 6](#) for the business process diagram associated with this activity.

**Group:** Exception Processing

**Actor/Role:** CSR

**Description:** CSR or Authorized User requests to Complete the To Do.

## Installation Options - Control Central Alerts

The following installation options are available:

System Event	Seq	Algorithm Code	Algorithm Code Description	Algorithm Type
Control Central Alert	10	C1_CASH-DF	Cash Only Account	C1-CASH-ACCT
Control Central Alert	20	C1_CRRT-DF	Credit Rating Alert	C1-CRRT-ACCT
Control Central Alert	30	C1_COLL-DF	Highlight Active Collection Processes	C1-COLLPR-AC
Control Central Alert	40	C1_COLLRF-DF	Highlight Active Collection Agency Referral	C1-COLL-REF
Control Central Alert	50	C1_SEVPR-DF	Highlight Active Severance Processes	C1-SEVPR-ACT
Control Central Alert	60	C1-OD-PROC	Highlight Active Overdue Processes	C1-OD-PROC
Control Central Alert	70	C1_LSSL-DF	Highlight Life Support/ Sensitive Load on Person	C1-LSSL-PER
Control Central Alert	80	C1_LSSLPR-DF	Highlight Life Support/ Sensitive Load on Premise	C1-LSSL-PRM
Control Central Alert	90	C1_PENDST-DF	Highlight Pending Start Service Agreements	C1-PEND-STRT
Control Central Alert	100	C1-STOP-SA	Highlight Stopped SAs	C1-STOP-SA
Control Central Alert	110	CI_CCAL-TD	Highlight open To Do entries	CCAL-TD
Control Central Alert	120	C1-CCAL-CASE	Highlight open cases	CCAL-CASE
Control Central Alert	130	C1-CCAL-CLM	Highlight Open Rebate Claims	C1-CCAL-CLM

## Adjustment Type Entities to Configure

This table describes the adjustment type entities available to configure.

The following approval profiles are available:

APPR_PROF_CD	DESCR	BUS_OBJ_CD
MISCFEES	Miscellaneous fees	C1-AdjustmentApprovalProfile
DEPOSIT	Deposits	C1-AdjustmentApprovalProfile

The following A/P request types are available:

AP_REQ_TYPE_CD	DESCR	DUE_DAYS	PYMNT_METHOD_FLG
LOAN	Loan disbursement	7	CHK
REFUND	Refund	7	CHK

The following lookup table values are available:

FIELD_NAME	Java Field Name	CUSTOM_SW	FIELD_VALUE	DESCR
ADJ_AMT_TYPE_FLG	adjustmentAmount Type	N	AMT	Non-Calculated Amount
ADJ_AMT_TYPE_FLG	adjustmentAmount Type	N	CALC	Calculated Amount
AD_FRZ_OPT_FLG	adjustmentFreeze Option	N	ATWL	Freeze At Will
AD_FRZ_OPT_FLG	adjustmentFreeze Option	N	BCMP	Freeze At Bill Completion
AP_1099_FLG	ap1099	N	IN	Interest
AP_1099_FLG	ap1099	N	MC	Miscellaneous

The following portal and zone values are available:

PORTAL_CD	DESCR	PAGE_TYPE	USER_C ONFIG_F LG	ZONE_CD	ZONE_DESCR
C1APROF	Approval Profile	Portal	N	C1-APROF ADJT	Approval Profile's Adjustment Types
C1APROF	Approval Profile	Portal	N	C1-APROF DISP	Approval Profile

C1-AdjTypePhysicalBO	Physical BO for Adjustment Type	ADJ TYPE	Adjustment Type
C1-AdjTypeProfPhysical BO	Physical BO for Adjustment Type Profile	ADJ TYPE PRF	Adjustment Type Profile

## Algorithm Types for Adjustments

The following Algorithm Types exist for Adjustment Type configuration:

ALG_TYPE_ENTITY	ALG_TYPE_CD	ALG_TYPE_DESCR
Adjustment Type - Adjustment Information	C1-ADT-INFO	Adjustment Information
Adjustment Type - Generate	ADJG-RT	Adjustment Generation - Apply Rate
Adjustment Type - Generate	C1-ADJG-WO	Generate Adjustment - Write Off Bills
Adjustment Type - Adjustment FT Creation	ADJT-AC	Payoff=Current=Adj Amount (Cash Accounting)
Adjustment Type - Adjustment FT Creation	ADJT-AD	Payoff=Current=Adj Amount (Cash Accounting)
Adjustment Type - Adjustment FT Creation	ADJT-CA	Payoff=0/Current=Adj Amount (No GL)
Adjustment Type - Adjustment FT Creation	ADJT-GL	Payoff=Current=0 (GL only)
Adjustment Type - Adjustment FT Creation	ADJT-NM	Payoff=Current=Adj Amount
Adjustment Type - Adjustment FT Creation	ADJT-RA	Payoff=Adj Amt/Current=0, No GL (Conversion Only)
Adjustment Type - Adjustment FT Creation	ADJT-TA	Payoff=Adj Amt/Current=0
Adjustment Type - Adjustment FT Creation	ADJT-TC	Payoff=Adj Amt/Current=0 (Cash Accounting)
Adjustment Type - Adjustment FT Creation	C1-FTGL-AD	Deferred Accrual WriteDown-Affects Payoff, Curr,GL
Adjustment Type - Adjustment FT Creation	C1-FTGL-ADAC	Deferred Accrual Adj - Affects Payoff,Current & GL
Adjustment Type - Adjustment FT Creation	C1-FTGL-ADNM	Process Holding Account Amounts
Adjustment Type - Adjustment FT Creation	C1-FTGL-ADTC	Deferred Accrual Adj - Affects Payoff & GL
Adjustment Type - Adjustment FT Creation	C1-ADJT-CL	Payoff=Current=Adj Amt (Calc Line Dist Code Source)
Adjustment Type - Adjustment FT Creation	C1-SETL-ADJ	FT GL Creation for Settlement Adjustments
Adjustment Type - Adjustment Freeze	ADFR-CRTODO	Adjustment Freeze - Create To Do Entry
Adjustment Type - Adjustment Freeze	C1-DISPPBAP	Disable Prepaid Biller Automatic Payment

<b>ALG_TYPE_ENTITY</b>	<b>ALG_TYPE_CD</b>	<b>ALG_TYPE_DESCR</b>
Adjustment Type - Adjustment Freeze	C1-PPBADJFRZ	Set Prepaid Funds Request FT Details
Adjustment Type - Adjustment Cancellation	ADCA-CRTODO	Adjustment Cancellation - Create To Do Entry
Adjustment Type - Determine SA	C1-SABYBADGE	Get Prepaid SA Using Badge Number
Adjustment Type - Resolve Suspense	C1-CANSUSADJ	Cancel Suspense Adjustment
Adjustment Type - Validate Adjustment	C1-VALXFRADJ	Validate Transfer Adjustment
Approval Profile (BO) - Determine Approval Requirements	C1-ADJAPREQT	Determine Adjustment Approval Requirements
Business Object - Information	C1-ADJAR-INF	Adjustment Approval Request Information
Business Object - Validation	C1-ADJAPVAL	Adjustment Approval Profile Validation
Business Object Status - Enter	C1-BOEN-CADJ	Create Rebate Adjustment
Business Object Status - Enter	C1-DEL-ADJ	Delete Rejected Adjustments
Business Object Status - Enter	C1-FRZ-ADJ	Freeze Approved Adjustments
Business Object Status - Enter	C1-NEM-TRUUP	NEM True Up - Create Adjustments
Business Object Status - Enter	CI_CANADJSA	Activity Request - Mass Adjustment Cancellation
Business Object Status - Enter	CI_CREADJSA	Activity Request - Mass Adjustment Creation
Business Object Status - Exit	C1-RT-CNFZAD	Reverse True Up - Cancel Frozen Adjustments
Business Object Status - Monitor	C1-APR-TMOUT	Adjustment Approval Request Timeout
Field Activity Type - FA Completion Method	C1-FACCHARGE	Apply charges - create adjustments
Installation - Adjustment Information	C1-ADI-INFO	Adjustment Information
To Do Type - External Routing	C1-ADJAREQEM	Create Email For Adjustment Approval

The following Adjustment Types are configured for use when system events occur:

<b>Adjustment Type</b>	<b>System Event</b>	<b>Algorithm Type</b>	<b>Algorithm</b>	<b>Algorithm Description</b>
Additional charge plus tax	Generate Adjustment	ADJG-RT	CI_ADJG_RT	Adjustment generation - apply rate
Appliance service charge	Generate Adjustment	ADJG-RT	CI_ADJG_RT	Adjustment generation - apply rate
Fix budget, adjust cur bal	Adj. Financial Transaction	ADJT-CA	CI_ADJFT-CA	Payoff Amt = 0 / Current Amt = Adj Amount (no GL)
Stop budget (cur = pay)	Adj. Financial Transaction	ADJT-CA	CI_ADJFT-CA	Payoff Amt = 0 / Current Amt = Adj Amount (no GL)
Start budget, adjust curr bal	Adj. Financial Transaction	ADJT-CA	CI_ADJFT-CA	Payoff Amt = 0 / Current Amt = Adj Amount (no GL)
Change charity current balance	Adj. Financial Transaction	ADJT-CA	CI_ADJFT-CA	Payoff Amt = 0 / Current Amt = Adj Amount (no GL)
