Contents

Preface

Audience

This guide is intended for client programmers involved with integrating Oracle Agile Product Lifecycle Management for Process. Information about using Oracle Agile PLM for Process resides in application-specific user guides. Information about administering Oracle Agile PLM for Process resides in the *Agile Product Lifecycle Management for Process Administrator User Guide*.

Variability of Installations

Descriptions and illustrations of the Agile PLM for Process user interface included in this manual may not match your installation. The user interface of Agile PLM for Process applications and the features included can vary greatly depending on such variables as:

- Which applications your organization has purchased and installed
- Configuration settings that may turn features off or on
- Customization specific to your organization
- Security settings as they apply to the system and your user account

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Software Availability

Oracle Software Delivery Cloud (OSDC) provides the latest copy of the core software. Note the core software does not include all patches and hot fixes. Access OSDC at:

http://edelivery.oracle.com.

Chapter 1—Introducing Fact Panel Reporting

This Nutrition Facts Panel Report Pack offers 32 out-of-the- box Nutrition Facts Panel reports that span across formulation specifications, nutrient profiles and trade specifications. This reporting solution utilizes calculated extended attributes embedded in custom sections to create nutrition facts panel data that is exposed in user friendly reports derived via Oracle Business Intelligence Publisher (Oracle BI Publisher). For a complete list and brief descriptions of the provided reports, please refer to

Appendix 1—Report Overviews.

Chapter 2—Supported Nutrition Fact Panel Layouts

This report pack contains Nutrition Facts Panel Reports that contain Fact Panel layouts as defined by Canadian Food Inspection Agency and the United States Food and Drug Administration. The reports include the following formats:

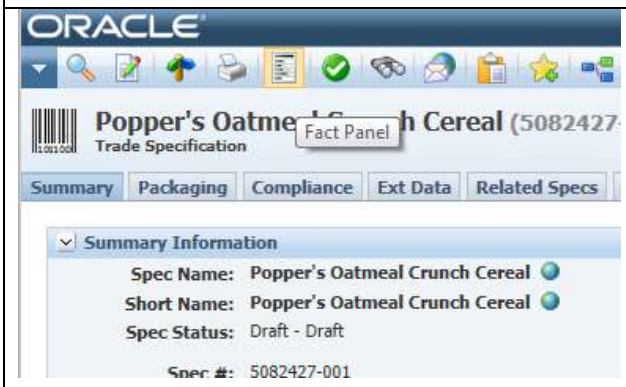
- Standard Format
- Bilingual Standard Format
- Dual Format
- Bilingual Dual Format
- Aggregate Format (up to five products)
- Bilingual Aggregate Format (up to five products)

Where applicable, reports also include Allergens, Label Claims, Complies With, and Ingredient Statement information. See Figure for examples of a US standard panel in English and a Bilingual Panel in English and Spanish.

Figure 1. Examples of a Standard and Bilingual US Panel

Chapter 3—Accessing the Reports

All fact panel reports can be launched from the PLM for Process application using the “Report Dialog” application. The Fact Panel icon should appear on trade, nutrient profiles and formulation specifications. When selected it opens the Report Dialog. Here the user will make selections around concepts like Region, Format, Type and Language to determine which report to launch.



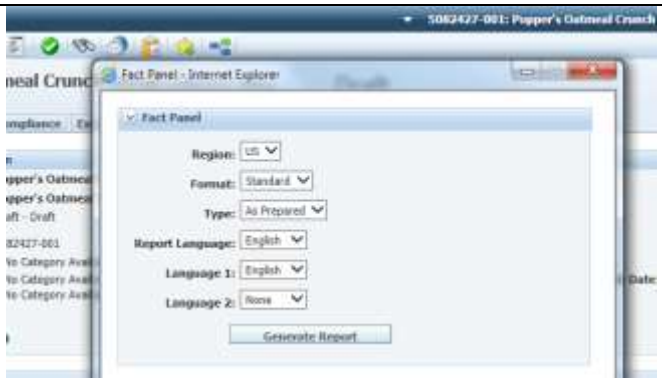


Figure 2. Fact Panel icon and Report Dialog

Chapter 4—Installing the Fact Panel Report Pack

The following requirements must be met prior to installing the Nutrition Facts Panel Report Pack:

- Oracle's Agile Product Lifecycle Management for Process version 6.1.1.5 or 6.2
- Oracle's BI Publisher version 11.1.1.7.x *(refer to Agile Product Lifecycle Management for Process Reporting Guide)*
- Nutrients with appropriate InFoods IDs must exist in the application, as described in the Nutrient Data section of this guide.
- Calculated Extended Attributes that represent nutrient values must be created, as described in the Calculated Extended Attributes section of this guide.
- Regionally based Facts Panel Custom Section must be created, as described in the

- Custom Sections section of this guide.
- Specification Hierarchy structures that are supported by the reports, as described in the following sections of this guide: Trade Specification Reports, Nutrition Profile Reports, Formulation Specification Reports.

The Report Dialog requires the following:

- Oracle's Agile Product Lifecycle Management for Process version 6.1.1.5 or 6.2.
- Hierarchy Denormalization Service is required for this report. You can learn more about this service in the *Agile Product Lifecycle Management for Process Hierarchy Denormalization Guide.*

The following steps must be taken to install the Nutrition Fact Panel reports:

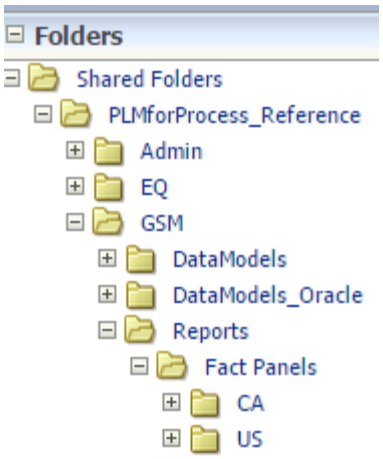
1. Run Reporting DBLayer script, LoadAllObjects.sql located in the <EP_HOME>\ ReferenceImplementations \ReportingDBLayer\<SQLSERVER or ORACLE>\. Read the ReadMe.txt before running this script.

2. Upload the BI Publisher .xdrz file which contains the Nutrition Fact Panel reports. This is located in the <EP_HOME>\ReferenceImplementations\ReferenceReportPacks\GSM directory.

   This file is a BI Publisher binary file which is the folder containing all the reports and the BI Publisher Data Models for both Oracle and SQL Server. This file should be uploaded to the 'Shared Folders' directory in BI Publisher. To upload this file you will need to go to:

   'http://{host}:{port}/xmlpserver/servlet/catalog' where {host} and {port} are those of your BI Publisher installation. When you use this URL, the 'Upload' functionality becomes available in the lower left panel as shown here:

   After uploading this file, there should be a new folder under 'Shared Folders' called 'PLMforProcess_Reference'. Under this folder there will be one folder per Report Pack. The following image shows the BI Publisher directory structure with both the Canadian and US Nutrition Fact Panel reports. If not uploaded to this location the reports will not function.



3. Configuring the Proper Data Model – Oracle or SQL Server

   Out of the box, under the Reporting Pack folder such as 'GSM', there are 2 Data Model folders, one for Oracle and one for SQL Server. They are named 'DataModels_' with either 'Oracle' or 'SQL Server' appended to it. You will need to rename the one you want to use to just 'DataModels'. If you like you can delete the other one. An example of the Data Models configured to use SQL Server is shown in Step 2 above.

   Note: Sample Data

   Each Data Model comes preloaded with a generic sample.xml file. It is recommended that you do not overwrite the sample files, but if this happens, the files are located in the Data Model folders of BI Publisher and can be reloaded. Data Models are usually released without sample data. However, in the case of nutrition facts panel reports, if the sample data file has a null value for a nutrient, BI Publisher will not populate the nutrient data when a report is executed against active data.

4. Confirm the existing Extended Attributes naming convention is in line with what the report expects. Extended Attributes are used to store nutritional values. If the out of the box naming conventions are used for these Extended Attributes then no further steps are required. To see the names that are used out of the box, please see Appendix 2—Required Calculated Extended Attributes.
   If these naming conventions have not been followed then a mapping exercise will be necessary. Please see "How do you use your existing extended data in the reports?" in the Chapter 8—Customizing & Configuring Your Reports section.

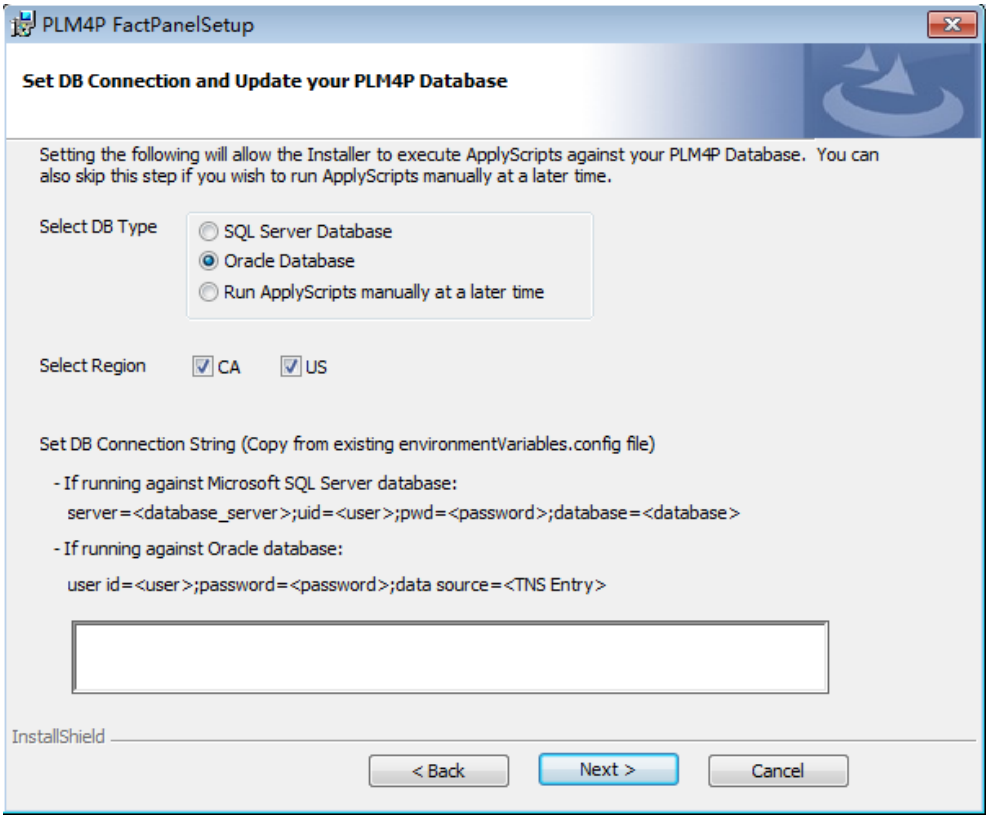
The following steps must be taken to install the Nutrition Fact Panel Report Dialog.

The Nutrition Fact Panel Dialog is not a requirement to use the Fact Panel Reports; however it will make it simpler for users to launch the appropriate report. There are over 30 fact panel reports which could be confusing if launched using standard navigation extensions.

1. **Run the Report Dialog Installer** found in ReferenceImplementation/ReferenceReportPacks/GSM/ReportDialog/FactPanelSetup.exe

a. **Select how to Apply Scripts**. Provide a database type and connection string.

b. **Select the Regions** you want to support.



2. **Map Reports** to a BI Publisher report folder in Extensions/ReportDialog.xml

Find the Fact Panel REPORTFORM node for each form you created.

Create a REPORTDIRECTORY node for each unique BI Publisher directory where the reports are located. You can point each individual ReportID to a different location. The ReportID attribute also allows you to use RegEx. For example, you can declare a specific directory for all report IDs that start with US by setting the ReportID to "US*" Out of the box the US Fact Panel Reports are in a different directory than the CA Fact Panels.

```
<ReportDialog>
    <ReportForm FORMID="FactPanel">
      <ReportFilter
ClassURL="Class:Oracle.Agile.PlmProcess.ReportDialog.Lib.Common.ReportResultFilter,ReportDialog" />
     <ReportURLConfig>
        <ReportDirectory REPORTID="US*" URL="@@VAR:Prodika.ReportServer.URL@@/@@/<REPORT SUBFOLDER PATH>"
ADDITIONALPARAM="_xmode=3"/>
        <ReportDirectory REPORTID="CA*" URL="@@VAR:Prodika.ReportServer.URL@@/<REPORT SUBFOLDER PATH>"
ADDITIONALPARAM="_xmode=3" />
     </ReportURLConfig>
```

```
  </ReportForm>
</ReportDialog>
```

3. **Set Your Consumer Prep Nutrient Profile Workflow Tag**. The As Prepared reports rely on a workflow tag(s) to indicate which Nutrient Profile represents the approved As Prepared nutrient data. Locate the behavior ID(s) for the tag(s) in ADMN and run the following script to update the tag ID(s) for all available reports.

```
update RPT_FactPanel set
PARAMETER_CLASS='Class:Oracle.Agile.PlmProcess.ReportDialog.Lib.Common.SpecRelatedParameterGen
erator,ReportDialog$<TagBehaviorId(s)>' where REPORT_ID in ('US11','US12','CA12','CA13');
```

Chapter 5—Oracle BI Publisher Reports

This Nutrition Facts Panel Report Pack contains Nutrition Facts Panel reports that can be executed via the new Report Dialog (or any custom navigation extension) from formulation specifications, nutrient profiles and trade specifications. Each report contains a Nutrition Facts Panel as defined by either the Canadian Food Inspection Agency or the United States Food and Drug Administration, and where applicable, the report also includes Allergens, Label Claims, Complies With, and Ingredient Statement information.

The Nutrition Facts Panel within each report contains only the required nutrients as defined by either the Canadian Food Inspection Agency or the United States Food and Drug Administration. The data models support all required and voluntary nutrients, so the reports can be customized to include additional nutrients as desired.

Some of the techniques described in this document can be used to present facts panel data in other areas of the application such as ingredient specifications. However, you will need to make adjustments to account for the data available for a given object. For an example 100g data is presented on the ingredients nutrient composition; however, “Serving Size” and nutrient “Per Serving” is not available. Therefore, you will need to add additional custom data and create new report layouts to support these areas if you wish to produce nutrition facts panel reports for ingredient specifications.

Trade Specification Reports

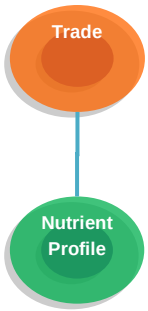
All trade specification reports contain a Nutrition Facts Panel which displays the appropriate nutrient data and ingredient statement from the related nutrient profiles, as well as the Allergens, Label Claims, and Complies With from the trade specification that the report was launched.

The trade specification reports include the following layouts:

- Standard Format
- Bilingual Standard Format
- Dual Format (As Packaged – As Prepared)
- Bilingual Dual Format (As Packaged – As Prepared)
- Aggregate Format
- Bilingual Aggregate Format

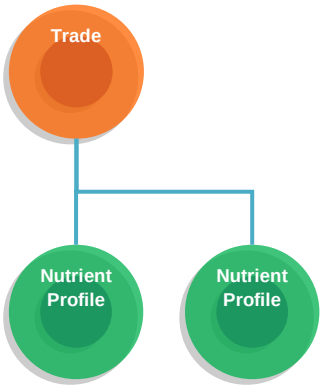
As the trade specification does not store nutrition data, the trade specification Nutrition Facts Panel Report requires the nutrient data to be pulled from nutrient profiles containing the proper information. Since trade specification can be associated with multiple nutrient profiles, the Report Dialog will pass the appropriate information to BI Publisher by interrogating the user’s input and the related nutrient profile’s relationship to the trade specification. The following trade specification hierarchies are supported.

Trade specification with one related “Active” nutrient profile supports the following reports:



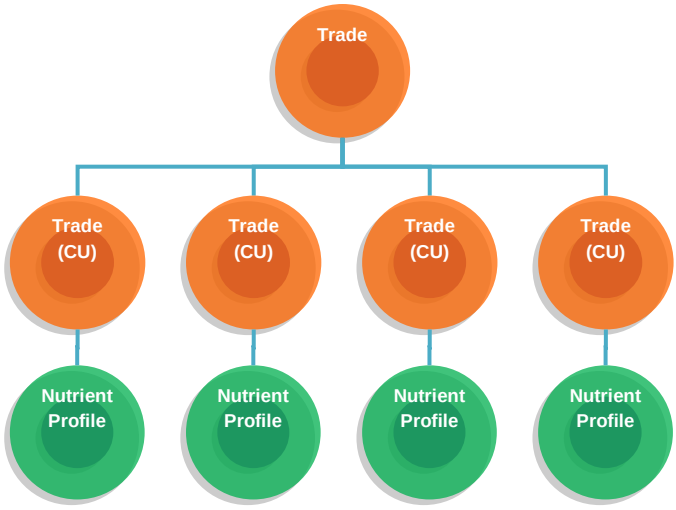
- Trade Standard Nutrition Facts Panel by Region
- Trade Bilingual Nutrition Facts Panel by Region

Trade specification with 1 “Active” nutrient profile (As Packaged), and 1 nutrient profile with the configured Report Dialog workflow tag “As Prepared” supports the following reports:



- Trade As Packaged-As Prepared Dual Column Nutrition Facts Panel by Region
- Trade As Packaged-As Prepared Bilingual Dual Column Nutrition Facts Panel by Region

Trade specification TU/CU hierarchy with 2-4 related “Is Approved” nutrient profiles supports the following reports (the data mode supports up to 5):



- Trade Aggregate 2, 3 and 4 Nutrition Facts Panel by Region
- Trade Bilingual Aggregate 2, 3 and 4 Nutrition Facts Panel by Region

Nutrition Profile Reports

All nutrient profile reports contain a Nutrition Facts Panel which displays the appropriate nutrient data and ingredient statement from the nutrient profile from which the report was launched. “Allergens”, “Label Claims” and “Complies With” data is not displayed; that information resides on trade specifications.

The Nutrient Profile reports include the following layouts:

- Standard Format
- Bilingual Standard Format

Since nutrient data resides directly on the nutrient profiles, the following reports can simply be executed from the nutrient profile.

- Nutrient Profile Standard Nutrition Facts Panel by Region
- Nutrient Profile Bilingual Nutrition Facts Panel by Region

Formulation Specification Reports

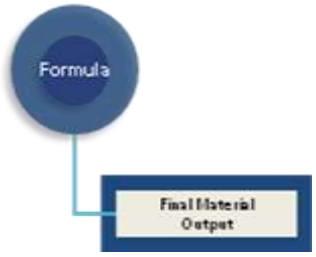
All formulation reports contain a Nutrition Facts Panel which displays the appropriate nutrient data and ingredient statement from the appropriate formulation output material specification from which the report was launched. “Allergens”, “Complies With” and the “Ingredient Statement” data is pulled from the related output material specification. “Label Claims” are not displayed on formulation reports as that information is only stored on trade specifications.

The Formulation Specification reports include the following layouts:

- Standard Format
- Bilingual Standard Format
- Dual Format (As Packaged – As Prepared)
- Bilingual Dual Format (As Packaged – As Prepared)

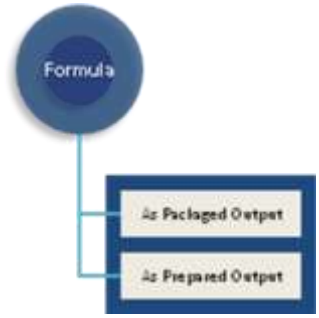
Since the nutrient data resides directly within the formulation specification on the Formulation Output pop-up window, the following reports can executeded directly from the formulation specification.

The following reports are executed against the formulation output of the last step of the formulation.



- Formulation Standard Nutrition Facts Panel by Region
- Formulation Bilingual Nutrition Facts Panel by Region

The following reports are executed against the formulation outputs of the last “Standard” formulation step and the last “Consumer Prep” step of the formulation.



- Formulation As Package-As Prepared Dual Column Nutrition Facts Panel by Region
- Formulation As Package-As Prepared Bilingual Dual Column Nutrition Facts Panel by Region

Note: Since “Servings Per Container” is not captured on formulation output specifications, “Servings Per Container” will not display on the nutrition facts panels within these reports.

Please refer to

Appendix 1—Report Overviews for a complete list of the available Nutrition Facts Panel Reports.

Multilingual Support

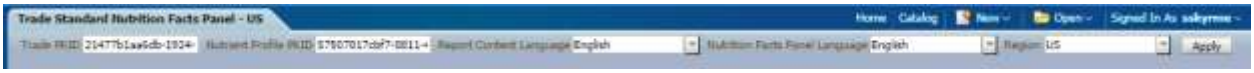
Each report can be executed in English, Spanish or French, and each bilingual report will display the Nutritional Facts Panel in any 2 of the aforemention lanuguages.With respect to lanuguage, the report is driven by 2 different language paramenters defined in the BI Publisher Data Models: Report Content Language and the Nutrition Facts Panel Language.

The Report Content Language parameter determines the language in which the following report labels and report content will display.

- Report Title
- Spec Name
- Spec #
- Equivalent
- Allergens
- Complies With
- Label Claims
- Ingredient Statement

The Nutrition Facts Panel Language parameter determines the languages in which the Nutrition Facts Panel data will be displayed.

For example, if both the Report Content Language and the Nutrition Facts Panel Language are set to “English” in the “Trade Standard Nutrition Facts Panel – US” report,



the entire report will be display in “English” as follows:

US - Nutrition Facts Panel Report

Spec Name: Poppers Oatmeal Bites

Spec #: 5081781-001

Equivalent: USORACLE-558899

Nutrition Facts

Serving Size 3 Cookies

Servings Per Container 4

Amount Per Serving

Date: Oct 2, 2014 at 10:08 PM

For additional information about multi-language support, please refer to *Agile Product Lifecycle Management for Process Configuration Guide*.

Report Naming Convention

The BI Publisher reports also follow a basic naming convention as follows:

[Spec Type][Panel Format][Panel Type]-[Region]-[Languages (if applicable)]

Where,

Spec Type = TRD (Trade), FRM(Formulation), NUTP(Nutrient Profile)

Panel Format = STD(Standard), TAB(Tabular), SIM(Simplified)

Panel Type = SGL(Single), ASP(As Prepared), AGG(Aggregate)

Region = US (United States) or CA (Cananda)

Languages = BI(Bilingual), TRI(Trilingual)

For Example,

TRDSTDSLG – CA – BI = Trade Standard Single Product Canadian Bilingual Report

Chapter 6—Nutrition Facts Panel Custom Data

This section describes the creation and configuration of the nutrients, extended attributes and custom sections needed to support the Nutrition Facts Panel Reporting Pack.

In order for the nutrient information to be available for the reports, the following requirements must be met:

1. All nutrients must be available with the appropriate InFoods ID in the application.
2. All calculated extended attributes must be created with the appropriate Attribute IDs.
3. Custom sections for the US Facts Panel and CN Facts Panel must be created utilizing the newly created extended attributes and extended to nutrient profiles and material specifications.

While nutrient data is captured throughout the specification hierarchy, these reports pull data from a custom section specific to regional facts panel requirements (i.e. Canadian or United States). These custom sections contain the calculated extended attributes that utilize the nutritional information from either the nutrient profile or the formulation output (depending on report) to calculate the following information for each nutrient attribute:

- Per Serving
- Rounded
- Overrides
- Final Per Serving
- %DV (Percent Daily Value)

Nutrient Data

All nutrition facts panel reports derived from trade specifications or nutrient profiles utilize the nutrition data from the related nutrient profile's Nutrition Panel tab. In order for the trade or nutrient profile reports to populate data, the "Amount Per Serving" value on the nutrient profiles must contain data in order for the application to calculate"Per Serving" values of the Nutrition Panel grid. Figure 3 shows the Nutrition Panel grid of the nutrient profile that is used to calculate the nutrient attributes for trade specification and nutrient profiles.

	Nutrient	Per 100g	Source	Per Serving	Comments
1	Calories	380.00000 kcal		209.00000 kcal	
2	Energy kJ	1580.00000 kJ		869.00000 kJ	
3	Protein	4.85000 g		2.66750 g	
4	Carbohydrates	59.00000 g		32.45000 g	
5	Dietary Fiber	5.00000 g		2.75000 g	
6	Total Fat	11.20000 g		6.16000 g	
7	Monounsaturated Fat	4.00000 g		2.20000 g	
8	Polyunsaturated Fat	3.20000 g		1.76000 g	
9	Cholesterol	48.00000 mg		26.40000 mg	
10	Vitamin A - IU	125.00000 IU		68.75000 IU	
11	Thiamin - B1	1.00000 mg		0.55000 mg	
12	Riboflavin - B2	2.00000 mg		1.10000 mg	
13	Niacin - B3	2.00000 mg		1.10000 mg	
14	Vitamin C	3.00000 mg		1.65000 mg	
15	Calcium	50.00000 mg		27.50000 mg	
16	Iron	3.00000 mg		1.65000 mg	
17	Potassium	98.00000 mg		53.90000 mg	
18	Sodium	220.00000 mg		121.00000 mg	

Figure 3. Nutrition Panel Grid

For formulation specifications, the nutrient data is stored in the Nutrient Composition grid of the Formulation Output popup window, as show below in Figure 4.

The Serving Size field located on in the Packaging Configuration section of the Yield tab of the Formulation Output must be populated for the “Per Serving” values to be calculated in the Nutrient Profile grid, as shown in Figure 5.

	Nutrient	Theoreticals (100g)	Overrides	Specification (100g)	Per Serving	Source	Comments
1	Calories	349.95000 kcal		349.95000 kcal	198.41831 kcal	Theoretical	
2	Energy kJ	1391.05000 kJ		1391.05000 kJ	788.71208 kJ	Theoretical	
3	Protein	13.20000 g		13.20000 g	7.48427 g	Theoretical	
4	Carbohydrates	63.61500 g		63.61500 g	36.06910 g	Theoretical	
5	Dietary Fiber	0.05000 g		0.05000 g	0.02835 g	Theoretical	
6	Total Sugar	4.82300 g		4.82300 g	2.73459 g	Theoretical	
7	Total Fat	5.19250 g		5.19250 g	2.94410 g	Theoretical	
8	Saturated Fat	0.91775 g		0.91775 g	0.52036 g	Theoretical	
9	Monounsaturated Fat	1.63945 g		1.63945 g	0.92955 g	Theoretical	
10	Polyunsaturated Fat	1.91295 g		1.91295 g	1.08462 g	Theoretical	
11	Trans Fatty Acid	0.00050 g		0.00050 g	0.00028 g	Theoretical	
12	Cholesterol	0.00000 mg		0.00000 mg	0.00000 mg	Theoretical	
13	Ash	4.29500 g		4.29500 g	2.43522 g	Theoretical	
14	Vitamin A - Total	0.00000 IU		0.00000 IU	0.00000 IU	Theoretical	
15	Thiamin - B1	1.58740 mg		1.58740 mg	0.90004 mg	Theoretical	

Figure 4. Nutrient Composition Grid of the Formulation Output Popup Window

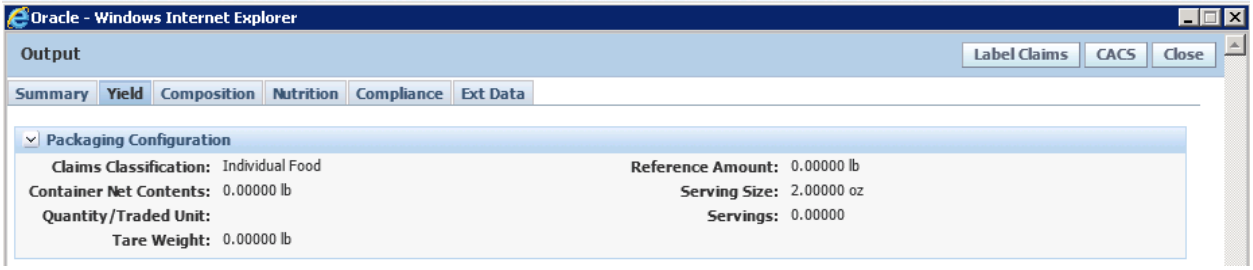

Figure 5. Serving Size field of Formulation Output Popup Window

Nutrients are created utilizing the Data Administration Toolkit. Figure 6 shows an example of the Saturated Fat Nutrient in the Data Admin Toolkit. The InFoods ID is used as a variable in the calculated extended attribute's Jscript to obtain the "Per Serving Values" for the new custom sections.

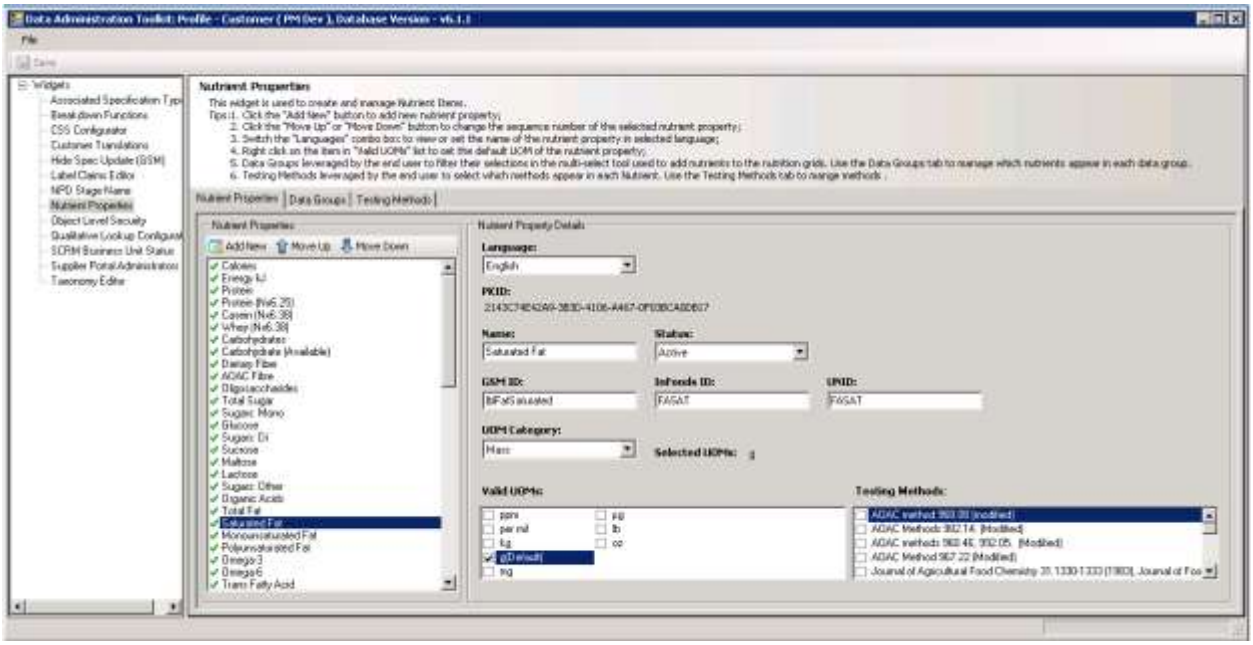

Figure 6. Saturated Fat Nutrient, Data Administration Toolkit

For additional information about nutrient creation, please refer to *Agile Product Lifecycle Management for Process Data Administration Toolkit Guide*.

The following nutrients are supported by the Nutrition Facts Panel Report Pack:

- Added Sugars
- Biotin
- Calcium
- Calories
- Calories From Fat
- Carb
- Chloride
- Cholesterol
- Chromium
- Copper
- Fat
- Fiber
- Folate
- Insoluble Fiber
- Iodine
- Iron
- Magnesium
- Manganese
- Molybdenum
- Monounsaturated Fat
- Niacin
- Other Carbohydrate
- Pantothenic acid
- Phosphorus
- Polyunsaturated Fat
- Potassium
- Protein
- Riboflavin
- Saturated Fat
- Selenium
- Sodium
- Soluble Fiber
- Sugar Alcohol
- Sugar
- Thiamin
- Trans Fat
- Vitamin A
- Vitamin A Total
- Vitamin B12
- Vitamin B6
- Vitamin C
- Vitamin D
- Vitamin E
- Vitamin K
- Zinc

Calculated Extended Attributes

The majority of the required nutrition attributes are represented by calculated extended attributes. While the nutrient profiles and formulation output materials store the “Serving Size”, “Per Serving(100 g)”, and “Per Serving” nutrient values, calculated extended attributes are used to expose/calculate the “Per Serving”, “Rounded”, “Overrides“, “Final Per Serving“ and “%DV“ for the nutrient information needed to produce a Nutrition Facts Panel reports.

Figures 7 though 11 show the exact configuration to create the Saturated Fat row within the US Facts Panel custom section. All remaining calculated extended attributes are very similar except for the specific Jscript used to perform calculations on specific nutrition attributes. Please refer to Appendix 2—Required Calculated Extended Attributes for a listing of all required calculated extended attributes that must be created to support the Nutrition Facts Panel Report Pack.

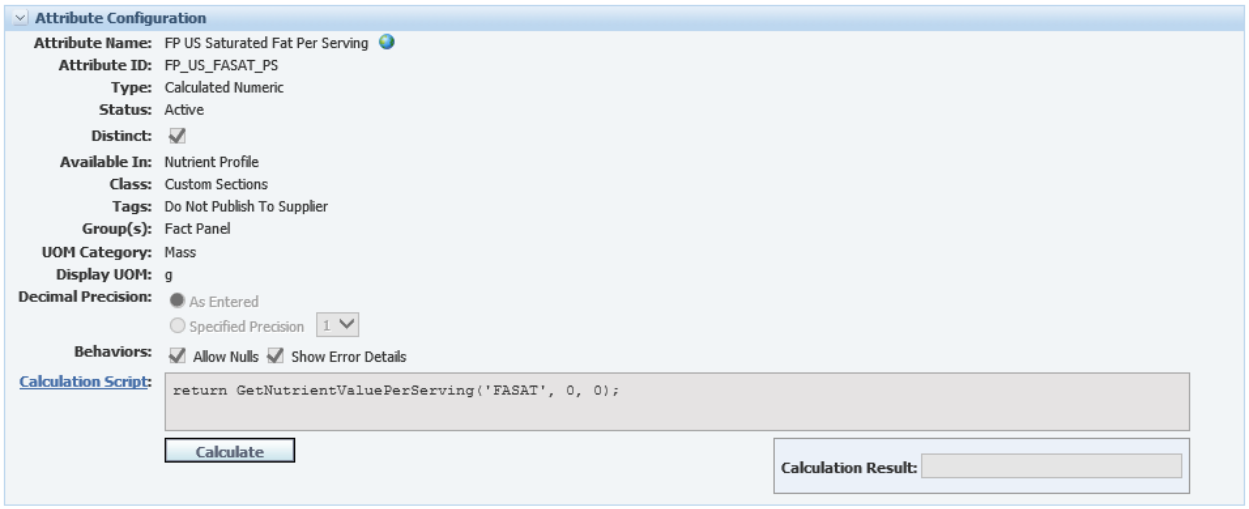

Figure 7. FP Saturated Fat Per Serving

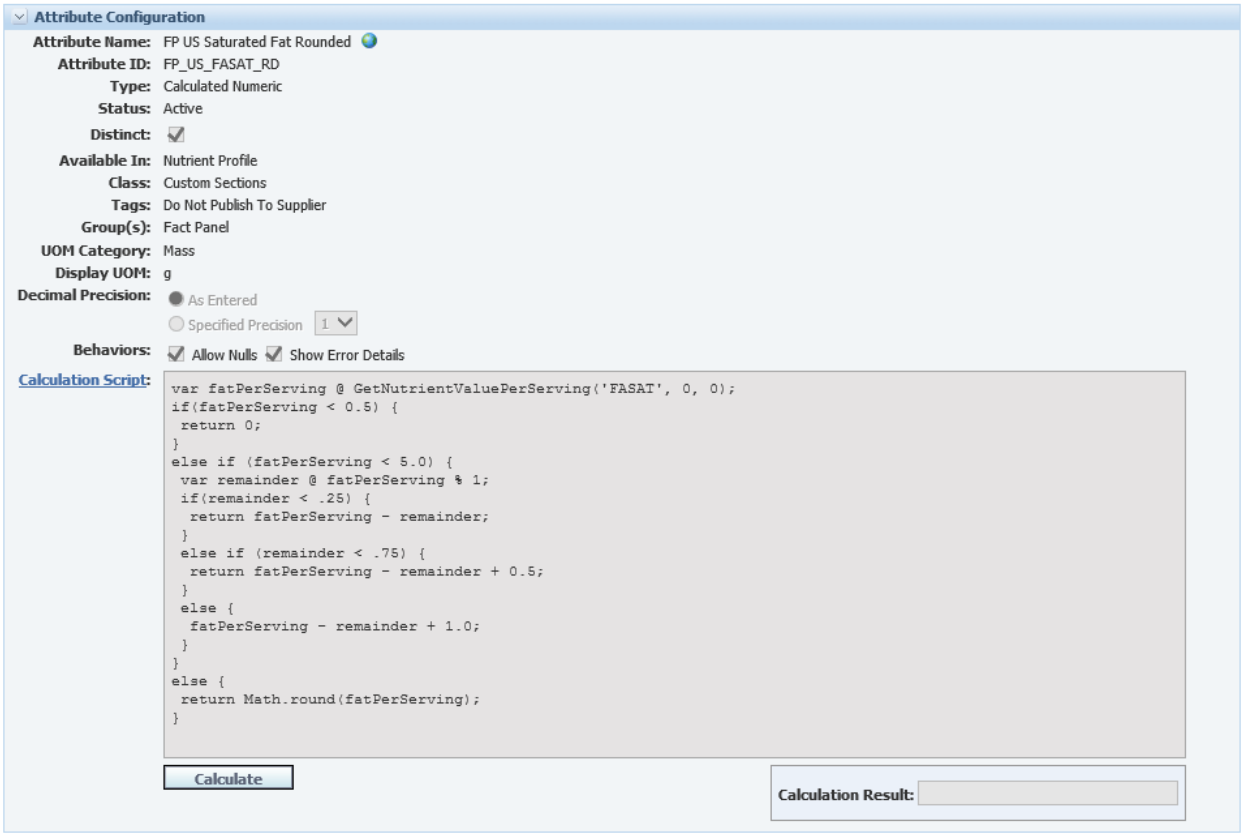

Figure 8. FP Saturated Fat Rounded

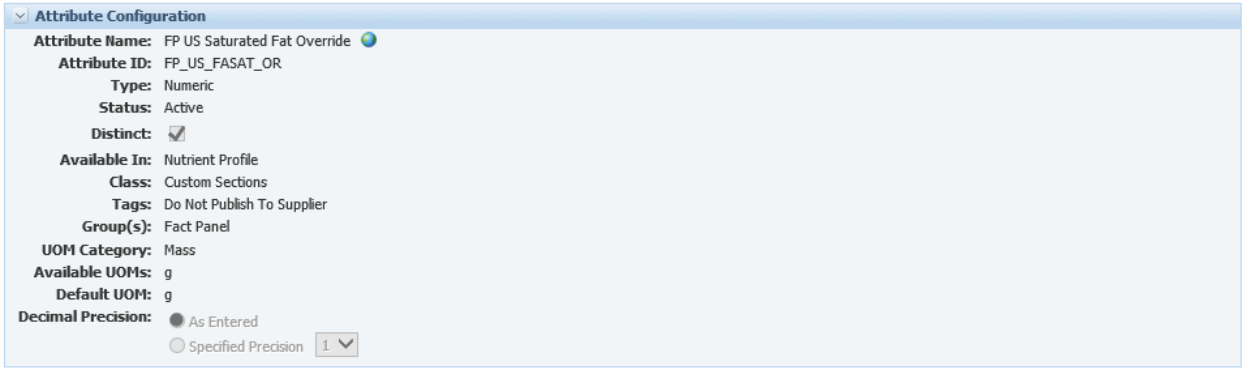

Figure 9. FP Saturated Fat Override

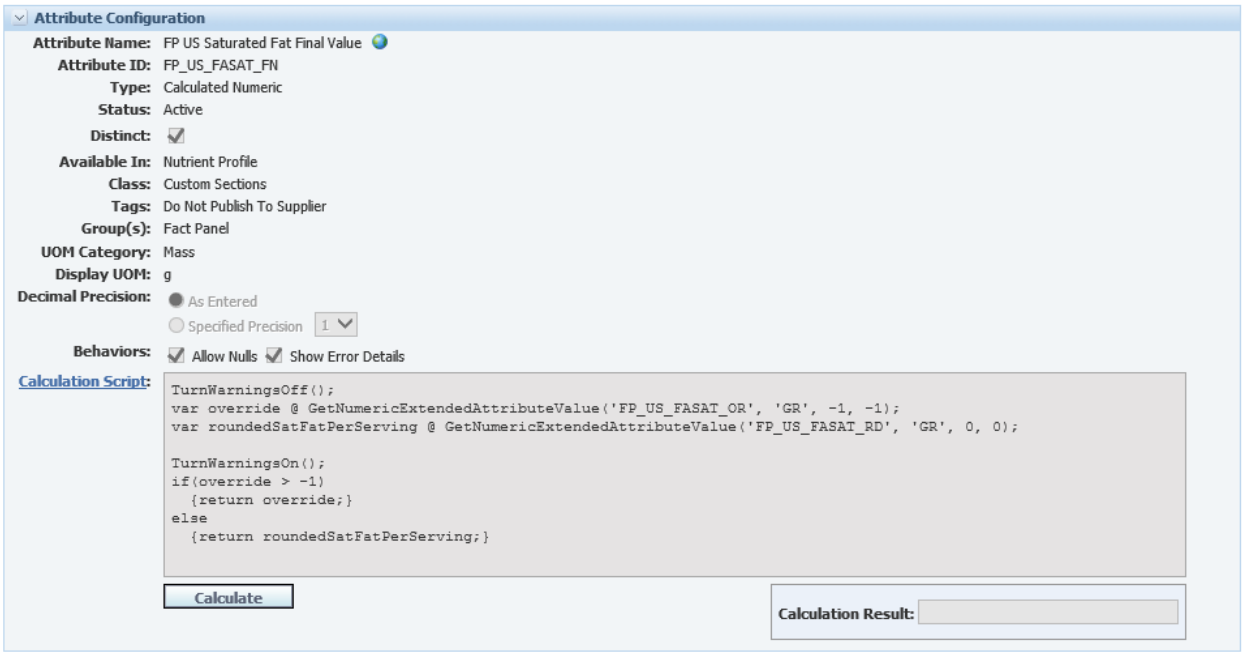

Figure 10. FP Saturated Fat Final Value

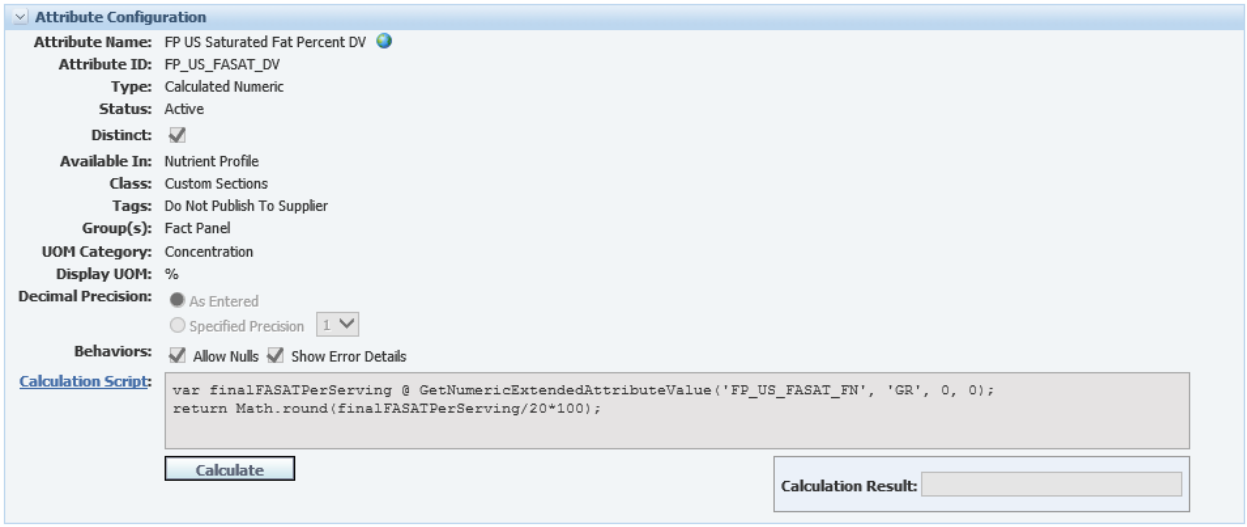

Figure 11. FP Saturated Fat DV

All “Per Serving Values”, “Rounded Values”, “Final Values” and “%DV” extended attributes should be created as follows:

- Type: “Calculated Numeric”
- Status: “Active”
- Distinct: “checked”
- Available In: <Null>
- Class: Custom Sections
- Tags: “Do Not Publish To Supplier”

- Group(s): "Fact Panel"
- UOM Category: "*Based on nutrient, See* Appendix 2—Required Calculated Extended Attributes"
- Display UOM: "*Based on nutrient, See* Appendix 2—Required Calculated Extended Attributes"
- Decimal Precision: "As Entered"
- Behaviors: Allow Nulls – "Checked" and Show Error Details - "Checked"
- Calculation Script: "*Based on nutrient, See* Appendix 2—Required Calculated Extended Attributes"

All "Override" extended Attributes should be created as follows:

- Type: "Numeric"
- Status: "Active"
- Distinct: "checked"
- Available In: <Null>
- Class: Custom Sections
- Tags: "Do Not Publish To Supplier"
- Group(s): "Fact Panel"
- UOM Category: "*Based on nutrient, See* Appendix 2—Required Calculated Extended Attributes"
- Available UOM: "*Based on nutrient, See* Appendix 2—Required Calculated Extended Attributes"
- Default UOM: "*Based on nutrient, See* Appendix 2—Required Calculated Extended Attributes"
- Decimal Precision: "As Entered"

***Very Important*:** Each extended attribute must be created as a "**Distinct**" attribute to support the Oracle BI Publisher SQL script that provides the nutrition data for the report pack.

Note: See the *Agile Product Lifecycle Management for Process Extended Attribute Calculation Guide* for more information on calculate extended attributes, and Appendix B of the *Agile Product Lifecycle Management for Process Administration User Guide* for a listing of all variables and InFoods IDs needed to pull nutrient and serving size values from specifications.

Extended Attribute Naming Convention

When creating extended attributes, it is very important to think through the naming conventions. Standardizing your naming conventions for your extended attributes will make it much easier to search for specific extended attributes. Knowing that the calculated extended attributes for the Nutrition Facts Panel Report Pack supports both Canadian and United States facts panels, a complete set of extended attributes that represent each of the nutrient values for both regionally defined regulatory standards must be created. When creating the new extended attributes it might be helpful to consider the following nomenclature:

[FP] [REGION] [INFOODSID] [USE]

Example of "US Carbohydrates Percent Daily Value":

FP US CHOCDF DV

Where,

FP = Fact Panel (primarily used for extended attribute user lookup)

REGION = Country/Region the EA is associated (i.e. US and CN)

INFOODSID = Abbreviation for nutrients adopted from InFoodsID

USE = Describes the nutritional calculations

- PS = Per Serving
- RD = Rounded
- FN = Final Values
- DV = Percent Daily Values
- OR = Overrides

InFoods is an international recognized organization that establishes international guidelines and standards for food and component nomenclature, data interchange, compilation, data checks, conversions, sampling, and data quality.

***Note*:** Added Sugar, Sugar Alcohol and Other Carbohydrates do not currently have a defined InFoods ID.

Rounding Rules

All rounding rules and %DV rules needed for the calculated extended attributes can be obtained at the following web addresses:

US Rounding and %DV Rules:

http://www.fda.gov/food/guidanceregulation/guidancedocumentsregulatoryinformation/labelingnutrition/ucm064932.htm

Canadian Rounding and %DV Rules:

http://www.inspection.gc.ca/english/fssa/labeti/nutricon/nutriconapp3e.shtml

Custom Sections

Both a United States Facts Panel and a Canada Facts Panel custom section must be created and contain the following columns: “Per Serving”, “Rounded”,” Overrides”, “Final Per Serving”, “%DV”. Since this is a custom section, additional columns can be added as needed to meet specific business requirements.

The “US Fact Panel” and “CN Fact Panel” custom sections must be created to support the report. The following information should be used to create both custom sections:

- Section Name: US Fact Panel or CN Fact Panel
- ID: US_Fact_Panel or CN_Fact_Panel
- Hide Header: Null
- Status: Active
- Available In: Nutrient Profiles, Formulation Specifications
- Tags: Do Not Publish To Supplier
- Denorm Model: Null
- Section Alias: Null
- Include In De-norm: Null
- De-norm Type: Direct Map
- De-norm Status: Will Not Be Included in the Denorm Process (-1)

In most cases, each row of the “US Facts Panel” and “Canada Facts Panel” customs sections represent an individual nutrient that can be found on the Nutrition Panel tab. Since regulatory agencies do not call for “%DV” values on all nutrition attributes, some custom section cells will be left blank. Depending on your business requirements, your custom section could include all required and voluntary nutrients as defined by each region in which the custom section is defined. The delivered data models currently support all required and voluntary nutrients defined by both United States and Canada regulatory agencies. Figure 12 displays a partial view of the US Facts Panel custom section for all required and voluntary nutrients.

Figure 12. US Facts Panel Custom Section

Custom Section Naming Convention

Like extended attributes, it is very helpful to think through the naming conventions. When creating the custom sections consider the following nomenclature:

[REGION] Fact Panel

Example of "United States Fact Panel"

US Fact Panel

Where,

REGION = Country/Region the Custom Section represents (i.e. US, EU or CN), and

Facts Panel is simply used to identify the custom section

For additional information on custom section creation, please refer to *Agile Product Lifecycle Management for Process Administrator User Guide*.

Chapter 7—Oracle BI Publisher Data Models

The Nutrition Facts Panel reports are supported by eight Oracle BI Publisher data models. The data models include all required and voluntary nutrients as defined by Canadian Food Inspection Agency and the United States Food and Drug Administration. The data models also include specific Nutrition Facts panel verbiage (i.e. Servings per Container, Amount, Less Than, etc) that is language aware. Users can further customize the reports to include any additional nutrient requirements for your specific business. Figure 13 shows an example of the Trade Hierarchy Fact Panel data model that supports the United States Standard Nutrition Facts Panel Report.

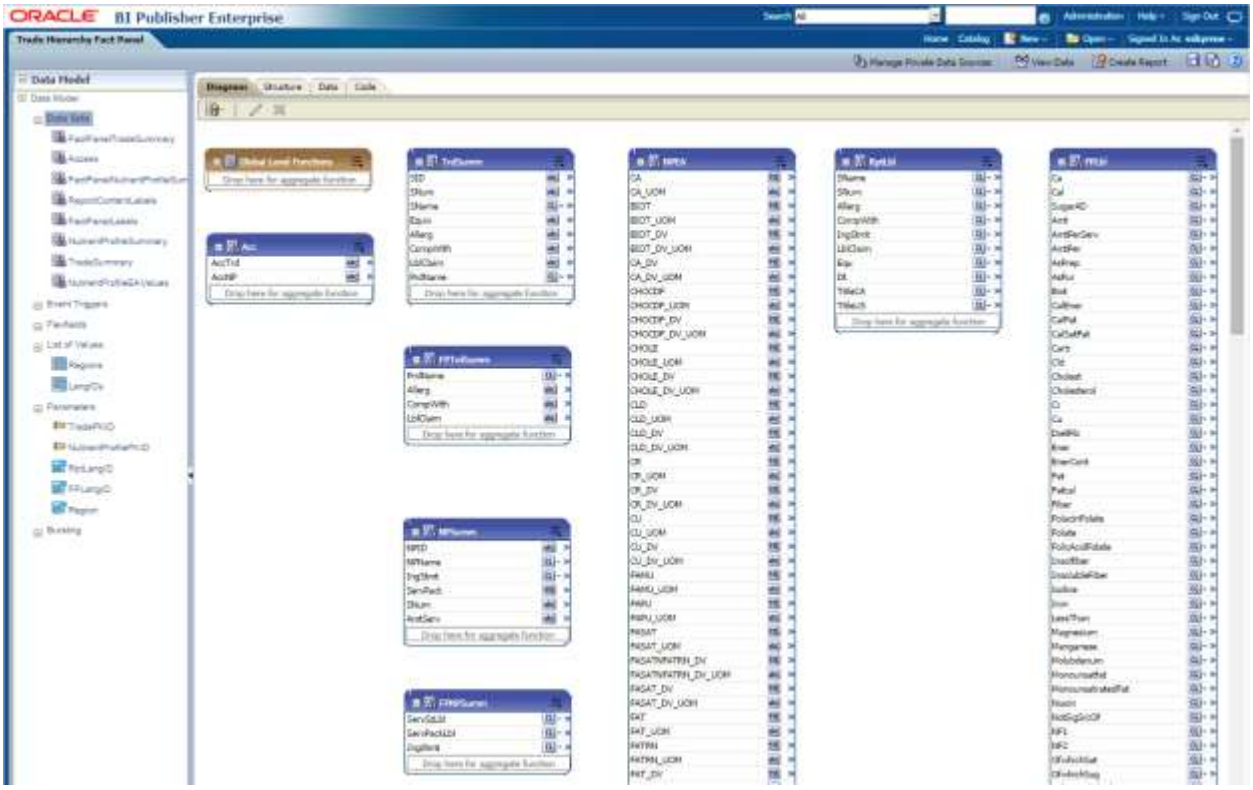

Figure 13. Trade Hierarchy Fact Panel Data Model

Chapter 8—Customizing & Configuring Your Reports

How do you use your existing extended data in the reports?

If your existing extended attributes have different IDs than detailed in Appendix 2 you will need to re-map your IDs. The Fact Panel Data Model retrieves its nutritional values from Extended Attributes. A database table, ReportingEAIDMapping, is used to determine which Extended Attributes to pull from. When running the DB Layer SQL scripts, this table is created and populated with EA IDs that customers will most likely not have. There are 2 deployment options.

1. Create Extended Attributes as descibred above that correspond with the out of the box IDs.

2. Use Extended Attributes with different IDs and update the ReportingEAIDMapping table to point to these these Extended Attributes. One simple way of doing this is to updated the CustomerSpecific_ReportingEAIDMapping_SQLServer.sql or CustomerSpecific_ReportingEAIDMapping_Oracle.sql script, locate in the <EP_HOME>\ReferenceImplementations\ReferenceReportPacks\GSM\Scripts\ directory, by replacing the out of the box Extended Attribute IDs with the customer specific IDs. This script will delete all rows from this table if it exists and then insert the updated mappings. For example, take the following insert statement::

```
insert into ReportingEAIDMapping (GenericEAID, Region, CustomerEAID)
values ('BIOT', 'US', 'FP_US_BIOT_FN');
```

   The out of the box Extended Attribute ID is 'FP_US_BIOT_FN'. If the customer uses an Extended Attribute with an ID of '*US_BIOTIN_F*' then the insert statement should change to:

```
insert into ReportingEAIDMapping (GenericEAID, Region, CustomerEAID)
values ('BIOT', 'US', 'US_BIOTIN_F');
```

   See Appendix 2—Required Calculated Extended Attributes for a list of all the out of the box IDs with their corresponding names.

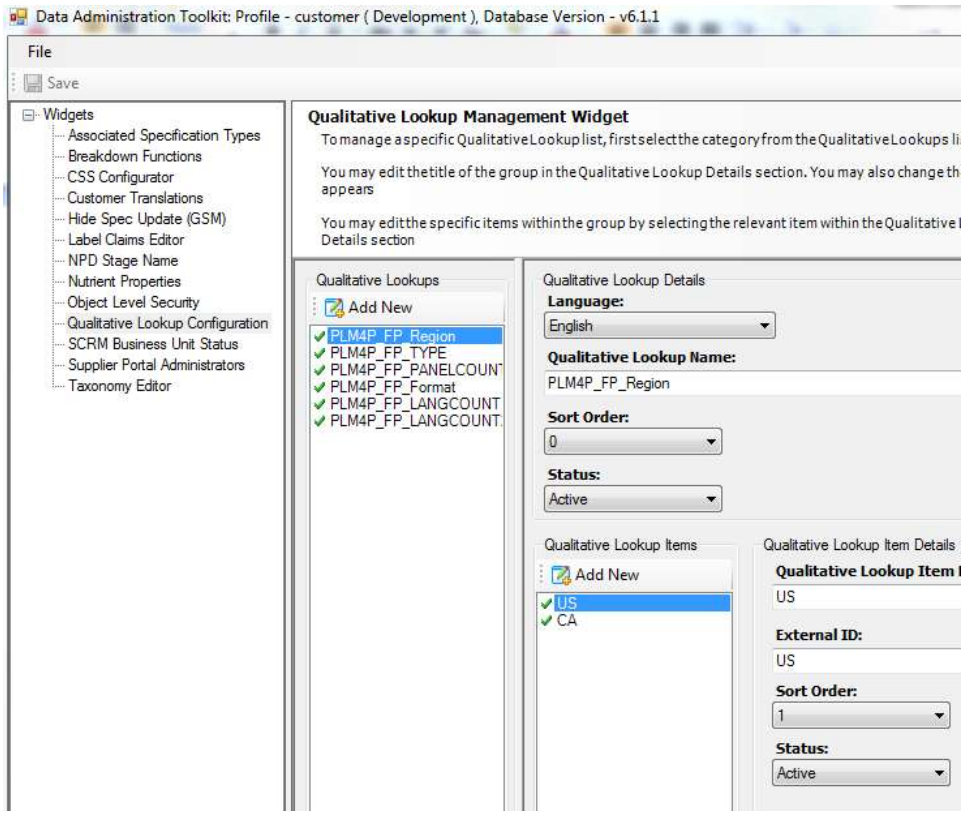
Once this table is populated with the proper Extended Attribute IDs, the Fact Panel reports will use them.

How do you add a new region?

The Fact Panel Report Pack currently supports US and Canadian regulatory requirements. To support a new regulatory body or geographical region you'll need to do the following:

1. **Add New Region Admin Data:** Create the new Region in an existing Qualitative Lookup by using the Data Adminstration Toolkit. After launching the toolkit select 'Qualitative Lookup

Configuration' under 'Widgets' in the left hand navigation. In the center pane, select 'PLM4P_FP_Region'. Select the 'Add New' button and in the right pane add the new region. Follow the Data Adminstration Toolkit process to deploy this change to your environment.



2. **Add New Extended Attributes**: If needed, create a new set of Extended Attributes using the Data Admin application.

3. **Map new Extended Attrbutes to the new Region:** In order for the report to use the new Extended Attributes they will need to be mapped to the Region by inserting data into the ReportingEAIDMapping table. The below script, and also provided as script CreateExtendedAttributesForNewRegion.sql, will create 'insert' statements for new Extended Attributes, based on those of another Region, provided you follow the same naming convention for the new Extended Attributes as the existing ones do. Before running this script, replace '_<NewRegion>_' with the actual name of the region. Also update the existing region to copy.

```
 select
'insert into ReportingEAIDMapping (GenericEAID, Region, CustomerEAID)
values ( ''' + GenericEAID+ ''', ''<NewRegion>'',
'''+replace(CustomerEAID,'_US_','_<NewRegion>_')+''');'
from ReportingEAIDMapping
where Region='US';
```

4. **Create BI Publisher Report:** Copy and existing Fact Panel report and make the necessary formatting changes. The new report could use the existing Data Model, but the new region will need to be passed in as a parameter. The new Region should be added to the Regions 'List of Values' in the Data Model.

5. **Update Report Dialog to recognize new region.** For each new report created a new row will need to be added to the rpt_factpanel table.

   The rpt_factpanel table controls what choices are presented to the end user. The following table describes the relevant columns. Updating these columns will change what is dislayed in the Report Dialog and how the Report is called. Please see the 'Report Dialog' section of the *Agile Product Lifecycle Management for Process Reporting Guide* for more information explaining how the Report Dialog application works.

FORMID	"FactPanel"
FP_REGION	The region the report is available for, use country code if possible. Example US, CA. List is pulled from the Qualitative Lookup Configuration called 'PLM4P_FP_REGION' in the Data Administration Toolkit. The value defined in the External ID field is used.
FP_FORMAT	The available format of the report. Currently only "Standard" is available. List is pulled from Qualitative Lookup Configuration called 'PLM4P_FP_FORMAT' in the Data Administration Toolkit. The value defined in the External ID field is used.
FP_TYPE	The Type of report. Example Single, As Perpared, Aggregated. List is pulled from Qualitative Lookup Configuration called 'PLM4P_FP_TYPE' in the Data Administration Toolkit. The value defined in the External ID field is used.
FP_PANELCOUNT	Only relevant when the FP_TYPE is set to 3, which is "Aggregated". The value defines the number Fact Panels that the report displays.
FP_LANGUAGE1 **FP_LANGUAGE2** **FP_LANGUAGE3**	Provides the LanguageID options for the labels of the actual Fact Panel such as "TotalFat" as opposed to the other report labels that are not part of the actual Fact Panel. FP_LANGUAGE1 will hold the options for the first language, left most. FP_LANGUAGE2 and FP_LANGUAGE3 will hold the options for the second and third languages for a multilingual report.
FP_REPORTLANG	Provides the LanguageID options for the report labels that are not part of the actual Fact Panel, such as "Spec Name".
HOST_TYPE	Spec Type number that the report is associated with.
REPORT_FILENAME	BI Publisher name of report
REPORT_ID	ID to uniquely identify report
PARAMTER_CLASS	Class which is called to build URL for report. "Class:Oracle.Agile.PlmProcess.ReportDialog.Lib.Common.SpecRelatedParameterGenerator,ReportDialog"

For example, if you created a single language report for the China region called NUTPSTDSGL-CN.xdo you would add the following row to this table.

```
insert into RPT_FactPanel ( FORMID, fp_region, fp_format, fp_type, fp_panelCount,
fp_Language1, fp_Language2, fp_Language3, fp_reportLang, fp_FormulaOutput,
fp_FormulaOutput2, HOST_TYPE, REPORT_FILENAME, REPORT_ID, PARAMETER_CLASS ) SELECT
'FactPanel', 'CN', '1', '1', NULL, '0,1,2', 'EMPTY', NULL, '0,1,2', '*', NULL, ' 5750
```

```
', ' NUTPSTDSGL-CN.xdo ', 'CN1',
'Class:Oracle.Agile.PlmProcess.ReportDialog.Lib.Common.SpecRelatedParameterGenerator,Re
portDialog' FROM DUAL WHERE NOT EXISTS(SELECT 1 FROM RPT_FactPanel WHERE REPORT_ID
='CN1');
```

If this new Region will share an existing report then append the new Region to the existing Region(s) in the Region column. This list will need to be comma separated.

6. **Update ReportDialog.xml to point to the right BI Publisher subfolder.** You need to tell the Report Dialog which BI Publisher subfolder your new report is in. The example below will direct all reports that start with the ID "CN" to a specific BI Publisher subfolder.

```
<ReportDirectory REPORTID="CN*" URL="@@VAR:Prodika.ReportServer.URL@@/<SUBFOLDER>" />
```

How do you add a new nutrient item?

The out of the box reports may not include all of the nutrients you need to see in a fact panel. Do the following to add a new nutrient:

1. Manually create one or many Extended Attributes for this nutrient. The number of Extended Attributes will depend on the number of Regions it is applicable to.
2. Map the new Extended Attributes to the Regions by adding a row for each Extended Attribute to the ReportingEAIDMapping table.
3. Update the Data Models to include new the new Nutrient.
4. Update the reports to include the new Nutrients.

How do you add a new language for an existing report?

The out of the box reports support English, Spanish and French. To support additional languages in these reports you'll need to do the following.

The labels for these reports are pulled from a table that supports multiple languages. In order for the report to function properly, this table must contain the labels with the appropriate language ID.

1. Verify you have the needed translations for the new language by executing the below script and ensuring the translations exist and are correct. Change the <NewLangID> parameter to the language ID you are supporting.
   ```
   select * from ReportingFactPanelNutrientsML where LangID=<NewLangID>;
   ```
2. If label translations are need to be added, use the below script. Update the '<NewLangID>' place holder prior to runnning. This script will create SQL Insert statements to create rows that match those translations of LangID = 0. Then update the scripts with the new translations by replacing the <NewValue> place holder.

```
select
```

```
'insert into ReportingFactPanelNutrientsML (ID, Value, LangID)
values ( '''+ID+''', ''<NewValue>'', <NewLangID>);'
from ReportingFactPanelNutrientsML
where LangID=0
```

3. Make the new language available to the Report Dialog by updating the rpt_factpanel table. The below script is an example SQL update statement that appends the new Lang ID to the fp_language1 column for a specific report name. Update the <NewLangID> and <ReportName> placeholders before executing. Do the same update to the fp_language2 and fp_language3 columns for multilingual reports.

```
update rpt_factpanel
set fp_language1 = fp_Language1+',<NewLangID>'
where
REPORT_FILENAME='<ReportName>'
```

Appendix 1—Report Overviews

Report Name	Report Long Name	Report Description	Data Model
TRDSTDAGG2-CA.xdo	Trade Aggregate 2 Nutrition Facts Panel Report	This report is designed to launch from a parent trade specification with 2 Consumer Unit trade specifications. It includes a Canada Aggregate Nutrition Facts Panel that displays the nutrition data from 2 Active nutrient profiles of the parent Traded Unit's hierarchy, as well as the ingredient statements. The allergens, label claims and complies with information is pulled from each of the Consumer Units specifications.	Fact Panel TRD Aggregate
TRDSTDAGG3-CA.xdo	Trade Aggregate 3 Nutrition Facts Panel Report	This report is designed to launch from a parent trade specification with 3 Consumer Unit trade specifications.
