Section: Standards Support, Supported Configurations and WebLogic Server Compatibility, Database Interoperability	
For additional information on the type of database to use.	
Instructions on installing this integration on non-Windows/ Linux platforms	Refer to Oracle Support Knowledge Article ID 1349320.1.

## Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

---

## Access to Oracle Support

Oracle customers have access to electronic support for the hearing impaired. Visit: <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs>

## Conventions

The following text conventions are used in this document:

Convention	Meaning
<b>boldface</b>	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

## Abbreviations

The following table lists the commonly used abbreviations in this guide.

Abbreviation	Definition
BPEL	Business Process Execution Language
CCB	Oracle Utilities Customer Care and Billing
DB	Database
DVM	Domain Value Map
ICS	Integration Cloud Service
MDS	Meta Data Store
OAAF	Oracle Utilities Application Framework
SOA	Service Oriented Architecture

# Chapter 1

---

## Introduction

This document provides configuration and administration information for SOA Based Service Catalog for Oracle Utilities ICS Adapter.

The overview includes the following:

- [Prerequisites](#)
- [About SOA Based Service Catalog for Oracle Utilities ICS Adapter](#)

## Prerequisites

All participating applications must be installed, set up, and working properly.

## About SOA Based Service Catalog for Oracle Utilities ICS Adapter

This section provides general information about the functionality and processing of the SOA Based Service Catalog for Oracle Utilities ICS Adapter.

Oracle Integration Cloud Service simplifies building integrations in the cloud, enabling to connect securely to applications and services, both in the cloud and on-premises.

The Oracle Utilities Adapter integrates Oracle Utilities Suite with your SaaS and on-premise applications to allow faster implementation, increased control, and lower costs.

Trigger (inbound) and Invoke (Outbound) support is provided for the Oracle Utilities ICS Adapter. The trigger capability enables Oracle Utilities Applications to trigger integration in Oracle Utilities ICS Adapter and the invoke capability allows invocation of an Oracle Utilities Application using web services from Oracle Integration Cloud Service.

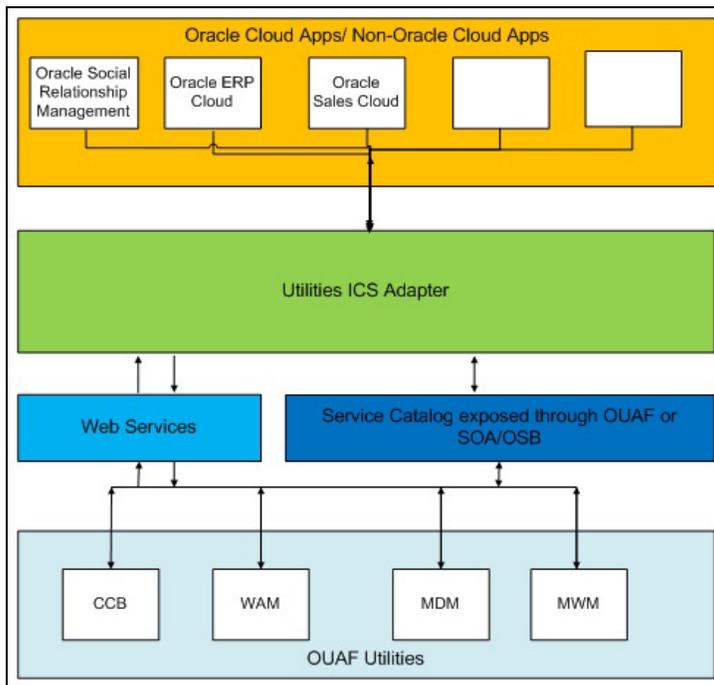

Both Inbound and Outbound Services are exposed using the Oracle Utilities Service Catalog. The Service Catalog provides a comprehensive list of services available for integration. Oracle Utilities ICS provides a simplified user experience in terms of creating data mappings at design time while constructing integrations with Utilities applications using the Oracle Utilities Adapter.

When creating a connection using the Oracle Utilities ICS Adapter, specify a web service that returns a list of all Inbound/Outbound Services that are currently exposed as part of the Catalog Service by one or more OUAF based applications.

The information retrieved by the adapter includes the name, the source system, description, the WSDL location and namespace. Every Inbound/Outbound service structure is exposed using a SOAP based WSDL.

**Note:** In order for the Oracle Utilities ICS Adapter to work with a Service Catalog, an interim solution of a SOA based BPEL catalog has been created to handle the aspect of returning the Catalog information required. In order for the catalog to work properly the username/ password used when creating an ICS connection should be synchronized between OUAF applications and the SOA Catalog Service.

**Note:** This document covers the basic details about the SOA based Catalog service. The documentation for the Service Catalog provided by Oracle Utilities Application Framework is part of the OUAF documentation.

ICS Integration Overview

# Chapter 2

---

## Understanding the Integration Process

This chapter provides the Service Catalog Enterprise Business Flow (EBF) processing details.

The Service Catalog EBF returns a list of catalog services from integration. The message format returned from integration is in the same format as what Oracle Utilities Application Framework returns; this way the catalog can be seamlessly switched between using SOA Service Catalog and OUAF Service Catalog.

- The Service Catalog EBF is a synchronous BPEL process receiving requests to return the list of services provided by the edge applications.
- The BPEL process invokes a Transformation/XSLT that looks up the `Number_Of_Services.dvm` to read the number of services currently in the Service Catalog.
- After the number of services is obtained, the next step in the transformation is to loop through each of the service and read the `ServiceCatalog.dvm` to obtain the following values in the DVM for each `serviceName`:
  - product
  - serverRole
  - serviceMode
  - category
  - serviceName
  - description
  - synopsis
  - wsdlLocation
  - wsdlTargetNamespace
- The transformed message is returned as response to the Service Catalog.
- Any errors encountered are handled in the integration layer.
- By default, `oracle/oracle/Utilities_wss_http_token_service_policy_OPT_ON` security policy is attached to the Service Catalog, so no credentials are needed to invoke the Catalog service.

The credentials provided while creating a connection in ICS should be the same as the credentials to access OUAF based applications, as well as SOA Catalog. Ensure the username is setup correctly in both OUAF based applications and SOA Catalog.

# Chapter 3

## Configuring the Integration

The DVMs `Number_Of_Services.dvm` and `ServiceCatalog.dvm` control what is returned by the Service Catalog.

This section provides details about the configuration settings required for the integration, and also discusses the following in detail:

- [Adding a Service to Service Catalog](#)
- [Sample Service Catalog Request/Response](#)
- [Creating New Utilities Adapter Connection in ICS](#)
- [Creating Integration Wizard for UGBU Connection](#)

### Adding a Service to Service Catalog

To add a new service to the Service Catalog follow these steps:

1. Navigate to `Number_Of_Services.dvm` and update it with the number of services to be read from the catalog.
2. Navigate to `ServiceCatalog.dvm` and update it with all the details needed for the service.
3. Run the following commands at the Command prompt to update MDS with the updated values of DVM.

Linux

```
cd $PRODUCT_HOME/bin
ant -f InstallBuild.xml installSOA -
DInstallProperties=$PRODUCT_HOME/config/InstallProperties.xml -l
InstallICSCatalog.log
```

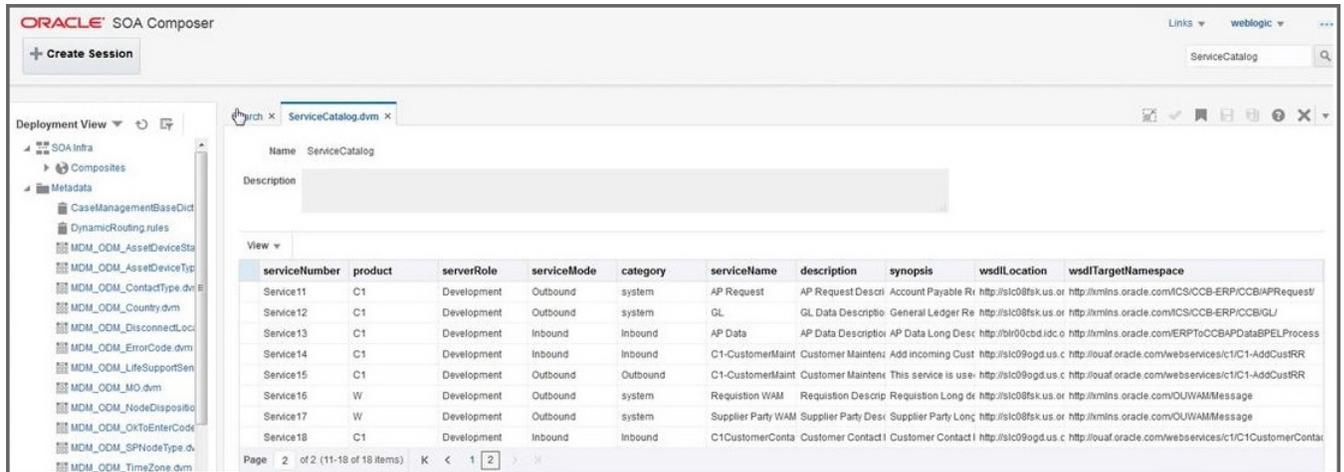

Windows

```
cd %PRODUCT_HOME%\bin
ant -f InstallBuild.xml installSOA -
DInstallProperties=%PRODUCT_HOME%/config/InstallProperties.xml -l
InstallICSCatalog.log
```

**Note:** The DVMs can also be updated using the SOA Composer.

Update using SOA Composer will not update the local dvms stored on the file system; hence local DVM files are maintained in sync with that in MDS.

The figure below shows the DVM that can be modified from SOA Composer where the ICS Catalog is deployed.

- After the new service is added to the Service Catalog, navigate to the existing ICS connection and refresh the metadata on the connection.
- Now, you can create or go to an existing integration and see the new service appear while selecting the connection. The new service is ready for use.

## Sample Service Catalog Request/Response

Below is a sample Service Catalog request/response.

### Request

```
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/" xmlns:ser="http://ouaf.oracle.com/webservices/builtin/ServiceCatalog">

Ipsum is simply dummy text of the printing and typesetting
industry. Lorem Ipsum has been the industry's standard dummy text
ever since the 1500s, when an unknown printer took a galley of type
and scrambled it to make a type specimen book. It has survived not
only five centuries, but also the leap into electronic typesetting,
remaining essentially unchanged. It was popularised in the 1960s
with the release of Letraset sheets containing Lorem Ipsum
passages, and more recently with desktop publishing software like
Aldus PageMaker including versions of Lorem Ipsum.</synopsis>

## Creating New Utilities Adapter Connection in ICS

To create a new Utilities Adapter connection in ICS, follow these steps:

1. Configure the Service Catalog in the Connection Properties of ICS.

Property Name	Property Value
* Catalog URL	http://example.com:8001/soa-infra/services/default/ServiceCatalog/ServiceCatalogService?wsdl
Event Catalog URL	

2. Specify the credentials to access the inbound/outbound services.

**Note:** HTTP Basic Authentication is the only security policy supported at the time of this release.

**Note:** While specifying the username/password, ensure that the same credentials are valid to invoke both the SOA Catalog Service and the

OUAF endpoints. The username/password specified here should exist on both the SOA server, as well as the OUAF server.

**Credentials**

You can configure the Security Policy for this connection. Please select the Security Policy.

Security Policy

Your application/endpoint requires that users and services provide security credentials for access. Specify the login credentials below.

Property Name	Property Value
Username	<input type="text" value="SYSUSER"/>
Password	<input type="password" value="*****"/>
Confirm Password	<input type="password" value="*****"/>

# Creating Integration Wizard for UGBU Connection

The Integration Wizard for the new connection (see [Creating New Utilities Adapter Connection in ICS](#) section for steps) can be created in the following ways:

## Configuring Outbound from ICS and Inbound into Oracle Utilities Customer Care and Billing

The screens below show the configuration of outbound from ICS and inbound into Oracle Utilities Customer Care and Billing.

**Configure Oracle Utilities Endpoint**

Help < Back Next > Cancel Done

**Configure the Operations to Perform in the Target Oracle Utilities Application.**  
Select the business service and operation to use for the target integration.

Basic Info Operations Summary

Select the Operation to Perform on the Business Service

Service Description :

Add incoming Customer Relationship Request. It invokes the Customer Relationship Creation processing script that is defined in Customer Relationship Integration master configuration. The base product provides sample script Create Customer Relationship Request (C1-CreCustRR) that can be plugged in on master configuration. This sample script contains logic that maps the request data sent in from the external system into the Customer Relationship Request record.

## Configuring Inbound into ICS and Outbound from Oracle Utilities Customer Care and Billing

The screens below show configuring inbound into ICS and outbound from Oracle Utilities Customer Care and Billing.
