This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Preface

The *Agile Product Lifecycle Management for Process Nutrition Surveillance Management User Guide* explains how to use the Nutrition Surveillance Management (NSM) application to track nutrient surveillance results and compare them to existing nutrient values for raw material or finished goods. Nutrient data is saved and managed from individual samples or composited to be compared against current nutrient values of materials and finished goods. NSM also enables you to compare nutrient information between NSM and Global Specification Management (GSM).

This Preface contains these topics:

- [Audience](#)
- [Variability of Installations](#)
- [Documentation Accessibility](#)
- [Related Documents](#)
- [Conventions](#)

Audience

This guide is intended for end users who are responsible for creating and managing information in Agile Product Lifecycle Management (PLM) for Process. Information about administering the system resides in the *Oracle Agile Product Lifecycle Management for Process Administrator User Guide*.

Variability of Installations

Descriptions and illustrations of the Agile PLM for Process user interface included in this manual may not match your installation. The user interface of Agile PLM for Process applications and the features included can vary greatly depending on such variables as:

- Which applications your organization has purchased and installed
- Configuration settings that may turn features off or on
- Customization specific to your organization
- Security settings as they apply to the system and your user account

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Related Documents

For more information, see the following documents in the Oracle Agile Product Lifecycle Management for Process documentation set:

- *Agile Product Lifecycle Management for Process Administrator User Guide*
- *Agile Product Lifecycle Management for Process Global Specification Management User Guide*
- *Agile Product Lifecycle Management for Process Release Notes*. Up-to-date Release Notes and other documentation are posted on Oracle Technology Network (OTN) at this location:

<https://www.oracle.com/technical-resources/documentation/agile.html#plmprocess>

Conventions

The following text conventions are used in this document:

| Convention | Meaning |
|------------------------|--|
| boldface | Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary. |
| <i>italic</i> | Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values. |
| <code>monospace</code> | Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter. |

Introduction to Nutrition Surveillance Management

You can use Nutrition Surveillance Management (NSM) to accurately track nutrient surveillance results and compare them to existing nutrient values for raw material or finished goods. You can save and manage nutrient data from individual samples or create composites and then compare these values to those that are declared on the approved specifications.

NSM acts as the clearinghouse for nutrient information. NSM can be the source of nutrient data for products and materials in GSM. Data from NSM can be imported into nutrient profiles or nutrient compositions, which in turn are used to generate nutrient information for labeling and communication to the supply chain.

Nutrient analysis and nutrient composites form the core features of NSM. NSM also has functionality to compare nutrient data in nutrient analyses, nutrient composites, and GSM specifications.

Touch Points with Other Oracle Agile Applications

Nutrition Surveillance Management interfaces with the Global Specification Management (GSM) application in the following ways:

- Nutrient information from nutrient analyses are used by specifications in GSM.
- Nutrient information from nutrient composites are used by specifications in GSM.

The Nutrient Comparison feature enables you to compare the nutrient values currently assigned to the specification in GSM against those of one or multiple specifications, nutrient composites, or nutrient analyses.

These topics are covered in this guide. For more information, refer to the *Agile Product Lifecycle Management for Process Global Specification Management User Guide*.

Getting Started with Nutrition Surveillance Management

To access the Nutrition Surveillance Management application, select NSM from the left navigation panel as shown in [Figure 1–1](#), or select NSM from the Applications menu of the top menu bar, as shown in [Figure 1–2](#).

Figure 1–1 NSM on the left navigation panel

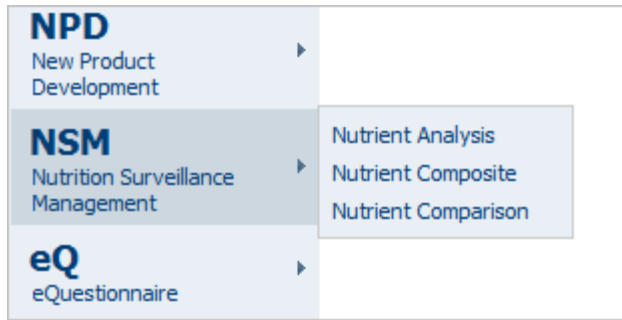

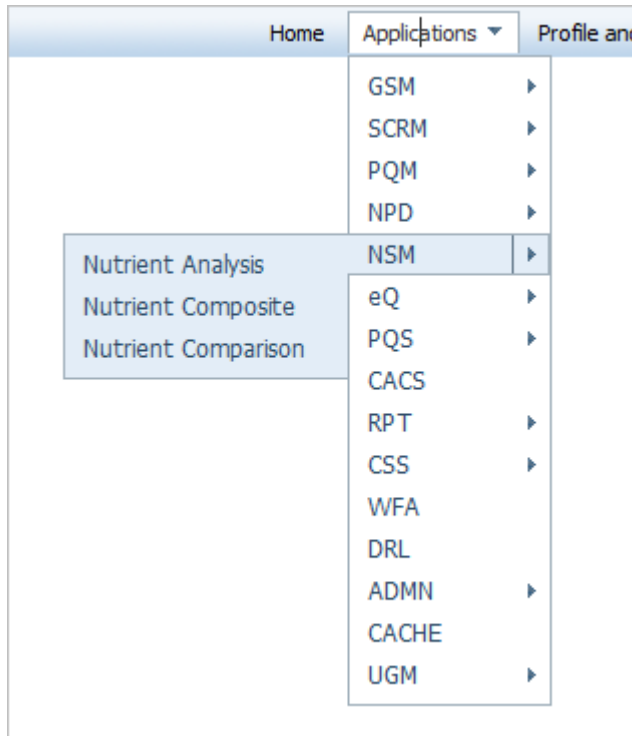

Figure 1–2 NSM on the Applications menu of the top menu bar

For more information on using Agile PLM for Process software, see the *Agile Product Lifecycle Management for Process Getting Started Guide*.

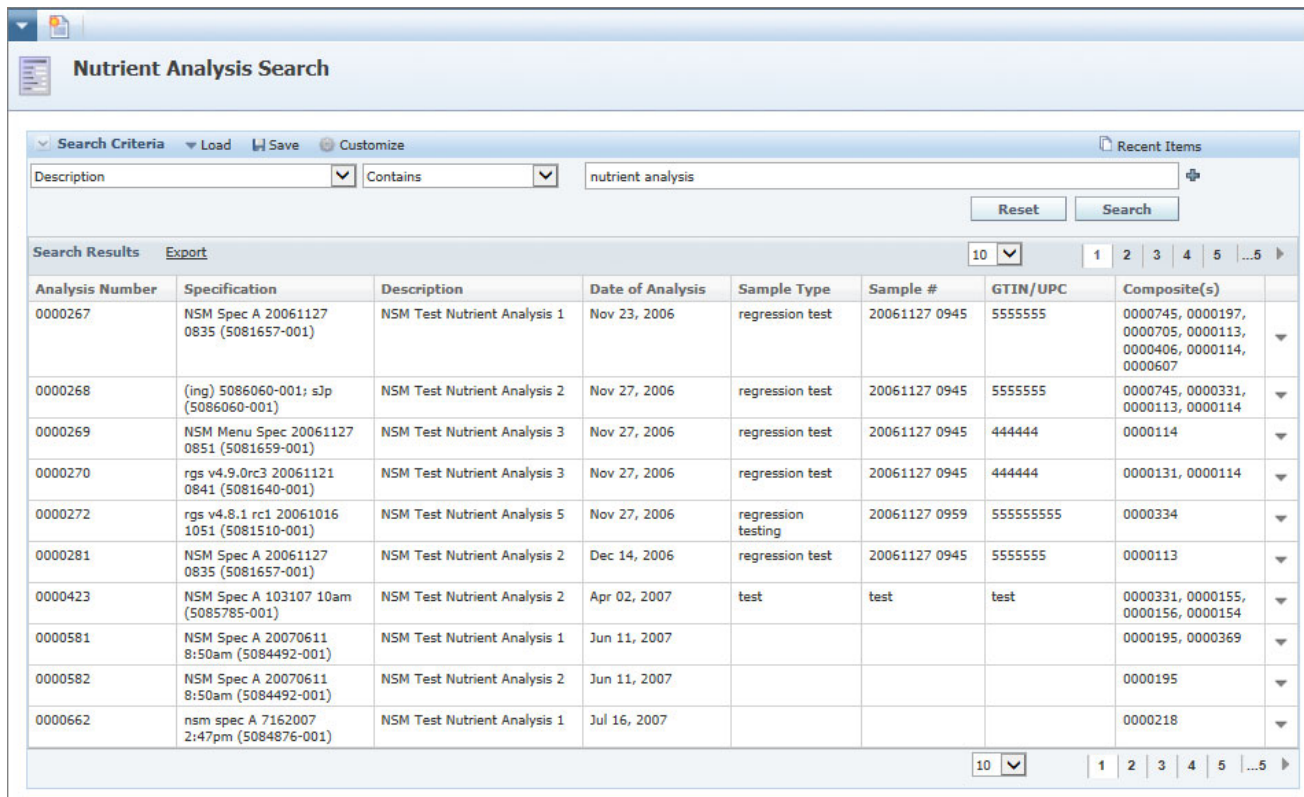

Using Nutrition Surveillance Management

This chapter presents basic information about using the Nutrition Surveillance Management (NSM) application. Topics in this chapter include:

- [Nutrient Analysis](#)
- [Nutrient Composite](#)
- [Nutrient Comparison](#)

Nutrient Analysis

You can navigate to a nutrient analysis by clicking **Nutrient Analysis** in the left navigation panel. Provide search criteria in the Nutrient Analysis search page and then click **Search**. The search results display the analysis number and the specification name in addition to information such as date, description, and sample type, as [Figure 2–1](#) shows:

Figure 2–1 Search results

The screenshot shows the 'Nutrient Analysis Search' window. At the top, there are tabs for 'Search Criteria', 'Load', 'Save', and 'Customize'. Below these, there are dropdown menus for 'Description' and 'Contains', and a text input field containing 'nutrient analysis'. There are 'Reset' and 'Search' buttons. Below the search bar, there is a 'Search Results' tab and an 'Export' button. A table of results is displayed with columns: Analysis Number, Specification, Description, Date of Analysis, Sample Type, Sample #, GTIN/UPC, and Composite(s). The table contains 10 rows of data. At the bottom right of the table, there are pagination controls showing '10' items per page and page numbers '1' through '5'.

| Analysis Number | Specification | Description | Date of Analysis | Sample Type | Sample # | GTIN/UPC | Composite(s) |
|-----------------|--|------------------------------|------------------|--------------------|---------------|-----------|---|
| 0000267 | NSM Spec A 20061127 0835 (5081657-001) | NSM Test Nutrient Analysis 1 | Nov 23, 2006 | regression test | 20061127 0945 | 5555555 | 0000745, 0000197, 0000705, 0000113, 0000406, 0000114, 0000607 |

Some important fields displayed in the results are:

Analysis Number—A unique identifier assigned to each nutrient analysis in NSM. This is an auto-generated number.

Specification—The name of the GSM specification that the nutrient analysis is tied to. The specification number and issue number are displayed in parentheses.

Composite(s)—This column lists all the nutrient composites where this nutrient analysis is consumed.

Click anywhere in a row to open an analysis.

Nutrient Analysis Page

The Nutrient Analysis page consists of two tabs: Summary and Related Specs.

Summary Tab

As [Figure 2–2](#) shows, the Summary tab has two sections: Summary Information and Nutrient Analysis.

Figure 2–2 Nutrient Analysis page, Summary tab

Add Import Compare

Summary Information Section

The Summary Information section contains general information about the nutrient analysis:

- **Analysis Number**—Auto-generated analysis number. This field cannot be changed.
- **Specification**—The GSM specification the analysis is tied to. The specification number and issue number are also displayed. Click the hyperlinked specification name to view the specification in GSM.
- **Context**—Available when the selected specification is a material created by a formulation specification. Select the formulation specification context from the drop down list to show which formulation specification the material being tested was created from.

- **Source Facility**—The facility where the sample is sourced. Click the hyperlinked facility name to view the facility profile in Supply Chain Relationship Management (SCRM). The message “Not authorized to see facility” appears if the user does not have access to the facility associated to the nutrient analysis.
- **Sample Number**—User-defined number for the sample. This can be alpha or numeric.
- **GTIN/UPC**—Free-text field identifying reference codes.
- **Sample Type**—User-defined field denoting the type of sample, such as raw material or finished product.
- **Segment(s)**—Business segments for the analysis. This field affects visibility.
- **Business Unit(s)**—Business units the analysis is tied to.
- **Description**—Description of the analysis.
- **Date of Analysis**—Date of the analysis.
- **Date of Last Update**—Date of the last save of the analysis.
- **Date Sent to Lab**—Date the analysis was sent to the lab.
- **Date Received from Lab**—Date the analysis was received from the lab.
- **Originator**—The name of the user who created the analysis. This field is auto-generated and cannot be changed.

Nutrient Analysis Section

The Nutrient Analysis section holds the nutrient information for the sample. The columns in this section are:

- **Nutrient**—The name of the nutrient.
- **Per 100g**—The amount of nutrient per 100 grams.
- **Method**—Lists the testing method.
- **Source**—If the nutrient information is from an external source like a standard reference library or a lab, it is included here. This list is managed by an administrator. Refer to the *Agile Product Lifecycle Management for Process Administrator User Guide* for more information.
- **Comments**—Additional comments about this particular nutrient.

Related Specs Tab

As [Figure 2–3](#) shows, the Related Specs tab consists of two sections: Related Specifications and Related Composite(s).

Related Specifications Section

The Related Specifications section lists all the specifications in GSM that have imported values from and are still referencing this particular nutrient analysis.

Related Composites Section

The Related Composites section lists all the nutrient composites that are built using this nutrient analysis.

Figure 2–3 Related Specifications and Related Composites sections

Distilled Vinegar Sampling #9 (0002241)
Nutrient Analysis

Summary Related Specs

▼ Related Specifications

| Spec # | Specification Name | Specification Type | Status |
|--------|--------------------|--------------------|--------|
| | | | |

▼ Related Composite(s)

| Composite | Specification | Date | Title |
|-------------------------|---|--------------|-------------------|
| 0000637 | Vinegar - Distilled - White - 100 Grain (5077413-001) | May 11, 2011 | Vinegar Composite |

Creating a Nutrient Analysis

To create a nutrient analysis:

1. In the NSM application, select **New > Nutrient Analysis** from the left navigation panel. NSM creates a new nutrient analysis.
2. In the Summary Information section, complete the following fields:

Specification—The name of the GSM specification that the nutrient analysis is tied to. This is a required field. Select a specification by clicking the search icon. The specification search page displays. Select a specification type from the drop down list, enter search criteria, then click **Search**. Select a specification from the search results. That specification and its related specification number and issue number populate this field.

Source Facility—Select the source facility for this sample by clicking the search icon. A search page displays. Search for and select a facility. The facility name populates this field.

Segment—Select the business segment for this sample by clicking the search icon. A search page displays. Search for and select a segment. The segment name populates this field.

Business Unit—If the analysis applies to specific business units, select business units by clicking the search icon. NSM displays the business unit dialog box. Select business units and click **Done** to populate this field.
3. Click **Save**. To add nutrients to the analysis, complete the steps described below in ["Adding Nutrients to a Nutrient Analysis"](#). The Nutrient Analysis section, shown in [Figure 2–2](#), hosts all the analysis data for all the nutrients tested for in the product sample.

Adding Nutrients to a Nutrient Analysis

There are three ways to add nutrients to a nutrient analysis. You can manually add nutrients that are already defined in the application, you can import nutrients from Food Composition Library (FCL), or you can leverage existing analyses.

To add nutrients to a nutrient analysis, select one of the following methods:

1. **Adding Nutrients**—With the Nutrient Analysis, Summary page in edit mode, click **Add**. A dialog box displays. Select nutrients to include in this analysis. Note that when you manually add nutrients, only the names of the nutrients are added. The rest of the columns must be manually entered. Click **Done**. Click **Save**.

2. **Importing Nutrients from FCL**—With the Nutrient Analysis, Summary page in edit mode, click **Import**. A search page displays with Food Composition Library selected in the drop down list. Enter the search criteria, then click **Search**. Select the food item name by clicking anywhere in the row in the Search Results section. You now see the nutrient composition of that particular food item. Select the nutrients you want to import and click **Import**. The nutrients that you selected are imported along with the values in the Per 100g column and the Source column on the Nutrient Analysis page. Click **Save**. [Figure 2-4](#) shows nutrients in a food item from FCL. For more details on FCL, please refer to the *Agile Product Lifecycle Management for Process Global Specification Management User Guide*.

Figure 2-4 Nutrients in a food item

| Nutrients & Properties / 100 grams | | |
|------------------------------------|---------------------|----------|
| | Nutrient | Value |
| <input type="checkbox"/> | Sodium | 38 mg |
| <input type="checkbox"/> | Cholesterol | 137 mg |
| <input type="checkbox"/> | Zinc | 0.23 mg |
| <input type="checkbox"/> | Protein | 2.05 g |
| <input type="checkbox"/> | Calcium | 65 mg |
| <input type="checkbox"/> | Riboflavin - B2 | 0.11 mg |
| <input type="checkbox"/> | Thiamin - B1 | 0.022 mg |
| <input type="checkbox"/> | Cobalamin - B12 | 0.18 µg |
| <input type="checkbox"/> | Vitamin C | 0.6 mg |
| <input type="checkbox"/> | Total Fat | 37 g |
| <input type="checkbox"/> | Panthothenic | 0.255 mg |
| <input type="checkbox"/> | Calories | 345 kcal |
| <input type="checkbox"/> | Niacin - B3 | 0.039 mg |
| <input type="checkbox"/> | Monounsaturated Fat | 10.686 g |
| <input type="checkbox"/> | Selenium | 0.5 µg |
| <input type="checkbox"/> | Phosphorus | 62 mg |
| <input type="checkbox"/> | Vitamin D | 52 IU |
| <input type="checkbox"/> | Carbohydrates | 2.79 g |
| <input type="checkbox"/> | Ash | 0.45 g |
| <input type="checkbox"/> | Iron | 0.03 mg |
| <input type="checkbox"/> | Energy kJ | 1443 kJ |

3. **Importing Nutrients from Other Analyses**—Instead of using FCL, select nutrients from existing nutrient analyses. With the page in edit mode, click **Import**. On the search page, select **Nutrient Analysis** from the drop down list. Enter the search criteria, then click **Search**. Select the analysis by clicking anywhere in the row in the Search Results section. A page similar to [Figure 2-4](#) above is displayed. Select the nutrients you want to import and click **Import**. They are imported into the new nutrient analysis along with their associated per 100 g values. Click **Save**.

Figure 2–5 shows examples of nutrients that are either manually added or imported. The Source column tells you where the nutrient information was obtained from.

Figure 2–5 Nutrient Analysis section, added nutrients

The screenshot shows the 'Nutrient Analysis' section with a table of nutrients. The table has columns for Nutrient, Per 100g, Method, Source, and Comments. The nutrients listed are Calories, Protein, Carbohydrates, Carbohydrate (Available), Dietary Fiber, and Total Fat. Each row has a pencil icon next to the nutrient name. Below the table are buttons for 'Add', 'Import', and 'Compare'.

| Nutrient | Per 100g | Method | Source | Comments |
|--------------------------|----------------|--------|--------|----------|
| Calories | 100.00000 kcal | | | |
| Protein | 1.10000 g | | | |
| Carbohydrates | 4.00000 g | | | |
| Carbohydrate (Available) | 3.00000 g | | | |
| Dietary Fiber | 1.10000 g | | | |
| Total Fat | 9.00000 g | | | |

Buttons: Add, Import, Compare

Modifying Values

Figure 2–6 shows the Nutrient Analysis page in edit mode. To update the Per 100g value, you can either click the edit icon next to each nutrient, or click the edit icon next to the Per 100g column header, shown in figure 2–5 above.

You can update nutrient values as well as the sources in this page. Click the apply changes icon next to the Per 100g column header to save the changes. If you modify a nutrient value that was imported from FCL or nutrient analysis, the source column is cleared.

Figure 2–6 Modifying a nutrient value

The screenshot shows the 'Nutrient Analysis' section in edit mode. The table has columns for Nutrient, Per 100g, Method, Source, and Comments. The nutrients listed are Calories, Protein, Carbohydrates, Carbohydrate (Available), Dietary Fiber, and Total Fat. Each row has a pencil icon next to the nutrient name. The 'Per 100g' column has a green checkmark and a red flag icon next to the header. The 'Method' column has radio buttons for 'Calculated' and 'AOAC Method 985.29 (Modified)'. The 'Source' column has a plus icon and a red X icon next to each nutrient. Below the table are buttons for 'Add', 'Import', and 'Compare'.

| Nutrient | Per 100g | Method | Source | Comments |
|--------------------------|----------------|-------------------------------|--------|----------|
| Calories | 100.00000 kcal | Calculated | | |
| Protein | 1.10000 g | | | |
| Carbohydrates | 4.00000 g | Calculated | | |
| Carbohydrate (Available) | 3.00000 g | | | |
| Dietary Fiber | 1.10000 g | AOAC Method 985.29 (Modified) | | |
| Total Fat | 9.00000 g | | | |

Buttons: Add, Import, Compare

Once done, click **Save** or **Save & Close**.

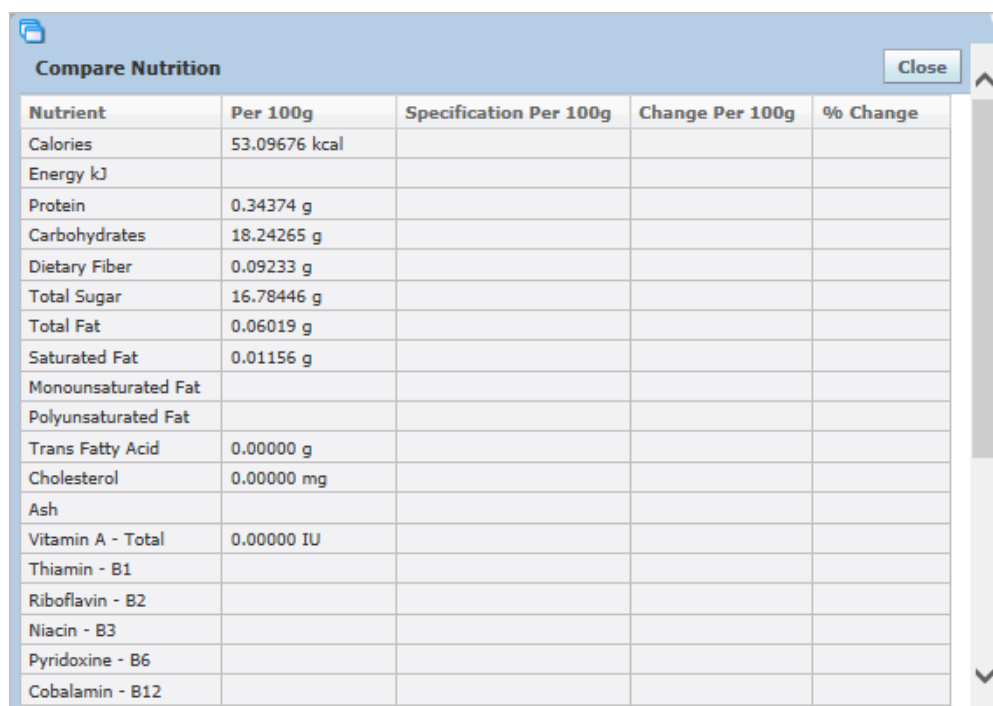

Comparing Nutrient Analyses

The nutrient comparison feature enables you to compare the nutrient values currently assigned to the specification in GSM against the nutrient values declared in this particular nutrient analysis. In order to compare nutrient information, open a nutrient analysis and scroll to the bottom of the Summary tab. Click **Compare**. The Compare Nutrition dialog box displays. It shows the compared nutrient information.

The Compare Nutrition dialog box, shown in [Figure 2–7](#), contains the following columns:

- **Nutrient**—Lists the name of the nutrient.
- **Per 100 g**—Displays the amount of nutrient in 100g sample. This value is from the nutrient analysis.
- **Specification Per 100g**— Displays the amount of nutrient per 100g declared on the specification. This value is from the specification in GSM.
- **Change per 100g**—Difference between the nutrient values in the specification and the nutrient analysis.
- **% Change**—The difference in percentage.

Figure 2–7 Compare Nutrition dialog box

| Nutrient | Per 100g | Specification Per 100g | Change Per 100g | % Change |
|---------------------|---------------|------------------------|-----------------|----------|
| Calories | 53.09676 kcal | | | |
| Energy kJ | | | | |
| Protein | 0.34374 g | | | |
| Carbohydrates | 18.24265 g | | | |
| Dietary Fiber | 0.09233 g | | | |
| Total Sugar | 16.78446 g | | | |
| Total Fat | 0.06019 g | | | |
| Saturated Fat | 0.01156 g | | | |
| Monounsaturated Fat | | | | |
| Polyunsaturated Fat | | | | |
| Trans Fatty Acid | 0.00000 g | | | |
| Cholesterol | 0.00000 mg | | | |
| Ash | | | | |
| Vitamin A - Total | 0.00000 IU | | | |
| Thiamin - B1 | | | | |
| Riboflavin - B2 | | | | |
| Niacin - B3 | | | | |
| Pyridoxine - B6 | | | | |
| Cobalamin - B12 | | | | |

Copying a Nutrient Analysis

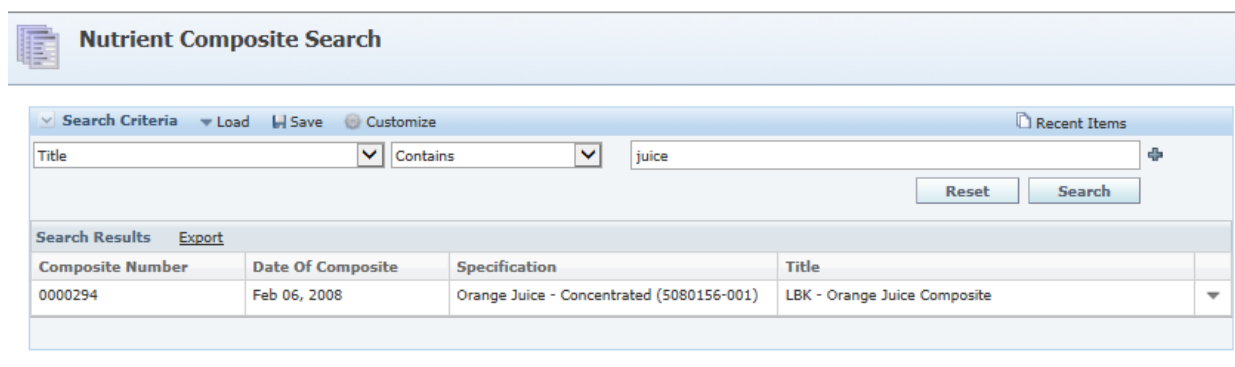

To copy a nutrient analysis, click **Create Copy**. A new analysis is created. The relevant information from the Summary tab of the current nutrient analysis is copied into the new one. Data from the Related Specs tab is not copied to the new analysis. The new analysis is opened in edit mode by default.

Nutrient Composite

NSM has the ability to composite sample values to obtain representative nutrient values from a number of sample analyses. You can use this feature to create composites for data obtained from multiple suppliers, from multiple labs, or from multiple samples. Nutrient information from nutrient composites can be leveraged by specifications in GSM.

In order to access nutrient composites, navigate to NSM and click **Nutrient Composite**. Just like in nutrient analysis, use the standard search tool to find the composites you are looking for. The search result page displays the nutrient composites that match your search criteria, as [Figure 2–8](#) shows.

Figure 2–8 Search results

The screenshot shows the 'Nutrient Composite Search' interface. At the top, there's a header with a folder icon and the title 'Nutrient Composite Search'. Below this is a search bar with a dropdown menu for 'Search Criteria' (set to 'Title'), a 'Load' button, a 'Save' button, a 'Customize' button, and a 'Recent Items' link. The search criteria are set to 'Contains' with the value 'juice'. There are 'Reset' and 'Search' buttons. Below the search bar, there's a table with the following data:

| Composite Number | Date Of Composite | Specification | Title |
|------------------|-------------------|---|------------------------------|
| 0000294 | Feb 06, 2008 | Orange Juice - Concentrated (5080156-001) | LBK - Orange Juice Composite |

Some important fields displayed in the results are:

- **Composite Number**—The auto-generated ID for the nutrient composite.
- **Date of Composite**—Displays the date that the nutrient composite was created.
- **Specification**—Displays the GSM specification that the nutrient composite refers to. The GSM specification number and issue number are displayed in parentheses.
- **Title**—Displays the name of the nutrient composite.

Click anywhere in a row to open the nutrient composite.

Nutrient Composite Page

The Nutrient Composite page, shown in [Figure 2–9](#), consists of two tabs: Summary and Related Specs.

Summary Related Specs

Summary Information

Composite Number: 0000083

Title:

Beef Jerky Ravioli

Specification:

Beef Jerky Ravioli (Top Level) (5081716-001)

Context :

(5081715-001) Beef Jerky Ravioli

Segment(s):

Business Unit(s):

CPI North America

Description:

Date of Composite:

3/6/2013

Date of Last Update:

Mar 06, 2013

Originator:

Patrick Rodika

Composite

| Analysis | Specification | Date | Weight | Comments |
|----------|--|--------------|---------|----------|
| 0000186 | Beef Jerky Ravioli (Top Level) (5081716-001) | Mar 06, 2013 | 1.00000 | |

| Copper | 0.04042 mg |
| Selenium | 0.00000 µg |
| Manganese | 0.00674 mg |

Compare

The Summary tab consists of the following sections: Summary Information, Composite, and Results.

Summary Information Section

This section includes fields that describe the nutrient composite:

- **Composite Number**—Auto generated unique identifier assigned to each nutrient composite in NSM. This field cannot be changed.
- **Title**—The title of the nutrient composite. This is a required field.
- **Specification**—The name, number, and issue number of the GSM specification that the nutrient composite refers to. This is a required field.
- **Context**—Available when the selected specification is a material created by a formulation specification. Select the formulation specification context from the drop down list to show which formulation specification the material being tested was created from.
- **Segment(s)**—Business segments for the composite. This field affects visibility.
- **Business Unit(s)**—Business units tied to the nutrient composite.
- **Description**—Detailed text describing the nutrient composite.
- **Date of Composite**—Date the composite was saved.
- **Date of Last Update**—Date of the last save of the composite.
- **Originator**—The name of the user who created the nutrient composite. The system populates this field.

Composite Section

This section lists the nutrient analyses that form this composite, including:

- Analysis number
- GSM specification associated with the nutrient analysis. NSM displays the message “Not authorized the see facility” if the user does not have access to the facility associated to the nutrient composite.
- Date the analysis was created
- Weight of each nutrient analysis in the composite

Weight Analysis

Analyses can be weighted separately when building the composites, so that one analysis can be considered more heavily than another when aggregating the results for the composite. For example, if you have two nutrient analyses, one with 2 g of sugar and the other with 5 g, and they have a weight of 1 each, the resulting composite will have 3.5 g of sugar. The composite would be calculated as follows:

$$((2 \text{ g} \times 1) + (5 \text{ g} \times 1)) / 2 = 3.5 \text{ g}$$

However, if the weight of the second nutrient analyses is set to 2, the sugar value in the resulting composite is calculated as follows:

$$((2 \text{ g} \times 1) + (5 \text{ g} \times 2)) / 3 = 4 \text{ g}$$

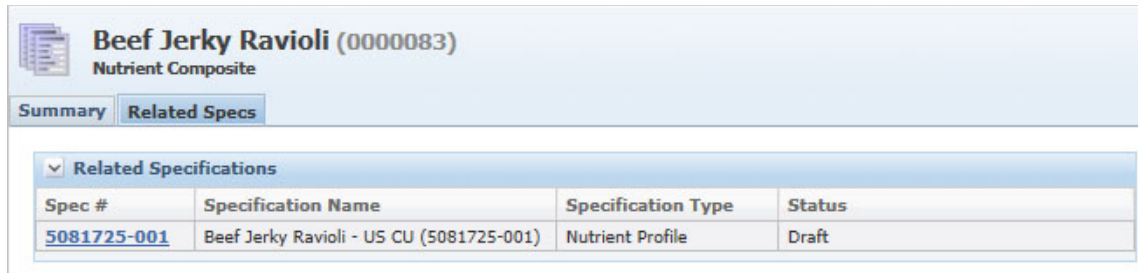

Results Section

This section lists the composited nutrient information.

Related Specs Tab

The Related Specs tab, shown in [Figure 2–10](#), lists all the GSM specifications that have imported this nutrient composite.

Figure 2–10 Related specifications

| Beef Jerky Ravioli (0000083) Nutrient Composite | | | |
|--|--|--------------------|--------|
| Summary | | Related Specs | |
| Related Specifications | | | |
| Spec # | Specification Name | Specification Type | Status |
| 5081725-001 | Beef Jerky Ravioli - US CU (5081725-001) | Nutrient Profile | Draft |

The table includes the following columns:

- **Spec #**—Clicking the specification number link displays the specification in GSM.
- **Specification Name**—The name of the specification.
- **Specification Type**—The type of specification.
- **Status**—The status of the specification in GSM.

Creating a Nutrient Composite

To create a nutrient composite:

1. Click **New > Nutrient Composite** in the action menu, or click the create new icon. NSM creates a new nutrient composite.
2. In the Composite section, click **Add New** to include nutrient analyses in the nutrient composite. The Search page opens.
3. Search for a nutrient analysis.
4. On the results page, click anywhere in a row to include the analysis in the nutrient composite. The nutrient analysis is added in to the Composite section. You can make multiple selections.
5. Click **Done**.
6. If you need to change the weight, click the edit icon for the row to change. The row displays in edit mode. Change the weight and add necessary comments, as [Figure 2–11](#) shows.

Figure 2–11 Editing a weight

| Composite | | | | | |
|-----------|-------------------------|---|--------------|---------|----------|
| | Analysis | Specification | Date | Weight | Comments |
| | 0000136 | Spice Tec-USF - Carol Stream / Spice Tec-USF Onion Powder - Premium (5077493-001) | Oct 02, 2007 | 1.00000 | |
| | 0000116 | Speaco Foods - Kansas City / Speaco Foods, Inc. Beef - Seasoned Cooked Strips & Binder Product - Reduced Sodium - IQF (5077433-001) | Aug 11, 2006 | 1.00000 | |

Add New

- Click the apply changes icon to save changes to the row. The Results section displays the composited nutrients, as [Figure 2–12](#) shows:

Figure 2–12 *Composited nutrients*

| Composite | | | | | | |
|---------------------|-------------------------|---|--------------|---------|----------|----------------|
| | Analysis | Specification | Date | Weight | Comments | |
| | 0000136 | Spice Tec-USF - Carol Stream / Spice Tec-USF Onion Powder - Premium (5077493-001) | Oct 02, 2007 | 3.00000 | | |
| | 0000116 | Speaco Foods - Kansas City / Speaco Foods, Inc. Beef - Seasoned Cooked Strips & Binder Product - Reduced Sodium - IQF (5077433-001) | Aug 11, 2006 | 1.00000 | | |
| Add New | | | | | | |
| Results | | | | | | |
| Nutrient | | | | | | Per 100g |
| Calories | | | | | | 338.00000 kcal |
| Energy kJ | | | | | | 1557.25000 kJ |

| Monounsaturated Fat | | | | | | 4.22975 g |
| Polyunsaturated Fat | | | | | | 0.44150 g |
| Cholesterol | | | | | | 29.75000 mg |
| Ash | | | | | | 1.95250 g |
| Thiamin - B1 | | | | | | 0.05400 mg |
| Riboflavin - B2 | | | | | | 0.08000 mg |
| Niacin - B3 | | | | | | 1.72850 mg |
| Pyridoxine - B6 | | | | | | 0.16450 mg |
| Cobalamin - B12 | | | | | | 0.86250 µg |
| Vitamin C | | | | | | 4.80000 mg |

- Click **Save** or **Save & Close** in the action menu.

Note: The Results section displays a warning message when nutrients are not present in all the nutrient analyses.

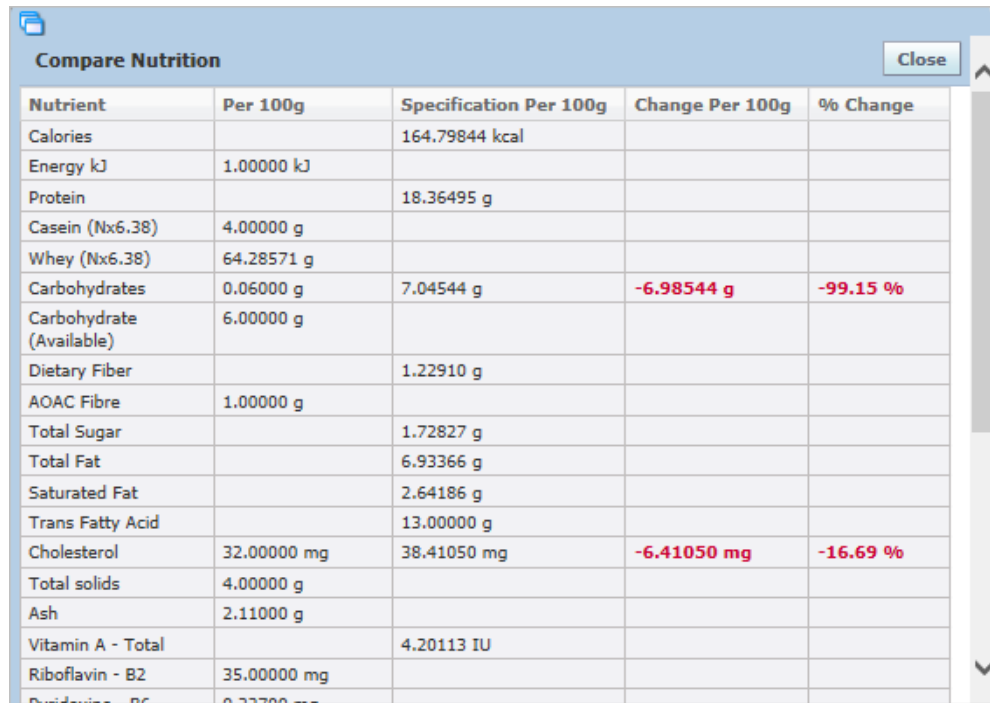

Comparing Nutrient Composites

The nutrient comparison feature allows you to compare the nutrient values currently assigned to the specification in GSM against nutrient make-up of a particular nutrient composite. In order to compare nutrient information, open a nutrient composite and scroll to the bottom of the Summary tab. Click **Compare**. The Compare Nutrition dialog box displays the compared nutrient information and includes the following columns:

- Nutrient**—Name of the nutrient.
- Per 100g**—Amount of nutrient in 100 g sample. This value is from the nutrient composite.
- Specification Per 100g**—Amount of nutrient in a 100 g sample of the specification. This value is from the specification in GSM.
- Change Per 100g**—Difference between the nutrient values in the specification and the nutrient analysis.
- % Change**—Difference in percentage.

Figure 2–13 shows the Compare Nutrition dialog box.

Figure 2–13 Compare Nutrition dialog box

| Nutrient | Per 100g | Specification Per 100g | Change Per 100g | % Change |
|--------------------------|-------------|------------------------|-----------------|----------|
| Calories | | 164.79844 kcal | | |
| Energy kJ | 1.00000 kJ | | | |
| Protein | | 18.36495 g | | |
| Casein (Nx6.38) | 4.00000 g | | | |
| Whey (Nx6.38) | 64.28571 g | | | |
| Carbohydrates | 0.06000 g | 7.04544 g | -6.98544 g | -99.15 % |
| Carbohydrate (Available) | 6.00000 g | | | |

| AOAC Fibre | 1.00000 g | | | |
| Total Sugar | | 1.72827 g | | |
| Total Fat | | 6.93366 g | | |
| Saturated Fat | | 2.64186 g | | |
| Trans Fatty Acid | | 13.00000 g | | |
| Cholesterol | 32.00000 mg | 38.41050 mg | -6.41050 mg | -16.69 % |
| Total solids | 4.00000 g | | | |
| Ash | 2.11000 g | | | |
| Vitamin A - Total | | 4.20113 IU | | |
| Riboflavin - B2 | 35.00000 mg | | | |
| Niacin - B3 | 0.33300 mg | | | |

Nutrient Comparison

Nutrient comparison enables you to compare nutrient analyses, nutrient composites, and GSM specifications against each other. Examples of comparisons are:

- . One nutrient analysis against one or more nutrient analyses
- . One nutrient analysis against a nutrient analysis and a nutrient composite
- . One GSM specification against another GSM specification
- . One GSM specification against a nutrient composite and several nutrient analyses

In general, you can compare nutrient information between two or more entities, either of the same type or of different types. Entities available for comparison are:

- . Material specification
- . Menu item specification
- . Nutrient analysis
- . Nutrient composite
- . Product specification
- . Trade specification

Note: To ensure optimal performance, your Agile administrator may limit the number of specifications that NSM can compare to a preset maximum.

Nutrient Comparison Page

Figure 2–14 shows a nutrient analysis, denoted by (na), being compared to a nutrient analysis (na) and a product specification (prod).

Figure 2–14 Comparison among nutrient analysis, product specification, and nutrient analysis

Nutrient Comparison

☒ Compare Nutrition

Show Children: ☒ Yes ☐ No

Base Specification: 0000310 (na) -- BBQ Beef and Vegetable Dinner - 11 oz (5077539-001)

Compare With:

- 1) 0000085 (na) -- 4:1 Beef Patty (5084160-001)
- 2) 5084160-001 (prod) -- 4:1 Beef Patty

Compare

When you click **Compare**, the nutrient comparison of the three displays, as shown in [Figure 2–15](#).

Figure 2–15 Comparison results

| Results | | | | | |
|---------------|--------------|-----------------|---------|-----------------------|--------------|
| Nutrient | 0000310 (na) | 1) 0000752 (na) | | 2) 5084160-001 (prod) | |
| | Per 100g | Per 100g | % Diff | Per 100g | % Diff |
| Calories | | --- | | | |
| Protein | | 1.000 | | | |
| Carbohydrates | | | | 20.000 | |
| Dietary Fiber | | | | 2.000 | |
| Maltose | | 0.000 | | | |
| Saturated Fat | 1.000 g | | | | |
| Cholesterol | | | | 100.000 | |
| Vitamin C | | | | 5.000 | |
| Vitamin D | | | | 5.000 | |
| Calcium | | --- | | 10.000 | |
| Iron | 0.080 mg | | | 15.000 mg | +18650.000 % |
| Magnesium | | 0.000 | | | |
| Phosphorus | | 2.000 | | | |
| Potassium | 3.000 mg | 3.000 mg | 0.000 % | | |
| Sodium | 4.000 mg | | | | |
| Zinc | | 99.999 | | | |
| Copper | | --- | | | |
| Manganese | | 0.000 | | | |
| Nitrogen | | | | 1.000 | |
| Starch | | | | 1.000 | |

The % Diff values are calculated with respect to the base specification. Cells are grayed out if the nutrient is not defined for that column.

If you select a menu item specification as the base specification and then select **Yes** for Show Children, you can compare the nutrients of child specifications (top-level bill of materials) of the parent specification, as shown in [Figure 2–16](#).
