# Preface

The *Agile Product Lifecycle Management for Process Supply Chain Relationship Management User Guide* explains how the Supply Chain Relationship Management (SCRM) application provides collaborative business process for managing supply chain relationships and sourcing approvals across product suppliers, distributors, and all other supply chain participants.

This Preface contains these topics:

- [Audience](#)
- [Variability of Installations](#)
- [Documentation Accessibility](#)
- [Software Availability](#)
- [Related Documents](#)
- [Conventions](#)

## Audience

This guide is intended for end users who are responsible for creating and managing information in Agile Product Lifecycle Management (PLM) for Process. Information about administering the system resides in the *Agile Product Lifecycle Management for Process Administrator User Guide*.

## Variability of Installations

Descriptions and illustrations of the Agile PLM for Process user interface included in this manual may not match your installation. The user interface of Agile PLM for Process applications and the features included can vary greatly depending on such variables as:

- Which applications your organization has purchased and installed
- Configuration settings that may turn features off or on
- Customization specific to your organization
- Security settings as they apply to the system and your user account

## Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

### Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

## Software Availability

Oracle Software Delivery Cloud (OSDC) provides the latest copy of the core software. Note the core software does not include all patches and hot fixes. Access OSDC at:

<http://edelivery.oracle.com>.

## Related Documents

For more information, see the following documents in the Oracle Agile PLM for Process documentation set:

- *Agile Product Lifecycle Management for Process Administrator User Guide*
- *Agile Product Lifecycle Management for Process Global Specification Management User Guide*
- *Agile Product Lifecycle Management for Process Supplier Portal User Guide*
- *Agile Product Lifecycle Management for Process eQuestionnaire User Guide*
- *Agile Product Lifecycle Management for Process Product Quality Management User Guide*
- *Agile Product Lifecycle Management for Process Getting Started Guide*
- *Agile Product Lifecycle Management for Process Release Notes*. Up-to-date Release Notes and other documentation are posted on Oracle Technology Network (OTN) at this location:

<https://www.oracle.com/technical-resources/documentation/agile.html#plmprocess>

## Conventions

The following text conventions are used in this document:

Convention	Meaning
<b>boldface</b>	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
<code>monospace</code>	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

---

# Introducing Supply Chain Relationship Management

This chapter gives an overview of Supply Chain Relationship Management and describes how the application interfaces with other Agile PLM for Process applications. It includes the following topics:

- [Overview](#)
- [Touch Points with Other Applications](#)
- [Getting Started with Supply Chain Relationship Management](#)

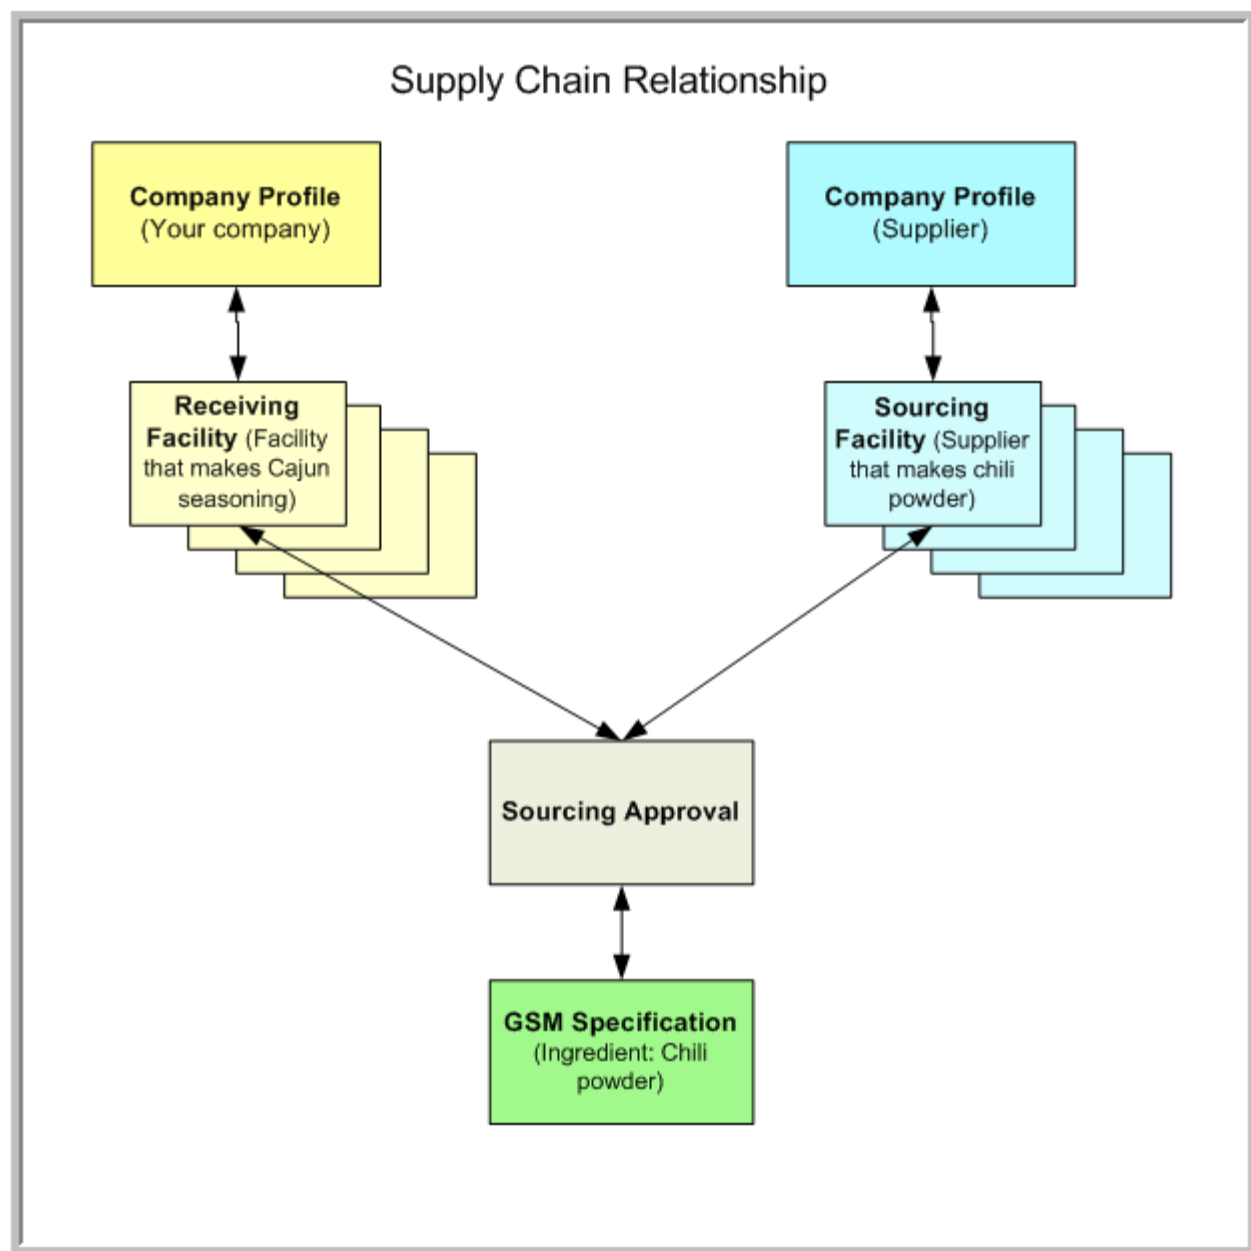

## Overview

Supply Chain Relationship Management (SCRM) provides collaborative business process for managing supply chain relationships and sourcing approvals across product suppliers, distributors, and all other supply chain participants.

You can use Supply Chain Relationship Management to build a view of the relationships between participants in a supply chain. Agile PLM for Process can leverage the information you provide in other applications such as Global Specification Management (GSM) and Supplier Portal (SP).

[Figure 1–1](#) shows the supply chain relationship of a company, a supplier, and an ingredient specification. In this example, a company owns a receiving facility that produces Cajun seasoning. The receiving facility obtains the chili powder required for the Cajun seasoning from a supplier sourcing facility. The sourcing approval tracks the approval relationship from the sourcing facility to the receiving facility.

**Figure 1–1 Supply chain**

Supply Chain Relationship Management can enable several critical business processes, including:

- Vendor management
- Sourcing management and compliance
- Vendor consolidation and rationalization
- Supplier contact management
- Supply chain analysis
- Product traceability

## Touch Points with Other Applications

The SCRM application interfaces with several other applications.

### Global Specification Management

Global Specification Management (GSM) provides your company with a tool to create and modify your company's products, including finished products and manufacturing processes to ingredient and packaging specifications. These specifications are syndicated to SCRM, where sourcing approvals are created. Refer to the *Agile Product Lifecycle Management for Process Global Specification Management User Guide* for more information.

### Manage Core Data

Your Agile PLM for Process administrator uses the Manage Core Data application (ADMN) to manage core data such as data lists and extended attributes. Core data that is specific to SCRM includes the following and is further explained in the *Agile Product Lifecycle Management for Process Administrator User Guide*:

- . Business units
- . Classes
- . Company special attributes
- . Contact categories
- . Contact profile tags
- . Document statuses
- . Document types
- . Facility special attributes
- . Protocol IDs
- . Sourcing types

### Workflow Administration

Workflows drive sourcing approvals, an integral part of SCRM. As part of workflow management, an Agile PLM for Process administrator plans and creates workflows using the Workflow Administration (WFA) application. This process involves creating workflow statuses, workflow transitions, workflow functional areas, and workflow groups. The workflows are then saved to Agile PLM for Process and integrated across all applications. Refer to the *Agile Product Lifecycle Management for Process Workflow Administration User Guide* for more information.

### eQuestionnaire

The eQuestionnaire (eQ) application's communication and coordination tools can be used to increase supply side collaboration between your company and its suppliers. Suppliers now can manage eQ through Supplier Portal. Questionnaires containing specific data requests are created and sent electronically to suppliers. Once the requested data is returned, it can then be automatically integrated into GSM and other applications. The user has the ability to create new questionnaires for information-gathering purposes or send existing ones for validation. Refer to the *Agile Product Lifecycle Management for Process eQuestionnaire User Guide* for more information.

## Supplier Portal

Supplier Portal provides a central location for your company's supply chain partners to access procurement and sourcing-related specifications, business processes and protocols in a flexible, secure and user-customizable environment. It gives internal resources and external supply chain partners (such as vendors, suppliers, brokers and distributors) the ability to obtain:

- Information regarding the specifications that are to be sourced
- Guidance surrounding expectations of deliverables
- Contact information of the various facilities and resources with which they may need to interact

Using Supplier Portal, you can set restrictions that control what information in Agile PLM for Process is visible to your suppliers. Refer to the *Agile Product Lifecycle Management for Process Supplier Portal User Guide* for more information.

## Product Quality Management

Product Quality Management allows you to capture, manage and correct quality issues around suppliers and the items they supply. PQM can also be used to capture, manage and correct quality issues around internal facilities and the items they produce. For more information, refer to the *Agile Product Lifecycle Management for Process Product Quality Management User Guide*.

# Getting Started with Supply Chain Relationship Management

## Accessing Supply Chain Relationship Management

To access the Supply Chain Relationship Management application, select **SCRM** from the left navigation panel as shown in [Figure 1–2](#), or select **SCRM** from the Applications menu on the top menu bar as shown in [Figure 1–3](#).

**Figure 1–2** The left navigation panel

**Figure 1–3 The Applications menu**

For general information on using Agile Product Lifecycle Management for Process software, see the *Agile Product Lifecycle Management for Process Getting Started Guide*.

---

## Company, Facility, and Contact Profiles

This chapter describes how to use Supply Chain Relationship Management to create and maintain company, facility, and contact profiles. The topics covered include:

- [Overview of Profiles](#)
- [Searching for a Profile](#)
- [Creating a Company Profile](#)
- [Saving the Company Profile](#)
- [Copying a Company Profile](#)
- [Creating a Facility Profile](#)
- [Saving the Facility Profile](#)
- [Copying a Facility Profile](#)
- [Assigning a Facility to a Different Company](#)
- [Creating a Contact Profile](#)
- [Saving the Contact Profile](#)
- [Archiving the Contact Profile](#)
- [Restoring the Contact Profile](#)

### Overview of Profiles

Supply Chain Relationship Management (SCRM) serves as a comprehensive platform for managing global supply and distribution relationships, and is a centralized repository for global provider information.

#### Company and Facility Profiles

Information about each company is organized into two levels:

- Company profiles
- Facility profiles

Every relationship in the supply chain must have a company profile. You can arrange company relationships hierarchically, allowing you to model the sourcing relationships as far up the chain as necessary. After a company profile is created, you can create its facility profiles. Facility profiles may be created from within a company profile, or as a new object which must be tied to a company prior to saving. Each company may have multiple facility profiles.

---

---

**Note:** You cannot delete a company profile or a facility profile in SCRM, but you can archive a company profile or a facility profile when it is no longer in use.

---

---

### Contact Profiles

Supplier Portal contacts are managed in SCRM. Previously these were maintained in Supplier Portal Administration (SPA). This makes it easier for you to manage all supply chain relationships in one place. See ["Creating a Contact Profile"](#) on page 2-21 for more information.

### Roles Related to Contact Profiles

There are some key roles surrounding contact profiles:

[CONTACT\_CREATOR]

- Can create a new contact profile
- Can only add or remove Associated Companies or Associated Facilities on the Portal Access tab (they cannot edit the User Access field; users need the SUPPLIER\_PORTAL\_ADMIN role to grant access to suppliers)
- Can modify all fields on Contact and Company Information tabs on contact profiles

[CONTACT\_EDITOR]

- Can modify all fields on Contact and Company Information tabs on contact profiles
- Can only add or remove Associated Companies or Associated Facilities on the Portal Access tab (cannot edit the User Access field)

[CONTACT\_READER]

- Read access only to contact profiles.

## Searching for a Profile

Use the Company Profile and Facility Profile search pages to search for companies and facilities. Use the Contact Profile search page to search for contacts. The returned search results include companies, facilities, or contacts that you have access to.

These search pages work like other search pages in Agile PLM for Process. For instructions on using the search page, see the *Agile Product Lifecycle Management for Process Getting Started Guide*.

---

---

**Note:** Your visibility and access could be determined by your SCRM business unit, which is assigned in the User feature of the User Group Management (UGM) application. If SCRM BU security is configured on, all search screens in Agile PLM for Process that include SCRM companies and facilities respect this visibility. For more information on visibility, see the *Agile Product Lifecycle Management for Process Security Configuration Guide*.

---

---

## Creating a Company Profile

You can create a company profile in the following ways:

- By using the **New > Company Profile > Blank** option from the action menu in SCRM. This option creates a company profile containing no data.
- By using the **New > Company Profile > From Template** option from the action menu in SCRM. This option creates a company profile with data pre-filled from a chosen template.

Use the Company Profile page to create a company. This page includes the following tabs, as shown in [Figure 2–1](#):

- [Company Information Tab](#)
- [Ext Data Tab](#)
- [Supporting Documents Tab](#)
- [Supply Categories Tab](#)
- [DRL Catalog Tab](#)
- [Facilities Tab](#)
- [Contacts Tab](#)
- [Audit Trail Tab](#)

Figure 2–1 Company Profile page

**Company Profile**

Company Information | Ext Data | Supporting Documents | Supply Categories | DRL Catalog | Facilities | Contacts | Audit Trail

**Company Information**

Company # :  
 Company Name:   
 Street Address:   
  
 City:   
 State/Province:    
 Postal Code:   
 Country:    
   
 Website:   
 Phone:   
 Fax:   
☐ Postal Address not same as Street Address

**Administrative Information**

Originator: Sarah Jones  
 Supplier Portal Admin:    
 Special Attributes:    
 Special Notes:

**Approved for Use In**

Segment(s):

Business Unit(s)	
Business Unit(s)	Status

## Company Information Tab

Enter data in the sections on the Company Information page to complete the company profile.

### Company Information Section

Use the Company Information section to provide general information such as company name, address, Web site, phone number, and fax number. The Province/ State field contains customized choices. When you save the information by clicking **Save**, the system assigns a company number that displays in the Company # field.

Company Name is a required field.

## Administrative Information Section

Use the Administrative Information section to keep track of special designations for the company that may be required for reporting and tracking. The Originator field shows you who created the company profile. This field is cannot be edited. Use the Supplier Portal Admin to assign a user to administer Supplier Portal access for the company, and the Special Attributes field to show special designations, such as ISO9000 and Minority or Women Owned Business.

## Approved for Use In Section

Use this section to specify the company's affiliation with one or more participating segments and business units and current status with regard to each business unit. Depending on your SCRM security configuration, you will only see segments and business units that you have access to. [Figure 2–2](#) shows this section.

**Figure 2–2** *Approved for Use in section*

Business Unit(s)			
		Business Unit(s)	Status
1	+	CPI Vendors - North America	Approved
2	+	CPI Vendors - Asia	In Review

Add New

Use the search icon to select a segment. This is a required field. Business Unit(s) is a required field. Click **Add New** to select and add a business unit from the Business Unit dialog box.

## Parent Relationships Section

Use the Parent Relationships section, shown in [Figure 2–3](#), to establish a parent company or agent relationship between this company (child) and a parent company.

Check the Show Archived SCRM Objects field to reveal archived companies.

**Figure 2–3** *Parent Relationship section*

Parent Relationships			Show Archived SCRM Objects: <input checked="" type="checkbox"/>
Company Name	Company #	Relationship	
ABC Packaging, Inc.	5011453	Parent	

Add New

## Child Relationships Section

The Child Relationships section displays all related child companies for this company. When you select a parent company from the list of existing companies, you automatically create a child company relationship at the child company level. You can view the profile of a child company by clicking the linked Company Name field, as shown in [Figure 2–4](#), when in read mode. Check the Show Archived SCRM Objects field to reveal archived companies.

Figure 2–4 Child Relationships section

Child Relationships			Show Archived SCRM Objects: <input checked="" type="checkbox"/>
	Company Name	Company #	Relationship
1	<a href="#">Peedmont Foods</a>	5010699	Child
2	<a href="#">CPI International</a>	5011147	Child

### Cross References Section

The Cross References section includes the system name, system ID, equivalent and status assigned to this company in an external system. A company can have multiple entries.

### Ext Data Tab

Use the Ext Data tab to enter extended attributes or custom sections for a company. This tab is described in detail in the *Agile Product Lifecycle Management for Process Getting Started Guide*.

### Supporting Documents Tab

Use the Supporting Documents tab to store documents for a company. You can also specify some documents to be viewed by suppliers who are using the Supplier Portal. You must save a company profile before you can add a supplier document or attachment. Refer to [Chapter 4, "Supplier Document Management"](#) for more detailed information. The Supporting Documents page consists of the Supplier Document Management section, shown in [Figure 2–5](#):

Figure 2–5 Supporting Documents tab

 <b>Archer Daniels Midland Corn SW (5010674)</b> Company Profile							
Company Information   Ext Data <b>Supporting Documents</b> Supply Categories   DRL Catalog   Facilities   Audit Trail							
Supplier Document Management							
	Type	Due/Renewal	Effective	Expiration	Status	Content	
1	 <b>Insurance</b> Insurance Considerations	3/28/2008 <input checked="" type="checkbox"/> (10)	3/23/2007	3/30/2007	In Progress	 	
2	 <b>Workplace Safety</b> Internal audit on workplace safety	3/31/2015			Review	 	
<div> <a href="#">Add New</a>   <a href="#">Order</a> </div> <div style="text-align: right;"> <a href="#">View Thumbnails</a></div>							

### Supplier Document Management Section

Refer to [Chapter 4, "Supplier Document Management"](#) for more detailed information on creating, editing, and managing supplier documents.

## Supply Categories Tab

The Supply Categories tab displays a consolidated list of the categories associated with all existing and potential specifications being sourced by this company (aggregated across all facilities). As [Figure 2–6](#) shows, it consists of two sections:

- **Existing Specification Categories**—This list is automatically generated based on the existing specifications attached to each facility via sourcing approvals.
- **Potential Specification Supply Categories**—This list is automatically generated based on potential categories attached to each facility via alternate (estimated) specification-related supply capabilities.

**Figure 2–6** Supply Categories tab

The screenshot shows the 'Supply Categories' tab for Archer Daniels Midland Corn SW (5010674). The interface includes a header with the company name and a navigation bar with tabs: Company Information, Ext Data, Supporting Documents, Supply Categories (selected), DRL Catalog, Facilities, and Audit Trail. The main content area is divided into two sections:

- Existing Specification Categories** (expanded):
  - Material Specifications » Sweeteners » Sugar » Dry
  - Material Specifications » \* No Category Available (Ing) » \* No Category Available » \* No Category Available
  - Material Specifications » Food Additives » Colors » Natural
  - Material Specifications » Dairy Products » Buttermilk » Chilled
  - Printed Packaging Specifications » \* No Category Available (Pkg) » \* No Category Available » \* No Category Available
  - Printed Packaging Specifications » Resin Based » Adhesives » Adhesives
  - Printed Packaging Specifications » Paper Based » Labels » Die Cut
  - Printed Packaging Specifications » Glass » Glass Containers » Blue Glass
  - Product Specifications » Beef - Ground - Frozen
- Potential Specification Supply Categories** (expanded):
  - Product Specifications » Beef - Ground - Fresh
  - Product Specifications » Beef - Ground - Frozen

## DRL Catalog Tab

Use the DRL Catalog tab to reference DRL catalogs of documents. The catalogs listed here will be available to vendors via the Supplier Portal. Refer to the *Agile Product Lifecycle Management for Process Document Reference Library User Guide* for more information. [Figure 2–7](#) shows the DRL Catalog tab:

**Figure 2–7** DRL Catalog tab

The screenshot shows the 'DRL Catalog' tab for American Sugar Refining Co. (5010664). The interface includes a header with the company name and a navigation bar with tabs: Company Information, Ext Data, Supporting Documents, Supply Categories, DRL Catalog (selected), Facilities, and Audit Trail. The main content area shows a section titled 'Document Catalogs' with a search bar and a list of document catalogs:

- Document Catalog(s):
  - Supplier Portal
  - Supply Chain » Distribution

## Facilities Tab

You can add facilities owned by the company using the Facilities tab. When you add a facility for a company, the facility is tied to the company and considered a “child” of that company.

For detailed information on creating a facility profile, see ["Creating a Facility Profile"](#) on page 2-11.

The Facilities tab is shown in [Figure 2–8](#):

**Figure 2–8 Facilities tab**

The screenshot shows the 'Facilities' tab for American Sugar Refining Co. (5010664). The page has a header with the company name and a 'Company Profile' label. Below the header is a navigation bar with tabs: Company Information, Ext Data, Supporting Documents, Supply Categories, DRL Catalog, Facilities (selected), and Audit Trail. The main content area is titled 'Facilities' and contains a table with the following data:

	Facility Name	Location	Status
1	<a href="#">Baker's Sugar - Philadelphia</a>	Philadelphia, PA USA	Approved - CPI Vendors - North America
2	<a href="#">Western Sugar</a>	Baltimore, MD -Not Specified	----- - CPI Co-packers

Below the table is an 'Add New' button.

## Contacts Tab

The Contacts tab, shown in [Figure 2–9](#), displays contacts for the company. This tab is visible for users with the [SUPPLIER\_PORTAL\_ADMIN] role.

**Figure 2–9 Contacts tab**

The screenshot shows the 'Contacts' tab for American Sugar Refining Co. (5010664). The page has a header with the company name and a 'Company Profile' label. Below the header is a navigation bar with tabs: Company Information, Ext Data, Supporting Documents, Supply Categories, DRL Catalog, Facilities, Contacts (selected), and Audit Trail. The main content area is titled 'Company Contacts' and contains a table with the following data:

Contact Name	Job Title	Category	Phone	Mobile/Pager	Email	Site Access	Portal Access	User Access	Description
1 <a href="#">Georgie Clock</a>			555-555-1211		<a href="mailto:gclock@asr.com">gclock@asr.com</a>	GSM, DRL, Contacts	Approved <a href="#">Change Status</a>	<input type="checkbox"/>	

Below the table are 'Add New' and 'Add Existing' buttons. To the right of the table is a 'Show Archived SCRM Objects:' checkbox.

Below the 'Company Contacts' section is a 'Facility Contacts' section, which is currently empty and displays 'No records found.'

The Site Access column contains the Site Access (for example, GSM, DRL, Contact, Manager) of the contact profile.

The Portal Access column combines “User Access” flag and “Supplier Portal Access” status to display the access for the contact profile. Options are:

- **Approved**—The contact profile is an “Approved” status and the user access is selected for the associated facility or parent company.
- **No Access**—User access is not selected for the associated facility or parent company, regardless of the contact profile status.

The Change Status button in the Portal Access column is used to change a contact's status. See ["To change the status for the contact:"](#) on page 2-24 for more information around this feature.

### Adding a Contact

After you have saved a company profile, you can add company contacts.

To add a contact:

1. Click **Edit**. The Add New button displays under the Company Contacts grid.
2. Click **Add New**. The Contact Profile window opens, shown in [Figure 2–10](#).

**Figure 2–10** Contact Profile dialog box

<a href="#">View All History</a>																								

The Lineage/History section shows a history of how a company was created and contains the following fields:

**Date**—Date and time the record was created.

**User**—User that created the record.

**Action**—The type of action that created this record:

- **Create New**—This record was created from blank.
- **Create New From Template**—This record was created from a template. The template is listed in the Company column.
- **Import From** (only available for specification-related sourcing approvals)—This record was created by importing existing specification-related sourcing approvals to a material in GSM.

**Company**—The corresponding object that was used based on the action performed. For example, when created from a template, the template used to create the record is listed.

Click see more information about the actions, click **View All History**. SCRM displays the Lineage/History dialog box.

Figure 2–12 Lineage/History dialog box

Total: 3					

## Saving the Company Profile

Once you entered all data for the company profile, click **Save & Close**.

## Copying a Company Profile

Users now have the ability to copy a company. A new role has been created SCRM\_COPIER. This new role plus the corresponding creator role is required to copy a company.

## Creating a Facility Profile

A facility is a plant or manufacturing location. When you create a facility within a company profile, the facility becomes a “child” of the “parent” company. A company is a vendor, supplier, broker, distributor, or co-packer.

You can create a facility profile in the following ways:

- By using the **New > Facility Profile > Blank** option from the action menu in SCRM. This option creates a facility profile containing no data.
- By using the **New > Facility Profile > From Template** option from the action menu in SCRM. This option creates a facility profile with data pre-filled from a chosen template.
- By creating it from the parent company profile. To create the facility using the company profile, first select the parent company using the search page. Then, select the **Facilities** tab and click **Add New > Blank** or **Add New > From Template**.

---

**Note:** Facility is required for setting up specification cost. You can add costing information for formulation specification calculation using a Cost Web service. See the *Agile Product Lifecycle Management for Process Web Services Guide*, “Using the Cost Services Web Service” chapter for more information.

---

## Facility Profile Page

Figure 2–13 shows the Facility Profile page.

**Figure 2–13** Facility Profile page

The screenshot displays the 'Facility Profile' page. At the top, there is a header with a factory icon and the title 'Facility Profile'. Below this is a row of tabs: 'Facility Information' (selected), 'Ext Data', 'Supporting Documents', 'Sourcing Approval', 'DRL Catalog', 'Contacts', and 'Audit Trail'. The main content area is divided into three sections, each with a dropdown arrow on the left:

- Facility Information:** Contains form fields for 'Company Name', 'Facility #', 'Facility Name', 'Street Address' (with a sub-field), 'City', 'State/Province', 'Postal Code', 'Country' (with a dropdown menu showing '- Not Specified'), 'Website', 'Phone', and 'Fax'. There is also a checkbox labeled 'Postal Address not same as Street Address'.
- Administrative Information:** Contains fields for 'Originator' (pre-filled with 'Shannon Smith'), 'Special Attributes', and 'Special Notes'.
- Approved for Use In:** Contains a 'Segment(s)' field and a table for 'Business Unit(s)'. The table has columns for 'Business Unit(s)' and 'Status'.

The facility profile page consists of several tabs across the top of the page:

- [Facility Information Tab](#)
- [Ext Data Tab](#)
- [Supporting Documents Tab](#)
- [Sourcing Approval Tab](#)
- [DRL Catalog Tab](#)

- [Contacts Tab](#)
- [Audit Trail Tab](#)

Use these tabs to set up a facility profile in the same way that you created a company profile.

## Facility Information Tab

Enter data in the Facility Information tab to complete the facility profile. The Facility Information tab contains the following sections:

- [Facility Information Section](#)
- [Administrative Information Section](#)
- [Approved for Use In Section](#)
- [Cross References Section](#)

### Facility Information Section

Use the Facility Information section to provide general information such as company name (required), facility name (required), address, Web site, phone number, and fax number. The Province/ State field contains customized choices.

If you created the facility profile using the **New > Facility Profile** option, assign a **Company Name** by clicking the search icon and selecting a company. Type a facility name in the **Facility Name** field.

If you created the facility profile from the parent company, the facility's parent name automatically displays in the **Company Name** field. This field contains a link to the Company Profile page. For the **Facility Name**, click the import data icon to import contact information associated with the parent company. The system automatically populates the Facility Information fields with the company contact information.

---

---

**Note:** You can reassign the facility to a new company using the Company Name field if you are assigned the [SCRM\_FACILITY\_RELOCATER] role. For more information, refer to "[Assigning a Facility to a Different Company](#)" on page 2-20.

---

---

Once you save the information by clicking **Save** in the action menu, the system assigns a facility number which displays in the Facility (Prodika #) field.

Administrative Information Section

Use the Administrative Information section to keep track of special designations for the facility which may be required for reporting and tracking. The Special Attributes field shows special designations, such as ISO9000 and Minority or Women Owned Business.

Approved for Use In Section

Use the Approved for Use In section to specify the facility’s affiliation with one or more participating company’s segments and business units and the current status for each business unit. Both of these fields are required. Figure 2–14 shows this section.

Figure 2–14 Approved for Use In section

Approved for Use In

Segment(s): Baked Goods, Beverages

Business Unit(s)

		Business Unit(s)	Status	
1	+	CPI Vendors - North America CPI Vendors - Latin America	Approved	✖
2	+	CPI Vendors - Europe	Not Approved	✖

Add New

Use the search icon to select a segment. This is a required field.

Business Unit(s) is a required field. Click **Add New** to select a business unit from the Business Unit dialog box.

The business units and segments are tied to sourcing approvals and can play a key role in workflow resolution.

Cross References Section

Use the Cross References grid to list the system name, system ID, equivalent value, and status assigned to this facility in a legacy, ERP, or vendor system. You can make multiple entries.

Ext Data Tab

Use the Ext Data tab to enter extended attributes or custom sections for a facility. This tab is described in detail in the *Agile Product Lifecycle Management for Process Getting Started Guide*.

## Supporting Documents Tab

Use the Supporting Documents tab to store documents for a facility. You can also specify documents to be viewed by suppliers who are using the Supplier Portal. You must save a facility profile before you can add a supplier document or attachment. Refer to [Chapter 4, "Supplier Document Management"](#) for more detailed information. The Supporting Documents page is shown in [Figure 2–15](#):

**Figure 2–15** Supporting Documents page

3	<b>Workplace Safety</b>		10/10/2005	10/10/2006	Compliant		

**Add New** **Order**

### Supplier Document Management Section

Refer to [Chapter 4, "Supplier Document Management"](#) for more detailed information on creating, editing, and managing supplier documents

## Sourcing Approval Tab

Use the Sourcing Approval tab, shown in [Figure 2–16](#), to add, delete, or modify sourcing approvals, depending on your permissions. [Chapter 3, "Sourcing Approvals"](#), gives detailed information about working with sourcing approvals.

You can add specification categories in the Alternate (Estimated) Specification related Supply Capabilities section. See ["Creating an Alternate \(Estimated\) Specification-Related Supply Capability"](#) on page 3-13 for instructions.

On the Specification-related Sourcing Approvals grid, click the **Show Hidden SAs** box to view sourcing approvals on workflow statuses that are tagged with "Hide SAs".

On the Specification-related Sourcing Approvals grid and Non-specification Related Sourcing Approval grid, you can click the **Show Archived SCRM Objects** box to reveal archived sourcing approvals.

### Facility Contacts Section

You can enter facility contacts using this section.

### Company Contacts Section

You can view and edit contacts added to the parent company using this section. This is a read only view of contacts are maintained on the company profile.

### Adding a Contact

After you have saved a facility profile, you can add facility contacts using the Contacts dialog box, shown in [Figure 2–19](#). Contact information includes first and last name, job title, phone number, email, address and whether the contact is designated as an emergency contact. For steps on adding a contact, refer to ["Adding a Contact"](#) on page 2-9.

Lineage/History

Date	User	Action	Facilities
No records found.			

### Company History Section

The Company History section displays any company reassignments made to that facility. You can reassign the facility to a new company using the Company Name field if you are assigned the [SCRM\_FACILITY\_RELOCATER] role. Refer to ["Assigning a Facility to a Different Company"](#) on page 2-20 for more information.

### Lineage/History Section

The Lineage/History section shows a history of how a facility was created and contains the following fields:

**Date**—Date and time the record was created.

**User**—User that created the record.

**Action**—The type of action that created this record:

- **Create New**—This record was created from blank.
- **Create New From Template**—This record was created from a template. The template is listed in the Facilities column.
- **Import From** (only available for specification-related sourcing approvals)—This record was created by importing existing specification-related sourcing approvals to a material in GSM.

**Facilities**—The corresponding object that was used based on the action performed. For example, when created from a template, the template used to create the record is listed.

## Saving the Facility Profile

Once you entered all data for the facility profile, click **Save & Close** from the action menu. You can also click the **Save & Close** action icon.

## Assigning a Facility to a Different Company

After saving a facility, users with the SCRM\_FACILITY\_RELOCATOR role can move the facility to a different company. All sourcing approvals tied to the facility will be moved.

### Moving a Facility

To move a facility:

1. On the Facility Information tab, click the search icon at the end of the Company Name field. SCRM displays the company search page.
2. Search for and select the company you want to assign the facility to. The Reason for Change field is displayed, as seen in [Figure 2-21](#).

**Figure 2-21 Reason for Change field**

The screenshot shows the 'Facility Information' tab with the following fields:

- Company Name:** ABC Food Ingredients Co. (with a search icon)
- Reason for Change:** (empty text box)
- Facility # :** 5011205 (with a folder icon)
- Facility Name:** ABC Facility (with a globe icon)

3. Enter notes explaining why you are changing the company the facility is assigned to.
4. Click **Save**. The facility's Audit Trail tab will display when this change was made, what the previous company value was, who made this change and the reason for change comments, as [Figure 2-22](#) shows.

**Figure 2-22 Audit Trail, Company History**

The screenshot shows the 'ABC Foods - Atlanta (5017198) Facility Profile' with the 'Audit Trail' tab selected. The 'Company History' section displays a table with the following data:

	User	Time	Event	Comments
1	Samuel Davis	10/28/2012 04:44 PM	Company Changed	'Global Foods Incorporated' changed to 'ABC Food Ingredients Co.' Comments: buyout

The 'Lineage/History' section shows a table with the following headers: Date, User, Action, Facilities. Below the table, it states 'No records found.'

## Copying a Facility Profile

Users with the [SCRM\_COPIER] role now have the ability to copy a facility. This role plus the corresponding creator role is required to copy an SCRM facility.

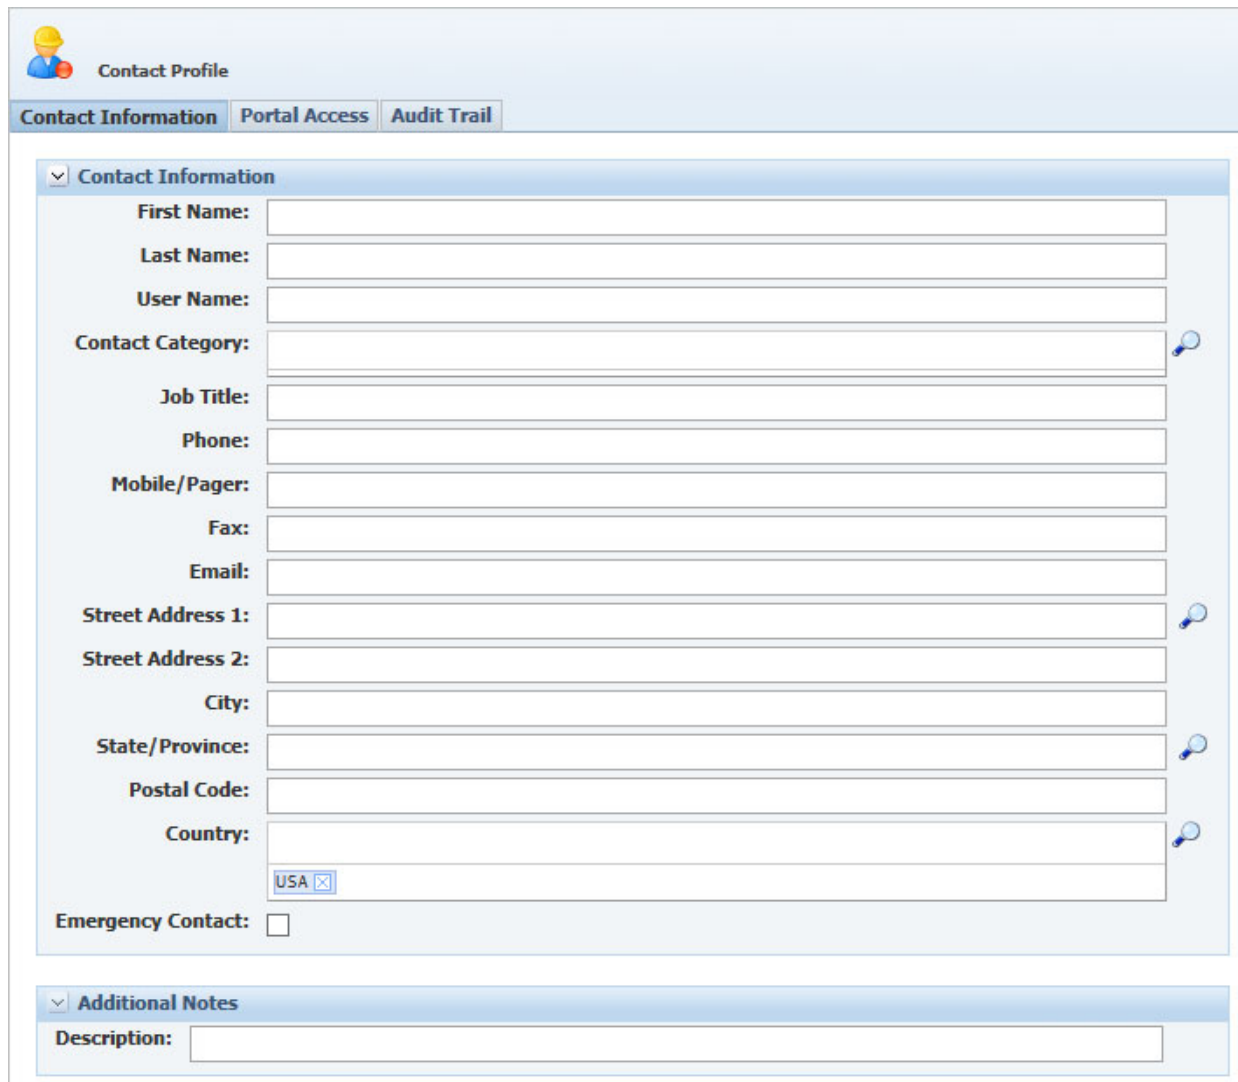

## Creating a Contact Profile

If you have the role [CONTACT\_CREATOR], you can create a contact profile using the **New > Contact Profile** option from the action menu in SCRM. This option creates a contact profile containing no data.

Use the Contact Profile page to create a contact. This page includes the following tabs, as shown in [Figure 2–23](#):

- [Contact Information Tab](#)
- [Portal Access Tab](#)
- [Audit Trail Tab](#)

**Figure 2–23** Contact Profile page

The screenshot displays the 'Contact Profile' page with three tabs: 'Contact Information', 'Portal Access', and 'Audit Trail'. The 'Contact Information' tab is active, showing a form with the following fields:

- First Name:
- Last Name:
- User Name:
- Contact Category:  
- Job Title:
- Phone:
- Mobile/Pager:
- Fax:
- Email:
- Street Address 1:  
- Street Address 2:
- City:
- State/Province:  
- Postal Code:
- Country:  

USA 
- Emergency Contact: ☐

Below the main form is a section titled 'Additional Notes' with a 'Description:' label and a text area.

## Contact Information Tab

Enter data in the sections on the Contact Information page to complete the contact profile.

### Contact Information Section

Use the Contact Information section to provide general information such as contact name, address, Web site, phone number, and fax number.

First Name and Last Name are required fields. You must provide a unique supplier email address.

You can use the search icon to make selections for Contact Category, Street Address 1, State/Province, and Country.

### Additional Notes Section

Use the Description field to keep track of special designations for the contact that may be required for reporting and tracking.

## Portal Access Tab

Use this tab to set the contact's access to Supplier Portal and other PLM for Process applications, to assign companies and facilities, and set other access features,

Segment is a required field, and at least one company or facility must be associated with the contact using this page.

## Supplier Portal Status Section

Use this section to maintain the Supplier Portal status for the contact.

**Figure 2–25** *Supplier Portal Status section*

Supplier Portal Status

Registration Request Date:

Last Login Date:

Portal Access: Not Initiated

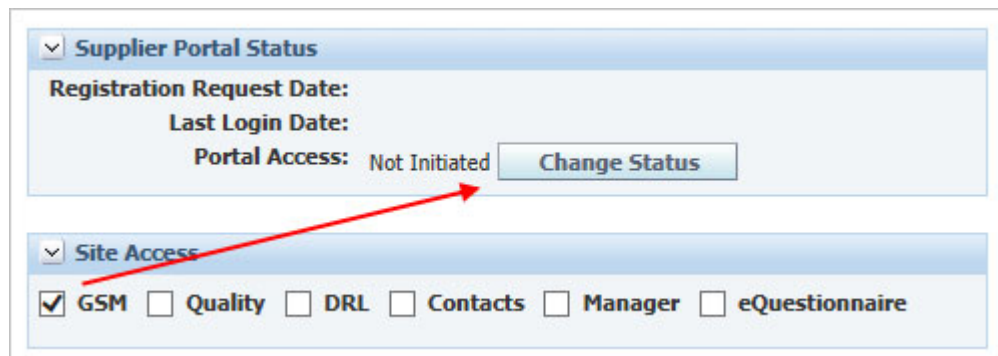

This section contains the following fields:

**Registration Request Date**—Remains blank until a request to register for Supplier Portal is submitted. Once submitted, the date displays in this field.

**Last Login Date**—Date of contact's last log in to Supplier Portal.

**Portal Access**—Automatically displays the status of Supplier Portal access. This field is blank for a new contact, but when a checkbox is selected in the Site Access section, the Change Status button displays in this section to the right of the Portal Access field.

**Figure 2–26** *Change Status button*

Supplier Portal Status

Registration Request Date:

Last Login Date:

Portal Access: Not Initiated

Change Status

Site Access

☒ GSM ☐ Quality ☐ DRL ☐ Contacts ☐ Manager ☐ eQuestionnaire

To change the status for the contact:

1. Click **Change Status**. SCRM displays the User Status Change window.

**Figure 2–27 User Status Change window**

The screenshot shows a web-based form titled "User Status Change". At the top right is a "Cancel" button. The form is divided into three main sections, each with a blue header and a light gray body:

- Next Action:** Contains a dropdown menu currently set to "Approve" and a "Submit" button.
- Your Comments:** Contains a single-line text input field.
- Current Status:** Displays two lines of information: "Contact Name: jthomas" and "Current Status: Not Initiated".

2. Select an action from the Next Action drop-down, then click **Submit**. Available choices vary depending on the status of the contact:
  - **Approve**—The only choice for a new contact.
  - **Reject**—Select this to reject the contact. (This is enabled by a configuration.)
  - **Deactivate**—Select this to deactivate the contact.
3. In the **Your Comments** field, enter notes about the status change. This field is required when deactivating a contact.

The Current Status section shows contact name and current status of the contact. These actions are reflected in the Audit Trail tab.

## Site Access Section

A contact's access to several areas of PLM for Process can be changed using the following boxes:

**GSM**—Grants an approved contact profile user the ability to access specifications and documents for the user's associated company/facility profiles.

**Quality**—Grants an approved contact profile user the ability to access PQM functionality for the user's associated company/facility profiles.

**DRL**—Grants an approved contact profile user the ability to access DRL functionality for the user's associated company/facility profiles.

**Contacts**—Grants an approved contact profile read access to other contact profiles associated to the same company/facility profiles. Note that all users with "Approved" Supplier Portal access are able to edit their contact information.

**Manager**—Grants an approved contact profile user the ability to create/edit all contact profile information for contact profiles associated to the same company/facility. In Supplier Portal, can view all published PQM objects assigned to the current user's associated companies/facilities, and can view the Open eQs tab and control in the Historical eQs tab if the supplier user can see eQs initiated by other contacts which have user access on the current user's associated company/facility.

**eQuestionnaire**—Grants an approved contact profile the ability to view the Action Items tab in Supplier Portal, and open and reassign assigned eQs. Can also view the Historical eQs tab in Supplier Portal which is populated with previously self-submitted eQs.

**Figure 2–28 Site Access section**

The screenshot shows a section titled "Site Access" with a dropdown arrow. Below the title is a row of six checkboxes, each followed by a label: ☒ GSM, ☒ Quality, ☒ DRL, ☒ Contacts, ☒ Manager, and ☒ eQuestionnaire.

## Associated Companies Section

Associated Companies and Associated Facilities are key fields when managing contacts. The administrator uses these fields to tie a supplier contact to companies or facilities. Doing so affects what data the supplier will see inside Supplier Portal.

For a registrant to be able to view specifications and contact information in Supplier Portal, he must be associated with one or more companies or facilities. The Associated Companies section contains a table with associated companies.

**Note:** If a facility is assigned to a registrant, only the specifications, documents and contacts for that facility will be available for viewing. If a company is assigned to the registrant, only the data for that company will be available for viewing.

Not for all facilities belonging to that company will be available for viewing.

**Figure 2–29 Associated Companies section**

The screenshot shows a section titled "Associated Companies" with a dropdown arrow. Below the title is a table with the following data:

	Company #	Company Name	User Access	
1	5011413	EchoClosures, Inc	<input type="checkbox"/>	

Below the table are two buttons: "Create New Company" and "Add Existing".

## Associated Facilities Section

The Associated Facilities section contains a table with associated facilities.

**Figure 2–30 Associated Facilities section**

The screenshot shows a section titled "Associated Facilities" with a dropdown arrow. Below the title is a table with the following data:

	Facility #	Facility Name	Company Name	User Access	
1	5011087	A E Staley Manufacturing Co	A E Staley Manufacturing Co	<input checked="" type="checkbox"/>	

Below the table is a button labeled "Add Existing".

**Assigning Companies or Facilities to a Contact** The administrator clicks **Add Existing** under either table to assign a company or facility to the registrant. This action displays

the standard search page. The administrator selects one or more companies or facilities, then clicks **Done**.

To add a new company, the administrator clicks **Create New Company**.

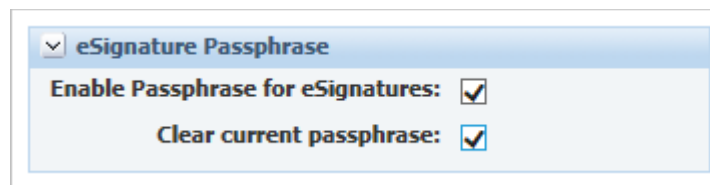

## eSignature Passphrase Section

Sourcing approval and signature document workflows can be configured to require re-authentication from a user before the user can transition the object to a specific workflow status. (See the “eSignature” section in the *Agile Product Lifecycle Management for Process Workflow Administration User Guide* for more information.) Use the eSignature Passphrase section to allow the user to enter a passphrase when transitioning a SCRM sourcing approval, or PQM object to a certain status, or when transitioning a signature document to a Go or No Go status. [Figure 2–31](#) shows this section. If a passphrase is not enabled for a user, the user will not be allowed to re-authenticate when workflowing an object.

This is used when supplier workflows a supplier PQM item. The system requires the supplier to input the passphrase before the workflow validation.

Users manage their passphrase in Profiles and Preferences. For more information, refer to the Profiles and Preferences section in the *Agile Product Lifecycle Management for Process Getting Started Guide*.

**Figure 2–31 eSignature Passphrase section**

The screenshot shows a user interface for the 'eSignature Passphrase' section. At the top, there is a dropdown menu with a downward arrow and the text 'eSignature Passphrase'. Below this, there are two lines of text, each followed by a checked checkbox. The first line is 'Enable Passphrase for eSignatures:' and the second line is 'Clear current passphrase:'.

**Enable Passphrase for Signatures**—When checked, the user is allowed to re-authenticate when workflowing an object and the passphrase option displays in the user’s Profiles and Preferences.

**Clear current passphrase**—This field is displayed when the Enable Passphrase for Signatures field is checked. When checked, the user’s passphrase is cleared and the user will be prompted to reset it when opening Profile and Preferences or when asked to re-authenticate while workflowing an object. This is typically used when a user forgets the passphrase he or she set up.

## Group Membership Section

Use this section to associate the contact to UGM groups. Groups decide the following for the supplier: Roles, Workflow Visibility Tags, and OLS classifications.

The role a supplier contact plays during the quality process is determined by group membership. For example, to give the supplier the ability to create quality actions, assign the supplier to a group with the [CREATE\_FROM\_TEMPLATE\_7003] role. Groups should also be used to manage workflow participation and permissions.

**Figure 2–32 Group Membership section**

Group Membership		
	Full Name	Description
1	Workflow/Manufacturing

Manage Groups

## User Available Languages Section

These are the languages that will be available to the contact in Supplier Quality. The language the contact selects when logging into Supplier Portal will be used.

**Figure 2–33 User Available Languages section**

User Available Languages

Available UI Languages: ENGLISH, PORTUGUESE

Proactive Translation Languages:

## Visibility and Security Section

Depending on your configuration choices, Supplier Portal users may be required to be associated with DRL Catalogs and/or Segments. The selection here will affect which objects the user is allowed to see. More information around security configuration can be found in the *Agile Product Lifecycle Management for Process Security Configuration Guide*. [Figure 2–34](#) shows the Visibility and Security section.

**Figure 2–34 Visibility and Security section**

Visibility and Security

DRL Catalog(s): Food Safety, Supplier Portal, Supply Chain

Segment(s): Baked Goods, Proteins

**DRL Catalogs**—The supplier can be given explicit access to specific DRL catalogs. For more information see the “Using Document Reference Library” chapter of the *Agile Product Lifecycle Management for Process Supplier Portal User Guide*.

**Segments**—This section displays if segment is enabled. This field is required. Click the search icon to grant the user access to a segment. When segment security is enabled, segments control the user’s visibility and read access to PPQM objects. As an example, if a user is associated to the “Baked Goods” segment they will only see PQM items that are associated to the Baked Goods segment.

User Preferences Section

This sets the default language for the contact. The language the supplier selects when logging into Supplier Portal will be used, however if they select a language that is not applicable, this will be the language used.

Figure 2–35 User Preferences section

Free Text Language:

ENGLISH ▼

Tags Section

Tags are used to associate a contact to custom print templates. Select the Publish to Supplier Portal tag to make the contact viewable in Supplier Portal. They can also be used to control Supplier Portal extension points. For more information around custom print templates refer to the *Agile Product Lifecycle Management for Process Print Extensibility Guide*.

13	Created	System Administrator	Jul 17, 2014 9:53 PM	
14	Added Company - EchoClosures, Inc	System Administrator	Jul 17, 2014 9:52 PM	

The Event History section shows a history of how the contact was created and contains the following fields:

**Event**—The type of action tied to this record. Examples are:

- **Restored**—The contact was restored on this date.
- **Archived**—This contact was archived on this date.
- **Created**—This contact was created on this date.
- **Added Company**—This record shows the creation date of the company assigned to the supplier contact.

**User**—User that created the record.

**Time**—Date and time the record was created.

**Comments**—This field shows both manually entered comments and system-generated comments. For example "Checked: Quality,GSM,DRL,Contacts,EQ" is a system-generated comment.

## Managing Contact Profiles

You can manage contact profiles through Action Items using the New Registrations tab. The page contains two sections: My New Registrations (Supplier Portal Assigned) and New Registrations (Country Assigned). Key fields include:

**Type**—Displays how the registration was submitted. Options are:

- **Manager Registration**—Supplier with “Manager” Site Access requested supplier portal access on behalf of a company colleague.
- **Self Registration**—Supplier requested Supplier Portal access via the self registration process.

Click on any row to view the contact profile and make any needed changes.

**Figure 2–38 New Registrations tab**

## Saving the Contact Profile

Once you entered all data for the contact profile, click **Save & Close**.

## Archiving the Contact Profile

You can archive contact profiles that are only associated to the specific company/facility profiles being archived. When a company/facility profile is set to “Archived”, all related contacts (including contacts on Associated Facilities) are marked “Archived” as well.

To archive a contact:

1. Access the contact profile.
2. Select **Archive Contact** from the action menu. A message prompts you to confirm the archive.
3. Click **OK**.

The profile is archived and the action is logged in the Audit Trail tab.

## Restoring the Contact Profile

When a Company/Facility Profile is set to “Restored”, all related Contacts (including Contacts on associated Facilities) should be marked “Restored” as well. You cannot restore a contact if the linked company/facility is Archived.

To restore an archived contact:

1. Access the contact profile.
2. Select **Restore Contact** from the action menu. A message prompts you to confirm the action.
3. Click **OK**.

The profile is restored and the action is logged in the Audit Trail tab.

---

## Sourcing Approvals

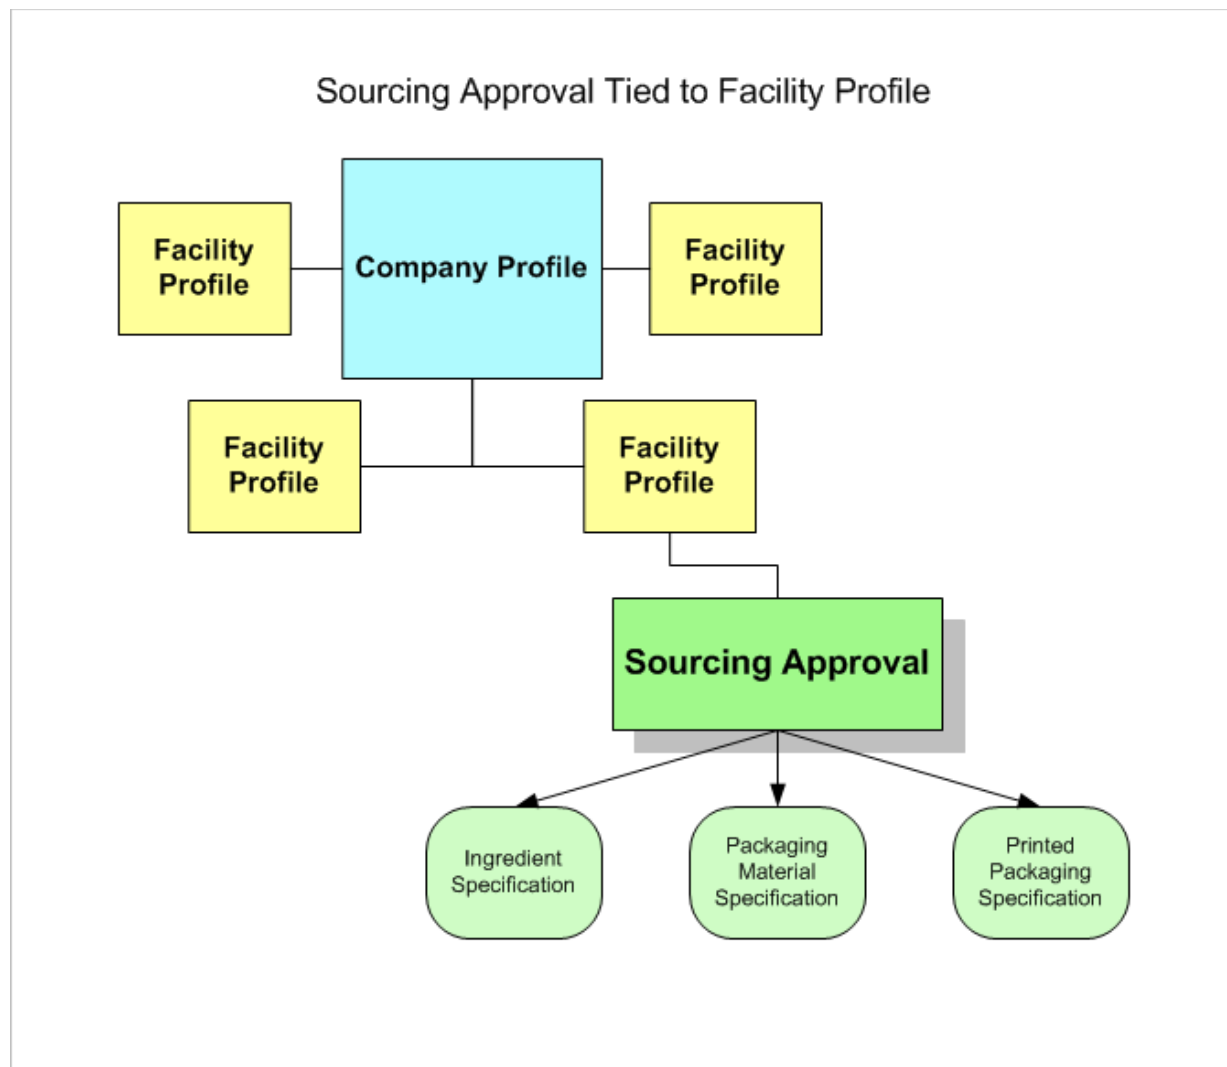

This chapter describes the types of sourcing approvals and discusses the steps involved in creating sourcing approvals. The topics covered include:

- [Overview](#)
- [Accessing Sourcing Approvals](#)
- [Creating a Specification-Related Sourcing Approval](#)
- [Creating an Alternate \(Estimated\) Specification-Related Supply Capability](#)
- [Creating a Non-Specification Related Sourcing Approval](#)
- [Copying a Sourcing Approval](#)
- [Workflows and Sourcing Approvals](#)

### Overview

A sourcing approval is a document that defines what will be supplied, who will supply it, and to whom it will be supplied. It describes the approval status among all facilities throughout the extended supply chain.

**Figure 3–1** A specification-related sourcing approval defines what specifications a facility is to supply

## Types of Sourcing Approvals

Use Supply Chain Relationship Management (SCRM) to create the following types of sourcing approvals:

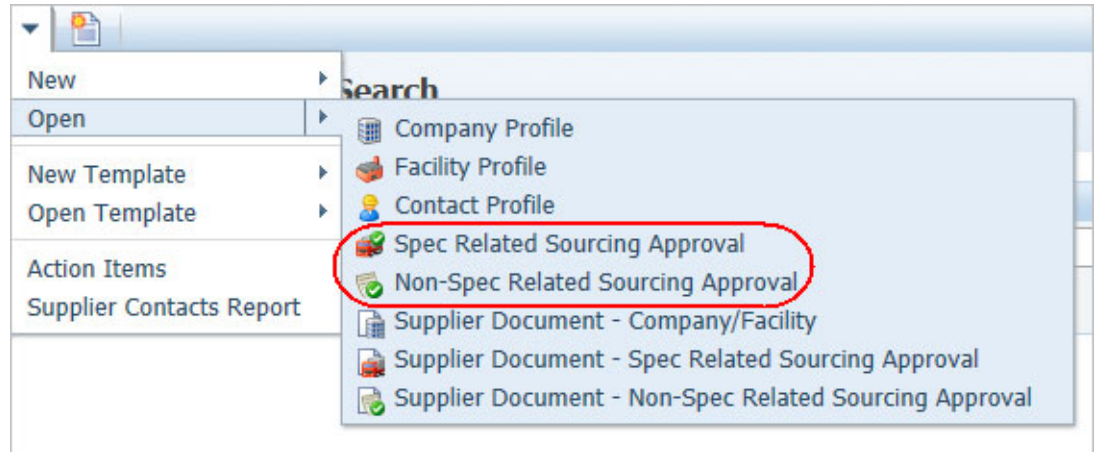

- **Specification-related sourcing approvals**—Sourcing approvals tied to specifications in Global Specification Management (GSM). The sourcing approval captures information about your company's relationship to the specification and its suppliers.
- **Non-specification related sourcing approvals**—Sourcing approvals unrelated to specifications within GSM, such as janitorial services.

## Accessing Sourcing Approvals

To view existing sourcing approvals in SCRM, you can either search for them from the Open action menu, shown in [Figure 3–2](#), or from a facility.

**Figure 3–2** Sourcing Approval submenu

Select from the following menu options:

- **Spec Related Sourcing Approval**—Displays a search page for specification related sourcing approvals.
- **Non-Spec Related Sourcing Approval**—Displays a search page for non-specification related sourcing approvals.

The sourcing approval search pages work like other search pages in Agile PLM for Process. For instructions on using the search page, see the *Agile Product Lifecycle Management for Process Getting Started Guide*.

---

**Note:** Depending on your configuration, there are security limitations around sourcing approvals. Only the sourcing approvals users have access to will be made available to them.

---

To select a sourcing approval from a facility, first select the facility. From the facility profile, click the Sourcing Approval tab. This tab contains the following three sections, as [Figure 3–3](#) shows:

- [Specification-related Sourcing Approvals Section](#)
- [Alternate \(Estimated\) Specification-related Supply Capabilities Section](#)
- [Non-specification Related Sourcing Approvals Section](#)

### Specification-related Sourcing Approvals Section

The Specification-related Sourcing Approvals section displays the following information:

**Sourcing Number**—The system-assigned number for the sourcing approval

**Spec #**—The system-assigned specification number for the item being sourced

**Spec Name**—The name of the specification

**Sourcing Type**—The type of sourcing relationship

**Receiving Facilities**—The names of the receiving facilities

**Status**—The workflow status of the sourcing approval

**Protocol**—Can help categorize the nature of the sourcing relationship

**Item #**—The item number assigned to the sourcing approval in the supplier's facility

**Cross Ref #**—The cross references assigned to the sourcing approval.

**Quality Concern Count**—Displays a count of quality concerns for the specification listed in the row. If there are severe quality concerns an alert (!) will appear next to the count. Open quality concerns are any PQM issue or action in a status tagged with submitted, released or review. The definition of a quality concern and severity is configurable. More information can be found in the *Agile Product Lifecycle Management for Process Quality Notifications Configuration Guide*.

**Sort (unlabeled)**—Click to change the sort order of the records. Options are ascending (default) and descending.

**Show Hidden SAs**—When checked, displays hidden sourcing approvals.

**Show Archived SCRM Objects**—When checked, displays archived specification-related sourcing approvals.

---

**Note:** If no cross reference is assigned to the sourcing approval, this field displays the preferred cross reference set by the user for GSM in Profile and Preference.

---

### Alternate (Estimated) Specification-related Supply Capabilities Section

This section, shown in [Figure 3–4](#), references the alternate capabilities of the supplier. For example, if your supplier supplies you with chili powder but could also supply you with pepper and salt, you would indicate that here using specification categories.

The category you add is consolidated with all other alternate capabilities for this facility and is displayed on the company profile's Supply Categories tab in the Potential Specification Supply Categories section. Refer to ["Supply Categories Tab"](#) on page 2-7 for more information.

**Figure 3–4** Alternate (Estimated) Specification-related Supply Capabilities section

### Non-specification Related Sourcing Approvals Section

The Non-specification Related Sourcing Approvals section, shown in [Figure 3–5](#), displays the following information:

**Sourcing #**—The system-assigned number for the sourcing approval

**Description**—The description of the item or service provided by the facility

**Sourcing Type**—The type of sourcing relationship

**Receiving Facilities**—The names of the receiving facilities

**Status**—The workflow status of the sourcing approval

**Show Archived SCRM Objects**—When checked, displays archived non-specification related sourcing approvals.

## Creating a Specification-Related Sourcing Approval

To add a specification-related sourcing approval:

1. From the Sourcing Approval tab in a facility profile, click **Add New > Blank** or **Add New > From Template**, or
2. In the action menu, click **New > Spec Related Sourcing Approval > Blank** or **New > Spec Related Sourcing Approval > From Template**.

Supply Chain Relationship Management displays the Specification Related Sourcing Approval page, as shown in [Figure 3–6](#).

**Figure 3–6** *Specification Related Sourcing Approval page*

 SC Assigned: ☒

**Receiving Facilities**

Facility #	Facility Name
No records found.	

**Cross References**

This page consists of four tabs arranged across the top of the page:

- . Summary
  - . Ext Data
  - . Supporting Documents
  - . Signature Approval
3. If you created the sourcing approval from a facility, the Facility field is already populated. If you created the sourcing approval from the New option on the action menu, you must assign a facility. Click the search icon, and then select a facility using the search page.
  4. In the Approved for Use In section, select one or more segments using the search icon. This is a required field.
  5. Make entries in the fields in the Specification section, as detailed below:

**Specification**—Select the specification using the search icon. The specification name and number are displayed, indicating the sourcing approval is linked to the specification. This is a required field.

**Assigned Reference**—This field is shown after a specification is selected. Use this field to select the specification cross references that directly relate to this sourcing approval.

**Item #**—Enter the supplier number for this specification.

**Supplier signed spec**—Check the Yes box if the supplier has agreed to the specification. When you check the box, a text entry field displays. Enter the name of the supplier representative that signed off, then click the date field to choose the date that the supplier's approval was received. If enacting supplier electronic signature, this box will be checked automatically when a supplier signs off on a specification. To learn more about supplier electronic signature, refer to the *Agile Product Lifecycle Management for Process Supplier Portal User Guide*.

**Sourcing Type**—Select the type of sourcing relationship. You can make multiple selections.

**Status**—The workflow status of the sourcing approval. This is assigned by the system.

**Protocol**—Select a protocol ID from the drop-down list.

**Class**—Select a class from the drop-down list.

**Notes**—Enter any notes.

**QA Assigned**—Select the name of a quality assurance auditor assigned to this facility. You can select multiple names.

**SC Assigned**—Select the name of the supply chain representative responsible for the relationship with the supplier. You can select multiple names.

6. The Receiving Facilities section displays the receiving facilities for the material. To add a receiving facility, click **Add New** and use the facility search page to select a facility.
7. The Cross References section displays the linked specification's cross references.
8. The Supplier Initiated Questionnaire section displays details of the eQ questionnaire tied to the sourcing approval. Complete this section to designate if the supplier is allowed to initiate questionnaires in Supplier Portal. For more information on supplier initiated questionnaires, refer to the *Agile Product Lifecycle Management for Process Supplier Portal User Guide*.

---

**Note:** This section will not appear on the sourcing approval if the supplier-initiated questionnaire feature is not configured on.

---

9. Make entries in the following fields:

**Supplier can initiate Edits**—Select the check box if the supplier can initiate edits to the specification. If selected, the supplier will see the Submit Changes supplier action in Supplier Portal.

**Questionnaire Owner**—Select who will be the owner of the questionnaire if the supplier initiates one. Click the field label to display a UGM user search page. You can select only one owner.

**Additional Administrators**—Select the users or groups who will be the additional administrators of the questionnaire. Click the field label to display a UGM user and group search page. You can select multiple administrators.

**Due Date**—Enter the number of days after the supplier initiates the questionnaire that it is due.

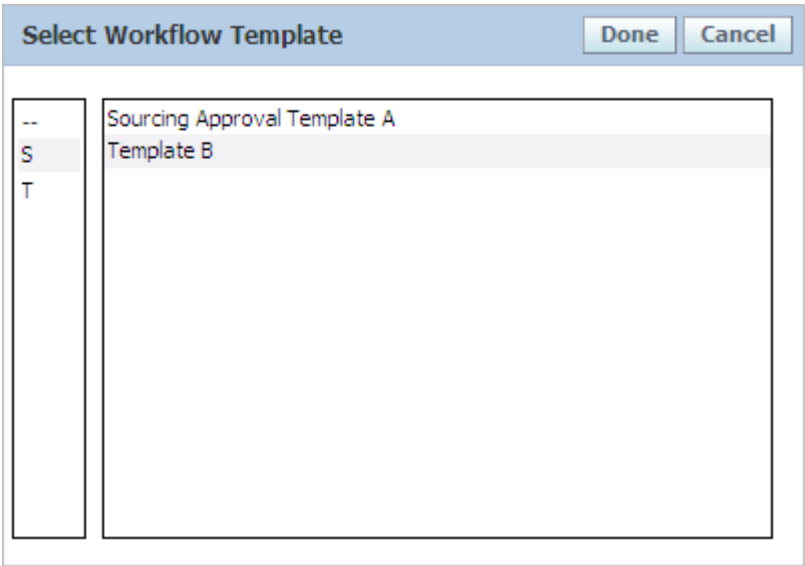

**Documentation Due Date**—Enter the number of days after the supplier initiates the questionnaire that supporting documentation is due.

**Amber Date**—Enter the number of days prior to the Due Date when the questionnaire becomes flagged as amber.

For more information on supplier-initiated questionnaires, refer to the *Agile Product Lifecycle Management for Process eQuestionnaire User Guide* and the *Agile Product Lifecycle Management for Process Supplier Portal User Guide*.

- 10. Click **Save**. You can use the other tabs to complete the sourcing approval. All sourcing approvals will be tied to a workflow. In some cases, when the sourcing approval resolves to multiple workflow templates, you will need to select the workflow template from the available options. For more detailed information on workflows, refer to ["Workflows and Sourcing Approvals"](#) on page 3-17.
- 11. Select a template to tie this approval to from the Select Workflow Template dialog box, shown in [Figure 3-7](#), then click **Done**.

**Figure 3-7** Select Workflow Template dialog box

- 12. Click **Save**. [Figure 3-8](#) shows the sourcing approval tied to the workflow.

Figure 3–8 Sourcing approval now tied to a workflow

**Approved for Use In**

Segment(s): Baked Goods

**Specification**

Specification: [5077414-001: Spice Oil for Pork & Beans](#)  
Assigned Reference:  
Item #:  
Supplier signed spec: ☐ Yes  
Sourcing Type: Producer  
Status: Draft  
Protocol: A  
Class: --  
Notes:   
QA Assigned:

Once you choose a workflow template, the workflow icon displays in the action menu, and the status displays in the header and in the Status field.

---

**Warning:** A workflow is tied to a sourcing approval when you first save the sourcing approval. Once you select a workflow template, you will not be asked to define this again. If you need to tie the sourcing approval to another workflow template, you will need to use the Resolve Workflow button (available with user role [CAN\_RERESOLVE\_WORKFLOWS\_SCRM]).

---

The system assigns a sourcing approval status based on the workflow template you chose. Refer to ["Workflows and Sourcing Approvals"](#) on page 3-17 for more information on workflows.

## Ext Data Tab

Use the Ext Data tab to enter extended attributes or custom sections for a sourcing approval. This tab is described in detail in the *Agile Product Lifecycle Management for Process Getting Started Guide*.

## Supporting Documents Tab

Use the Supporting Documents page to store documents for sourcing approvals. You can also specify attachments to be viewed by suppliers who are using the Supplier Portal. The Supporting Documents page is shown in [Figure 3–9](#).

**Figure 3–9** Supporting Documents tab

Supplier Document Management							
	Type	Due/Renewal	Effective	Expiration	Status	Content

▼ **Signature Document**

[View Historical Signature Documents](#)

▼ **Lineage/History**

Date	User	Action	Spec Related Sourcing Approval
No records found.			

This tab consists of the following sections:

**Current Status Section**—Snapshot view of the sourcing approval’s workflow summary

**Event History Section**—Listing of all actions taken for this sourcing approval

**Signature Documents Section**—Listing of all signature documents

**Lineage/History Section**—Historical listing of how and when a sourcing approval was created.

## Current Status Section

The following fields reside in the Current Status section:

**Current Owner**—The name of the persons responsible for managing the current step in the sourcing approval. When the sourcing approval is in Draft status, the originator is displayed.

**Current Workflow**—The workflow that the sourcing approval has resolved to

**Current Status**—The current status of the sourcing approval

**Desired Action**—The recommended action based on the instructions from the workflow step

**Start Date**—The date that the current step was assigned to the owner

**Amber Date**—The date that a reminder will be issued to the owner indicating a deadline is approaching

**Red Date**—The date that the current workflow task is due

## Event History Section

The Event History section displays the current and past steps within the sourcing approval process. Each step status is displayed along with the name of the user who transitioned the workflow, the date that the workflow was transitioned, and any related comments. The most recent transitions are displayed first.

## Signature Documents Section

The Signature Documents section lists all signature documents assigned to this sourcing approval. See ["Working with a Signature Document"](#) on page 3-19 for more information on signature documents.

## Lineage/History Section

The Lineage/History section shows a history of how a specification-related sourcing approval was created and contains the following fields:

**Date**—Date and time the record was created.

**User**—User that created the record.

**Action**—The type of action that created this record:

- **Create New**—This record was created from blank.
- **Create New From Template**—This record was created from a template. The template is listed in the Spec Related Sourcing Approval column.
- **Import From** (only available for specification-related sourcing approvals)—This record was created by importing existing specification-related sourcing approvals to a material in GSM.

**Spec Related Sourcing Approval**—The corresponding object that was used based on the action performed. For example, when created from a template, the template used to create the record is listed.

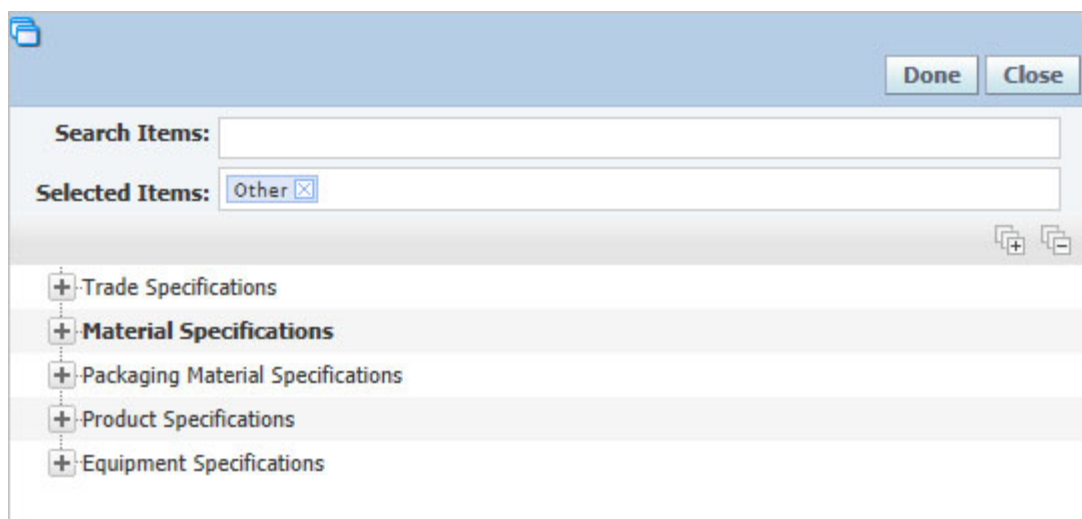

## Creating an Alternate (Estimated) Specification-Related Supply Capability

Use this feature to track alternate specification categories that an existing company or facility provides but does not currently supply to your organization.

To add an alternate specification-related sourcing approval:

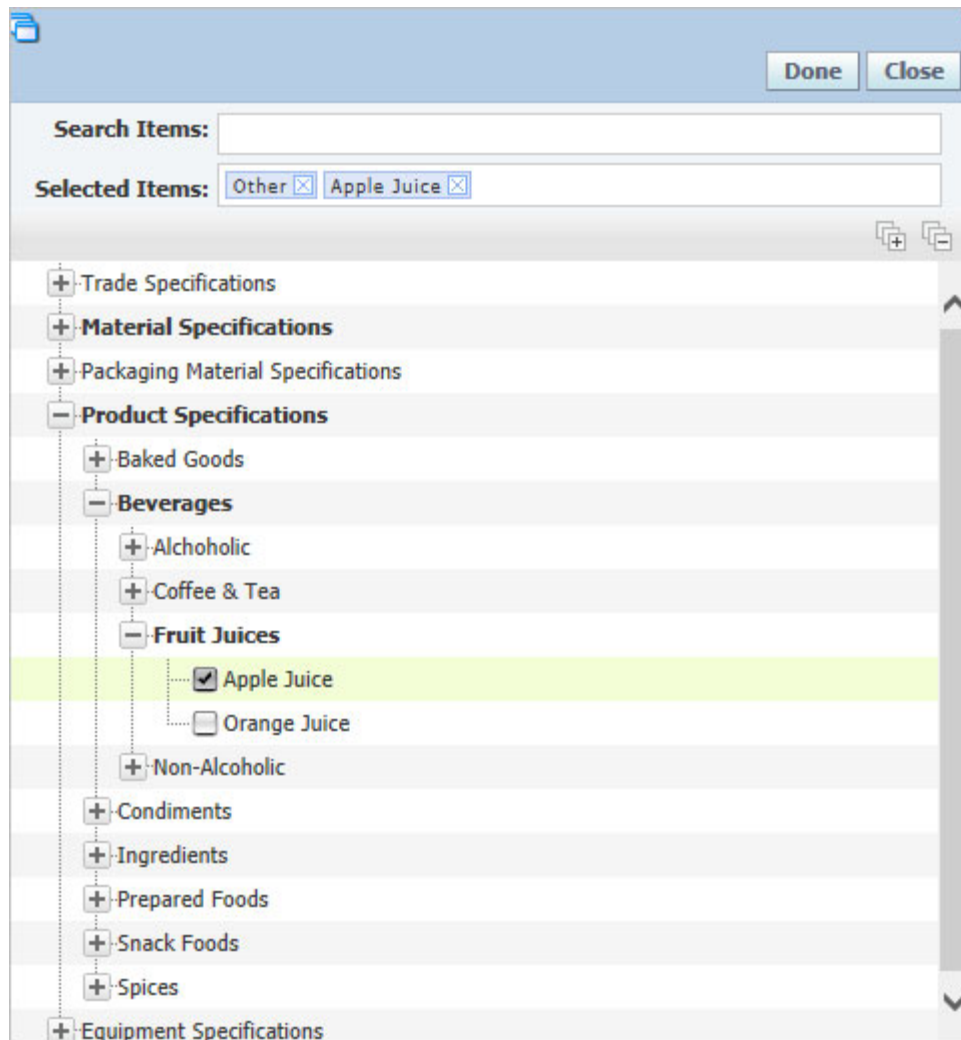

1. Select a facility using the search page.
2. Select the Sourcing Approval tab.
3. Click **Edit** in the action menu. The Sourcing Approval tab displays in edit mode.
4. Under the Alternate (Estimated) Specification-related Supply Capabilities section, click **Add New**. A dialog box displays specification categories, as shown in [Figure 3–11](#).

**Figure 3–11** Specification categories dialog box

5. Click a specification type to expand the listing, then check the checkbox next to the chosen specification category, as shown in [Figure 3–12](#).

**Figure 3–12 Expanded specifications dialog box**

6. Click **Done**. The specification category that you defined displays under the Alternate (Estimated) Specification-related Supply Capabilities section as shown in [Figure 3–13](#).

**Figure 3–13 Added alternate specification type**

7. Click **Save**. The record is now tied to the sourcing approval. This information will be displayed in the Potential Specification Supply Categories section on the company profile's Supply Categories tab. See ["Supply Categories Tab"](#) on page 2-7 for more information.

---

**Note:** You can later search for the record using “alternate supply capability” as your search criteria.

---

## Creating a Non-Specification Related Sourcing Approval

To create a non-specification related sourcing approval, follow steps similar to creating a specification-related sourcing approval.

To add a new non-specification related sourcing approval:

1. In the action menu, click **New > Non Spec Related Sourcing Approval > Blank** or **New > Non Spec Related Sourcing Approval > From Template**. SCRM displays a blank Non Specification-Related Sourcing Approval page.
2. In the **Facility** field, use the search icon to assign a facility. The company the facility is assigned to displays in the **Company** field. Continue with step 2 below.

Or

1. From the Sourcing Approval tab in a facility, click **Add New > Blank** or **Add New > From Template** below Non-Specification Related Sourcing Approvals section. SCRM displays a Non Specification-Related Sourcing Approval page, as shown in [Figure 3–14](#).

**Figure 3–14 Non Specification-Related Sourcing Approval page**

**Non-Specification Related Sourcing Approval** Draft

**Summary** | Ext Data | Supporting Documents | Signature Approval

**Summary Information**

Approval # :  
 Company: American Sugar Refining Co.  
 Facility: Baker's Sugar - Philadelphia

**Approved for Use In**

Segment(s):

**Approval Attributes**

Item/Service Description:  
 Sourcing Type:  
 Status: Draft  
 Class: --  
 Notes:  
 QA Assigned:   
 SC Assigned:

**Receiving Facilities**

Facility #	Facility Name
No records found.	

**Add New**

2. In the Approved for Use In section, use the search icon to assign segments. This is a required field.
  3. In the Approval Attributes section, make entries in the following fields:
    - Item/Service Description**—Enter a detailed description of the item or service. This is a required field.
    - Sourcing Type**—Select the type of sourcing relationship from the list in the pop-up dialog box. You can make multiple selections.
    - Sourcing Approval Status**—Assigned by the system. The workflow status of the sourcing approval.
    - Class**—Select a class from the drop-down list.
    - Notes**—Enter any notes.
    - QA Assigned**—Select the name of a quality assurance auditor assigned to this facility. You can select multiple names.
    - SC Assigned**—Select the name of the supply chain representative responsible for the relationship with the supplier. You can select multiple names.
- 
- Note:** It is important to enter a detailed description in the Item/Service Description field. Doing so will make it easier to locate the record if you ever need to search for the sourcing approval by description.
- 
4. In the Receiving Facilities section, to add a receiving facility, click **Add New** and use the facility search page to select a facility.
  5. Use the remaining sourcing approval tabs to add more information:
    - Ext Data
    - Supporting Documents
    - Signature Approval
  6. Click **Save**. See "[Transitioning a Workflow](#)" on page 3-20 for more information.

## Copying a Sourcing Approval

Users now have the ability to copy a sourcing approval. A new role has been created called SCRM\_COPIER. This new role plus the corresponding creator role is required to copy a sourcing approval. For example, a user must have the SCRM\_COPIER and SAC\_CREATOR role to copy specification-related sourcing approvals.

## Workflows and Sourcing Approvals

You can use SCRM to obtain supplier approval at the facility and specification level through workflow automation.

Workflows represent business practices and processes used by your company. You create workflows using the Workflow Administration (WFA) application. Refer to the *Agile Product Lifecycle Management for Process Workflow Administration User Guide* for more information.

## Managing Sourcing Approvals

You manage sourcing approvals using signature documents and workflows. Get to your sourcing approvals and signature documents by:

- Using your Action Items list
- Clicking a link that is emailed to you (for signature documents only)

## Using Action Items

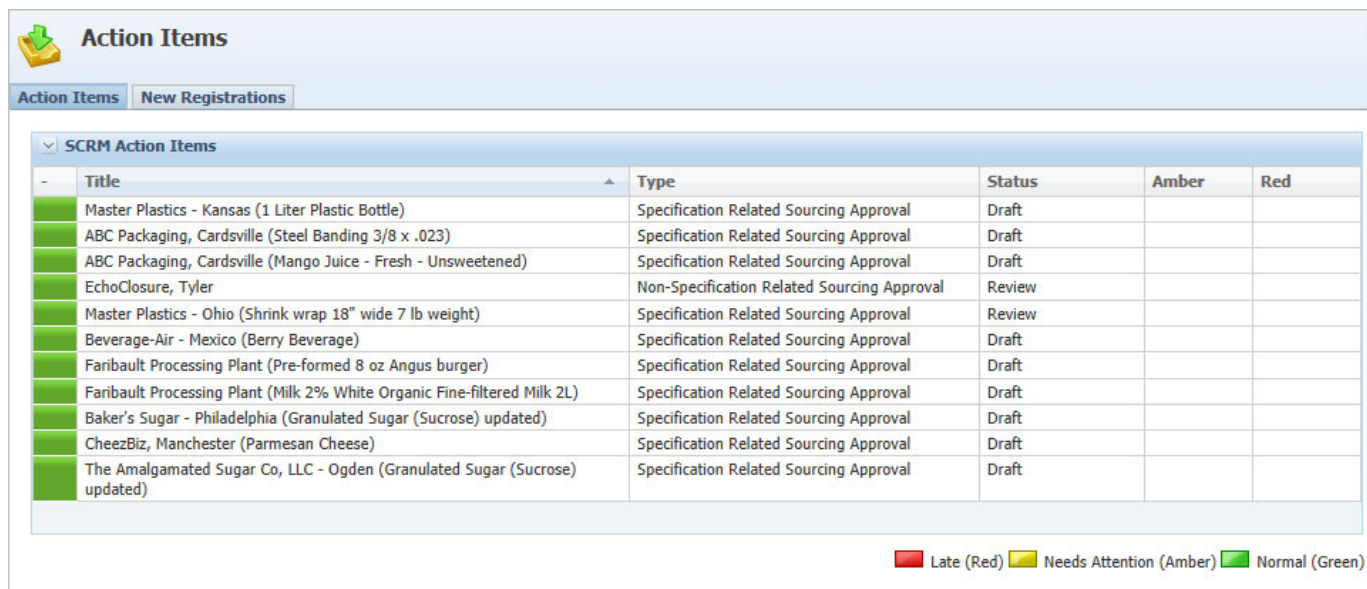

As a sourcing approval moves through the workflow process, action items generate for designated team members. Each owner of subsequent steps will receive the item (sourcing approval or signature document) in his or her Action Items list, as [Figure 3–15](#) shows. Signature requestees will also be alerted via email.

The Action Items page displays when you select Action Items from the SCRM menu. Action items are workflow items assigned to you that require your attention — think of them as your “To Do” list. Action items indicate that review or a signature document is required before the document can progress to the next step.

As you take appropriate action for each item assigned to you, the item’s status updates, and the item progresses to the next step in the workflow. It remains in your Action Items list as long as you are the “owner” of the current step in the workflow.

See ["Managing Contact Profiles"](#) on page 2-31 for more information about managing Supplier Portal registrations using the New Registrations tab.

	The Amalgamated Sugar Co, LLC - Ogden (Granulated Sugar (Sucrose) updated)	Specification Related Sourcing Approval	Draft		

■ Late (Red)
 ■ Needs Attention (Amber)
 ■ Normal (Green)

Each row in the SCRM Action Items table gives more information about the item in the workflow, as described below:

**RAG Status (not labeled)**—RAG indicates Red, Amber, or Green. This field is an indicator of compliance with the established service level agreement (SLA) time lines for that document type. SLAs are defined in that object’s workflow. When action items are sorted by this column in descending order they will be sorted in Red | Amber | Green sort order listing older red dates first. When items are sorted in ascending order they will be sorted in Green | Amber | Red listing newer green dates first.

- **Red**—Late
- **Amber**—Needs Attention
- **Green**—Normal

**Title**—The name of action item.

- For specification-related sourcing approvals, it consists of the name of the facility and specification.
- For non-specification-related sourcing approvals, it consists of the facility name.
- For signature documents, it consists of the name of the facility and specification (if applicable)
- For specification or non-specification-related sourcing approval templates or their signature document, it consists of the name of the template.

**Type**—The type of action item. Types are:

- Specification-related sourcing approval
- Non-specification related sourcing approval
- Signature document
- Specification-related sourcing approval template
- Non-specification-related sourcing approval template

**Status**—The step of the workflow that the item is in. You can hover over the field to read the workflow instructions.

**Amber**—The date the action item is entering an amber state.

**Red**—The date the action item will be entering the red state.

## Working with a Signature Document

When you select a signature document as an action item or through an email link, the signature document page displays, as shown in [Figure 3–16](#).

**Figure 3–16** Signature document page

The Summary tab shows links to the sourcing approval, the source facility, and the receiving facility. You can click the links to view or edit the sourcing information, depending on your workflow permissions.

---

**Note:** If the signature document is generated from a specification-related sourcing approval or a non-specification-related sourcing approval template, the Summary tab only shows links to the sourcing approval templates.

---

As [Figure 3–17](#) shows, the Signature Approval tab shows the current status and owner of the signature document, the desired action, assigned dates, and a history of signatures.

**Figure 3–17 Signature Approval tab**

The screenshot shows the 'Signature Document' interface with the 'Signature Approval' tab selected. The 'Current Status' section displays the following information:

- Current Owner:** [Sarah Adams]
- Current Workflow:** Specification Signature Document Workflow
- Current Status:** Under Review
- Desired Action:** Review and move forward in the workflow.
- Start Date:** Mar 1, 2011
- Amber Date:** Sep 17, 2011
- Red Date:** Dec 15, 2011

The 'Event History' section contains a table with the following data:

Status	User	Time	Comments
Under Review	Sarah Adams	Sep 17, 2011 02:48:57 PM	

Click **Workflow** from the action menu to take action on the signature document, either by advancing it to the next step or sending it back to the prior step.

For a sourcing approval with outstanding signature requests, you can now workflow the sourcing approval to a prior step. You do not have to wait for all signature requests to be approved or disapproved.

## Transitioning a Workflow

Within a sourcing approval or signature document, you can use the workflow button to transition the workflow.

To transition a workflow:

1. Click **Workflow** from the action menu. The Document Workflow dialog box displays, as shown in [Figure 3–18](#). Remember that the buttons and fields that display vary based on the workflow and current workflow step.

**Figure 3–18 Document Workflow dialog box**

**Document Workflow** [Cancel]

Next Action

 Review

Your Comments

Current Status

Current Owner: [Sarah Adams]  
Current Workflow: SAC KLC  
Current Status: Draft  
Desired Action: Please review and share thoughts

Start Date: May 28, 2008  
Amber Date: May 29, 2008  
Red Date: May 31, 2008

2. Enter comments in the **Your Comments** field (required).
3. Select a step from the action drop-down list.
4. Click the move step forward icon to forward the sourcing approval or signature document to the next step in the approval process, or click the move step back icon to return to a prior step. The system updates the workflow status based on your selection.

### Selecting Workflow Participants

If the move step forward icon includes people, you may have to select a person such as an owner, signature requestee, or notifiee, in the next dialog box. The dialog box may contain preselected data, or it may prompt you to select one or multiple participants, depending on how the workflow has been set up. You may need to select participants from multiple dialog boxes. Refer to the figure below for an example of selecting workflow participants.

**Figure 3–19** Select signature requestees using checkboxes

The screenshot shows a dialog box titled "Select Signator(s)" with "Done" and "Cancel" buttons. A tab labeled "Engineering" is selected. Below the tab, there is a list of signatories with checkboxes:

Signatory	Selected
N/A	Yes
Johnson, Clerk (cjohnson)	No
Jones, Selly (sjones)	No
Smith, Mark (msmith)	No

### Re-Authentication

Depending on workflow configurations, you are sometimes asked to re-authenticate while workflowing a sourcing approval. You will be asked to enter a passphrase to prove your identity. Your passphrase is managed through profile and preferences. For more information, refer to the *Agile Product Lifecycle Management for Process Getting Started Guide*.

---

# Supplier Document Management

This chapter explains the Supplier Document Management feature. The topics covered include:

- [Overview](#)
- [Publishing to Supplier Portal](#)
- [Searching for Supplier Documents](#)
- [Adding Supplier Documents](#)
- [Editing Supplier Documents](#)
- [Deleting Supplier Documents](#)

## Overview

Use the Supplier Document Management feature to manage documents related to companies, facilities, and sourcing relationships. Supplier documents can be attached to:

- Company profiles
- Facility profiles
- Specification-related sourcing approvals
- Non-specification related sourcing approvals

A supplier document is a collection of attachments with corresponding data that allows for easier managing, searching, and reporting against the documents. A supplier document includes the following:

- Name of the parent object (company, facility, or sourcing approval)
- Document type
- Document status
- Description
- Originator
- Due/renewal date
- Effective date
- Expiration date

Supplier documents can contain attachments in the form of uploaded files, URLs, and rich text documents.

Supplier documents are created on the company or facility profile or on the sourcing approval. Once they are created, supplier documents can be searched and edited from the left navigation panel in Supply Chain Relationship Management (SCRM).

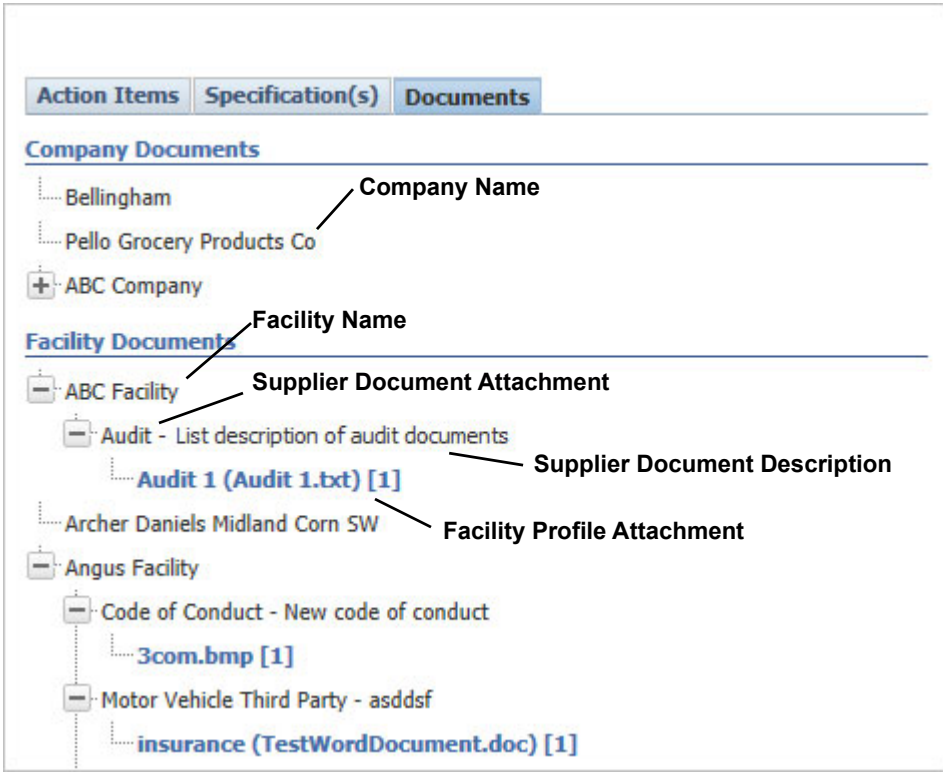

## Publishing to Supplier Portal

Each attachment can be marked to publish to the Supplier Portal. When a supplier document contains an attachment that is published to the Supplier Portal, the document type, document description, title and filename of the attachment are shown to the supplier. Suppliers are able to download the attachment.

Suppliers can access the supplier documents by selecting **Specs & Docs** from the Supplier Portal home page.

Only supplier documents attached to company and facility profiles are available through the Supplier Portal Documents section. Supplier documents attached to sourcing approvals will not be available through the Supplier Portal; only sourcing approval attachments are available. [Figure 4-1](#) shows company and facility supplier documents. [Figure 4-2](#) shows sourcing approval attachments.

**Figure 4-1** Supplier Portal Documents tab listing company and facility supporting documents

## Searching for Supplier Documents

Using the Supplier Document Management feature, you can search for supplier documents tied to a company or facility profile, a specification-related sourcing approval, or a non-specification-related sourcing approval. These choices are represented in the left navigation panel, in the Applications menu, and in the action menu in SCRM.

To search for a supplier document:

1. Select an SDM search option from the navigation panel, Applications menu, or action menu.
2. Enter criteria in the search fields, then click **Search**. The Search Results table lists all supplier documents meeting the criteria you specified, as [Figure 4–3](#) shows.

## Adding Supplier Documents

Supplier documents can only be created on the business object (company profile, facility profile, or sourcing approval). Supplier documents cannot be created on the business object template (company template, facility template, sourcing approval template).

To add a supplier document:

1. Select the company profile, facility profile, or sourcing approval that you want to add the supplier document to.
2. On the Supporting Documents tab, click **Edit** from the action menu. The page refreshes and the fields display in editable mode as Figure 4-5 shows.

**Figure 4-5 Supporting Documents page in edit mode**

**A E Staley Manufacturing Co (5010672)**

3	<b>Audit</b>				New Supplier		
4	<b>Audit</b>				New Supplier		
5	<b>Audit</b>				New Supplier		

**Add New** **Order**

3. Click **Add New** under the Supplier Document Management section. The Supplier Document Management page displays, as Figure 4-6 shows.

**Figure 4-6 Supplier Document Management page; Facility example**

**Supplier Document Management**

**Facility Name:** ABC Foods - Atlanta (5017198)

**Document Type:**

**Status:**

**Description:**

**Add File(s)** **Add URL** **Add Rich Text**

4. Complete the following fields in the Supplier Document Management section:

- **(Object Name)**—The name of the company, facility, specification-related sourcing approval, or non-specification related sourcing approval. This field is supplied by the system and cannot be changed.
  - **Document Type**—Type of supplier document.
  - **Status**—Status of the document.
  - **Description**—Description of the document.
  - **Originator**—The name of the person who created the document. This field is supplied by the system and cannot be changed.
  - **Due/Renewal Date**—The due date or renewal date.
  - **Notify**—Checkbox displays when a due or renewal date is entered. When checked, a field labeled **days prior to due/renewal date** is displayed. Enter the desired number.
  - **Effective Date**—The date the supplier document takes effect.
  - **Expiration Date**—The date the supplier document expires.
  - **Security Classification**—The security classification assigned to the document. This field appears when object level security (OLS) is configured on. For more information on OLS, refer to the *Agile Product Lifecycle Management for Process Security Configuration Guide*.
5. To add an attachment to the supplier document, click one of the following buttons under the Attachment grid:
    - **Add File(s)**—Upload a file or drag and drop files. This feature is described below in ["Adding Files"](#) on page 4-6.
    - **Add URL**—Add a URL. This feature is described in ["Adding URLs"](#) on page 4-7.
    - **Add Rich Text**—Add Rich Text. This feature is described in ["Adding Rich Text"](#) on page 4-8.
  6. After adding your attachment, complete the following fields in the Attachments section:
    - **Title**—The title of the attachment.
    - **Content**—Title of attachment, URL, or rich text. The version number is also displayed. Click the link to view details about the document in the File Attachment Detail dialog box.
    - **Tags**—Tags that apply to the attachment. These are managed by a list in ADMN. Attachments marked with the “Publish to Supplier” tag are published to Supplier Portal. Attachments marked with “All SCRM Objects” are available in companies, facilities, and sourcing approvals. Attachments tagged as “Proprietary” are not included in printing.
    - **Effective**—Effective date of the attachment.
    - **Inactive**—Inactive date of the attachment.
    - **Owner**—Owner of the attachment.
  7. Click **Done** at the top right of the page. The Supplier Document Management page refreshes and the fields you changed display in edit mode.

### Adding Files

When you click **Add File**, the standard file upload dialog box is displayed.

Select the files you want to upload. You can select multiple files at once by holding **Shift**+click or **Ctrl**+click.

You can also drag and drop files to the Attachments grid.

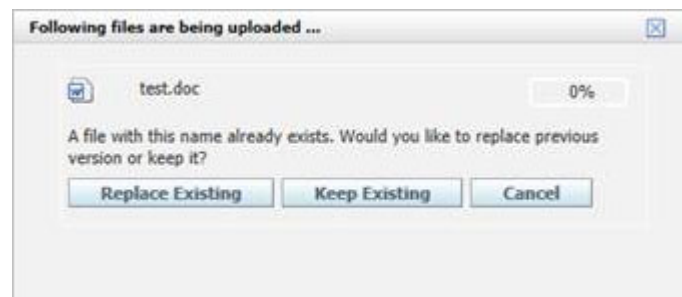

When you add a file, a floating panel shows the status of each file that is uploading. When the upload is complete, you will see the Attachment grid refreshed to show the new files. You can then edit all attributes except for Content (filename).

**Figure 4–7 Progress panel**

If a file is too large the following error is returned: "This file exceeds the maximum size allowed and cannot be uploaded."

**Figure 4–8 Warning**

**Versioning** During upload, if the same file name is found it will automatically be versioned. You will be given the choice to replace the existing file and increase the version number by one, or keep the file and add a new attachment with a new version. The version number is determined by the most recent document with the same filename and version number set. So if fileA.doc version 1 exists and you upload FileA.doc again, it would go to version 2.

If 5 versions of FileA.doc are found, date would be the deciding factor. For example, if you upload FileA.doc -1 today, and upload FileA.doc-2 tomorrow and set the version to 8, the system would use 9.

When you have finished making changes for the supporting document, click **Save**.

### Adding URLs

When you click **Add URL** from the Attachments grid, the URL dialog box is displayed. It includes all fields that are available in the grid and a browse functionality.

**Figure 4–9 URL dialog box**

The screenshot shows a 'URL Detail' dialog box. It contains the following fields:

- Title:** An empty text input field.
- Owner:** A text input field containing 'Adams, Sarah'.
- Effective:** A date input field containing '12/1/2016'.
- Inactive:** An empty date input field.
- Tags:** An empty text input field.
- URL:** A text input field containing 'http://'.

### Adding Rich Text

The rich text document type is a way to create a formatted attachment to the business object that can be printed in line with the printed object. You can also publish rich text documents to Supplier Portal. The rich text document includes a title and an enriched textual entry. When you click **Add Rich Text** from the Attachments grid, the Rich Text dialog box is displayed. It includes all fields that are available in the grid, a Rich Text control and Keywords below that.

**Figure 4–10 Rich Text dialog box**

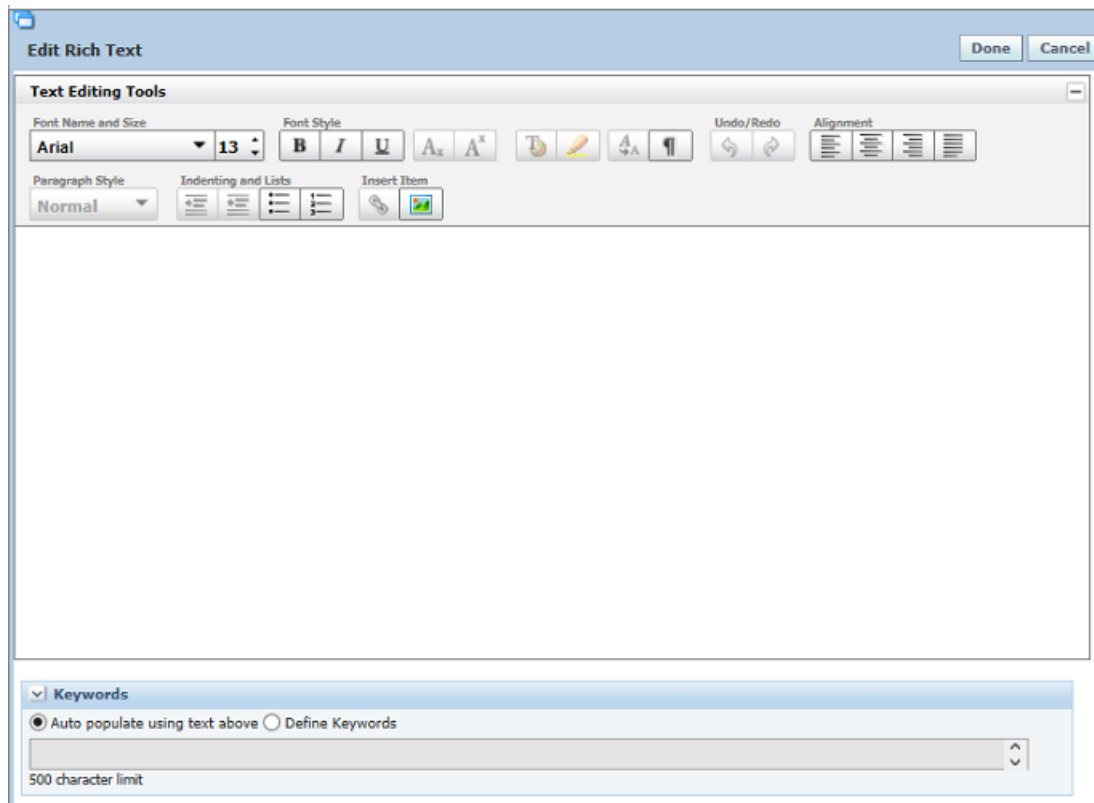

The screenshot shows a 'Rich Text Detail' dialog box. It contains the following fields:

- Title:** A text input field containing 'Testing Plans'.
- Owner:** A text input field containing 'Bales, Amy'.
- Effective:** A date input field containing '12/1/2016'.
- Inactive:** An empty date input field.
- Tags:** A text input field containing 'Publish to Supplier'.
- Rich Text:** A rich text area containing the text 'First Name, Last Name' in pink, followed by 'Testing Plans' and '1st Quarter, 2017' in a smaller font.
- Keyword(s):** A text input field containing 'First Name, Last NameTesting Plans1st Quarter, 2017'.

To add rich text:

1. Enter a **Title** (optional).
2. Click **Rich Text**. The rich text dialog box opens.

Figure 4–11 Rich text formatting dialog box

3. Use the rich text formatting dialog box to enter text and apply simple formatting (boldface, font color, font size, bullets, numbering, and so on.)

4. Click **Done**, or to enter keywords, complete the Keywords section as described below.

Keywords can be used to search against specifications that have rich text. To add keywords:

1. Click the **Keywords** header. Select one of the following radio buttons:
  - **Auto populate using text above**—Selected by default, the first 500 characters entered in the rich text field are automatically added to the Keywords section.
  - **Define Keywords**—Select to manually enter keywords.
2. Click **Done**. Agile PLM for Process closes the rich text formatting dialog box, and your changes are reflected in the Rich Text dialog box, as shown below:

**Figure 4–12** Sample rich text dialog

**Rich Text Detail** [Done] [Cancel]

**Rich Text Document**

Title:

Owner:

**Rich Text:** *This is an example of Rich Text*

**Keyword(s):** This is an example of Rich Text

## Editing Supplier Documents

To edit a supplier document, use the Supplier Document Management search feature or go to the business object to locate the document. Click **Edit Document**. The Supplier Document Management page displays in edit mode. Make changes to the fields as described on page 4-8. Click **Save** at the top right of the page.

## Deleting Supplier Documents

To delete a supplier document, use the Supplier Document Management search feature or go directly to the business object to locate the document. With the page in edit mode, click the delete icon on the row of the document that you want to delete, as [Figure 4–13](#) shows.

**Figure 4–13** Business object document row in edit mode

Supplier Document Management						
	Document	Due/Renewal Date	Effective Date	Expiration Date	Status	Attached files
1	<a href="#">A New Type 11/30</a> Memo	01/02/2011	02/02/2011		Status_Two	
2	<a href="#">Audit</a>				Not Applicable	<a href="#">Company Policies and Procedures - Policies and Procedures.txt</a> <a href="#">logo.gif</a> <a href="#">workflow compare.xls</a>
3	<a href="#">A New Type 11/30</a>				New Supplier	
Add New						

Click **OK** in the confirm deletion dialog box. Click **Save**.

---

# Creating and Managing Templates

This chapter presents guidance on creating and managing templates in SCRM. Topics in this chapter include:

- [Overview](#)
- [Creating Templates](#)
- [Consuming Templates](#)

## Overview

SCRM templates provide the ability to create objects containing attributes which will be copied when creating companies, facilities, and sourcing approvals. Templates can be created for the following objects:

- Companies
- Facilities
- Specification related sourcing approvals
- Non-specification related sourcing approvals

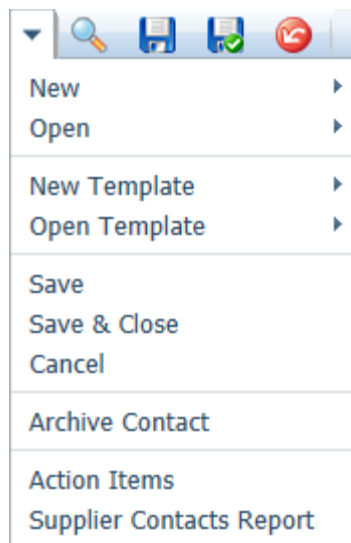

Once a company or facility template is created, it can be used to create objects. A specification related and non-specification related sourcing approval template must be published before it can be used to create objects.

## Creating Templates

### Roles for Template Creation

A user will need the UGM role of `TEMPLATE_CREATOR` plus the base object creator role to create templates. For example, a user assigned the `SAC_CREATOR` role can create “blank” specification related sourcing approvals. With the `SAC_CREATOR` and `TEMPLATE_CREATOR` roles, the user can create specification related sourcing approval templates. For a list of specification creator roles, please refer to the *Agile Product Lifecycle Management for Process User Group Management User Guide*.

Users with the appropriate roles see the following options in the navigation menu.

**Figure 5–1** Template creation options

**New Template**—Allows users to select the object type they would like to create and create a new template.

**Open Template**—Allows users to see templates that have already been created.

## Template Attributes

Templates generally have the same attributes available for edit as their corresponding object. Many values added to these attributes will be copied to the object when a user creates an object from a template.

---

**Note:** Facility templates can not be assigned a parent company, and sourcing approval templates can not be assigned a company, facility, or specification.

---

Templates also have some additional fields which can be found in the "[Template Configuration](#)" section.

## Template Configuration

All templates have a Template Configuration section. For sourcing approval templates, this section contains the Workflow field, as shown in [Figure 5–2](#).

**Figure 5–2** Template Configuration section, specification-related sourcing approval

 A screenshot of a software form titled 'Template Configuration'. The form has a blue header bar with a dropdown arrow and the text 'Template Configuration'. Below the header, there are two fields: 'Template #:' and 'Template Name:'. The 'Template Name:' field is a text input box. Below the 'Template Name:' field, there is a line of text: 'This field decides the workflow objects will resolve to when created using this template.' Below this text, there is a 'Workflow:' label followed by a red 'X' icon and a text input box. To the right of the text input box is a magnifying glass icon.

**Workflow**—The template creator uses the Workflow field to specify a sourcing approval workflow template. When a sourcing approval is created from a template, it will automatically resolve to this workflow. If this field is left blank, the sourcing approval created will use standard SCRM workflow resolution.

## Template Access

Sourcing approval templates resolve to WFA workflows. Along with the specific user roles discussed above, workflow controls read and write access to sourcing approval templates. WFA has a resolution criteria of “is Template”, allowing templates to resolve to separate workflow templates. See the *Agile Product Lifecycle Management for Process Administrator User Guide* for more information.

Company and facility templates do not resolve to WFA workflows but they do respect SCRM Business Unit security. Template creators that do not have access to the business unit assigned to a template cannot read the template. If the Business Unit field is left blank on the template, then all users will have access to it. See the *Agile Product Lifecycle Management for Process Security Configuration Guide* for more information.

Segments also respect SCRM Business Unit security.

### Template Availability

Company and facility templates are instantly accessible to end users, however sourcing approval templates are not. Sourcing approval templates must be in a “published” state before general users can start creating sourcing approvals using them. This setup allows a template to go through its own workflow and approval process before objects are created based on them. A template is considered published when template is in a status that contains the “Publish Template” workflow tag. See the *Agile Product Lifecycle Management for Process Administrator User Guide* for more information.

## Consuming Templates

A user must have the appropriate role to create an object from a template. For example, users assigned the CREATE\_FROM\_TEMPLATE\_5001 role can create companies from templates. See the roles appendix in the *Agile Product Lifecycle Management for Process User Group Management User Guide* for a full list of roles.

Users with this role see the **New > OBJECT TYPE > From Template** option in the navigation menu.

The third panel displays the most recently used templates under the “From Template” header. Click on any of the most recently used templates to instantly create an object using that template. You can also click the **More** link or the **From Template** header to open a template search screen.

Use this page to search for the template you would like to use. The template you select automatically creates the new object based on that template and puts it in edit mode.

For more information on creating objects, see the following topics:

- ["Creating a Company Profile"](#) on page 2-3
- ["Creating a Facility Profile"](#) on page 2-11
- ["Creating a Specification-Related Sourcing Approval"](#) on page 3-5
- ["Creating a Non-Specification Related Sourcing Approval"](#) on page 3-15
