Name stop-domain– Stops the Domain Administration Server of the specified domain

Synopsis
```
stop-domain  [--terse={false|true}] [ --echo ={false|true}]
[ --user  admin_user] [--passwordfile filename] [--domaindir domain-dir]
[--help] domain_name
```

Description Use the `stop-domain` command to stop the Domain Administration Server of the specified domain. The `stop-domain` command can be run in the local mode only.

Options `-t--terse`
Indicates that any output data must be very concise, typically avoiding human-friendly sentences and favoring well-formatted data for consumption by a script. Default is false.

`-e --echo`
Setting to true will echo the command line statement on to the standard output. Default is false.

`-u --user`
The user name of the authorized administrative user of the domain administration server.

If you have authenticated to a domain by using the `asadmin login` command, you need not specify the `--user` option for subsequent operations on the domain.

`--passwordfile`
Specifies the name, including the full path, of a file that contains the password entries in a specific format.

The entry for a password must have the `AS_ADMIN_` prefix followed by the password name in uppercase letters. For example, to specify the password for the domain administration server, use an entry with the following format:

`AS_ADMIN_PASSWORD=password`

In this example, *password* is the actual administrator password.

The following other passwords can also be specified:

- `AS_ADMIN_MAPPEDPASSWORD`
- `AS_ADMIN_USERPASSWORD`
- `AS_ADMIN_ALIASPASSWORD`

All remote commands must specify the administration password to authenticate to the domain administration server. The password can be specified by one of the following means:

- Through the `--passwordfile` option
- Through the `asadmin login` command
- Interactively at the command prompt

The `asadmin login` command can be used only to specify the administration password. For other passwords that remote commands require, use the `--passwordfile` option or specify them at the command prompt.

After authenticating to a domain by using the asadmin login command, you need not specify the administration password through the --passwordfile option for subsequent operations on the domain. However, only the AS_ADMIN_PASSWORD option is not required. You still must provide the other passwords, for example, AS_ADMIN_USERPASSWORD, when required by individual commands, such as update-file-user.

For security reasons, a password that is specified as an environment variable is not read by the asadmin command.

The default value for AS_ADMIN_MASTERPASSWORD is changeit.

--domaindir
The directory where the domain is to be stopped. If specified, the path must be accessible in the filesystem. If not specified, the domain in the default *as-install*/domains directory is stopped.

--help
Displays the help text for the command.

Operands *domain_name*   This is the name of the domain to stop.

Examples EXAMPLE 1   Using the stop-domain Command

```
asadmin> stop-domain sampleDomain
Domain sampleDomain stopped
```

Exit Status 0   command executed successfully

               1   error in executing the command
