Name delete-custom-resource – removes a custom resource

Synopsis delete-custom-resource [--help] [--target *target*] *jndi-name*

Description The delete-custom-resource subcommand removes a custom resource.

This subcommand is supported in remote mode only.

Options --help
-?
    Displays the help text for the subcommand.

--target
    This option helps specify the location of the custom resources that you are deleting. Valid
    targets are server, domain, cluster, and instance. The default is server.

    Note – Resources are always created for a domain as a whole but are only active for targets
    for which a <resource-ref> has been created using the --target option when the
    resource was created. This means that deleting a resource only deletes the <resource-ref>
    element for the specified --target, and does not delete the resource from the domain as a
    whole unless domain is specified as the --target for the deletion.

    server
        Deletes the resource for the default server instance. This is the default value.

    domain
        Deletes the resource for the domain.

    cluster_name
        Deletes the resource for every server instance in the cluster.

    instance_name
        Deletes the resource for a particular server instance.

Operands *jndi-name*
        The JNDI name of this resource.

Examples EXAMPLE 1 Deleting a Custom Resource

This example deletes a custom resource named mycustomresource.

```
asadmin> delete-custom-resource mycustomresource
Command delete-custom-resource executed successfully.
```

Exit Status 0   subcommand executed successfully
