

Name create-javamail-resource – creates a JavaMail session resource

Synopsis create-javamail-resource [--help] [--target *target*] [--mailhost *hostname*] [--mailuser *username*] [--fromaddress *address*] [--storeprotocol *storeprotocol*] [--storeprotocolclass *storeprotocolclass*] [--transprotocol *transprotocol*] [--transprotocolclass *transprotocolclass*] [--debug={false|true}] [--enabled={true|false}] [--description *resource-description*] [--property (*name=value*) [:*name=value*]*] *jndi-name*

Description The `create-javamail-resource` subcommand creates a JavaMail session resource.

This subcommand is supported in remote mode only.

Options --help

-?

Displays the help text for the subcommand.

--target

This option specifies the target for which you are creating the JavaMail session resource.

Valid values are:

server

Creates the resource for the default server instance. This is the default value.

domain

Creates the resource for the domain.

cluster_name

Creates the resource for every server instance in the cluster.

instance_name

Creates the resource for a particular server instance.

--mailhost

The DNS name of the default mail server. The connect methods of the Store and Transport objects use this value if a protocol-specific host property is not supplied. The name must be resolvable to an actual host name.

--mailuser

The name of the mail account user provided when connecting to a mail server. The connect methods of the Store and Transport objects use this value if a protocol-specific username property is not supplied.

--fromaddress

The email address of the default user, in the form *username@host.domain*.

--storeprotocol

The mail server store protocol. The default is `imap`. Change this value only if you have reconfigured the GlassFish Server's mail provider to use a non-default store protocol.

--storeprotocolclass

The mail server store protocol class name. The default is `com.sun.mail.pop3.POP3Store`. Change this value only if you have reconfigured the GlassFish Server's mail provider to use a nondefault store protocol.

--transprotocol

The mail server transport protocol. The default is `smtp`. Change this value only if you have reconfigured the GlassFish Server's mail provider to use a nondefault transport protocol.

--transprotocolclass

The mail server transport protocol class name. The default is `com.sun.mail.smtp.SMTPTransport`. Change this value only if you have reconfigured the GlassFish Server's mail provider to use a nondefault transport protocol.

--debug

If set to true, the server starts up in debug mode for this resource. If the JavaMail log level is set to `FINE` or `FINER`, the debugging output will be generated and will be included in the server log file. The default value is false.

--enabled

If set to true, the resource is enabled at runtime. The default value is true.

--description

Text providing some details of the JavaMail resource.

--property

Optional attribute name/value pairs for configuring the JavaMail resource. The GlassFish Server-specific `mail-` prefix is converted to the standard `mail` prefix. The JavaMail API documentation lists the properties you might want to set.

Operands *jndi-name*

The JNDI name of the JavaMail resource to be created. It is a recommended practice to use the naming subcontext prefix `mail/` for JavaMail resources.

Examples **EXAMPLE 1** Creating a JavaMail Resource

This example creates a JavaMail resource named `mail/MyMailSession`. The JNDI name for a JavaMail session resource customarily includes the `mail/` naming subcontext.

```
asadmin> create-javamail-resource --mailhost localhost
--mailuser sample --fromaddress sample@sun.com mail/MyMailSession
Command create-javamail-resource executed successfully.
```

Exit Status	0	subcommand executed successfully
	1	error in executing the subcommand
