ak-1	p290 for "Embedded" and "Local" descriptions:	"its operation is managed by the JMS service" CHANGE TO "its configuration and life cycle are managed by the JMS service" **Response**: done.
ak-2	p290	"statically created physical .." CHANGE TO "administratively created physical .." **Response**: done.
ak-3	p294	"as-install/nodes/node-name/instance-name/imq" comments: is 'as-install/nodes' or should be as-install/glassfish/nodes ? **Response**: no, *as-install* is correct. There are two "replaceables" GlassFish uses to describe installation locations: *as-install*, which is glassfish3/glassfish by default in 3.1, and *as-install-parent*, which is glassfish3 in 3.1. The *as-install-parent* one exists for use with integrated-but-not-glassfish components, as in *as-install-parent*/mq or *as-install-parent*/javadb.
ak-4	p303	"View the broker log, typically available at domain-dir/imq/instances/imqbroker/log/log.txt" CHANGE TO "View the broker log, typically available at for DAS, domain-root-dir/domain-name/imq/instances/imqbroker, for any other GlassFish server instance, glassfish3/glassfish/nodes/node-name/instance-name/imq/instances/instance-name/log comment: replace 'glassfish3' with whatever the symbol used in GlassFish docs **Response**: done.
ND-1		Thanks Mike. I see you've mentioned it [how to configure broker properties] in the definition of the <jms-service> element. However I believe (Satish can confirm) you can also set it under the <jms-host> element. Is that mentioned? There's also an order of precedence if properties are set under both, Satish can advise which wins in the event of a conflict. **Response**: it was not mentioned. I've added it to "To Create a JMS Host" and to "To Update a JMS Host". Also, I have a query out to Satish about which wins.
ND-2		Incidentally, I don't see any documentation of the attributes of the <jms-host> element (admin-password, admin-password, admin-user-name, host, name=and port). The section "To Update a JMS Host" on p295 gives the exact asadmin syntax to change one of these attributes (default_JMS_host) but doesn't list what this attribute means or what attributes are available. **Response**: the attributes are covered in the create-jms-dest man page, and not replicated here. I've beefed up the procedure to show how to use the get subcommand to get the current values and to see create-jms-dest for a description of the values.
ND-3		In contrast, the section "Updating the JMS Service Configuration" on p291 lists the attributes of the <jms-service> element and explains what they mean but doesn't tell you the exact asadmin syntax to change them. **Response**: before the listing of attributes was the statement "You can then update the JMS service configuration by using the Java Message Service page for the configuration in the Administration Console, or by using the set subcommand to change one of the following properties". I've extended this to show the form of set command to use.
EB-1		I still see instances of: Oracle GlassFish Message Queue -- are you going to be able to change everything (in both GF and MQ docs) to Oracle GlassFish Server Message Queue? (e.g. p291, GF Admin. guide: "Oracle Glass Fish Message Queue 4.5 Technical Overview") **Response**: yes.

EB-2		One of the more frequent issue I encounter is that GF customers don't realize that MQ keeps its own log. Could you tack an example in the VARHOME section that illustrates where the MQ broker logs live? (p294) I realize you have this in the troubleshooting section, but it might be nice to have this in more than one place. **Response**: done.
