Hello, I have completed an end-end test and review of your HOL session 7001_glassfisheclipse. My comments are below. Please contact me for clarification on anything.

version tested: 7001_glassfisheclipse v1 from <http://kenai.com/projects/j1-09hol/downloads>

My testing platform:

Mac OS X 10.5.6 Intel
NetBeans 6.5.1
Java 1.6.0
Eclipse 3.4.0

Testing to follow (not covered here):

*OpenSolaris / Solaris 10
Windows XP / Vista
Linux*

You will be alerted if there are any issues detected on these platforms.

Documentation (typos/needs clarification):

- *exercise2.html*, ln211 - tell users to right-click on the "MyFirstWebApp" project name, then click New -> Servlet
- *exercise2.html*, ln374 - remove "for"

Usage Notes:

- no issues!

Overall:

- Excellent, well-prepared lab. Had no issues running. Correct the two documentation issues above, and you're good to go.

Regards,

Brian Jenkins
