

Name update-password-alias– updates a password alias

Synopsis update-password-alias
[--help]
aliasname

Description This subcommand updates the password alias IDs in the named target. An alias is a token of the form `${ALIAS=password-alias-password}`. The password corresponding to the alias name is stored in an encrypted form. The `update-password-alias` subcommand takes both a secure interactive form (in which the user is prompted for all information) and a more script-friendly form, in which the password is propagated on the command line.

This subcommand is supported in remote mode only.

Options --help
Displays the help text for the subcommand.

Operands *aliasname*
This is the name of the password as it appears in `domain.xml`.
