Name list-applications – lists deployed applications

Synopsis list-applications [--help]
[--long={false|true}] [--resources] [--subcomponents]
[--type *type*] [*target*]

Description The list-applications subcommand lists deployed Java EE applications and the type of each application that is listed.

If the --type option is not specified, all applications are listed. If the type option is specified, you must specify a type. The possible types are listed in the Options section of this help page.

If multiple versions of a module or application are deployed, this subcommand lists all versions. To list which version is enabled, set the --long option to true. For more information about module and application versions, see the "Module and Application Versions" in *Sun GlassFish Enterprise Server v3 Preview Application Deployment Guide*.

This subcommand is supported in remote mode only.

Options --help
-?
    Displays the help text for the subcommand.

--long
    If true, displays whether each module or application listed is enabled. The default is false.

--resources
    Lists the application-scoped resources for each application. If the --subcomponents option is also used, lists the application-scoped resources for each component within the application.

--subcomponents
    Lists the subcomponents of each application. The subcomponents listed depend on the application type. For example, for a Java EE application (EAR file), modules are listed. For a web application, servlets and JSP pages are listed. For an EJB module, EJB subcomponents are listed.

--type
    Specifies the type of the applications that are to be listed. The options are as follows:

    - application
    - appclient
    - connector
    - ejb
    - web
    - webservice

    If no type is specified, all applications are listed.

Operands --target

This is the name of the target upon which the subcommand operates. The valid values are as follows:

server
Lists the applications for the default server instance server and is the default value.

domain_name
Lists the applications for the named domain.

cluster_name
Lists the applications for every server instance in the cluster.

instance_name
Lists the applications for a particular server instance.

Examples   EXAMPLE 1   Listing the Web Applications

asadmin> **list-applications --type web**
hellojsp <web>
Command list-applications executed successfully

Exit Status   0   subcommand executed successfully

1   error in executing the subcommand
