Name delete-lifecycle-module – removes the lifecycle module

Synopsis delete-lifecycle-module [--help] [--target *target*] *module_name*

Description The delete-lifecycle-module subcommand removes a lifecycle module. A lifecycle module provides a means of running a short or long duration Java-based task at a specific stage in the server life cycle. This subcommand is supported in remote mode only.

Options --help
-?
    Displays the help text for the subcommand.

--target
    Indicates the location where the lifecycle module is to be deleted. Valid values are

- server- Specifies the default server instance as the target for deleting the lifecycle module. server is the name of the default server instance and is the default value for this option.
- *cluster_name*- Specifies a particular cluster as the target for deleting the lifecycle module.
- *instance_name*- Specifies a particular server instance as the target for deleting the lifecycle module.
- *configuration_name*- Specifies a particular configuration as the target for deleting the lifecycle module.

Operands *module_name*
    This operand is a unique identifier for the deployed server lifecycle event listener module.
