Preface

This document describes error messages that you might encounter when using Sun GlassFish GlassFish Server 3.1.

This preface contains information about and conventions for the entire GlassFish Server Open Source Edition (GlassFish Server) documentation set.

GlassFish Server 3.1 is developed through the GlassFish project open-source community at <https://glassfish.dev.java.net/>. The GlassFish project provides a structured process for developing the GlassFish Server platform that makes the new features of the Java EE platform available faster, while maintaining the most important feature of Java EE: compatibility. It enables Java developers to access the GlassFish Server source code and to contribute to the development of the GlassFish Server. The GlassFish project is designed to encourage communication between Oracle engineers and the community.

The following topics are addressed here:

- “GlassFish Server Documentation Set” on page 5
- “Related Documentation” on page 7
- “Typographic Conventions” on page 8
- “Symbol Conventions” on page 8
- “Default Paths and File Names” on page 9
- “Documentation, Support, and Training” on page 10
- “Searching Oracle Product Documentation” on page 10
- “Third-Party Web Site References” on page 10

GlassFish Server Documentation Set

The GlassFish Server documentation set describes deployment planning and system installation. For an introduction to GlassFish Server, refer to the books in the order in which they are listed in the following table.

TABLE P-1 Books in the GlassFish Server Documentation Set

Book Title	Description
<i>Release Notes</i>	Provides late-breaking information about the software and the documentation and includes a comprehensive, table-based summary of the supported hardware, operating system, Java Development Kit (JDK), and database drivers.
<i>Quick Start Guide</i>	Explains how to get started with the GlassFish Server product.
<i>Installation Guide</i>	Explains how to install the software and its components.
<i>Upgrade Guide</i>	Explains how to upgrade to the latest version of GlassFish Server. This guide also describes differences between adjacent product releases and configuration options that can result in incompatibility with the product specifications.
<i>Deployment Planning Guide</i>	Explains how to build a production deployment of GlassFish Server that meets the requirements of your system and enterprise.
<i>Administration Guide</i>	Explains how to configure, monitor, and manage GlassFish Server subsystems and components from the command line by using the <code>asadmin(1M)</code> utility. Instructions for performing these tasks from the Administration Console are provided in the Administration Console online help.
<i>Application Deployment Guide</i>	Explains how to assemble and deploy applications to the GlassFish Server and provides information about deployment descriptors.
<i>Application Development Guide</i>	Explains how to create and implement Java Platform, Enterprise Edition (Java EE platform) applications that are intended to run on the GlassFish Server. These applications follow the open Java standards model for Java EE components and application programmer interfaces (APIs). This guide provides information about developer tools, security, and debugging.
<i>Add-On Component Development Guide</i>	Explains how to use published interfaces of GlassFish Server to develop add-on components for GlassFish Server. This document explains how to perform <i>only</i> those tasks that ensure that the add-on component is suitable for GlassFish Server.
<i>Embedded Server Guide</i>	Explains how to run applications in embedded GlassFish Server and to develop applications in which GlassFish Server is embedded.
<i>High Availability Administration Guide</i>	Explains how to configure GlassFish Server to provide higher availability and scalability through failover and load balancing.
<i>Performance Tuning Guide</i>	Explains how to optimize the performance of GlassFish Server.
<i>Troubleshooting Guide</i>	Describes common problems that you might encounter when using GlassFish Server and explains how to solve them.

TABLE P-1 Books in the GlassFish Server Documentation Set (Continued)

Book Title	Description
<i>Error Message Reference</i>	Describes error messages that you might encounter when using GlassFish Server.
<i>Reference Manual</i>	Provides reference information in man page format for GlassFish Server administration commands, utility commands, and related concepts.
<i>Message Queue Release Notes</i>	Describes new features, compatibility issues, and existing bugs for Open Message Queue.
<i>Message Queue Administration Guide</i>	Explains how to set up and manage a Message Queue messaging system.
<i>Message Queue Developer's Guide for JMX Clients</i>	Describes the application programming interface in Message Queue for programmatically configuring and monitoring Message Queue resources in conformance with the Java Management Extensions (JMX).

Related Documentation

The following tutorials explain how to develop Java EE applications:

- *Your First Cup: An Introduction to the Java EE Platform* (<http://download.oracle.com/javaee/6/firstcup/doc/>). For beginning Java EE programmers, this short tutorial explains the entire process for developing a simple enterprise application. The sample application is a web application that consists of a component that is based on the Enterprise JavaBeans specification, a JAX-RS web service, and a JavaServer Faces component for the web front end.
- *The Java EE 6 Tutorial* (<http://download.oracle.com/javaee/6/tutorial/doc/>). This comprehensive tutorial explains how to use Java EE 6 platform technologies and APIs to develop Java EE applications.

Javadoc tool reference documentation for packages that are provided with GlassFish Server is available as follows.

- The API specification for version 6 of Java EE is located at <http://download.oracle.com/javaee/6/api/>.
- The API specification for GlassFish Server 3.1, including Java EE 6 platform packages and nonplatform packages that are specific to the GlassFish Server product, is located at <http://glassfish.java.net/nonav/docs/v3/api/>.

Additionally, the *Java EE Specifications* (<http://www.oracle.com/technetwork/java/javaee/tech/index.html>) might be useful.

For information about creating enterprise applications in the NetBeans Integrated Development Environment (IDE), see the *NetBeans Documentation, Training & Support page* (<http://www.netbeans.org/kb/>).

For information about the Java DB database for use with the GlassFish Server, see the [Java DB product page](http://www.oracle.com/technetwork/java/javadb/overview/index.html) (<http://www.oracle.com/technetwork/java/javadb/overview/index.html>).

The Java EE Samples project is a collection of sample applications that demonstrate a broad range of Java EE technologies. The Java EE Samples are bundled with the Java EE Software Development Kit (SDK) and are also available from the [Java EE Samples project page](http://java.net/projects/glassfish-samples) (<http://java.net/projects/glassfish-samples>).

Typographic Conventions

The following table describes the typographic changes that are used in this book.

TABLE P-2 Typographic Conventions

Typeface	Meaning	Example
AaBbCc123	The names of commands, files, and directories, and onscreen computer output	Edit your <code>.login</code> file. Use <code>ls -a</code> to list all files. <code>machine_name% you have mail.</code>
AaBbCc123	What you type, contrasted with onscreen computer output	<code>machine_name% su</code> Password:
<i>AaBbCc123</i>	A placeholder to be replaced with a real name or value	The command to remove a file is <code>rm filename</code> .
<i>AaBbCc123</i>	Book titles, new terms, and terms to be emphasized (note that some emphasized items appear bold online)	Read Chapter 6 in the <i>User's Guide</i> . A <i>cache</i> is a copy that is stored locally. Do <i>not</i> save the file.

Symbol Conventions

The following table explains symbols that might be used in this book.

TABLE P-3 Symbol Conventions

Symbol	Description	Example	Meaning
[]	Contains optional arguments and command options.	<code>ls [-l]</code>	The <code>-l</code> option is not required.
{ }	Contains a set of choices for a required command option.	<code>-d {y n}</code>	The <code>-d</code> option requires that you use either the <code>y</code> argument or the <code>n</code> argument.

TABLE P-3 Symbol Conventions (Continued)

Symbol	Description	Example	Meaning
<code>{ }</code>	Indicates a variable reference.	<code>{com.sun.javaRoot}</code>	References the value of the <code>com.sun.javaRoot</code> variable.
-	Joins simultaneous multiple keystrokes.	Control-A	Press the Control key while you press the A key.
+	Joins consecutive multiple keystrokes.	Ctrl+A+N	Press the Control key, release it, and then press the subsequent keys.
→	Indicates menu item selection in a graphical user interface.	File → New → Templates	From the File menu, choose New. From the New submenu, choose Templates.

Default Paths and File Names

The following table describes the default paths and file names that are used in this book.

TABLE P-4 Default Paths and File Names

Placeholder	Description	Default Value
<i>as-install</i>	Represents the base installation directory for GlassFish Server. In configuration files, <i>as-install</i> is represented as follows: <code>{com.sun.aas.installRoot}</code>	Installations on the Oracle Solaris operating system, Linux operating system, and Mac operating system: <i>user's-home-directory/glassfish3/glassfish</i> Windows, all installations: <i>SystemDrive:\glassfish3\glassfish</i>
<i>as-install-parent</i>	Represents the parent of the base installation directory for GlassFish Server.	Installations on the Oracle Solaris operating system, Linux operating system, and Mac operating system: <i>user's-home-directory/glassfish3</i> Windows, all installations: <i>SystemDrive:\glassfish3</i>
<i>domain-root-dir</i>	Represents the directory in which a domain is created by default.	<i>as-install/domains/</i>
<i>domain-dir</i>	Represents the directory in which a domain's configuration is stored. In configuration files, <i>domain-dir</i> is represented as follows: <code>{com.sun.aas.instanceRoot}</code>	<i>domain-root-dir/domain-name</i>

Documentation, Support, and Training

The Oracle web site provides information about the following additional resources:

- Documentation (<http://www.oracle.com/technetwork/indexes/documentation/index.html>)
- Support (<http://www.oracle.com/us/support/index.html>)
- Training (<http://education.oracle.com/>)

Searching Oracle Product Documentation

Besides searching Oracle product documentation from the [Oracle Documentation](http://www.oracle.com/technetwork/indexes/documentation/index.html) (<http://www.oracle.com/technetwork/indexes/documentation/index.html>) web site, you can use a search engine by typing the following syntax in the search field:

search-term **site:oracle.com**

For example, to search for “broker,” type the following:

broker site:oracle.com

Third-Party Web Site References

Third-party URLs are referenced in this document and provide additional, related information.

Note – Oracle is not responsible for the availability of third-party web sites mentioned in this document. Oracle does not endorse and is not responsible or liable for any content, advertising, products, or other materials that are available on or through such sites or resources. Oracle will not be responsible or liable for any actual or alleged damage or loss caused or alleged to be caused by or in connection with use of or reliance on any such content, goods, or services that are available on or through such sites or resources.

GlassFish Server Open Source Edition Error Messages

This chapter provides a compilation of error messages that you might encounter when using GlassFish Server Open Source Edition.

Error messages provide information about events that occur during GlassFish Server operation, such as configuration errors, security failures, or server malfunction. These messages often include diagnostic and troubleshooting information.

Error messages can also be viewed in the Administration Console Log Viewer. For more information about logging, see [Chapter 7, “Administering the Logging Service,” in *Oracle GlassFish Server 3.1 Administration Guide*](#).

For additional troubleshooting information, see [Oracle GlassFish Server 3.1 Troubleshooting Guide](#).

Error messages in this chapter are listed in alphabetic and numeric order by message ID. The text is as it appears in the actual error message. Each message ID includes a prefix that represents a subsystem within the software.

ACC

ACC001 Using the only client {1} with main class {2} in {0} even though it does not match the specified main class name {3} or client name {4}

Cause: The command line specified a main class or a client name different from the main class and name of the only client found.

Solution: The error message lists the main classes and client names for the clients in the JAR. Make sure the command line specifies one of those.

ACC002 The application contains multiple app clients; please choose one using `-mainclass {0}` or `-name {1}`

Cause: The command line did not specify a main class or a client name to run, and the JAR contains more than one client.

Solution: Specify either `-mainclass your-main-class-name` or `-name your-client-name` on the `appclient` command.

ACC003 No app client in the app client group `{0}` matches the main class name "`{1}`" or the app client name "`{2}`";\nPlease choose one using `-mainclass {3}` or `-name {4}`

Cause: The JAR file contains multiple app clients and none matches the `-mainclass` value or the `-name` value that was specified on the `appclient` command.

Solution: Review the list of main classes and names in the original error message and make sure the `appclient` command specifies a main class or a name listed.

ACC004 No app clients are listed in the app client group `{0}`

Cause: The deployment which generated the downloaded JAR file might have failed partially.

Solution: Check the `server.log` file on the server for any deployment errors.

ACC005 The main method is either not public or not static

Cause: The main method for the app client is not declared as "public."

Cause: The main method for the app client is not declared as "static."

Solution: Declare the main method as "public."

Solution: Declare the main method as "static."

ACC006 The main method's return type is not void

Cause: The main method does not have a return type of "void."

Solution: Declare the main method so its return type is "void."

ACC007 The app client `{0,choice,0#file|1#directory}` `{1}` does not contain a manifest; the app client container cannot process it. Embedded programs should pass URIs with scheme "jar:" for JAR files and scheme "file:" for directories.

Cause: The file might not be a valid app client JAR or undeployed EAR. It might be another kind of file or have become corrupted.

Solution: Make sure to specify a valid app client JAR file or an EAR which contains at least one app client.

ACC008 The manifest in the app client facade {0} does not contain the expected entry for {1} or it is invalid; the app client container cannot process it.

Cause: The app client facade JAR file might have generated incorrectly.

Cause: The app client facade JAR file might have become corrupted.

Solution: Check the server's server.log file for any errors during deployment of the application.

Solution: Use the get-client-stubs command to retrieve the generated JAR files for the application again.

ACC009 \n\nThe credentials you provided (username and password) were not valid or do not\nallow access to the application. Please try again with a valid username and \npassword. If you are certain the username and password are correct please\ncontact your system administrator. The following information might be helpful:\n\n\n{0}

Cause: The user supplied a username and password combination that are not valid.

Cause: The user supplied a valid username and password but they are not authorized for access to the server-side resource requested.

Solution: Make sure the username and password are correct.

Solution: Make sure the username and password grant the desired access to the requested server-side resource.

ACC010 The user cancelled authentication.

Description: TBD

ACC011 The expected client file {0} is missing. The deployment of the application or retrieval of the app client might have failed.

Cause: The manifest of the generated facade JAR file refers to the specified app client JAR file but that file does not seem to exist.

Solution: Make sure the deployment of the application succeeded and that the download of the app client files (using either "deploy --retrieve" or "get-client-stubs" succeeded).

ACC012 In modifying known loggers, the LogManager reported the logger name {0} which does not have a corresponding logger; continuing

Cause: Somehow a logger name is registered with the LogManager with no corresponding logger.

Solution: Possibly the logging.properties file contains settings which cause this condition.

ACC013 The `-password` option is deprecated and will likely be removed in a future release. Please use `-passwordfile` or let the app client container prompt for the username and/or password if they are needed to access a remote resource.

Cause: Specifying the password on the command line exposes the password too easily and is a security risk.

Solution: Consider using the `-passwordfile` option instead, or allow the app client container to prompt for the username and/or password when access to a protected resource is requested.

ACC014 Launching client {1} with main class {2} in {0} although the client manifest specifies the Main-Class as {3}

Cause: The specified main class name exists in the app client but is different from the Main-Class setting in the app client itself.

Solution: Make sure you really want to launch the app client using a main class other than the one configured in the application

ACDEPL

ACDEPL001 Directory URL {0} in the manifest Class-Path for {1} will not be honored; it does not end with a slash.

Cause: Default class loaders will not include files from this directory at runtime; also, as a result, these files be not downloaded to clients.

Solution: Please make sure all such directory URLs in the Class-Path entry of JAR manifests have a trailing slash.

ACDEPL002 Cannot process archive {0} as an application client; it does not contain the required manifest at META-INF/MANIFEST.MF

Cause: All legal JARs, including Java EE components such as app clients, are required to have a manifest.

Solution: Make sure all JARs, specifically the one logged in the message, include valid manifests.

ACDEPL003 Cannot process archive {0} as an application client; its manifest does not contain main attributes (such as "Main-Class")

Cause: An app client JAR must specify the main class using the Main-Class setting in the manifest

Solution: Make sure the manifest of each app client JAR specifies the Main-Class

ACDEPL101 Java Web Start services not started for the app client {0}; its developer has marked it as ineligible

Cause: The developer's sun-application-client.xml file marks the app client as ineligible for Java Web Start support.

Solution: If users should be able to launch this client using Java Web Start, change the <java-web-start-support> 'enabled' attribute.

ACDEPL102 Java Web Start services not started for the app client {0}; the administrator has disabled Java Web Start support for it

Cause: The administrator disabled Java Web Start launches for the app client, either using '--properties java-web-start-enabled=false' during deployment or changing the properties afterwards.

Solution: If users should be able to launch this client using Java Web Start, either deploy the application again without --properties or adjust the configuration using the admin console or the asadmin 'set' command

ACDEPL103 Java Web Start services started for the app client {0} (contextRoot: {1})

Description: TBD

ACDEPL104 Java Web Start services stopped for the app client {0}

Description: TBD

ACDEPL105 Error starting the adapter to serve static system-level content

Cause: An unexpected internal system error occurred

Solution: Please consult the exception stack trace

ACDEPL106 Attempt to replace existing static content for {0} with {1} which does not match the existing content {2}

Cause: This is an internal error.

Solution: Please file an issue with a reproducible test case.

ACDEPL107 Attempt to add or retrieve content with URI {0} to HTTP adapter with context root {1} and user-friendly context root {2} rejected; URIs must fall within the adapter context root

Cause: This is an internal error.

Solution: Please file an error with a reproducible test case.

ACDEPL108 Config file for client JNLP not found: {0}

Cause: The config file does not exist.

Solution: The file is part of the installation so this might be an internal error. Make sure you have not accidentally removed or renamed the config file. If not, please file an error with a reproducible test case.

ACDEPL109 The config file for client JNLP {0} exists but could not be read.

Cause: The config file might be protected from reading.

Solution: Make sure the config file protection settings permit the server to read it.

ACDEPL110 Error processing client JNLP config file {0}

Cause: An error occurred attempting to process the config file's contents.

Solution: The contents of the file might be invalid or incorrectly formatted. Check to make sure the file includes valid property settings.

ACDEPL111 Client JNLP document {0} refers to the static resource {1} that does not exist or is not readable.

Cause: The developer-provided JNLP content refers to a file as if the file is in the application but the server could not find the file.

Solution: Make sure the file is packaged in the application and that the reference to the file is correct. Then rebuild and redeploy the application.

ACDEPL112 The following extensions or libraries are referenced from the manifest of {0} but were not found where indicated: {1}; ignoring and continuing

Cause: The server could not open the JAR file(s) or process the extension(s) listed in its manifest.

Solution: Make sure the manifest of the JAR file correctly lists the relative paths of library JARs and the extensions on which the JAR depends.

ACDEPL113 Error preparing to server JARs referenced by app client; referenced JAR file {0} contains no manifest; continuing

Cause: A JAR file which an app client directory or indirectly refers to contains no manifest, in violation of the JAR specification, so it cannot be checked for further dependencies.

Solution: Check that the referenced JAR file has been built correctly. It should contain a manifest but does not.

ACDEPL114 The ApplicationSignedJARManager for a nested app client deployer helper is unexpectedly null.

Cause: During deployment of nested app clients (those inside EARs), the system should use an ApplicationSignedJARManager but it is null.

Solution: This is a system error. Please report this as a bug.

ACDEPL115 The custom JNLP document {0} in a stand-alone app client incorrectly refers to a JAR {1}

Cause: The app client includes a custom JNLP document which refers to a JAR. Stand-alone app clients cannot refer to other JARs because they are self-contained deployment units.

Solution: Remove references to JAR from the custom JNLP document or package the app client inside an EAR that also contains the referenced JAR.

ACDEPL116 The manifest in dependent JAR {0} contains no main attributes, such as Class-Path, and so is an invalid JAR. Continuing.

Cause: The JAR specification requires JARs to have a main attributes section, which this JAR does not have.

Solution: Make sure the JAR was created correctly with a main attributes section and has not been corrupted.

ACT

ACT5001 Error occurred in image loading =[{0}]

Description: TBD

ACT5002 Invalid outputStream in TextEditor! not saving!.

Description: TBD

ACT5003 TextEditor Save Operation failed with Exception.

Description: TBD

ACT5004 Bad .mime.types entry: [{0}]

Description: TBD

ACT5005 Exception parsing mailcap file

Description: TBD

ADM

ADM0001 SunoneInterceptor is now enabled

Description: TBD

ADM0002 System MBean initialized:[{0}]

Description: TBD

ADM0003 MBeanServer initialization failed

Description: TBD

ADM0004 MBeanServer method invocation:[{0}]

Description: TBD

ADM0005 Timestamp files for configuration created for:[{0}]

Description: TBD

ADM0006 Timestamp files not created - Detailed Message:

Description: TBD

ADM0007 The folder [{0}] where admin server uploads the remote files for deployment already exists. This is probably because admin-server could not delete this folder during last shutdown. This should not be cause of any problem

Description: TBD

ADM0008 Admin Server could not create the temporary folder for internal purposes at [{0}]. This may cause problems with deployment etc. It is alright if some space is freed at this location without shutting down the Admin Server. Also look at the operating systems artifacts like file permissions etc. to resolve the problem

Description: TBD

ADM0009 Created temporary folder at [{0}] for internal purpose

Description: TBD

ADM0010 Deleted temporary folder at [{0}] successfully

Description: TBD

ADM0011 Could not re-register HttpListener with DomainRegistry.

Description: TBD

ADM0012 A Domain Registry Exception occurred. Details are:

Description: TBD

ADM0013 A config exception occurred. Details are:

Description: TBD

ADM0014 The temporary folder required by the administrative console (graphical user interface) could not be created at [{0}]. This will pose some problems while trying to deploy archives from the console. Some space can be freed at this location without restarting the administrative server to correct this problem.

Description: TBD

ADM0015 The temporary folder required by the administrative console (graphical user interface) was created at [{0}]. This is where the archives to be deployed will be uploaded.

Description: TBD

ADM0016 Unable to determine java home. This suggests that you are using a version of J2EE plug-in incompatible with administration server.

Description: TBD

ADM0017 Admin server could not be initialized with java home from j2ee plug-in.

Description: TBD

ADM0018 Support for batched reconfiguration is disabled.

Description: TBD

ADM0019 Admin service is running without server context.

Description: TBD

ADM0020 Following is the information about the JMX MBeanServer used:

Description: TBD

ADM0021 MBeanServer Implementation Name: [{0}]

Description: TBD

ADM0022 MBeanServer Implementation Vendor: [{0}]

Description: TBD

ADM0033 Admin Service configuration could not be read and Admin Service type is being defaulted to [{0}]

Description: TBD

ADM0034 Preinvoke failed for MBeanServer interceptor [{0}].

Description: TBD

ADM0035 Preinvoke exception for MBeanServer interceptor.

Description: TBD

Description:TBD

ADM1058 Restarting the server instance : [{0}]

Description:TBD

ADM1059 Security check failed - Detailed Message:

Description:TBD

ADM1060 isDebug check failed. Detailed Message:

Description:TBD

ADM1061 Skipping notifications because instance [{0}] is not running.

Description:TBD

ADM1062 The temporary file uploaded at [{0}] deleted. This does not necessarily imply that the deployment request from an administrative interface was served successfully

Description:TBD

ADM1063 The temporary file [{0}] used to upload before deployment could not be deleted, most likely because the file handle is occupied by admin server runtime. If a file with the same name is to be deployed again, this file will be overwritten during upload, which should not be a problem in future deployments. Please try deleting this file, if you see this message.

Description:TBD

ADM1064 The upload file at [{0}] exists and will be overwritten.

Description:TBD

ADM1065 Beginning to stop the domain [{0}]. The administrative server will also be shutdown along with all the other running non administrative SunONE Application Server instances

Description: TBD

ADM1066 Beginning to stop the domain [{0}]. The administrative server will not be shutdown. Only the non administrative SunONE Application Server instances will be shutdown

Description: TBD

ADM1067 Deletion of JMS service instance failed.

Description: TBD

ADM1068 Stopping instance [{0}] failed. See instance logs for more details

Description: TBD

ADM1069 Starting the server instance failed. Detailed message:

Description: TBD

ADM1070 Starting the server instance:[{0}] in debug mode with JPDA port number [{1}]

Description: TBD

ADM1071 Ownership of deployment directories could not be changed. [{0}]

Description: TBD

ADM1072 Size of the file [{0}] could not be verified

Description: TBD

Description: TBD

ADM11022 Database write operation by call flow asynchronous thread failed.

Description: TBD

ADM11023 Data transfer to call flow asynchronous thread interrupted.

Description: TBD

ADM1500 Initializing the lifecycle module for JMX Connector

Description: TBD

ADM1501 Here is the JMXServiceURL for the JMXConnectorServer: [{0}]. This is where the remote administrative clients should connect using the standard JMX Connectors.

Description: TBD

ADM1502 Status of System JMX Connector: Active = [{0}]

Description: TBD

ADM1503 The system-jmx-connector port [{0}] is not enabled to start with server startup. Thus JSR 160 JMX Connector will not be started.

Description: TBD

ADM1504 Here is the JMXServiceURL for the Standard JMXConnectorServer: [{0}]. This is where the remote administrative clients should connect using the standard JMX connectors

Description: TBD

ADM1506 Status of Standard JMX Connector: Active = [{0}]

Description: TBD

ADM1509 JSR 160 JMX Connector Server at address [{0}] is now stopping

Description: TBD

ADM1510 JSR 160 JMX Connector Server is now shutdown

Description: TBD

ADM1600 The MBean, {0}, was successfully deleted dynamically.

Description: TBD

ADM1601 Received a request for registration of MBean, {0}, but it is already registered in the MBeanServer.

Cause: Registration of the MBean was unsuccessful because it is already registered.

Solution: Run 'asadmin list-mbeans' to see a list of registered MBeans

ADM1602 The MBean, {0}, was successfully registered in the MBeanServer.

Description: TBD

ADM1603 Unable to unregister the MBean, {0}. This MBean was never registered in the MBeanServer. In general, this should not be a problem.

Cause: Unregistration of the MBean failed because it is not registered.

Solution: Run 'asadmin list-mbeans' to see a list of registered MBeans

ADM1604 The MBean, {0}, was successfully unregistered from the MBeanServer.

Description: TBD

ADM1605 Received a ConfigChange event for: [{0}]

Description: TBD

ADM1606 Can't handle updating an MBean element itself ({0}). The MBean is updated in terms of its xml-attributes, none of which are dynamically reconfigurable.

Cause: Can't handle updating an MBean element

Solution: Note that none of the attributes of "mbean" element except 'enabled' and 'object-name' are modifiable dynamically. Only the properties in this element that are actually the attributes of the runtime mbean are modifiable dynamically.

ADM1607 Received an MBean change event, but the MBean, {0}, is disabled. Disabled MBeans can't have their state changed.

Cause: Disabled MBeans are not allowed to have their state changed

Solution: Try enabling the MBean

ADM1608 An MBean with name: {0} could not be loaded. Continuing to load other MBeans";

Cause: The MBeanServer refused to load the MBean

Solution: Try redeploying the MBean

ADM1609 Attempting to load mbean: {0}

Description: TBD

ADM1610 The real mbean object-name would be: {0}

Description: TBD

ADM1611 The Class: {0} could not be loaded by class loader: {1} or any of its parents.

Description: TBD

ADM1612 The Class: {0} could not be initialized by class loader: {1} or any of its parents.

Description: TBD

ADM1613 The Class: {0} could not be instantiated because it appears to be an interface or abstract class. Check MBean code.

Description: TBD

ADM1614 The Class: {0} could not be could not be instantiated because of illegal access or default constructor not being available. Check MBean code.

Description: TBD

ADM1615 The Class: {0} could not be instantiated because of an error in static initializer. Check MBean code.

Description: TBD

ADM1616 MBean Class: {0} initiating class loader: {1}, defining class loader: {2}

Description: TBD

ADM1617 Setting attribute: {0} on mbean: {1}

Description: TBD

ADM1618 Can't unregister MBean: {0}

Cause: Can not unregister the MBean. This is a non-fatal error.

Solution: Try restarting the AppServer

ADM1619 handleUpdate Remote Server: received -- {0} {1}

Description: TBD

ADM1620 handleDelete Remote Server: received -- {0} {1}

Description: TBD

Description: TBD

DPL8001 descriptor failure {0}

Cause: Archivist.setDescriptor() failed

Cause: The instance may not be of expected type

Solution: Ensure that the descriptor type is set as expected

Solution: Turn log level for deployment to see more details

DPL8002 file copy failure

Cause: Copying of files failed

Cause: May be because of lack of space or permission

Solution: Ensure that there is enough disk space

Solution: Ensure that the permissions are set as expected

DPL8003 archivist instantiation failure for {0}; type = {1}

Cause: ArchivistFactory.getArchivist() failed

Cause: the module type may not be as expected

Solution: Ensure that the module type is one of the supported types

Solution: Ensure that the module type is one of the supported types

DPL8004 file open failure; file = {0}

Cause: Opening of files failed

Cause: May be because of lack of permission or wrong file name

Solution: Ensure that the file name is correct

Solution: Ensure that the permissions are set as expected

DPL8005 Deployment Descriptor parsing failure : {0}

Cause: Error while parsing the deployment descriptor

Cause: May be because of malformed descriptor or absence of all required descriptor elements

Solution: Ensure that the descriptor is well formed and as per specification

Solution: Ensure that the SAX parser configuration is correct and the descriptor has right permissions

DPL8006 get/add descriptor failure : {0} TO {1}

Cause: Adding or getting a descriptor failed

Cause: May be because the node / information to be added is not valid; may be because of the descriptor was not registered

Solution: Ensure that the node to be added is valid

Solution: Ensure that the permissions are set as expected

DPL8007 Unsupported deployment descriptors element {0} value {1}

Cause: Failed to find the resource specified in the deployment descriptor

Cause: May be because of wrong specification in the descriptor

Solution: Ensure that the resource specified is present

Solution: Ensure that there is no typo in the resource specified in the descriptor

DPL8008 method/class loading failure : {0} \n method/class name - {1}

Cause: Failed to load the class / method

Cause: May be because of wrong class/method name

Solution: Ensure that the class / method specified is present

Solution: Ensure that the path info is correct

DPL8009 deployment manager load failure : unable to load - {0}

Cause: Failed to load the deployment manager

Cause: May be because of wrong uri specification or deployment factory not installed at all

Solution: Ensure that the resource specified is present

Solution: Ensure that there is no typo in the URI specified

DPL8010 autodeployment startup failure

Cause: Failed in autodeployment

Cause: May be because of failure in creating the autodeployer or while reading the autodeploy config info

Solution: Ensure that the autodeploy is enabled properly

Solution: Ensure that there autodeploy config info is set properly

DPL8011 autodeployment failure while deploying the application : {0}

Cause: Failed in autodeployment of applications

Cause: Mostly because of application specific failure

Solution: Ensure that the application can be deployed using CLI

Solution: Ensure that there autodeploy config info is set properly and the server is up and running

DPL8012 directory rename failure : {0} TO {1}

Cause: Failed to rename directory

Cause: May be because of lack of permissions

Solution: Ensure that the permissions are set as expected

Solution: Ensure that there is no directory name clash

DPL8013 JAR file creation failure : {0}

Cause: Failed to create JAR file

Cause: May be because of lack of permissions or lack of space

Solution: Ensure that the permissions are set as expected

Solution: Ensure that there is enough space

DPL8014 Application deployment failure

Cause: Failed to complete application deployment

Cause: May be because of lack of permissions or lack of space or wrong application

Solution: Ensure that the permissions are set as expected

Solution: Ensure that there is enough space

DPL8015 This application has no role mapper factory defined

Cause: Failed to find the resource specified in the deployment descriptor

Cause: May be because of wrong specification in the descriptor

Solution: Ensure that the resource specified is present

Solution: Ensure that there is no typo in the resource specified in the descriptor

DPL8017 Ejb-ref type mismatch for ejb reference {0}. Reference declares type {1} but target ejb {2} has {3} interface of type {4}.

Cause: Possible type mismatch in ejb-ref/ejb-local-ref/@EJB

Cause: May be because of wrong specification in the descriptor

Solution: Ensure that the type associated with the ejb reference is the correct one.

Solution: Ensure that there is no typo in the resource specified in the descriptor

DPL8018 Invalid spec version {0}, reset to value {1}

Description: TBD

DPL8019 The run-as principal {0} was assigned by the deployment system based on the specified role. Please consider defining an explicit run-as principal in the sun-specific deployment descriptor.

Description: TBD

DPL8020 The role-name is empty. The may not be what the developer had in mind. Please check this.

Description: TBD

DPL8021 Invalid URL {0} specified for WSDL location

Cause: Failed to create a URL from the wsdl location specified

Cause: May be because of wrong specification in the descriptor

Solution: Ensure that the resource specified is a valid URL

Solution: Ensure that there is no typo in the resource specified in the descriptor

DPL8022 Artifact {0} identified for inclusion in app clients after one or more app clients were generated.

Cause: The application might specify that modules are to be processed in the order they appear in the application and an app client module appears before a module that creates an artifact to be included in app clients.

Solution: Make sure, if the application specifies initialize-in-order as true, that the app clients appear after other modules which generated artifacts that should be accessible to app clients.

DPL8023 URL Pattern contains CR(#xD) or LF(#xA): [{0}]. Leading and trailing whitespace will be ignored.

Description: TBD

DPL8024 Artifact with relative path {0} expected at {1} but does not exist or cannot be read

Cause: The server is attempting to register an artifact to be included in the generated app client JAR but the artifact does not exist or cannot be read

Solution: This is an internal server error. Please file a bug report.

DPL8025 Artifact with relative path {0} from {1} collides with an existing artifact from file {2}

Cause: The server has created more than one artifact with the same relative path to be included in the generated app client JAR file

Solution: This is an internal server error. Please file a bug report.

DPL8026 Submodule {0} has been expanded from the EAR into the same relative location as the location where it would be copied for internal use, but is of the type {1} which is not the type the rest of deployment will expect.

Cause: A submodule in an EAR can have the same name as its expansion location but the submodule must be of the correct storage type (such as a directory, not a JAR) as well.

Solution: Rename the submodule JAR in the application so it is not the same name as the expansion directory the server uses, or keep the same name but package it in the EAR as a subdirectory and not as a JAR file.

DPL8027 Ignore {0} in archive {1}, as GlassFish counterpart runtime xml {2} is present in the same archive.

Description: TBD

DPL8028 [{0}] is not an allowed WebLogic module type. Allowed module types are JMS, JDBC and Interception.

Description: TBD

DPL8029 Ignore {0} in archive {1}, as Sun counterpart runtime xml {2} is present in the same archive.

Description: TBD

DPL8030 Sun specific deployment descriptor ({0} in archive {1}) is deprecating, please use GlassFish specific deployment descriptor {2} in the future.

Description: TBD

DPL8031 Ignoring {0} with time {1} because timestamp on containing archive {2}, {3}, is later

Cause: A file inside a file archive predates the archive and is therefore being hidden and will appear not to exist in the archive

Solution: The file might have been opened but never closed, for instance during an earlier deployment of an application, and incorrectly remains in the archive after an undeployment.

DTX

DTX5001 Exception in enlistComponentResources.

Cause: Exception occurred while enlisting the resource.

Solution: Make sure that the resource usage is from a standard J2EE component or a life cycle component. If this exception occurs from a standard component, this is an Unexpected Internal Error and please contact Sun with the complete error log message.

DTX5002 Exception in delistComponentResources.

Cause: Exception occurred while delisting the resource.

Solution: Make sure that the resource usage is from a standard J2EE component or a life cycle component. If this exception occurs from a standard component, this is an Unexpected Internal Error and please contact Sun with the complete error log message.

DTX5003 RollbackException in registerSynchronization.

Cause: Trying to register the sync object while transaction is marked for rollback.

Solution: This is an Unexpected Internal Error. Please contact Sun with the complete error log message.

DTX5004 RemoteException in UserTx.begin().

Cause: Exception occurred while enlisting the component resource.

Solution: Make sure that the resource usage is from a standard J2EE component or a life cycle component. If this exception occurs from a standard component, this is an Unexpected Internal Error and please contact Sun with the complete error log message.

DTX5005 RemoteException in UserTx.commit().

Cause: Exception occurred while delisting the component resources.

Solution: Make sure that the resource usage is from a standard J2EE component or a life cycle component. If this exception occurs from a standard component, this is an Unexpected Internal Error and please contact Sun with the complete error log message.

DTX5006 RemoteException in UserTx.rollback().

Cause: Exception occurred while delisting the component resources.

Solution: Make sure that the resource usage is from a standard J2EE component or a life cycle component. If this exception occurs from a standard component, this is an Unexpected Internal Error and please contact Sun with the complete error log message.

DTX5007 Exception :

Description: TBD

DTX5008 Pooling Exception:

Cause: Exception occurred while closing the connection.

Solution: Check if DB is up and running.

DTX5009 Reconfiguration of transaction timeout failed

Cause: Invalid integer passed to set the timeout.

Solution: Check the timeout that is being given in the server configuration file.

DTX5010 An exception occurred while JTASStats monitoring registration

Cause: Could not register the JTA statistics for monitoring due to configuration problem.

Solution: This is an Unexpected Internal Error. Please contact Sun with the complete error log message.

DTX5011 Error occurred while getting monitor attribute

Cause: Requested attribute is not monitorable.

Solution: This is an Unexpected Internal Error. Please contact Sun with the complete error log message.

DTX5012 ClassNotFoundException occurred while creating JTASStats

Cause: JTASStats implementation class is not found.

Solution: This is an Unexpected Internal Error. Please contact Sun with the complete error log message.

DTX5013 Attribute is not part of transaction monitoring

Description: TBD

DTX5014 Caught exception in beforeCompletion() callback:

Cause: Exception occurred while calling beforeCompletion() method of the registered synchronization

Solution: Check exception message for the exact cause of the exception

DTX5015 Caught exception in afterCompletion() callback:

Cause: Exception occurred while calling afterCompletion() method of the registered synchronization

Solution: Check exception message for the exact cause of the exception

DTX5016 Error in XA recovery. See logs for more details

Cause: Exceptions while trying to close connections of handlers.

Solution: Individual resource handlers would have logged exceptions if any, check server.log for more details.

DTX5017 Cannot construct the probe. Transaction Manager is NULL!

Cause: Transaction Manager is not set in the StatsProvider.

Solution: This error shouldn't happen. Please file a bug with details about the setup.

DTX5018 TBEAN IS NULL FOR:

Cause: TransactionAdminBean was not constructed properly

Solution: This error shouldn't happen. Please file a bug with details about the setup.

DTX5019 Transaction Manager is ready. Using [{0}] as the delegate

Description: TBD

EJB5031 Some remote exception occurred while refreshing rob : [{0}] : [{0}]

Cause: An error occurred while looking up a Read Only Bean Notifier. The most common cause for this failure is that the string supplied to the getReadOnlyBeanNotifier method either does not refer to a read-only bean.

Solution: Check the application code that calls this method to make sure the string passed in refers to a valid read-only bean.

EJB5032 Exception in creating new bean : [{0}]

Description: TBD

EJB5033 Illegal state exception occurred : [{0}]

Description: TBD

EJB5035 Some application or unchecked exception occurred : [{0}]

Description: TBD

EJB5039 Some runtime exception occurred : [{0}]

Description: TBD

EJB5041 Exception while running postinvoke : [{0}]

Description: TBD

EJB5042 Exception setting bean context : [{0}]

Description: TBD

EJB5043 Exception cleaning up ejb subclass : [{0}]

Description: TBD

EJB5044 Name not found exception : [{0}]

Description: TBD

EJB5045 Class cast exception : [{0}]
Description:TBD

EJB5048 Exception creating new attribute
Description:TBD

EJB5049 Exception obtaining attribute [{0}]
Description:TBD

EJB5050 Exception in printStackTrace
Description:TBD

EJB5051 Exception in printStackTrace of super
Description:TBD

EJB5052 Exception closing session : [{0}]
Description:TBD

EJB5053 Exception closing server session pool : [{0}]
Description:TBD

EJB5054 Exception closing topic session: [{0}]
Description:TBD

EJB5055 Exception in init of ejb : [{0}]
Description:TBD

EJB5056 Exception in undeploying the bean : [{0}]
Description:TBD

EJB5057 Exception creating session : [{0}]
Description:TBD

EJB5058 Exception while getting ejb stub : [{0}]
Description:TBD

EJB5059 Exception creating ejb object : [{0}]
Description:TBD

EJB5060 Exception creating ejb local object [{0}]
Description:TBD

EJB5061 Exception removing ejb : [{0}]
Description:TBD

EJB5062 Exception removing bean : [{0}]

Description: TBD

EJB5063 Some exception removing bean : [{0}]

Description: TBD

EJB5064 Exception in afterCompletion : [{0}]

Description: TBD

EJB5065 Exception in deserializing [{0}]

Description: TBD

EJB5066 Some generic ejb exception : [{0}]

Description: TBD

EJB5067 Exception activating ejb : [{0}]

Description: TBD

EJB5068 Exception in serializing : [{0}]

Description: TBD

EJB5069 Exception getting ejbcreate method : [{0}]

Cause: The bean's Home or LocalHome does not define a no-arg create method.

Solution: Check the Home or LocalHome interface for the appropriate create method signature. Running the verifier will help identify the error as well.

EJB5070 Exception creating stateless session bean : [{0}]

Description: TBD

EJB5071 Some remote or transactional roll back exception occurred

Cause: Some problem occurred during the beforeCompletionphase of the transaction lifecycle. This error often happens when application code throws a system exception from its ejbStore method or if the transaction manager encounters a system exception.

Solution: Check the stack trace to see if the exception originated from the application's ejbStore method. Also check the resource configuration to ensure that all resource managers involved in the transaction are configured properly and healthy.

EJB5072 Error initializing home of container: [{0}]

Description: TBD

EJB5083 Error -- invalid maxMsgs prop = [{0}]

Description: TBD

EJB5085 Error -- invalid msg bean pool size = [{0}]

Description:TBD

EJB5087 [{0}]: Invalid value [{1}] for [{2}] , use [{3}] instead

Description:TBD

EJB5088 Number format exception

Description:TBD

EJB5089 Error -- invalid cleanup interval prop = [{0}]

Description:TBD

EJB5090 Exception in creating EJB container [{0}]

Cause: Problem during ejb container runtime initialization. See stack trace for more details. Some common causes are global JNDI name conflicts, class-not-found errors, and configuration errors for resources needed by the ejb.

Solution: If the ejb has a Remote view, check that its JNDI name does not clash with any other ejb's JNDI name or any other global JNDI name. Check that all needed classes are available to the ejb. Also ensure that any resources needed by the ejb are available. If the ejb uses a data source make sure the corresponding database is running. If it uses a queue makes sure the physical queue has been created.

EJB5091 Exception occurred in postInvoke : [{0}]

Description:TBD

EJB5092 Exception occurred in postInvokeTx : [{0}]

Description:TBD

EJB5093 Exception occurred in passiveIdleBeans

Description:TBD

EJB5094 container.getClassLoader() returned null

Description:TBD

EJB5095 Exception occurred in selectVictims()

Description:TBD

EJB5096 Unable to lookup UserTransaction

Description:TBD

EJB5097 Exception during undeploy

Description:TBD

EJB5098 Exception in preInvokeTx

Description: TBD

EJB5099 Exception in checkUnfinishedTx

Description: TBD

EJB5100 Exception in useClientTx

Description: TBD

EJB5101 Transaction Aborted

Description: TBD

EJB5102 Unable to complete container-managed transaction

Description: TBD

EJB5103 Exception in releaseContext

Description: TBD

EJB5104 Exception in callEJBStore

Description: TBD

EJB5105 Exception in createContainer

Description: TBD

EJB5106 Exception in EntityContainer

Description: TBD

EJB5107 Exception while getting server session

Description: TBD

EJB5108 Unable to initialize EJB Timer Service. The possible cause is the timer resource is not configured correctly, the database has not been started, or the timer database table has not been created.

Description: TBD

EJB5109 EJB Timer Service started successfully for data source [{0}]

Description: TBD

EJB5110 Attempt to override reserved ejb interface method [{0}] in [{1}].
Override will be ignored.

Description: TBD

EJB5111 Bean class for ejb [{0}] does not define a method corresponding to [{1}] interface method [{2}]

Cause: This error indicates a mismatch in the required method signature rules between a method defined on a [Home, Remote, LocalHome, Local] interface and the corresponding bean implementation class. E.g., this would happen if a create method in a Home interface did not have a matching ejbCreate method in the bean class.

Solution: Run the verifier tool to check that the methods defined on the bean class are correct with respect to the exposed interface.

EJB5112 Error cancelling timer with pkey [{0}]

Description: TBD

EJB5113 Error cancelling timers for container [{0}] and pkey [{1}]

Description: TBD

EJB5114 Error destroying timers for container [{0}]

Description: TBD

EJB5115 Error destroying timer [{0}]

Description: TBD

EJB5116 Delivering missed timer for timer id [{0}]. Timer should have fired at [{1}]

Description: TBD

EJB5117 Timer creation failed for container [{0}] primary key [{1}] and info [{2}]

Cause: Error while creating the persistent representation of an ejb timer. This typically means there is some configuration error or runtime problem with the ejb timer service data source.

Solution: Double-check the JDBC data source (and its associated connection pool) assigned to the timer-datasource element in domain.xml. Common causes are that the database is not running, the timer table has not been created within that database, or that the connection pool's JDBC driver URL information is incorrect.

EJB5118 Failure removing timer bean [{0}]

Description: TBD

EJB5119 Expunging timer [{0}] after [{1}] failed deliveries

Description: TBD

EJB5120 EJB Timer Service last shutdown at [{0}]

Description: TBD

EJB5121 EJB Timer Service shutdown info [{0}] not found. Shutdown time unknown.

Description: TBD

EJB5122 EJB Timer Service shutdown at [{0}]

Description: TBD

EJB5123 Rolling back timed out transaction [{0}] for [{1}]

Description: TBD

EJB5124 Commit Option A is not currently supported. Using Commit Option B for [{0}]

Description: TBD

EJB5125 Cannot add idle bean cleanup task

Description: TBD

EJB5126 Cannot add asynchronous task

Description: TBD

EJB5127 Error during passivation of [{0}]

Description: TBD

EJB5128 Error during Stateful Session Bean activation for key [{0}]

Cause: A problem occurred while the container was activating a stateful session bean. One possible cause is that the bean code threw a system exception from its `ejbActivate` method.

Solution: Check the stack trace to see whether the exception was thrown from the `ejbActivate` method and if so double-check the application code to determine what caused the exception.

EJB5129 Error in `ContainerSynchronization::afterCompletion`

Cause: An error occurred during the `afterCompletion` phase of the transaction lifecycle.

Solution: Check stack trace for details of error encountered by `ejb` container

EJB5130 Error while adding idle bean passivator task

Description: TBD

EJB5131 Error while adding idle bean removal task

Description: TBD

EJB5132 Could not determine passivation directory

Description: TBD

EJB5133 Error while creating SFSBStore manager

Description:TBD

EJB5134 Error while removing idle beans

Description:TBD

EJB5135 Error while removing expired beans

Description:TBD

EJB5136 Creation of passivation directory failed for {0}

Description:TBD

EJB5137 Initialization of store manager failed. Directory: {0}

Description:TBD

EJB5138 Initialization of store manager failed

Description:TBD

EJB5139 Error while loading bean state from store. Key: {0}

Description:TBD

EJB5140 Error while loading bean state from store

Description:TBD

EJB5141 Error while removing bean state from store. Key: {0}

Description:TBD

EJB5142 Error while removing bean state from store

Description:TBD

EJB5143 Error while removing passivation directory: {0}

Description:TBD

EJB5144 Error while removing passivation directory

Description:TBD

EJB5145 Error while undeploying store manager

Description:TBD

EJB5146 Error while undeploying store manager

Description:TBD

EJB5147 Error while saving bean state to store. Key: {0}

Description:TBD

EJB5148 Error while saving bean state to store

Description: TBD

EJB5149 Error while initializing file store manager {0}

Description: TBD

EJB5150 Error while initializing file store manager

Description: TBD

EJB5151 Error while creating enterprise bean context for {0} during jacc callback

Description: TBD

EJB5152 No methods registered yet for monitoring for {0} ; {1} ; {2}

Description: TBD

EJB5153 Error while registering method {3} for {0} ; {1} ; {2}

Description: TBD

EJB5154 Unexpected error while registering method {3} for {0} ; {1} ; {2}

Description: TBD

EJB5155 Error while unregistering method {3} for {0} ; {1} ; {2}

Description: TBD

EJB5156 Unexpected error while unregistering method {3} for {0} ; {1} ; {2}

Description: TBD

EJB5157 Error while registering container stats for {0} ; {1} ; {2}

Description: TBD

EJB5158 Unexpected error while registering container stats for {0} ; {1} ; {2}

Description: TBD

EJB5159 Error while unregistering container stats for {0} ; {1} ; {2}

Description: TBD

EJB5160 Unexpected error while unregistering container stats for {0} ; {1} ; {2}

Description: TBD

EJB5161 Error while registering pool stats for {0} ; {1} ; {2}

Description: TBD

EJB5162 Unexpected error while registering pool stats for {0} ; {1} ; {2}

Description:TBD

EJB5163 Error while unregistering pool stats for {0} ; {1} ; {2}

Description:TBD

Description:TBD

EJB5165 Error while registering cache stats for {0} ; {1} ; {2}

Description:TBD

EJB5166 Unexpected error while registering cache stats for {0} ; {1} ; {2}

Description:TBD

EJB5167 Error while unregistering cache stats for {0} ; {1} ; {2}

Description:TBD

EJB5168 Unexpected error while unregistering cache stats for {0} ; {1} ; {2}

Description:TBD

EJB5169 Rescheduling timer [{0}] after [{1}] redeliveries

Description:TBD

EJB6001 Caught exception instantiating EmbeddedContainer.

Description:TBD

EJB6002 Caught IOException parsing classpath entries.

Description:TBD

EJB6003 Caught exception instantiating InitialContext.

Description:TBD

EJB6004 Specified application server installation location [{0}] does not exist.

Description:TBD

EJB6005 No EJB modules found

Cause: No EJB modules had been found on the classpath or specified via MODULE property.

Solution: Check the classpath and the value(s) of the MODULE property.

EJB6006 Cannot determine server installation location

Cause: Installation location is not specified, and cannot be determined relative to the implementation location.

Solution: Check the classpath or specify server installation location using the `org.glassfish.ejb.embedded.glassfish.installation.root` property

EJB6007 Temporary file could not be created: {0}

Cause: See output for details.

Solution: See detailed exception at FINE log level.

GMSAD

GMSAD016 complete failure recovery callback for component: {0} failed member: {1}

Description: TBD

GMSAD1001 no clustername to lookup

Cause: Required information was not passed into method.

Solution: File issue with all relevant information.

GMSAD1002 Multiple gms-adapter service for cluster {0}

Cause: GMs module is being initialized more than once for the same cluster.

Solution: File issue with all relevant information.

GMSAD1003 GMS cannot initialize with unknown cluster

Cause: No cluster was found with this name in the domain configuration.

Solution: Check that domain exists in domain.xml.

GMSAD1004 Started GMS for instance {0} in group {1}

Description: TBD

GMSAD1005 Member {0} joined group {1}

Description: TBD

GMSAD1006 aliveAndReady monitoring: joinedAndReady memberState is UNKNOWN for core members: {0}

Description: TBD

GMSAD1007 AliveAndReady for signal: {0} for member: {1} of group: {2} current:[{3}] previous:[{4}]

Description: TBD

GMSAD1008 GMSAdapter for member: {0} group: {1} received GlassfishEventType: {2}

Cause: An unexpected exception occurred in the GMS implementation.

Solution: Check the server log file for more information from Shoal-GMS.

GMSAD1009 An exception occurred while creating the HealthHistory object: {0}

Cause: An unexpected exception occurred.

Solution: See server log for more details.

GMSAD1010 An exception occurred while processing GMS configuration properties: {0}

Cause: An unexpected exception occurred.

Solution: See server log for more details.

GMSAD1011 Ignoring group-management-service property {0} with value of {1} due to {2}

Cause: An illegal argument was passed into the Shoal GMS implementation.

Solution: Check the server log file for more information from Shoal-GMS.

GMSAD1012 Error processing cluster property:{0} value:{1} due to exception {2}

Cause: An unexpected exception occurred.

Solution: Check the server log file for more information from Shoal-GMS.

GMSAD1013 Exception in getting GMS module for group {0}: {1}

Cause: There was a problem withing the GMS implementation.

Solution: Check the server log file for more information from Shoal-GMS.

GMSAD1014 An exception occurred while updating the instance health history table: {0}

Cause: An unexpected exception occurred.

Solution: Check the log for Shoal-GMS exceptions.

GMSAD1015 start failure recovery callback for component: {0} failed member: {1}

Description: TBD

GMSAD1017 GMS failed to start. See stack trace for additional information.

Description: TBD

GMSAD1018 GMS failed to start due to a runtime exception. See stack trace for additional information.

Description: TBD

GMSAD1019 GMS bind interface address {0} is invalid. Will use default value instead.

Cause: The specified bind interface address is not an active local address, so it cannot be used on this node.

Solution: Check that you have specified the proper address. See server log for more details from GMS subsystem.

GMSAD3001 GMSAnnounceAfterStartClusterCommand: exitCode:{0} members {1} clusterMembers:{2}

Description: TBD

GMSAD3002 An exception occurred while announcing GMS group startup: {0}

Cause: An unexpected exception occurred in the GMS implementation.

Solution: Check the server log file for more information from Shoal-GMS.

GMSAD3003 An exception occurred while announcing GMS group shutdown: {0}

Cause: An unexpected exception occurred in the GMS implementation.

Solution: Check the server log file for more information from Shoal-GMS.

GMSAD3004 An exception occurred while announcing GMS group startup: {0}

Cause: An unexpected exception occurred in the GMS implementation.

Solution: Check the server log file for more information from Shoal-GMS.

GMSAD3005 An exception occurred while announcing GMS group shutdown: {0}

Cause: An unexpected exception occurred in the GMS implementation.

Solution: Check the server log file for more information from Shoal-GMS.

GMSBS

GMSBS1001 Unable to load GMS classes. Group management service is not available.

Cause: GMS implementation classes are not present. See https://glassfish.dev.java.net/issues/show_bug.cgi?id=12850.

Solution: Check that shoal-gms-impl.jar file is present.

GMSBS2001 Adding instance {0} to health history table.

Description: TBD

GMSBS2002 Instance {0} was not in map when deleted from health history table.

Cause: More than one call may have been made to remove this instance \

Solution: No action is necessary.

GMSBS2003 Deleting instance {0} from health history table.

Description: TBD

GMSBS2004 Duplicate instance {0} ignored in health history.

Cause: There may be more than one instance in the cluster with the same name.

Solution: Check that instance names are unique within the cluster.

GMSBS2005 State already known for instance {0}. Not adding to health history table.

Description: TBD

GMSBS2006 New state {0} added for unknown instance {1}

Description: TBD

IIOP

IIOP1000 Exception creating ASContext

Cause: An error occurred while creating the ASContext or SASContext

Solution: Please check the values provided in the descriptor for the IOR security config

IIOP1001 Exception getting username and password

Cause: An exception occurred while obtaining the username and password

Solution: Please check the username and password provided

IIOP1002 Principal propagation: Cannot find principal information in subject

Cause: The principal information is not found in the subject

Solution: Please check the config settings for identity propagation

IIOP1003 Principal propagation: Cannot find credential information in subject.

Cause: Credential information is not found in the subject

Solution: Please check the config settings for identity propagation

IIOP1004 Key alias {0} not found in keystore

Cause: Alias key is not found in the keystore

Solution: Please check the if the name of the alias is right and of the keystore contains the key of the alias

IIOP1005 An exception has occurred in the ejb security initialization.

Cause: An Exception has occurred in the ejb security initialization

Solution: Please check the if the IOR security configuration of the ejb is correct

Description: TBD

JTS5001 Cannot create control object reference.

Cause: Servant is already active.

Cause: Servant is not active.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5002 Cannot locate [{0}] servant.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5003 Cannot destroy [{0}] object reference.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5004 Cannot create coordinator object reference

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5005 Wait for resync complete interrupted

Cause: Recovery or resync process got interrupted.

Solution: See the server log for more details.

JTS5006 Unable to convert object reference to string in recovery.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5007 Cannot initialise log.

Solution: See the server log for more details.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5008 Cannot open log file for server = [{0}].

Cause: Make sure, Transaction log directory (transaction-service.tx-log-dir in server configuration file) is proper and has the read, write permissions for the user of the application server.

Solution: Transaction log directory is not accessible.

JTS5009 Cannot create CoordinatorResource object reference

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5010 Cannot create CoordinatorSynchronization object reference

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5011 No coordinator available.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5012 Unexpected error occurred when trying to begin a new transaction.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5013 Unable to create a subordinate Coordinator.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5014 Recoverable JTS instance, serverId = [{0}]

Description: TBD

JTS5015 Unexpected error occurred when creating portable object adaptors

Cause: ORB may not be running.

Solution: Make sure that ORB is running.

Solution: If ORB is running, this is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5016 Unexpected error occurred when creating current object

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5017 The ORB daemon, ORBD, is not running.

Description: TBD

JTS5018 Cannot register [{0}] instance with the ORB.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5019 This is a non-persistent servers. Transactions will not be recoverable.

Description: TBD

JTS5020 Invalid log path. Using [{0}].

Cause: Configuration problem while giving the log path.

Solution: Check the Transaction log path in server configuration file (transaction-service.tx-log-dir).

JTS5021 Invalid default log path. Using current directory.

Description: TBD

JTS5022 Unexpected exception [{0}] from log.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

Solution: Make sure Transaction log directory (transaction-service.tx-log-dir in server configuration file) is valid, not corrupted, and has the read, write permissions for the user of the application server. You may also need to restart the application server.

JTS5023 Heuristic exception [{0}] cannot be reported to superior in resync.

Description: TBD

JTS5024 Cannot create RecoveryCoordinator object reference.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5025 Log file exists for transient server [{0}].

Description: TBD

JTS5026 Exception [{0}] recovering an in-doubt Coordinator.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5027 Exception [{0}] on [{1}] operation during resync.

Solution: See the server log for more details.

JTS5028 XAException occurred during recovery of XAResource objects; XA Error Code : [{0}]

Cause: XAResource.recover has thrown an exception during recovery.

Solution: See the exception Stack trace for more details.

JTS5029 Exception [{0}] on [{1}] operation during resync.

Solution: See the server log for more details.

JTS5030 Unable to write restart record.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5031 Exception [{0}] on Resource [{1}] operation.

Solution: See the server log for more details.

JTS5032 Retry limit of [{0}] [{1}] operations exceeded.

Cause: Server could not communicate with the resource manager with in the retry limit.

Solution: Make sure that resource manager is up and running or increase the retry limit (transaction-service.retry-timeout-in-seconds in the server configuration file).

JTS5033 Exception [{0}] on [{1}] synchronization operation.

Solution: See the server log for more details.

JTS5034 Already identified to communications manager.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5035 Unable to identify to communications manager.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5036 Transaction in the wrong state for [{0}] operation.

Solution: See the server log for more details.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5037 Cannot create Terminator object reference.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5038 Transaction resynchronization from originator failed, retrying...

Description: TBD

JTS5039 Timeout thread stopped

Description: TBD

JTS5040 Cannot create TransactionFactory object reference.

Cause: ORB may not be running.

Solution: See the server log for more details.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5041 The resource manager is doing work outside a global transaction

Cause: Database driver or Resource Adapter has thrown XAException with the error message "The resource manager is doing work outside a global transaction"

Solution: Check if the application is using the same XA pool outside the transactional context as well as in the transactional context. Some drivers do not allow this scenario. Another scenario to verify is, two separate XA pools pointing to the same backend with the same credentials and the second connection is obtained within the same transaction, without closing the first connection.

JTS5042 Unexpected error occurred while getting the status of the transaction

Solution: See the server log for more details.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5043 Unexpected error occurred while creating transaction manager instance

Solution: See the server log for more details.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5044 Unexpected error occurred while getting or creating transaction state

Description: TBD

JTS5045 Unexpected error occurred in beforeCompletion

Description: TBD

JTS5046 Transaction is not active

Description: TBD

JTS5047 Transaction object not available

Description: TBD

JTS5048 Assert condition not satisfied

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5049 Cannot create XAResource object reference.

Solution: See the server log for more details.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5050 Invalid timeout value. Negative values are illegal.

Description: TBD

JTS5051 Invalid transaction state change

Solution: See the server log for more details.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5052 Transaction id is already in use.

Description: TBD

JTS5053 Invalid log record data in section [{0}].

Solution: See the server log for more details.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5054 Unexpected error occurred in after completion

Cause: One or more SynchronizationImpls beforeCompletion or afterCompletion methods have thrown unexpected exception.

JTS5055 Unexpected error occurred in getCORBAResourceReference

Solution: See the server log for more details.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5056 Invalid wait point

Solution: Make sure to call FailureInducer.setWaitPoint() with a valid WaitPoint.

JTS5057 FailPoint : [{0}]

Description: TBD

JTS5058 Invalid crash point

Solution: Make sure to call `FailureInducer.setWaitPoint()` with a valid `WaitPoint`.

JTS5059 Exception recovering an in-doubt Coordinator

Solution: See the server log for more details.

Solution: This is an Unexpected Internal Error. Please contact support with the complete error log message.

JTS5060 Exception occurred while setting transaction timeout

Description: TBD

JTS5061 Exception occurred while enabling transaction monitoring

Description: TBD

JTS5062 Exception occurred while setting XAResource timeout

Solution: See the server log for more details. `XAResource.setTransactionTimeout()` might not be supported for this `XAResource`.

JTS5063 Unexpected error occurred in beforeCompletion, XA Error Code : [{0}], Error Message : [{1}]

Description: TBD

JTS5064 Unexpected exception occurred while delisting the resource

Cause: Unexpected exception thrown from `XAResource.end`.

Solution: See the server log for more details.

JTS5065 An IO Exception occurred while handling recovery file

Cause: Transaction Log directory path is not valid or proper permissions are not there.

Solution: Make sure that transaction log directory is valid and files in that directory have read write permissions.

JTS5066 Unexpected error occurred in recovery process. Possible cause is that transaction logs are corrupted. Please clean up the transaction-service.tx-log-dir/tx/* files and restart the server.

Cause: Possible cause is that transaction logs are corrupted.

Solution: Please clean up the transaction-service.tx-log-dir/tx/* files and restart the server.

JTS5067 Unexpected error occurred in commit

Description: TBD

JTS5068 Unexpected error occurred in rollback

Description: TBD

JTS5069 Exception occurred while accessing JDBC resource for transaction log.

Description: TBD

JTS5070 Exception occurred while obtaining JDBC resource [{0}] for transaction log.

Description: TBD

JTS5071 Unexpected error occurred in registerSynchronization

Description: TBD

JTS5072 Caught exception during beforeRecovery event for {0}

Cause: Exception occurred while calling beforeRecovery event on the registered listener

Solution: Check exception message for the exact cause of the exception

JTS5073 Caught exception during afterRecovery event for {0}

Cause: Exception occurred while calling afterRecovery event on the registered listener

Solution: Check exception message for the exact cause of the exception

JTS5074 Error while doing the transaction recovery.

Cause: Exception occurred while performing delegated recovery

Solution: Check exception message for the exact cause of the exception

JTS5075 Error while updating GMS

Cause: Exception occurred while updating GMS

Solution: Check exception message for the exact cause of the exception

JTS5076 Invalid wait time for the recovery

Cause: wait-time-before-recovery-insec property is not set to a valid integer

Solution: Check wait-time-before-recovery-insec property value

JTS5077 Transaction log location data is not available for failed Member details for {0}

Cause: Could happen if instance fails BEFORE actually getting this info into distributed state cache.

Cause: Could also be a GMS distributed state cache bug.

Solution: Check if "asadmin recover-transactions" can be used instead. Report the problem if it persists.

LDR

LDR5001 ApplicationLoader: Cannot convert [{0}] into a URL.

Description: TBD

LDR5002 Unexpected error occurred while unloading ejb containers

Description: TBD

LDR5003 Duplicate unique id [{0}] found in ejb descriptor [{1}].

Description: TBD

LDR5004 Unexpected error occurred while creating ejb container

Description: TBD

LDR5005 ApplicationLoader exception :

Description: TBD

LDR5006 Failed to load deployment descriptor

Description: TBD

LDR5007 Exception :

Description: TBD

LDR5008 ConfigException :

Description: TBD

LDR5009 Unexpected error occurred while creating URL. Check if filename and path is correct.

Description: TBD

LDR5010 All ejb(s) of [{0}] loaded successfully!

Description: TBD

LDR5011 Class not found exception occurred while loading the ejbs

Description: TBD

LDR5012 Jndi name conflict found in [{0}]. Jndi name [{1}] for bean [{2}] is already in use.

Description: TBD

LDR5013 Naming exception while creating EJB container:

Description: TBD

LDR5014 Cannot load policy file while loading EJB.

Description:TBD

LDR5015 Exception :

Description:TBD

LDR5016 Cannot load web service monitoring MBeans for application : [{0}]

Description:TBD

LDR5017 Cannot unload web service monitoring MBeans for application : [{0}]

Description:TBD

LDR5018 ERROR while initializing ConnectorResourcesLoader [{0}]

Description:TBD

LDR5019 For module {0} the module directory {1} is missing or invalid

Description:TBD

LDR5100 Configuration exception encountered

Description:TBD

LDR5101 Could not get classpath

Description:TBD

LDR5102 Could not get classpath for appclient module

Description:TBD

LDR5200 MalformedURLException.

Description:TBD

LDR5201 Environment property [{0}] is not set. Unable to construct code source path for [{1}] in ejb class loader.

Description:TBD

LDR5202 Exception in ASURLClassLoader

Description:TBD

LDR5203 An error occurred while adding URL [{0}] to the EJB class loader. Please check the content of this URL.

Description:TBD

LDR5204 Error : Request made to load class or resource [{0}] on an ASURLClassLoader instance that has already been shutdown. [{1}]

Description:TBD

LDR5205 Cannot load the foreign URL {0} using the stream handler for {1}

Description: TBD

LDR5206 ASURClassLoader {1} was requested to find resource {0} after done was invoked from the following stack trace

Description: TBD

LDR5207 ASURClassLoader {1} was requested to find class {0} after done was invoked from the following stack trace

Description: TBD

LDR5208 Invalid attempt to close JarFile managed by ASURClassLoader

Description: TBD

LDR5209 Error closing an open stream during loader clean-up

Description: TBD

LDR5210 Input stream has been finalized or forced closed without being explicitly closed; stream instantiation reported in following stack trace

Description: TBD

LDR5211 Error checking for existing of {0} in {1}

Description: TBD

LDR5212 Error processing file with path {0} in {1}

Description: TBD

LDR5213 Error closing zip file for class path entry {0}

Description: TBD

LDR5214 Error closing zip file for duplicate class path entry {0}

Description: TBD

MDB

MDB0001 Create message-driven bean pool with maximum pool size [{0}], bean idle timeout [{1}] seconds

Description: TBD

MDB00010 Exception while cleaning up ServerSession [{0}]

Description: TBD

MDB00011 Exception while cleaning up ServerSession

Description: TBD

MDB00012 ServerSession.getSession() must be called first before calling ServerSession.start() !

Description: TBD

MDB00013 Create ServerSession error: [{0}]

Description: TBD

MDB00014 Exception while Creating ServerSession

Description: TBD

MDB00015 [{0}]: Message-driven bean destination name [{1}] not found

Description: TBD

MDB00016 [{0}]: Name not found exception: [{1}]

Description: TBD

MDB00017 [{0}]: Exception in creating message-driven bean container: [{1}]

Cause: An error occurred during the message-driven bean container initialization at runtime. The most common cause for this is that the physical resource(e.g. Queue) from which the message-driven bean is consuming either does not exist or has been configured incorrectly. Another common error is that the message-driven bean implementation class does not correctly implement the required javax.ejb.MessageBean or MessageListener interfaces.

Solution: Double-check that the JNDI name of the message-driven bean's resource in sun-ejb-jar.xml is correct. It is also useful to run the verifier to check that the code requirements for the message-driven bean class have been fulfilled.

MDB00018 [{0}]: Closing message-driven bean container connection

Description: TBD

MDB00019 [{0}]: Message-driven bean container connection closed

Description: TBD

MDB0002 Could not get server session: [{0}]

Description: TBD

MDB00020 [{0}]: Exception in closing message-driven bean container: [{1}]

Description: TBD

MDB00021 [{0}]: Message-driven bean destination type mismatch. Destination [{1}] is not of type [{2}]

Description: TBD

MDB00022 [{0}]: Message-driven bean listening on JMS destination [{1}]

Description: TBD

MDB00023 [{0}]: Invalid max-messages-load [{1}]

Description: TBD

MDB00024 [{0}]: Message-driven bean container connection factory [{1}] not found: [{2}]

Description: TBD

MDB00025 [{0}]: Message-driven bean connection factory type mismatch. Connection factory [{1}] is not of type [{2}]

Description: TBD

MDB00026 [{0}]: Unable to start message-driven bean container connection: [{1}]

Description: TBD

MDB00027 [{0}]: Connection exception event for [{1}], [{2}], [{3}]

Description: TBD

MDB00028 [{0}]: Message-driven bean container using external connection factory object: [{1}]

Description: TBD

MDB00029 [{0}]: Register message-driven bean container bean-pool monitor failed: [{1}]

Description: TBD

MDB0003 Exception on getting server session

Description: TBD

MDB00030 [{0}]: Exception in setting up message-driven bean container: [{1}]

Description: TBD

MDB00031 [{0}]: Message-driven bean container connection factory [{1}] not found. Use default

Description: TBD

MDB00032 [{}]: Message-driven bean container connection factory not specified.
Use default

Description:TBD

MDB00033 [{}]: Message-driven bean container reconnecting ...

Description:TBD

MDB00034 [{}]: Message-driven bean container reconnected

Description:TBD

MDB00035 [{}]: Exception on message-driven bean pool close: [{}]

Description:TBD

MDB00036 [{}]: Message-driven bean preInvoke() failed

Description:TBD

MDB00037 [{}]: Message-driven bean invocation exception: [{}]

Description:TBD

MDB00038 [{}]: No message-driven bean context in message listener : [{}]

Description:TBD

MDB00039 [{}]: Message sent to a destroyed message-driven bean : [{}], [{}]

Description:TBD

MDB0004 Can not call getSession() while the session is still in use

Description:TBD

MDB00040 [{}]: Message-driven bean CMT can not be supported.

Description:TBD

MDB00041 [{}]: Message-driven bean onMessage error: [{}]

Description:TBD

MDB00042 [{}]: No invocation for message [{}]

Description:TBD

MDB00043 [{}]: Exception in reading mdb-container configuration: [{}]

Description:TBD

MDB00044 Deploying message-driven bean [{}], consuming from [{}]

Description:TBD

MDB00045 Undeploying message-driven bean [{0}]

Description: TBD

MDB00046 Message-driven bean [{0}]: onMessage RuntimeException occurred: [{1}].
[{2}]

Description: TBD

MDB00047 Message-driven bean [{0}]: Some application or unchecked exception
occurred : [{1}]

Description: TBD

MDB00048 Message-driven bean [{0}]: Exception in preinvoke : [{1}]

Cause: An error occurred during the pre-invocation processing before a message-driven bean MessageListener method is called. This is often caused by some transaction-related errors.

Solution: Double-check the transaction configuration for the message-driven bean and consult stack trace for additional details.

MDB00049 Message-driven bean [{0}]: Exception in postinvoke : [{1}]

Description: TBD

MDB0005 Can not call getSession() after the session has been destroyed

Description: TBD

MDB00050 Message-driven bean [{0}]: Exception in creating message-driven ejb :
[{1}]

Cause: An error occurred during the lifecycle initialization of a message-driven bean instance. This typically means a system exception was thrown from the bean code during the execution of the no-arg constructor, the setMessageDrivenContext method, or the ejbCreate method. Common causes are failed naming service lookups coding errors, or ClassNotFoundException errors.

Solution: Check the stack trace to see which method threw the exception. If the error was caused by a NamingException, double-check the environment configuration (ejb-refs, resource-refs, etc.) in the deployment descriptor against the coded names. It would also be useful to run the verifier.

MDB00051 Message-driven bean [{0}] preinvoke exception in destroy message-driven
ejb: [{1}]

Cause: An error occurred while the container was destroying an instance of a message-driven bean. The most common cause is that a message-driven bean class threw a system exception from its ejbRemove method.

Solution: Check the message driven bean's `ejbRemove` implementation to determine what would result in an exception. Also consult the stack trace for more information.

MDB00052 Message-driven bean [{0}]: start message delivery exception: [{1}]

Cause: An error occurred while the container was enabling the message flow into a message-driven bean. This is an internal error that typically means there is a problem with the messaging system from which the message-driven bean is consuming.

Solution: Check the stack trace for more details.

MDB00053 Message-driven bean [{0}] container cleanup exception: [{1}]

Description: TBD

MDB00054 Message-driven bean [{0}]: Exception setting bean context : [{1}]

Description: TBD

MDB00055 Message-driven bean [{0}]: Exception in closing consumer : [{1}]

Description: TBD

MDB00056 Message-driven bean [{0}]: start cleanup for shutdown

Description: TBD

MDB00057 Message-driven bean [{0}]: finished cleanup for shutdown

Description: TBD

MDB00058 Message-driven bean [{0}]: connection exception [{1}] during server shutdown. ignore.

Description: TBD

MDB00059 {0}: Exception on unregistering monitor mbean: [{1}]

Description: TBD

MDB0006 Get session failed: [{0}]

Description: TBD

MDB00060 [{0}]: Invalid value [{1}] for [{2}] , use [{3}] instead

Description: TBD

MDB0007 Get session throws exception

Description: TBD

MDB0008 Session.run() throws Exception [{0}]

Description: TBD

MDB0009 Session.run() throws Exception

Description: TBD

MNTG

MNTG0101 Discovering the ProbeProviders

Description: TBD

MNTG0102 Discovering the XML ProbeProviders from lib/monitor

Description: TBD

MNTG0103 Couldn't find the module, when loading the monitoring providers from XML directory : {0}

Description: TBD

MNTG0104 Unable to load the ProbeProvider

Description: TBD

MNTG0105 Unable to load the ProbeProvider

Description: TBD

MNTG0106 Level change event received, {0} New Level = {1}, Old Level = {2}

Description: TBD

MNTG0107 Enabling {0} monitoring to {1}

Description: TBD

MNTG0108 Disabling {0} monitoring

Description: TBD

MNTG0109 mbean-enabled flag is turned on. Enabling all the MBeans

Description: TBD

MNTG0110 mbean-enabled flag is turned off. Disabling all the MBeans

Description: TBD

MNTG0111 dtrace-enabled flag is turned on/off. Enabling/Disabling DTrace

Description: TBD

MNTG0112 monitoring-enabled flag is turned on. Enabling all the Probes and Stats

Description: TBD

MNTG0113 monitoring-enabled flag is turned off. Disabling all the Stats

Description:TBD

MNTG0201 Flashlight listener registration failed for listener class : {0} , will retry later

Description:TBD

MNTG0202 Invalid statsProvider (very likely a duplicate request), cannot unregister : {0}

Description:TBD

MNTG0203 Cannot find node {0} for statsProvider {1}

Description:TBD

MNTG0204 {0} is not a ManagedObject and will not be registered with Gmbal to create an MBean

Description:TBD

MNTG0205 Gmbal registration failed

Description:TBD

MNTG0206 Gmbal unregistration failed

Description:TBD

MNTG0207 module-monitoring-level or container-monitoring config element for {0} does not exist

Description:TBD

MNTG0208 Error unregistering the stats provider : {0}

Description:TBD

MNTG0209 Error resetting the stats provider : {0}

Description:TBD

MNTG0301 Cannot process XML ProbeProvider, xml = {0}

Description:TBD

MNTG0302 Cannot resolve the paramTypes, unable to create this probe - {0}

Description:TBD

MNTG0303 Cannot resolve the paramTypes of the probe - {0}, Try giving a fully qualified name for the type

Description:TBD

MNTG0304 Can not match the Probe method ({0}) with any method in the DTrace object.

Description: TBD

MNTG0305 Invalid parameters for ProbeProvider, ignoring {0}

Description: TBD

MNTG0501 invalid pid, start btrace-agent using asadmin enable-monitoring with --pid option, you may get pid using jps command

Description: TBD

MNTG0502 btrace-agent.jar does not exist under {0}

Description: TBD

MNTG0503 btrace-agent.jar directory {0} does not exist

Description: TBD

MNTG0504 Encountered exception during agent attach

Description: TBD

MNTG0601 No providers identified from the xml

Description: TBD

NAM

NAM0000 Exception in Main of CorbaNameURL.

Description: TBD

NAM0001 Exception in Main.

Description: TBD

NAM0002 Exception in NamingManagerImpl copyMutableObject().

Cause: Problem with serialising or deserialising of the object

Solution: Check the class hierarchy to see if all the classes are Serializable.

NAM0003 Exception in SerialContextProviderImpl InsertSerialContextProvider() : {0}.

Cause: Problem in creating a remote object for SerialContextProvider.

Cause: Problem during publishing SerialContextProvider in CosNaming Service.

Solution: Check if ORB CosNaming Service initialised.

Solution: Check if ORB CosNaming Service initialised.

NAM0004 Exception during name lookup : {0}

Cause: App Server may not be running at port intended.

Cause: Possible Network Error.

Solution: Check to see if the AppServer is up and running on the port intended. The problem could be because of incorrect port.

Solution: Check to see if you can access the host on which the AppServer running.

NAM0005 JMS Connection Factory resource not found: {0}

Cause: The JMS Connection Factory may not be bound to a JNDI name.

Solution: Check the list of JNDI bindings by clicking on the JNDI tree on the Administrator's console. Check the JMS resource references bindings.

NAM0006 JMS Destination Object or Administered Object not found: {0}

Cause: The JMS destination may not be bound to a JNDI name.

Solution: Check the list of JNDI bindings by clicking on the JNDI tree on the Administrator's console. Check the JMS resource references bindings.

NAM0007 Message Destination Reference {0} has not been linked to a Message Destination

Cause: Unresolved Message Destination Reference

Solution: Check if the Message Destination has been linked to a Message Destination

NAM0008 Invalid Destination: {0} for {1}

Cause: Invalid Destination Name

Solution: Check Destination Name

NAM1000 No Endpoints selected in com.sun.appserv.iiop.endpoints property. Using {0}:{1} instead

Cause: No endpoints selected.

Solution: Check system property com.sun.appserv.iiop.endpoints

NAM1001 No Endpoints selected in com.sun.appserv.iiop.endpoints property. Using JNDI Provider URL {0} instead

Cause: No endpoints selected.

Solution: Check system property com.sun.appserv.iiop.endpoints

NAM1002 Exception : (0) thrown for bad provider URL String: {1}

Cause: Bad JNDI provider URL

Solution: Check system property java.naming.provider.url

NAM1003 Bad host:port entry: {0} Exception thrown : {1}

Cause: Bad host:port entry

Solution: Check system property com.sun.appserv.iiop.endpoints

NAM1004 Unknown host: {0} Exception thrown : {1}

Cause: Unknown host

Solution: Check the host entry

NAM1005 No Endpoints selected. Please specify using system property com.sun.appserv.iiop.endpoints.

Cause: No endpoints selected.

Solution: Check system property com.sun.appserv.iiop.endpoints

NAM1006 Problem with resolving the reference to the FOLB GroupInfoService.

Exception occurred : {0}

Description: TBD

NAM1007 Problem with membership change notification. Exception occurred : {0}

Description: TBD

NAM1008 Please specify ic-based or ic-based-weighted as the LoadBalancing policy

Description: TBD

PAYL

PAYL1001 Error processing file {0} to include it in the payload

Cause: The system tried to include a non-existent or unreadable file in an outgoing payload

Solution: This is a system error. Please file a bug report.

PER

PER01000 Got SQLException executing statement "{0}": {1}

Description: TBD

PER01001 Cannot connect to database via JNDI name ''{0}'': {1}.

Description: TBD

PER01002 Deployment of ''{0}'' encountered unexpected IOException: {1}

Description: TBD

PER01003 Deployment encountered SQL Exceptions:

Description: TBD

PER01004 Executing SQL Statement "{0}".

Description: TBD

PER02000 PersistenceUnitInfoImpl: For pu-root [{0}], \

Description: TBD

PER02100 Could not load Toplink Essentials. Assuming this is an upgrade from V2. Switching Persistence Unit [{0}] to use [{1}] as JPA provider. If you intend to use Toplink Essentials, please ensure that it is visible to your application."

Description: TBD

RAR

RAR2001 Unsupported callback {0} during credential mapping

Cause: Resource adapter has used a callback that is not supported by application server

Solution: Check whether the callback in question is supported by application server

RAR2002 Work is an WorkContextProvider and ExecutionContext [{0}] is not null

Cause: submitted work has execution-context as well it is a work-context-provider which is specification violation

Solution: Make sure that either execution-context or work-context-provider with transaction-context is passed, but not both

RAR2003 duplicate work context for type [{0}]

Cause: multiple work contexts of same type submitted

Solution: Make sure that same context type is not submitted multiple times in the work-context

RAR2004 Application server cannot handle the following work context : {0}

Cause: Work Context in question is not supported by application server

Solution: Check the application server documentation for supported work contexts

RAR2005 setting custom workcontext for WorkContext [{0}] using most specific support Work Context [{1}]

Cause: Requested work context is not supported, but a super type of the context is supported

RAR2006 most specific work context for [{0}] supported by container is [{1}]

Cause: Requested work context is not supported, but a super type of the context is supported

RAR2007 Unable to load work context class {0} due to the following exception {1}

Cause: Work Context class is not available to application server

Solution: Make sure that the work context class is available to server

RAR2008 Unable to set security context

Cause: Unable to set security context

Solution: Check the server.log for exceptions

RAR2009 Container cannot load the work-context class [{0}] to check whether any of the supported contexts 'isAssignable'

Cause: Unable to load the work-context class specified by the resource-adapter

Solution: Make sure that the work-context class is available to the server

RAR5003 Error loading J2EE resource file

Description: TBD

RAR5004 Error in XA recovery. See logs for more details.

Cause: Jdbc driver threw an exception while recovery.

Cause: Resource Adapter threw an exception while recovery in case of connectors.

Solution: Check database or EIS log for details.

Solution: Check whether the connection pool configuration is proper.

Solution: Check whether domain.xml is accessible.

RAR5005 Error in accessing XA resource with JNDI name [{0}] for recovery

Cause: The XA resource has been deleted before attempting recovery

Cause: The XA resource is no longer referenced in the domain.xml

Cause: The database server that the XA resource points to is no longer running

Cause: The configuration information for the XA Resource has been changed before attempting recovery

Solution: Check that the XA Resource and the pool it points to is still defined in the domain.xml

Solution: Check that the XA Resource is present in the list of resource-refs in the domain.xml

Solution: Check that the Database server is up and running

Solution: Check if the config info of the XA resource and the pool it points to is sane. In particular check that the datasourceclassname in the pool is correct and the XA resource points to the correct pool

RAR5007 Error in creating data source object: [{0}]

Cause: Exception while creating persistent manager resource.

Solution: Check whether the persistent manager factory class is configured properly and is available in the classpath.

Solution: Check whether the jdbc resource name is correct and is configured properly.

RAR5008 Error in creating a naming Reference for custom resource [{0}]

Cause: Naming provider and port are not set in the initial context

Cause: The Naming provider is not up

Solution: Check the jndi.properties file has the naming provider host and port specified

Solution: Check if the naming provider is up and listening on the port specified in the domain.xml

RAR5009 Cannot load external-jndi-resource factory-class ''[{0}]''

Cause: Could not create an instance of factory-class.

Solution: Make sure that factory-class name is configured correctly.

Solution: Make sure that factory-class is available in the classpath of the application server

RAR5010 external-jndi-resource factory-class ''[{0}]'' must be of type javax.naming.spi.InitialContextFactory

Cause: External JNDI resource has a wrong factory-class configuration

Solution: Verify that factory class is an instance of javax.naming.spi.InitialContextFactory

RAR5011 Exception thrown creating initial context for external JNDI factory ''[{0}]''

Cause: Could not create Initial Context.

Solution: Make sure that the external-jndi-resource configuration is sufficient to create an initial context.

RAR5012 Cannot create external-jndi-resource factory-class ''[{0}]''

Cause: Could not create Initial context factory.

Solution: Make sure that the external-jndi-resource configuration is sufficient to create an initial context factory

RAR5013 Error in installing connection factories

Description: TBD

RAR5014 Cannot load class [{0}].

Description: TBD

RAR5015 Unexpected exception in loading class [{0}] by classloader

Cause: Classpath is not properly set in the domain.xml

Cause: The application server process does not have read permissions on the directory that holds the classes/jar

Cause: Classpath is not properly set in the domain.xml

Cause: The application server process does not have read permissions on the directory that holds the classes/jar

Solution: You do not have read permissions on the directory that holds the classes/jar

Solution: Check that the classpath attribute in the java-config includes a reference to the jar/package directory for the class

Solution: You do not have read permissions on the directory that holds the classes/jar

Solution: Check that the classpath attribute in the java-config includes a reference to the jar/package directory for the class

RAR5016 Error accessing configuration file.

Description: TBD

RAR5017 Cannot locate connection descriptor by name

Description: TBD

RAR5018 Cannot create connection factory

Description: TBD

RAR5019 Unexpected exception in creating new file

Description: TBD

RAR5020 Error in Persistence Manager Settings [{0}]

Cause: Could not configure persistence manager resource properly.

Solution: Make sure that the Jdbc resource name, you have configured is correct

Solution: Check whether the persistence manager factory class is proper.

Solution: Check whether the persistence manager factory class has a setConnectionFactoryName method.

RAR5021 Error in installing resource adapters

Description: TBD

RAR5022 Error in binding to JNDI namespace

Description: TBD

RAR5023 Error removing connection factory

Description: TBD

RAR5024 Error adding J2EE resource

Description: TBD

RAR5025 Error removing J2EE resource

Description: TBD

RAR5026 Failed to complete transaction. Error Message: [{0}].

Cause: Internal error while completing the transaction.

RAR5027 Unexpected exception in resource pooling

Cause: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR5029 Unexpected exception while registering component

Cause: Internal error while registering the resource to the transaction.

RAR5030 Unexpected exception while registering synchronization

Cause: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR5031 System Exception

Cause: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR5032 Unexpected exception while returning resource to pool

Description: TBD

RAR5033 ASSERT FAILED!!!

Description: TBD

RAR5034 Failed to resize pools

Description: TBD

RAR5035 Unexpected exception while destroying resource from pool {0}. Exception message: {1}

Cause: Error while closing the physical connection.

Cause: Error while destroying the connector managed connection.

Solution: Refer to the manual of the resource that is pooled (JDBC driver or Resource Adapter).

Solution: To get exception stack, please change log level to FINE. Examine this exception stack trace for details.

RAR5036 Resource reference is not defined for JNDI name [{0}]

Description: TBD

RAR5037 Username/password not specified for resource reference [{0}]. Defaulting to one in the pool.

Description: TBD

RAR5038 Unexpected exception while creating resource for pool {0}. Exception : {1}

Cause: Could not create a physical connection.

Solution: Connection pool is configured incorrectly.

Solution: Database is running properly.

Solution: EIS (in case of connectors) is running properly.

Solution: SJS MQ (in case of JMS) is running properly.

Solution: Network connection to Database/EIS/MQ is proper.

Solution: Check linked exception (if there was a linked exception it is logged after this message).

RAR5039 Linked exception : {0}

Description: TBD

RAR5042 Error in accessing XA resource for recovery

Cause: The XA resource has been deleted before attempting recovery

Cause: The XA resource is no longer referenced in the domain.xml

Cause: The database server that the XA resource points to is no longer running

Cause: The configuration information for the XA Resource has been changed before attempting recovery

Solution: Check that the XA Resource and the pool it points to is still defined in the domain.xml

Solution: Check that the XA Resource is present in the list of resource-refs in the domain.xml

Solution: Check that the Database server is up and running

Solution: Check if the config info of the XA resource and the pool it points to is sane. In particular check that the data source class name in the pool is correct and the XA resource points to the correct pool

RAR5043 Error in creating data source object:

Cause: Exception while creating persistent manager resource.

Solution: Check whether the persistent manager factory class is configured properly and is available in the classpath.

Solution: Check whether the jdbc resource name is correct and is configured properly.

RAR5044 Error in Persistence Manager Settings

Cause: Could not configure persistence manager resource properly.

Solution: Make sure that the Jdbc resource name, you have configured is correct

Solution: Check whether the persistence manager factory class is proper.

Solution: Check whether the persistence manager factory class has a `setConnectionFactoryName` method.

RAR5045 Error in creating a naming Reference for custom resource

Cause: Naming provider and port are not set in the jndi provider's property file

Cause: The Naming provider is not up

Solution: Check the `jndi.properties` file has the naming provider host and port specified

Solution: Check if the naming provider is up and listening on the port specified in the `domain.xml`

RAR5046 Unexpected exception in loading class by classloader [{0}]

Cause: Classpath is not properly set in the `domain.xml`

Cause: You do not have read permissions on the directory that holds the classes/jar

Cause: Classpath is not properly set in the `domain.xml`

Cause: You do not have read permissions on the directory that holds the classes/jar

Solution: Check that the classpath attribute in the `java-config` includes a reference to the `jar/package` directory for the class

Solution: Check that the directory where the classes/jars reside have read permission for the application server process

Solution: Check that the classpath attribute in the `java-config` includes a reference to the `jar/package` directory for the class

Solution: Check that the directory where the classes/jars reside have read permission for the application server process

RAR5047 Exception thrown creating initial context for external JNDI factory [{0}]

Cause: Could not create Initial Context.

Solution: Make sure that the `external-jndi-resource` configuration is sufficient to create an initial context.

RAR5048 Error in configuring JDBC resource

Cause: The configuration for the JDBC resource could not be read from the `domain.xml`

Cause: This is an internal server error. Please contact Sun Microsystems with the complete error log

RAR5051 Jdbc pool monitoring bean registration failure

Description: TBD

RAR5052 Failed to look up connection pool resource name

Description: TBD

RAR5053 underlying connection not valid

Description: TBD

RAR5054 Exception while closing connection

Description: TBD

RAR5055 Missing parameter in properties file [{0}].

Description: TBD

RAR5058 Error while Resizing pool {0}. Exception : {1}

Cause: Could not create physical connection during connection pool resizing.

Solution: Check your database/ EIS logs for possible connection creation errors.

Solution: Check whether your network connection to the database or EIS is proper.

RAR5059 Binding [JDBC DataSource Name: {0}, Pool Name: {1}]

Description: TBD

RAR5060 Install JDBC Datasources ...

Description: TBD

RAR5061 Exception caught and ignored : {0}

Description: TBD

RAR5062 Exception caught while getting Local Transaction

Description: TBD

RAR5063 Exception while creating XADataSource :{0}

Cause: The class specified in datasourceclassname attribute in the jdbc-connection-pool is not of type javax.sql.XADataSource. Please consult your database vendor's documentation to identify the class that implements the javax.sql.XADataSource

Solution: Check if the datasourceclass implements the javax.sql.XADataSource interface. Try using the javap tool for this purpose

RAR5065 Exception while creating DataSource Object : {0}

Cause: The class specified in datasourceclassname attribute in the jdbc-connection-pool is not of type javax.sql.ConnectionPoolDataSource. Please consult your database vendor's documentation to identify the class that implements the javax.sql.ConnectionPoolDataSource

Solution: Check if the datasourceclass implements the javax.sql.ConnectionPoolDataSource interface. Try using the javap tool for this purpose

RAR5066 Exception while getting pooled connection : {0}

Cause: The Database server is not up and running

Cause: The connection pool is full and cannot allocate more connections

Cause: The Database server threw some unexpected exception. Please study the exception message for more details

RAR5067 Exception while getting XA Connection : {0}

Description: TBD

RAR5068 No such element in connection set

Cause: There are no managed connections in the connection pool at this time

Cause: There is an internal server error. Please contact Sun Microsystems with the complete log message

Solution: This is an internal server error. Please contact Sun Microsystems with the complete error log

Solution: This is an internal server error. Please contact Sun Microsystems with the complete error log

RAR5069 Exception while fetching EIS Product name : {0}

Cause: The Connection object is now invalid due to database restart

Cause: The connection object is now invalid since the database is not up and running

Cause: The JDBC driver cannot provide the required information due to internal error

Solution: Switch on the connection validation property of the connection pool and try again

Solution: If the database has restarted, restart the application server as well or set the connection validation property in the pool to avoid this in the future. If the database server is not up, please bring it up

Solution: Check the server log and please contact Sun Microsystems with the complete error log

RAR5070 Exception while fetching EIS Product version :{0}

Cause: The Connection object is now invalid due to database restart

Cause: The connection object is now invalid since the database is not up and running

Cause: The JDBC driver cannot provide the required information due to internal error

Solution: Switch on the connection validation property of the connection pool and try again

Solution: If the database has restarted, restart the application server as well or set the connection validation property in the pool to avoid this in the future. If the database server is not up, please bring it up

Solution: Check the server log and please contact Sun Microsystems with the complete error log

RAR5071 Exception creating CciInteraction object

Description: TBD

RAR5072 Exception while clearing warnings from Statement object

Description: TBD

RAR5073 Exception while getting warnings from Statement object

Description: TBD

RAR5074 Table based validation detected invalid connection. Querying the table {0} failed. Set resource-adaptor log-level to FINE for exception stack trace.

Cause: The Connection object is now invalid due to database restart

Cause: The connection object is now invalid since the database is not up and running

Cause: The JDBC driver cannot execute the statement due to internal error

Solution: Switch on the connection validation property of the connection pool and try again

Solution: If the database has restarted, restart the application server as well or set the connection validation property in the pool to avoid this in the future. If the database server is not up, please bring it up

Solution: Check the server log and please contact Sun Microsystems with the complete error log

RAR5075 Exception while setting up Statement according to Spec

Description: TBD

RAR5076 Exception while preparing statement

Description: TBD

RAR5077 Exception while closing statement

Description: TBD

RAR5078 Exception while beginning local transaction

Description: TBD

RAR5079 Exception while committing local transaction

Description: TBD

RAR5080 Exception while committing xa transaction

Description: TBD

RAR5081 Exception while rolling back local transaction

Description: TBD

RAR5082 Exception while creating CciManagedConnection

Description: TBD

RAR5083 Exception while destroying physical connection

Description: TBD

RAR5084 Exception while creating physical connection

Description: TBD

RAR5085 Exception while getting XA resource

Description: TBD

RAR5086 Exception creating CciManagedConnectionMetaData

Description: TBD

RAR5087 Exception while querying the EIS for max connections

Cause: The Connection object is now invalid due to database restart

Cause: The connection object is now invalid since the database is not up and running

Cause: The JDBC driver cannot provide the required information due to internal error

Solution: Switch on the connection validation property of the connection pool and try again

Solution: If the database has restarted, restart the application server as well or set the connection validation property in the pool to avoid this in the future. If the database server is not up, please bring it up

Solution: Check the server log and please contact Sun Microsystems with the complete error log

RAR5088 Exception while checking if ResultSet can detect deletes

Description: TBD

RAR5089 Exception while checking if ResultSet can detect updates

Description: TBD

RAR5090 Exception while checking if ResultSet can detect other deletes

Description: TBD

RAR5091 Exception while checking if ResultSet can detect inserts

Description: TBD

RAR5092 Exception while checking if ResultSet can detect other updates

Description: TBD

RAR5093 Exception while checking if ResultSet can detect own updates

Description: TBD

RAR5094 Exception while checking if ResultSet can detect other inserts

Description: TBD

RAR5095 Exception while checking if ResultSet can detect own inserts

Description: TBD

RAR5096 Exception while checking if ResultSet can detect own deletes

Description: TBD

RAR5097 Exception while checking if RA supports concurrency in combo with give RS

Description: TBD

RAR5098 Exception while checking if RA supports a type of RS

Description: TBD

RAR5099 Wrong class name or classpath for Datasource Object

Cause: Classpath is not properly set in the domain.xml

Cause: The application server process does not have read permissions on the directory that holds the classes/jar

Solution: Check if the server classpath specified in the java-config element in the domain.xml has an entry for the jar containing this class

Solution: Check that the directory where the classes/jars reside have read permission for the application server process

RAR5100 Wrong class name or classpath for {0}

Cause: Classpath is not properly set in the domain.xml

Cause: The application server process does not have read permissions on the directory that holds the classes/jar

Solution: Check if the server classpath specified in the java-config element in the domain.xml has an entry for the jar containing this class

Solution: Check that the directory where the classes/jars reside have read permission for the application server process

RAR5101 Exception while instantiating {0}

Cause: The appserver process does not have read access to the directory where this class resides

Cause: The application server process does not have security permissions to access this code

Solution: Check if the application server has read permissions on the directory where this class/jar containing this class resides

Solution: Check if your security manager policy is configured properly

RAR5102 Access error while instantiating {0}

Cause: The application server process do not have permission to access the code base where the class resides

Cause: This is an internal server/JVM error. Please contact Sun Microsystems with the complete error log

Solution: See if the application server process has permission to read the directory where the class/jar resides

Solution: Check if all relevant JVM patches are installed on your machine. Please contact Sun Microsystems with the complete error log

RAR5103 Error setting java bean value : {0}

Cause: The pool parameters in the domain.xml are improper.

Cause: The application server process does not have enough permissions to access the DataSource class

Solution: Check that the pool parameters specified in the domain.xml are correct. For example check that parameters that expect numeric values are numerals

Solution: Check that the application server process has permissions to read the directory where the class resides

RAR5104 Not a valid type for this method : {0}

Cause: The pool parameters in the domain.xml are improper.

Solution: Check that the pool parameters specified in the domain.xml are correct. For example check that parameters that expect numeric values are numerals

RAR5105 Connection Error occurred : {0}

Cause: The connection validation method is incorrect, it should be one of auto-commit, meta-data, table

Cause: The connection is no longer valid. It could have been rendered invalid due to database restart/shutdown

Solution: Check if the connection validation is one of : auto-commit, meta-data or table. If the method is table, check that the table name is correct.

Solution: If the database has been restarted, restart the application server as well. If the database is down, start it up

RAR5106 AutoCommit based validation detected invalid connection. Set resource-adapter log-level to FINE for exception stack trace

Cause: Database server is not up thus rendering the connection invalid

Cause: The JDBC driver is unable to provide the auto-commit status of the connection due to an internal error

Solution: Check if the database server is up and running

Solution: This is an internal error. Please contact Sun Microsystems with the complete error log

RAR5107 Meta-Data based validation detected invalid connection. Set resource-adapter log-level to FINE for exception stack trace

Cause: The connection is invalid due to a database restart

Cause: The connection is invalid due to a database shutdown

Cause: The JDBC driver cannot provide the connection's metadata information due to an internal error

Solution: If the database has been restarted, restart the appserver as well. To avoid this in the future set the connection validation property in the pool

Solution: Check that the database is up and running

RAR5108 Error while getting transaction isolation level :{0}

Cause: The connection is invalid due to database restart/shutdown

Cause: The JDBC driver cannot provide the transaction isolation level due to an internal error

Solution: Please bring up the database if not up already. Check if the connection validation pool property is set, else set this property if the database server will be restarted in the future.

RAR5109 Error while setting transaction isolation level

Cause: Jdbc driver has thrown an SQLException while setting the isolation level.

Solution: Check your connection pool configuration and make sure that the isolation level is correct

Solution: Check whether your driver supports the isolation level you have specified in the connection pool.

RAR5110 Error creating managed Connection with user and password : {0}

Cause: The URL specified is incorrect

Cause: The database server is not up and running

Solution: Check if the URL specified in the getConnection call is correct. Consult the JDBC driver vendor's documentation for the correct URL format.

Solution: Check that the Database server is up and running

RAR5111 Error casting to javax.sql.DataSource

Cause: The class specified in datasourceclassname attribute in the jdbc-connection-pool is not of type javax.sql.DataSource. Please consult your database vendor's documentation to identify the class that implements the javax.sql.DataSource

Solution: Check if the datasourceclass implements the javax.sql.DataSource interface. Try using the javap tool for this purpose

RAR5112 Error casting to javax.sql.XADataSource

Cause: The class specified in datasourceclassname attribute in the jdbc-connection-pool is not of type javax.sql.XADataSource. Please consult your database vendor's documentation to identify the class that implements the javax.sql.XADataSource

Solution: Check if the datasourceclass implements the javax.sql.XADataSource interface. Try using the javap tool for this purpose

RAR5113 Error creating connection from supplied information: Reason - {0}

Cause: The Database server is not up and running

Cause: The connection pool is full and cannot allocate more connections

Cause: The Database server threw some unexpected exception. Please study the exception message for more details

Solution: Check that the Database server is up and running

Solution: Check if the size of your connection pool is sufficiently large for serving all requests

Solution: Check the server log and please contact Sun Microsystems with the full error log

RAR5114 Error allocating connection : [{0}]

Cause: There was an SQLException while acquiring connection from the Database. Please see the detailed exception message for more information

Cause: The Connection pool is full and incapable of serving more requests at this point. Please try later.

Cause: There is an internal server error. Please contact Sun Microsystems with the complete log message

Solution: Check if the database server is correctly configured

Solution: Check if your pool size is sufficient to server all simultaneous connection requests

Solution: Check the server log and contact Sun Microsystems with the complete error message

RAR5115 Error cleaning up handles associated with this ManagedConnection

Description: TBD

RAR5116 The XA connection could not be allocated: {0}

Cause: The Database server is not up and running

Cause: The connection pool is full and cannot allocate more connections

Cause: The Database server threw some unexpected exception. Please study the exception message for more details

Solution: Check that the Database server is up and running

Solution: Check if the size of your connection pool is sufficiently large for serving all requests

Solution: Check the server log and please contact Sun Microsystems with the full error log

RAR5117 Failed to obtain/create connection from connection pool [{0}]. Reason : {1}

Cause: Error while obtaining a connection from the pool.

Solution: Check your connection pool configuration.

RAR6000 Invalid deployment descriptor, no connection-definition found either via ra.xml or annotations for the resource-adapter [{0}]

Cause: Illegal access Error while instantiating one of the resource adapter java beans like ManagedConnectionFactory or ResourceAdapter Javabean classes.

Solution: Check whether the resource adapter have any specific security requirements..

RAR6001 Class Not found : {0}

Cause: Error while locating one of the resource adapter java beans like ManagedConnectionFactory or ResourceAdapter Javabean classes.

Solution: Resource adapter is bundled properly.

Solution: Resource adapter jar file deployment descriptor specifies correct class names.

RAR6002 Could not instantiate class : {0}

Cause: Error while instantiating one of the resource adapter java beans like ManagedConnectionFactory or ResourceAdapter Javabean.

Solution: Resource adapter is bundled properly with all the classes.

RAR6003 Could not access class : {0}

Description: TBD

RAR6004 Privileged action error : {0}

Cause: Illegal access Error while instantiating one of the resource adapter java beans like ManagedConnectionFactory or ResourceAdapter Javabean classes.

Solution: Check whether the resource adapter have any specific security requirements..

RAR6005 Could not create mcf : {0}

Cause: Error while creating ManagedConnectionFactory.

Solution: Resource adapter is bundled properly.

Solution: Check whether connection pool configuration has correct properties for MCF.

Solution: Check resource adapter documentation for configuring correct properties of MCF.

RAR6006 Failed to get ResourcesUtil object : {0}

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR6007 Failed to get Resources list from domain.xml

Cause: Runtime could not obtain list of resources of this resource adapter.

Solution: Check whether the resource adapter configuration is proper.

RAR6008 Failed to remove Active Resource Adapter from registry {0}

Cause: Resource Adapter threw an exception during ResourceAdapter.stop() method.

Solution: Check your resource adapter documentation about ResourceAdapter.stop() method.

RAR6009 Connector Connection Pools/resources still exist. Remove all the connector connection pools and resources before undeploying rar : {0}

Cause: A resource (connection pool, connector resource or admin object) pertaining to the resource adapter is existing.

Solution: Check whether the cascade option of undeploy is false.

RAR6010 Resource Adapter is already started/deployed : {0}

Cause: Resource Adapter is already active in the connector runtime.

Solution: Check whether a previous resource adapter deployment is still available.

RAR6011 Failed to obtain the classloader : {0}

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR6012 Null pointer Exception : {0}

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

Solution: Check whether resource adapter threw a null pointer exception.

RAR6013 Could not publish connector descriptor in JNDI : {0}

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR6014 Could not find the connector descriptor in the rar : {0}

Cause: Incomplete or erroneous resource adapter deployment.

Solution: Check whether the RA deployment is proper and complete.

RAR6015 Obtained Null connection pool object from jndi : {0}

Cause: Connection pool is not created properly.

Solution: Check your resource configuration, whether you are using correct connection pool name.

RAR6016 Active resource adapter not initialized.Rar Name : {0}

Cause: Resource Adapter is not yet initialized in the connector runtime.

Solution: Check whether the deployment of the resource adapter is complete.

RAR6017 Failed to get connection pool object {0} via JNDI lookup : {1}

Cause: Incomplete or erroneous connection pool creation.

Solution: Check whether connection pool is created and is proper.

RAR6018 Failed to add MCF to connector registry : {0}

Description: TBD

RAR6019 Failed to get connector descriptor from registry. RarName : {0}

Cause: Incomplete or erroneous resource adapter deployment.

Solution: Check whether the RA deployment is proper and complete.

RAR6020 Failed to publish connection pool object in JNDI : {0}

Solution: Check whether the connection pool is existing.

RAR6021 Failed to create MCF : {0}

Cause: Error while creating ManagedConnectionFactory.

Solution: Resource adapter is bundled properly.

Solution: Check whether connection pool configuration has correct properties for MCF.

Solution: Check whether the resource adapter require security permissions to load the classes. Some adapters require getClassLoader() permission.

RAR6022 Failed to register MCF in connector registry : {0}

Cause: NullPointerException while creating ManagedConnectionFactory.

Solution: Check whether resource adapter throws null pointer exception.

RAR6023 Null connector descriptor in registry. Module Name is : {0}

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR6024 Failed to bind connector resource in JNDI: {0}

Description: TBD

RAR6025 Failed to read the connector deployment descriptors : {0}

Cause: Could not read the deployment descriptor of the resource adapter.

Solution: Check whether the resource adapter is packaged correctly.

Solution: Check the correctness of deployment descriptor.

RAR6026 Failed to parse the connector deployment descriptors : {0}

Cause: Could not parse the deployment descriptor of the resource adapter.

Solution: Check whether the resource adapter is packaged correctly.

Solution: Check the correctness of deployment descriptor.

RAR6027 Malformed URL to add to path of classloader : {0}

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR6028 This adapter is not 1.5 compliant : {0}

Cause: Resource Adapter doesnt contain resource adapter java bean.

Solution: Make sure that the resource adapter is 1.5 compliant.

RAR6029 Failed to delete admin object from jndi : {0}

Description: TBD

RAR6030 Failed to remove the MCF : {0}

Cause: MCF cleanup in connector runtime failed.

Solution: Check whether connection pool has already been deleted.

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR6031 Failed to unbind connectionPool from jndi : {0}

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR6032 Wrong connector resource entry in the domain.xml. No corresponding connection pool created. Pool Name:

Cause: Connection Pool Name of the Resource configuration is wrong.

Solution: Check whether the connection pool is created.

RAR6033 Wrong connector connection pool entry in the domain.xml. No corresponding resource adapter deployed. Resource Adapter Name :
Description: TBD

RAR6034 Wrong admin object entry in the domain.xml. No corresponding resource adapter deployed. Resource Adapter Name :
Cause: Resource Adapter Name of the admin object configuration is wrong
Solution: Check whether the resource adapter is deployed.

RAR6035 Resource adapter start failed : {0}
Cause: Could not start the resource adapter instance.
Cause: ResourceAdapter threw an exception during ResourceAdapter.start()
Solution: Check whether the domain.xml is accessible.
Solution: Check your resource adapter documentation for possible causes of failure during ResourceAdapter.start()

RAR6036 Resource adapter association failed : {0}
Cause: Resource Adapter throws exception during ManagedConnectionFactory.setResourceAdapter()
Solution: If you are using third party resource adapter, contact resource adapter vendor.
Solution: If you are a resource adapter developer, please check the resource adapter code.

RAR6037 Resource adapter threw an exception while stopping
Cause: Resource Adapter threw an exception during ResourceAdapter.stop() method.
Solution: Check your resource adapter documentation about ResourceAdapter.stop() method.

RAR7000 Check for a new version of MQ installation failed : {0}
Cause: MQ resource adapter in the upgraded MQ is not accessible.
Cause: Could not read the manifest of New MQ resource adapter file.

RAR7001 Upgrading a MQ resource adapter failed : {0}
Cause: Could not unzip the MQ resource adapter archive from upgraded MQ.
Solution: Check whether new MQ resource adapter archive in imq_home/lib is accessible.

RAR7002 MQ Resource adapter upgrade started.
Description: TBD

RAR7003 MQ Resource adapter upgrade completed.

Description: TBD

RAR7004 MDB deployment is still happening. Cannot create end point now.

Cause: Resource Adapter is requesting endpoints to the MDB, before MDB deployment is complete.

Cause: Resource Adapter is requesting endpoints to the MDB, before MDB deployment is complete.

RAR7005 Class loader not found : [{0}]

Cause: Could not access the class loader specific to the MDB.

Cause: Could not access the class loader specific to the MDB.

RAR7006 ActivationSpec validation failed : [{0}]

Cause: ActivationSpec validation failed.

Solution: Check your JMS related configuration in MDB deployment descriptor.

Solution: Check your activation configuration in the MDB deployment descriptor.

RAR7007 The method is not defined : [{0}]

Cause: Resource Adapter is trying to invoke an unknown method during message delivery.

Cause: Resource Adapter is trying to invoke an unknown method during message delivery.

Solution: Check your resource adapter documentation for possible issues during message delivery.

Solution: Check your resource adapter documentation for possible issues during message delivery.

RAR7008 Initialized monitoring registry and listeners

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR7009 Cannot set auto-commit mode for physical connection

Description: TBD

RAR7010 Pool not reachable.

Cause: Could not find the connection pool specified.

Solution: Check whether the connection pool creation was successful.

Solution: Check whether the pool name used is correct.

RAR7011 Unexpected exception determining whether resource is referenced.

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR7012 J2EE Connector 1.5 specification compliant Resource Adapter stop() status

Description: TBD

RAR7013 Resource Adapter stop() call successful

Description: TBD

RAR7014 Error reading Connector Service Element from domain.xml while trying to get shutdown-timeout-in-seconds value. Continuing with the default shutdown timeout value

Cause: Could not read shutdown-timeout-in-seconds from the domain.xml properly.

Solution: Make sure that domain.xml is configured correctly.

RAR7092 Incorrect transaction support level. This RAR has a lower tx support level in its ra.xml transaction-support attribute : {0}

Cause: The ra.xml specifies LocalTransaction as the transaction-support and connection-pool is configured with XATransaction support.

Cause: The ra.xml specifies NoTransaction as the transaction-support and connection-pool is configured with XATransaction or LocalTransaction support.

RAR7093 Error while cleaning up ManagedConnection

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR7094 {0} shutdown successful.

Description: TBD

RAR7095 {0} shutdown unsuccessful. Please refer the server and/or resource adapter logs for more information.

Cause: The resource adapter failed to shutdown within the specified shutdown timeout.

Solution: Check the resource adapter and server logs for any exceptions during resource adapter stop.

Solution: Increase the shutdown-timeout-in-seconds attribute of connector-service if the resource adapter requires a longer time to shutdown.

RAR7096 Exception {2} while trying to set the value {1} on property {0}

Cause: Error while trying to invoke the setter method for the specified property.

Solution: Check if the value and the property name specified are valid.

RAR7097 No setter method present for the property {0} in the class {1}

Cause: Error in finding a mutator method for the specified property

Solution: Check if the property has been specified correctly and an appropriate public setter method [method] is available in the class.

RAR7099 The mcf being used to allocate the connection and the MCF in the pool are not equal.

Cause: The configuration parameters like username/password for the Pool being accessed are changed and the application has not been redeployed

Cause: The MCF equals method is improperly implemented

Solution: Ensure that your resource adapter properly implements the equals method

RAR7100 Physical destination {0} is auto-created by application server.

Description: TBD

RAR7101 Auto-creation of physical destination {0} failed.

Cause: Creation of physical destination in SJS MQ failed. Please look at SJS MQ log for more details.

Cause: You haven't configured jms-service properly. Make sure that default-jms-host of jms-service points to a valid SJS MQ location.

RAR7102 Default-jms-host of jms-service is not configured properly. Using the first jms-host as the default-jms-host.

Cause: You haven't configured default-jms-host in the jms-service.

Cause: The jms-host configured as default-jms-host is not available.

RAR7103 The physical destination {0} is already created.

Description: TBD

RAR7104 Exception while stopping Derby :

Cause: Embedded Derby will always throw this exception when the database is shutdown

RAR7105 Derby Embedded Driver not found :

Cause: Derby embedded driver class is not found in classpath

RAR7106 LazyConnectionEnlistment need to be true for LazyConnectionAssociation to work, for pool: {0}

Cause: Connection Pool properties, LazyConnectionAssociation is true and LazyConnectionEnlistment is false which is not allowed.

RAR7107 Unable to retrieve password from alias

Cause: Alias may not exist. Ensure that alias exists.

RAR7108 Error while loading jms resources during recovery : {0}

Cause: Error getting jms resource configs.

Cause: Lookup failed for the jms resource. Not found in jndi.

Solution: See server log for more information

RAR7109 Error while loading jdbc resources during recovery : {0}

Cause: Error getting jdbc resource configs.

Cause: Lookup failed for the jdbc resource. Not found in jndi.

Solution: See server log for more information

RAR7110 Error while loading connector resources during recovery : {0}

Cause: Error getting connector resource configs.

Cause: Lookup failed for the connector resource. Not found in jndi.

Cause: Error loading the embedded RAR.

Solution: See server log for more information

RAR7111 destroying connection during connectionClosed since this connection is marked for removal

Description: TBD

RAR7112 destroying connection during txCompleted since this connection is marked for removal

Description: TBD

RAR7113 destroying connection since it has reached the maximum usage of : {0}

Description: TBD

RAR7114 Unable to get ClientInfo for connection

Description: TBD

RAR7115 Unable to set ClientInfo for connection

Description:TBD

RAR7116 Unable to unwrap

Description:TBD

RAR7117 Exception during isWrapper

Description:TBD

RAR7118 Unable to load jdbc objects factory

Description:TBD

RAR7119 Unable to get XADataSource

Description:TBD

RAR7120 Unable to get ConnectionPoolDataSource

Description:TBD

RAR7121 Exception while retrieving meta-data of connection

Description:TBD

RAR7122 Unexpected Exception while detecting JDBC version

Description:TBD

RAR7123 Unable to initialize custom pool data-structure. Exception occurred :

Description:TBD

RAR7124 Unable to initialize connection pool wait-queue. Exception occurred :

Description:TBD

RAR7125 Unable to initialize connection pool resource-gateway. Exception occurred :

Description:TBD

RAR7126 Assuming destination type {0} for MDB {2} from administered object {1}

Description:TBD

RAR7127 Unable to create a new resource : {0}

Description:TBD

RAR7132 Unable to enlist the resource in transaction. Returned resource to pool.
Pool name: [{0}]

Description:TBD

RAR7133 Unable to remove resource [{0}] from jndi

Description: TBD

RAR7134 RAR [{0}] is not deployed

Description: TBD

RAR7135 Unable to remove connector-descriptor of resource-adapter [{0}] from jndi

Description: TBD

RAR7137 Unable to create default resource for the resource-adapter

Description: TBD

RAR7138 Unable to undeploy the default pool [{0}]

Description: TBD

RAR7139 Unable to undeploy the default resource [{0}]

Description: TBD

RAR7140 Unable to set log-writer for resource-adapter [{0}] : {1}

Description: TBD

RAR7141 Unable to undeploy the sun-ra pool [{0}]

Description: TBD

RAR7142 Connector classloader unable to add files to classpath

Description: TBD

RAR7143 could not find a resource by name : {0}

Description: TBD

RAR7144 The Connector module {0} has been removed. Please redeploy all applications that are using this connector module's resources.

Description: TBD

RAR7145 Unable to obtain work manager :

Description: TBD

RAR7146 Unable to obtain transaction synchronization registry :

Description: TBD

RAR8000 The method {0} is not present in the class : {1}

Solution: Check the error message to see which class doesn't have the method.

Solution: Check the connection pool configuration property names.

Solution: Check the jms resource configuration property names.

Solution: Check the admin object resource configuration property names.

Solution: Check the resource adapter configuration property names.

RAR8001 Error in executing the method : {0}

Solution: Check the error message to see which class has failed to execute the method.

Solution: Check the connection pool configuration property names and values.

Solution: Check the jms resource configuration property names. and values

Solution: Check the admin object resource configuration property names and values.

Solution: Check the resource adapter configuration property names and values.

RAR8002 Class Not Found : {0}

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR8003 Cannot register pool from monitoring registry: {0}

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR8004 Cannot unregister pool from monitoring registry: {0}

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR8005 Cannot get MCF for pool : {0}

Description: TBD

RAR8007 Error registering MonitoringLevelListener in monitoring registry. The Exception is: {0}

Solution: There is an internal server error. Please contact Sun Microsystems with the complete log message

RAR8010 Exception while cancelling timer : {0}

Description: TBD

RAR8011 Exception during timer purge : {0}

Description: TBD

RAR8012 Exception while scheduling timer : {0}

Cause: Timer could have already been cancelled because of any unchecked exception

RAR8013 Unable to destroy a jdbc resource during transaction recovery

Solution: Check server.log for any resource specific exceptions

RAR8014 Associate with thread need to be false for Pooling disable to work, for pool: {0}

Cause: Connection Pool properties, Associate with thread is true and Pooling is disabled which is not allowed.

RAR8015 Connection validation is set to true and Pooling is disable, for pool: {0}

Cause: Connection validation is useful only in a pooled environment.

RAR8016 Validate At most once period is set when Pooling is disabled, for pool : {0}

Cause: Validate at most once period is useful only in a pooled environment.

RAR8017 Match Connections is set to true when Pooling is disabled, for pool : {0}

Cause: Match Connections is useful only in a pooled environment.

RAR8018 Max Connection usage is set when Pooling is disabled, for pool : {0}

Cause: Max Connection Usage is useful only in a pooled environment.

RAR8019 Idle Timeout is specified when Pooling is disabled, for pool : {0}

Cause: Idle Timeout is useful only in a pooled environment.

RAR8021 Following validation constraints violated for Java Bean of type [{0}] of resource-adapter [{1}] : Message = {2}

Cause: There could be erroneous values (not acceptable according to the constraints) specified in the bean

RAR8022 Failed to get invalid connections from Managed Connection Factory {0}. Exception = {1}; Message = {2}

Cause: Resource Adapter threw a ResourceException.

Solution: Check the resource adapter's documentation.

RAR8023 Flush Connection Pool did not happen as pool - {0} is not initialized

Cause: Flush Connection Pool is a NO-OP as the pool has not been initialized till now.

Solution: Check if pool has been initialized

RAR8024 Get Validation Table Names failed. Reason - {0}

Cause: Database server is not up and admin GUI tries to get connection validation table names

Solution: Make sure database server is up and running.

RAR8025 Flush Connection Pool failed for pool - {0}. Reason - {1}

Cause: Database server is not up and Flush tries to access the pool.

Solution: Make sure database server is up and running.

RAR8026 Unable to initialize custom pool data-structure : {0}

Description: TBD

RAR8027 Unable to initialize custom connection pool wait-queue : {0}

Description: TBD

RAR8028 Unable to initialize custom connection pool resource-gateway : {0}

Description: TBD

RAR8029 Resource [{0}] of type [{1}] is not enabled

Description: TBD

RAR8030 Exception while getting validation table names. Set resource-adapter log-level to FINE for exception stack trace.

Cause: Database access error

Solution: Check is database server is up and running

RAR8031 Exception while pinging tableName : {0}.

Cause: Database access error

Solution: Check is database server is up and running

RAR8032 Failed to delete all connector resources : {0}

Description: TBD

RAR8033 Deletion of pool failed. PoolName not specified.

Cause: PoolName specified could be null

RAR8034 Exception while reconfiguring pool [{0}] : , {1}

Cause: Unable to reconfigure connection pool.

Solution: Review the new modifications to pool properties and attributes

RAR8035 Exception while creating jdbc connection pool [{0}] : , {1}

Cause: unable to create jdbc connection pool

Solution: check whether database is up and running, use ping-connection-pool to \

RAR8036 Exception while redeploying jdbc-connection-pool [{0}], {1}

Cause: unable to redeploy jdbc connection pool

Solution: check whether database is up and running, use ping-connection-pool to \

RAR8037 exception while getting transaction-support for RAR [{0}] , {1}

Cause: Unable to get connector descriptor

Solution: check whether rar is property deployed, ra.xml or annotations equivalent are correct.

RAR8038 unable to load the resource-adapter [{0}], {1}

Cause: Possible exception while bootstrapping RAR or validating RAR

Solution: Check server.log for exact cause of failure which may be due to one of the steps in \

RAR8039 unable to unload the resource-adapter [{0}], {1}

Cause: Possible exception while destroying pools

Cause: Possible exception while deactivating end-points

Cause: Possible exception while stopping RA

Solution: Check server.log for exact cause of failure which may be due failure while destroying pools

Solution: Check server.log for exact cause of failure which may be due failure in de-activating end-points

Solution: Check server.log for exact cause of failure which may be due failure while stopping RA

RAR8040 Unable to delete resource-adapter-config for RAR [{0}]

Cause: Possible exception while deleting resource-adapter-config

Solution: Check server.log for exact cause of failure that happened while deleting resource-adapter-config

RAR8041 Unable to delete resource-adapter-config for RAR [{0}], {1}

Cause: Possible exception while deleting resource-adapter-config

Solution: Check the exception message while deleting the configuration of resource-adapter-config

RAR8042 Unable to delete work-security-map(s) for RAR [{0}]

Cause: Possible exception while deleting work-security-map configuration

Solution: Check server.log for exact cause of failure that happened while deleting work-security-map configuration

RAR8043 Unable to delete work-security-map(s) for RAR [{0}], {1}

Cause: Possible exception while deleting work-security-map configuration

Solution: Check the exception message while deleting the configuration of work-security-map

RAR8044 Unable to admin-object-resource(s) for RAR [{0}]

Cause: Possible exception while deleting admin-object-resource configuration

Solution: Check server.log for exact cause of failure that happened while deleting admin-object-resource configuration

RAR8045 Unable to delete admin-object-resource(s) for RAR [{0}], {1}

Cause: Possible exception while deleting admin-object-resource configuration

Solution: Check the exception message while deleting the configuration of admin-object-resource

RAR8046 Unable to connector-resource(s) for RAR [{0}]

Cause: Possible exception while deleting connector-resource configuration

Solution: Check server.log for exact cause of failure that happened while deleting connector-resource configuration

RAR8047 Unable to delete connector-resource(s) for RAR [{0}], {1}

Cause: Possible exception while deleting connector-resource configuration

Solution: Check the exception message while deleting the configuration of connector-resource

RAR8048 Unable to delete connector-connection-pool(s) for RAR [{0}]

Cause: Possible exception while deleting connector-connection-pool configuration

Solution: Check server.log for exact cause of failure that happened while deleting connector-connection-pool configuration

RAR8049 Unable to delete connector-connection-pool(s) for RAR [{0}], {1}

Cause: Possible exception while deleting connector-connection-pool configuration

Solution: Check the exception message while deleting the configuration of connector-connection-pool

RAR8050 Exception while processing xml files for detecting bean-validation-mapping\

Cause: Possible invalid entries in mapping xml files

Solution: Check whether all the constraints defined in the validation mapping xml files are valid

RAR8051 unable to stop resource adapter [{0}] due to exception {1}, set FINEST log level\

Cause: unable to destroy pools or stop RA or deactivating end-points

Solution: Check server.log for exceptions due to failure in destroying pools or stopping RA or deactivating end-points

RAR8052 RA [{0}] stop timeout occurred, {1}

Cause: unable to stop RA in specified time, timeout occurred

Solution: Check whether ra.destroy() has happened successfully or any exceptions in server.log

RAR8053 RA [{0}] stop failed, {1}

Cause: RA stop failed

Solution: Check server.log for any exceptions

RAR8054 Exception while creating an unpooled [test] connection for pool [{0}], {1}

Cause: Unable to create a new connection

Solution: Check whether connection parameters are correct

RAR8055 Exception while getting connector descriptor for RAR [{0}], {1}

Cause: Possible exception while parsing ra.xml or RA is not deployed

Solution: Check whether RA name is correct, RA is already deployed, server.log for exceptions while parsing ra.xml

RAR8056 unable to load Connection Pool [{0}], {1}

Cause: Exception while loading RAR or resource-adapter-config or connection pool

Solution: Check the exception, server.log for status of RAR, resource-adapter-config, exceptions while loading connection pool

RAR8057 one or more resources of resource-adapter [{0}] exist, use '--cascade=true' to delete them during undeploy

Cause: resources of RAR exist during RAR undeployment

Solution: Check whether resources of RAR exist, delete them before RAR undeployment or use '--cascade=true' \

RAR8058 Unsupported work context [{0}] for RAR [{1}]

Cause: Required work context is not supported by the container

Solution: Check the application server documentation for supported work context types in addition to \

RAR8059 Exception while trying to find properties of class [{0}], set log-level to \

Cause: Possible exception due to access permission or class is not available

Solution: Check whether the class is available to the server, appropriate permissions are provided to load the class

RAR8060 Unable to lookup pool [{0}], {1}

Cause: Possible exception during pool initialization

Solution: Check any exceptions in server.log related to pool creation

RAR8061 failed to load resource-adapter-config or RA [{0}], {1}

Cause: Unable to load RA or resource-adapter-config

Solution: Possible failure to load RA or resource-adapter-config. Check server.log for exceptions

RAR8062 failed to load resources for RA[{0}], {1}

Cause: Unable to load resources

Solution: Possible failure to load resources. Check server.log for exceptions

RAR8065 Attempt to Flush Connection Pool failed because Pooling is disabled for pool : {0}

Cause: Pooling is disabled when flush connection pool is attempted.

Solution: Flush connection pool is useful only in a pooled environment.

RAR8066 Cleanup of a resource from pool [{0}] failed. Exception : {1}

Cause: resource-adapter might have thrown exception due to clean up failure

Solution: check logs specific to resource-adapter in the server.log for more information.

RAR8067 Unable to determine pool type for pool [{0}], using default pool type
Cause: Unable to determine type of pool (Default, Associated-with-thread, etc.)

Solution: Message can be ignored as the processing can continue using the default pool type. \

RAR8068 Using default datasource : {0} for pool : {1}

Cause: Datasource/Driver Class not found

Cause: Resource type does not match with actually loaded class type.

RAR8069 Failed to create resources (defined in glassfish-resources.xml) bundled in module [{0}], of application [{1}] : [{2}]

Cause: Invalid resource definition

Solution: Check whether attributes and properties of resource-definitions conform to the constraints

RAR8070 Failed to create resources (defined in glassfish-resources.xml) bundled in application [{0}] : [{1}]

Cause: Invalid resource definition

Solution: Check whether attributes and properties of resource-definitions conform to the constraints

RAR8071 Exception while transparently redeploying pool [{0}] : {1}

Cause: Unexpected exception while redeploying the pool transparently.

Solution: Check the exception message in server.log and verify pool configuration.

RAR8072 Failed to publish resource {0} in JNDI : {1}

Solution: Check whether the connection pool exists.

Solution: Check whether the connection pool configuration is valid.

Solution: Check whether the resource configuration is valid.

RAR8073 Failed to deploy DataSource Definition [{0}] of application [{1}], exception : {2}

Solution: Check the server.log for exceptions.

RAR8501 Exception during endpoint activation for ra [{0}], activationSpecClass [{1}] : {2}

Cause: An exception occurred while creating an instance of the activation spec JavaBean, validating it, \

Cause: Unable to activate endpoint with provided activation configuration

Solution: Check whether activation configuration is correct

Solution: Check whether activation configuration is violating validation constraints

Solution: Check the server.log for related exceptions

RAR8502 Error creating ActivationSpec : {0} , set FINEST log level to get complete\

Cause: Error while creating activation-spec object

Solution: Check whether activation configuration is correct

RAR8503 Exception while creating ActivationSpec and getting inbound resources for recovery

Cause: Possible exception while creating instance of ActivationSpec

Cause: Possible exception while acquiring inbound resource for recovery

Solution: Check the server.log for ActivationSpec instantiation related exceptions

Solution: Check the server.log for inbound XA Resource acquisition related exceptions

RAR8504 Exception during inbound recovery

Cause: Possible exception while creating instance of ActivationSpec

Cause: Possible exception while acquiring inbound resource for recovery

Cause: Possible exception while bootstrapping RAR

Solution: Check the server.log for ActivationSpec instantiation related exceptions

Solution: Check the server.log for inbound XA Resource acquisition related exceptions

Solution: Check the server.log for RAR bootstrap related exceptions

RAR8505 Application [{0}] does not seem to have started. Skipping Inbound Recovery for the application.

Cause: Application has not started.

Solution: Check the server.log for application start related exceptions.

RAR8701 Exception while extracting RAR [{0}] from archive : {1}

Cause: RAR is not available in the bundle

Solution: check whether the RAR is bundled in the archive

RAR8702 Port Number provided is not a number [{0}] : {1}

Cause: Not a number provided for the property 'port'

Solution: Provide a valid number for the property 'port'

RAR8703 failed to create libraries classloader

Cause: Failed to create libraries classloader due to insufficient security privileges

Solution: Check whether sufficient privilege is provided to create libraries classloader

RAR8704 failed to create connector classloader

Cause: Failed to create connector classloader due to insufficient security privileges

Solution: Check whether sufficient privilege is provided to create connector classloader

RAR8705 Invalid value for property

'dynamic-reconfiguration-wait-timeout-in-seconds' : {0}

Cause: Invalid value for property 'dynamic-reconfiguration-wait-timeout-in-seconds'

Solution: Check whether a valid number (Long) is specified

RAR9000 Custom validation detected invalid connection. Executing the isValid() of {0} class failed. Set resource-adapter log-level to FINE for exception stack trace.

Cause: Database could be inaccessible.

Cause: The Connection object is now invalid due to database restart

Cause: The connection object is now invalid since the database is not up and running

Cause: The JDBC driver cannot execute the statement due to internal error

Solution: Check if the database is accessible.

Solution: If the database has restarted, restart the application server as well or set the connection validation property in the pool to avoid this in the future. If the database server is not up, please bring it up

Solution: Check the server log and please contact Sun Microsystems with the complete error log

RAR9001 Custom validation class name is invalid

Cause: Custom validation class name is invalid as it does not implement interface org.glassfish.jdbc.api.ConnectionValidation

Cause: Custom validation class name could not be loaded

Cause: Custom validation class name is not in the classpath.

RAR9002 Exception while getting Proxied Connection during SQL tracing : {0}

Cause: Connection object could be null

Cause: Initialization provoked by method could have failed.

Cause: Underlying method inaccessible.

RAR9003 Sql tracing : ClassNotFoundException while trying to load class : {0}

Cause: Sql trace listener class name is not in the classpath.

RAR9004 Exception while introspecting SQL trace listeners : {0}

Cause: Constructor of the sql trace listener provided does not have enough access.

Cause: Sql trace listener does not implement org.glassfish.api.jdbc.SQLTraceListener.

Cause: Error while instantiating sql trace listener class provided.

RAR9005 Error while executing Init SQL : {0}

Cause: Database access error

Solution: Check is database server is up and running

RAR9006 Exception while creating timer : {0}

Cause: Bootstrap Context might not be available

RAR9600 unable to deploy resource : {0}. Following exception occurred : {1}

Description: TBD

RAR9601 Unable to undeploy resource : {0}. Following exception occurred : {1}

Cause: Error while creating ManagedConnectionFactory.

Cause: Unable to unbind resource from JNDI.

Solution: Resource adapter is bundled properly.

Solution: Check whether connection pool configuration has correct properties for MCF.

Solution: Check whether the resource adapter require security permissions to load the classes. Some adapters require getClassLoader() permission.

RAR9602 Cannot bind resource [{0}] to naming manager. Following exception occurred {1}

Description: TBD

RAR9603 Unable to bind connector descriptor for resource-adapter [{0}].
Following exception occurred : {1}

Description: TBD

RAR9604 Exception while pinging pool during creation for pool {0}. Following exception occurred {1}

Cause: The specified jdbc connection pool is unusable.

RAR9605 Ping pool during creation failed for pool : {0} . Pool has been created successfully but ping failed.

Cause: There could be some erroneous values specified in jdbc connection pool configuration.

Cause: Caused by unsupported/incorrect values for database connectivity properties.

RAR9606 Error while handling Remove event.

Cause: Unable to find resource deployer for handling the particular resource.

Cause: Undeploying the resource from the server's runtime context failed.

Cause: Redeploying resource into the server's runtime context failed.

Cause: Error while creating ManagedConnectionFactory.

Solution: Resource adapter is bundled properly.

Solution: Check whether connection pool configuration has correct properties for MCF.

Solution: Check whether the resource adapter require security permissions to load the classes. Some adapters require getClassLoader() permission.

RAR9607 Error while handling Change event.

Cause: Unable to find resource deployer for handling the particular resource.

Cause: Undeploying the resource from the server's runtime context failed.

Cause: Redeploying resource into the server's runtime context failed.

Cause: Error while creating ManagedConnectionFactory.

Solution: Resource adapter is bundled properly.

Solution: Check whether connection pool configuration has correct properties for MCF.

Solution: Check whether the resource adapter require security permissions to load the classes. Some adapters require getClassLoader() permission.

SEC

SEC1000 Caught exception.

Cause: A Security Exception has been thrown

Solution: A Security Exception has been thrown

SEC1001 Security Manager is ON.

Description: TBD

SEC1002 Security Manager is OFF.

Description: TBD

SEC1003 Could not override SecurityManager.

Cause: Could not override SecurityManager.

Solution: Could not override SecurityManager.

SEC1010 Entering Security Startup Service

Description: TBD

SEC1011 Security Service(s) Started Successfully

Description: TBD

SEC1050 Certificate authentication requires certificate realm. Check server configuration.

Description: TBD

SEC1100 Disabled realm [{0}] due to errors.

Description: TBD

SEC1101 No realms available. Authentication services disabled.

Description: TBD

SEC1102 Incomplete configuration, login module not specified.

Cause: Error during SolarisRealm initialization. LoginModule not specified

Solution: Please provide the jaas-context in the SolarisRealm configuration

SEC1103 No AuthenticationHandler available for this realm.

Cause: The Realm configured is not an instance of CertificateRealm, Certificate authentication requires certificate realm.

Cause: No AuthenticationHandler available for this realm.

Solution: Please check if the realm class is an instance of CertificateRealm

Solution: Check of the Realm has been configured correctly. This is the base class method that has to be overridden

SEC1104 Error while obtaining private subject credentials.

Cause: Private Credentials of Subject not available

Solution: Please check if the private credentials are available

SEC1105 A PasswordCredential was required but not provided.

Cause: PasswordCredential was required, but not supplied.

Solution: Please check if the password is provided

SEC1106 Error during LDAP search with filter [{0}].

Cause: Error during LDAP search

Solution: Please check the LDAP configuration

SEC1107 Writing file realm data to [{0}].

Description: TBD

SEC1108 Error writing file realm data.

Description: TBD

SEC1109 Error reading file realm data.

Cause: Error reading keyfile of filerealm

Solution: Please check if the keyfile for the filerealm is configured correctly and is in place.

SEC1110 JAAS context requested from certificate realm. Configuration error is likely.

Cause: JAAS context requested from certificate realm.

Solution: Certificate Realm does not have a JAAS context. Please check the configuration

SEC1111 Cannot load group for JDBC realm user [{0}].

Cause: Exception while obtaining groups for the users.

Solution: Please check the JDBC configuration, encoding algorithm and the groups for the user.

SEC1112 Cannot validate user [{0}] for JDBC realm.

Cause: Cannot obtain the password for the user provided.

Solution: Please check the JDBC configuration, encoding algorithm and the password for the user.

SEC1113 Exception in LdapRealm when trying to authenticate user.

Description: TBD

SEC1114 Exception in LdapRealm when trying to locate groups for user.

Cause: There was an exception while installing the Policy Provider.

Cause: Invalid user or improper LDAPRealm configuration

Solution: Please check the if the Policy Provider is correct

Solution: Check the LDAPRealm Configuration in GlassFish.

SEC1115 Realm [{0}] of classtype [{1}] successfully created.

Description: TBD

SEC1116 Unable to locate Realm class [{0}]

Description: TBD

SEC1117 Realm [{0}] successfully updated.

Description: TBD

SEC1118 Error while de-aliasing the aliased password

Cause: There was an exception while de-aliasing the aliased password provided as the ldaprealm property.

Solution: Please check the if the alias and the password configured are correct

SEC1120 Error reading audit configuration.

Description: TBD

SEC1122 Audit enabled.

Description: TBD

SEC1123 Audit: principal=

Description: TBD

SEC1130 Code does not have permission to invoke programmatic login mechanism.

Cause: Code does not have permission to invoke programmatic login mechanism.

Solution: Code does not have permission to invoke programmatic login mechanism.

SEC1131 Code does not have permission to invoke programmatic logout mechanism.

Description: TBD

SEC1132 Bad runtime object type. Programmatic login failed.

Description: TBD

SEC1133 Application does not have permission to call web programmatic login.

Description: TBD

SEC1140 Policy provider configuration overridden by property {0} with value {1}

Cause: Policy Provider Configuration Property is overridden by property javax.security.jacc.auth.policy.provider.

Solution: Policy Provider Configuration Property is overridden by property javax.security.jacc.auth.policy.provider.

SEC1141 Requested jacc-provider [{0}] is not configured in domain.xml.

Cause: JaccProvider class not found for name defined.

Solution: Please check if the name of the Jacc provider is defined correctly.

SEC1142 Error while reading policy-provider in domain.xml.

Cause: Error while reading policy-provider in domain.xml.

Solution: Please check if the policy provider defined is correct.

SEC1143 Loading policy provider {0}.

Description: TBD

SEC1144 Error while installing policy provider:

Description: TBD

SEC1145 No policy provider defined. Will use the default JDK Policy implementation.

Cause: No policy provider defined. Will use the default JDK Policy implementation.

Solution: No policy provider defined. Will use the default JDK Policy implementation.

SEC1146 Policy configuration factory overridden by property {0} with value {1}

Cause: Policy Configuration Factory overridden

Solution: Please check if the system property javax.security.jacc.PolicyConfigurationFactory.provider has not been set.

SEC1147 Policy configuration factory not defined.

Cause: Policy Configuration Factory not defined

Solution: Please check if the Policy Configuration Factory has been defined.

SEC1148 Cannot load policy file for Application.

Description: TBD

SEC1200 Unable to expand provider property value, unexpanded value passed to provider.

Description: TBD

SEC1201 Login failed for user: {0}

Description: TBD

SEC1202 No support to read Principals in SecretKeyCallback.

Description: TBD

SEC1203 GFAuthConfigFactory unable to load Provider: {0}, reason: {1}

Cause: Error while loading ConfigProvider.

Solution: Please check if the configprovider has been configured correctly.

SEC1204 GFAuthConfigFactory loader failure.

Cause: Error while loading the persisted entries of GFAuthConfigFactory

Solution: Error while loading the persisted entries of GFAuthConfigFactory

SEC1205 Cannot write to file {0}. Updated provider list will not be persisted.

Cause: Cannot write to file. Updated provider list will not be persisted.

Solution: Cannot write to file. Updated provider list will not be persisted.

SEC1206 Could not persist updated provider list due to {0}, Will use default providers when reloaded.

Cause: Could not persist updated provider list due to {0}. Will use default providers when reloaded.

Solution: Could not persist updated provider list due to {0}. Will use default providers when reloaded.

SEC1207 Could not read auth configuration file due to {0} Will use default providers.

Cause: Could not read auth configuration file. The default provider will be used.

Solution: Could not read auth configuration file. The default provider will be used.

SEC1208 Configuration file does not exist at {0}. Will use default providers.

Description: TBD

SEC1209 GFAuthConfigProvider is unable to load AuthModule: {0}, reason: {1}

Description: TBD

SEC1210 Creating JMAC Configuration file {0}.

Description: TBD

SEC2000 Container-auth: ServletSystemHandlerDelegate: processRequest.

Description: TBD

SEC2001 Container-auth: ServletSystemHandlerDelegate: processResponse.

Description: TBD

SEC2002 Container-auth: wss: Error validating request

Description: TBD

SEC2003 Container-auth: wss: Error securing response

Description: TBD

SEC2004 Container-auth: wss: Error securing request

Description: TBD

SEC2005 Container-auth: wss: Error validating response

Description: TBD

SEC2006 Container-auth: wss: Not a SOAP message context.

Description: TBD

SEC5019 ERROR: Unknown credential provided. Class: [{0}]

Description: TBD

SEC5022 Error reading anonymous role.

Description: TBD

SEC5023 Exception retrieving group membership for [{0}]

Description: TBD

SEC5024 Exception getting security credential

Description: TBD

SEC5026 Exception generating security context

Description: TBD

SEC5028 Exception loading keystore

Cause: There was an exception while loading keystore

Solution: Please check the if the file path and password are correct

SEC5029 Exception storing keystore

Cause: There was an exception while storing the keystore

Solution: Please check the if the file path and password are correct

SEC5030 Exception loading security provider

Cause: There was an exception while loading the security provider

Solution: Please check the if the Provider classname is correct.

SEC5031 Exception getting security provider name

Cause: There was an exception while obtaining the name of the Provider.

Solution: Please check the if the Provider name is correct.

SEC5032 Security main exception

Description: TBD

SEC5034 Exception creating security realm

Description: TBD

SEC5035 Exception in security realm manager

Description: TBD

SEC5036 Exception in getting security context

Cause: There was an exception obtaining the default security context.

Solution: There was an exception obtaining the default security context.

SEC5037 Exception configuring security principal

Description: TBD

SEC5038 Default user login exception.

Cause: There was an exception while authenticating the default caller principal

Solution: There was an exception while authenticating the default caller principal

SEC5039 Exception entering name and password for security

Cause: An exception occurred while processing username and password for security

Solution: An exception occurred while processing username and password for security

SEC5040 Exception initing keystore

Description: TBD

SEC5041 Exception initializing security realm

Description: TBD

SEC5042 Exception instantiating security realm

Description: TBD

SEC5043 Exception in security accesscontroller action

Cause: Exception while extracting username and realm from the subject post login

Solution: Exception while extracting username and realm from the subject post login

SEC5044 Security login exception

Description: TBD

SEC5046 Audit: Authentication refused for [{0}].

Description: TBD

SEC5047 Audit: Authentication granted for [{0}].

Description: TBD

SEC5048 doAsPrivileged AuthPermission required to set SecurityContext.

Cause: AuthPermission required to set SecurityContext,

Solution: AuthPermission required to set SecurityContext,

SEC5049 Unexpected exception while attempting to set SecurityContext.

Cause: There was an unexpected exception while setting the security context

Solution: There was an unexpected exception while setting the security context

SEC5050 Current Context unchanged.

Description: TBD

SEC5051 Cannot setRemoteHost.

Cause: null Subject used in SecurityContext construction.

Solution: null Subject used in SecurityContext construction.

SEC5052 null Subject used in SecurityContext construction.

Description: TBD

SEC5053 BSM audit failure on {0}: {1}.

Description: TBD

SEC5054 Certificate has expired: {0}

Cause: Certificate expired

Solution: Please check the validity date of the certificate

SEC5055 Role mapping conflicts found in application {0}. Some roles may not be mapped.

Cause: Principal-Group-Role Mapping conflicts in the application

Solution: Please check if the roles have been mapped to the same principals/groups consistently in all the descriptors.

SEC5100 A negative access control entry presented for role {0} will be ignored.

Description: TBD

SEC5101 Fail to instantiate the SecurityLifecycle.

Description: TBD

SEC8001 Exception in initializing SunPKCS11.

Description: TBD

SEC8002 Alias {0} in slot {1} has been renamed to {2}.

Description: TBD

SEC8003 Can't load cert: {0}.

Description: TBD

SEC9001 ACC: Error in initializing JSR 196 Default Factory

Cause: GFAuthConfigFactory not in classpath or not enough permissions to call Security.setProperty

Solution: Please check if appclient classpath has GFAuthConfigFactory class and ensure required permissions are given.

SEC9002 ACC: Security Manager is ON

Description: TBD

SEC9003 ACC: Security Manager is OFF

Description: TBD

SEC9050 Programmatic login failed

Description: TBD

SEC9051 Programmatic logout failed

Description: TBD

SECJB

SECEJB9000 Exception while running pre-invoke

Cause: An error occurred during the call to preInvoke of the EjbSecurityComponentInvocationHandler

Solution: Check the exception stack trace to see if the exception originated from EjbSecurityManager

SECEJB9001 Exception while running postInvoke

Cause: An error occurred during the call to postInvoke of the EjbSecurityComponentInvocationHandler

Solution: Check the exception stack trace to see if the exception originated from EjbSecurityManager

SECEJB9002 Exception while getting the CodeSource

Cause: An error occurred during the call to get the Codesource in the EjbSecurityManager

Solution: Check the exception stack trace to see if the URL provided for the codesource has valid syntax or is malformed

SECEJB9003 Exception while destroying EjbSecurityManager

Cause: An error occurred during the call to destroy the EjbSecurityManager

Solution: Check if the policy has been already removed or if the application was rightly registered

SECEJB9004 EjbSecurityManager - Exception while getting the CodeSource

Cause: An error occurred during the call to obtain the codesource through the URI provided

Solution: Check the exception stack trace to see if the URL provided for the codesource is correct

SECEJB9005 EjbSecurityManager - Exception while getting the PolicyFactory

Cause: An error occurred during the call to obtain the PolicyConfigurationFactory

Solution: Check the stack trace to see if the exception is ClassNotFoundException or a general PolicyContextException

SECEJB9006 JACC: Unexpected security exception on access decision

Cause: An Authorization Exception was thrown for accessing the specific method on the EJB by the user

Solution: Check the EJB policy to see if access is allowed for the user role specified

SECEJB9007 JACC: Unexpected exception manipulating policy context

Cause: An Exception was thrown while resetting the policycontext

Solution: Check the EJB policy to see if the policy contexts of the application are correct

SECEJB9008 JACC: Unexpected security exception isCallerInRole

Cause: An Exception was thrown while checking if the caller of the EJB belongs to the role specified

Solution: Check the EJB policy to see if the caller has been configured for the correct role

SECEJB9009 JACC: Unexpected PrivilegedActionException manipulating policy context

Cause: A PrivilegedActionException Exception was thrown while resetting the policy context

Solution: Check to see if the caller has enough permissions for this operation

SECEJB9010 JACC: EJB Method Descriptor not defined for Ejb {0}, MethodName {1}, MethodParameters {2}

Cause: The Method Interface specified is either empty or null

Solution: Check to see if the EJB name and the method interfaces are correct

SGMT

SGMT0005 Self Management Service on Shutdown

Description: TBD

SGMT0006 Self Management Service on Termination

Description: TBD

SGMT0008 Self Management Service not configured

Description: TBD

SGMT0013 Error in registering action : {1} in Rule : {0}. Possible error with action, try redeploying the application

Description: TBD

SGMT0017 Error creating and configuring the rule : {0} due to IllegalArgumentException specified for its event type : {1}. Create the rule with correct arguments for the configured event.

Description: TBD

SGMT0018 Configured action name={1} for Rule name={0} is disabled. The action would not be executed till it is enabled.

Description: TBD

SGMT0019 Could not delete rule. No configured rule exists with name={0}

Description: TBD

SGMT0020 Error encountered while trying to delete rule={0}. Reason - {1}

Description: TBD

SGMT0021 Successfully deleted rule={0}, with description= {1}

Description: TBD

SGMT0200 Error in sending the alert message for event : {0} due to : {1}

Description: TBD

SGMT0201 Error in sending the alert for event : {0} as no configured mail recipients

Description: TBD

SGMT0203 Error in sending the alert for event : {0} due to configured mail resource {1} not found

Description: TBD

SGMT0210 {0}- Cannot check for potential non-responsive requests/threads. This is because internal statistics are not available due HttpService monitoring being switched OFF. Set it to non-OFF value for successful checks to occur.

Description: TBD

SGMT0211 {0}- No http requests received

Description: TBD

SGMT0212 {0}- Could not send mail alert due to invalid ref, {1} ,configured. Please ensure that the configured mail alert application is available.

Description: TBD

SGMT0213 {0}- Error encountered while trying to send mail alert. Would proceed to log the detail.

Description: TBD

SGMT0214 {0}- Potential request/threads found to be non-responsive={1}.

Description:TBD

SGMT0215 {0}- Error encountered while trying to stop/interrupt the potential unresponsive request/thread/

Description:TBD

SGMT0216 {0}- Error encountered while trying to retrieve statistics to determine potential non-responsive requests/threads.

Description:TBD

SGMT0217 {0}- Found non-responsive http request/thread on listener port:{1}, for URI={2}

Description:TBD

SGMT0218 {0}- Stopped non-responsive http request/thread on listener port={1}, for URI={2}

Description:TBD

SGMT0219 {0}- Cannot send mail alert on the check for non-responsive requests/threads, as application ref for mail alert is not provided.

Description:TBD

SGMT0220 {0}- HttpService monitoring switched ON. Statistics for check for non-responsive http request/threads would now be enabled.

Description:TBD

SGMT0221 {0}- HttpService monitoring switched OFF. It would not be possible to check for non-responsive http requests/threads, due to non-availability of internal statistics.

Description:TBD

SGMT0222 {0}- Due ThresholdWaitInMillis:{1} being less than load balancer default timeout value of:{2}; resetting it to load balancer default.

Description:TBD

SGMT0223 {0}- Due ThresholdWaitInMillis:{1} being less than load balancer response timeout:{2}, resetting it to load balancer response timeout.

Description:TBD

SGMT0224 Instance hang check - Listener: {1} of server :{0} is not responding to the for instance hang check request. The request timeout occurred for the timeout value of={2}.

Description:TBD

SGMT0225 Instance hang check - Listener: {1} of server: {0} has not responded to the ping request for instance hang check. However it still has scope to receive further http requests, as it has not max'd out on threads. No. of busy http threads={2}.

Description: TBD

SGMT0226 Instance hang check - Listener: {1} of server: {0} has not responded to instance hang check request. The listener has max'd out on threads. No. of busy http threads={2}.

Description: TBD

SGMT0227 Instance hang check - Listener: {1} of server: {0} is healthy for the instance hang check carried out.

Description: TBD

SGMT0228 Instance hang check - Server {0} is healthy.

Description: TBD

SGMT0229 Instance hang check - Server: {0} is not responding; is unhealthy.

Description: TBD

SGMT0230 Instance hang check - Invalid name : {0} specified in the check list of the rule. Ignoring this value.

Description: TBD

SGMT0231 Instance hang check - The threshold timeout= {1} specified for cluster: {0} is less than the load balancer health checker configured for it. Raising this timeout to its load balancer health checker value of {2}.

Description: TBD

SGMT0232 Instance hang check - The threshold timeout= {1} specified for server: {0} is less than the load balancer health checker configured for it. Raising this timeout to its load balancer health checker value of {2}.

Description: TBD

SGMT0233 Instance hang check - There are no instances specified in the check list to check for instance hang.

Description: TBD

SGMT0234 Started instance hang check for server: {0} in cluster: {1}

Description: TBD

SGMT0235 Started instance hang check for server: {0}

Description: TBD

SGMT0236 Instance hang check - Server: {0} in Cluster {1} is healthy.

Description:TBD

SGMT0237 Instance hang check - Server: {0} in Cluster {1} is unhealthy.

Description:TBD

SGMT0239 Instance hang check - Trying to restart non-responsive instance: {0}

Description:TBD

SGMT0240 Instance hang check - Trying to stop non-responsive instance: {0} in cluster: {1}

Description:TBD

SGMT0241 Instance hang check - Successfully stopped instance: {0}

Description:TBD

SGMT0242 Instance hang check - Successfully stopped instance: {0} in cluster: {1}

Description:TBD

SGMT0243 Instance hang check - Error in stopping non-responsive instance: {0}. Cannot restart this instance.

Description:TBD

SGMT0244 Instance hang check - Error in stopping non-responsive instance: {0} in cluster: {1}. Cannot restart this instance.

Description:TBD

SGMT0245 Instance hang check - Trying to restart instance: {0}

Description:TBD

SGMT0246 Instance hang check - Trying to restart instance: {0} in cluster: {1}

Description:TBD

SGMT0247 Instance hang check - Successfully restarted instance: {0}

Description:TBD

SGMT0248 Instance hang check - Successfully restarted instance: {0} in cluster: {1}

Description:TBD

SGMT0249 Instance hang check - Error in trying to restart non-responsive instance: {0}

Description:TBD

SGMT0259 Instance hang check - Error in trying to restart non-responsive instance: {0} in cluster: {1}

Description: TBD

SGMT0260 Instance hang check cycle completed.

Description: TBD

SGMT0261 This action can only be deployed on a DAS instance.

Description: TBD

SGMT0262 Could not obtain MBeanServerConnection.

Description: TBD

SGMT0301 Reconfig notification received for creation

Description: TBD

SGMT0302 Reconfig notification received for update

Description: TBD

SGMT0303 Reconfig notification received for deletion

WEB

WEB0100 Loading web module [{0}] in virtual server [{1}] at [{2}]

Description: TBD

WEB0103 This web container has not yet been started

Description: TBD

WEB0108 extra-class-path component [{0}] is not a valid pathname

Description: TBD

WEB0109 Property [{0}] is not yet supported

Description: TBD

WEB0110 Ignoring invalid property [{0}] = [{1}]

Description: TBD

WEB0111 Enabling file-based persistence for web module [{0}]'s sessions

Description: TBD

WEB0113 Virtual server [{0}] already has a web module [{1}] loaded at [{2}]; therefore web module [{3}] cannot be loaded at this context path on this virtual server.

Description: TBD

WEB0116 Using alternate deployment descriptor [{0}] for web module [{1}]

Description: TBD

WEB0121 Enabled session ID reuse for web module [{0}] deployed on virtual server [{1}]

Cause: Use caution before enabling this feature, because it puts the burden of creating unpredictable session ids on the client, which may not be trusted

Solution: Check your sun-web.xml for a property with name reuseSessionID, and set it to false if you do not want to enable this feature

WEB0122 Unable to start web container

Description: TBD

WEB0123 Unable to stop web container

Description: TBD

WEB0124 Property element in sun-web.xml has null 'name' or 'value'

Description: TBD

WEB0125 class-loader attribute dynamic-reload-interval in sun-web.xml not supported

Description: TBD

WEB0126 Failed to parse sun-web.xml singleThreadedServletPoolSize property value ({0}) of web module deployed at {1}, using default ({2})

Cause: The value of the singleThreadedServletPoolSize property in the sun-web.xml deployment descriptor cannot be parsed as an Integer

Solution: Make sure to specify an Integer as the value of the singleThreadedServletPoolSize property

WEB0127 Web module [{0}] is not loaded in virtual server [{1}]

Cause: The virtual server specified does not exist.

Solution: Make sure the virtual server name is correct and create one if necessary.

Description: TBD

WEB0131 Enabling no persistence for web module [{0}]'s sessions: persistence-type = [{1}]

Description: TBD

WEB0136 Virtual server [{0}] has a property with missing name or value

Description: TBD

WEB0137 Invalid redirect property value [{0}] for virtual server [{1}]: More than one [{2}] component

Cause: The value of the redirect property of the virtual server specifies more than one component of the same name

Solution: Check the redirect property of the virtual server and make sure it does not specify more than one component of the same name

WEB0138 Invalid redirect property value [{0}] for virtual server [{1}]: Missing from component

Cause: The redirect property value of the virtual server is missing a from component

Solution: Make sure to specify a from component for the redirect property of the virtual server

WEB0139 Invalid redirect property value [{0}] for virtual server [{1}]: Missing url or url-prefix component

Cause: The redirect property value of the virtual server is missing an url or url-prefix component

Solution: Make sure that the value of the redirect property of the virtual server specifies an url or url-prefix component, but not both

WEB0140 Invalid redirect property value [{0}] for virtual server [{1}]: Both url and url-prefix specified

Cause: The value of the redirect property of the virtual server specifies both an url and an url-prefix component

Solution: Make sure that the value of the redirect property of the virtual server specifies an url or url-prefix component, but not both

WEB0141 Invalid redirect property value [{0}] for virtual server [{1}]: escape must be equal to yes or no

Cause: The value of the escape component is invalid

Solution: Make sure to specify either yes or no (case-insensitive) as the value of the escape component for the redirect property of the virtual server

WEB0142 Invalid send-error property value [{0}] for virtual server [{1}]: More than one [{2}] component

Cause: The value of the send-error property of the virtual server specifies more than component of the same name

Solution: Check the send-error property of the virtual server and make sure it does not specify more than one component of the same name

WEB0143 Invalid send-error property value [{0}] for virtual server [{1}]: Missing path component

Cause: The value of the send-error property of the virtual server is missing a path component

Solution: Make sure to specify a path component for the send-error property of the virtual server

WEB0144 Invalid redirect URL [{0}]: Impossible to URL encode

Description: TBD

WEB0145 Unable to deploy web module [{0}] at root context of virtual server [{1}], because this virtual server declares a default-web-module

Cause: There can be at most one web module occupying a virtual server's root context at any time

Solution: You must first undeclare a virtual server's default-web-module in order to be able to deploy to the virtual server's root context

WEB0146 Web module [{0}] has a property with missing name or value

Description: TBD

WEB0147 Unable to add listener of type [{0}] to virtual server [{1}]

Cause: Declared listener is neither of type org.apache.catalina.ContainerListener nor org.apache.catalina.LifecycleListener

Solution: Make sure the declared listener implements org.apache.catalina.ContainerListener or org.apache.catalina.LifecycleListener

WEB0148 Unable to load extension class [{0}] from web module [{1}]

Description: TBD

WEB0149 Unable to set default-web-module [{0}] for virtual server [{1}]

Description: TBD

WEB0151 Webservice based application, requires Metro to be installed. Run updatecenter client located in bin folder to install Metro

Description: TBD

WEB0152 Unable to load web module [{0}] at context root [{1}], because it is not correctly encoded

Cause: The specified context root contains one or more '%' characters and therefore is assumed to have been encoded using some multibyte encoding scheme, but it fails to be decoded using UTF-8 which is assumed as the default multibyte encoding

Solution: When deploying to a multibyte context root, make sure it is encoded according to UTF-8

WEB0153 Unable to load configuration of web module [{0}]

Description: TBD

WEB0154 Failed to precompile JSP pages of web module [{0}]

Description: TBD

WEB0155 Unable to destroy web module deployed at context root [{0}] on virtual server [{1}] during undeployment

Description: TBD

WEB0156 Exception during invocation of PreDestroy-annotated method on JSP tag handler [{0}]

Description: TBD

WEB0157 Unable to load session uuid generator [{0}]

Description: TBD

WEB0158 Object of type classname [{0}] not an instance of Valve or GlassFishValve

Description: TBD

WEB0159 Exception setting the schemas/dtds location

Description: TBD

WEB0160 Unable to determine location of server.log file

Description: TBD

WEB0161 Error loading web module [{0}]

Description: TBD

WEB0162 [WebContainer] Undeployment failed for context [{0}]

Description: TBD

WEB0163 Exception processing HttpService configuration change

Description: TBD

WEB0164 Unable to set context root [{0}]

Description: TBD

WEB0165 [WebContainer] Unable to disable web module at context root [{0}]

Description: TBD

WEB0166 Error during destruction of virtual server [{0}]

Description: TBD

WEB0167 Virtual server [{0}] cannot be updated, because it does not exist

Description: TBD

WEB0168 Ignoring [{0}] during Tag Library Descriptor (TLD) processing

Description: TBD

WEB0169 Created HTTP listener [{0}] on host/port [{1}:{2}]

Description: TBD

WEB0170 Apache mod_jk/jk2 attached to virtual-server [{0}] listening on port [{1}]

Description: TBD

WEB0171 Created virtual server [{0}]

Description: TBD

WEB0172 Virtual server [{0}] loaded default web module [{1}]

Description: TBD

WEB0190 Error starting virtual server [{0}]

Description: TBD

WEB0191 Unable to instantiate ContainerListener of type [{0}]

Description: TBD

WEB0201 The web module [{0}] has been designated as the default-web-module for virtual server [{1}]

Description: TBD

WEB0203 Error looking up the configuration information of the default-web-module [{0}] for virtual server [{1}]

Cause: The web module that has been designated as the default-web-module may not exist

Solution: Make sure that the web module that has been designated as the default-web-module for the virtual server has been deployed

WEB0204 The default-web-module [{0}] is either disabled or does not specify virtual server [{1}]

Description: TBD

WEB0206 Virtual server [{0}] has invalid authentication realm [{1}]

Description: TBD

WEB0207 Invalid sso-cookie-secure configuration [{0}] for virtual server [{1}]

Cause: The sso-cookie-secure attribute of the virtual server has an unsupported value

Solution: Make sure the value of the sso-cookie-secure attribute of the virtual server is set to 'true', 'false', or 'dynamic'

WEB0208 Virtual server {0} has been disabled

Description: TBD

WEB0209 Virtual server {0} has been turned off

Description:TBD

WEB0210 Realm [{0}] is not an instance of [{1}], and will be ignored

Description:TBD

WEB0301 Creating Listener @port {0} {1}

Description:TBD

WEB0304 Unsupported http-service property ({0}) is being ignored

Description:TBD

WEB0305 Unable to parse proxy port component ({0}) of server-name attribute of network-listener {1}

Cause: HTTP listener's proxy port is not a numeric string

Solution: Check to see if the value of the HTTP listener's server-name attribute contains a colon, and if so, make sure the name component following the colon is a numeric string

WEB0306 Unable to parse redirect-port ({0}) attribute of network-listener {1}, using default: {2}

Description:TBD

WEB0307 All SSL protocol variants disabled for network-listener {0}, using SSL implementation specific defaults

Description:TBD

WEB0308 All SSL cipher suites disabled for network-listener(s) {0}. Using SSL implementation specific defaults

Description:TBD

WEB0309 Unrecognized cipher: {0}

Description:TBD

WEB0310 Unable to parse acceptor-threads attribute ({0}) of network-listener {1}, using default: {2}

Description:TBD

WEB0313 Unable to parse port number {0} of network-listener {1}

Description:TBD

WEB0314 virtual server {0} has an invalid docroot {1}

Description:TBD

WEB0315 The host name {0} is shared by virtual servers {1} and {2}, which are both associated with the same HTTP listener ({3})

Cause: Two or more virtual servers associated with the same HTTP listener share the same host name

Solution: Make sure that the sets of host names of all virtual servers associated with the same HTTP listener are disjunct

WEB0322 Unable to load ProxyHandler implementation class {0}

Description: TBD

WEB0323 {0} not an instance of com.sun.appserv.ProxyHandler

Description: TBD

WEB0324 Missing end delimiter in access log pattern: {0}

Cause: The given access log pattern is missing a trailing '%'

Solution: Make sure that any access log pattern element is bounded by a leading and trailing '%'

WEB0325 Invalid component: {0} in access log pattern: {1}

Description: TBD

WEB0333 Unable to rename access log file {0} to {1}

Description: TBD

WEB0340 Unable to write access log file {0}

Description: TBD

WEB0342 Invalid accessLogWriterInterval value [{0}]

Description: TBD

WEB0343 JK properties file {0} does not exist

Description: TBD

WEB0344 Unable to configure JK properties for connector listening to {0}

Description: TBD

WEB0345 Access log valve cannot be stopped because it has not been started

Description: TBD

WEB0346 Unable to reconfigure access log valve

Description: TBD

WEB0347 Must not disable network-listener [{0}], because it is associated with admin virtual server [{1}]

Description: TBD

WEB0348 Illegal access log pattern [{0}], is not a valid nickname and does not contain any ''%''

Description: TBD

WEB0350 Access logger has already been started

Description: TBD

WEB0351 Access logger has not yet been started

Description: TBD

WEB0352 Invalid max-pending-count attribute value [{0}], using default [{1}]

Description: TBD

WEB0353 Invalid accessLogBufferSize value [{0}]

Description: TBD

WEB0354 Unable to parse max-history-files access log configuration [{0}]

Cause: max-history-files not specified as an integer

Solution: Make sure the value of the com.sun.enterprise.server.logging.max_history_files system property or max-history-files attribute of access-log is given as an integer

WEB0355 network-listener [{0}] referenced by virtual server [{1}] does not exist

Description: TBD

WEB0356 Web module [{0}] not loaded to any virtual servers

Cause: No virtual servers specified on which to load the web module

WEB0357 Unable to remove access log file {0}

Description: TBD

WEB0358 Invalid attribute [{0}] in thread-pool configuration

Cause: The specified attribute value cannot be parsed as an Integer

Solution: Make sure to specify an Integer as the attribute value

WEB0359 The class [{0}] is annotated with an invalid scope

Cause: The offending class is annotated with javax.enterprise.context.ApplicationScoped, javax.enterprise.context.ConversationScoped, javax.enterprise.context.RequestScoped, or javax.enterprise.context.SessionScoped, which is a violation of the Servlet specification

Solution: Make sure that the offending class does not have any scope annotation or is annotated with the `javax.enterprise.context.Dependent` scope, which is the only valid scope for Servlets, Filters, and Listeners

WEB0400 Unable to set request encoding [{0}] determined from sun-web.xml deployment descriptor of web application [{1}]

Cause: The sun-web.xml deployment descriptor specifies an invalid request encoding

Solution: Check the form-hint-field, default-charset, and locale-charset-map configuration in the sun-web.xml deployment descriptor and make sure it specifies a valid request encoding

WEB0402 POST data too large

Description: TBD

WEB0500 default-locale attribute of locale-charset-info element is being ignored

Cause: This attribute has been deprecated

Solution: Use default-charset attribute of parameter-encoding element instead

WEB0502 Null property name or value for alternate docbase

Description: TBD

WEB0503 Alternate docbase property value {0} is missing a URL pattern or docbase

Description: TBD

WEB0504 URL pattern {0} for alternate docbase is invalid

Description: TBD

WEB0505 URL pattern {0} for alternate docbase contains CR or LF or both

Description: TBD

WEB0506 No ServerContext in WebModule [{0}]

Description: TBD

WEB0507 No method [{0}(`java.lang.String`)] defined on valve [{1}] of web module [{2}]

Description: TBD

WEB0508 Exception during execution of method [{0}] on valve [{1}] of web module [{2}]

Description: TBD

WEB0509 Unable to add valve to web module [{0}]

Cause: Valve declaration is missing a name attribute

Solution: You must specify a name attribute with your valve declaration

WEB0510 Unable to add valve with name [{0}] to web module [{1}]

Cause: Valve declaration is missing a class-name attribute

Solution: You must specify a class-name attribute with your valve declaration

WEB0511 Valve [{0}] of web module [{1}] has a property without any name

Description: TBD

WEB0512 Object of type {0} is not a valve

Cause: Declared custom valve does not implement any of the required valve interfaces

Solution: Make sure the declared custom valve implements `org.apache.catalina.Valve` or `org.glassfish.web.valve.GlassFishValve`

WEB0513 Unable to add listener of type [{0}] to web module [{1}]

Cause: Declared listener does not implement any of the required interfaces

Solution: Make sure the declared listener implements `org.apache.catalina.ContainerListener`, `org.apache.catalina.LifecycleListener`, or `org.apache.catalina.InstanceListener`

WEB0514 Unable to create custom `ObjectInputStream`

Description: TBD

WEB0515 Unable to create custom `ObjectOutputStream`

Description: TBD

WEB0516 Unable to save sessions for web module [{0}] during redeployment

Cause: An HTTP session that was supposed to survive the redeployment of the web module failed to be serialized. This kind of error can occur only if the `keepSessions` property of the `redeploy` command has been set to `true`

Solution: Make sure that all HTTP sessions of the web module are serializable, or disable the feature that preserves HTTP sessions across redeployments

WEB0517 Unable to restore sessions for web module [{0}] from previous deployment

Cause: An HTTP session that was supposed to survive the redeployment of the web module failed to be restored (deserialized). This can happen if an application class that was used as a session attribute has changed incompatibly

Solution: Make sure that any application classes that are being used as session attributes change only in a compatible way during redeployments

WEB0605 No Realm with name [{0}] configured to authenticate against

Description: TBD

WEB0607 Cannot configure an authenticator for method {0}

Description: TBD

WEB0608 Cannot instantiate an authenticator of class {0}

Description: TBD

WEB0609 Configured an authenticator for method {0}

Description: TBD

WEB0610 [{0}] failed to unbind namespace

Description: TBD

WEB0670 Unknown error, loadWebModule returned null, file a bug

Description: TBD

WEB0671 Loading application [{0}] at [{1}]

Description: TBD

WEB0700 Error initializing socket factory

Description: TBD

WEB0701 Error initializing endpoint

Description: TBD

WEB0702 Error starting endpoint

Description: TBD

WEB0703 Starting Sun-Java-System/Application-Server HTTP/1.1 on {0}

Description: TBD

WEB0704 Stopping Sun-Java-System/Application-Server HTTP/1.1 on {0}

Description: TBD

WEB0705 Error registering MBean for {0}

Description: TBD

WEB0706 Exception when initializing monitoring for network-listener [{0}]

Description: TBD

WEB0707 Exception while invoking mebean server operation [{0}]

Description: TBD

WEB0800 Save succeeded for web module [{0}] in virtual server [{1}] at [{2}]

Description:TBD

WEB5000 Exception during invocation of InjectionManager.destroyManagedObject on {0} of web module {1}

Description:TBD

WEB5001 Exception during processing of event of type {0} for web module {1}

Description:TBD

WEB6000 Lifecycle event data object [{0}] is not a WebModule

Description:TBD

WEB6001 Error creating cache manager and configuring the servlet caching subsystem

Description:TBD

WEB7000 Security role name {0} used in an <auth-constraint> without being defined in a <security-role>

Description:TBD

WEB7001 Security role name {0} used in a <role-link> without being defined in a <security-role>

Description:TBD

WEB7002 Security role name {0} used in a <run-as> without being defined in a <security-role>

Description:TBD

WEB8001 Exception in creating cache

Description:TBD

WEB8002 Exception initializing cache-helper [{0}]; please check your helper class implementation.

Description:TBD

WEB8020 Incorrect scope value [{0}] for web application cache field name [{1}]

Description:TBD

WEB8021 ''greater'' expression requires a numeric value; please check your value {0}

Description:TBD

WEB8022 ''lesser'' expression requires a numeric value; please check your value [{0}]

Description: TBD

WEB8023 illegal value [{0}] expr [{1}]

Description: TBD

WEB8024 illegal in-range constraint; specify a valid range (xxx-yyy) value [{0}]

Description: TBD

WEB8025 missing separator in the ''in-range'' constraint; [{0}]

Description: TBD

WEB8026 ''in-range'' constraint requires numeric values for the lower bound [{0}]

Description: TBD

WEB8027 ''in-range'' constraint requires a value for the upper bound of the range; check your value [{0}]

Description: TBD

WEB8028 ''in-range'' constraint requires numeric values for the upper bound [{0}]

Description: TBD

WEB8050 Illegal CacheKeyGenerator

Description: TBD

WEB8080 Null run-as principal or servlet, ignoring run-as element.

Description: TBD

WEB9001 cache not found in the specified scope

Description: TBD

WEB9002 Illegal value ({0}) for scope attribute of cache tag

Cause: Only 'request', 'session', and 'application' scopes are supported for caching purposes

Solution: If the scope attribute of the cache tag is specified, make sure its value is set to 'request', 'session', or 'application'

WEB9003 Unable to determine TLD resources for [{0}] tag library, because class loader [{1}] for [{2}] is not an instance of java.net.URLClassLoader

Description: TBD

WEB9031 WebappClassLoader unable to load resource [{0}], because it has not yet been started, or was already stopped

Cause: This problem usually indicates that the classloader of a web application was cached, and an attempt is being made to have it load resources even though the web application with which the classloader used to be associated has already been undeployed

Solution: Make sure that the classloader associated with your web application is not cached and used beyond the lifetime of your web application

WEB9032 Class {0} has unsupported major or minor version numbers, which are greater than those found in the Java Runtime Environment version {1}

Cause: This error indicates that a web application contains class files that were compiled with a version of the Java programming language compiler that is greater than the version of the Java Runtime Environment with which the GlassFish application server process was launched

Solution: Make sure that the classes of your web application have been compiled with a version of the Java programming language compiler that is less than or equal to the version of the Java Runtime Environment with which the GlassFish application server process was launched

WEB9033 Unable to load class with name [{0}], reason: {1}

Description: TBD

WEB9034 SQL driver deregistration failed

Description: TBD

WEB9035 Unable to read data for class with name [{0}]

Description: TBD

WEB9036 Unable to purge bean classes from BeanELResolver

Description: TBD

WEB9037 Illegal JAR entry detected with name {0}

Description: TBD
