### [TOTD #110: JRuby on Rails application using Oracle on GlassFish](#)

Categories: [frameworks](#), [glassfish](#), [rails](#), [totd](#)

Tags: [oracle](#) [openworld](#)

[Edit This](#)

[GlassFish v3](#) is the Reference Implementation for [Java EE 6](#). Following the "extensibility" principle of Java EE 6, it also allows Ruby-on-Rails, Groovy and Grails and Python/Django applications to be seamlessly deployed as well, without any additional packaging. [This blog](#) has published multiple entries on deploying a Rails application on GlassFish as given below:

- [TOTD #105](#): Monitor Rails application using JavaScript
- [TOTD #104](#): Redmine, Typo, Substruct on GlassFish v3
- [TOTD #84](#): Apache + mod\_proxy\_balancer to load balance Rails applications on GlassFish
- [TOTD #81](#): nginx to load balance Rails applications on GlassFish Gem
- [TOTD #73](#): Deploying Rails application as WAR on GlassFish v2.1
- [TOTD #72](#): Deploying Rails application on GlassFish v3
- [TOTD #70](#): Deploying Rails application on GlassFish Gem

All the existing applications have used JavaDB, SQLite3, or MySQL as the database so far. In the process of getting ready for the upcoming [Oracle Open World 2009](#), this **Tip Of The Day** will show how to use an Oracle database with a JRuby-on-Rails application deployed on GlassFish v3.

Lets get started!

1. Install Oracle database as explained in [TOTD #106](#).
2. Configure JRuby/Rails in GlassFish v3 using one of the mechanisms explained in [TOTD #104](#). Alternatively you can also install the GlassFish gem as:

```
>./bin/jruby -S gem install glassfish
JRuby limited openssl loaded. gem install jruby-openssl for full support.
http://wiki.jruby.org/wiki/JRuby_Builtin_OpenSSL
Successfully installed rack-1.0.0
Successfully installed glassfish-0.9.5-universal-java
2 gems installed
Installing ri documentation for rack-1.0.0...
Installing ri documentation for glassfish-0.9.5-universal-java...
Installing RDoc documentation for rack-1.0.0...
Installing RDoc documentation for glassfish-0.9.5-universal-java...
```

This blog will use GlassFish Gem for running the application described below.

3. Create a new database user and grant rights using SQL\*Plus as shown:

```
Macintosh-187:~ oracle$ sqlplus "/ as sysdba"
SQL*Plus: Release 10.2.0.4.0 - Production on Thu Oct 1 12:32:33 2009
```

Copyright (c) 1982, 2007, Oracle. All Rights Reserved.

```
Connected to:
Oracle Database 10g Release 10.2.0.4.0 - Production

SQL> CREATE USER glassfish IDENTIFIED BY glassfish DEFAULT tablespace users TEMPORARY tablespace temp;

User created.

SQL> GRANT CONNECT TO glassfish IDENTIFIED BY glassfish;

Grant succeeded.

SQL> GRANT UNLIMITED TABLESPACE TO glassfish;

Grant succeeded.

SQL> GRANT CREATE TABLE TO glassfish;

Grant succeeded.

SQL> GRANT CREATE SEQUENCE TO glassfish;

Grant succeeded.
SQL> exit
Disconnected from Oracle Database 10g Release 10.2.0.4.0 - Production
```

The user name and password are chosen as "glassfish" for simplicity. This is not a recommended setting for production usage though.

4. Copy [Oracle JDBC drivers \(odj6.jar\)](#) in JRUBY\_HOME/lib directory.
5. Create a simple Rails application

1. Make sure the following gems are pre-installed:

```
rails (2.3.4)
activerecord-jdbc-adapter (0.9.2)
glassfish (0.9.5)
```

If not, then install them as:

```
jruby -S gem install rails activerecord-jdbc-adapter glassfish
```

2. Create a simple Rails application as:

```
jruby -S rails bookstore -d oracle
```

3. Using the normal "jdbc" adapter will give the following error later:

```
ActionView::TemplateError (book_url failed to generate from {:controller=>"books", :action=>"show", :id=>#<Book id: #<BigDecimal:3feef1eb,'10000.0',1(8)>, title: "Ultramarathon Man", aut
```

As evident, the "id" column is returned as BigDecimal where as it should be integer. Fortunately the fix is simple, install the "oracle\_enhanced\_adapter" ([docs](#)) as:

```
bookstore >~/tools/jruby/bin/jruby -S gem install activerecord-oracle_enhanced-adapter
JRuby limited openssl loaded. gem install jruby-openssl for full support.
http://wiki.jruby.org/wiki/JRuby_Builtin_OpenSSL
Successfully installed activerecord-oracle_enhanced-adapter-1.2.2
1 gem installed
Installing ri documentation for activerecord-oracle_enhanced-adapter-1.2.2...
Installing RDoc documentation for activerecord-oracle_enhanced-adapter-1.2.2...
```

Using this "enhanced adapter" is highly recommended for connecting with Oracle databases from Rails applications.

4. Edit "config/database.yml" and change the "development" section to:

```
development:
  adapter: oracle_enhanced
  host: localhost
  database: orcl
  username: glassfish
  password: glassfish
```

Notice, the username and password values are the same as chosen in the SQL statements above.

## 5. Generate a scaffold as:

```
bookstore >~/tools/jruby/bin/jruby script/generate scaffold book title:string author:string
JRuby limited openssl loaded. gem install jruby-openssl for full support.
http://wiki.jruby.org/wiki/JRuby_Builtin_OpenSSL
exists app/models/
exists app/controllers/
exists app/helpers/
create app/views/books
exists app/views/layouts/
exists test/functional/
exists test/unit/
create test/unit/helpers/
exists public/stylesheets/
create app/views/books/index.html.erb
create app/views/books/show.html.erb
create app/views/books/new.html.erb
create app/views/books/edit.html.erb
create app/views/layouts/books.html.erb
create public/stylesheets/scaffold.css
create app/controllers/books_controller.rb
create test/functional/books_controller_test.rb
create app/helpers/books_helper.rb
create test/unit/helpers/books_helper_test.rb
route map.resources :books
dependency model
exists app/models/
exists test/unit/
exists test/fixtures/
create app/models/book.rb
create test/unit/book_test.rb
create test/fixtures/books.yml
create db/migrate
create db/migrate/20091005233152_create_books.rb
```

## 6. Prepare your application for JDBC as:

```
bookstore >~/tools/jruby/bin/jruby script/generate jdbc
JRuby limited openssl loaded. gem install jruby-openssl for full support.
http://wiki.jruby.org/wiki/JRuby_Builtin_OpenSSL
exists config/initializers
create config/initializers/jdbc.rb
exists lib/tasks
create lib/tasks/jdbc.rake
```

## 7. Migrate the database as:

```
~/samples/v3/rails/oracle/bookstore >~/tools/jruby/bin/jruby -S rake db:migrate
(in /Users/arungupta/samples/v3/rails/oracle/bookstore)
== CreateBooks: migrating =====
-- create_table(:books)
-> 0.0740s
-> 0 rows
== CreateBooks: migrated (0.0750s) =====
```

## 6. Lets run the application as:

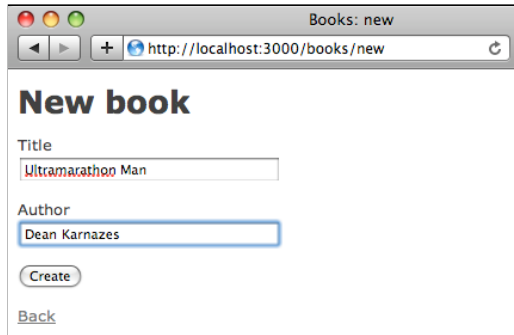

```
~/samples/v3/rails/oracle/bookstore >~/tools/jruby/bin/jruby -S glassfish -l
Starting GlassFish server at: 129.145.133.197:3000 in development environment...
Writing log messages to: /Users/arungupta/samples/v3/rails/oracle/bookstore/log/development.log.
Press Ctrl+C to stop.
Oct 6, 2009 9:45:51 AM com.sun.enterprise.v3.services.impl.GrizzlyProxy start
INFO: Listening on port 3000
```

. . .

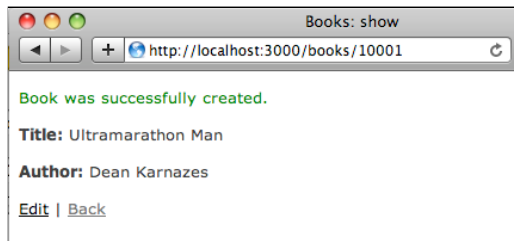

he application is now accessible at "http://localhost:3000/books" and looks like:

Click on "New Book" and enter the values as shown:

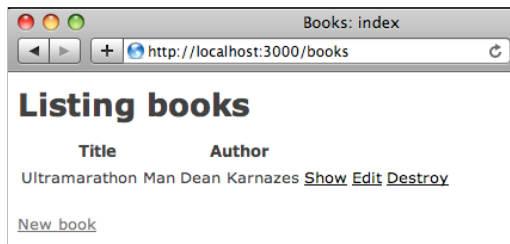

Click on "Create" to see the output as:

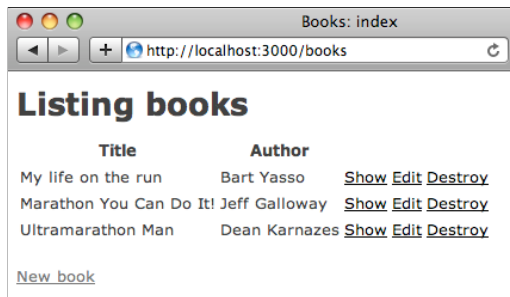

Click on "Back" to see the main page as:

After adding another book, this page looks like:

And another book ...

So we created a brand new JRuby/Rails application and ran it using GlassFish and Oracle backend. A subsequent blog entry will show how to create a similar application using an existing database.

A complete archive of all the TOTDs is [available here](#). The complete list of Rails blog entries are [available here](#).

This and other similar applications will be demonstrated at the upcoming [Oracle Open World](#).
