

Document: Sailfin Deployment Spec

Reviewer: June Parks

Review Date: 8/22/07

Reference	Location	Review Comments	Author's response	Status
None	Missing in Spec	Are any of the sun-web-app properties applicable to sun-sip-app?		
None	Missing in Spec	Does a converged app require both sun-web.xml and sun-sip.xml, or just one of them? If both are present, which file's values take precedence?		
1.1.5 Verification	Page 2	In which spec is verification of SIP Applications defined? None of the specs listed seem like an obvious place.		
Application Upgrade	Page 13	“A deployment property would be used to indicate that this redeploy action is an Application Upgrade option.” What is this property, which file is it in (domain.xml? sun-web/sip.xml?), and what element is it under?		
4.1.3.1 ContextRoot for SIP Applications	Page 14	According to the domain DTD, context-root is an attribute of extension-module and not a property. This distinction is important.		
Documentation Requirements	Page 15	This is much too vague. The doc plan is posted on the Sailfin site. Please indicate specifically which docs are affected. For example, the Admin Ref is affected by domain.xml changes, and the App Deploy Guide is affected by sun-sip.xml.		
APPENDIX A: sun-sip_1-1.dtd	Pages 16-22	The localpart element definition appears to be needed but is missing.		

How to attach your review comments to the site:

1. Save your review document in doc format and append your name to the file. For ex, LB_smith
2. Click on the attachments link and upload this document
3. Once the doc is attached, edit the WIKI page to include this link by modifying the “Reviewer” column as follows: [LB_smith|LB_smith]
