Technical Bookshop

ORACLE

# Agenda

- Customer case studies
  - Image-enabled Electronic Health Record
  - Clinical Trial Image Management
- Content Management Challenges in Healthcare
  - Focus on medical images
- Medical image support in Oracle products

# Medical Images

- X-Rays, CTs, MRIs, Pathology images, etc.
- DICOM (Digital Imaging and Communications in Medicine) is the universal standard data format
  - Images
  - Video
  - Structured Reports
- Non-DICOM formats for legacy and other medical images
  - TIFF, JPEG, etc.

# Spitalnetz Bern Hospital

## Customer Case Study

- Network of 5 regional hospitals
  - Serving an area of 300,000 people
- 600 beds
- 2800 employees
  - Physicians
  - Nursing staff
  - Other clinical support staff
  - Data accessed by 2000+ people
- Switzerland

# Improve Quality of Care and Lower Costs

## Requirements

- Enable referring physician to track progress of patient in hospital
- Improve data access overall
  - Timely access to all patient data
  - Share and access patient data from any application
  - Access only with appropriate authorization
- One universal archive for all content
- Challenges related to images
  - Imaging systems (X-Rays, CTs, MRIs, Ultrasounds, etc.) are completely silo-ed
  - Access methods and communication protocol different from that of other patient data management systems

# Image-enabled Electronic Health Record

**the i-engineers**

- health engine from Oracle partner the i-engineers
- Provides universal access to patient data and images
- Understand images from multiple vendors
- Benefits
  - Reduced costs
  - Increased efficiency
  - Healthcare workers can focus on caring for patients and not aggravations of accessing data

ORACLE

# Bristol-Myers Squibb

## Customer Case Study

Bristol-Myers Squibb

- Top 10 pharmaceutical
- Invests \$3.5 billion each year to discover and develop new medicines
- In the last few years have delivered new medicines for psychiatric disorders, rheumatoid arthritis, hepatitis B, cancer, HIV/AIDS and diabetes
- New Jersey, USA

ORACLE

# Management and Interoperability

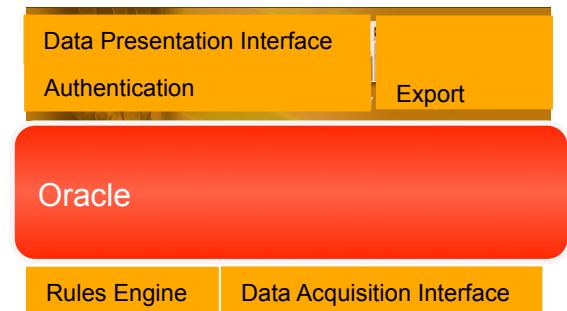

## Clinical trial sponsors (Pharmas)

- Access
  - Prohibitively expensive for clinical trial sponsors to access their own data
  - Images scattered across multiple repositories, across organizations
  - Data transfer for sharing is slow and error prone
- Security
  - Satisfy regulatory and privacy requirements while sharing data
- No process to control data quality
  - “What you see is what you get”
  - Poor data quality causes significant delays in the clinical trial process

# Clinical Trials Image Management Solution

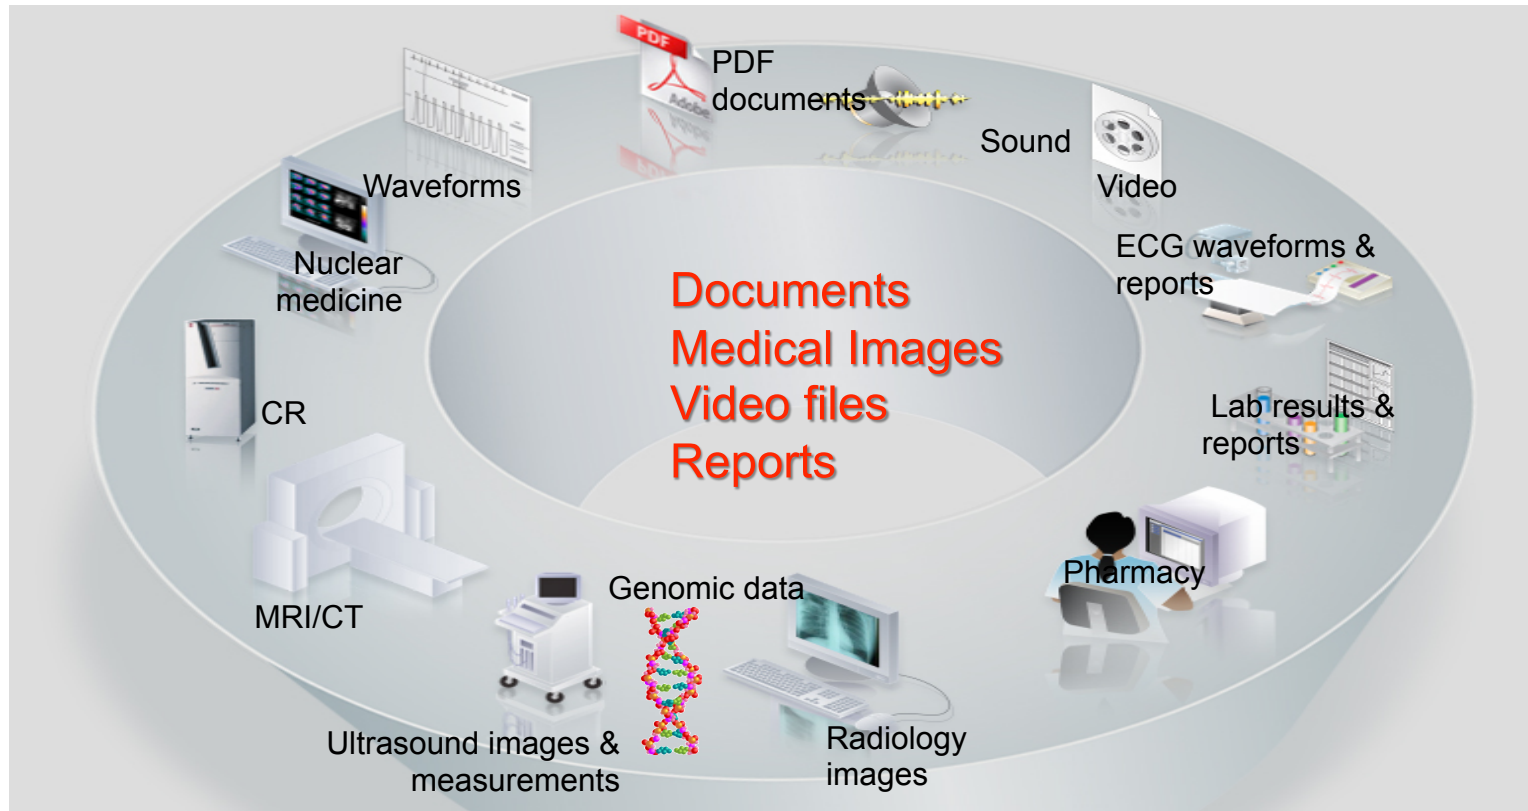

- IBISimg solution from Oracle partner IBISWorks
- Improves data management efficiency and shortens time to market
  - Centralized repository for images
  - Unified management and access
  - Provide timely access to images
- Benefits
  - Cost-effective access to images when they want it
  - Access original image, and not just the report
  - Integrated access with clinical research systems
  - Improve quality: Validation is built into the workflow

# CONTENT MANAGEMENT IN HEALTHCARE

# Healthcare Systems Rely on Content

## Multiple Types of Content in Siloed Systems

- Lack of unified view of patient content reduces quality
- Business processes are tied to individual systems
- Access to content is not uniform as they are in different systems
- Security policies are not uniform across the organization
- Retention policies are not uniform

# Integrating Medical Images with Other Data

## Major Challenges

- DICOM images are in systems that are completely siloed
  - PACS (Picture Archiving and Communication Systems) store and manage DICOM content
  - Image-specific DICOM protocol is used to access images
  - DICOM content not integrated with other applications
- Siloed image management systems are inefficient
  - DICOM images cannot be easily accessed across the organization
  - Sharing is difficult
  - Including images in other applications is hard

\* DICOM is the ubiquitous medical image format standard

ORACLE

# Medical Image Data Volume

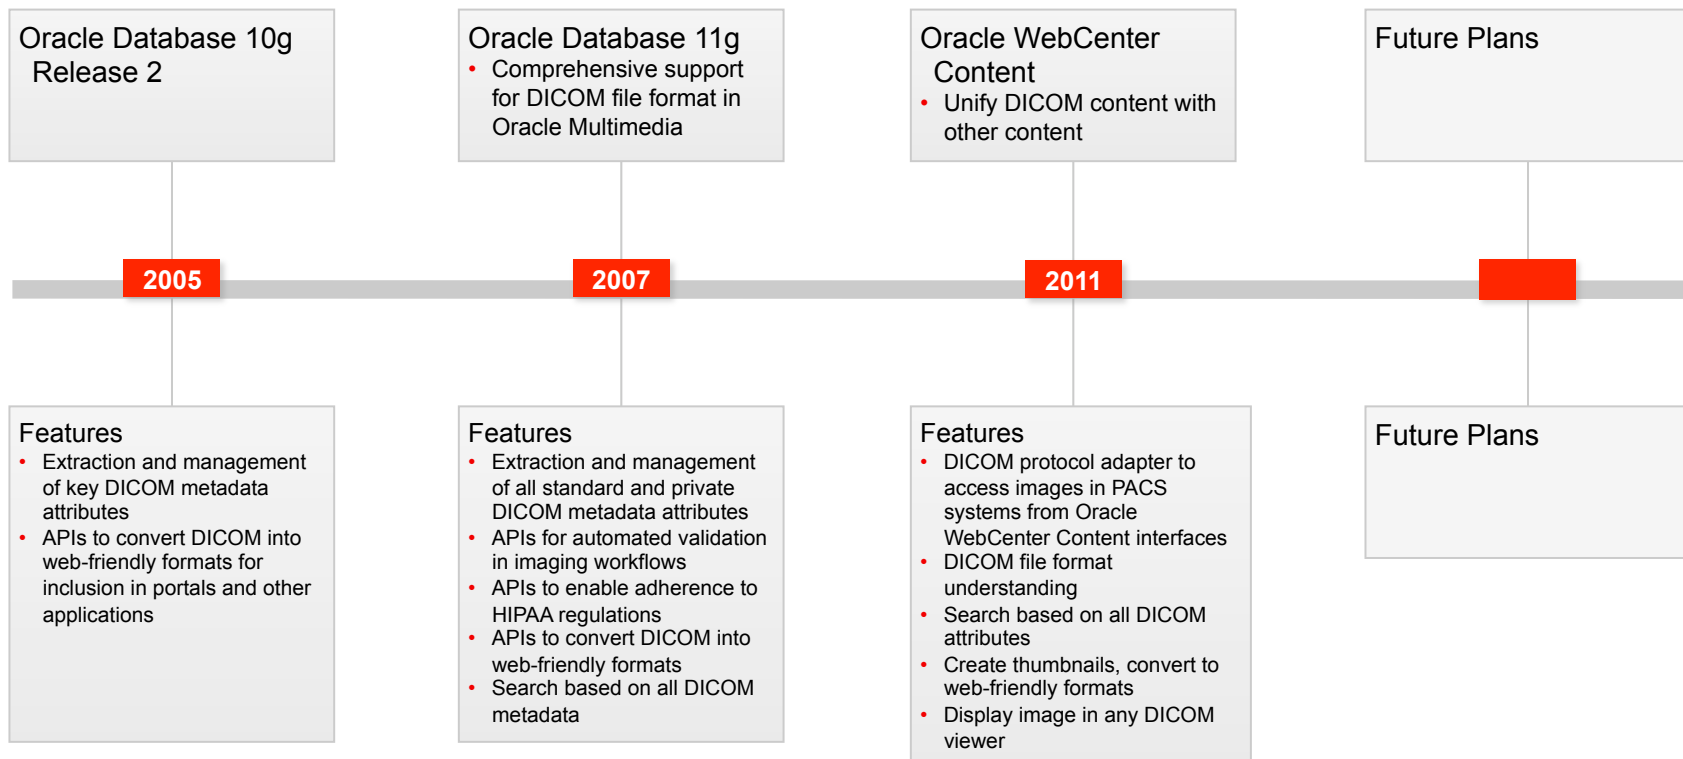

## Repository Growth Compounds the Problems

- Massive increase in data volume (image volume doubles every 18 to 20 months\*)
- Image sizes range from 0.5 MB to multiple GBs
- An image study can include thousands of individual images
- Increased costs for storage, development, deployment and maintenance

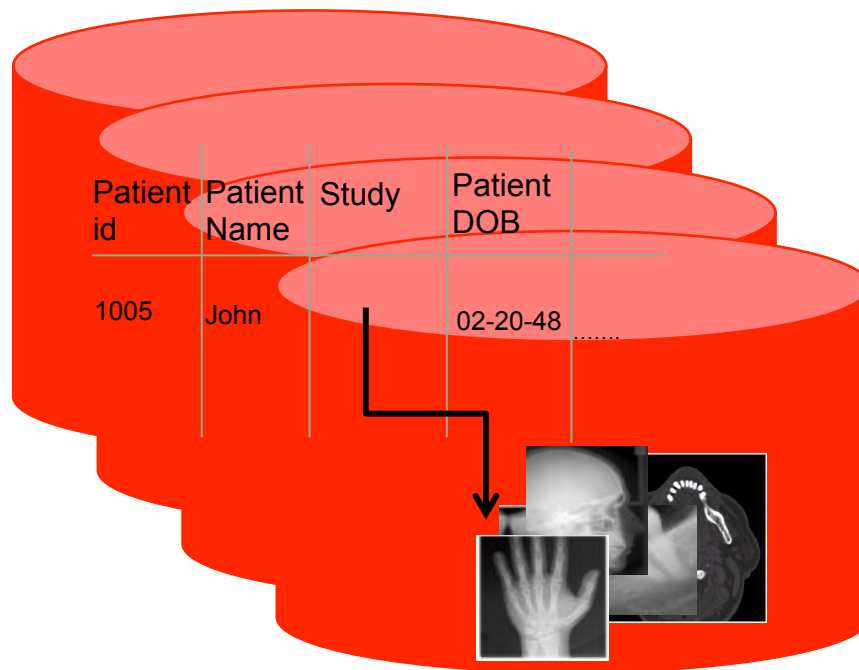

# DICOM SUPPORT IN ORACLE PRODUCTS

# DICOM Support in Oracle Products

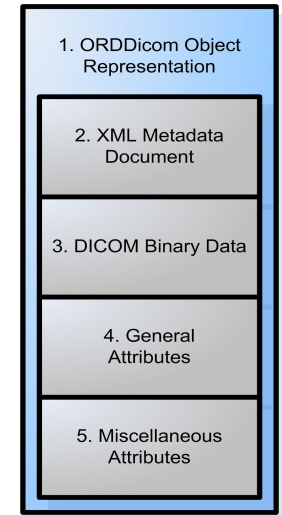

# Manage Images with Database Infrastructure

- Standards based open programmable platform for sharing and interoperability
- Database features
  - Data synchronization
  - Protection against data loss
  - Security
  - Availability
  - Scalability

# Native DICOM support in Oracle Database

- SQL, PL/SQL and Java APIs for rapid development and deployment
- (zero code) Metadata extraction
- (zero code) Anonymization of image metadata
- (zero code) Automated DICOM data validation
- (zero code) Include DICOM content in reports and display in browsers
- (zero code) Create DICOM images from legacy non-DICOM images

## Some Technical Details

- Extract standard DICOM and proprietary extensions by PACS vendors
  - Enables interoperability and sharing across systems
- Convert DICOM to JPEG for easy viewing and access in browsers
- Basic image processing operations

# Benefits

Feature	Benefit
Unified management of images	Simplify management and lower costs
Extract, store, and search metadata from any PACS vendor	Both standard (2000+ tags) and private tags are available for use
Granular access control	Access only to authorized users At organization level, user level, scan level
Audit access and operations	Audit trail for regulatory compliance
Retention policies management	Lower costs and simplify maintenance
Flexible data retrieval	View images in DICOM viewer of choice View images from anywhere (HTTP based transfer)

# Announcing

## DICOM Support in Oracle's Enterprise Content Management Platform: WebCenter Content

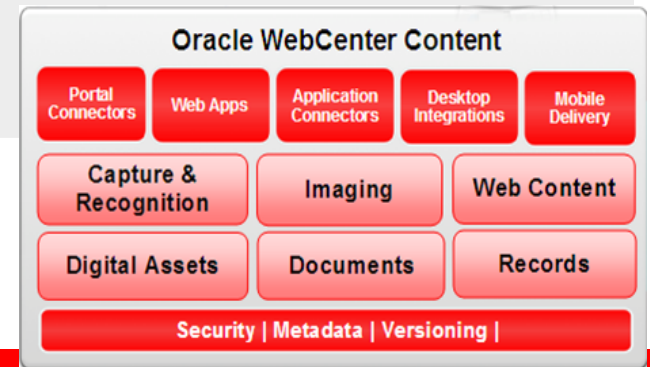

**ORACLE®**

**WEBCENTER CONTENT**

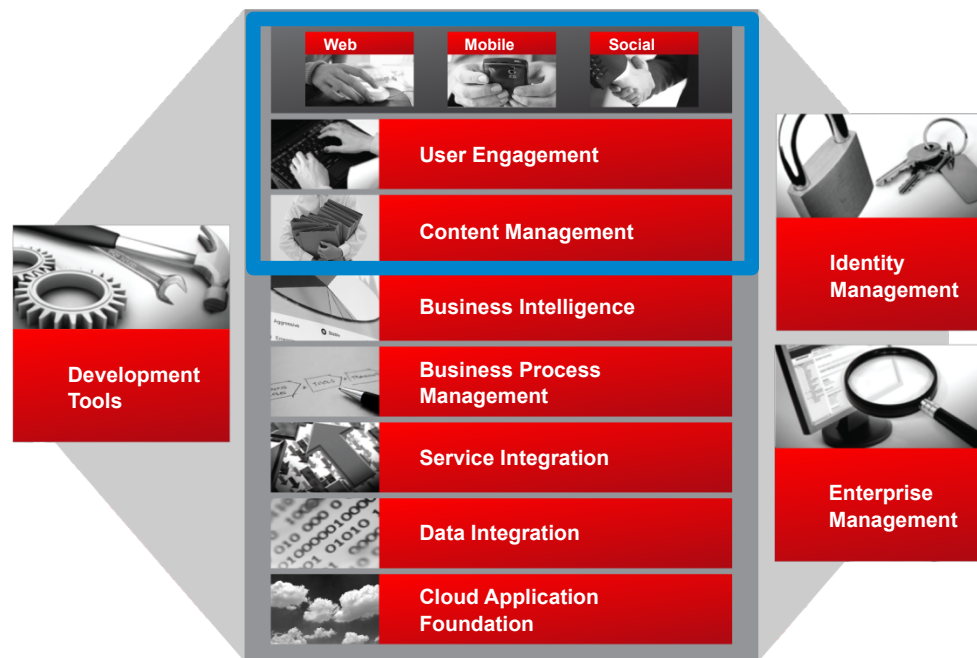

### Seamless Access to the Right Information in Context

- Strategic content infrastructure for managing all documents, images, and rich media files
- End-to- End content lifecycle management from creation to archiving
- Contextual application integration

# Oracle Fusion Middleware

Complete, Open, Integrated, Best-in-Class

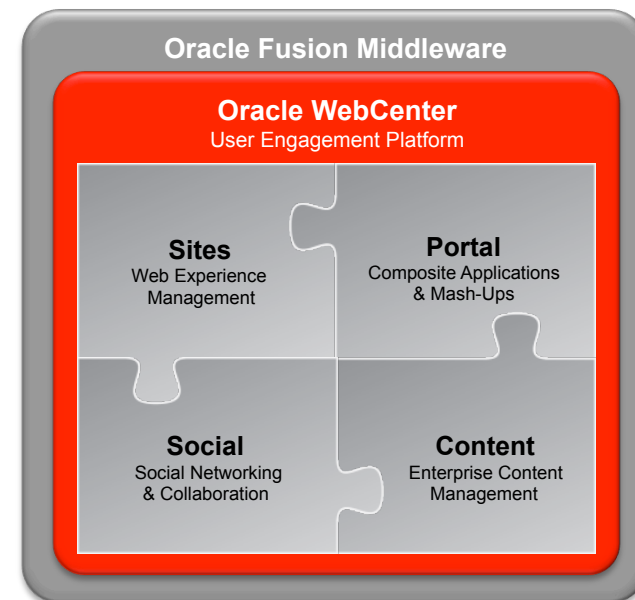

ORACLE

# UCM, URM, IRM → Oracle WebCenter Content

## Products you may know...

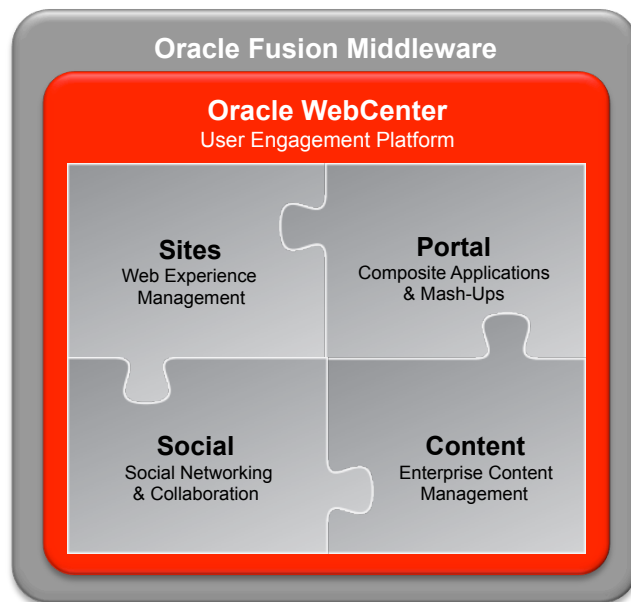

- Enterprise Content Management Suite → Content
  - Universal Content Management (UCM), Universal Records Management (URM), Information Rights Management (IRM)
  - Imaging & Process Management (I/PM), Document Capture, Distributed Document Capture, Forms Recognition
  - Application Adapters for Enterprise Content Management
- WebCenter Suite → Portal
  - WebCenter Portal, Framework, Spaces
  - WebCenter Services
  - WebLogic Portal
  - WebCenter Interaction
- FatWire → Sites
  - Content Server, Satellite Server, Mobility Server
  - Engage, Analytics
  - Gadget Server, Community Server

## Have become...

# Oracle WebCenter

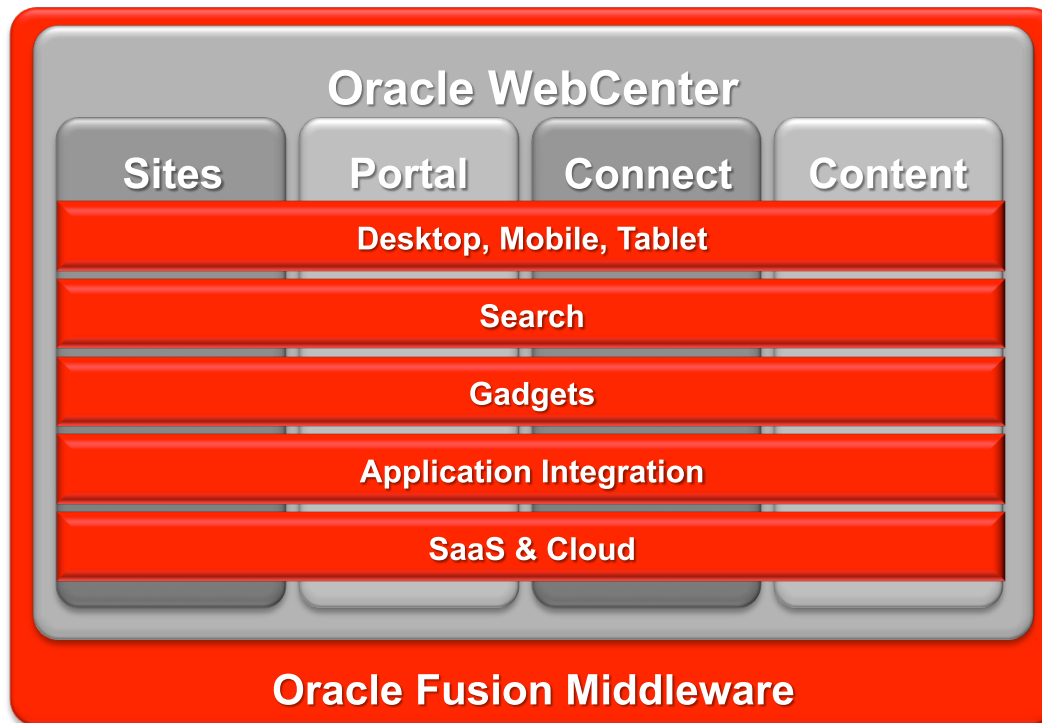

The User Engagement Platform for Social Business

**Oracle WebCenter is the user engagement platform for social business, connecting people and information**

- Increase customer loyalty with personalized online experiences
- Drive innovation with portals & composite applications
- Enhance productivity with contextual collaboration
- Optimize information access with content management

# Oracle WebCenter: Architected Together

- Single Content Repository & Infrastructure
  - Share content across organization, internally and externally
- Embedded Social Channel
  - Collaborate with others directly from applications and Web sites
- Reusable Enterprise Gadgets
  - Build once and use everywhere
- Optimized for Application Integration
  - Enables user experience in Oracle and other enterprise applications
- Built on Fusion Middleware
  - Complete, open, integrated, scalable, high-performance, cloud

# Oracle WebCenter Content

One Platform, One Vendor

## Comprehensive

- Documents, Images, and Digital Asset Management
- Records and Retention Management
- Information Rights Management
- Imaging and Process Management

## Pre-Integrated

- Leverages Oracle Database and Fusion Middleware technologies (WebCenter Portal, SOA, BPM)
- Out-of-the-Box integrations with Siebel, JD Edwards, E-Business Suite, and PeopleSoft

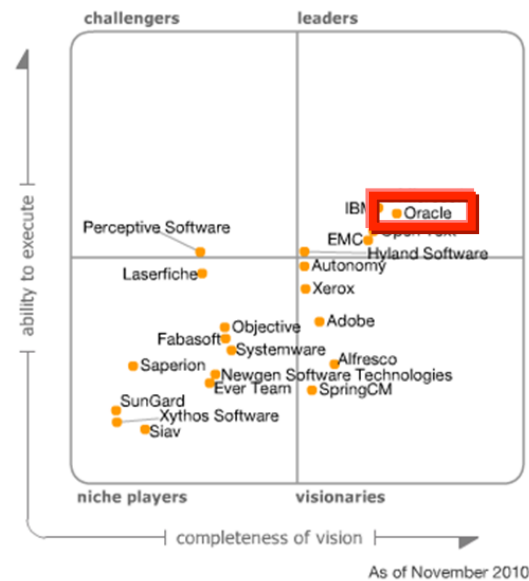

ORACLE

# Industry Analysts' Perspective

## Gartner Magic Quadrant for Enterprise Content Management

November 16, 2010

This Magic Quadrant graphic was published by Gartner, Inc. as part of a larger research note and should be evaluated in the context of the entire report. The Gartner report is available upon request from Oracle.

ORACLE

# New Capabilities

## Oracle WebCenter Content Platform

- Understand DICOM file format
  - Parse DICOM metadata on DICOM image check-in
  - Search repository based on DICOM metadata
  - Convert DICOM to web-friendly file formats (JPEG, GIF)
- DICOM protocol adapter to connect with PACS systems and DICOM viewers

# Easy Access to Images

## WebCenter Content

- Powerful Search
  - Metadata search, Thumbnails
- Access images enterprise-wide
  - Avoid 'lock in' at place of storage
- Re-use image data in a range of applications
  - Lower costs, improved flexibility
- Maintain security and privacy
  - Adhere to HIPAA regulations while sharing images

# Improved Lifecycle Management

## WebCenter Content

- Intelligent Classification and Storage
- Automatically apply retention policies
  - Lower costs and simplify maintenance

The screenshot shows the 'Configure Retention Administration' page in the Oracle Universal Records Management interface. The page has a blue header with the Oracle logo and navigation tabs: Home, Search, New Check In, My Profile, Tasks, Saved Reports, and Help. Below the header is a breadcrumb trail: My Content Server > Browse Content > Content Management > Administration > External Content. The main content area is titled 'Configure Retention Administration' and includes sub-tabs: Configure, Tasks, Screening, Reports, Audit, and Batch Services. The 'Configure' tab is active, showing various configuration options. These include: 'Start of Fiscal Calendar' (1, April), 'Notify recipient' (sysadmin), 'Archive Meta Data Format' (csv), and 'Disposition List Result Count' (20). A large list of checkboxes follows, with several checked: Log Metadata Changes, User-friendly disposition, ACL-based security, Default Content Server security on Retention Schedule objects, Supplemental Markings, User must match all Supplemental Markings, Custom Security Fields, Classified Security, Show Export Date, Only allow scheduled screening, Only allow scheduled disposition actions, Do Not Notify Authors, Use Page Navigation, Disable Lifecycle Update, Allow Destroy Contents and Records and leave Metadata, Enable New Revision Date Trigger Field (By default this field is not searchable.), Always restrict revisions, Never restrict revisions, Always restrict deletions, Never restrict deletions, Always restrict edits, and Never restrict edits. At the bottom, there is a 'Display Record Icon When' dropdown set to 'Deletes, Edits and Revisions Restricted' and a 'wwRmaSecurityProperties' field. The page concludes with 'Submit Update', 'Reset', and 'Quick Help' buttons.

# High Scalability and Performance

## WebCenter Content

- High Performance
- High Scalability
- Oracle Software and Hardware: Engineered to Work Together

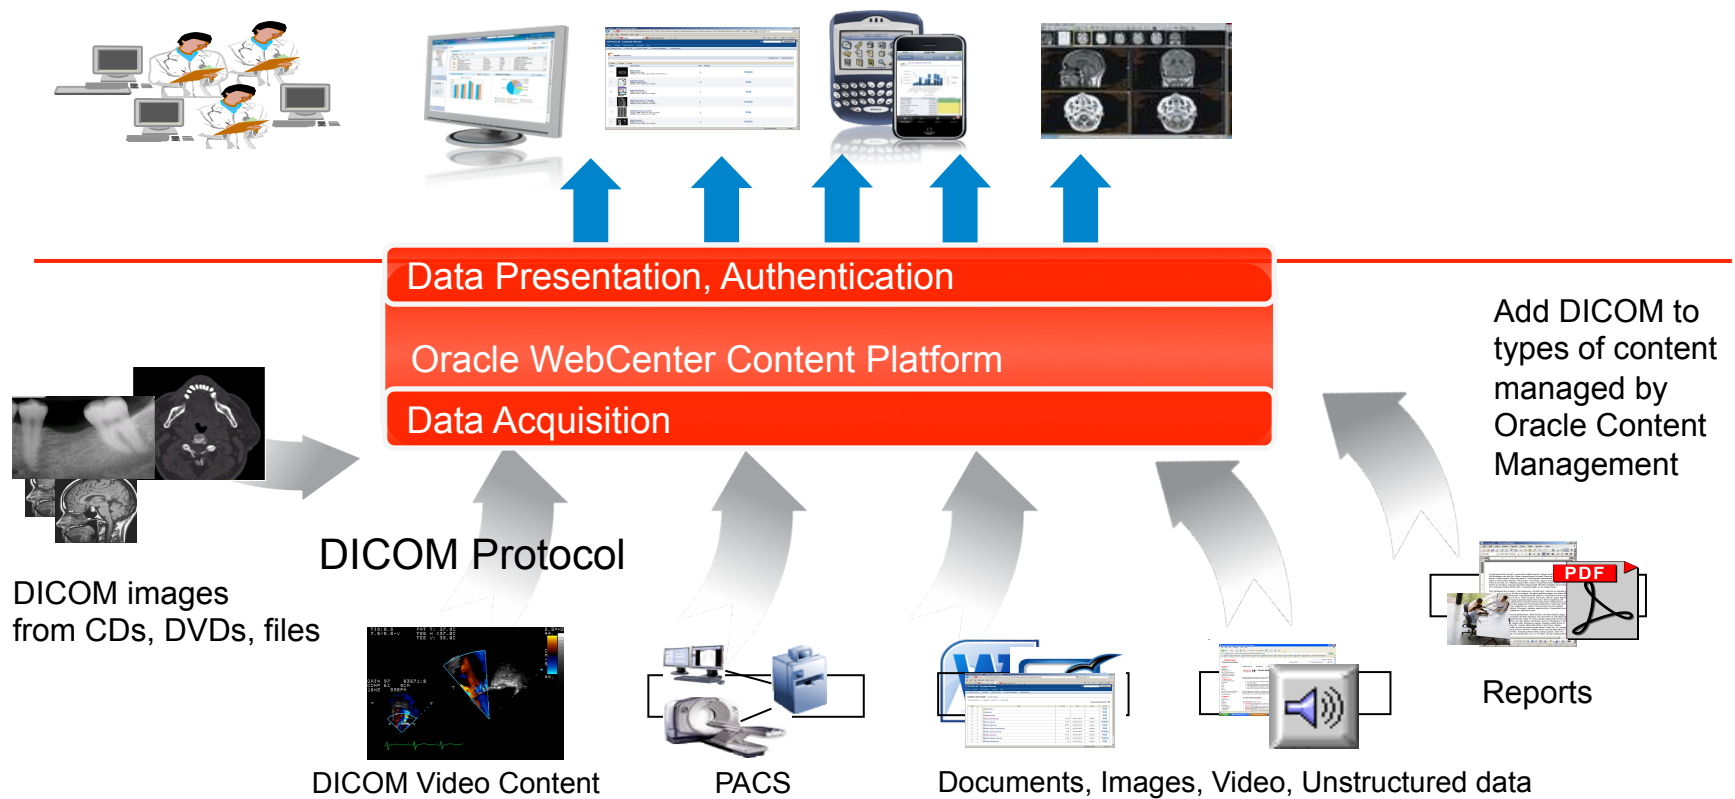

ORACLE

# Sample Applications

- Providers
  - Centralized and unified to images from PACS systems from multiple vendors
  - Search and reporting on patient data and DICOM metadata to lower costs and improve patient outcomes. Ex: Report to highlight radiation dosage on patient outcomes
- Patient portals by provider
  - Patients can access their images along with other information
- Payers
  - Provide all clinical information to patients
  - Include images in reports
