# “Virtual” Connected Live Field Data Maintenance

# Turnpike Enterprise Asset Management System (TEAMS)

# Florida's Turnpike System

**Mainline (1957-1964)**

**HEFT (1973-1974)**

**Bee Line West Expressway  
(1973)**

**Sawgrass Expressway  
(Opened 1986; Acquired 1990)**

**Seminole Expressway 1 (1994)**

**Southern Connector Extension (1996)**

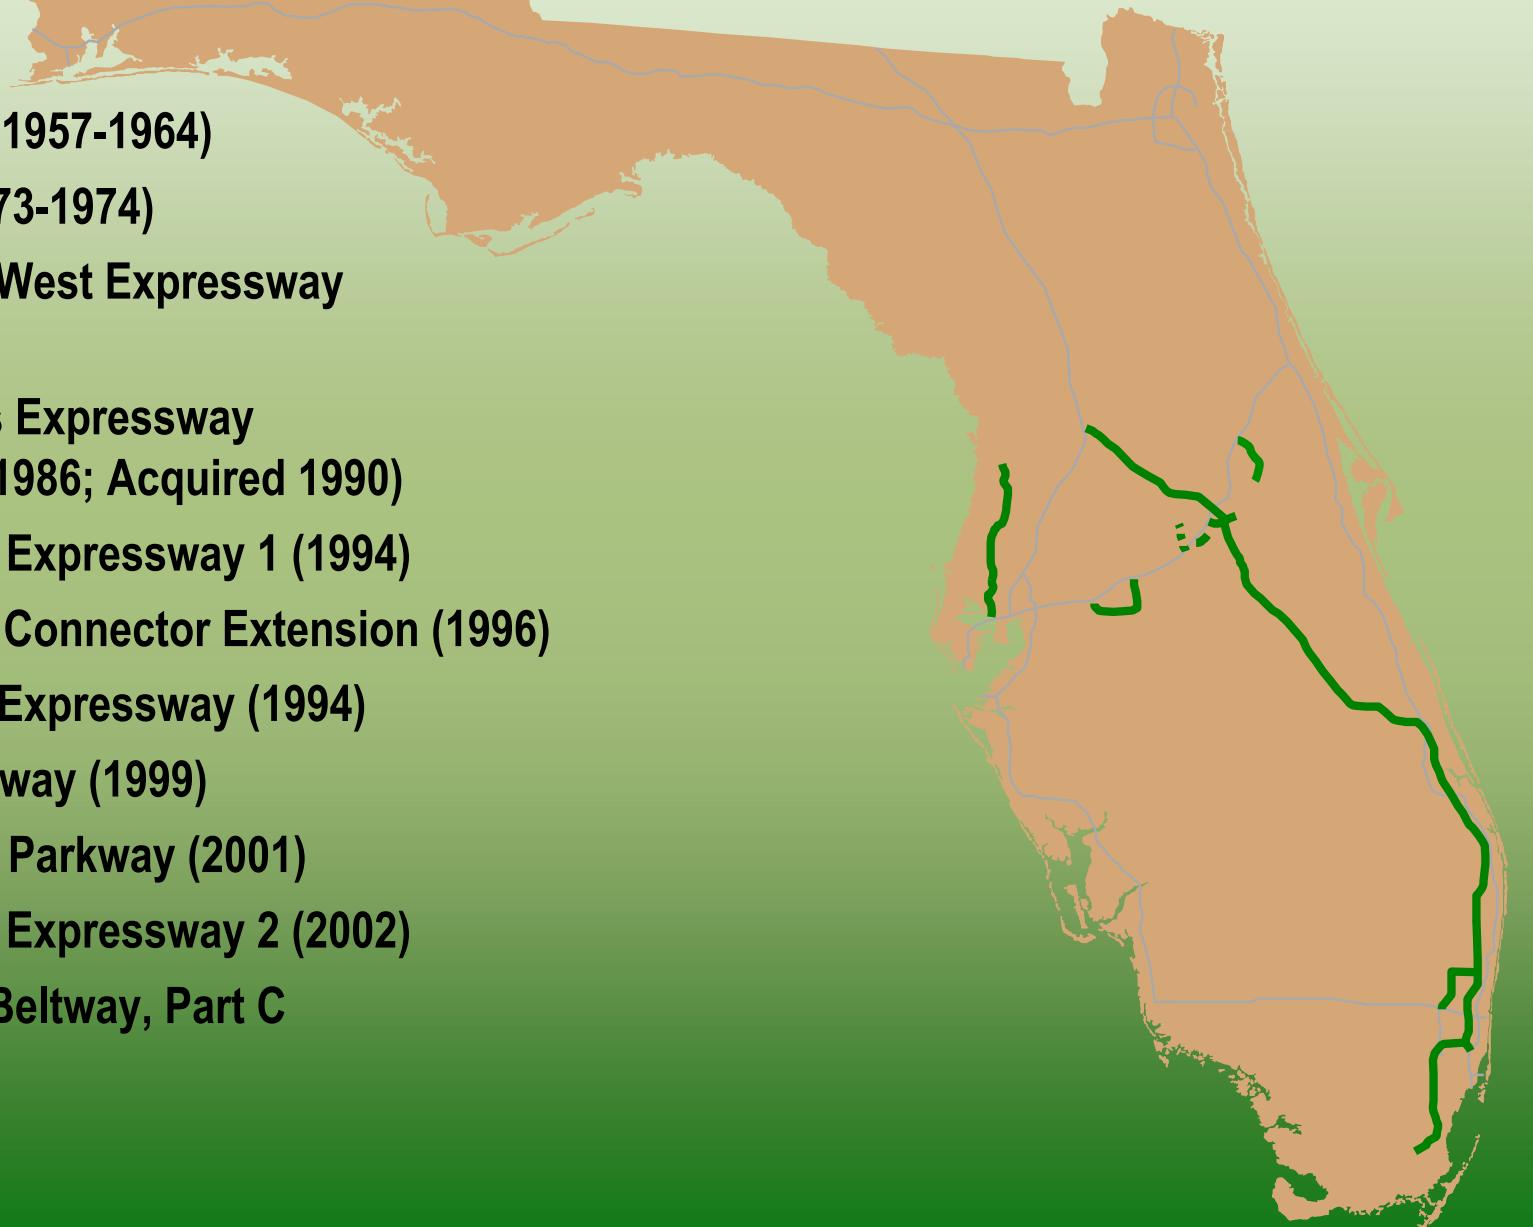

**Veterans Expressway (1994)**

**Polk Parkway (1999)**

**Suncoast Parkway (2001)**

**Seminole Expressway 2 (2002)**

**Western Beltway, Part C**

# Florida's Turnpike System

# System Background

Turnpike Enterprise Asset Management System

**TEAMS** is an intranet application that:

- Provides an accurate inventory of infrastructure assets (and certain other capital assets)
- Provide the current condition of assets
- A method to forecast and prioritize capital expenditures required for periodic renewal & replacement

# Assets Managed in TEAMS

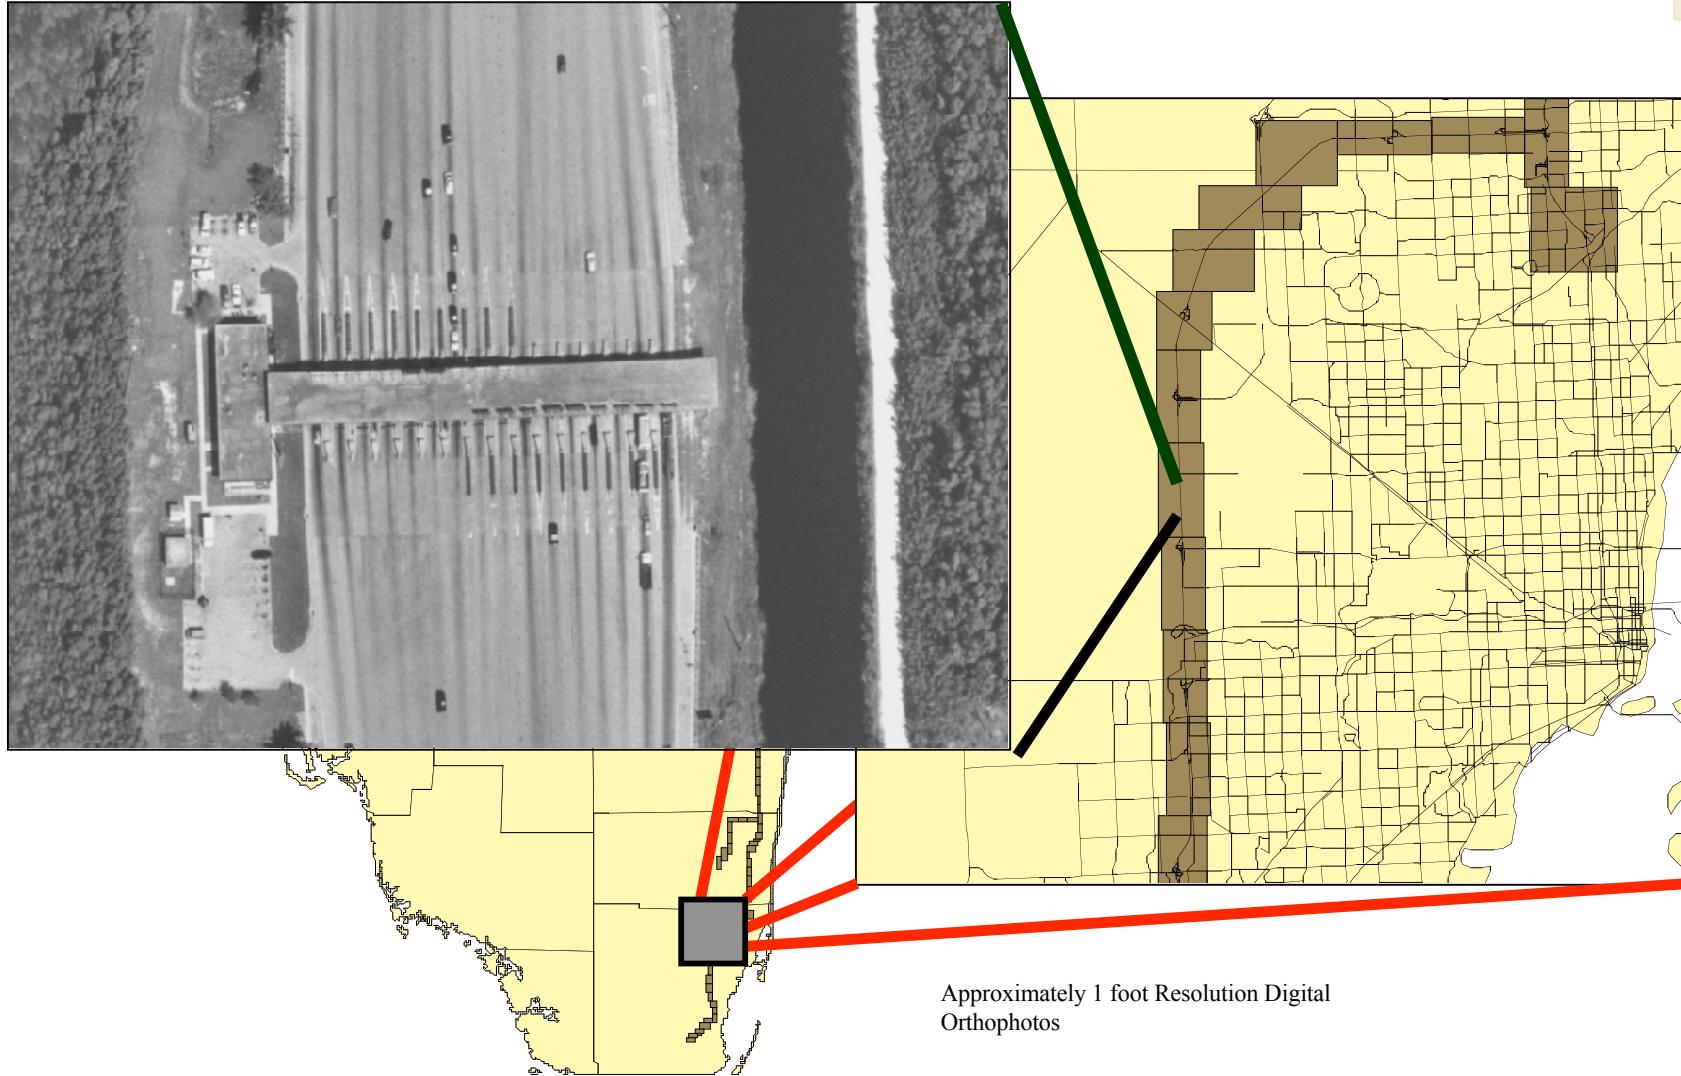

- PAVEMENT
- ROADWAY
- FACILITIES
- BRIDGES
- NPDES
- SAFETY
- ENVIRONMENTAL PERMITS
- UTILITIES

# Initial Data Collection Process

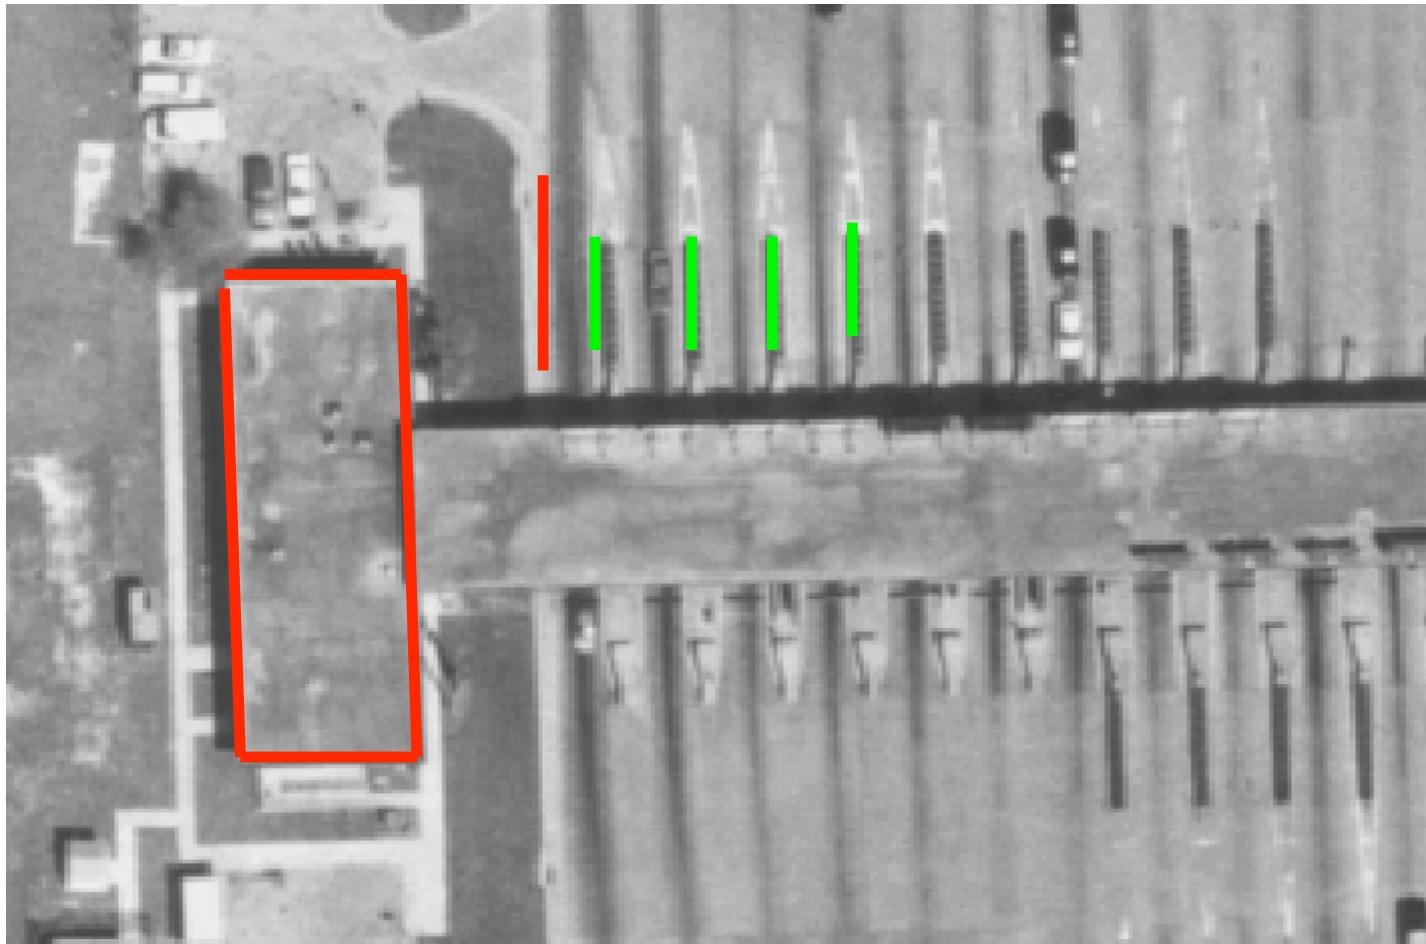

- Multi Source Approach
  - Photogrammetry
  - VISAT VAN
  - GPS Field Data Collections Units

# Photogrammetry

Approximately 1 foot Resolution Digital  
Orthophotos

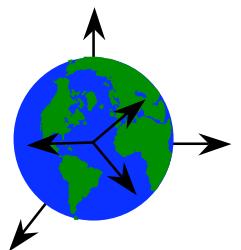

# Photogrammetry

# VISAT VAN

## The VISAT Van

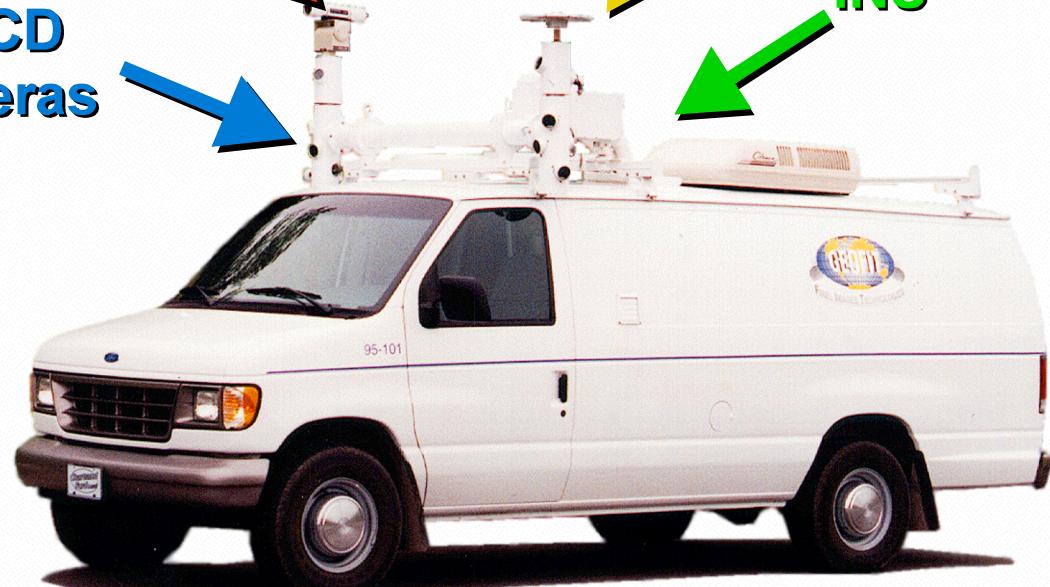

VISAT

S-VHS  
Camera

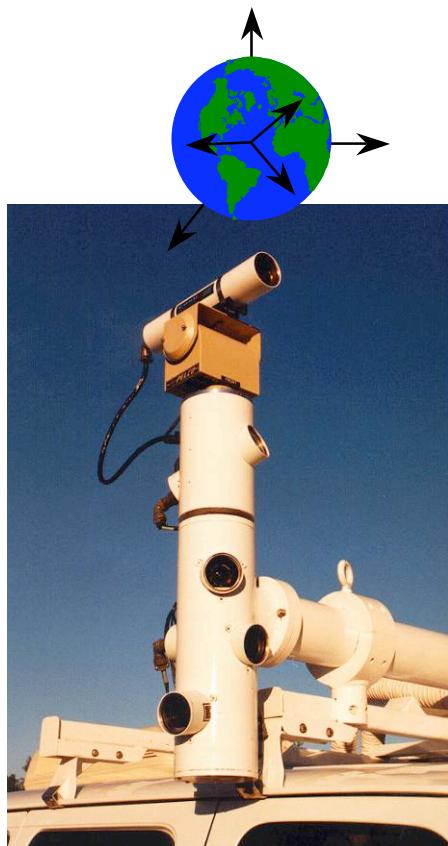

8 CCD  
Cameras

GPS  
Antenna

INS

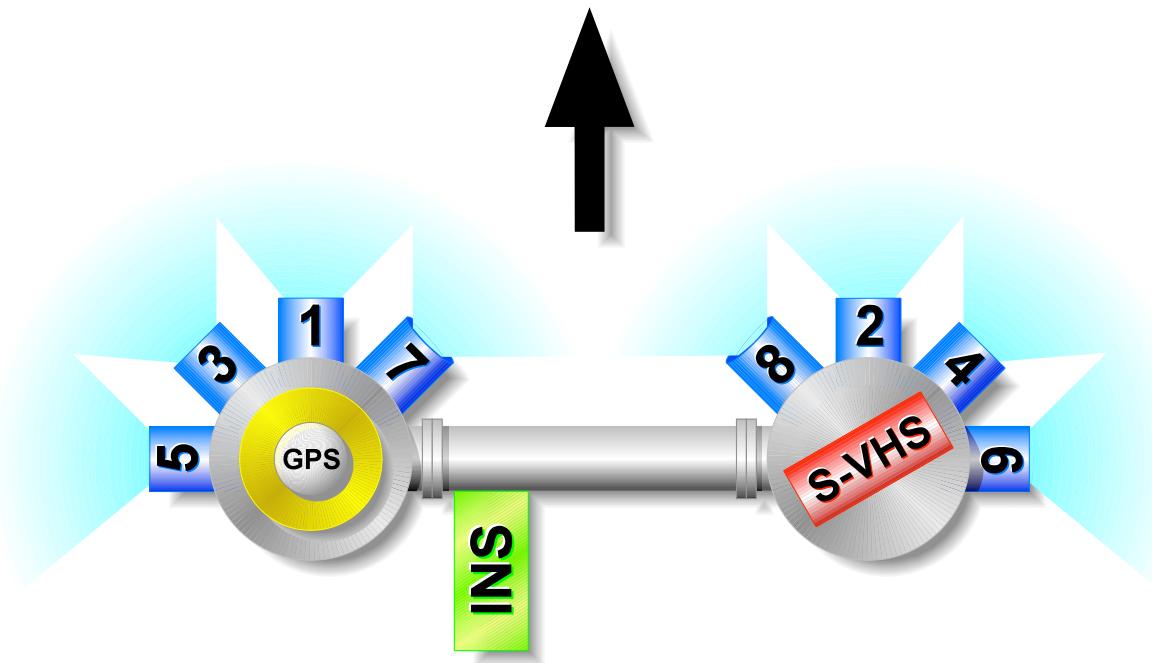

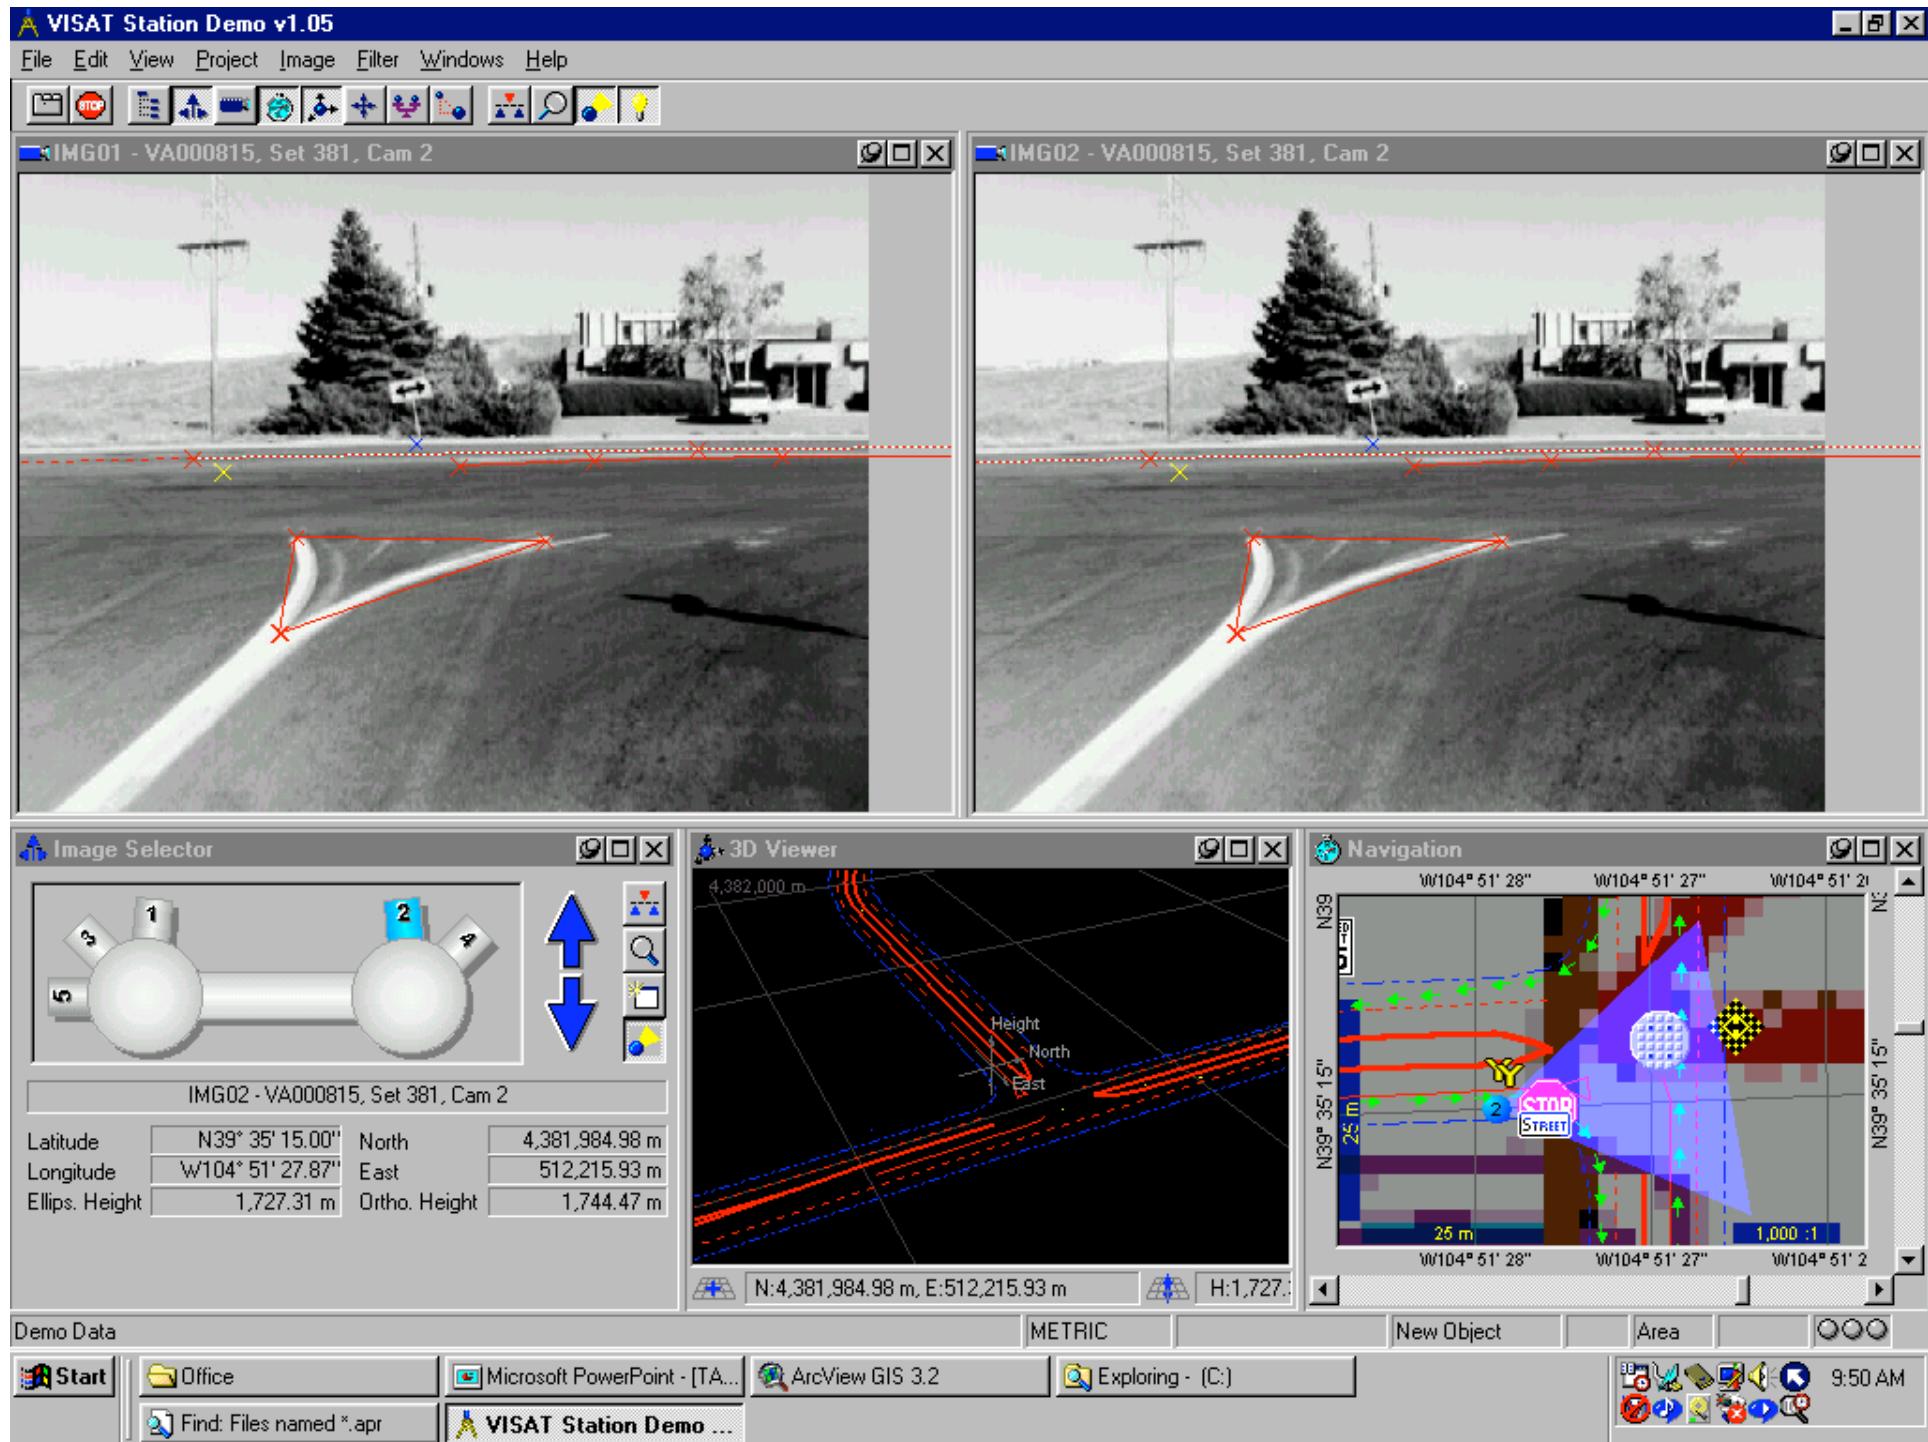

# VISAT VAN

VISAT

Cameras Field of View

- VoCarta Voice Activated Data Collection Software
- Digital Camera
- Electronic Notepad
- GPS Unit

## What Have We Learned?

- Software has to be maintainable by in-house staff.
  - Both VISAT and VoCarta required vendor experts for even the simplest modifications or changes.
- Collect the data in the same format as it is going to be stored when in production.
  - Translating data from one proprietary format to another causes unexpected problems, which complicates the process.
- The software must tie the digital photo to the asset at collection time.
- Data Collection Software tends to be expensive - \$1000 – \$2000 per license

## What Have We Learned?

- Hardware must be suitable for field conditions.
  - Most computers will stop, or almost stop running at 100 degrees Fahrenheit – it gets real hot in Florida
- To the extent possible – control data quality at input.
  - Don't assume the software has this capability
- To the extent possible limit the number of software “components” in your data collection process.

# Field Data Collection Issues

## Vision:

- Low per user software cost - \$750 or less
- Works on all MS Windows operating system
- Easily maintained / modifiable software
- Easy to use – no more than 8hrs training required
- Works in disconnected or connect environment – no upgrade cost when (or if) Wi-Fi is available
- Fully compatible with Oracle – requires no translation.

# Field Data Collection Solution

# Software

## Acquis Remote and Acquis Mobile for Oracle Spatial

- Enterprise J2EE software that natively extends Oracle MapViewer
  - Extracts business logic, metadata and data (including structured and unstructured data as well as user-defined types) directly from Oracle Database
  - Integrated into ANY business workflow, application or GIS
- Single code base for web, remote and mobile – “develop once, deploy anywhere”
- Operates in real-time and disconnected modes while preserving Oracle Spatial native format throughout business process lifecycle
- Extremely LOW cost

# Hardware

- 2 Trimble Geo XTs
- 2 Panasonic Toughbook 18s

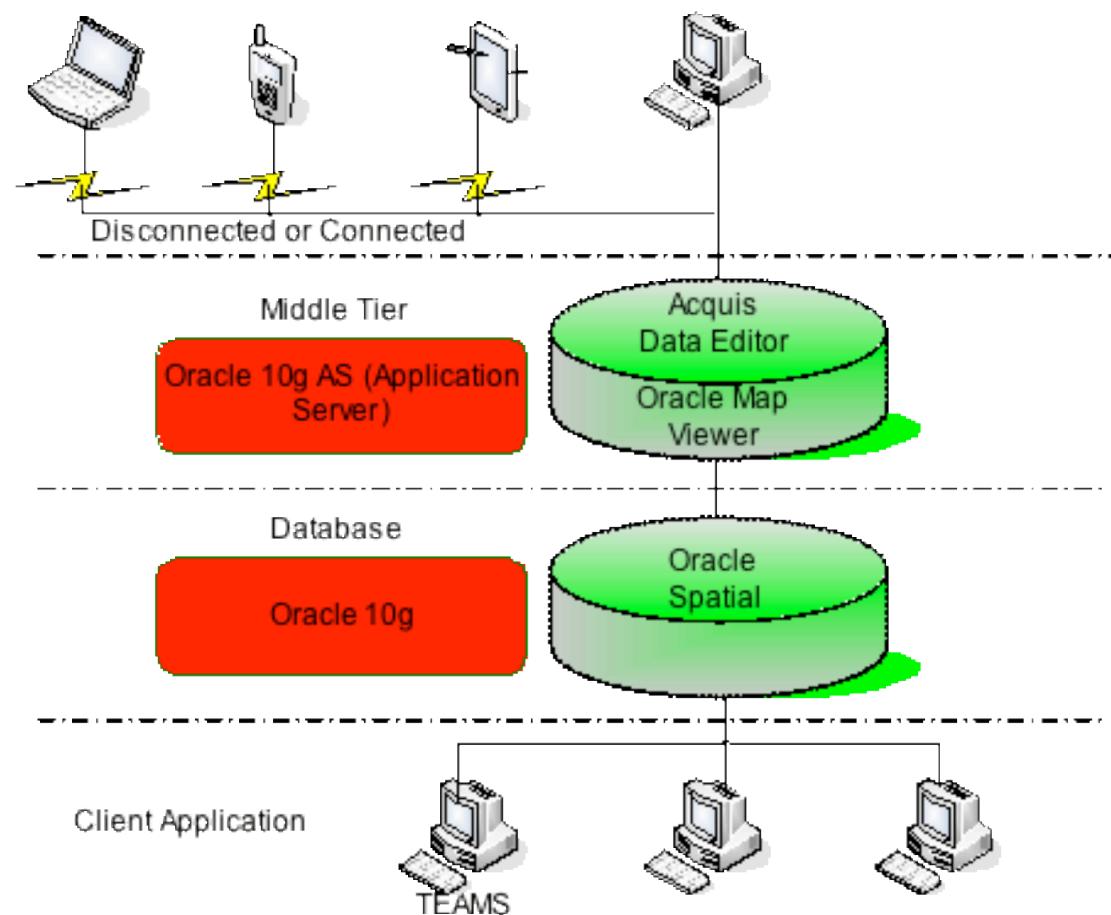

Panasonic recommends  
Windows® XP Professional

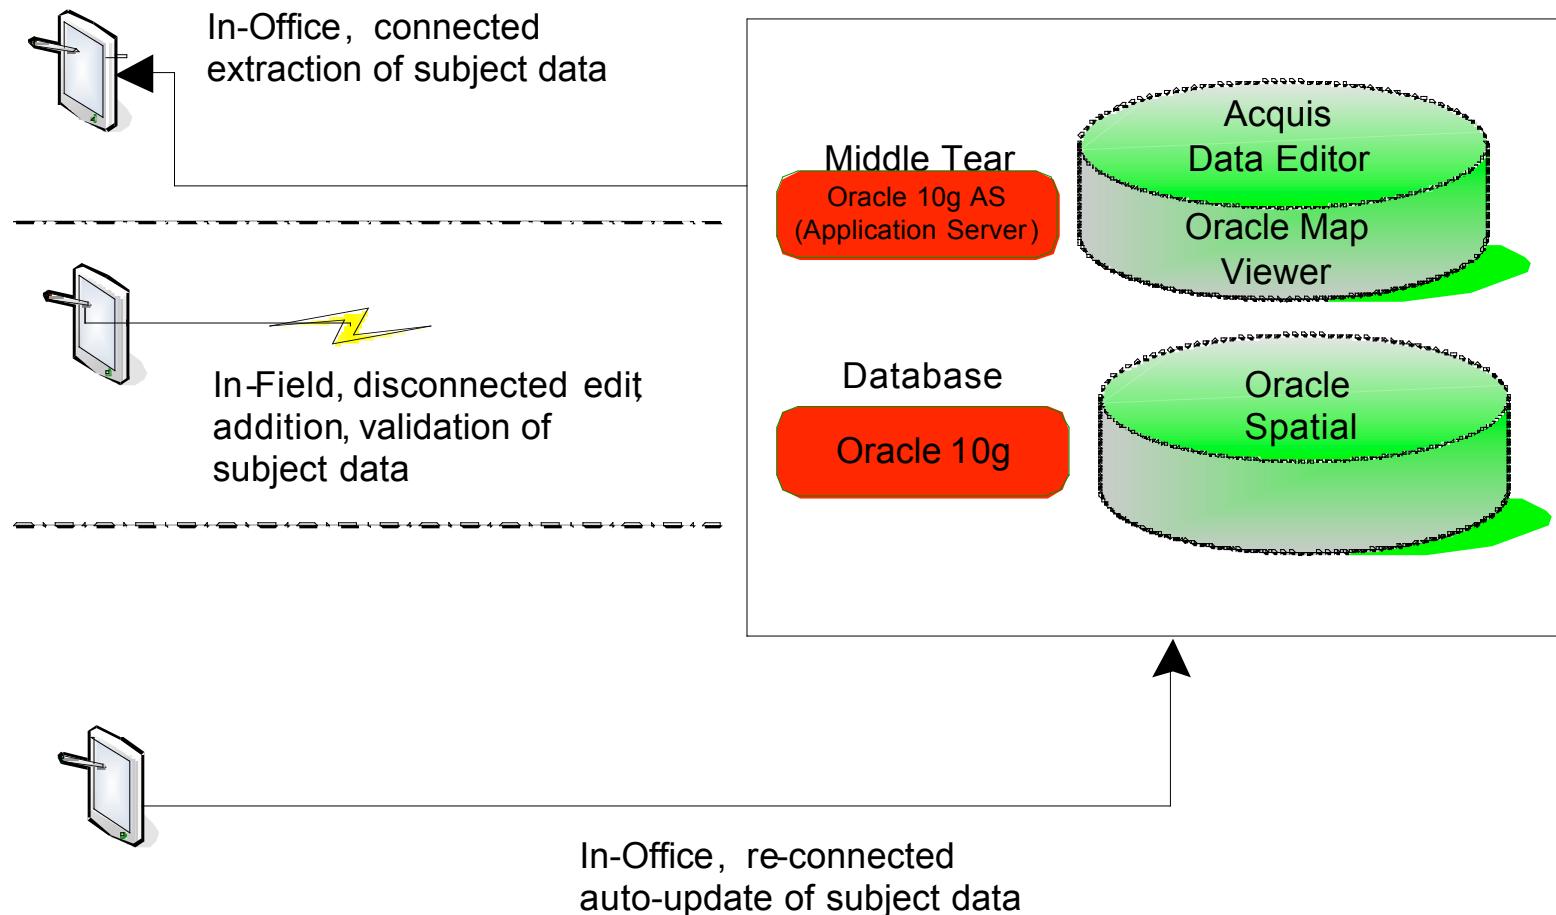

## 3 Phase Approach

- Phase 1: Sign Structure and Panel collection and validation – to include integration of digital photos
- Phase 2: All assets – Roadway and Facilities
- Phase 3: Development of TEAMS Field – Full TEAMS capabilities in the Field.
