**Brief Description**

<b>Business Process:</b>	<b>5.6.3.1 Manage Tracked Assets and Devices</b>
<b>Process Type:</b>	<b>Sub-Process</b>
<b>Parent Process:</b>	<b>5.6.3 C2M.ODM-MDM. Manage Assets and Devices</b>
<b>Sibling Processes:</b>	<b>5.6.3.2 C2M.MDM. Manage Device Installation and Commissioning</b>
	<b>5.6.3.3 C2M.MDM. Manage Device De-Installation, Decommissioning and Retirement</b>
	<b>5.1.5.1 C2M.CCB.Manage Metered Site</b>
	<b>4.2.1.1 C2M.MDM.Upload Device Measurements. System IMD</b>

This process takes place when business requires to store and maintain information about Assets (Devices) and their locations. Application creates records and tracks information about Assets (Devices) from the moment they are received from Vendor. Application follows lifecycle of Asset/Device including Asset rejection or acceptance with or without inspection, storing accepted Assets in specific location until installed. The process also describes setting up the device, the device configuration, and measuring component(s). However, it does not include creating an installation event – connecting the device to the service point. Please refer to 5.6.3.2 Manage Device Installation and Commissioning for that process.

Note: Devices are physical objects that hold one or more measuring components that can produce data to be handled by the system. Examples of devices include meters, demand response devices, weather stations, etc.

A Device can have one or more device configurations over time. A device's measuring components are associated with the device via device configurations.

Each Device configuration can have one or more measuring components associated with it.

Measuring Components (MC) are single channels for which data will be received and stored in the system.

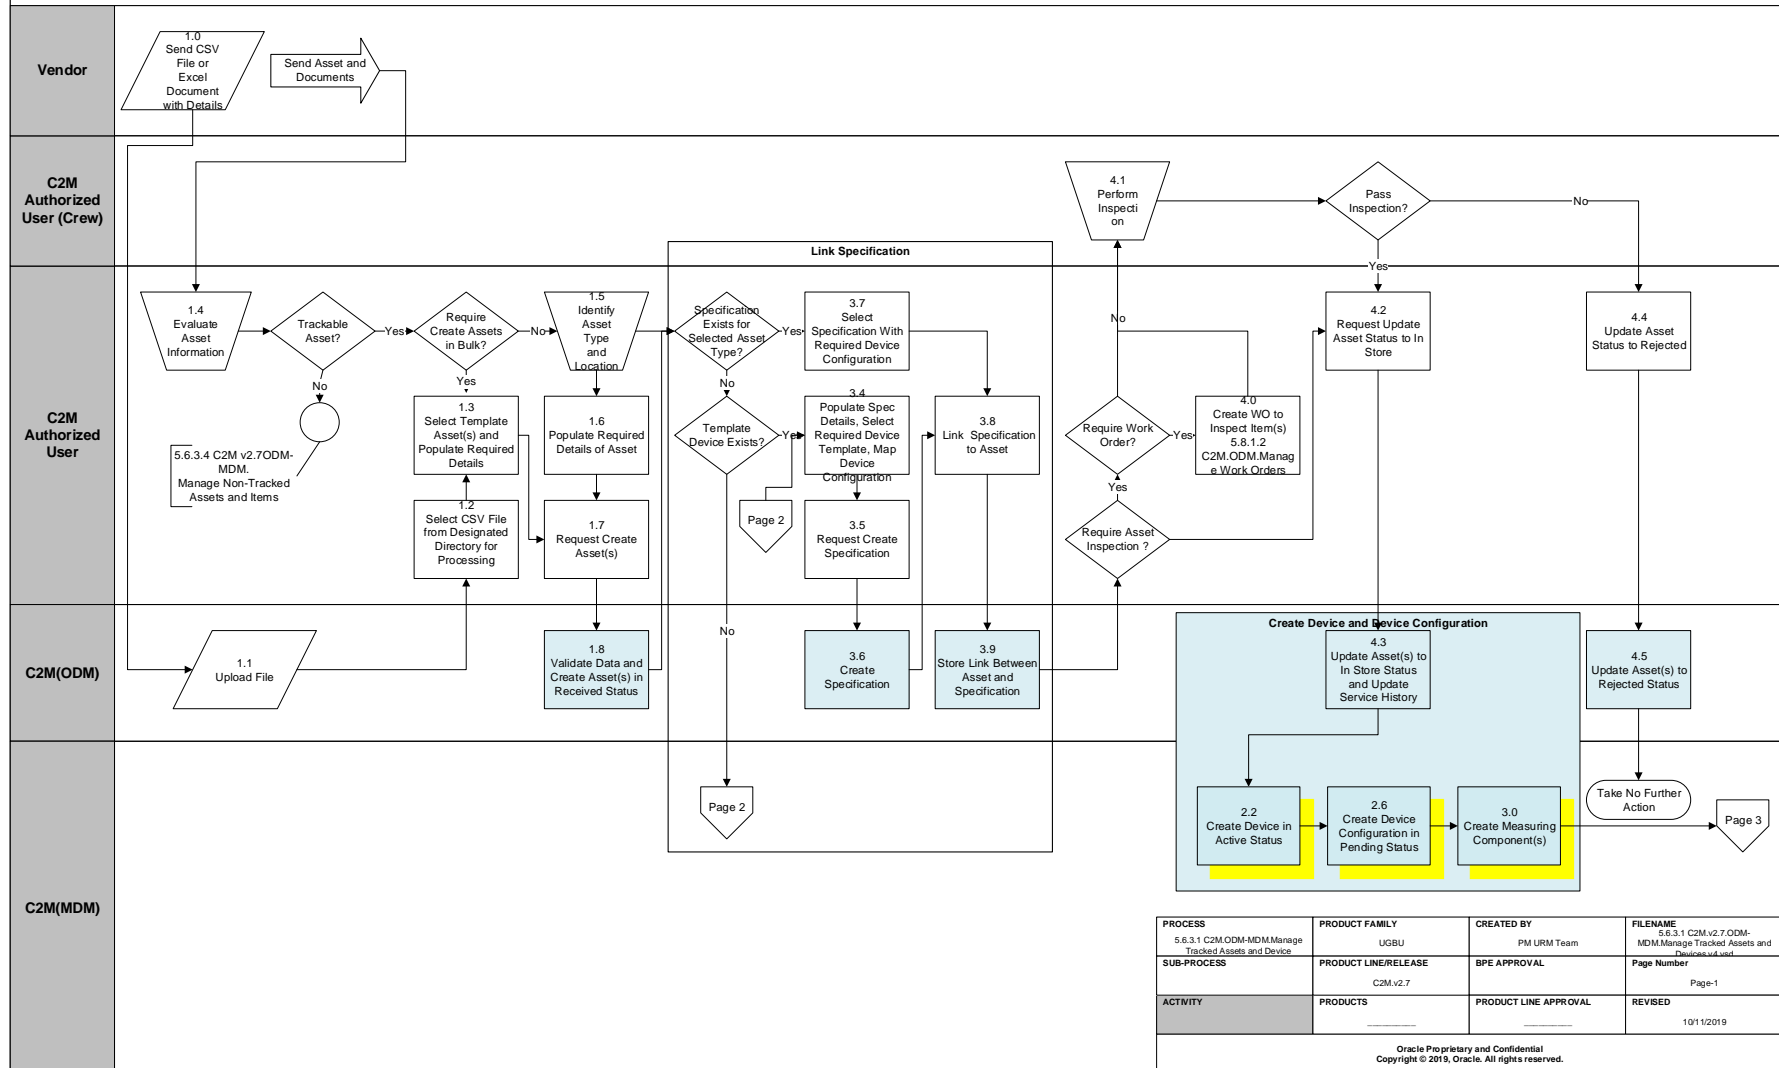

A measuring component can be associated to a physical device, which can have one or more measuring components, or it can be one of several other types of measuring components. Examples of other measuring components include:

- **Aggregator:** A class of measuring component that stores measurements that represent a summarization of other measurements from a potentially diverse set of devices.
- **Interval Scratchpad:** A class of measuring component that provides users with a means to manipulate "scratchpad" measurement data without affecting existing "live" measurement data.
- **Standalone:** A measuring component that is not related to a physical meter, e.g., market prices, weather data, etc.

When either a Meter Multiplier or Installation Constant is changed, it is validated and may become eligible for measurement reprocessing. C2M(MDM) creates system IMDs skipping the process of VEE and Consumption sync. The reprocessed IMDs are sent as subsequent correction to Billing system.

Service points are locations at which a company supplies service. Service points are used to store information describing the attributes of the service point

**1.4 Evaluate Asset Information**

**Actor/Role:** C2M Authorized User

**Description:** C2M Authorized User gathers all the required attributes for adding the Asset.

**1.5 Identify Asset Type and Location**

**Actor/Role:** C2M Authorized User

**Description:** C2M Authorized User Identifies Asset Type and Asset Location.

**1.6 Populate Required Details of Asset**

**Actor/Role:** C2M Authorized User

**Description:** C2M Authorized User populates required details to create a new Asset.

**1.7 Request Create Asset(s)**

**Actor/Role:** C2M Authorized User

**Description:** C2M Authorized User Requests to create Asset.

**1.8 Validate Data and Create Asset(s) in Received Status**

**Actor/Role:** C2M - ODM

**Description:** C2M-ODM creates tracked asset or component in disposition “In Receipt”.

**Process Plug-in enabled (Y)      Available Algorithm(s):**

W1-ASTMNTMON
W1-ASTDPNAUD
W1-ASSETINFO
W1-ASTDPNDEF
W1-DFASTOWAG
W1-ASTATTVAL

W2-RELFWVAL
W1-GCHG-CDCP
W2-SMTRFWLOG
W2-SMTRFWVAL

<b>Business Object (Y)</b>	<b>Business Object</b>	W1-TrackedAsset
		W2-CommunicationRelay
		W2-ManualMeter
		W2-SmartMeter
<b>Configuration required (Y)</b>	<b>Entities to Configure:</b>	Asset Type

**1.9 Analyze Requirements**

**Actor/Role:** C2M Authorized User

**Description:** When creating a new device online, the authorized user gathers all the required attributes for adding the device.

**2.0 Determine Device Type and Populate Data**

**Actor/Role:** C2M Authorized User

**Description:** The authorized user analyzes the device information that is provided.

**2.1 Request to Create Device**

**Actor/Role:** Authorized User

**Description:** Authorized User requests to create the Device.

**2.2 Create Device in Active Status**

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) creates the Device in Active status

**Note:** This task can be triggered from Manual and automated (Synchronization) processes

<b>Business Object (Y)</b>	<b>Business Object</b>	D1-SmartMeter
		D1-ManualMeter
		D1-SynchronizationAddDevice
<b>Configuration required (Y)</b>	<b>Entities to Configure:</b>	Device Type

### 2.3 Review Device Data

**Actor/Role:** Authorized User

**Description:** The Authorized User reviews the data after the device has been created.

### 2.4 Determine Device Configuration Type and Populate Data

**Actor/Role:** Authorized User

**Description:** The Authorized User determines the device configuration type and populates the information in C2M(MDM).

### 2.5 Request to Create Device Configuration

**Actor/Role:** Authorized User

**Description:** Authorized User requests to create the Device Configuration.

### 2.6 Create Device Configuration in Pending Status

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) creates the Device Configuration in Pending status.

**Note:** This task can be triggered from Manual and automated (Synchronization) processes

<b>Business Object (Y)</b>	<b>Business Object</b>	D1-DeviceConfiguration
		D1-SynchronizationAddDC
<b>Configuration required (Y)</b>	<b>Entities to Configure:</b>	Device Configuration Type

### 2.7 Review Device Configuration Data

**Actor/Role:** Authorized User

**Description:** The Authorized User reviews the data after the device configuration has been created.

### 2.8 Determine Measuring Component Type

**Actor/Role:** Authorized User

**Description:** The Authorized User determines the measuring component type and populates the information in C2M(MDM).

Note: If the Channel Multiplier field is not populated with data a default of "1.000000" will populate.

If the Measuring Component Type has been configured with *Fallback VEE Group for Initial Load*, *VEE Group for Estimation*, and *Fallback VEE Group for Manual Override*, those fields will be populated if the data is not supplied upon creation.

### 2.9 Request to Create Measuring Component(s)

**Actor/Role:** Authorized User

**Description:** Authorized User requests to create the Measuring Component.

### 3.0 Create Measuring Component(s)

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) creates the Measuring Component

**Note:** This task can be triggered from Manual and automated (Synchronization) processes

Business Object (Y)	Business Object	
		D1-SynchronizationAddMC
		D1-IntervalChannel
		D1-Register
		D1-RegisterAutoRead
<b>Configuration required (Y)</b>	<b>Entities to Configure:</b>	Measuring Component Type

### 3.1 Review Measuring Component Data

**Actor/Role:** Authorized User

**Description:** The Authorized User reviews the data after the measuring component has been created.

### 3.2 Request to Activate Device Configuration

**Actor/Role:** C2m Authorized User

**Description:** After the device, device configuration, and measuring component have been created, the Authorized User determines if the device configuration need to be “Active”. If so, the Authorized User requests to activate the device configuration using [Device Configuration screen](#)

**Note:** If the request to activate the device configuration is made before any measuring components have been added, an error message will be created.

### 3.3 Set Device Configuration Status to Active

**Actor/Role:** C2M Authorized User

**Description:** C2M(MDM) updates Device Configuration with a status of “Active”.

Note: If the Device Configuration is set to active before any measuring components are created, an error is created.

Note: This task can be triggered from Manual and automated (Synchronization) processes

### 3.4 Populate Spec Details, Select Required Device Template, Map Device Configuration

**Actor/Role:** C2M Authorized User

**Description:** To create specification Authorized User Populates Specification details and chooses Device configuration and corresponding device template

### 3.5 Request Create Specification

**Actor/Role:** C2M Authorized User

**Description:** C2M Authorized User requests to create Specification

### 3.6 Create Specification

**Actor/Role:** C2M (ODM)

**Description:** C2M(MDM) creates the Specification

<b>Process Plug-in enabled (Y)</b>	<b>Available Algorithm(s):</b>	W2-CCSPECVAL
		W2-SMSPECVAL
		W2-CRSPECVAL
<b>Business Object (Y)</b>	<b>Business Object</b>	W1-Specification
		W2-CommunicationComponentSpec
		W2-ManualMeterSpecification
		W2-SmartMeterSpecification

### 3.7 Select Specification With Required Device Configuration

**Actor/Role:** C2M Authorized User

**Description:** C2M Authorized user selects existing Specification.

### 3.8 Link Specification to Asset

**Actor/Role:** C2M Authorized User

**Description:** C2M Authorized User links Specification to Asset

### 3.9 Store link between Asset and Specification

**Actor/Role:** C2M Authorized User

**Description:** Asset stores the Specification ID

**Business Object (Y)      Business Object:**

W1-TrackedAsset
W1-Specification

### 4.1 Perform Inspection

**Actor/Role:** C2M Authorized User

**Description:** For Assets that require Inspection, C2M Authorized User performs Inspection

### 4.2 Request Update Asset Status to In Store

**Actor/Role:** C2M Authorized User

**Description:** C2M Authorized User updates Asset status to In Store

### 4.3 Update Asset(s) to In Store Status and Update Service History

**Actor/Role:** C2M (ODM)

**Description:** C2M (ODM) updates Asset Status to In Store

**Process Plug-in enabled (Y)      Available Algorithm(s):**

W1-SVCHSINFO
W1-DFSHSOWAG
W1-DFNDSVH

**Business Object (Y)**

**Business Object**

W1-AssetDposHistInStoreMvmnts
W1-TrackedAsset
W2-CommunicationRelay
W2-ManualMeter
W2-SmartMeter
W1-BasicTest

**Configuration required (Y)**

**Entities to Configure**

Service History Type
----------------------

**4.4 Update Asset Status to Rejected**

**Actor/Role:** C2M Authorized User

**Description:** C2M Authorized User updates Asset status to Rejected

**4.5 Update Asset(s) to Rejected Status**

**Actor/Role:** C2M (ODM)

**Description:** C2M (ODM) updates Asset status to Rejected

**Configuration required (Y)**

**Business Object:**

W1-TrackedAsset
W2-CommunicationRelay
W2-ManualMeter
W2-SmartMeter

**4.6 Review Asset and Device**

**Actor/Role:** C2M Authorized User

**Description:** C2M Authorized User reviews Asset and Device to see what needs to be updated

**4.7 Populate Asset Information**

**Actor/Role:** C2M Authorized User

**Description:** C2M Authorized User populates Asset information that needs to be updated

#### 4.8 Update Asset Details

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) updates the Asset with the data provided

**Note:** Task can be triggered from manual and automated (Synchronization) processes.

**Configuration required (Y)**      **Business Object:**

W1-TrackedAsset
W2-CommunicationRelay
W2-ManualMeter
W2-SmartMeter

#### 4.9 Update Device Details

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) updates the device with the data provided

**Note:** Task can be triggered from manual and automated (Synchronization) processes.

**Business Object (Y)**      **Business Object**

D1-SmartMeter
D1-ManualMeter
D1-OngoingSyncRequestDevice

#### 5.0 Review Device Configuration Data

**Actor/Role:** Authorized User

**Description:** The Authorized User reviews the data after the device has been updated.

#### 5.1 Locate Device Configuration and Populate Data

**Actor/Role:** Authorized User

**Description:** Authorized User finds the Device Configuration and populates and/or updates the Device Configuration with the analyzed device configuration requirements.

#### 5.2 Request Device Configuration Update

**Actor/Role:** Authorized User

**Description:** Authorized User requests to update the Device Configuration.

### 5.3 Update Device Configuration

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) updates Device Configuration with the data provided.

**Note:** Task can be triggered from manual and automated (Synchronization) processes

Business Object (Y)	Business Object
	D1-DeviceConfiguration
	D1-OngoingSyncRequestDC

### 5.4 Locate MC and Populate Data

**Actor/Role:** Authorized User

**Description:** The user finds the device and populates and/or updates the data with the analyzed requirements.

### 5.5 Request Measuring Component Update

**Actor/Role:** Authorized User

**Description:** Authorized User requests to update the [measuring component](#).

### 5.6 Update Measuring Component

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) updates the Measuring Component with the data provided.

**Note:** Task can be triggered from manual and automated (Synchronization) processes

Process Plug-in enabled (Y)	Available Algorithm(s):
	D1-DETTARGMC

Business Object (Y)	Business Object
	D1-IntervalChannel
	D1-Register
	D1-RegisterAutoRead
	D1-OngoingSyncRequestMC

### 5.7 Evaluate Metered Site Details

**Actor/Role:** Vendor

**Description:**

### 5.8 Select Measuring Component and Update Meter Multiplier

**Actor/Role:** Authorized User

**Description:** Authorized User selects measuring component and updates [meter multiplier](#).

**Configuration required (Y/N)**      **Entities to Configure:**

### 5.9 Update Measuring Component

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) updates Measuring Component and meter multiplier information.

### 6.0 Select Install Event and Update Installation Constant

**Actor/Role:** Authorized User

**Description:** Authorized User selects Install Event and updates [Installation Constant](#).

**Configuration required (Y/N)**      **Entities to Configure:**

### 6.1 Update Install Event

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) updates Install Event and Installation Constant information.

### 6.2 Validate Eligibility to Re-process Measurement

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) validates the eligibility to re-process measurement. C2M(MDM) validates that there is a change between the old value and the new multiplier or installation constant value and if the new value is different it next determines the period affected by the change.

Further, it validates that there are no other in-progress Activities for the same Activity type and MC. This is intended to prevent a user from creating a new Activity that will be in conflict with any existing system-generated Measurement Reprocessing Activity. There will be only one Activity created for Measuring Component.

<b>Process Plug-in enabled (Y/N)</b>	<b>Available Algorithm(s):</b>	D1-MRACTINFO (Measurement Reprocess Activity Information)
		D1-VALUNIQ (Validate Uniqueness)
<b>Business Object (Y/N)</b>	<b>Business Object</b>	D1-MeasurementReprocessParent
		D1-MeasurementReprocessScalar
		D1-MeasurementReprocesInterval

### 6.3 Create Measurement Reprocessing Activity in Pending State

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) creates measurement reprocessing activity in 'Pending' state. Prior to creation it pre-processes to determine the Activity Type and to generate a GUID i.e. a unique ID for the reprocessing activity. C2M(MDM) auto-transitions measurement reprocessing activity to next state based on evaluation. A batch monitor may be scheduled in the rare case when measurement reprocessing activity encounters error during auto-transition to next state and stays in 'Pending' state.

<b>Process Plug-in enabled (Y/N)</b>	<b>Available Algorithm(s):</b>	D1-DETTACTYP (Determine Activity Type)
		D1-POPGUID (Populate GUID)
<b>Business Object (Y/N)</b>	<b>Business Object</b>	D1-MeasurementReprocessParent
		D1-MeasurementReprocessScalar
		D1-MeasurementReprocesInterval

### 6.4 Evaluate Criteria for Approval

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) evaluates criteria for approval. C2M(MDM) checks the Measurement Reprocessing [Activity Type](#) configuration for whether 'Approval Required?' is set. If set to "No", then the Activity will move on to the 'Ready for Processing' status. If set to "Yes", then the logic checks if any of the 'Preapproved Percentages' are set on the Measurement Reprocessing Activity Type. If the 'Preapproved Percentages' are set then those are compared to the Multiplier or Installation Constant percentage of change that originally initiated the Activity. If the percentage of change falls outside of the 'Preapproved Percentages' or they aren't populated, then a manual approval is required.

<b>Process Plug-in enabled (Y/N)</b>	<b>Available Algorithm(s):</b>	D1-DETMRAPPR (Determine Measurement Reprocessing Approval)
--------------------------------------	--------------------------------	--

<b>Business Object (Y/N)</b>	<b>Business Object</b>	D1-MeasurementReprocessParent D1-MeasurementReprocessScalar D1-MeasurementReprocesInterval
<b>Configuration required (Y/N)</b>	<b>Entities to Configure:</b>	Activity Type for Measurement Reprocessing - Scalar Activity Type for Measurement Reprocessing - Interval

**6.5 Create To Do for Approval and Transition to Approval Required State**

**Actor/Role:** C2M(MDM)  
**Description:** C2M(MDM) creates 'To Do' for approval required and transitions to 'Approval Required' state.

<b>Process Plug-in enabled (Y/N)</b>	<b>Available Algorithm(s):</b>	F1-AT-RQJ (Transition to Default Next Status (Java)) D1-MRAPPTODO (Create Measurement Reprocessing Requiring Approval To-Do Entry)
--------------------------------------	--------------------------------	---

<b>Business Object (Y/N)</b>	<b>Business Object</b>	D1-MeasurementReprocessParent D1-MeasurementReprocessScalar D1-MeasurementReprocesInterval
------------------------------	------------------------	--

<b>Configuration required (Y/N)</b>	<b>Entities to Configure:</b>	To Do Type and Role in Activity Type
-------------------------------------	-------------------------------	--------------------------------------

**6.6 Review Change**

**Actor/Role:** Authorized User (Approver)  
**Description:** Authorized User (Approver) reviews the change and the update performed on Meter Multiplier of Installation Constant.

**6.7 Request to Approve**

**Actor/Role:** Authorized User (Approver)  
**Description:** Authorized User (Approver) makes a request to approve the measurement reprocessing activity.

### 6.8 Complete To Do

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) completes 'To Do' created.

<b>Process Plug-in enabled (Y/N)</b>	<b>Available Algorithm(s):</b>	D1-GTDCBO (Generic To-Do Completion for BOs)
--------------------------------------	--------------------------------	--

<b>Business Object (Y/N)</b>	<b>Business Object</b>	D1-MeasurementReprocessParent
		D1-MeasurementReprocessScalar
		D1-MeasurementReprocesInterval

### 6.9 Update Measurement Reprocessing Activity to Ready for Processing State

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) updates measurement reprocessing activity to 'Ready for Processing' state.

<b>Business Object (Y/N)</b>	<b>Business Object</b>	D1-MeasurementReprocessParent
		D1-MeasurementReprocessScalar
		D1-MeasurementReprocesInterval

<b>Customizable process (Y/N)</b>	<b>Process Name</b>	D1-MRAC (Measurement Reprocessing Monitor)
-----------------------------------	---------------------	--

### 7.0 Request to Discard

**Actor/Role:** Authorized User (Approver)

**Description:** Authorized User can make a request to discard measurement reprocessing activity.

Note: An activity discarded stays in database and is not completely removed from system.

### 7.1 Discard Measurement Reprocessing Activity

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) discards measurement reprocessing activity.

### 7.2 Analyze Measurement Reprocessing

**Actor/Role:** Authorized User

**Description:** Authorized User analyzes measurement reprocessing activity.

**7.3 Request to Process**

**Actor/Role:** Authorized User

**Description:** Authorized User makes a request to process measurement reprocessing activity.

**7.4 Transition to Process State**

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) transitions measurement reprocessing activity to 'Process' state.

Business Object (Y/N)	Business Object
	D1-MeasurementReprocessParent
	D1-MeasurementReprocessScalar
	D1-MeasurementReprocesInterval

**7.5 Transition to Process State**

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) transitions measurement reprocessing activity to Process State. A batch monitor is configured here to monitor and take forward the processing of measurement reprocessing activity towards initiating the creation of IMD Seeder for reprocessing.

Business Object (Y/N)	Business Object
	D1-MeasurementReprocessParent
	D1-MeasurementReprocessScalar
	D1-MeasurementReprocesInterval

Customizable process (Y/N)	Process Name
	D1-MRAC

**7.6 Initiate IMD seeder Creation**

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) initiates the creation of IMD Seeder. C2M(MDM) identifies the type of measuring component and initiate IMD creation specific to scalar or interval channel. In case of Install Event, it determines the measuring components associates and accordingly initiates the creation.

C2M(MDM) looks for the measurements in the effective period to populate the new IMDs. If the Measurement Reading isn't populated, then C2M(MDM) will look to the original IMD linked to the Measurement in order to pull the reading required for the new IMD. If neither exist, then the Measurement reprocessing will be skipped.

<b>Process Plug-in enabled (Y/N)</b>	<b>Available Algorithm(s):</b>	D1-REPSCMSRS (Reprocess Scalar Measurements)
		D1-REPINMSRS (Reprocess Interval Measurements)

<b>Business Object (Y/N)</b>	<b>Business Object</b>	D1-MeasurementReprocessParent
		D1-MeasurementReprocessScalar
		D1-MeasurementReprocesInterval
		D1-IMDSeeder
		D1-SystemIMDScalar
		D1-SystemIMDInterval

**7.7 Create To Do in Issue Detected State and Perform Exception Process**

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) creates a To Do for issues encounters during the creation of IMDs and transitions the measurement reprocess activity to 'Issue Detected' state. The User can perform the standard exception process in terms of analyzing the To Do for the error and request C2M(MDM) to either initiate to reprocess or discard.

If the User doesn't take any action, the measurement reprocess activity in 'Issue Detected' state is reprocessed through a batch scheduler. Finally, it is rejected by the system.

<b>Process Plug-in enabled (Y/N)</b>	<b>Available Algorithm(s):</b>	D1-WTTMOUT (Wait Time Out - Transition to Rejection)
		D1-RBOE (Retry BO in Error)
		D1-GTDCBO (Generic To-Do Completion for BOs)

<b>Business Object (Y/N)</b>	<b>Business Object</b>	D1-MeasurementReprocessParent
		D1-MeasurementReprocessScalar
		D1-MeasurementReprocesInterval

<b>Customizable process (Y/N)</b>	<b>Process Name</b>	D1-MRER (Measurement Reprocessing - Retry Monitor)
-----------------------------------	---------------------	--

**7.8 Complete Measurement Reprocessing Activity**

**Actor/Role:** C2M(MDM)

**Description:** C2M(MDM) completes measurement reprocessing activity. In parallel, the IMD Creation process continues. Please refer to process 4.2.1.1 C2M.MDM.Upload Device Measurements. System IMD for more details.

<b>Process Plug-in enabled (Y/N)</b>	<b>Available Algorithm(s):</b>	<table border="1"> <tr> <td data-bbox="882 337 1543 373">D1-REPSCMSRS (Reprocess Scalar Measurements)</td> </tr> <tr> <td data-bbox="882 373 1543 414">D1-REPINMSRS (Reprocess Interval Measurements)</td> </tr> </table>	D1-REPSCMSRS (Reprocess Scalar Measurements)	D1-REPINMSRS (Reprocess Interval Measurements)
