# Chapter 1 – RDM message API

## API summary

RDM maintains many API interfaces to support the downloading of specific data used in the application. These interfaces provide both generic and specific return values to the RIB as each message is consumed. This document contains the status codes and error messages returned by the API interfaces.

The first table contains the entire list of return values in numeric order. The second table contains the same list, in alphabetic order.

See Operations Guide – Volume 1: Functional Overviews for specific information about each API.

## Detail of procedures

Each CONSUME procedure returns both a status code and an error message. When the message is consumed successfully, the status code will return an 'S', and the error message will be NULL.

## Chapter 2 - Error codes

All error codes are contained in the RDMRIB\_ERROR package.

**Table A - Error codes in numeric order**

Error Message	Status Code	Description
k_GENERAL_SUCCESS	S	A message was consumed.
