Customer Support

Customer Support hours:

Customer Support is available 7x24x365 via e-mail, phone and Web access.

Depending on the Support option chosen by a particular client (Standard, Plus, or Premium), the times that certain services are delivered may be restricted. Severity 1 (Critical) issues are addressed on a 7x24 basis and receive continuous attention until resolved, for all clients on active maintenance.

Functional enhancements

Retek Price Management (RPM) 10.1 supports the following new enhancements and features. For more information, please see the *Retek Price Management 10.1 User Guide*.

General

- RPM 10.1 now supports value-added tax (VAT.) VAT is reflected in the statistical information on the Worksheet Status screen.
- When changing aggregation levels for a department from department level to class level aggregation, RPM 10.1 will optionally not discard the schedule and pricing strategy information for the department. Instead, it will provide an option to copy this information to all classes for the department. RPM 10.0 would have unconditionally discarded the information on an aggregation level change.
- Most screens in RPM 10.1 now host a logout button. Users can now logout from most screens rather than having to logout only from the main menu, as was the case in RPM 10.0.
- When a session expires, RPM 10.1 presents users with the logon screen and closes any open windows that are no longer valid. This presents users with a new, clean session.

Worksheet

- When users export a worksheet, RPM 10.1 no longer displays an extra small window.
- RPM 10.1 supports new columns on the worksheet:
 - WH on Order Amount
 - Store on Order Amount
 - Markdown Number
 - Weeks Sales Exp.

Worksheet status

- Navigation and scrolling on the Worksheet Status screen has been improved.
- RPM 10.1 now allows columns on the Worksheet Status screen to be resized, re-arranged, or hidden.
- RPM 10.1 now allows rows on the Worksheet Status screen to be sorted in either ascending or descending order.

Internationalization

- RPM 10.1 formats numeric, currency, and date values for the locale of the user.
- RPM 10.1 supports code pages for various user locales.

Currency conversion

RPM 10.1 now converts currency amounts from one currency to another in specific instances:

- Candidate rules that use conditions with currency values. For such values, specify a currency amount in the system currency, which is contained in `SYSTEM_OPTIONS`. RPM 10.1 now converts all currency amounts from the system currency to the currency of a price zone when selecting candidate items from that price zone.
- Cost information. RPM 10.1 now converts item costs from the currency of a price zone to the system currency when selecting items to display in a worksheet. RPM 10.1 worksheets will always display cost information in a single currency.

Candidate Rules

- RPM 10.1 allow users to work with the variables from only one department at a time. This new restriction makes the Candidate Rule Variable Maintenance screen much more understandable as to which variables belong to which department.

Schedules

- RPM 10.1 now fits a schedule to its snapshots, so that there are no extra days in a schedule. For instance, if you have a ten-day schedule with a snapshot every four days, then you get a snapshot on the first, fifth and ninth days. RPM 10.1 will, optionally, trim the schedule to eight days, so that the ninth and tenth days can be used for a different schedule.

Performance enhancements

Integration enhancements

N/A

Known issues

The following issues describe limitations to the functionality of Retek Price Management (RPM) 10.1. The functionality described by these issues may change in future versions of RPM.

- RPM 10.1 completes pricing using only the current selling unit of measure held by RMS for an item. The unit of measure for an item cannot be changed in RPM 10.1.
- RPM 10.1 does not include an item in a worksheet for a particular retail zone if the item is not active for that zone. In other words, if RPM 10.1 does not locate the item in the RMS future cost table for the retail zone, the item will not appear on the RPM worksheet.
- When aggregating rows on a worksheet, a default value will be displayed in certain columns of the parent row where the data in the aggregated rows could not be aggregated. The default value varies by the type of data in the column:
 - If the column holds a date, RPM 10.1 will display a date from 1970.
 - If the column holds a numeric, percentage or currency value, RPM 10.1 will display a value of -99999999.
 - If the column holds text, RPM 10.1 will display the letter “V”.
- Rarely, RPM 10.1 may fail to display any rows for a pricing worksheet. If this happens, merely refresh the page and the rows will re-appear.

Additional changes

Table Changes

RPM 10.1 includes the following table changes:

- RPM_ITEM_EXT

New Columns in RPM_ITEM_EXT
WH_ON_ORDER
STORE_ON_ORDER
BASE_COST
RETAIL_INCLUDE_VAT_IND
VAT_RATE
ORIGINAL_EFFECTIVE_DATE
ORIG_OUT_OF_STOCK_DATE
ORIG_CLEARANCE

- RPM_WS_STATUS

New Columns in RPM_WS_STATUS
WORKSHEET_STATUS_SALES_AMOUNT_EXVAT_0
WORKSHEET_STATUS_SALES_AMOUNT_EXVAT_1

- RPM_COLUMN

New Columns in RPM_COLUMN
IS_HIDEABLE

Also, for RPM_COLUMN in RPM 10.1, the IS_VISIBLE column now contains a '1' or a '0' to signify whether the column is visible. In RPM 10.0, this column contains a 'Y' or 'N'.

Packaging changes

RPM 10.1 redistributes classes previously contained in package `com.retek.rpm.dao.db.oracle` to one of the following new sub-packages:

- `com.retek.rpm.dao.db.oracle.batch`
contains the oracle-based front-end batch updaters that RPM 10.0 previously included in `com.retek.rpm.batch`.
- `com.retek.rpm.dao.db.oracle.rms`
contains oracle-based handlers that are associated with RMS tables.
- `com.retek.rpm.dao.db.oracle.rpm`
contains oracle-based handlers that are associated with RPM tables.
