ABOUT THIS PEOPLEBOOK

This section describes information you should know before you begin working with PeopleSoft products and documentation, including PeopleSoft-specific documentation conventions, information specific to the PeopleSoft Portal Solutions product line, how to order additional copies of our documentation, and so on.

The book provides you with the information you will need for implementing and using PeopleSoft Government Portal. You can order the online version by requesting SKU PS8SP2r0, or the hard-copy version by requesting SKU MAGPEr8SP2B 1200.

Before You Begin

To benefit fully from the information covered in this book, you need to have a basic understanding of how to use PeopleSoft applications. We recommend that you complete at least one PeopleSoft introductory training course.

You should be familiar with navigating around the system and adding, updating, and deleting information using PeopleSoft windows, menus, and pages. You should also be comfortable using the World Wide Web and the Microsoft® Windows or Windows NT graphical user interface.

Because we assume you already know how to navigate around the PeopleSoft system, much of the information in this book is not procedural. That is, it does not typically provide step-by-step instructions on using tables, pages, and menus. Instead, we provide you with all the information you need to use the system most effectively and to implement your PeopleSoft application according to your organizational or departmental needs. This book expands on the material covered in PeopleSoft training classes.

Related Documentation

To add to your knowledge of PeopleSoft applications and tools, you may want to refer to the documentation of other PeopleSoft applications. You can access additional documentation for this release from PeopleSoft Customer Connection (www.peoplesoft.com). We post updates and other items on Customer Connection, as well. In addition, documentation for this release is available on CD-ROM and in hard copy.

Important! Before upgrading, it is *imperative* that you check PeopleSoft Customer Connection for updates to the upgrade instructions. We continually post updates as we refine the upgrade process.

Documentation on the Internet

You can order printed, bound versions of the complete PeopleSoft documentation delivered on your PeopleBooks CD-ROM. You can order additional copies of the PeopleBooks CDs through the Documentation section of the PeopleSoft Customer Connection Web site: <http://www.peoplesoft.com/>.

You'll also find updates to the documentation for this and previous releases on Customer Connection. Through the Documentation section of Customer Connection, you can download files to add to your PeopleBook library. You'll find a variety of useful and timely materials, including updates to the full PeopleSoft documentation delivered on your PeopleBooks CD.

Documentation on CD-ROM

Complete documentation for PeopleSoft Government Portal is provided on the CD-ROM *PeopleSoft Government Portal PeopleBook*.

Your access to PeopleSoft PeopleBooks depends on which PeopleSoft applications you've licensed. You may not have access to some of the PeopleBooks listed here.

The CD includes the following PeopleBooks (presented in HTML format) that you can print in whole or in part:

- PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook
- PeopleSoft 8 Campus Portal SP2 PeopleBook
- PeopleSoft 8 Enterprise Portal SP2 PeopleBook
- PeopleSoft 8 Government Portal SP2 PeopleBook
- PeopleSoft 8 Customer Portal SP2 PeopleBook
- PeopleSoft 8 Employee Portal SP2 PeopleBook
- PeopleSoft 8 Supplier Portal SP2 PeopleBook
- PeopleSoft 8 Enterprise Integration SP2 PeopleBook
- PeopleTools 8.12 PeopleBook
- Using PeopleBooks
- Using PeopleSoft Applications PeopleBook

Hardcopy Documentation

To order printed, bound volumes of the complete PeopleSoft documentation delivered on your PeopleBooks CD-ROM, visit the Ordering PeopleBooks section of the PeopleSoft Customer Connection web site.

We make printed documentation for each major release available shortly after the software is first shipped. Customers and partners can order printed PeopleSoft documentation using any of the following methods:

Internet	From the main PeopleSoft Internet site, go to the Documentation section of Customer Connection. You can find order information under the Ordering PeopleBooks topic. PeopleSoft Internet site: http://www.peoplesoft.com/ .
Telephone	Contact Consolidated Publishing Incorporated (CPI) at 800 888 3559 .
Email	Email CPI at callcenter@conpub.com .

Typographical Conventions and Visual Cues

To help you locate and interpret information, we use a number of standard conventions in our online documentation.

Please take a moment to review the following typographical cues:

<code>(monospace font)</code>	Indicates PeopleCode.
Bold	Indicates field names and other page elements, such as buttons and group box labels, when these elements are documented below the page on which they appear. When we refer to these elements elsewhere in the documentation, we set them in Normal style (not in bold). We also use boldface when we refer to navigational paths, menu names, or process actions (such as Save and Run).
<i>Italics</i>	Indicates a PeopleSoft or other book-length publication. We also use italics for <i>emphasis</i> and to indicate specific field values. When we cite a field value under the page on which it appears, we use this style: <i>field value</i> . We also use italics when referring to words as words or letters as letters, as in the following: Enter the number 0, not the letter O.
KEY+KEY	Indicates a key combination action. For example, a plus sign (+) between keys means that you must hold down the first key while you press the second key. For ALT+W, hold down the ALT key while you press W.

Bold	Indicates field names and other page elements, such as buttons and group box labels, when these elements are documented below the page on which they appear. When we refer to these elements elsewhere in the documentation, we set them in Normal style (not in bold).
Cross-references	<p>The phrase "For more information" indicates where you can find additional documentation on the topic at hand.</p> <ul style="list-style-type: none"> Capitalized titles in <i>italics</i> indicate the title of another PeopleBook. For example: For more information about billing, see <i>PeopleSoft 8.00.01 Billing PeopleBook</i>. Capitalized titles in <i>italics</i> followed by chapter title in quotes refer to a chapter in another PeopleBook. For example: For more information about establishing rate templates, see <i>PeopleSoft 8.00.01 Projects PeopleBook</i>, "Integrating With PeopleSoft Billing and PeopleSoft Contracts". Capitalized titles in quotes refer to another chapter of this PeopleBook. For example: For more information about contract status security, see "Securing Your PeopleSoft Contracts System". Capitalized titles refer to sections within this chapter of this PeopleBook. For example: For more information about Defining Contract Statuses, see Defining Your Own Contract Statuses.
<i>Italics</i>	<p>Indicates a PeopleSoft or other book-length publication. We also use italics for <i>emphasis</i> and to indicate specific field values. When we cite a field value under the page on which it appears, we use this style: <i>field value</i>.</p> <p>We also use italics when we refer to words as words or letters as letters, as in the following: Enter the number <i>0</i>, not the letter <i>O</i>.</p>
KEY+KEY	Indicates a key combination action. For example, a plus sign (+) between keys means that you must hold down the first key while you press the second key. For ALT+W, hold down the ALT key while you press W.
We use a table to introduce the documentation of all pages. You'll find the following information in these tables.	
Usage	The reason you would use the page.

Object Name	<p>The system name for this page.</p> <p>You can find a page's object name by right-clicking on the page itself (the middle of the frame) and selecting View Source. The HTML code for that page appears. You'll find the page's object name in the string that begins with the word Page. For example, in the string, Page: JOB_DATA1, the page's object name is JOB_DATA1. You can also see the component name and the menu name. For example:</p> <p>Page:PO_LINE Component:PURCHASE_ORDER Menu:MANAGE_PURCHASE_ORDERS</p>
Navigation	How to get to this page.
Prerequisites	Pages where you must enter data in order to have the appropriate information default to this page.
Access Requirements	The keys you must enter in order to access the page or component.

Text in this bar indicates information that you should pay particular attention to as you work with your PeopleSoft system. If the note is preceded by **Important**, the note is crucial and includes information that concerns what you need to do for the system to function properly.

Text in this bar indicates For more information cross-references to related or additional information.

Text within this bar indicates a crucial implementation consideration. Pay very close attention to these warning messages.

Comments and Suggestions

Your comments are important to us. We encourage you to tell us what you like, or what you would like changed about our documentation, PeopleBooks, and other PeopleSoft reference and training materials. Please send your suggestions to:

PeopleSoft Financial Management for Education and Government Product Documentation
Manager
PeopleSoft, Inc.
4460 PeopleSoft Parkway
Pleasanton, CA 94588

Or send comments by email to the authors of the PeopleSoft documentation at:

DOC@PEOPLESOFT.COM

While we cannot guarantee to answer every email message, we will pay careful attention to your comments and suggestions. We are always improving our product communications for you.

CHAPTER 1

Introducing PeopleSoft Government Portal

PeopleSoft Government Portal leverages a set of technologies that exploit the internet and enable public institutions and their constituents to interact in a way that could not be done with conventional technology such as Electronic Data Interchange (EDI) or client/server networks. PeopleSoft Government Portal makes information available in real time to improve relationships, response capability, and employee productivity at little or no cost to vendors, customers, and suppliers.

Portals and Enterprise Portals

Portals are sites that provide access to information through a single consolidated interface. Portals can do the following:

- Classify content into a hierarchical category structure.
- Provide free-form searching across all classified content.
- Function as an initial page where users can add, remove, and arrange content to create a personalized homepage.

Technological progress brings these concepts to the business world in the form of enterprise portals. Indeed, businesses provide a broad array of information, applications, and tools to a diverse audience. Yet with the enterprise portal, information is accessible from a single place. The enterprise portal serves as a gateway to the resources across the enterprise and beyond through a web page that is personalized to the needs of each user.

Enterprise Portals and XML

Using enterprise portals, you can access different kinds of data from disparate business systems. The data that you encounter can be structured data that resides in enterprise systems (such as databases) as well as unstructured data in the form of word processing documents, content in emails, audio/video files, and graphics. Integration is key to providing you with a single point of access to all of this enterprise information. Indeed, an enterprise portal can be regarded as an integration of enterprise applications and the internet.

With its potential to simplify information integration, Extensible Markup Language (XML) is a valuable asset for enterprise portals. As a versatile language, XML offers powerful flexibility for defining tags that describe the structure of all types of information. We can think of XML as a translator that enables disparate business systems to talk with each other and exchange data. As a result, enterprise portals that support XML can more easily integrate data from the internet, unstructured data in emails and other documents in the enterprise, and structured information from databases. Government users can find the information they need, regardless of its format or where it resides.

Government Portal Overview

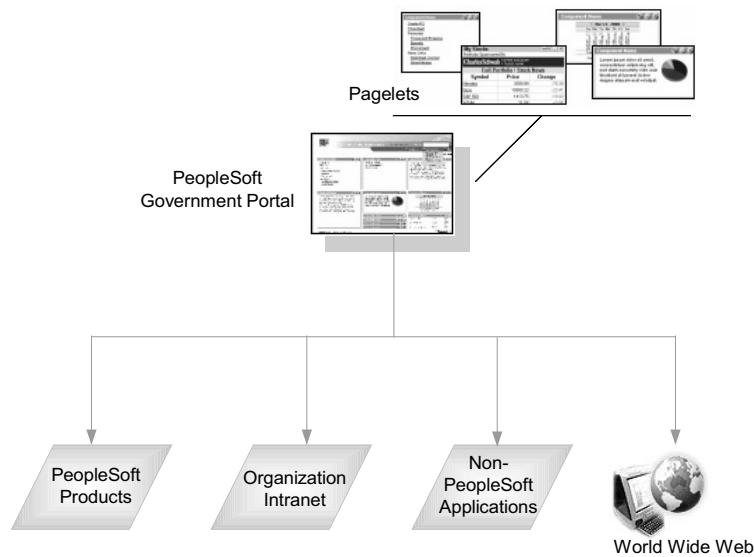

Through the PeopleSoft Government Portal, vendors, customers, suppliers, and guests can view the same data that's available to employees. Using a standard web browser vendors can modify their own business information and review invoices, payments, and account balances through inquiry panels.

You can set up the portal to allow employees and managers to perform a wide variety of tasks including updating personal information, signing up for training courses, reviewing job postings, reporting time, and viewing and updating personal accounts.

PeopleSoft Government Portal enables you to make real-time data available across the boundaries of your organization, which can help improve productivity and responsiveness.

Employees, vendors, customers, and suppliers can use PeopleSoft Government Portal to access multiple products and applications. Individual users can personalize their homepages and find information that's relevant to their roles within their own organizations, creating a more collaborative and efficient environment. PeopleSoft Government Portal offers browser-based, real-time access to information that your employees, vendors, customers, and suppliers need.

PeopleSoft Government Portal is a separate application that functions as a single point of entry to PeopleSoft products, non-PeopleSoft applications, and to content on intranet sites and the web. The following diagram illustrates these relationships.

Single point of entry for PeopleSoft products, non-PeopleSoft applications, intranet and web content

Using PeopleSoft Government Portal, your employees, vendors, customers and suppliers can access PeopleSoft self-service transactions, which can be tightly integrated with your internal PeopleSoft applications and enable real-time collaboration, lookups, and processing. PeopleSoft Government Portal provides a highly integrated solution for improving the service levels of your organization.

PeopleSoft Government Portal Features

This section introduces you to some general features of PeopleSoft Government Portal.

PeopleSoft Portal Technology

The PeopleSoft Enterprise Portal tools and architecture are the basis of PeopleSoft Government Portal. This collection of technologies includes the portal registry, the page assembler, personalization, the search engine, and navigation.

For more information about portal technology, see *PeopleTools 8.12 Portal Technology PeopleBook*.

Enterprise-Wide PeopleSoft Information Architecture

The information architecture in PeopleSoft Government Portal features a powerful content hierarchy. In addition, it offers related information links and rich keyword associations that ease a user's search for information.

The elements that comprise the portal's information architecture are the extensible enterprise-wide hierarchy, related information links, rich keyword associations, and sample roles.

For more information about information architecture, see *PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook*, “Understanding Information Architecture”.

The Enterprise-Wide Hierarchy

PeopleSoft Government Portal features a delivered PeopleSoft enterprise-wide navigational hierarchy. This involves new standards for an aggregated web-based approach to the hierarchy. The following are the high-level approaches and standards that you encounter in Government Portal:

- All employee self-service content is grouped under a high-level node called My Information.
- Power-user transactions have a structure similar to the application menu structure, enabling you to navigate to the PeopleSoft applications quickly.
- Category titles and descriptions are brief and written with meaningful keywords.
- PeopleSoft business process analysts who are trained in web information architecture built the navigational hierarchy of PeopleSoft Government Portal. They organized the content by business processes regardless of product or product lines.
- PeopleSoft business process analysts have built sample roles for PeopleSoft Government Portal. Based on these roles, the analysts tested the usability of the hierarchy.

Related Information Links

The PeopleSoft information architects identified key transactions that provide you with a short-cut to other related information links. They used the Related Information pagelet and Portal Template to establish cross-reference links that are based on typical business process requirements. This enables you to jump quickly from one application to another.

PeopleSoft Government Portal also provides the Government Resource Directory, which is a menu item providing related links to various government organizations and affiliations.

For more information about related information links, see *PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook*, “Understanding Related Links”. For more information about the Government Resource Directory, see **Government Resource Directory**.

Rich Keyword Associations

The PeopleSoft information architects provided key functional words for each PeopleSoft web page that is registered within the hierarchy. As a result, you find web pages easily, even when you don't know the exact name of the PeopleSoft menu item.

Sample Roles

PeopleSoft Government Portal includes sample roles based on real business processes. This enables customers to implement the portal quickly.

Extensible Hierarchy

With an extensible content hierarchy, you can weave other Hypertext Markup Language (HTML) content from your intranet and the web directly into PeopleSoft Government Portal. As a result, all appropriate content for the workforce is in one place.

Government Portal Security

PeopleSoft Government Portal includes a security architecture that enables you to restrict access for each user to only the information pertinent to that user's specific role.

You need to use the PeopleTools Security Administrator to set up a unique operator ID and password for each eBusiness application user. In addition, you need to associate each operator ID with the corresponding data that the user can view. For example, to set up a vendor for eBusiness access, you would establish an operator ID and associate it with that vendor's ID. When the vendor logs on to the eBusiness application, the vendor receives access only to the address, contact, invoice, and payment information specific to that vendor.

For more information about PeopleSoft Government Portal security, see *PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook*, “Understanding Information Architecture” and *PeopleTools 8.12 Security PeopleBook*.

Homepage Pagelets

Various homepage pagelets can be used with PeopleSoft Government Portal. These pagelets display information within a small rectangular area on the homepage. Users can add, remove, and rearrange pagelets to create their own homepages.

PeopleSoft Government Portal enables each user to choose from a variety of pre-configured pagelets. You can also design your own pagelets.

For more information about designing your own pagelets, see *PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook*, “Using Content From the Internet” and *PeopleTools 8.12 Portal Technology PeopleBook*, “Developing Pagelets”.

PeopleSoft Government Portal is delivered with PeopleSoft Enterprise Portal, which in turn delivers preconfigured pagelets. In this section, we look at these homepage pagelets. You can make any or all of the preconfigured pagelets available to your users to incorporate into their homepages.

Company News

The Company News pagelet enables your organization to publish specific news articles and display them within this pagelet. The articles that employees can access are role sensitive.

For more information about the Company News pagelet, see *PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook*, “Using the Company News Pagelet”.

Company Events

The Company Events pagelet enables your organization to post event information for employees. The events that employees see are role-sensitive.

For more information about the Company Events pagelet, see *PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook*, “Using the Company Events Pagelet”.

Integrated Task List

You can look at your work list and personal “to do” items within the portal. This is accomplished with the Integrated Task List pagelet, which enables you to build your own task list and view the tasks within the pagelet’s display.

For more information about integrated task lists, see *PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook*, “Understanding the Integrated Task List Pagelet”.

External Content

PeopleSoft Government Portal offers both internal and external content. The external content is based on information that you'll encounter at popular internet portals—headline news, stocks, sports, and weather, just to name a few. The web is filled with this free content, and Government Portal provides many of these external pagelets. Specifically, it accesses web sites that have syndicated content. The process is based on Rich Site Summary (RSS) and Open Content Syndication (OCS), two XML-based content standards that enable content providers to syndicate their content.

In addition, PeopleSoft Government Portal offers external content from various content syndication partners. PeopleSoft's content syndication partners include iSyndicate and Moreover.com.

For more information about external content, see *PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook*, “Using Content From the Internet”.

Email and Calendar Integration

You can use email integration to view your latest email messages without leaving the PeopleSoft portal. You can also check your email whether or not you're at your own computer, even if the email package is a Windows client implementation. The portal can integrate with Lotus Notes, Microsoft Outlook, or any Pop-enabled mail software. In addition, if the email package is web enabled, you can launch your email directly from the portal.

Calendar integration enables you to check your appointments for the current day without leaving the portal. Moreover, you can view your schedule whether you're using your own machine or not, even if the calendar package is a Windows client implementation. The portal can integrate with Lotus Notes and Microsoft Outlook.

For more information about email and calendar integration, see *PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook*, “Using Third-Party Email and Calendar Events”.

Web Publishing

With web publishing, you can create a striking online magazine. The publication technology pulls together disparate pieces of content (such as articles) and displays them in an organized layout. Multiple publications are supported, and individual issues can be effective-dated to keep information current. From the homepage, you can access various publication issues based on your roles.

For more information about web publishing, see *PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook*, “Creating Web Magazines”.

Multinational Considerations

PeopleSoft Government Portal is translated into all the languages that PeopleSoft supports. The applications and content appear in your preferred language. If you're a casual user or guest who navigates to a homepage, you can select your preferred language. Once you're officially logged in, you're presented with information in the language designated in your profile.

The enterprise-wide information architecture is also translated into all the languages that PeopleSoft supports. The translation includes the following elements:

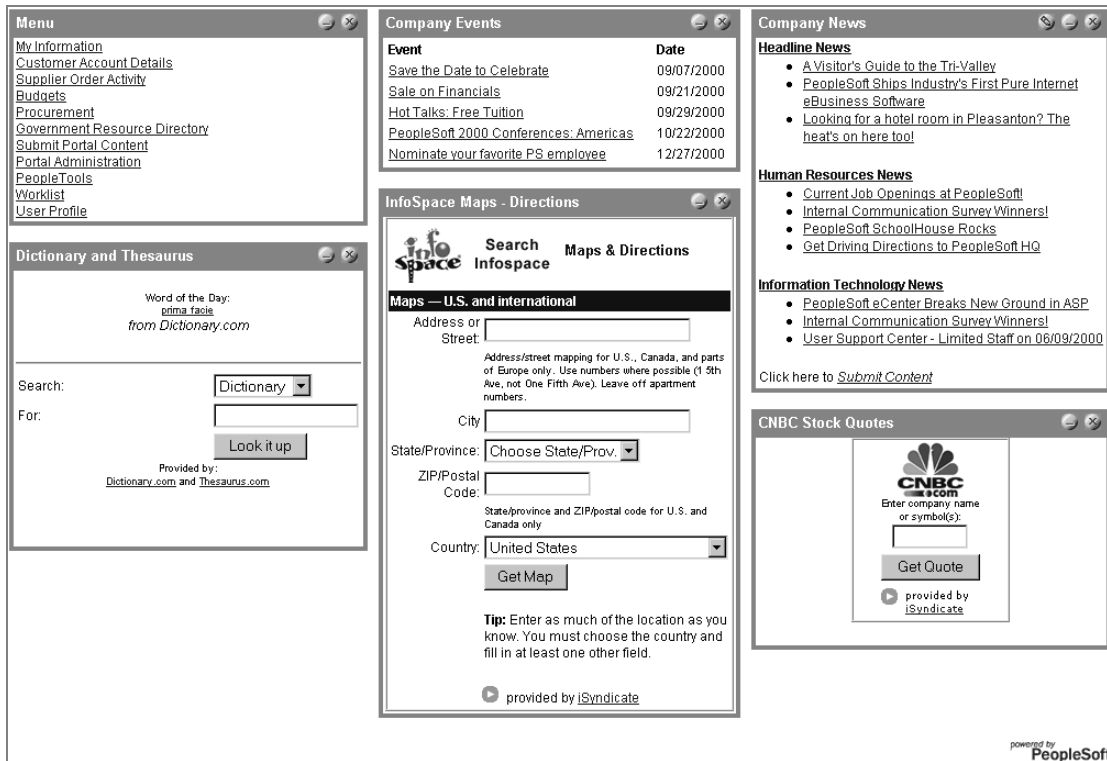

- Category descriptions
- Keywords
- Descriptions of related information links

Integration With Other Software Vendors

Because of its open web architecture, PeopleSoft Government Portal can aggregate all web content for its users, including the content of other web sites. PeopleSoft has teamed with a systems integration vendor and an enterprise application integration vendor to provide a complete portal solution.

Government Portal Menu

The PeopleSoft Government Portal applications are deployed based on permission lists, roles, and role users, which you define. PeopleSoft Government Portal comes with a set of example roles and permission lists, which you can use as a starting point.

Example of the PeopleSoft Government Portal homepage

Depending on your deployment and the PeopleSoft products you purchased, the PeopleSoft Government Portal menu may include items from the following:

My Information

Users can update their own profiles. This reduces your need to maintain user information, including email addresses and passwords. Users can also designate alternate users to receive communications in their absence.

For more information about user profiles on PeopleSoft Government Portal, see *PeopleTools 8.12 Portal Technology PeopleBook*, "Using Portal Navigation Features".

PeopleSoft Financials for Education and Government

PeopleSoft eBusiness HTML access applications are available for PeopleSoft Accounts Payable, Accounts Receivable, General Ledger, and Purchasing within the PeopleSoft Financial Management for Education and Government product line. PeopleSoft provides an HTML access application that enables employees, vendors, customers, and suppliers to use a browser to enter and view data over the internet from an individual workstation.

Employees, vendors, customers, and suppliers can use the self-service web applications to view and modify their own business information at their convenience. Through inquiry panels they can review invoice, payment, order, and receipt activity. They can also view their account balance and the invoices related to that balance.

For more information about PeopleSoft eBusiness HTML access applications, see *PeopleSoft 7.5 Application Fundamentals for Education and Government* and the respective *PeopleSoft Business Processes* PeopleBook for the Peoplesoft Accounts Payable, Accounts Receivables, General Ledger, or Purchasing applications.

PeopleSoft Human Resources Management for Education and Government

PeopleSoft HRMS for Education and Government is an innovative and robust human resource management system designed for organizations doing business in the United States and Canada. This application blends traditional human resources standards and practices with contemporary, state-of-the-art technology.

To help make public sector organizations more productive and responsive, this application enables employees and managers to use a standard web browser to update personal information, sign up for training courses, review job postings, report time, view flexible spending account plan activity, add and update dependent and beneficiary data, and review summary information about their benefit elections.

PeopleSoft HRMS for Education and Government includes all of the features delivered in the core commercial application plus features designed specifically for higher education and public sector customers.

For more information about PeopleSoft HRMS for Education and Government, see the *PeopleSoft HRMS for Education and Government* PeopleBooks.

PeopleSoft Budget Planning for Education and Government

PeopleSoft Budget Planning for Education and Government is designed and built specifically for education and government organizations to completely perform the budgeting process on the internet. This application enables employees to develop, review, and analyze budget plans at the detailed account, rolled-up by category and budget center levels.

Using a standard web browser, employees can manage and organize the business process flow, maintain budget plans, do “what-if” modeling, and inquire about and generate budget reports to complete the budget cycle.

For more information about PeopleSoft Budget Planning for Education and Government, see the *PeopleSoft Budget Planning for Education and Government* PeopleBooks.

PeopleSoft eProcurement for Education and Government

Through connections to PeopleSoft Marketplace and Commerce One's MarketSite, PeopleSoft eProcurement for Education and Government is fully eCommerce enabled. PeopleSoft eProcurement provides end-to-end support of selected merchants and multiple independent trading exchanges. The integrated links to PeopleSoft Marketplace, Commerce One's MarketSite, independent trading exchanges, and selected merchants mean that PeopleSoft will provide and maintain the eCommerce connectors that enable you to exchange content and transactions directly from the eProcurement application to the targeted merchant or trade exchange. Content can include catalog data, pricing updates, and research data. Supported transactions include requisitions, purchase orders, change orders, price inquiries, inventory availability inquiries, and auctioning.

PeopleSoft eProcurement for Education and Government supports integration with the PeopleSoft Financials for Education and Government applications, including the budget checking and real-time validation of accounting ChartFields functionality

For more information about PeopleSoft eProcurement, see the *PeopleSoft eProcurement* PeopleBooks.

Government Resource Directory

The Government Resource Directory provides links to internet sites of various government institutions and affiliations. You can enable employees to quickly access these websites through the portal menu.

Government Resource Directory

Submit Portal Content

The Menu Item feature, under the Submit Portal Content menu, enables portal users to contribute information—a file attachment, a web page, or an internal page—to the company's intranet and leave the registration of the process to the portal administrator. The administrator reviews the request and sends it back to the user with the notification that the request has either been registered, needs to be reworked, or has been rejected.

Submit Menu Item

To request a new menu item for an internal page, attachment, or URL, click the Add New Menu Item button. All Menu Items are reviewed by the Portal Administrator prior to approval and addition to the portal registry.

Menu Item Listings				
Creation Date	Menu Item Label	Status		
11/02/2000	All My Children Soap Updates	Rejected	<input type="button" value="Delete"/>	<input type="button" value="Review"/>
11/02/2000	Schwab Site	New	<input type="button" value="Edit"/>	<input type="button" value="Delete"/>
11/02/2000	Schwab Stock Option Center	New	<input type="button" value="Edit"/>	<input type="button" value="Delete"/>
11/02/2000	Update Folder Permissions	Approved		<input type="button" value="Review"/>

Submit Menu Item page

For more information about the Menu Item feature, see *PeopleSoft 8 Portals Application Fundamentals SP2 PeopleBook*, “Submitting and Managing Menu Items”.

Depending on the user's assigned permissions, the PeopleSoft Government Portal menu can also display links to Portal Administration and PeopleTools.
