

**Oracle[®] Retail Invoice Matching
Release Notes
Release 12.0
May 2006**

Copyright © 2006, Oracle. All rights reserved.

The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software—Restricted Rights (June 1987). Oracle Corporation, 500 Oracle Parkway, Redwood City, CA 94065

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

Oracle, JD Edwards, PeopleSoft, and Siebel are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

A Release Notes document can include some or all of the following sections, depending upon the release:

- Overview of the release
- Functional, technical, integration, and/or performance enhancements
- Assumptions
- Fixed and/or known issues/defects

Because of their brevity, Release Notes do not include chapters, appendices, or a table of contents.

Audience

Release Notes are a critical communication link between Oracle Retail and its retailer clients. There are four audiences in general for whom a Release Notes document is written:

- Retail clients who wish to understand the contents of this release.
- Integrators and implementation staff who have the overall responsibility for implementing ReIM into their enterprise.
- Business analysts who are looking for high-level functional information about this release.
- System analysts and system operation personnel who are looking for high-level functional and technical content related to this release.

Customer Support

- <https://metalink.oracle.com>

When contacting Customer Support, please provide:

- Product version and program/module name.
- Functional and technical description of the problem (include business impact).
- Detailed step-by-step instructions to recreate.
- Exact error message received.
- Screen shots of each step you take.

Overview

ReIM supports verification of merchandise invoice cost and quantity prior to payment. ReIM receives invoice data via electronic data interchange (EDI) or manually entered into the system through a group or single invoice entry facility.

Invoice records are verified against associated receipts in an automated matching process. If invoices are matched to receipts within tolerance at a summary level, they are evaluated for 'best payment terms' and posted to a staging table. The staging table is interfaced with the retailer's accounts payable system, where payments are processed and corresponding accounting entries are posted.

If invoices and receipts are not matched at the summary level after a specified period of time, the auto-matching process attempts to match at a line-level within tolerance. If matches are not identified at the line level, the process calculates a cost or quantity discrepancy. The discrepancy is routed to defined user groups for resolution.

Discrepancies are resolved by applying reason codes based on a set of defined actions (for example, charge-back supplier), which determine disposition of the discrepancies.

Discrepancies are routed out of the auto-match process and you can begin manual identification of summary and detail level matches. The retailer may resolve line-level discrepancies.

Technical Enhancements

Certification

The Oracle Retail software certification is the process of developing in order to conform to certain information technology industry's standards and specifications. This release of ReIM includes certification on the following:

- Oracle Database 10g
- Oracle Application Server 10g

Automated Installation on UNIX Environments

A new installation tool is available to install ReIM on UNIX environments. This tool is Java-based and automates the following:

- The creation of database objects.
- The deployment of the ReIM war file.
- The installation of the ReIM batch scripts.
- The WebHelp setup.

Complete installation instructions are in the ReIM 12.0 Installation Guide.

Multibyte Field Expansion

ReIM was modified to support languages whose characters require multiple bytes. Certain description fields were expanded to allow for meaningful text to be entered. Please note the following:

- Any data that is entered by the user as a string is validated for byte length.
- Scope for this requirement did not include matching all column sizes with Oracle Financials.
- This release of ReIM removed integration with RMS versions that are earlier than RMS 12.0.

Multi-language Enablement

ReIM supports the following languages:

- German
- English
- French
- Japanese
- Korean
- Brazilian Portuguese
- Chinese (Simplified)
- Chinese (Traditional)
- Spanish

Date Format Support

Each locale can specify a display date format. Date formats support either 2 or 4 digit year designations. Date formats support month name abbreviations or month numbers. Date formats support limited sequencing: year month day, month day year and day month year. Date formats support either '-' (dash) or '/' (backslash) delimiters.

Functional Enhancement

Rebranding

Oracle Retail Invoice Matching software and documentation have been rebranded to comply with Oracle industry standards. The rebranding provides visual consistency among the integrated platforms.

Assumptions

The RMS 12.0 CODE_DETAIL_TRANS table must be populated with each language used by the retailer.

Known Issues/Defects

The posting of complex and fixed deals is not functioning correctly. The following list summarizes the known issues surrounding this functionality:

- After the run that posts complex deals, the records are not posted to the financials staging interface table.
- VAT records are incorrectly posting the accounting information based on the record. They are linked to when the posting batch program writes to IM_FINANCIALS_STAGE and IM_AP_STAGE_DETAIL.
- The GL Cross Reference form is not set up to allow mapping DIRAR or DIRAF to GL segments for deal income. Instead, the posting batch program uses the TAP GL segments for both the debit and credit, resulting in offsetting debits and credits with the same GL segments (\$0 net effect in the GL).
- Fixed deals with income > 0 and deb_cred_ind='C' are uploaded as credit note requests (CNR). The CNRs are then converted to a debit memo by the posting batch program when the credit note is late for a supplier. The converted debit memos are created with a deal_type of null, and the dynamic segments are not found because they refer to the original document. This issue causes the posting batch program to fail.
- The FixedDealUpload batch program fails for non-merchandise deals. Value added tax (VAT) is not applicable for non-merchandise deals.
