
PeopleSoft Enterprise CRM 9 Partner Relationship Management PeopleBook

August 2006

The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS

Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are “commercial computer software” or “commercial technical data” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). Oracle Corporation, 500 Oracle Parkway, Redwood City, CA 94065.

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee’s responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

Oracle, JD Edwards, PeopleSoft, and Siebel are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

Open Source Disclosure

Oracle takes no responsibility for its use or distribution of any open source or shareware software or documentation and disclaims any and all liability or damages resulting from use of said software or documentation. The following open source software may be used in Oracle’s PeopleSoft products and the following disclaimers are provided.

About This PeopleBook

PeopleSoft Enterprise PeopleBooks provide you with the information that you need to implement and use PeopleSoft Enterprise applications from Oracle.

This preface discusses:

- PeopleSoft Enterprise application prerequisites.
- Application fundamentals.
- Documentation updates and printed documentation.
- Additional resources.
- Typographical conventions and visual cues.
- Comments and suggestions.
- Common elements in PeopleBooks.

Note. PeopleBooks document only elements, such as fields and check boxes, that require additional explanation. If an element is not documented with the process or task in which it is used, then either it requires no additional explanation or it is documented with common elements for the section, chapter, PeopleBook, or product line. Elements that are common to all PeopleSoft Enterprise applications are defined in this preface.

PeopleSoft Enterprise Application Prerequisites

To benefit fully from the information that is covered in these books, you should have a basic understanding of how to use PeopleSoft Enterprise applications.

You might also want to complete at least one introductory training course, if applicable.

You should be familiar with navigating the system and adding, updating, and deleting information by using PeopleSoft Enterprise menus, pages, or windows. You should also be comfortable using the World Wide Web and the Microsoft Windows or Windows NT graphical user interface.

These books do not review navigation and other basics. They present the information that you need to use the system and implement your PeopleSoft Enterprise applications most effectively.

Application Fundamentals

Each application PeopleBook provides implementation and processing information for your PeopleSoft Enterprise applications.

For some applications, additional, essential information describing the setup and design of your system appears in a companion volume of documentation called the application fundamentals PeopleBook. Most product lines have a version of the application fundamentals PeopleBook. The preface of each PeopleBook identifies the application fundamentals PeopleBooks that are associated with that PeopleBook.

The application fundamentals PeopleBook consists of important topics that apply to many or all PeopleSoft Enterprise applications. Whether you are implementing a single application, some combination of applications within the product line, or the entire product line, you should be familiar with the contents of the appropriate application fundamentals PeopleBooks. They provide the starting points for fundamental implementation tasks.

Documentation Updates and Printed Documentation

This section discusses how to:

- Obtain documentation updates.
- Download and order printed documentation.

Obtaining Documentation Updates

You can find updates and additional documentation for this release, as well as previous releases, on Oracle's PeopleSoft Customer Connection website. Through the Documentation section of Oracle's PeopleSoft Customer Connection, you can download files to add to your PeopleBooks Library. You'll find a variety of useful and timely materials, including updates to the full line of PeopleSoft Enterprise documentation that is delivered on your PeopleBooks CD-ROM.

Important! Before you upgrade, you must check Oracle's PeopleSoft Customer Connection for updates to the upgrade instructions. Oracle continually posts updates as the upgrade process is refined.

See Also

Oracle's PeopleSoft Customer Connection, http://www.oracle.com/support/support_peoplesoft.html

Downloading and Ordering Printed Documentation

In addition to the complete line of documentation that is delivered on your PeopleBook CD-ROM, Oracle makes PeopleSoft Enterprise documentation available to you via Oracle's website. You can:

- Download PDF files.
- Order printed, bound volumes.

Downloading PDF Files

You can download PDF versions of PeopleSoft Enterprise documentation online via the Oracle Technology Network. Oracle makes these PDF files available online for each major release shortly after the software is shipped.

See Oracle Technology Network, <http://www.oracle.com/technology/documentation/psftent.html>.

Ordering Printed, Bound Volumes

You can order printed, bound volumes of selected documentation via the Oracle Store.

See Oracle Store, http://oraclestore.oracle.com/OA_HTML/ibeCCtpSctDspRte.jsp?section=14021

Additional Resources

The following resources are located on Oracle's PeopleSoft Customer Connection website:

Resource	Navigation
Application maintenance information	Updates + Fixes
Business process diagrams	Support, Documentation, Business Process Maps
Interactive Services Repository	Support, Documentation, Interactive Services Repository
Hardware and software requirements	Implement, Optimize + Upgrade; Implementation Guide; Implementation Documentation and Software; Hardware and Software Requirements
Installation guides	Implement, Optimize + Upgrade; Implementation Guide; Implementation Documentation and Software; Installation Guides and Notes
Integration information	Implement, Optimize + Upgrade; Implementation Guide; Implementation Documentation and Software; Pre-Built Integrations for PeopleSoft Enterprise and JD Edwards EnterpriseOne Applications
Minimum technical requirements (MTRs)	Implement, Optimize + Upgrade; Implementation Guide; Supported Platforms
Documentation updates	Support, Documentation, Documentation Updates
PeopleBooks support policy	Support, Support Policy
Prerelease notes	Support, Documentation, Documentation Updates, Category, Release Notes
Product release roadmap	Support, Roadmaps + Schedules
Release notes	Support, Documentation, Documentation Updates, Category, Release Notes
Release value proposition	Support, Documentation, Documentation Updates, Category, Release Value Proposition
Statement of direction	Support, Documentation, Documentation Updates, Category, Statement of Direction
Troubleshooting information	Support, Troubleshooting
Upgrade documentation	Support, Documentation, Upgrade Documentation and Scripts

Typographical Conventions and Visual Cues

This section discusses:

- Typographical conventions.
- Visual cues.
- Country, region, and industry identifiers.
- Currency codes.

Typographical Conventions

This table contains the typographical conventions that are used in PeopleBooks:

Typographical Convention or Visual Cue	Description
Bold	Indicates PeopleCode function names, business function names, event names, system function names, method names, language constructs, and PeopleCode reserved words that must be included literally in the function call.
<i>Italics</i>	Indicates field values, emphasis, and PeopleSoft Enterprise or other book-length publication titles. In PeopleCode syntax, italic items are placeholders for arguments that your program must supply. We also use italics when we refer to words as words or letters as letters, as in the following: Enter the letter <i>O</i> .
KEY+KEY	Indicates a key combination action. For example, a plus sign (+) between keys means that you must hold down the first key while you press the second key. For ALT+W, hold down the ALT key while you press the W key.
Monospace font	Indicates a PeopleCode program or other code example.
“ ” (quotation marks)	Indicate chapter titles in cross-references and words that are used differently from their intended meanings.
. . . (ellipses)	Indicate that the preceding item or series can be repeated any number of times in PeopleCode syntax.
{ } (curly braces)	Indicate a choice between two options in PeopleCode syntax. Options are separated by a pipe ().

Typographical Convention or Visual Cue	Description
[] (square brackets)	Indicate optional items in PeopleCode syntax.
& (ampersand)	<p>When placed before a parameter in PeopleCode syntax, an ampersand indicates that the parameter is an already instantiated object.</p> <p>Ampersands also precede all PeopleCode variables.</p>

Visual Cues

PeopleBooks contain the following visual cues.

Notes

Notes indicate information that you should pay particular attention to as you work with the PeopleSoft Enterprise system.

Note. Example of a note.

If the note is preceded by *Important!*, the note is crucial and includes information that concerns what you must do for the system to function properly.

Important! Example of an important note.

Warnings

Warnings indicate crucial configuration considerations. Pay close attention to warning messages.

Warning! Example of a warning.

Cross-References

PeopleBooks provide cross-references either under the heading “See Also” or on a separate line preceded by the word *See*. Cross-references lead to other documentation that is pertinent to the immediately preceding documentation.

Country, Region, and Industry Identifiers

Information that applies only to a specific country, region, or industry is preceded by a standard identifier in parentheses. This identifier typically appears at the beginning of a section heading, but it may also appear at the beginning of a note or other text.

Example of a country-specific heading: “(FRA) Hiring an Employee”

Example of a region-specific heading: “(Latin America) Setting Up Depreciation”

Country Identifiers

Countries are identified with the International Organization for Standardization (ISO) country code.

Region Identifiers

Regions are identified by the region name. The following region identifiers may appear in PeopleBooks:

- Asia Pacific
- Europe
- Latin America
- North America

Industry Identifiers

Industries are identified by the industry name or by an abbreviation for that industry. The following industry identifiers may appear in PeopleBooks:

- USF (U.S. Federal)
- E&G (Education and Government)

Currency Codes

Monetary amounts are identified by the ISO currency code.

Comments and Suggestions

Your comments are important to us. We encourage you to tell us what you like, or what you would like to see changed about PeopleBooks and other Oracle reference and training materials. Please send your suggestions to your product line documentation manager at Oracle Corporation, 500 Oracle Parkway, Redwood Shores, CA 94065, U.S.A. Or email us at appsdoc@us.oracle.com.

While we cannot guarantee to answer every email message, we will pay careful attention to your comments and suggestions.

Common Elements Used in PeopleBooks

As of Date	The last date for which a report or process includes data.
Business Unit	An ID that represents a high-level organization of business information. You can use a business unit to define regional or departmental units within a larger organization.
Description	Enter up to 30 characters of text.
Effective Date	The date on which a table row becomes effective; the date that an action begins. For example, to close out a ledger on June 30, the effective date for the ledger closing would be July 1. This date also determines when you can view and change the information. Pages or panels and batch processes that use the information use the current row.

Once, Always, and Don't Run	<p>Select Once to run the request the next time the batch process runs. After the batch process runs, the process frequency is automatically set to Don't Run.</p> <p>Select Always to run the request every time the batch process runs.</p> <p>Select Don't Run to ignore the request when the batch process runs.</p>
Process Monitor	Click to access the Process List page, where you can view the status of submitted process requests.
Report Manager	Click to access the Report List page, where you can view report content, check the status of a report, and see content detail messages (which show you a description of the report and the distribution list).
Request ID	An ID that represents a set of selection criteria for a report or process.
Run	Click to access the Process Scheduler request page, where you can specify the location where a process or job runs and the process output format.
SetID	<p>An ID that represents a set of control table information, or TableSets. TableSets enable you to share control table information and processing options among business units. The goal is to minimize redundant data and system maintenance tasks. When you assign a setID to a record group in a business unit, you indicate that all of the tables in the record group are shared between that business unit and any other business unit that also assigns that setID to that record group. For example, you can define a group of common job codes that are shared between several business units. Each business unit that shares the job codes is assigned the same setID for that record group.</p>
Short Description	Enter up to 15 characters of text.
User ID	An ID that represents the person who generates a transaction.

PeopleSoft Partner Relationship Management Preface

This preface discusses:

- Additional resources.
- PeopleSoft Enterprise Customer Relationship Management (CRM) application fundamentals.
- PeopleSoft Enterprise CRM automation and configuration tools.
- PeopleSoft Enterprise CRM business object management.
- Enterprise PeopleTools PeopleBooks.

Note. This PeopleBook documents only page elements that require additional explanation. If a page element is not documented with the process or task in which it is used, then either it requires no additional explanation or it is documented with common elements for the section, chapter, PeopleBook, or product line.

Additional Resources

The following resources are located on the PeopleSoft Customer Connection website.

Resource	Navigation
Application maintenance information	Patches + Fixes
Business process diagrams	Support, Documentation, Business Process Maps

PeopleSoft Enterprise CRM Application Fundamentals

The *PeopleSoft Enterprise CRM 9 Application Fundamentals PeopleBook* contains essential information describing the setup and design of the PeopleSoft CRM system. This book contains important topics that apply to many or all PeopleSoft applications across the PeopleSoft CRM product line.

The *PeopleSoft Enterprise CRM 9 Application Fundamentals PeopleBook* contains these parts:

- CRM Multi-Product Foundation

This part discusses the design and setup of the PeopleSoft CRM system, including security considerations.

- Workforce Management

This part discusses how to administer workers who perform tasks such as support or field service in PeopleSoft CRM. It includes information on competency management and assigning workers to tasks.

- Interactions and 360-Degree Views

This part discusses how to manage interactions and set up and use the 360-degree view, a powerful tool that enables users to view and work with any transaction or interaction that is associated with a customer or worker.

- Self-Service for Customers

This part discusses how to set up, administer, and use self-service applications for customers and workers.

- Relationship Management

This part discusses how system users manage their contacts and tasks.

- Entitlement Management

This part discusses setting up agreements and warranties.

- SmartViews

This part discusses how to set up and use SmartViews to manage key customer segments and accounts in a central environment.

See Also

PeopleSoft Enterprise CRM 9 Application Fundamentals PeopleBook

PeopleSoft CRM Enterprise Automation and Configuration Tools

The *PeopleSoft Enterprise CRM 9 Automation and Configuration Tools PeopleBook* discusses automation and configuration tools that are common to multiple PeopleSoft CRM applications. This is an essential companion to the *PeopleSoft CRM Application Fundamentals PeopleBook*.

There are four parts to the *PeopleSoft Enterprise CRM 9 Automation and Configuration Tools PeopleBook*

- Correspondence Management

This part discusses the setup and application of manual notifications, automatic notifications and manual correspondence requests among CRM objects.

- Automation Tools

This part discusses PeopleSoft CRM workflow, the Active Analytics Framework (OAF), business projects, and scripts.

- Configuration Tools

This part discusses configurable search pages, configurable toolbars, attributes, and industry-specific field labels and field values.

- Knowledge Management

This part discusses the setup of Natural Language Processing (NLP) and Verity search.

- Business Process Management

This part provides information on the two different approaches to manage business processes in PeopleSoft CRM and discusses:

- The setup of the BPEL infrastructure to initiate and manage BPEL process instances.
- The setup of Business Process Monitor to view the status information of initiated BPEL process instances.
- The setup of BPEL worklist integration to send CRM worklist entries (both notifications and action items) from BPEL processes.
- The setup and execution of business projects.

PeopleSoft Enterprise CRM Business Object Management

The *PeopleSoft Enterprise CRM 9 Business Object Management PeopleBook* discusses how to create and manage customer and worker business objects in PeopleSoft CRM.

The PeopleSoft Enterprise CRM 9 Business Object Management PeopleBook has these parts:

- Business Object Management Basics

This part provides an overview of the business object relationship model and discusses setting up role types, relationship types, and control values.

- Data Management for Organization Business Objects

This part discusses how to set up and manage companies, sites, and partner companies.

- Data management for Individual Business Objects

This part discusses how to set up and manage persons, including contacts and consumers, and workers.

- Business Object Management

This part discusses how to define and use business object searches, quick create, and the customer identification framework to manage business objects.

- Customer and Worker Data Integrations

This part discusses how to integrate customer and worker data with other systems.

CHAPTER 1

Getting Started with PeopleSoft Partner Relationship Management

This chapter provides an overview of PeopleSoft Enterprise Partner Relationship Management and discusses:

- PeopleSoft Partner Relationship Management integrations.
- PeopleSoft Partner Relationship Management implementation.

PeopleSoft Partner Relationship Management Overview

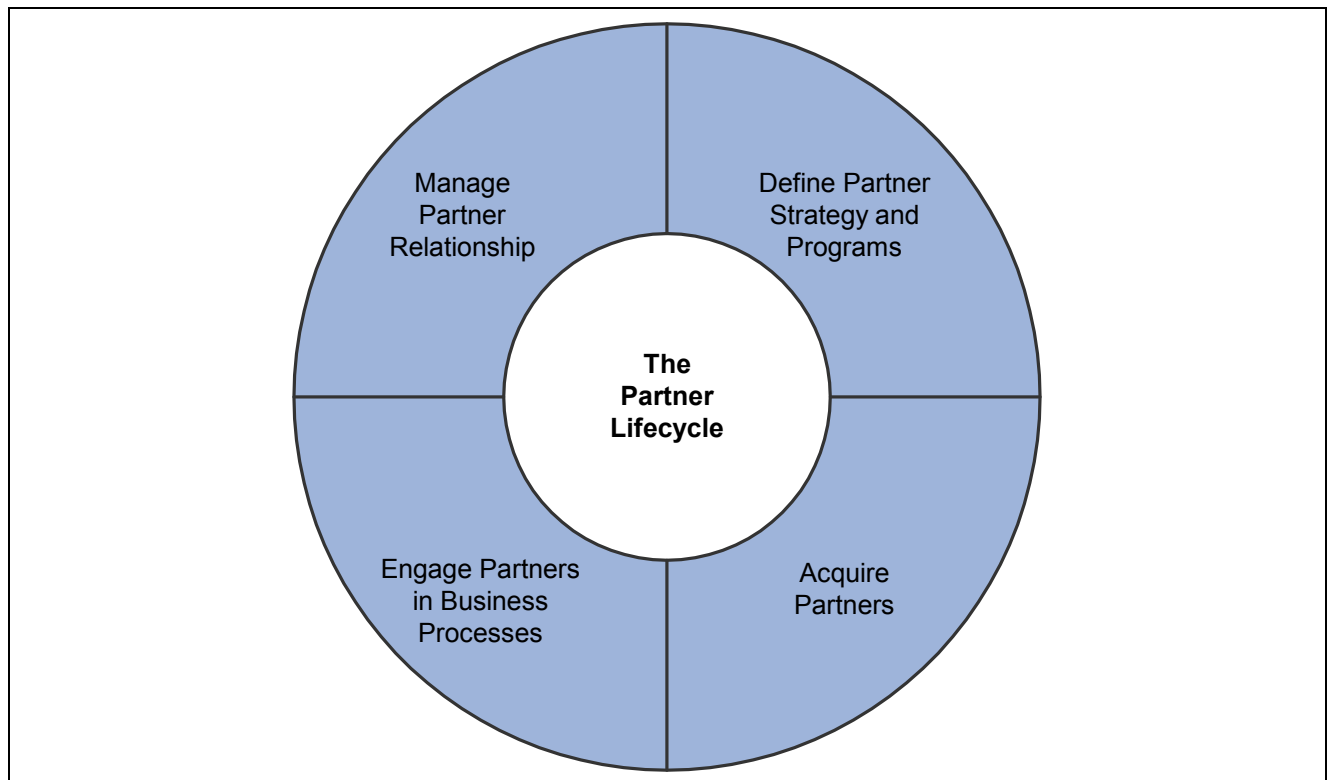

PeopleSoft Partner Relationship Management (PeopleSoft PRM) encompasses all the processes necessary for modeling partners and profile information, registering partners, managing security, analyzing performance, and allowing partners to effectively interact with an enterprise via a partner portal.

Oracle has integrated PeopleSoft PRM capabilities into many parts of the PeopleSoft Customer Relationship Management (PeopleSoft CRM) process, including marketing, sales, commerce, and service. This comprehensive enablement of PeopleSoft PRM through the PeopleSoft CRM product family makes it possible for you and your partners to share PeopleSoft CRM features, functionality, and transactions, including leads, quotes, orders, cases, and more.

PeopleSoft PRM encompasses four phases in the partner lifecycle:

- Definition of partner strategy and programs, including program objectives and membership structures.
Features like Partner Programs help you define and describe program details for various partner categories and participation levels.
- Partner recruitment and acquisition, with tools that include configurable online application forms and dialog recruitment that capture all information in a single repository.
This information is accessible in a comprehensive Partner Profile that provides a single, at-a-glance partner overview.
- Engagement of partners in enterprise business processes, including marketing, sales, commerce, service, or all of these.
- Management of the ongoing partner relationship, including reviewing and rewarding partner performance, and determining which relationships should be invested in and which should be terminated.

This diagram illustrates the partner lifecycle:

Partner Lifecycle

PeopleSoft Partner Relationship Management Integrations

PeopleSoft PRM is enabled in the following PeopleSoft applications:

- PeopleSoft Order Capture and Order Capture Self-Service.
- PeopleSoft Sales.
- PeopleSoft Marketing.
- PeopleSoft Online Marketing.
- PeopleSoft Strategic Account Planning.
- PeopleSoft Support.
- PeopleSoft Advanced Configurator and PeopleSoft Advisor

We discuss integration considerations in the implementation chapters of this PeopleBook.

PeopleSoft Partner Relationship Management Implementation

PeopleSoft Setup Manager enables you to generate a list of setup tasks for your organization based on the features that you are implementing. The setup tasks include the components that you must set up, listed in the order in which you must enter data into the component tables, and links to the corresponding PeopleBook documentation.

PeopleSoft Enterprise Sales/PeopleSoft Enterprise Partner Sales also provides component interfaces to help you load data from your existing system into PeopleSoft Enterprise Sales tables. Use the Excel to Component Interface utility with the component interfaces to populate the tables relevant for your PRM enablement activities.

This table lists the component that has a component interface:

Component	Component Interface	Reference
Partner RD_PARTNER_CI	RD_PARTNER_CI_API	See Chapter 5, “Creating and Maintaining Partner Profiles,” page 25.

Other Sources of Information

In the planning phase of your implementation, take advantage of all Oracle sources of information, including the installation guides, table-loading sequences, data models, and business process maps. A complete list of these resources appears in the preface in the PeopleSoft Enterprise CRM 9 Application Fundamentals PeopleBook, with information about where to find the most current version of each.

CHAPTER 2

Understanding PeopleSoft Partner Relationship Management

This chapter discusses:

- PeopleSoft Partner Relationship Management (PeopleSoft PRM).
- PeopleSoft PRM business processes.

PeopleSoft Partner Relationship Management

This section discusses:

- PeopleSoft Lifecycle Management and the Partner Platform.
- Partner programs.
- Partner profile and administration.
- Application security.
- Partner recruitment and registration.
- Distributed security and self-administration.
- Partner Portal and managing transactions.

PeopleSoft Lifecycle Management

PeopleSoft's Partner Lifecycle Management encompasses four phases:

- Definition of partner strategy and programs, including program objectives and membership structures.
Features such as Partner Programs help you define and describe program details for various partner categories and participation levels.
- Partner recruitment and acquisition, with tools that include online application forms and dialog recruitment that capture all information in a single repository.
This information is accessible in a comprehensive Partner Profile that provides a single, at-a-glance partner overview.
- Engagement of partners in enterprise business processes, including marketing, sales, commerce, service, or any combination of these business processes.
- Management of the ongoing partner relationship, including reviewing and rewarding partner performance, and determining which relationships should be invested in and which should be terminated.

The PeopleSoft Partner Platform is the foundation for the PeopleSoft PRM solution. It has a robust security model, comprehensive yet extensible partner data model, and core partner lifecycle management features and functionality. Partner program administrators can easily configure business rules in the dynamic partner security model to only grant partner users access to data that is appropriate, such as select rows of customer data, partner-relevant transactions, and functional actions and prompting capabilities within each of the transactions. Prospective partners can register for specific partner programs via online application forms that are easily configurable by a partner program administrator. Once a partner is approved, enterprise channel managers and enterprise alliance managers can begin to build a centralized repository of profile data on each partner that can be leveraged for lead distribution, partner catalog management, and targeted communications. The Channel Manager will have access to a 360-degree view of partner information for an overview of transactions and interactions associated to the partner. PeopleSoft Partner Management extends an enterprise's business processes and delivers the tools necessary to execute a successful partner strategy.

Partner Programs

In many partner relationship scenarios, a partner or alliances organization may group partners into different programs and categories, each with different requirements, benefits of membership, and so forth. A Partner Program is a new database object and a distinct component. An Enterprise Channel Manager can specify different partner programs and the related requirements, benefits, and fees for each program. Partner companies can apply for partnership and membership in one or more partner programs.

See [Chapter 4, "Creating Partner Programs," page 13](#).

Partner Profile and Administration

Partner profiling captures and maintains detailed partner and relationship information. Critical pieces of information about a partner's business, industry, and operational area should be captured. These pieces of information change from industry to industry and from business to business.

Partner profile information is crucial to lead assignment, territory management, pricing, and other important business functions. PeopleSoft PRM's flexible solution accommodates an unlimited number of partner types, attributes, and relationships. Your organization cannot only capture the characteristics of the partner organization, but also the characteristics of people or objects within that organization. Partner profiles are determined by the relationship with the partner, the role the partner plays, and how the partner interacts with your organization.

See [Chapter 5, "Creating and Maintaining Partner Profiles," page 25](#).

Application Security

The Application Security Framework has three key elements: who has access, what transactions or rows they can see, and what functions they can perform. PeopleSoft PRM delivers a flexible and dynamic way of creating and defining membership lists that are based on configurable criteria. This feature, the View List, reduces maintenance overhead that is a result of creating multiple roles—one for every possible combination and permutation of permissions and functions. The View List determines what the security membership can access and see, which secures customer data from partners. When a partner CSR logs into the Order Capture application, the customers that he or she can prompt on can be automatically restricted to only the customers that the enterprise allows the partner to see. Finally, the Functional Options concept provides an additional level of granularity and control over what users can do within a PIA page. PeopleSoft PeopleTools allows users to be granted access to specific pages in an application; once the user has access, he or she can access any part of that page. When extending transactions to partner and third-party users, a critical issue is limiting what they can do from a risk management and data security point of view.

See [Chapter 6, "Setting Up Security for Partners," page 49](#).

Partner Recruitment and Registration

When your organization uses partners to penetrate or expand into specific sales territories, it can conduct marketing campaigns to recruit potential partners with specific characteristics that meet the ideal target partner profile. For example, a partner recruiting campaign can have a call to action that brings a prospective partner to an online self-registration or application page. Based on the responses of those campaigns, partners can be further qualified and approved as part of the recruitment process. Prospective partners can register at the web site of the enterprise and apply for partnership.

Once potential partners are identified through prospecting and recruitment campaigns, partner registration allows your enterprise to capture profiling information about the partner company and partner employees. In addition to allowing internal enterprise users to capture partner information, partners themselves have access to online self-service registration for data entry and maintenance of user profile information.

See [Chapter 7, “Setting Up and Managing Partner Registration,” page 61.](#)

Distributed Security and Self-Administration

Distributed security enables partners to administer access to the PeopleSoft PRM solution for their partner employees. For enterprise channel management personnel, setting up a partner company can be time consuming, but the prospect of setting up and tracking partner employee users is more challenging and time consuming. Such activities should be delegated to the partners to reduce maintenance costs and empower the partners. Partners should be able to create and administer their own personnel records and logins within the confines of the security boundaries defined by the enterprise.

See [Chapter 8, “Setting Up Distributed Security for Partner Users,” page 73.](#)

Partner Portal and Transaction Management

The PeopleSoft PRM solution delivers a new portal registry specifically for partner users. The Partner Portal exposes only those transactions appropriate for your partner users, and provides a home page that can be configured for each partner user. The partner portal includes pagelets that can contain lists of transactions and, along with the Enterprise Portal, customized news and content.

From the Partner Portal, a partner can access and manage partner user profile information and manage leads, view product catalogs, and manage quotes and orders.

The enterprise can also view and enter partner specific data within the core transactions of lead, opportunity, order, quote, and support case. An agent or sales representative can reference the partner company and contact information for core enterprise transactions. Using the Partner 360-degree view, a channel manager can then view all of a partner’s activities with the enterprise.

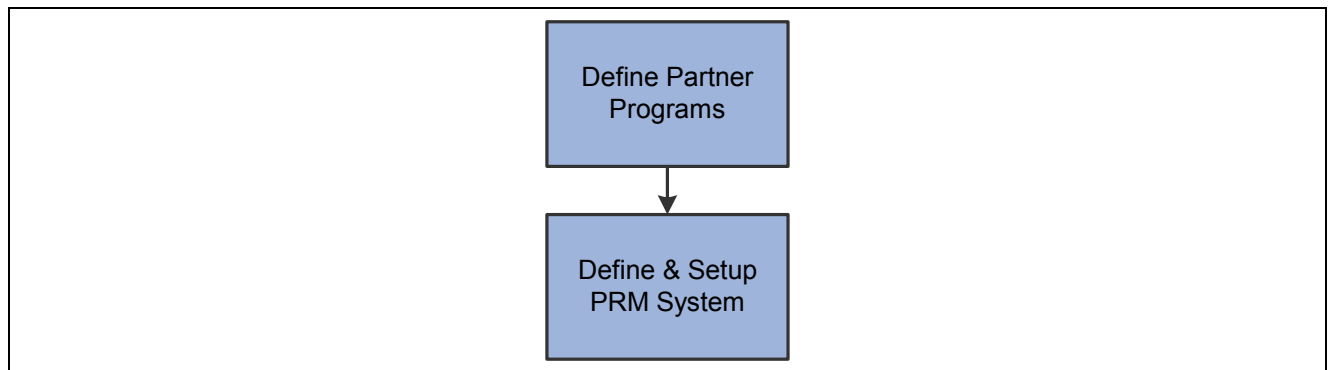

See [Chapter 9, “Executing Partner Relationship Management Transactions,” page 83.](#)

PeopleSoft PRM Business Processes

PeopleSoft PRM consists of four main business processes:

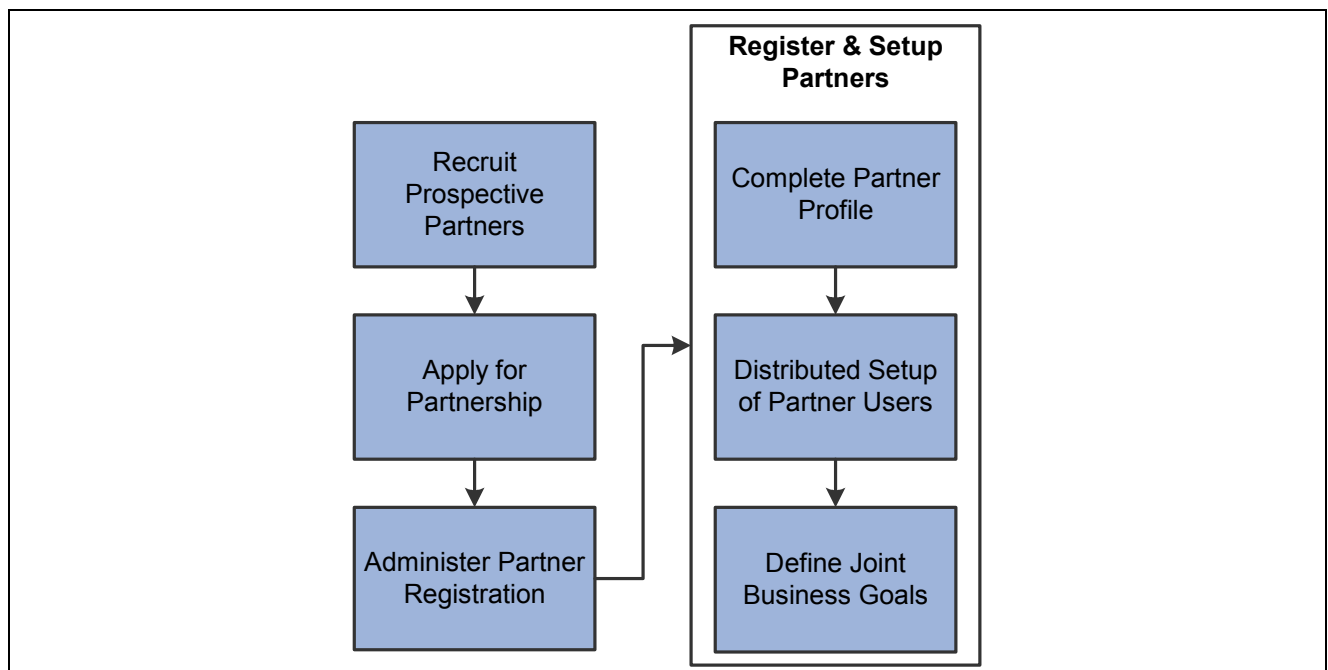

- Defining the partner strategy and programs.
- Acquiring partners.
- Engaging partners in business processes.
- Managing the partner relationship.

This diagram illustrates the definition phase of the PeopleSoft PRM business process:

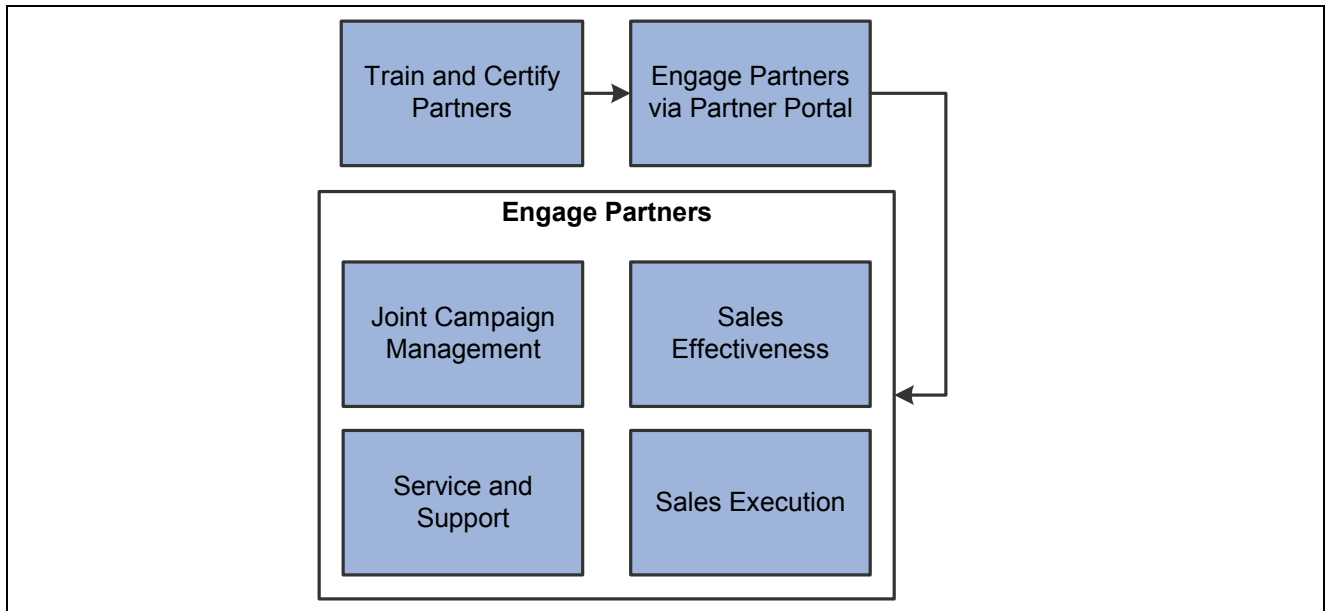

Defining partners

CHAPTER 3

Navigating in PeopleSoft Partner Relationship Management

This chapter discusses how to navigate in PeopleSoft Partner Relationship Management.

Navigating in PeopleSoft Partner Relationship Management

PeopleSoft Partner Relationship Management provides functional area navigation pages that support a specific set of business processes or tasks.

Note. In addition to the PeopleSoft Partner Relationship Management functional area navigation pages, PeopleSoft Partner Relationship Management provides menu navigation, standard navigation pages, and PeopleSoft Navigator.

See Also

Using PeopleSoft Applications

Pages Used to Navigate in PeopleSoft Partner Relationship Management

This table lists the custom functional navigation pages that are used to navigate in PeopleSoft Partner Relationship Management:

Partner Management Center

The Partner Management Center page will be used by the person in your organization who focuses on the partner business process. In PeopleSoft Partner Relationship Management, this person would normally be the Enterprise Channel Manager.

Page Name	Navigation	Usage
Partner Management Center	Main Menu, Partner Management Center	Manage all partner activities.
Partner Companies	Click the Partner Companies link on the Partner Management Center page.	Add and manage profile information for partners companies.
Contacts	Click the Contacts link on the Partner Management Center page.	View and manage your partner contacts.

Page Name	Navigation	Usage
My Partners	Click the My Partners link on the Partner Management Center page.	Access business plans for specific partners.
Partner Programs	Click the Partner Programs link on the Partner Management Center page.	Create and manage partner programs and related marketing dialogs for partner applications and recruitment.
Research Partner Activity	Click the Research Partner Activity link on the Partner Management Center page.	View all activities related to a partner.
Calendar and Tasks	Click the Calendar and Tasks link on the Partner Management Center page.	Access your monthly calendar to update or review tasks and events.
Marketing Programs	Click the Marketing Programs link on the Partner Management Center page.	View and manage marketing programs and campaigns.

CHAPTER 4

Creating Partner Programs

This chapter provides overviews of partner relationship programs and partner types and subtypes and discusses how to:

- Set up the partner program environment.
- Create dialogs for partner programs.
- Create partner programs.

Understanding Partner Relationship Programs

PeopleSoft Partner Relationship Management delivers statuses, steps, actions, and several predefined types to automatically enable Partner Relationship Management. To take full advantage of the application, you should review your business processes and determine if any additional Partner Relationship Management types or characteristics exist that might be appropriate for your business.

Understanding Partner Types and Subtypes

PeopleSoft Partner Relationship Management delivers three partner types with a number of corresponding subtypes. This table lists the partner types and subtypes delivered as sample data:

Partner Types	Partner Subtypes
Alliance (ALLC)	<i>System Integrator (0010)</i> <i>Consultant (0020)</i> <i>Independent Software Vendor (0030)</i> <i>Advisor (0040)</i> <i>Analyst (0050)</i> <i>Strategic Alliance Partner (0060)</i> <i>Joint Marketing Partner (0070)</i> <i>Development Partner (0080)</i>

Partner Types	Partner Subtypes
Channel (CHNL)	<i>Distributor (0010)</i> <i>Reseller (0020)</i> <i>Agent (0030)</i> <i>Broker (0040)</i> <i>Wholesaler (0050)</i> <i>Dealer (0060)</i> <i>Value-Added Reseller (0070)</i> <i>Value-Added Distributor (0080)</i>
Service/Fulfillment (SVC)	<i>Content Provider (0010)</i> <i>Installation Provider (0020)</i> <i>Repair Services Provider (0030)</i> <i>Outsourced Call Center Vendor (0040)</i> <i>Outsourced Service Provider (0050)</i> <i>Application Outsourcing Services (0060)</i> <i>Managed Services Provider (0070)</i>

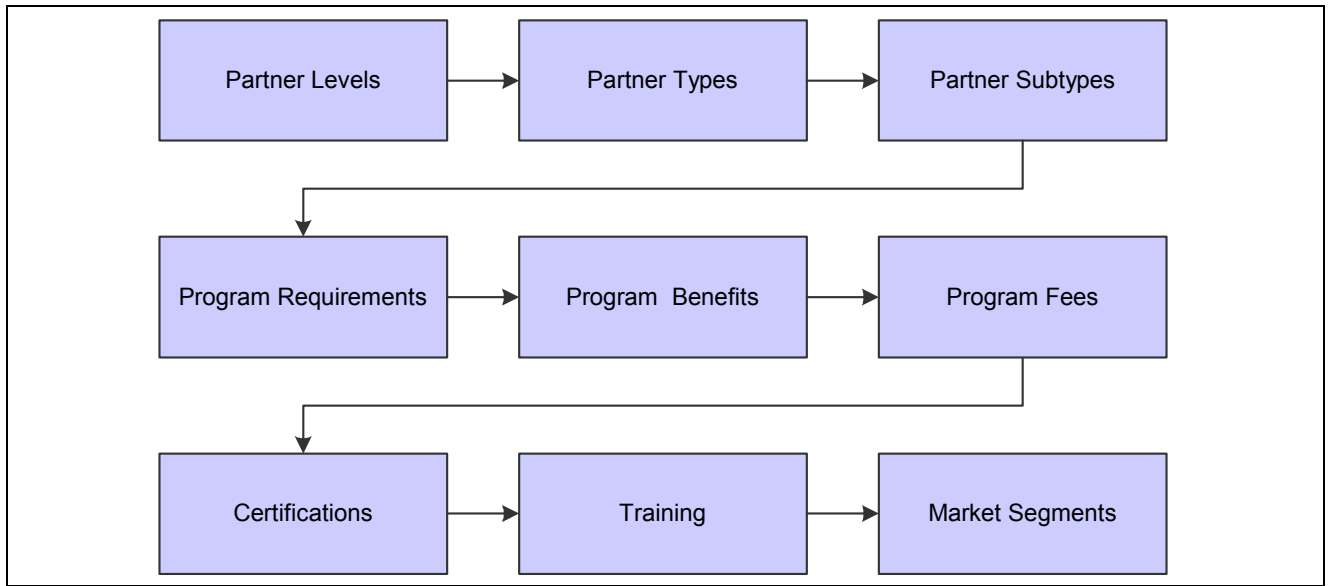

Setting Up the Partner Program Environment

To set up the partner program environment, use the Certifications (RD_CERTIFICATION), Market Segments (RD_MARKET_SEG), Partner Levels (RD_PR_LEVEL), Program Benefits (RD_PR_PGM_BEN), Program Fees (RD_PR_PGM_FEE), Program Requirements (RD_PR_PGM_REQ), Add Partner Program (RD_PR_PROG), Partner Types/Subtypes (RD_PR_TYPE), and Training (RD_TRAINING) components.

This section discusses how to:

- Define partner levels.
- Define partner types.
- Define partner subtypes.
- Define partner program requirements.
- Define program benefits.
- Define program fees.
- Define certifications.
- Define training.
- Define market segments.

This diagram illustrates the steps to set up partner program control tables:

Setting up partner program tables

Pages Used to Set Up The Partner Program Environment

Page Name	Object Name	Navigation	Usage
Partner Level	RD_PR_LEVEL	Set Up CRM, Product Related, Partner Management, Partner Levels, Partner Level	Define partner levels that enable the enterprise to group partners and determine partner privileges.
Partner Type	RD_PR_TYPE	Set Up CRM, Product Related, Partner Management, Partner Types/Subtypes, Partner Type	Define partner types, such as alliance, channel, fulfillment.
Partner Subtype	RD_PR_SUBTYPE	Set Up CRM, Product Related, Partner Management, Partner Types/Subtypes, Partner Type, Partner Subtype	Define partner subtypes for your partner types. Examples are reseller, broker, or agent.
Partner Program Requirement	RD_PR_PGM_REQ	Set Up CRM, Product Related, Partner Management, Program Requirements, Partner Program Requirement	Establish available program requirements for partners.
Partner Program Benefit	RD_PR_PGM_BEN	Set Up CRM, Product Related, Partner Management, Program Benefits, Partner Program Benefit	Establish partner program benefits.
Partner Program Fees	RD_PR_PGM_FEE	Set Up CRM, Product Related, Partner Management, Program Fees	Establish fees for the programs.
Certification	RD_CERTIFICATION	Set Up CRM, Product Related, Partner Management, Certifications, Certification	Add certifications for partners.
Training	RD_TRAINING	Set Up CRM, Product Related, Partner Management, Training, Training	Add training relevancies for partner programs.
Market Segment	RD_MARKET_SEG	Set Up CRM, Product Related, Partner Management, Market Segments, Market Segment	Add market segments for partners.

Defining Partner Levels

Creating Dialogs for Partner Programs

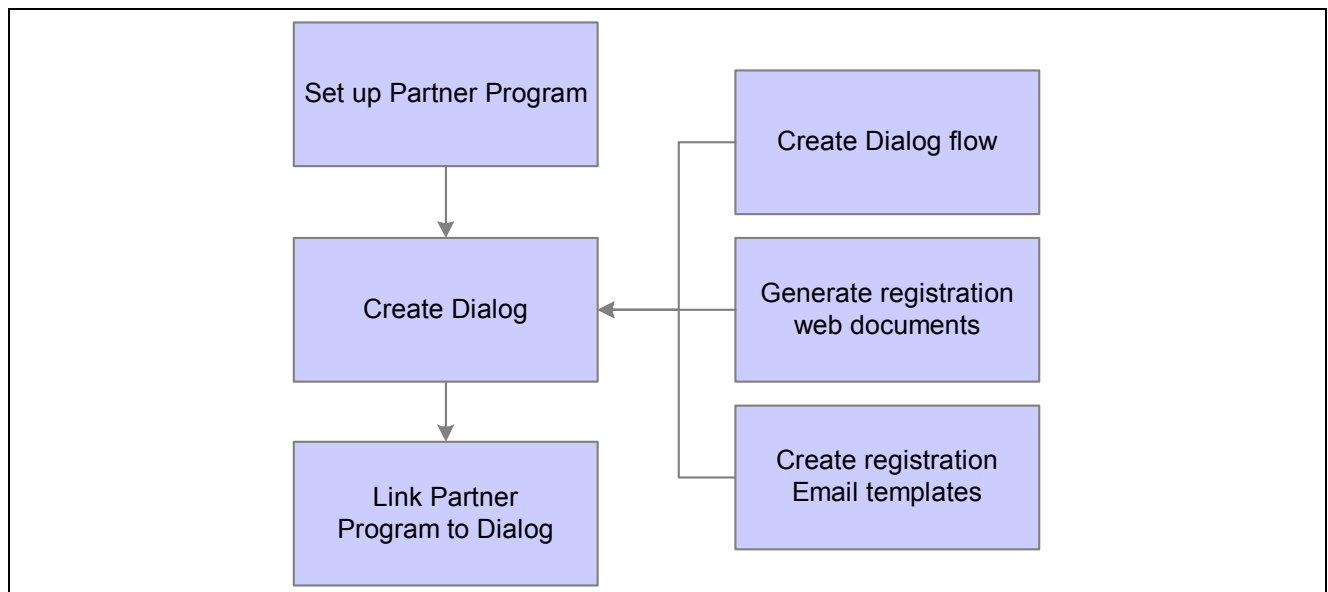

This section provides an overview of dialog use in partner programs and discusses how to:

- Create partner registration logic using the dialog designer.
- Use the document page in document designer to tailor the look and feel of the dialog.
- Use the designer page in document designer to define specific display preferences.

Understanding Dialog Use in Partner Programs

Dialogs are created for the self-service partner registration process. However, when you define a partner program, you are asked to associate a partner registration dialog with that program. For you to do this, a registration dialog must already exist in the system, which means that you may want to create your partner registration dialogs first, although the assignment of a dialog to a partner program is optional.

The following diagram illustrates the setup flow for partner registration:

Partner registration setup flow

Pages Used to Create Dialogs

Page Name	Object Name	Navigation	Usage
Dialog	RY_DIALOG	Marketing, Dialog Designer, Dialog	Create a dialog for partner registration.
Document	RY_DOC	Marketing, Document Designer, Document	Create the display preferences for a web document or an email document.
Designer	RY_DOC_DESIGNER	Marketing, Document Designer, Document, Designer	Design the partner registration web or email document.

Creating Partner Registration Logic Using the Dialog Designer

Access the Dialog page.

The screenshot shows the 'Dialog Designer' application window. The title bar reads 'Dialog Designer'. The menu bar includes 'Save', 'Check', 'Options', 'Link Report', 'Clone', 'Search', and 'Add Dialog'. The main area is divided into tabs: 'Dialog', 'Flow', 'Documents', and 'Elements'. The 'Dialog' tab is active, showing 'Dialog Information'.

On this page, you can view the partner companies associated with this program. The alphabetical sorting search feature enables you to quickly identify partner companies. If you drill down into the partner company name, you will see a summary of that company. You can also add a partner company to this partner program.

Note. If you want to add an entirely new partner company to the enterprise system, you must return to the Partner Company page.

CHAPTER 5

Creating and Maintaining Partner Profiles

This chapter provides an overview of partner profiles and discusses how to:

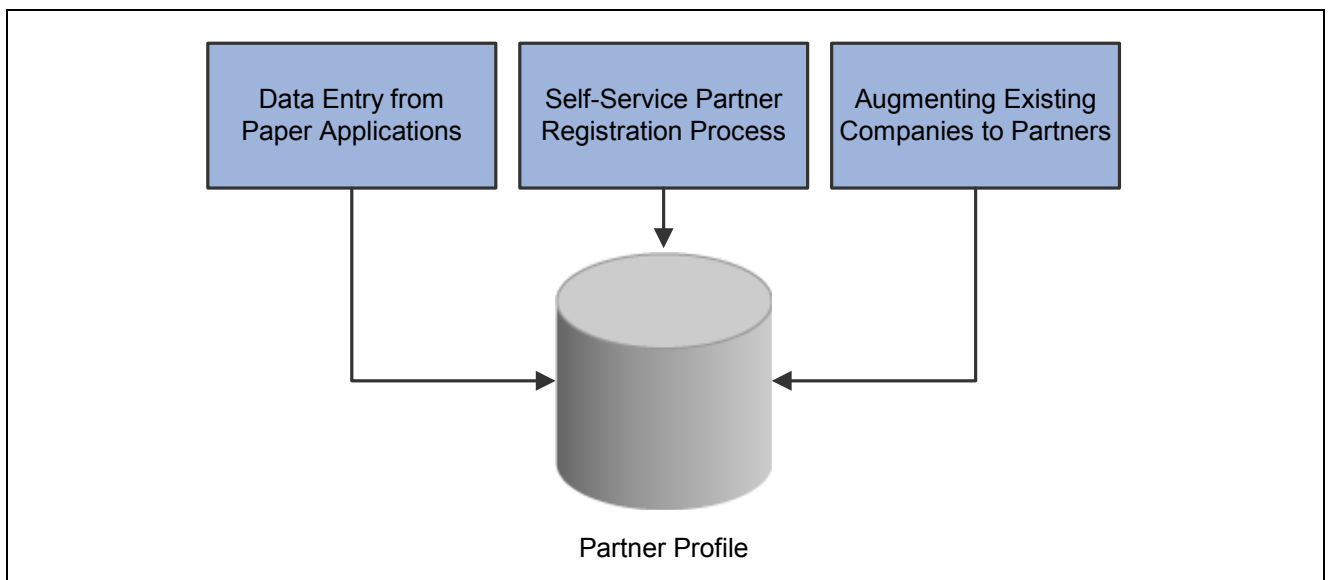

- Create and manage partner companies.
- Create and manage partner users.
- Add partner contacts.

Understanding Partner Profiles

As part of on going partner relationship management, the enterprise needs to be able to maintain the partner profile in the following scenarios:

- Add new partners.
- Update partner profile attributes.
- Terminate existing partners.
- Reactivate terminated partners.

This diagram illustrates the data sources for a partner profile:

Creating Partner Profiles

Partner profile information is the center of the Partner Relationship Management universe. As part of the overall Partner Platform solution, the partner profile allows the enterprise Channel Manager to manage profile data and allow other partner processes, such as application security and partner registration, to retrieve and update business object data. The enterprise Channel Manager can create new partner profile data. New partner profiles can be created by the following means:

- Through the self-service registration process.

In this case, the partner provides information over the web without action by the enterprise.

- Data entry from paper applications.

In this case, and enterprise would be responsible for manual data entry.

- Augmentation of an existing customer, meaning the adding of a Partner role.

This privilege is only to the appropriate Enterprise Channel Manager(s), and is not accessible to all enterprise users. PeopleSoft CRM provides a facility for the Enterprise Channel Manager to create and maintain partner profile data.

Note. Quick Create functionality is disabled for the Partner Role Type. We do not allow Quick Create to create partner companies because enabling the feature would circumvent the standard partner registration approval process.

Partner Profile Terminology

Augmentation	This refers to adding a partner role to an existing company.
Business Object (BO)	Practically all objects in the PeopleSoft CRM Customer Data Model (or BORM) are considered business objects. There are three types of business objects: <ol style="list-style-type: none"> 1. Organization. (For example, a company, partner, or site) 2. Individual. (For example, a worker, consumer, or contact). 3. Other Database Object. (For example, an account).
Enterprise	This refers to the organization that is deploying PeopleSoft PRM. This is the PeopleSoft customer.
Enterprise Channel Administrator	Employee of the enterprise who is responsible for administering the Partner Relationship Management system. This could be the same role as the Enterprise Administrator, or the same role as the Enterprise Channel Manager, depending on the size of the Partner management organization. This role is slightly more technically-oriented because it involves an understanding of system setup and configuration for functions such as security and privileges.
Enterprise Channel Manager	Employee of the enterprise who is responsible for managing specific Partner relationships.
Enterprise Alliance Manager (EAM)	Enterprise Alliance Manager is another valid role that is similar to ECM. An EAM is someone who manages alliance partners.
Partner	An organization that sells products or services on behalf of the enterprise.
Partner Contact	A representative for the partner organization. This is usually an employee of the partner organization.

Partner Registration	This refers to the self-service facility that prospective partners use to apply to become enterprise partners.
Partner Relationship Administrator/Manager	Employee of the partner organization who is responsible for administering the relationship with the enterprise, or managing the relationship with the enterprise.
Partner Search	The business object search engine in PeopleSoft CRM allows users to search for partner business objects.

Creating and Managing Partner Companies

To create and manage partner companies, use the Add Partner Company (RD_PARTNER) component.

This section explains how to:

- View partner company information.
- Update partner company information.
- Enter market coverage information.
- View catalogs.
- Maintain competency, training, and certification information.
- View the partner company's access to customer data.
- View the partner company's sales organization tree.
- Maintain the partner company's customer references.
- Maintain resale tax certificate information.
- View partner program history.
- Maintain the account team assigned to the partner.
- Maintain partner-related tasks.
- View partner call reports.
- Maintain partner business plans.
- Enter and update partner company notes.
- Maintain partner company contacts.
- Maintain partner company address, phone, and email information.
- View and maintain partner relationships.
- Maintain marketing profile information.

Creating and Managing Partner Users

This section provides an overview and explains how to manage:

- Partner user information.
- Organization groups for partners.
- Additional roles for partners.

Understanding Partner Management

The User Information and Organization Group pages are used to manage the organization structure and lead assignment for the partner. The sales tree controls the organization group that the partner can be assigned to.

Additional trees can be added by performing the following:

1. Adding additional sales territory trees from the Tree Manager page.

Note. The appropriate security must be set up in order to add trees.

2. Add the new tree for the user on the Organization Groups page.

Pages Used to Manage Partners

Page Name	Object Name	Navigation	Usage
Manage Partner Users - User Information	RD_PTNR_USER_SRCH	Partners CRM, Manage Partner Users, Manage Partner Users, User Information	Use to add partners.
Manage Partner Users - Organization Group	RD_PTNR_USER_SRCH	Partners CRM, Manage Partner Users, Manage Partner Users, Organization Group	Use to organization groups for the partner.
Additional Roles	RD_PTNR_USER_ROLES	Click the Additional Roles button on the Manage Partner Users — User Information page.	Use to add more then one role for the partner.

Managing Partner User Information

Access the User Information page.

CHAPTER 6

Setting Up Security for Partners

This chapter identifies new security terminology relevant to PeopleSoft Partner Relationship Management (PRM), provides an overview of PRM security, and discusses how to:

- Understand transaction security as applied to PRM.
- Understand and set up PeopleSoft CRM application security for PRM.

PRM Security Terminology

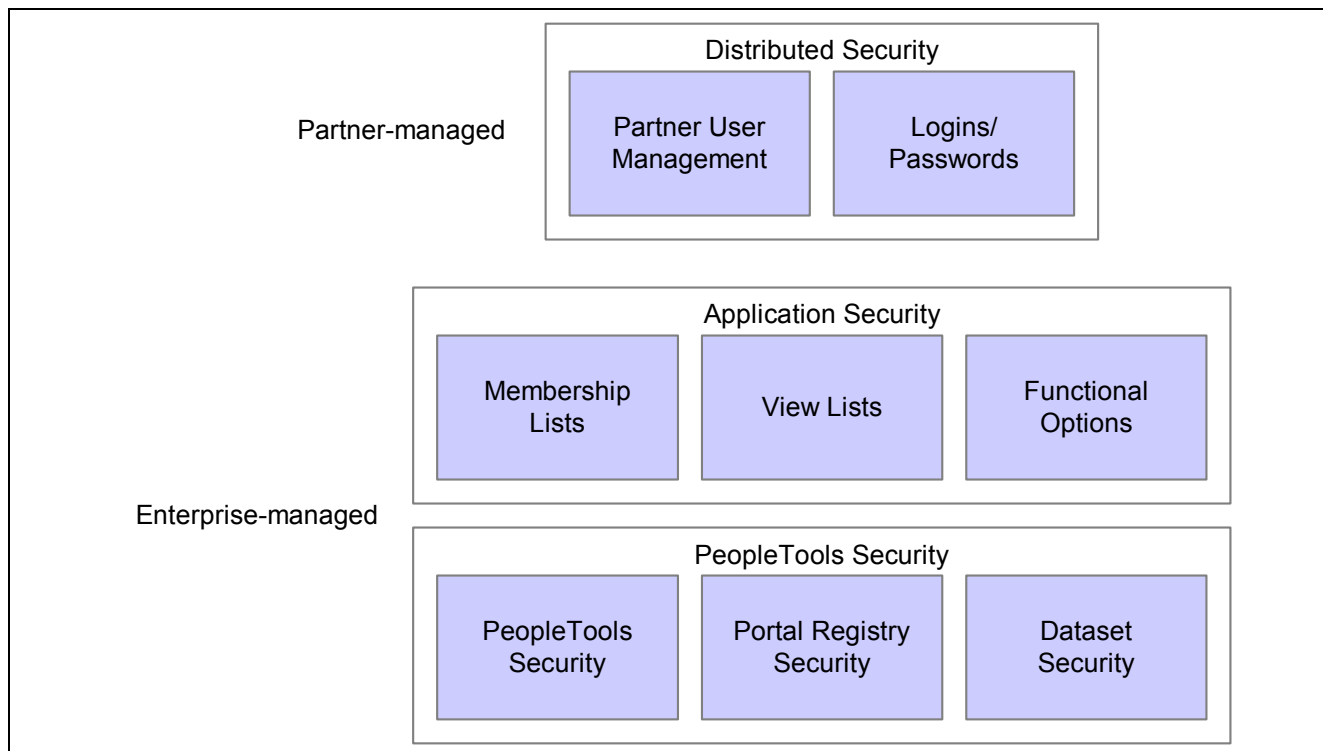

Transaction	A primary business activity such as campaigns, cases, leads, opportunities, orders, and service orders.
Configurable Search	A transaction search page with a common interface that is shared across all CRM transactions. A system administrator can configure the relevant search fields for each transaction. Configurable Searches can use dataset definitions for achieving row-level security in the search results.
Functional Options	A unique code that defines a specific action or privilege that can be performed within a transaction or component. For example, a single functional option could control whether a partner can add a customer address.
Functional Option Group	A grouping of function options. A partner can maintain orders, can add customers, and view customer addresses.
Membership List	A dynamically or statically defined group of people—for example partner contacts—whose functional and data access needs to be secured.
View List	A dynamically or statically defined group of objects—for example, customers, accounts—that are being secured for viewing by the Membership List. For example, all Fortune 500 companies in the North America
Security Profile	A logical security container that groups the view lists and functional privileges that can be granted to a membership list. A security profile is given to one or multiple membership lists. An example would be all partners in the gold program (membership list) have access to Fortune 500 companies (view list) with the ability to <i>maintain orders</i> and <i>add customer addresses</i> (functional options).

Overview of Security as Applied to Partner Relationship Management

One of the foundational components of the PeopleSoft Partner Relationship Management (PRM) Solution is security. Security is a combination of transaction (or PeopleTools) security, application security, and distributed security (for partner users). Transaction security includes the menu navigation and component access achieved through a combination of the existing PeopleSoft portal navigation security, PeopleTools component security, and dataset security frameworks. PeopleTools security provides a mechanism to control PIA menu navigation access through Portal Security, Permission Lists and user roles. Application security includes securing data, prompts, and functions within a transaction. Dataset security controls row-level access to transactions, and is achieved by associating the definition of a dataset to the Configurable Search definition for a transaction that has multiple dataset rules. Dataset rules will be assigned to PeopleTools Roles.

PeopleSoft Partner Relationship Management provides for the most stringent requirements for securing partner access to transactions and customer data. You need to define role-based and characteristics-based security. This includes the transactions that can be accessed, the transaction rows that should be accessible, the customers that can be seen by the partner, and what the partner can do within the general transaction or transaction row. PeopleSoft PRM also requires that user management and security administration of partner users be delegated to partner organizations to manage with minimal intervention from the enterprise organization. Administering partner security is seamless, and easy to implement. An enterprise administrator can set up the partner system and delegate administration responsibility to partner administrators. The partner administrator should then be able to create subsequent partner users and manage security for those users in a distributed manner.

This diagram illustrates the building blocks of Partner Relationship Management security:

Security Building Blocks

Understanding Transaction (PeopleTools) Security in PRM

This section provides an overview of transaction security in PRM, and identifies:

- Partner roles and permissions.
- Sample user IDs for PRM.
- PRM dataset security in PeopleSoft Partner Commerce, Partner Sales, and Marketing.

Overview of Transaction Security

Transaction Security (PeopleTools Security) includes PeopleTools Security, Portal Registry, and Dataset Security. This can be implemented with existing PeopleTools functionality.

- *PeopleTools Security*: Set up permission lists, roles, and sample users.
- *Portal Registry*: Define folders and content references; set up security for the folders and content references.
- *Dataset Security*: Define data distribution rules, assign data distribution rules to PeopleTools roles, and attach the dataset to a Configurable Search definition.

Partner Roles and Permissions

This table provides guidelines for defining the roles and permissions to achieve PRM role-based navigation access to PeopleSoft transactions. Although these roles are delivered, you can add or modify, new or existing roles and permissions to fit your business requirements.

Role	Permissions
Enterprise Channel Manager	<p>Responsible for managing the day-to-day transactional sales relationship between the enterprise and the Channel Partner:</p> <ul style="list-style-type: none"> • Review new leads and determine distribution if manual. • Review status of leads already distributed. • Review pipeline. • Approve quotes generated by partner. • Manage one or more partners. • Manage partner registration and partner profiles. • Manage territory trees. • Manage application security.

Role	Permissions
Partner Administrator	Responsible for performing any administrative tasks that the enterprise has enabled for the partner: <ul style="list-style-type: none"> • Search and select customers. • Create new partner employees and establish security parameters. • Create organization groups (territories). • Clear and approve orders that are in “Hold” status. • View product catalog.
Partner Sales Manager	Responsible for a team of sales representatives: <ul style="list-style-type: none"> • Search and select customers. • Create and approve quotes and orders. • Search quotes and orders. • Access product catalog.
Partner Marketing Analyst	Responsible for marketing programs: <ul style="list-style-type: none"> • Add partner related tasks. • Adds partner related costs. • Views overall campaign status and progress.
Partner Marketing Manager	Responsible for marketing programs and views overall campaign status and progress.

Sample User IDs for PRM

This table lists the predefined user IDs, passwords, and associated roles for users implementing PeopleSoft Partner Relationship Management:

User ID	Password	Roles
ECM	ECM	Enterprise Channel Manager
PADMIN	PADMIN	Partner Administration
PMGR	PMGR	Partner Sales Manager
PREP	PREP	Partner Representative
PMKTA	PMKTA	Partner Marketing Analyst
PMKTM	PMKTM	Partner Marketing Manager

PRM Dataset Security

We deliver dataset security that will be used for the PRM solution. Please reference the table below for the dataset security that is enabled and which PRM product enables that security.

Partner Commerce Dataset Rules

Dataset Rule	Partner Administration	Partner Sales Manager	Partner Representative	Partner Marketing Analyst	Partner Marketing Manager
Orders as Partner Contact	No	Yes	Yes	No	No
Orders as Partner Manager	No	Yes	No	No	No

Partner Sales Dataset Rules

Dataset Rule	Partner Administration	Partner Sales Manager	Partner Representative	Partner Marketing Analyst	Partner Marketing Manager
Leads as Partner Owner	Yes	Yes	Yes	No	No
Leads as Partner Manager	Yes	Yes	No	No	No
Leads as Partner Team Member	No	Yes	Yes	No	No
All Organization Groups	No	No	No	No	No
Organization Groups as Owner	Yes	No	No	No	No
Organization Groups as Manager	Yes	No	No	No	No

Partner Marketing Dataset Rules

Dataset Rule	Partner Administration	Partner Sales Manager	Partner Representative	Partner Marketing Analyst	Partner Marketing Manager
All Audiences as Owner	No	No	No	Yes	Yes
All Audiences as Team Member	No	No	No	Yes	Yes
Published Audiences	No	No	No	Yes	Yes
Programs as Team Member	No	No	No	Yes	Yes

Partner for Financial Accounts Dataset Rules

Dataset Rule	Partner Administration	Partner Sales Manager	Partner Representative	Partner Marketing Analyst	Partner Marketing Manager
Accounts as Partner	Yes	No	Yes	No	No
Accounts as Owner	Yes	No	Yes	No	No

Setting Up PeopleSoft CRM Application Security for PRM

This section provides an overview of CRM application security as applied to PRM, and discusses how to:

- Define partner security objects.
- Add partner membership and view lists.
- Define functional options and functional option groups.
- Add partner security profiles.
- Set up other security options.

Understanding PeopleSoft CRM Application Security for PRM

The application security framework (CRM Application Security) is a characteristic-based security framework that allows PeopleSoft customers to secure data and functions within a transaction. A group of partners—for example, European partners—are given access to a group of customers and this group of partners can add customers, generate quotes, submit orders, etc. Application security involves setting up and defining membership lists, view lists, and functional options. Together these three constructs constitute a PRM security profile.

- **Membership List**

Define the characteristics of one or a group of users—for example, partner users—to whom system and data access and functional options are being granted.

Users in a security membership list definition are recipients of a security profile. Membership lists can be either dynamic or static.

A dynamic membership list is a set of characteristics that result in a constantly updated list of members for a membership list object. Even if the domain type is dynamic, you can still edit the membership criteria using the appropriate configurable search definition.

A static membership list contains a specific list of members that you may associate with any security profile available in the system. So if you wish to specify the partners who will be part of a membership list you would use a static list, but if you want the list to continually update its list of partners, old and new, depending on defined criteria, you would use a dynamic selection.

- **View List**

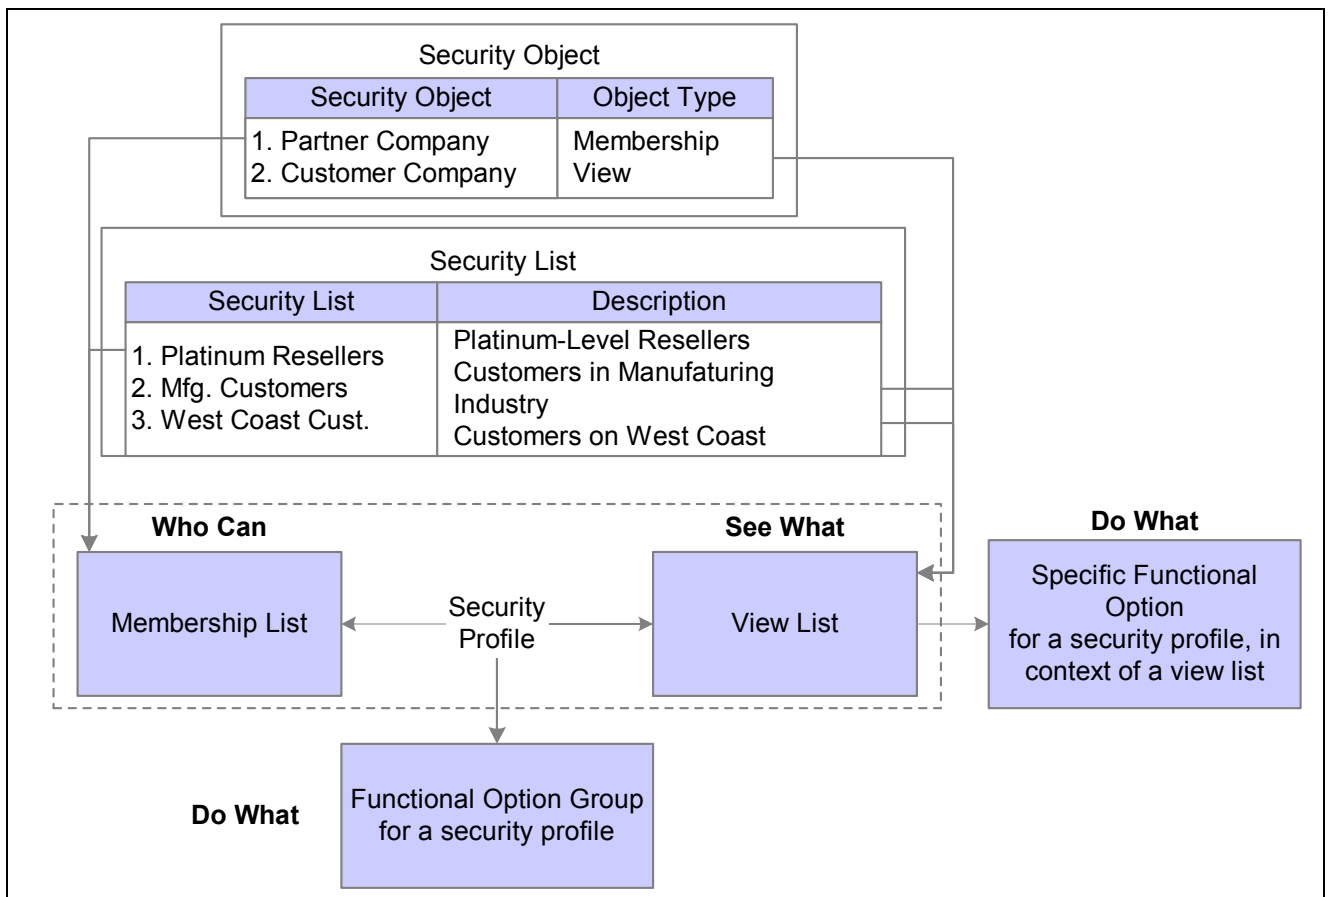

Define characteristics of the viewing object—for example, partner customers, accounts—that are being secured from the Membership List.

- Functional Options

Determine what a user can do within an application. For example, you can create functional options that enable users to submit orders or add new customers.

To group view lists and functional options, you define a security profile. The security profile is then granted or associated to one or multiple membership lists. A functional option group is a grouping of functional options, which you can associate with a security profile.

The following example illustrates how security can be set up for partners:

Application Security Data Model

1. Create a dynamic membership list that contains *All Platinum Reseller* type partners in the state of California.
Run the list builder process to insert the list results into a list table.
2. Create a dynamic list of *All Consumers* in the state of California.
Run the list builder process to insert the list results into a list table.
3. Create a security profile that has the membership list from step 1 and view list from step 2.
4. Log in and enter an order as:
 - A partner using the Platinum Reseller group.

- An agent, entering an order on behalf of a partner using the Platinum Reseller group.

Note. In both cases, the view list (all consumers in state of California) will be restricted based on the fact that the order contains the partner who is a member of the Platinum Reseller membership list.

Pages Used to Set Up PRM Application Security

Page Name	Object Name	Navigation	Usage
Security Object	RSEC_OBJECT_DEFN	Set Up CRM, Security, CRM Application Security, Security Object, Security Object	View or edit the Partner security object.
Add Membership List	RSEC_MEMBER_SMRY	Set Up CRM, Security, CRM Application Security, Add Membership List, Add Membership List	Add a partner membership list. You can activate or deactivate the membership list. The membership list you create here will be associated to a security profile.
Add Membership List	RSEC_SRTY_WIZ1	Click the Nextbutton on the first Add Membership List page.	Select the partner membership object and the partner members to which you want the security object to apply.
Add Membership List	RSEC_SRTY_WIZ2	Click the Nextbutton on the second Add Membership List page.	Select a partner Membership Type of either <i>dynamic</i> or <i>static</i> .
Add Membership List (Dynamic)	RSEC_PARTNER_SRCH	Select the <i>Dynamic</i> radio button and click the Next button on the third Add Membership List page.	Choose the dynamic criteria that you want to use to select partners.
Add Membership List (Static)	RSEC_ML_PARTNER	Select the <i>Static</i> radio button and click the Next button on the third Add Membership List page.	Select the specific partners you want to add to the membership list.
Add View List	RSEC_VIEW_SMRY	Set Up CRM, Security, CRM Application Security, Add View List, Add View List	Enter the view list name and description. You can activate or deactivate the view list here.
Add View List	RSEC_SRTY_WIZ1	Click the Next button on the first Add View List page.	Select the Security Object type and the members to which you want the security object to apply.

Page Name	Object Name	Navigation	Usage
Add View List	RSEC_SRTY_WIZ2	Click the Next button on the second Add View List page.	Select either a <i>Dynamic</i> or <i>Static</i> view type.
Add View List (Dynamic)	RSEC_CUSTOMER_SRCH	Select the <i>Dynamic</i> radio button and click Next at the bottom of the third Add View List page.	Choose the dynamic criteria that you want to use to select customers, or view list objects.
Add View List (Static)	RSEC_VL_CUSTOMER	Select the <i>Static</i> radio button and click Next at the bottom of the third Add View List page.	Choose the specific customers (or other view list objects) that you want to use.
Functional Option	RSEC_FUNC_DEFN	Set Up CRM, Security, CRM Application Security, Functional Option, Functional Option	Define functional options, including enabling amount-related fields, conditional operators, application classes, and messages.
Functional Option Group	RSEC_FUNC_GROUP	Set Up CRM, Security, CRM Application Security, Functional Option Group, Functional Option Group	Group functional options.
Security Profile	RSEC_PROFILE	Set Up CRM, Security, CRM Application Security, Add Security Profile, Security Profile	Define a partner security profile.
Security Profile - Membership	RSEC_PROFILEMEMBER	Set Up CRM, Security, CRM Application Security, Add Security Profile, Membership	Add partner membership lists to the partner security profile
Refresh Dynamic Lists	RSEC_BUILDER_RUN	<ul style="list-style-type: none"> Set Up CRM, Security, CRM Application Security, Refresh Dynamic Lists, Refresh Dynamic Lists Click Run from the Security Profile page. 	Set run controls for the List Build process.
Static Menu Transfer	RSEC_STAT_MENU	Set Up CRM, Security, CRM Application Security, Static Menu Transfer Path, Static Menu Transfer	Enter static menu transfer paths.

Defining Partner Security Objects

Access the Security Object page.

PeopleSoft PRM is delivered with several security objects. For example, *Partner* is a member security object and *Customer* is a view security object.

Note. Any new security objects created or any changes to the out of the box delivered security object definitions may require some customization to get the intended functionality working.

Defining Functional Options and Functional Option Groups

To define functional options and functional option groups, access the Functional Option and Functional Option Group pages.

The functional options that can be used with PRM are:

Functional Option Code	Description	Application/Function
CORE_RSF_FCAST_ROLLUP	Forecast will begin in rollup; otherwise it begins in summary.	Sales
CORE_RSF_FCAST_SIMPLE	Forecast simple reduces options presented to the forecast user.	Sales
CORE_RSF_ADVANCED	Controls basic versus advanced mode for lead and opportunity components.	Sales
CORE_RSF_AUTO_ASSIGN_OFF	Controls the ability to automatically assign a lead or opportunity at save in add mode.	Sales
CORE_RSF_DEFAULT_OWNER	When lead or opportunity is in add mode at save time, the current user is assigned as the primary sales representative by default. If revoked, then leave lead or opportunity unassigned.	Sales
CORE_RSF_SEARCH_PRODUCT_GROUP	Allows the end user to search for product group on leads and opportunities.	Sales

Functional Option Code	Description	Application/Function
CORE_RSF_SHOW_SITE	Controls the ability to add a site to a lead or opportunity.	Sales
CORE_RSF_SUMMARY	Control the display of the summary page in lead and opportunity.	Sales
RO_MAX_DISCOUNT_PERCENT	Maximum discount percent.	Order Capture
RO_MAX_ORDER_TOTAL	Maximum order total reached.	Order Capture
RO_MAX_SURCHARGE_PERCENT	Maximum surcharge percent.	Order Capture
RO_MIN_MARGIN_PERCENT	Maximum profit margin percent.	Order Capture
SEARCH_ALL_PRODUCTS	When searching for products in Order Capture, this functional option give the user the ability to search for any products that are defined in the system instead of limiting them to the products that are defined in a catalog.	Order Capture
MKTHIDE	Hides marketing fields.	Marketing
MKTDISP	Makes marketing fields display-only.	Marketing

Setting Up Other Security Options

You can set up run controls for the List Build process. This allows you to refresh the dynamic membership lists and view lists, all security objects, and profiles that you have created to implement security for PRM. If the content of the lists, objects, and profiles changes frequently, you can set up this process to run daily, every few minutes, or every few hours.

You can also create static menu transfer paths for entering or viewing static list data that is either dynamically created or entered manually. Irrespective of how a membership or view list is created, the results of the list or the list members are stored in a list table. In order to see the list members, a page and a component are created and attached to a menu. The static menu transfer path shows the location of the transfer component.

CHAPTER 7

Setting Up and Managing Partner Registration

This chapter provides an overview of partner registration and discusses how to:

- Set up partner registration.
- Register a partner.

Understanding Partner Registration

In order to allow potential partners to apply for partnership online, your enterprise can provide a self-service registration process. The prospective partners can then access a public web site for your enterprise and enter their company information, answer questions, and submit an application.

The partner registration feature allows potential partners to apply for partnership online and receive email notification after submitting the application. The enterprise administrator can configure the partner registration process, partner profile attributes, and email notifications. The Enterprise Channel Manager can receive email notification of new applications, review registration history, and send email to the prospective Partner Relationship Manager automatically.

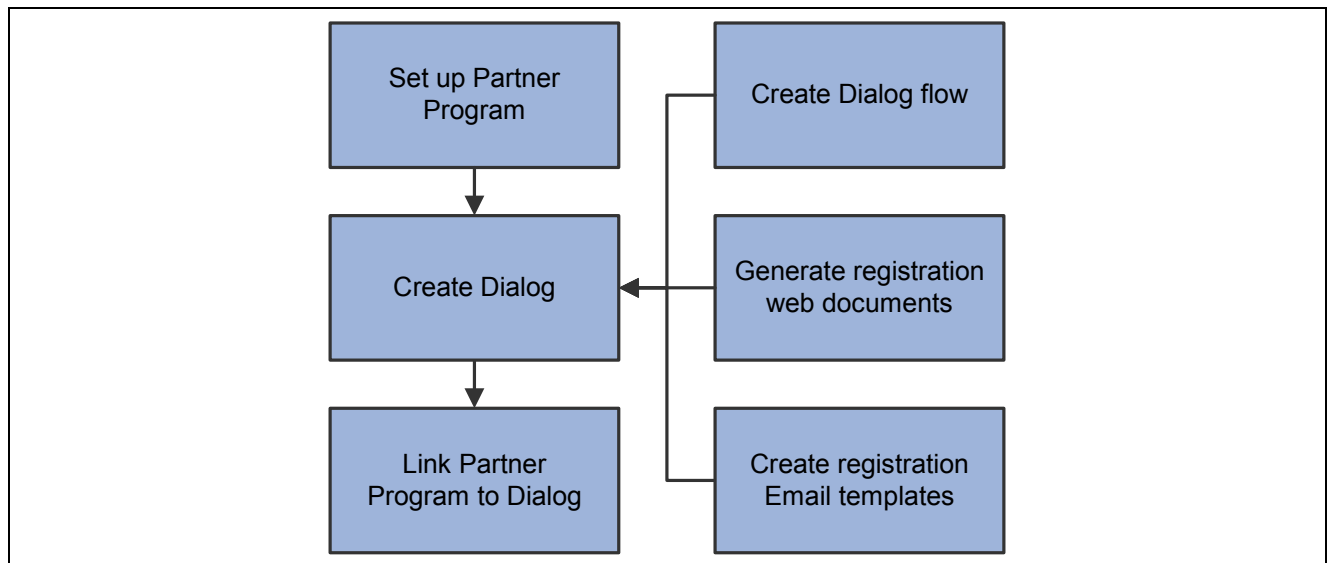

Using partner registration you can:

- Enable partner companies' applications for partnership and registration via an online self-service registration process.
- Maintain a history of partner status, including application and registration outcomes.
- Configure the partner registration process to define your own partner registration process flow, profile attributes to track, registration documents, and Email templates.

PRM self-service registration is totally configurable, so you will use the PeopleSoft Online Marketing dialog feature to define your own partner registration process, including setting up registration confirmation/notification email documents. Dialogs will also be used for designing and rendering registration web pages at run time. PRM comes with a limited license to the dialog feature of PeopleSoft Online Marketing; an additional license of PeopleSoft Online Marketing is not required.

Partner Registration Setup Flow

The following diagram illustrates the registration setup flow:

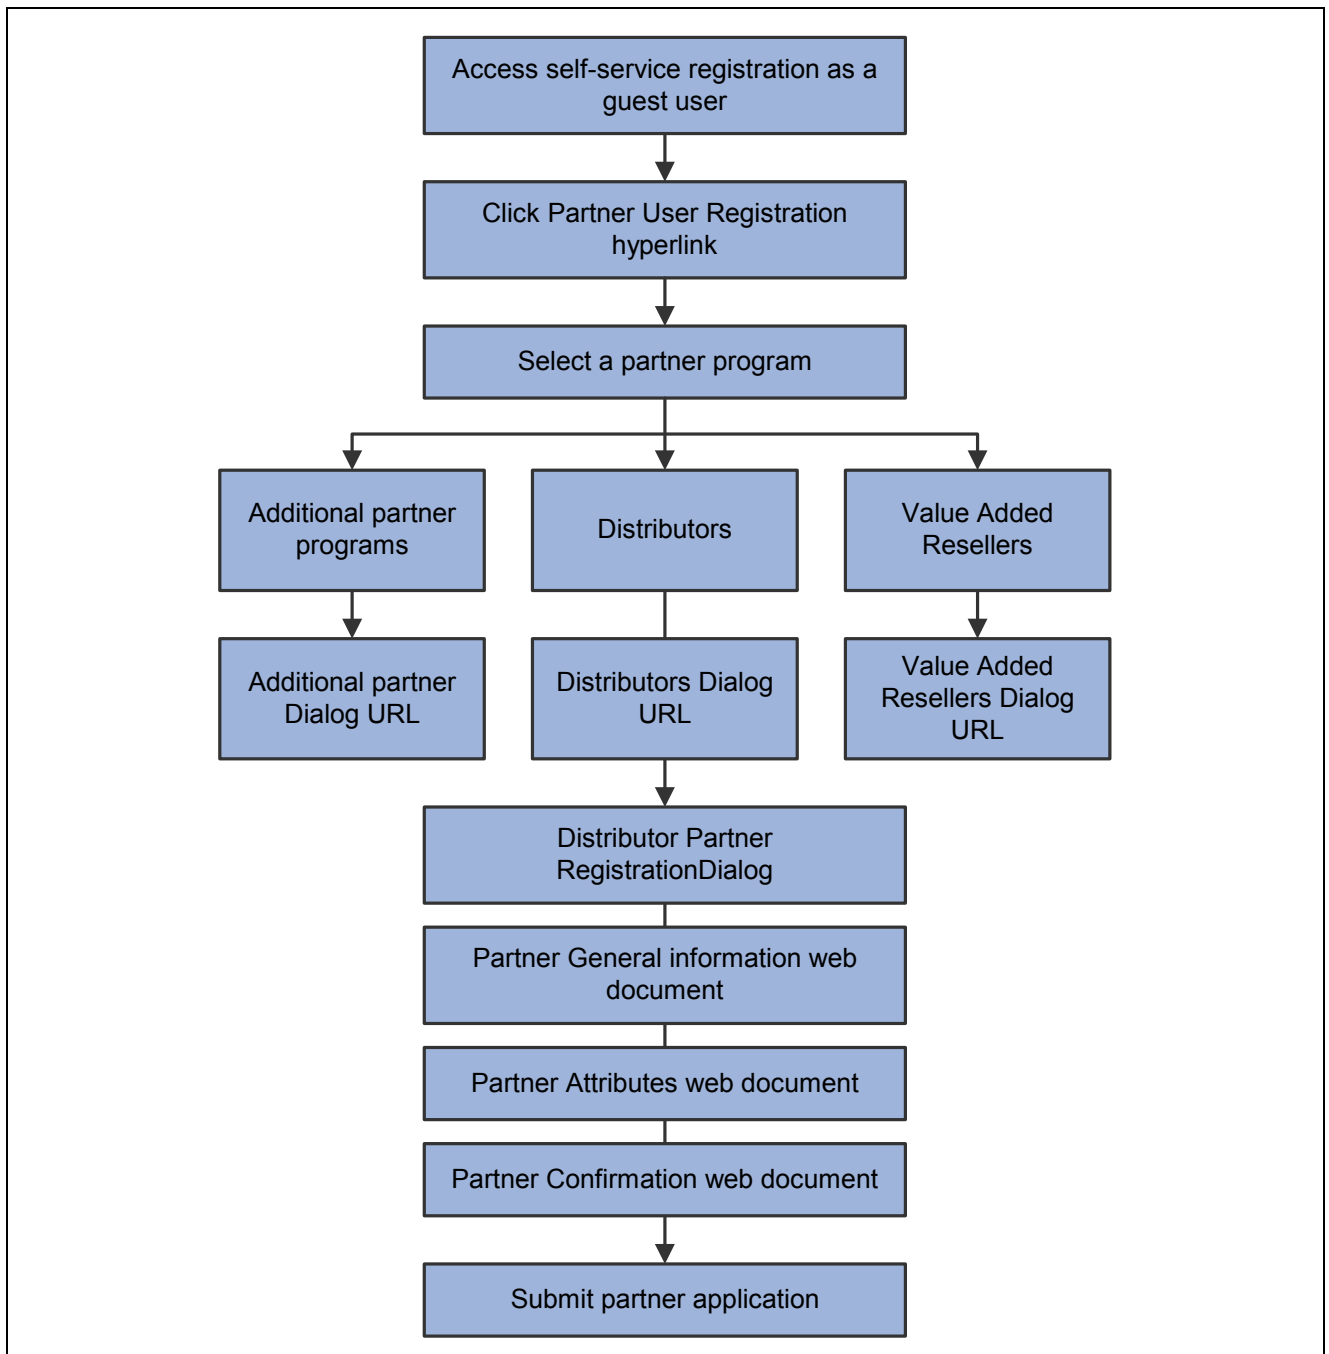

Registration Setup Flow

The setup includes setting up partner programs, defining customized profile attributes in Marketing Profile (optional), creating a dialog using the PeopleSoft Online Marketing dialog functionality, associating the dialog to the partner program, and creating a dialog flow, registration Web Documents and Email notification templates. You will need to follow through this flow and complete each task to create your self-service registration process.

Partner Registration Process Flow

The following diagram illustrates a typical partner registration process flow used during online registration. PeopleSoft delivers this sample dialog that you may wish to use and modify to suit your business requirements.

Partner registration process flow

Setting Up Partner Registration

To set up partner registration, use the Add Partner Program (RD_PR_PROG) component.

This section discusses how to:

- Set up partner programs.

- Create dialogs.
- Link partner programs to dialogs.

Pages Used to Set Up Partner Registration

Page Name	Object Name	Navigation	Usage
Partner Program	RD_PR_PROG	Partners CRM, Add Partner Program, Partner Program	Set up a partner program.
Dialog Designer	RY_DIALOG	Marketing, Dialog Designer, Dialog Designer	Create a dialog flow.
Document	RY_EDOC	Marketing, Document Designer, Document	Generate registration web documents.
Document	RY_EDOC	Marketing, Document Designer, Document	Create registration confirmation and notification email templates.

Setting Up Partner Programs

Access the Partner Program page.

See [Chapter 4, “Creating Partner Programs,” Setting Up the Partner Program Environment, page 14.](#)

Creating Dialogs

This section discusses how to:

- Create dialog flow.
- Generate registration web documents.
- Create registration confirmation and notification email templates.

See [Chapter 4, “Creating Partner Programs,” Creating Dialogs for Partner Programs, page 20.](#)

Creating Dialog Flow

Access the Dialog Designer page.

Note. When creating a dialog for partner registration, set the value for New Individual Role to *Contact for Partner*.

See *PeopleSoft Enterprise Online Marketing 9 PeopleBook*, “Designing Online Dialogs,” Creating a New Dialog.

Generating Registration Web Documents

Access the Dialog Designer page.

See *PeopleSoft Enterprise Online Marketing 9 PeopleBook*, “Designing Web Documents”.

Registration Dialog	Displays the dialog that has been defined through the dialog creation process in PeopleSoft Marketing.
Dialog Entry Point	Displays the document or trigger point of the dialog that will launch the dialog for the end user.

Registering a Partner

For partner registration, PeopleSoft delivers a sample dialog and sample documents. They are named *Partner Registration XXX* and can be found under Marketing, Dialog Designer or Marketing, Document Designer. Because of the data complexities surrounding the publishing of a dialog—Go Live—these are delivered in design mode and must be activated. You can start by cloning and modifying the provided sample data, or use this as a guide to create your own registration dialogs. These dialogs are provided as samples only.

It is recommended that you work through the following steps to activate and test the delivered data before setting up your enterprise partner registration.

Validating Sample Documents

Navigate to Marketing, Document Designer. Confirm the following documents exist:

Document Designer				
Only the first 100 results can be displayed. Enter more information and search again to reduce the number of search results.

Dialog Designer - Dialog Status page

Launching Registration

Access the customer portal registry. The guest user established in the steps above will automatically be used for guest access to the customer registry.

Navigate to the Partner Registration to launch a partner registration dialog.

Partner Registration page

Select the partner program you have associated the dialog to. This will launch the dialog as you have configured it. Your partners will be able to fill in this information and register for partnership as you have configured it.

Submit and view the confirmation.

Validating Data

The captured partner registration data is then saved to the Online Marketing Profile tables (organization data is written to the BO_BASIC_ORG table and individual data is written to the BO_BASIC_IND table). The partner organization data is also saved to the partner profile tables in the business object relationship model or BORM tables.

See [Chapter 5, “Creating and Maintaining Partner Profiles,” page 25](#).

CHAPTER 8

Setting Up Distributed Security for Partner Users

This chapter provides overviews of distributed security for partners and the distributed security process flow and discusses how to:

- Set up distributed security for partner users.
- Manage partner user groups in self-service.

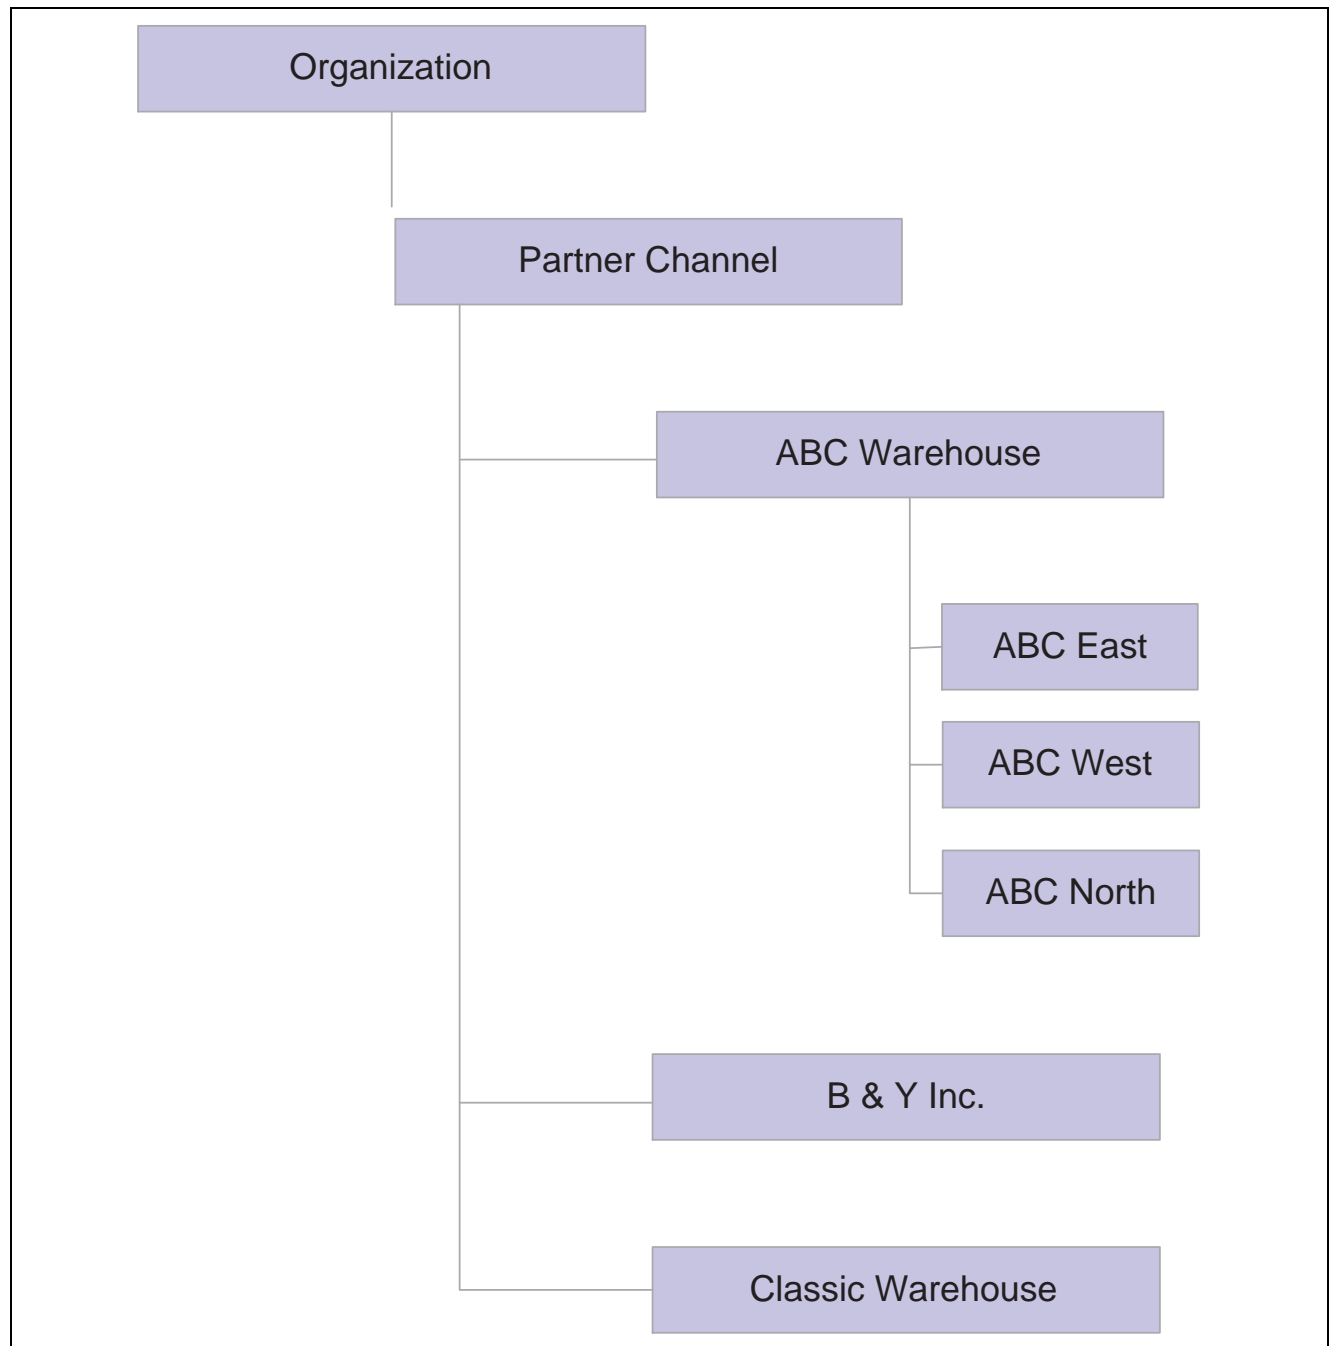

Understanding Distributed Security for Partners

Distributed security or delegated administration provides the ability to delegate administrative responsibility to multiple administrators and managers in an organization in a secured fashion. Distributed security for partners enables partner administrators to set up team members for the user groups they manage and also define subordinate user groups. Given the potentially large numbers of partners that an enterprise can do business with, it is critical for a partner to be able to manage application access and permissions for their own employees.

Centralized administration in a partner-intensive environment is extremely complex to manage and often doesn't scale in practice. By allowing partners to self-register, set up users, maintain their own profiles, and create and manage their own organizational groups, PeopleSoft's PRM solution addresses the need to simplify and decentralize partner management.

For distributed security and partner self-service requirements, the enterprise channel operations manager determines what roles and access privileges a partner administrator is allowed to assign when he creates additional accounts for partner employees. Ideally, a partner administrator should be able to customize the access privileges and further restrict what a partner user has access to, as long as any new access combination still remains within the confines of what the enterprise channel manager delegated in the first place.

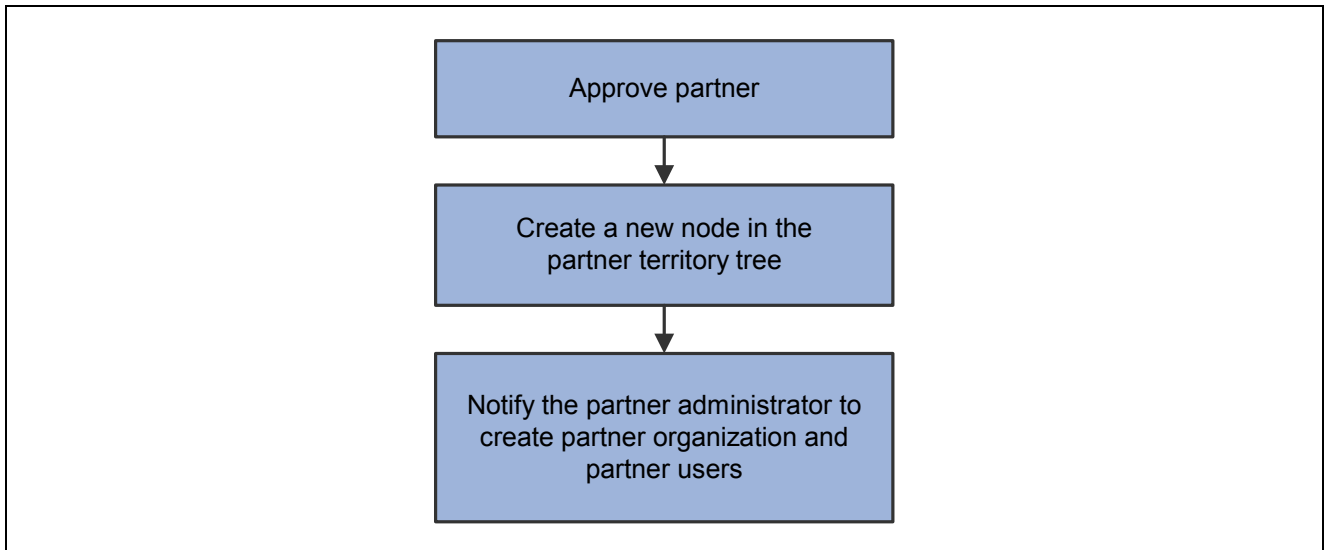

The following example shows delegated security where the Enterprise Administrator or Channel Manager sets up user groups in the organization hierarchy for each partner company; for example, ABC Warehouse, B&Y Inc, and Classic Warehouse:

Example of organization hierarchy

Understanding the Distributed Security Process Flow

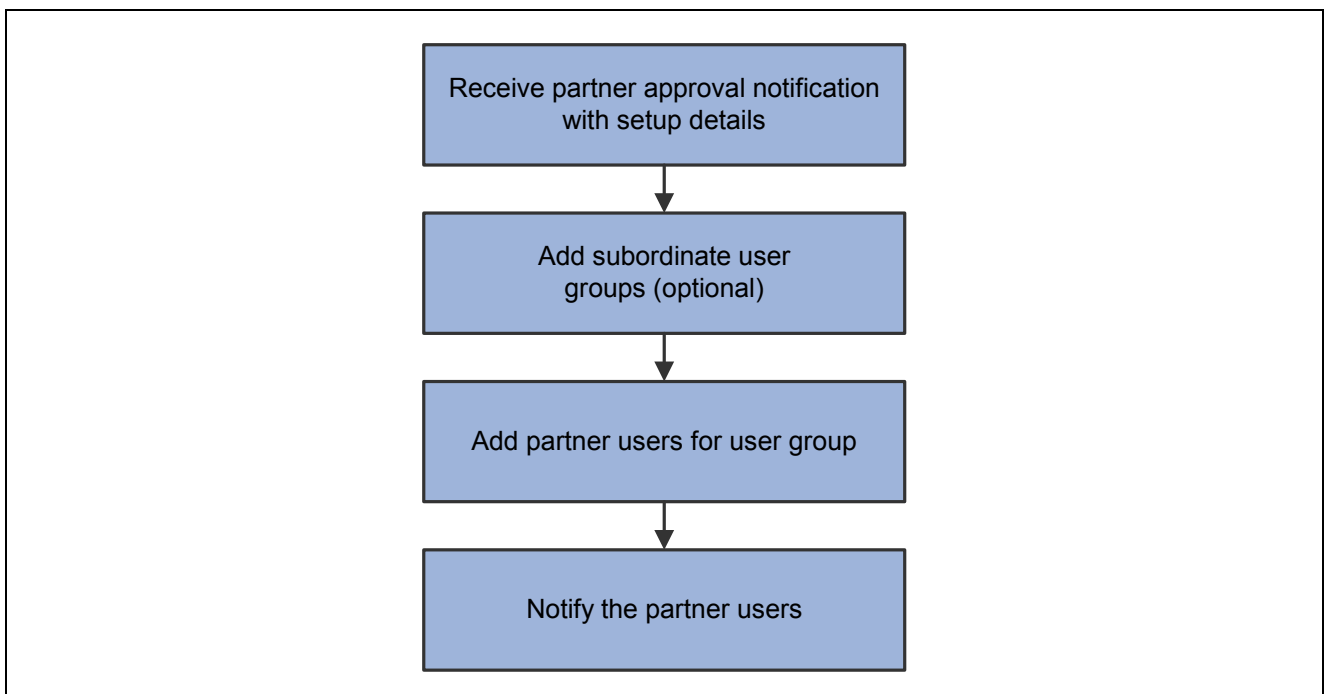

The following diagram illustrates a distributed security process flow. Your enterprise may define a different process flow to suit your unique business needs.

Distributed security process flow for the enterprise channel manager

As the first step in the distributed security process, the partner company applies and provides information about the company and a single point of contact, such as a partner administrator. The enterprise administrator sets up user groups in the organization hierarchy for each partner company. Once the enterprise completes the task of setting up partner user groups, an email notification is sent to the partner administrator. The enterprise grants the designated partner administrator access to the system.

This diagram illustrates a distributed security process flow for a partner administrator:

Distributed security process flow for the partner administrator

The partner administrator can now define teams and maintain the hierarchy for their organization. For example, the partner administrator for ABC Warehouse has the ability to set up multiple team members in the ABC Warehouse user group. This feature enables the partner administrator to add subordinate groups to the ABC Warehouse user group. The Territory tree is used to model the partner organization hierarchy.

The partner administrator can create partner employees in the system by defining User IDs and default passwords and automatically emailing this information to the respective users.

Distributed security also provides the partner administrator with maintenance functionality. The partner administrator can:

- Add subordinate user groups.
- Transfer partner users from one user group to another.
- Activate and deactivate partner users.
- Reset passwords.

Register Users - User Information page

The partner administrator uses this self-service page to administer the users in the partner organization. The administrator can add or delete users and keep track of all users within the partner organization. Multiple roles can be selected for the user. You must add EOPP_USER and PAPP_USER roles to get access to the PeopleSoft system. In addition to these two roles, the Partner Administrator should select additional roles, such as Partner Representative or Partner Sales Manager, as appropriate for each user created. To view, assign, or delete multiple roles for a user, use the Additional Roles icon next to the role drop-down list box.

CHAPTER 9

Executing Partner Relationship Management Transactions

This chapter provides an overview of partner enabled transactions, and discusses how to:

- Create partner marketing campaigns and add tasks.
- Generate partner leads.
- Add orders and quotes by partners.
- Maintain service management orders by partners.
- View financial accounts.
- Add partners to support cases.

Understanding Partner Transactions

Partner company and contact information is available across the channels supported by PeopleSoft CRM applications. The enterprise can view and assign partner information within the context of many employee or enterprise facing transactions (found in the employee portal registry), customer facing transactions (found in the customer portal registry), and partner facing transactions (found in the partner portal registry). Within the employee facing transactions, partner data can be viewed and updated on the campaign, lead, opportunity, quote, order, service management order and case. Partner data can also be viewed for financial vertical customers on the financial account. Within the customer facing transactions, partner data can be viewed on the order and quote, and updated on the case and product registration transactions. Finally, the partner company is extended a set of transaction to act on behalf of your enterprise. Those transactions include the marketing program or campaign, lead, quote, order, service management order, and view financial account information. There are additional secondary or supporting transactions that a partner has access to as well. Those secondary transactions include product catalog, product configuration, and product advice or recommendations. Additional transactions exposed to the partner include partner profile, partner organization hierarchy and security maintenance.

See [Chapter 5, “Creating and Maintaining Partner Profiles,” page 25](#); [Chapter 4, “Creating Partner Programs,” page 13](#) and [Chapter 6, “Setting Up Security for Partners,” page 49](#).

PeopleSoft Partner Portal

We deliver a PeopleSoft Partner Portal which enables partner representatives to transact on behalf of the enterprise using the business processes exposed in the partner portal registry.

The transactions in the PeopleSoft Partner Portal include the ability to:

- View marketing campaigns and adding tasks to marketing campaigns.
- Add and updating leads.

- Add and updating quotes and orders.
- Add service management orders.
- View financial account information for customers.
- Update profile information.

The PeopleSoft Partner portal is delivered with a set of role filtered left hand menu navigation as well as a matching target page navigation page that is represented with function appropriate buttons.

Partner Search

Search functionality has been enhanced to maintain security where the enterprise has exposed partner data across the main CRM transaction set. Maintaining the appropriate level of data access is critical in order to ensure that partners have access to only the customers that they have been secured to view and transact with. With the appropriate level of security defined using the CRM application security framework, the presence of partner data on a transaction will automatically restrict the customer search that takes place so that only the restricted list of customer for the partner is displayed. Additionally, if a customer is entered on a transaction, and subsequent entry of the partner data takes place, the partner prompt will be limited to only those partners that have access to the customer already on the transaction.

Partner and customer search restrictions are in force across all of the transactions covered in this chapter where partner data is exposed.

See [Chapter 8, “Setting Up Distributed Security for Partner Users,” page 73](#) and [Chapter 6, “Setting Up Security for Partners,” page 49](#).

Creating Partner Marketing Campaigns

This section provides an overview of partner marketing campaigns and discusses how to:

- Update partner marketing campaigns.
- Update activities for marketing campaigns.
- Update tasks for marketing campaigns.
- View cost information for marketing campaigns.
- View cost information for marketing campaigns.

Understanding Partner Marketing Campaigns

By extending marketing functionality to PeopleSoft Partner Relationship Management, we enable the Enterprise Channel Manager to add partner members to an activity team and add partner companies to a list of sponsors. Within the partner organization, a partner manager can view lists of marketing programs or campaigns, and add tasks and notes to a marketing campaign (marketing program). The Enterprise Channel Manager can add partners to program teams, define promotional pricing for partners, disable the Audience icon on the Wave Detail page so the partner cannot access the audience, and allow partners to have display-only access to offers, tasks and costs.

The two types of marketing campaigns where partners are involved are joint marketing campaigns and marketing campaigns targeted at partners.

Joint Marketing Campaigns with Partners

To create a joint marketing program with a partner, the enterprise users can add partners to marketing programs. Partners themselves cannot create marketing programs. Once a partner has been added to a marketing program, the partner can access the program and they can perform restricted tasks based on their security level.

Note. A partner user cannot create a new marketing campaign in PeopleSoft Marketing. If they log in to the enterprise partner portal system as a partner user, security dictates that the relevant buttons and fields are unavailable to them.

Marketing Campaigns Targeted at Partners

The process of creating a marketing campaign directed solely at partners simply involves selecting audiences that consist of partners and creating marketing campaigns for them. The process of creation does not differ from the process that one would follow to create a regular marketing campaign.

Generating Partner Leads

This section provides an overview of partner lead functionality and explains how to:

- Generate partner leads.
- Add assignments.
- Add products to the lead.

- Add notes and attachments to the lead.

Understanding Partner Functionality in PeopleSoft Sales

Your enterprise may choose to extend your sales channel to a partner company. In doing so, the partner company and its partner representatives will therefore need access to the lead component in order to be assigned leads and manage lead information. In order to receive lead assignments, the partner should be represented on the territory tree. The automatic assignment rules will look across the partner and enterprise sales representatives and assign the best representative to the lead. These rules are configured by the enterprise. As soon as a lead has been assigned to a partner company and representative, the lead is viewable within the partner portal. The partner will not have access to the same lead information as the enterprise user. A partner has access to only those leads that he has been assigned, and has customer access within the lead transaction to only those customers or consumers that he has been granted access to.

Sales representatives and or partner representatives can be added to leads manually or automatically. If they are added automatically, the system does the following:

1. If there is currently an enterprise sales representative that is marked as primary and the assignment engine finds a different primary one, the system will replace the current primary sales representative with the new sales representative.
2. If both the enterprise sales representative and partner representative are marked as primary, the system will replace the primary depending upon who is selected as primary by the Assignment Engine.
3. If there is a enterprise sales representative and partner representative, the system will replace the current primary. For example, if the sales representative is currently the primary and the Assignment Engine sends the partner representative as the primary, the enterprise sales representative is replaced by the partner representative.

Note. Partner sales representatives do not have to be sales users in order to be assigned.

To secure your enterprise, partner restrictions are applied to the PeopleSoft Sales system. When the Enterprise Channel Manager is searching for customers and partners in the context of the lead or opportunity transactions, the following security is enforced:

- Search for a customer and later search for a partner. Partners are restricted to the authorized list of customers.
- Search for a partner and later search for a customer. Customers are restricted to the authorized list of partners.
- Change the Business Unit and search for the customer and partner. The setID should restrict customer and partners.

Note. The system is not delivered with security on the contacts, sites, and partner sales representatives or enterprise sales representatives. Security should prevent the 'Primary' selection in the Sales Team to only those partners authorized for the customer. Security is not enforced if there is no customer or partner identified. For example if the Enterprise Channel Manager searches for a customer without a partner, the entire list of customers will display.

When entering a new lead or opportunity in the enterprise, if only a partner is involved in the lead, the following is enforced:

- The representative who is entering the lead is defaulted as the primary sales representative.
- A partner with a contact can be selected from the main page. The contact of the partner will be defaulted in the Sales Team as a 'Primary' representative for the partner.

- When adding the partner, you can search for the Partner Reps from all partner companies filtered by setID. You can select multiple contacts from the list for the partner company.
- If partners are added automatically, the partner sales representatives found by the assignment engine will be added to the sales team. If the assignment engine finds the match on the 'Primary' sales representative, the partner will be marked as 'Primary'.

If both an enterprise and partner sales representative are involved:

- An enterprise and a partner sales representative can both be marked as Primary.

Note. If there are more than two sales representatives in the Assign page, changing the Primary enterprise or partner representative will insert a new row or update an existing row for the new primary representative

- If partners are added automatically and both enterprise and partner sales representatives are already in the 'Assign' page and marked as Primary, the assignment engine may find a different primary representative. If so, the existing representatives will not be removed from the sales team, but will be updated as non-primary.

Partner Leads in the PeopleSoft Partner Portal

Lead functionality is exposed in the PeopleSoft Partner Portal and is scaled to fit the partner role. Some of the options available in the enterprise are not available in the PeopleSoft Partner Portal in order to simplify the user experience and limit the features and functions to only those that the partner should be performing.

The partner can only select from a restricted list of customers. Partners cannot add contacts unless a customer is identified on the lead and only the contacts of the customer can be added.

If the partner is the primary representative:

- The primary partner and partner contact are display only from the Discover page.
- Only the primary partner contact can delete or change the sales team on the lead.
- Only the primary partner contact can change the primary sales team member to a team member from his or her own partner company.
- Any team member viewing the lead can add more team members from his or her own partner company.
- The partner can change the status for the lead.

Note. If the lead is turned back, the system will remove the primary partner from the sales team. A new primary contact from the same partner company as the Partner who is signed in will be added when the page is saved. If none was found, the lead will be given to an enterprise sales representative if there is one, or it will be left unassigned.

If the partner is not the primary representative:

- The partner sales representatives will only be able to view the Discover, Propose and Notes pages.
- The partner sales representatives will still be to add more team members from their own partner company.

Adding Orders and Quotes by Partners

This section provides an overview of partner orders and quotes and explains how a partner can:

- Enter orders.

- Access product recommendations.
- Check availability and price.
- Enter line details.
- View and remove holds.
- View notes.
- View related actions.
- View order history.

Orders and Quotes

Many of the options and pages available to the partner when entering an order from the PeopleSoft Partner Portal are the same as when an order is entered by a CSR during order entry. The differences are listed in this section.

When a partner enters an order or quote, they can only select from customers and products that they have been given access using the CRM application security framework.

Depending on how you set up hold processing, partners may be able to release some orders from hold status to expedite fulfillment.

Hold codes pertaining to partners are available to use in the following situations:

- The partner is placing an order for a product that exists in his catalog but not in the customer's catalog.
- Minimum or maximum order total amounts for a specific partner. When the order is outside of these limits, the order is placed on hold.
- If the partner is allowed to apply a manual price adjustment, the order will go on hold if the manual discount or surcharge is greater than what the partner is allowed to give.
- If the partner name is specified but the partner contact field is empty, the order will go on hold.
- If configured products are added to the order, the order will go on hold.
- If the partner places an order for resale, the tax-exempt certificate should be included or the order will go on hold.

All of the hold codes can be edited or deleted. For example, you may decide that configured products that are ordered by partners do not need to be reviewed before the hold code is removed.

Pages Used to Enter Orders and Quotes by Partners

Page Name	Object Name	Navigation	Usage
Search	RO_SEARCH_UPDATE	Partner Portal, Search Orders and Quotes	Search for orders and quotes.
Order — Entry Form, Quote — Entry Form,	RO_FORM	<ul style="list-style-type: none"> • Partner Portal, Add Order • Partner Portal, Add Quote 	As a partner, enter an order or quote for a customer.
Product Advisor List	RO_LISTDISP_SEC	Click the Get Recommendations link on the Quote - Entry Form or Order - Entry Form page.	Select a catalog from the list of catalogs available. You can then launch Advisor dialogs that are associated to the catalog.
Check Availability and Pricing	RO_FORM	Click the Availability tab on the Quote - Entry Form or Order - Entry Form page. Then click the Check Availability link.	Create partial shipments, add promotion codes, or view pricing details for order lines.
Line Details	RO_CAPTURELINE_DTL	Click the Line Details tab in the Order Details or Quote Details section on the Quote - Entry Form or Order - Entry Form page.	Check product availability. Partners can edit line details such as unit of measure, order quantity, unit price, promotion code and apply manual adjustments. They can also allow partial shipment for this product.
Entry Form — Holds	RO_HOLD	Click the Holds tab in the Order Details or Quote Details section on the Quote - Entry Form or Order - Entry Form page.	Use to view and remove holds for the order.
Notes	RO_NOTE	Click the Notes tab in the Order Details or Quote Details section on the Quote - Entry Form or Order - Entry Form page.	Use to view or add notes to the order.
Related Actions	RO_ASSOCIATION	Click the Related Action tab in the Order Details or Quote Details section on the Quote - Entry Form or Order - Entry Form page.	View related actions for the order, such as a business project that is somehow related to the order or quote.
History	RO_HISTORY	Click the History tab in the Order Details or Quote Details section on the Quote - Entry Form or Order - Entry Form page.	View changes or communication about the order.

Maintaining Service Management Orders by Partners

This section provides an overview of partner service management orders and explains how a partner can:

- Add partner service management orders.
- Add service management order line details.
- View and remove holds.
- View notes.

- View related actions.
- View order history.

Partner Service Management Orders

Similar to the order entry discussed in the previous section, many of the options and pages available to the partner when entering a service order from the PeopleSoft Partner Portal are the same as when a service order is entered by a CSR. The differences are listed in this section.

When partners log on to the PeopleSoft Partner Portal to maintain service orders, their partner and contact information is saved on the service order, but it is not displayed while they enter the order. The list of installed services that can be added to the service order are based on the partner and customer relationship.

Pages Used to Add Partner Service Management Orders

Page Name	Object Name	Navigation	Usage
Search	RO_SEARCH_UPDATE	Partner Portal, Search Orders and Quotes	Search for service orders.

Adding Partners to Support Cases

This section provides an overview of how partners are added to cases.

Partner Cases

You can now capture partner information when logging a case either in customer self-service, or within the enterprise or employee case transaction. The partner company and partner contact can be added to the case.

You can display the partner company and partner contact in the Case Information section of the main case page or in the Partner Information section on the main case page by configuring the display template. The partner fields can be displayed in two sections of the main case page, so you should select the location that makes sense for your business needs.

When adding a case, security performs the following:

- When a partner is selected, the customer selection must be limited to those customers who are in the view list for that partner.
- When a customer is selected, the partner selection must be limited to those partners who are in the membership list that grants access to that customer.

Glossary of PeopleSoft Enterprise Terms

absence entitlement	This element defines rules for granting paid time off for valid absences, such as sick time, vacation, and maternity leave. An absence entitlement element defines the entitlement amount, frequency, and entitlement period.
absence take	This element defines the conditions that must be met before a payee is entitled to take paid time off.
academic career	In PeopleSoft Enterprise Campus Solutions, all course work that a student undertakes at an academic institution and that is grouped in a single student record. For example, a university that has an undergraduate school, a graduate school, and various professional schools might define several academic careers—an undergraduate career, a graduate career, and separate careers for each professional school (law school, medical school, dental school, and so on).
academic institution	In PeopleSoft Enterprise Campus Solutions, an entity (such as a university or college) that is independent of other similar entities and that has its own set of rules and business processes.
academic organization	In PeopleSoft Enterprise Campus Solutions, an entity that is part of the administrative structure within an academic institution. At the lowest level, an academic organization might be an academic department. At the highest level, an academic organization can represent a division.
academic plan	In PeopleSoft Enterprise Campus Solutions, an area of study—such as a major, minor, or specialization—that exists within an academic program or academic career.
academic program	In PeopleSoft Enterprise Campus Solutions, the entity to which a student applies and is admitted and from which the student graduates.
accounting class	In PeopleSoft Enterprise Performance Management, the accounting class defines how a resource is treated for generally accepted accounting practices. The Inventory class indicates whether a resource becomes part of a balance sheet account, such as inventory or fixed assets, while the Non-inventory class indicates that the resource is treated as an expense of the period during which it occurs.
accounting date	The accounting date indicates when a transaction is recognized, as opposed to the date the transaction actually occurred. The accounting date and transaction date can be the same. The accounting date determines the period in the general ledger to which the transaction is to be posted. You can only select an accounting date that falls within an open period in the ledger to which you are posting. The accounting date for an item is normally the invoice date.
accounting split	The accounting split method indicates how expenses are allocated or divided among one or more sets of accounting ChartFields.
accumulator	You use an accumulator to store cumulative values of defined items as they are processed. You can accumulate a single value over time or multiple values over time. For example, an accumulator could consist of all voluntary deductions, or all company deductions, enabling you to accumulate amounts. It allows total flexibility for time periods and values accumulated.
action reason	The reason an employee's job or employment information is updated. The action reason is entered in two parts: a personnel action, such as a promotion, termination, or change from one pay group to another—and a reason for that action. Action reasons are used by PeopleSoft Enterprise Human Resources, PeopleSoft Enterprise Benefits

	Administration, PeopleSoft Enterprise Stock Administration, and the COBRA Administration feature of the Base Benefits business process.
action template	In PeopleSoft Enterprise Receivables, outlines a set of escalating actions that the system or user performs based on the period of time that a customer or item has been in an action plan for a specific condition.
activity	<p>In PeopleSoft Enterprise Learning Management, an instance of a catalog item (sometimes called a class) that is available for enrollment. The activity defines such things as the costs that are associated with the offering, enrollment limits and deadlines, and waitlisting capacities.</p> <p>In PeopleSoft Enterprise Performance Management, the work of an organization and the aggregation of actions that are used for activity-based costing.</p> <p>In PeopleSoft Enterprise Project Costing, the unit of work that provides a further breakdown of projects—usually into specific tasks.</p> <p>In PeopleSoft Workflow, a specific transaction that you might need to perform in a business process. Because it consists of the steps that are used to perform a transaction, it is also known as a step map.</p>
address usage	In PeopleSoft Enterprise Campus Solutions, a grouping of address types defining the order in which the address types are used. For example, you might define an address usage code to process addresses in the following order: billing address, dormitory address, home address, and then work address.
adjustment calendar	In PeopleSoft Enterprise Campus Solutions, the adjustment calendar controls how a particular charge is adjusted on a student's account when the student drops classes or withdraws from a term. The charge adjustment is based on how much time has elapsed from a predetermined date, and it is determined as a percentage of the original charge amount.
administrative function	In PeopleSoft Enterprise Campus Solutions, a particular functional area that processes checklists, communication, and comments. The administrative function identifies which variable data is added to a person's checklist or communication record when a specific checklist code, communication category, or comment is assigned to the student. This key data enables you to trace that checklist, communication, or comment back to a specific processing event in a functional area.
admit type	In PeopleSoft Enterprise Campus Solutions, a designation used to distinguish first-year applications from transfer applications.
agreement	In PeopleSoft Enterprise eSettlements, provides a way to group and specify processing options, such as payment terms, pay from a bank, and notifications by a buyer and supplier location combination.
allocation rule	In PeopleSoft Enterprise Incentive Management, an expression within compensation plans that enables the system to assign transactions to nodes and participants. During transaction allocation, the allocation engine traverses the compensation structure from the current node to the root node, checking each node for plans that contain allocation rules.
alternate account	A feature in PeopleSoft Enterprise General Ledger that enables you to create a statutory chart of accounts and enter statutory account transactions at the detail transaction level, as required for recording and reporting by some national governments.
analysis database	In PeopleSoft Enterprise Campus Solutions, database tables that store large amounts of student information that may not appear in standard report formats. The analysis database tables contain keys for all objects in a report that an application program can use to reference other student-record objects that are not contained in the printed report. For instance, the analysis database contains data on courses that are considered

	for satisfying a requirement but that are rejected. It also contains information on courses captured by global limits. An analysis database is used in PeopleSoft Enterprise Academic Advisement.
Application Messaging	PeopleSoft Application Messaging enables applications within the PeopleSoft Enterprise product family to communicate synchronously or asynchronously with other PeopleSoft Enterprise and third-party applications. An application message defines the records and fields to be published or subscribed to.
AR specialist	Abbreviation for <i>receivables specialist</i> . In PeopleSoft Enterprise Receivables, an individual in who tracks and resolves deductions and disputed items.
arbitration plan	In PeopleSoft Enterprise Pricer, defines how price rules are to be applied to the base price when the transaction is priced.
assessment rule	In PeopleSoft Enterprise Receivables, a user-defined rule that the system uses to evaluate the condition of a customer's account or of individual items to determine whether to generate a follow-up action.
asset class	An asset group used for reporting purposes. It can be used in conjunction with the asset category to refine asset classification.
attribute/value pair	In PeopleSoft Enterprise Directory Interface, relates the data that makes up an entry in the directory information tree.
audience	In PeopleSoft Enterprise Campus Solutions, a segment of the database that relates to an initiative, or a membership organization that is based on constituent attributes rather than a dues-paying structure. Examples of audiences include the Class of '65 and Undergraduate Arts & Sciences.
authentication server	A server that is set up to verify users of the system.
base time period	In PeopleSoft Enterprise Business Planning, the lowest level time period in a calendar.
benchmark job	In PeopleSoft Enterprise Workforce Analytics Solution, a benchmark job is a job code for which there is corresponding salary survey data from published, third-party sources.
billing career	In PeopleSoft Enterprise Campus Solutions, the one career under which other careers are grouped for billing purposes if a student is active simultaneously in multiple careers.
bio bit or bio brief	In PeopleSoft Enterprise Campus Solutions, a report that summarizes information stored in the system about a particular constituent. You can generate standard or specialized reports.
book	In PeopleSoft Enterprise Asset Management, used for storing financial and tax information, such as costs, depreciation attributes, and retirement information on assets.
branch	A tree node that rolls up to nodes above it in the hierarchy, as defined in PeopleSoft Tree Manager.
budgetary account only	An account used by the system only and not by users; this type of account does not accept transactions. You can only budget with this account. Formerly called "system-maintained account."
budget check	In commitment control, the processing of source transactions against control budget ledgers, to see if they pass, fail, or pass with a warning.
budget control	In commitment control, budget control ensures that commitments and expenditures don't exceed budgets. It enables you to track transactions against corresponding budgets and terminate a document's cycle if the defined budget conditions are not met.

For example, you can prevent a purchase order from being dispatched to a vendor if there are insufficient funds in the related budget to support it.

budget period	The interval of time (such as 12 months or 4 quarters) into which a period is divided for budgetary and reporting purposes. The ChartField allows maximum flexibility to define operational accounting time periods without restriction to only one calendar.
business activity	The name of a subset of a detailed business process. This might be a specific transaction, task, or action that you perform in a business process.
business event	<p>In PeopleSoft Enterprise Receivables, defines the processing characteristics for the Receivable Update process for a draft activity.</p> <p>In PeopleSoft Enterprise Sales Incentive Management, an original business transaction or activity that may justify the creation of a PeopleSoft Enterprise Incentive Management event (a sale, for example).</p>
business process	<p>A standard set of 17 business processes are defined and maintained by the PeopleSoft Enterprise product families and are supported by the Business Process Engineering group. An example of a business process is Order Fulfillment, which is a business process that manages sales orders and contracts, inventory, billing, and so forth.</p> <p>See also <i>detailed business process</i>.</p>
business task	The name of the specific function depicted in one of the business processes.
business unit	A corporation or a subset of a corporation that is independent with regard to one or more operational or accounting functions.
buyer	In PeopleSoft Enterprise eSettlements, an organization (or business unit, as opposed to an individual) that transacts with suppliers (vendors) within the system. A buyer creates payments for purchases that are made in the system.
campus	In PeopleSoft Enterprise Campus Solutions, an entity that is usually associated with a distinct physical administrative unit, that belongs to a single academic institution, that uses a unique course catalog, and that produces a common transcript for students within the same academic career.
catalog item	In PeopleSoft Enterprise Learning Management, a specific topic that a learner can study and have tracked. For example, "Introduction to Microsoft Word." A catalog item contains general information about the topic and includes a course code, description, categorization, keywords, and delivery methods. A catalog item can have one or more learning activities.
catalog map	In PeopleSoft Enterprise Catalog Management, translates values from the catalog source data to the format of the company's catalog.
catalog partner	In PeopleSoft Enterprise Catalog Management, shares responsibility with the enterprise catalog manager for maintaining catalog content.
categorization	Associates partner offerings with catalog offerings and groups them into enterprise catalog categories.
category	In PeopleSoft Enterprise Campus Solutions, a broad grouping to which specific comments or communications (contexts) are assigned. Category codes are also linked to 3C access groups so that you can assign data-entry or view-only privileges across functions.
channel	In PeopleSoft MultiChannel Framework, email, chat, voice (computer telephone integration [CTI]), or a generic event.
ChartField	A field that stores a chart of accounts, resources, and so on, depending on the PeopleSoft Enterprise application. ChartField values represent individual account numbers, department codes, and so forth.

ChartField balancing	You can require specific ChartFields to match up (balance) on the debit and the credit side of a transaction.
ChartField combination edit	The process of editing journal lines for valid ChartField combinations based on user-defined rules.
ChartKey	One or more fields that uniquely identify each row in a table. Some tables contain only one field as the key, while others require a combination.
checkbook	In PeopleSoft Enterprise Promotions Management, enables you to view financial data (such as planned, incurred, and actual amounts) that is related to funds and trade promotions.
checklist code	In PeopleSoft Enterprise Campus Solutions, a code that represents a list of planned or completed action items that can be assigned to a staff member, volunteer, or unit. Checklists enable you to view all action assignments on one page.
class	In PeopleSoft Enterprise Campus Solutions, a specific offering of a course component within an academic term. See also <i>course</i> .
Class ChartField	A ChartField value that identifies a unique appropriation budget key when you combine it with a fund, department ID, and program code, as well as a budget period. Formerly called <i>sub-classification</i> .
clearance	In PeopleSoft Enterprise Campus Solutions, the period of time during which a constituent in PeopleSoft Enterprise Contributor Relations is approved for involvement in an initiative or an action. Clearances are used to prevent development officers from making multiple requests to a constituent during the same time period.
clone	In PeopleCode, to make a unique copy. In contrast, to <i>copy</i> may mean making a new reference to an object, so if the underlying object is changed, both the copy and the original change.
cohort	In PeopleSoft Enterprise Campus Solutions, the highest level of the three-level classification structure that you define for enrollment management. You can define a cohort level, link it to other levels, and set enrollment target numbers for it. See also <i>population</i> and <i>division</i> .
collection	To make a set of documents available for searching in Verity, you must first create at least one collection. A collection is set of directories and files that allow search application users to use the Verity search engine to quickly find and display source documents that match search criteria. A collection is a set of statistics and pointers to the source documents, stored in a proprietary format on a file server. Because a collection can only store information for a single location, PeopleTools maintains a set of collections (one per language code) for each search index object.
collection rule	In PeopleSoft Enterprise Receivables, a user-defined rule that defines actions to take for a customer based on both the amount and the number of days past due for outstanding balances.
comm key	See <i>communication key</i> .
communication key	In PeopleSoft Enterprise Campus Solutions, a single code for entering a combination of communication category, communication context, communication method, communication direction, and standard letter code. Communication keys (also called <i>comm keys</i> or <i>speed keys</i>) can be created for background processes as well as for specific users.

compensation object	In PeopleSoft Enterprise Incentive Management, a node within a compensation structure. Compensation objects are the building blocks that make up a compensation structure's hierarchical representation.
compensation structure	In PeopleSoft Enterprise Incentive Management, a hierarchical relationship of compensation objects that represents the compensation-related relationship between the objects.
component interface	A component interface is a set of application programming interfaces (APIs) that you can use to access and modify PeopleSoft Enterprise database information using a program instead of the PeopleSoft client.
condition	In PeopleSoft Enterprise Receivables, occurs when there is a change of status for a customer's account, such as reaching a credit limit or exceeding a user-defined balance due.
configuration parameter catalog	Used to configure an external system with PeopleSoft Enterprise. For example, a configuration parameter catalog might set up configuration and communication parameters for an external server.
configuration plan	In PeopleSoft Enterprise Incentive Management, configuration plans hold allocation information for common variables (not incentive rules) and are attached to a node without a participant. Configuration plans are not processed by transactions.
constituents	In PeopleSoft Enterprise Campus Solutions, friends, alumni, organizations, foundations, or other entities affiliated with the institution, and about which the institution maintains information. The constituent types delivered with PeopleSoft Enterprise Contributor Relations Solutions are based on those defined by the Council for the Advancement and Support of Education (CASE).
content reference	Content references are pointers to content registered in the portal registry. These are typically either URLs or iScripts. Content references fall into three categories: target content, templates, and template pagelets.
context	<p>In PeopleCode, determines which buffer fields can be contextually referenced and which is the current row of data on each scroll level when a PeopleCode program is running.</p> <p>In PeopleSoft Enterprise Campus Solutions, a specific instance of a comment or communication. One or more contexts are assigned to a category, which you link to 3C access groups so that you can assign data-entry or view-only privileges across functions.</p> <p>In PeopleSoft Enterprise Incentive Management, a mechanism that is used to determine the scope of a processing run. PeopleSoft Enterprise Incentive Management uses three types of context: plan, period, and run-level.</p>
control table	Stores information that controls the processing of an application. This type of processing might be consistent throughout an organization, or it might be used only by portions of the organization for more limited sharing of data.
cost-plus contract line	A rate-based contract line associated with a fee component of Award, Fixed, Incentive, or Other. Rate-based contract lines associated with a fee type of None are not considered cost-plus contract lines.
cost profile	A combination of a receipt cost method, a cost flow, and a deplete cost method. A profile is associated with a cost book and determines how items in that book are valued, as well as how the material movement of the item is valued for the book.
cost row	A cost transaction and amount for a set of ChartFields.
course	In PeopleSoft Enterprise Campus Solutions, a course that is offered by a school and that is typically described in a course catalog. A course has a standard syllabus and

credit level; however, these may be modified at the class level. Courses can contain multiple components such as lecture, discussion, and lab.

See also *class*.

course share set	In PeopleSoft Enterprise Campus Solutions, a tag that defines a set of requirement groups that can share courses. Course share sets are used in PeopleSoft Enterprise Academic Advisement.
current learning	In PeopleSoft Enterprise Learning Management, a self-service repository for all of a learner's in-progress learning activities and programs.
data acquisition	In PeopleSoft Enterprise Incentive Management, the process during which raw business transactions are acquired from external source systems and fed into the operational data store (ODS).
data cube	In PeopleSoft Analytic Calculation Engine, a data cube is a container for one kind of data (such as Sales data) and works with in tandem with one or more dimensions. Dimensions and data cubes in PeopleSoft Analytic Calculation Engine are unrelated to dimensions and online analytical processing (OLAP) cubes in PeopleSoft Cube Manager.
data elements	<p>Data elements, at their simplest level, define a subset of data and the rules by which to group them.</p> <p>For Workforce Analytics, data elements are rules that tell the system what measures to retrieve about your workforce groups.</p>
dataset	A data grouping that enables role-based filtering and distribution of data. You can limit the range and quantity of data that is displayed for a user by associating dataset rules with user roles. The result of dataset rules is a set of data that is appropriate for the user's roles.
delivery method	<p>In PeopleSoft Enterprise Learning Management, identifies the primary type of delivery method in which a particular learning activity is offered. Also provides default values for the learning activity, such as cost and language. This is primarily used to help learners search the catalog for the type of delivery from which they learn best. Because PeopleSoft Enterprise Learning Management is a blended learning system, it does not enforce the delivery method.</p> <p>In PeopleSoft Enterprise Supply Chain Management, identifies the method by which goods are shipped to their destinations (such as truck, air, and rail). The delivery method is specified when creating shipment schedules.</p>
delivery method type	In PeopleSoft Enterprise Learning Management, identifies how learning activities can be delivered—for example, through online learning, classroom instruction, seminars, books, and so forth—in an organization. The type determines whether the delivery method includes scheduled components.
detailed business process	A subset of the business process. For example, the detailed business process named Determine Cash Position is a subset of the business process called Cash Management.
dimension	In PeopleSoft Analytic Calculation Engine, a dimension contains a list of one kind of data that can span various contexts, and it is a basic component of an analytic model. Within the analytic model, a dimension is attached to one or more data cubes. In PeopleSoft Cube Manager, a dimension is the most basic component of an OLAP cube and specifies the PeopleSoft metadata to be used to create the dimension's rollout structure. Dimensions and data cubes in PeopleSoft Analytic Calculation Engine are unrelated to dimensions and OLAP cubes in PeopleSoft Cube Manager.
directory information tree	In PeopleSoft Enterprise Directory Interface, the representation of a directory's hierarchical structure.

division	<p>In PeopleSoft Enterprise Campus Solutions, the lowest level of the three-level classification structure that you define in PeopleSoft Enterprise Recruiting and Admissions for enrollment management. You can define a division level, link it to other levels, and set enrollment target numbers for it.</p> <p>See also <i>population</i> and <i>cohort</i>.</p>
document sequencing	A flexible method that sequentially numbers the financial transactions (for example, bills, purchase orders, invoices, and payments) in the system for statutory reporting and for tracking commercial transaction activity.
dynamic detail tree	A tree that takes its detail values—dynamic details—directly from a table in the database, rather than from a range of values that are entered by the user.
edit table	A table in the database that has its own record definition, such as the Department table. As fields are entered into a PeopleSoft Enterprise application, they can be validated against an edit table to ensure data integrity throughout the system.
effective date	A method of dating information in PeopleSoft Enterprise applications. You can predate information to add historical data to your system, or postdate information in order to enter it before it actually goes into effect. By using effective dates, you don't delete values; you enter a new value with a current effective date.
EIM ledger	Abbreviation for <i>Enterprise Incentive Management ledger</i> . In PeopleSoft Enterprise Incentive Management, an object to handle incremental result gathering within the scope of a participant. The ledger captures a result set with all of the appropriate traces to the data origin and to the processing steps of which it is a result.
elimination set	In PeopleSoft Enterprise General Ledger, a related group of intercompany accounts that is processed during consolidations.
entry event	In PeopleSoft Enterprise General Ledger, Receivables, Payables, Purchasing, and Billing, a business process that generates multiple debits and credits resulting from single transactions to produce standard, supplemental accounting entries.
equitization	In PeopleSoft Enterprise General Ledger, a business process that enables parent companies to calculate the net income of subsidiaries on a monthly basis and adjust that amount to increase the investment amount and equity income amount before performing consolidations.
equity item limit	In PeopleSoft Enterprise Campus Solutions, the amounts of funds set by the institution to be awarded with discretionary or gift funds. The limit could be reduced by amounts equal to such things as expected family contribution (EFC) or parent contribution. Students are packaged by Equity Item Type Groups and Related Equity Item Types. This limit can be used to assure that similar student populations are packaged equally.
event	<p>A predefined point either in the Component Processor flow or in the program flow. As each point is encountered, the event activates each component, triggering any PeopleCode program that is associated with that component and that event. Examples of events are FieldChange, SavePreChange, and RowDelete.</p> <p>In PeopleSoft Enterprise Human Resources, also refers to an incident that affects benefits eligibility.</p>
event propagation process	In PeopleSoft Enterprise Sales Incentive Management, a process that determines, through logic, the propagation of an original PeopleSoft Enterprise Incentive Management event and creates a derivative (duplicate) of the original event to be processed by other objects. PeopleSoft Enterprise Enterprise Sales Incentive Management uses this mechanism to implement splits, roll-ups, and so on. Event propagation determines who receives the credit.
exception	In PeopleSoft Enterprise Receivables, an item that either is a deduction or is in dispute.

exclusive pricing	In PeopleSoft Enterprise Order Management, a type of arbitration plan that is associated with a price rule. Exclusive pricing is used to price sales order transactions.
fact	In PeopleSoft Enterprise applications, facts are numeric data values from fields from a source database as well as an analytic application. A fact can be anything you want to measure your business by, for example, revenue, actual, budget data, or sales numbers. A fact is stored on a fact table.
financial aid term	In PeopleSoft Enterprise Campus Solutions, a combination of a period of time that the school determines as an instructional accounting period and an academic career. It is created and defined during the setup process. Only terms eligible for financial aid are set up for each financial aid career.
forecast item	A logical entity with a unique set of descriptive demand and forecast data that is used as the basis to forecast demand. You create forecast items for a wide range of uses, but they ultimately represent things that you buy, sell, or use in your organization and for which you require a predictable usage.
fund	In PeopleSoft Enterprise Promotions Management, a budget that can be used to fund promotional activity. There are four funding methods: top down, fixed accrual, rolling accrual, and zero-based accrual.
gap	In PeopleSoft Enterprise Campus Solutions, an artificial figure that sets aside an amount of unmet financial aid need that is not funded with Title IV funds. A gap can be used to prevent fully funding any student to conserve funds, or it can be used to preserve unmet financial aid need so that institutional funds can be awarded.
generic process type	In PeopleSoft Process Scheduler, process types are identified by a generic process type. For example, the generic process type SQR includes all SQR process types, such as SQR process and SQR report.
gift table	In PeopleSoft Enterprise Campus Solutions, a table or so-called <i>donor pyramid</i> describing the number and size of gifts that you expect will be needed to successfully complete the campaign in PeopleSoft Enterprise Contributor Relations. The gift table enables you to estimate the number of donors and prospects that you need at each gift level to reach the campaign goal.
GL business unit	Abbreviation for <i>general ledger business unit</i> . A unit in an organization that is an independent entity for accounting purposes. It maintains its own set of accounting books. See also <i>business unit</i> .
GL entry template	Abbreviation for <i>general ledger entry template</i> . In PeopleSoft Enterprise Campus Solutions, a template that defines how a particular item is sent to the general ledger. An item-type maps to the general ledger, and the GL entry template can involve multiple general ledger accounts. The entry to the general ledger is further controlled by high-level flags that control the summarization and the type of accounting—that is, accrual or cash.
GL Interface process	Abbreviation for <i>General Ledger Interface process</i> . In PeopleSoft Enterprise Campus Solutions, a process that is used to send transactions from PeopleSoft Enterprise Student Financials to the general ledger. Item types are mapped to specific general ledger accounts, enabling transactions to move to the general ledger when the GL Interface process is run.
group	In PeopleSoft Enterprise Billing and Receivables, a posting entity that comprises one or more transactions (items, deposits, payments, transfers, matches, or write-offs). In PeopleSoft Enterprise Human Resources Management and Supply Chain Management, any set of records that are associated under a single name or variable to

	run calculations in PeopleSoft business processes. In PeopleSoft Enterprise Time and Labor, for example, employees are placed in groups for time reporting purposes.
incentive object	In PeopleSoft Enterprise Incentive Management, the incentive-related objects that define and support the PeopleSoft Enterprise Incentive Management calculation process and results, such as plan templates, plans, results data, and user interaction objects.
incentive rule	In PeopleSoft Enterprise Sales Incentive Management, the commands that act on transactions and turn them into compensation. A rule is one part in the process of turning a transaction into compensation.
incur	In PeopleSoft Enterprise Promotions Management, to become liable for a promotional payment. In other words, you owe that amount to a customer for promotional activities.
initiative	In PeopleSoft Enterprise Campus Solutions, the basis from which all advancement plans are executed. It is an organized effort targeting a specific constituency, and it can occur over a specified period of time with specific purposes and goals. An initiative can be a campaign, an event, an organized volunteer effort, a membership drive, or any other type of effort defined by the institution. Initiatives can be multipart, and they can be related to other initiatives. This enables you to track individual parts of an initiative, as well as entire initiatives.
inquiry access	In PeopleSoft Enterprise Campus Solutions, a type of security access that permits the user only to view data. See also <i>update access</i> .
institution	In PeopleSoft Enterprise Campus Solutions, an entity (such as a university or college) that is independent of other similar entities and that has its own set of rules and business processes.
integration	A relationship between two compatible integration points that enables communication to take place between systems. Integrations enable PeopleSoft Enterprise applications to work seamlessly with other PeopleSoft Enterprise applications or with third-party systems or software.
integration point	An interface that a system uses to communicate with another PeopleSoft Enterprise application or an external application.
integration set	A logical grouping of integrations that applications use for the same business purpose. For example, the integration set <code>ADVANCED_SHIPPING_ORDER</code> contains all of the integrations that notify a customer that an order has shipped.
item	In PeopleSoft Enterprise Inventory, a tangible commodity that is stored in a business unit (shipped from a warehouse). In PeopleSoft Enterprise Demand Planning, Inventory Policy Planning, and Supply Planning, a noninventory item that is designated as being used for planning purposes only. It can represent a family or group of inventory items. It can have a planning bill of material (BOM) or planning routing, and it can exist as a component on a planning BOM. A planning item cannot be specified on a production or engineering BOM or routing, and it cannot be used as a component in a production. The quantity on hand will never be maintained. In PeopleSoft Enterprise Receivables, an individual receivable. An item can be an invoice, a credit memo, a debit memo, a write-off, or an adjustment.
item shuffle	In PeopleSoft Enterprise Campus Solutions, a process that enables you to change a payment allocation without having to reverse the payment.

joint communication	In PeopleSoft Enterprise Campus Solutions, one letter that is addressed jointly to two people. For example, a letter might be addressed to both Mr. Sudhir Awat and Ms. Samantha Mortelli. A relationship must be established between the two individuals in the database, and at least one of the individuals must have an ID in the database.
keyword	In PeopleSoft Enterprise Campus Solutions, a term that you link to particular elements within PeopleSoft Enterprise Student Financials, Financial Aid, and Contributor Relations. You can use keywords as search criteria that enable you to locate specific records in a search dialog box.
KPI	An abbreviation for <i>key performance indicator</i> . A high-level measurement of how well an organization is doing in achieving critical success factors. This defines the data value or calculation upon which an assessment is determined.
LDIF file	Abbreviation for <i>Lightweight Directory Access Protocol (LDAP) Data Interchange Format file</i> . Contains discrepancies between PeopleSoft Enterprise data and directory data.
learner group	In PeopleSoft Enterprise Learning Management, a group of learners who are linked to the same learning environment. Members of the learner group can share the same attributes, such as the same department or job code. Learner groups are used to control access to and enrollment in learning activities and programs. They are also used to perform group enrollments and mass enrollments in the back office.
learning components	In PeopleSoft Enterprise Learning Management, the foundational building blocks of learning activities. PeopleSoft Enterprise Learning Management supports six basic types of learning components: web-based, session, webcast, test, survey, and assignment. One or more of these learning component types compose a single learning activity.
learning environment	In PeopleSoft Enterprise Learning Management, identifies a set of categories and catalog items that can be made available to learner groups. Also defines the default values that are assigned to the learning activities and programs that are created within a particular learning environment. Learning environments provide a way to partition the catalog so that learners see only those items that are relevant to them.
learning history	In PeopleSoft Enterprise Learning Management, a self-service repository for all of a learner's completed learning activities and programs.
ledger mapping	You use ledger mapping to relate expense data from general ledger accounts to resource objects. Multiple ledger line items can be mapped to one or more resource IDs. You can also use ledger mapping to map dollar amounts (referred to as <i>rates</i>) to business units. You can map the amounts in two different ways: an actual amount that represents actual costs of the accounting period, or a budgeted amount that can be used to calculate the capacity rates as well as budgeted model results. In PeopleSoft Enterprise Warehouse, you can map general ledger accounts to the EW Ledger table.
library section	In PeopleSoft Enterprise Incentive Management, a section that is defined in a plan (or template) and that is available for other plans to share. Changes to a library section are reflected in all plans that use it.
linked section	In PeopleSoft Enterprise Incentive Management, a section that is defined in a plan template but appears in a plan. Changes to linked sections propagate to plans using that section.
linked variable	In PeopleSoft Enterprise Incentive Management, a variable that is defined and maintained in a plan template and that also appears in a plan. Changes to linked variables propagate to plans using that variable.
LMS	Abbreviation for <i>learning management system</i> . In PeopleSoft Enterprise Campus Solutions, LMS is a PeopleSoft Enterprise Student Records feature that provides a

	common set of interoperability standards that enable the sharing of instructional content and data between learning and administrative environments.
load	In PeopleSoft Enterprise Inventory, identifies a group of goods that are shipped together. Load management is a feature of PeopleSoft Enterprise Inventory that is used to track the weight, the volume, and the destination of a shipment.
local functionality	In PeopleSoft Enterprise HRMS, the set of information that is available for a specific country. You can access this information when you click the appropriate country flag in the global window, or when you access it by a local country menu.
location	Locations enable you to indicate the different types of addresses—for a company, for example, one address to receive bills, another for shipping, a third for postal deliveries, and a separate street address. Each address has a different location number. The primary location—indicated by a <i>1</i> —is the address you use most often and may be different from the main address.
logistical task	In PeopleSoft Enterprise Services Procurement, an administrative task that is related to hiring a service provider. Logistical tasks are linked to the service type on the work order so that different types of services can have different logistical tasks. Logistical tasks include both preapproval tasks (such as assigning a new badge or ordering a new laptop) and postapproval tasks (such as scheduling orientation or setting up the service provider email). The logistical tasks can be mandatory or optional. Mandatory preapproval tasks must be completed before the work order is approved. Mandatory postapproval tasks, on the other hand, must be completed before a work order is released to a service provider.
market template	In PeopleSoft Enterprise Incentive Management, additional functionality that is specific to a given market or industry and is built on top of a product category.
mass change	In PeopleSoft Enterprise Campus Solutions, mass change is a SQL generator that can be used to create specialized functionality. Using mass change, you can set up a series of Insert, Update, or Delete SQL statements to perform business functions that are specific to the institution. See also <i>3C engine</i> .
match group	In PeopleSoft Enterprise Receivables, a group of receivables items and matching offset items. The system creates match groups by using user-defined matching criteria for selected field values.
MCF server	Abbreviation for <i>PeopleSoft MultiChannel Framework server</i> . Comprises the universal queue server and the MCF log server. Both processes are started when <i>MCF Servers</i> is selected in an application server domain configuration.
merchandising activity	In PeopleSoft Enterprise Promotions Management, a specific discount type that is associated with a trade promotion (such as off-invoice, billback or rebate, or lump-sum payment) that defines the performance that is required to receive the discount. In the industry, you may know this as an offer, a discount, a merchandising event, an event, or a tactic.
meta-SQL	Meta-SQL constructs expand into platform-specific SQL substrings. They are used in functions that pass SQL strings, such as in SQL objects, the <i>SQLExec</i> function, and PeopleSoft Application Engine programs.
metastring	Metastings are special expressions included in SQL string literals. The metastings, prefixed with a percent (%) symbol, are included directly in the string literals. They expand at run time into an appropriate substring for the current database platform.
multibook	In PeopleSoft Enterprise General Ledger, multiple ledgers having multiple-base currencies that are defined for a business unit, with the option to post a single

	transaction to all base currencies (all ledgers) or to only one of those base currencies (ledgers).
multicurrency	The ability to process transactions in a currency other than the business unit's base currency.
national allowance	In PeopleSoft Enterprise Promotions Management, a promotion at the corporate level that is funded by nondiscretionary dollars. In the industry, you may know this as a national promotion, a corporate promotion, or a corporate discount.
need	In PeopleSoft Enterprise Campus Solutions, the difference between the cost of attendance (COA) and the expected family contribution (EFC). It is the gap between the cost of attending the school and the student's resources. The financial aid package is based on the amount of financial need. The process of determining a student's need is called <i>need analysis</i> .
node-oriented tree	A tree that is based on a detail structure, but the detail values are not used.
pagelet	Each block of content on the home page is called a pagelet. These pagelets display summary information within a small rectangular area on the page. The pagelet provide users with a snapshot of their most relevant PeopleSoft Enterprise and non-PeopleSoft Enterprise content.
participant	In PeopleSoft Enterprise Incentive Management, participants are recipients of the incentive compensation calculation process.
participant object	Each participant object may be related to one or more compensation objects. See also <i>compensation object</i> .
partner	A company that supplies products or services that are resold or purchased by the enterprise.
pay cycle	In PeopleSoft Enterprise Payables, a set of rules that define the criteria by which it should select scheduled payments for payment creation.
payment shuffle	In PeopleSoft Enterprise Campus Solutions, a process allowing payments that have been previously posted to a student's account to be automatically reapplied when a higher priority payment is posted or the payment allocation definition is changed.
pending item	In PeopleSoft Enterprise Receivables, an individual receivable (such as an invoice, a credit memo, or a write-off) that has been entered in or created by the system, but hasn't been posted.
PeopleCode	PeopleCode is a proprietary language, executed by the PeopleSoft Enterprise component processor. PeopleCode generates results based on existing data or user actions. By using various tools provided with PeopleTools, external services are available to all PeopleSoft Enterprise applications wherever PeopleCode can be executed.
PeopleCode event	See <i>event</i> .
PeopleSoft Pure Internet Architecture	The fundamental architecture on which PeopleSoft 8 applications are constructed, consisting of a relational database management system (RDBMS), an application server, a web server, and a browser.
performance measurement	In PeopleSoft Enterprise Incentive Management, a variable used to store data (similar to an aggregator, but without a predefined formula) within the scope of an incentive plan. Performance measures are associated with a plan calendar, territory, and participant. Performance measurements are used for quota calculation and reporting.
period context	In PeopleSoft Enterprise Incentive Management, because a participant typically uses the same compensation plan for multiple periods, the period context associates

	a plan context with a specific calendar period and fiscal year. The period context references the associated plan context, thus forming a chain. Each plan context has a corresponding set of period contexts.
person of interest	A person about whom the organization maintains information but who is not part of the workforce.
personal portfolio	In PeopleSoft Enterprise Campus Solutions, the user-accessible menu item that contains an individual's name, address, telephone number, and other personal information.
plan	In PeopleSoft Enterprise Sales Incentive Management, a collection of allocation rules, variables, steps, sections, and incentive rules that instruct the PeopleSoft Enterprise Incentive Management engine in how to process transactions.
plan context	In PeopleSoft Enterprise Incentive Management, correlates a participant with the compensation plan and node to which the participant is assigned, enabling the PeopleSoft Enterprise Incentive Management system to find anything that is associated with the node and that is required to perform compensation processing. Each participant, node, and plan combination represents a unique plan context—if three participants are on a compensation structure, each has a different plan context. Configuration plans are identified by plan contexts and are associated with the participants that refer to them.
plan template	In PeopleSoft Enterprise Incentive Management, the base from which a plan is created. A plan template contains common sections and variables that are inherited by all plans that are created from the template. A template may contain steps and sections that are not visible in the plan definition.
planned learning	In PeopleSoft Enterprise Learning Management, a self-service repository for all of a learner's planned learning activities and programs.
planning instance	In PeopleSoft Enterprise Supply Planning, a set of data (business units, items, supplies, and demands) constituting the inputs and outputs of a supply plan.
population	In PeopleSoft Enterprise Campus Solutions, the middle level of the three-level classification structure that you define in PeopleSoft Enterprise Recruiting and Admissions for enrollment management. You can define a population level, link it to other levels, and set enrollment target numbers for it. See also <i>division</i> and <i>cohort</i> .
portal registry	In PeopleSoft Enterprise applications, the portal registry is a tree-like structure in which content references are organized, classified, and registered. It is a central repository that defines both the structure and content of a portal through a hierarchical, tree-like structure of folders useful for organizing and securing content references.
price list	In PeopleSoft Enterprise Pricer, enables you to select products and conditions for which the price list applies to a transaction. During a transaction, the system either determines the product price based on the predefined search hierarchy for the transaction or uses the product's lowest price on any associated, active price lists. This price is used as the basis for any further discounts and surcharges.
price rule	In PeopleSoft Enterprise Pricer, defines the conditions that must be met for adjustments to be applied to the base price. Multiple rules can apply when conditions of each rule are met.
price rule condition	In PeopleSoft Enterprise Pricer, selects the price-by fields, the values for the price-by fields, and the operator that determines how the price-by fields are related to the transaction.
price rule key	In PeopleSoft Enterprise Pricer, defines the fields that are available to define price rule conditions (which are used to match a transaction) on the price rule.

primacy number	In PeopleSoft Enterprise Campus Solutions, a number that the system uses to prioritize financial aid applications when students are enrolled in multiple academic careers and academic programs at the same time. The Consolidate Academic Statistics process uses the primacy number indicated for both the career and program at the institutional level to determine a student's primary career and program. The system also uses the number to determine the primary student attribute value that is used when you extract data to report on cohorts. The lowest number takes precedence.
primary name type	In PeopleSoft Enterprise Campus Solutions, the name type that is used to link the name stored at the highest level within the system to the lower-level set of names that an individual provides.
process category	In PeopleSoft Process Scheduler, processes that are grouped for server load balancing and prioritization.
process group	In PeopleSoft Enterprise Financials, a group of application processes (performed in a defined order) that users can initiate in real time, directly from a transaction entry page.
process definition	Process definitions define each run request.
process instance	A unique number that identifies each process request. This value is automatically incremented and assigned to each requested process when the process is submitted to run.
process job	You can link process definitions into a job request and process each request serially or in parallel. You can also initiate subsequent processes based on the return code from each prior request.
process request	A single run request, such as a Structured Query Report (SQR), a COBOL or Application Engine program, or a Crystal report that you run through PeopleSoft Process Scheduler.
process run control	A PeopleTools variable used to retain PeopleSoft Process Scheduler values needed at runtime for all requests that reference a run control ID. Do not confuse these with application run controls, which may be defined with the same run control ID, but only contain information specific to a given application process request.
product	A PeopleSoft Enterprise or third-party product. PeopleSoft organizes its software products into product families and product lines. Interactive Services Repository contains information about every release of every product that PeopleSoft sells, as well as products from certified third-party companies. These products appear with the product name and release number.
product category	In PeopleSoft Enterprise Incentive Management, indicates an application in the PeopleSoft Enterprise Incentive Management suite of products. Each transaction in the PeopleSoft Enterprise Incentive Management system is associated with a product category.
product family	A group of products that are related by common functionality. The family names that can be searched using Interactive Service Repository are Oracle's PeopleSoft Enterprise, PeopleSoft EnterpriseOne, PeopleSoft World, and third-party, certified partners.
product line	The name of a PeopleSoft Enterprise product line or the company name of a third-party certified partner. Integration Services Repository enables you to search for integration points by product line.
programs	In PeopleSoft Enterprise Learning Management, a high-level grouping that guides the learner along a specific learning path through sections of catalog items. PeopleSoft Enterprise Learning Systems provides two types of programs—curricula and certifications.

progress log	In PeopleSoft Enterprise Services Procurement, tracks deliverable-based projects. This is similar to the time sheet in function and process. The service provider contact uses the progress log to record and submit progress on deliverables. The progress can be logged by the activity that is performed, by the percentage of work that is completed, or by the completion of milestone activities that are defined for the project.
project transaction	In PeopleSoft Enterprise Project Costing, an individual transaction line that represents a cost, time, budget, or other transaction row.
promotion	In PeopleSoft Enterprise Promotions Management, a trade promotion, which is typically funded from trade dollars and used by consumer products manufacturers to increase sales volume.
prospects	In PeopleSoft Enterprise Campus Solutions, students who are interested in applying to the institution. In PeopleSoft Enterprise Contributor Relations, individuals and organizations that are most likely to make substantial financial commitments or other types of commitments to the institution.
publishing	In PeopleSoft Enterprise Incentive Management, a stage in processing that makes incentive-related results available to participants.
rating components	In PeopleSoft Enterprise Campus Solutions, variables used with the Equation Editor to retrieve specified populations.
record group	A set of logically and functionally related control tables and views. Record groups help enable TableSet sharing, which eliminates redundant data entry. Record groups ensure that TableSet sharing is applied consistently across all related tables and views.
record input VAT flag	Abbreviation for <i>record input value-added tax flag</i> . Within PeopleSoft Enterprise Purchasing, Payables, and General Ledger, this flag indicates that you are recording input VAT on the transaction. This flag, in conjunction with the record output VAT flag, is used to determine the accounting entries created for a transaction and to determine how a transaction is reported on the VAT return. For all cases within Purchasing and Payables where VAT information is tracked on a transaction, this flag is set to Yes. This flag is not used in PeopleSoft Enterprise Order Management, Billing, or Receivables, where it is assumed that you are always recording only output VAT, or in PeopleSoft Enterprise Expenses, where it is assumed that you are always recording only input VAT.
record output VAT flag	Abbreviation for <i>record output value-added tax flag</i> . See <i>record input VAT flag</i> .
recname	The name of a record that is used to determine the associated field to match a value or set of values.
recognition	In PeopleSoft Enterprise Campus Solutions, the recognition type indicates whether the PeopleSoft Enterprise Contributor Relations donor is the primary donor of a commitment or shares the credit for a donation. Primary donors receive hard credit that must total 100 percent. Donors that share the credit are given soft credit. Institutions can also define other share recognition-type values such as memo credit or vehicle credit.
reference data	In PeopleSoft Enterprise Sales Incentive Management, system objects that represent the sales organization, such as territories, participants, products, customers, and channels.
reference object	In PeopleSoft Enterprise Incentive Management, this dimension-type object further defines the business. Reference objects can have their own hierarchy (for example, product tree, customer tree, industry tree, and geography tree).

reference transaction	In commitment control, a reference transaction is a source transaction that is referenced by a higher-level (and usually later) source transaction, in order to automatically reverse all or part of the referenced transaction's budget-checked amount. This avoids duplicate postings during the sequential entry of the transaction at different commitment levels. For example, the amount of an encumbrance transaction (such as a purchase order) will, when checked and recorded against a budget, cause the system to concurrently reference and relieve all or part of the amount of a corresponding pre-encumbrance transaction, such as a purchase requisition.
regional sourcing	In PeopleSoft Enterprise Purchasing, provides the infrastructure to maintain, display, and select an appropriate vendor and vendor pricing structure that is based on a regional sourcing model where the multiple ship to locations are grouped. Sourcing may occur at a level higher than the ship to location.
relationship object	In PeopleSoft Enterprise Incentive Management, these objects further define a compensation structure to resolve transactions by establishing associations between compensation objects and business objects.
remote data source data	Data that is extracted from a separate database and migrated into the local database.
REN server	Abbreviation for <i>real-time event notification server</i> in PeopleSoft MultiChannel Framework.
requester	In PeopleSoft Enterprise eSettlements, an individual who requests goods or services and whose ID appears on the various procurement pages that reference purchase orders.
reversal indicator	In PeopleSoft Enterprise Campus Solutions, an indicator that denotes when a particular payment has been reversed, usually because of insufficient funds.
role	Describes how people fit into PeopleSoft Workflow. A role is a class of users who perform the same type of work, such as clerks or managers. Your business rules typically specify what user role needs to do an activity.
role user	A PeopleSoft Workflow user. A person's role user ID serves much the same purpose as a user ID does in other parts of the system. PeopleSoft Workflow uses role user IDs to determine how to route worklist items to users (through an email address, for example) and to track the roles that users play in the workflow. Role users do not need PeopleSoft user IDs.
roll up	In a tree, to roll up is to total sums based on the information hierarchy.
run control	A run control is a type of online page that is used to begin a process, such as the batch processing of a payroll run. Run control pages generally start a program that manipulates data.
run control ID	A unique ID to associate each user with his or her own run control table entries.
run-level context	In PeopleSoft Enterprise Incentive Management, associates a particular run (and batch ID) with a period context and plan context. Every plan context that participates in a run has a separate run-level context. Because a run cannot span periods, only one run-level context is associated with each plan context.
SCP SCBM XML message	Abbreviation for <i>Supply Chain Planning Supply Chain Business Modeler Extensible Markup Language message</i> . Supply Chain Business Modeler uses XML as the format for all data that it imports and exports.
search query	You use this set of objects to pass a query string and operators to the search engine. The search index returns a set of matching results with keys to the source documents.
search/match	In PeopleSoft Enterprise Campus Solutions and PeopleSoft Enterprise Human Resources Management Solutions, a feature that enables you to search for and identify duplicate records in the database.

seasonal address	In PeopleSoft Enterprise Campus Solutions, an address that recurs for the same length of time at the same time of year each year until adjusted or deleted.
section	In PeopleSoft Enterprise Incentive Management, a collection of incentive rules that operate on transactions of a specific type. Sections enable plans to be segmented to process logical events in different sections.
security event	In commitment control, security events trigger security authorization checking, such as budget entries, transfers, and adjustments; exception overrides and notifications; and inquiries.
serial genealogy	In PeopleSoft Enterprise Manufacturing, the ability to track the composition of a specific, serial-controlled item.
serial in production	In PeopleSoft Enterprise Manufacturing, enables the tracing of serial information for manufactured items. This is maintained in the Item Master record.
service impact	In PeopleSoft Enterprise Campus Solutions, the resulting action triggered by a service indicator. For example, a service indicator that reflects nonpayment of account balances by a student might result in a service impact that prohibits registration for classes.
service indicator	In PeopleSoft Enterprise Campus Solutions, indicates services that may be either withheld or provided to an individual. Negative service indicators indicate holds that prevent the individual from receiving specified services, such as check-cashing privileges or registration for classes. Positive service indicators designate special services that are provided to the individual, such as front-of-line service or special services for disabled students.
session	<p>In PeopleSoft Enterprise Campus Solutions, time elements that subdivide a term into multiple time periods during which classes are offered. In PeopleSoft Enterprise Contributor Relations, a session is the means of validating gift, pledge, membership, or adjustment data entry . It controls access to the data entered by a specific user ID. Sessions are balanced, queued, and then posted to the institution's financial system. Sessions must be posted to enter a matching gift or pledge payment, to make an adjustment, or to process giving clubs or acknowledgements.</p> <p>In PeopleSoft Enterprise Learning Management, a single meeting day of an activity (that is, the period of time between start and finish times within a day). The session stores the specific date, location, meeting time, and instructor. Sessions are used for scheduled training.</p>
session template	In PeopleSoft Enterprise Learning Management, enables you to set up common activity characteristics that may be reused while scheduling a PeopleSoft Enterprise Learning Management activity—characteristics such as days of the week, start and end times, facility and room assignments, instructors, and equipment. A session pattern template can be attached to an activity that is being scheduled. Attaching a template to an activity causes all of the default template information to populate the activity session pattern.
setup relationship	In PeopleSoft Enterprise Incentive Management, a relationship object type that associates a configuration plan with any structure node.
share driver expression	In PeopleSoft Enterprise Business Planning, a named planning method similar to a driver expression, but which you can set up globally for shared use within a single planning application or to be shared between multiple planning applications through PeopleSoft Enterprise Warehouse.
single signon	With single signon, users can, after being authenticated by a PeopleSoft Enterprise application server, access a second PeopleSoft Enterprise application server without entering a user ID or password.

source key process	In PeopleSoft Enterprise Campus Solutions, a process that relates a particular transaction to the source of the charge or financial aid. On selected pages, you can drill down into particular charges.
source transaction	In commitment control, any transaction generated in a PeopleSoft Enterprise or third-party application that is integrated with commitment control and which can be checked against commitment control budgets. For example, a pre-encumbrance, encumbrance, expenditure, recognized revenue, or collected revenue transaction.
speed key	See <i>communication key</i> .
SpeedChart	A user-defined shorthand key that designates several ChartKeys to be used for voucher entry. Percentages can optionally be related to each ChartKey in a SpeedChart definition.
SpeedType	A code representing a combination of ChartField values. SpeedTypes simplify the entry of ChartFields commonly used together.
staging	A method of consolidating selected partner offerings with the offerings from the enterprise's other partners.
standard letter code	In PeopleSoft Enterprise Campus Solutions, a standard letter code used to identify each letter template available for use in mail merge functions. Every letter generated in the system must have a standard letter code identification.
statutory account	Account required by a regulatory authority for recording and reporting financial results. In PeopleSoft Enterprise, this is equivalent to the Alternate Account (ALTACCT) ChartField.
step	In PeopleSoft Enterprise Sales Incentive Management, a collection of sections in a plan. Each step corresponds to a step in the job run.
storage level	In PeopleSoft Enterprise Inventory, identifies the level of a material storage location. Material storage locations are made up of a business unit, a storage area, and a storage level. You can set up to four storage levels.
subcustomer qualifier	A value that groups customers into a division for which you can generate detailed history, aging, events, and profiles.
Summary ChartField	You use summary ChartFields to create summary ledgers that roll up detail amounts based on specific detail values or on selected tree nodes. When detail values are summarized using tree nodes, summary ChartFields must be used in the summary ledger data record to accommodate the maximum length of a node name (20 characters).
summary ledger	An accounting feature used primarily in allocations, inquiries, and PS/nVision reporting to store combined account balances from detail ledgers. Summary ledgers increase speed and efficiency of reporting by eliminating the need to summarize detail ledger balances each time a report is requested. Instead, detail balances are summarized in a background process according to user-specified criteria and stored on summary ledgers. The summary ledgers are then accessed directly for reporting.
summary time period	In PeopleSoft Enterprise Business Planning, any time period (other than a base time period) that is an aggregate of other time periods, including other summary time periods and base time periods, such as quarter and year total.
summary tree	A tree used to roll up accounts for each type of report in summary ledgers. Summary trees enable you to define trees on trees. In a summary tree, the detail values are really nodes on a detail tree or another summary tree (known as the <i>basis</i> tree). A summary tree structure specifies the details on which the summary trees are to be built.
syndicate	To distribute a production version of the enterprise catalog to partners.

system function	In PeopleSoft Enterprise Receivables, an activity that defines how the system generates accounting entries for the general ledger.
system source	<p>The system source identifies the source of a transaction row in the database. For example, a transaction that originates in PeopleSoft Enterprise Expenses contains a system source code of BEX (Expenses Batch).</p> <p>When PeopleSoft Enterprise Project Costing prices the source transaction row for billing, the system creates a new row with a system source code of PRP (Project Costing pricing), which represents the system source of the new row. System source codes can identify sources that are internal or external to the PeopleSoft Enterprise system. For example, processes that import data from Microsoft Project into PeopleSoft Enterprise applications create transaction rows with a source code of MSP (Microsoft Project).</p>
TableSet	A means of sharing similar sets of values in control tables, where the actual data values are different but the structure of the tables is the same.
TableSet sharing	Shared data that is stored in many tables that are based on the same TableSets. Tables that use TableSet sharing contain the SETID field as an additional key or unique identifier.
target currency	The value of the entry currency or currencies converted to a single currency for budget viewing and inquiry purposes.
tax authority	In PeopleSoft Enterprise Campus Solutions, a user-defined element that combines a description and percentage of a tax with an account type, an item type, and a service impact.
template	A template is HTML code associated with a web page. It defines the layout of the page and also where to get HTML for each part of the page. In PeopleSoft Enterprise, you use templates to build a page by combining HTML from a number of sources. For a PeopleSoft Enterprise portal, all templates must be registered in the portal registry, and each content reference must be assigned a template.
territory	In PeopleSoft Enterprise Sales Incentive Management, hierarchical relationships of business objects, including regions, products, customers, industries, and participants.
third party	A company or vendor that has extensive PeopleSoft Enterprise product knowledge and whose products and integrations have been certified and are compatible with PeopleSoft Enterprise applications.
3C engine	Abbreviation for <i>Communications, Checklists, and Comments engine</i> . In PeopleSoft Enterprise Campus Solutions, the 3C engine enables you to automate business processes that involve additions, deletions, and updates to communications, checklists, and comments. You define events and triggers to engage the engine, which runs the mass change and processes the 3C records (for individuals or organizations) immediately and automatically from within business processes.
3C group	Abbreviation for <i>Communications, Checklists, and Comments group</i> . In PeopleSoft Enterprise Campus Solutions, a method of assigning or restricting access privileges. A 3C group enables you to group specific communication categories, checklist codes, and comment categories. You can then assign the group inquiry-only access or update access, as appropriate.
TimeSpan	A relative period, such as year-to-date or current period, that can be used in various PeopleSoft Enterprise General Ledger functions and reports when a rolling time frame, rather than a specific date, is required. TimeSpans can also be used with flexible formulas in PeopleSoft Enterprise Projects.

trace usage	In PeopleSoft Enterprise Manufacturing, enables the control of which components will be traced during the manufacturing process. Serial- and lot-controlled components can be traced. This is maintained in the Item Master record.
transaction allocation	In PeopleSoft Enterprise Incentive Management, the process of identifying the owner of a transaction. When a raw transaction from a batch is allocated to a plan context, the transaction is duplicated in the PeopleSoft Enterprise Incentive Management transaction tables.
transaction state	In PeopleSoft Enterprise Incentive Management, a value assigned by an incentive rule to a transaction. Transaction states enable sections to process only transactions that are at a specific stage in system processing. After being successfully processed, transactions may be promoted to the next transaction state and “picked up” by a different section for further processing.
Translate table	A system edit table that stores codes and translate values for the miscellaneous fields in the database that do not warrant individual edit tables of their own.
tree	The graphical hierarchy in PeopleSoft Enterprise systems that displays the relationship between all accounting units (for example, corporate divisions, projects, reporting groups, account numbers) and determines roll-up hierarchies.
tuition lock	In PeopleSoft Enterprise Campus Solutions, a feature in the Tuition Calculation process that enables you to specify a point in a term after which students are charged a minimum (or <i>locked</i>) fee amount. Students are charged the locked fee amount even if they later drop classes and take less than the normal load level for that tuition charge.
unclaimed transaction	In PeopleSoft Enterprise Incentive Management, a transaction that is not claimed by a node or participant after the allocation process has completed, usually due to missing or incomplete data. Unclaimed transactions may be manually assigned to the appropriate node or participant by a compensation administrator.
universal navigation header	Every PeopleSoft Enterprise portal includes the universal navigation header, intended to appear at the top of every page as long as the user is signed on to the portal. In addition to providing access to the standard navigation buttons (like Home, Favorites, and signoff) the universal navigation header can also display a welcome message for each user.
update access	In PeopleSoft Enterprise Campus Solutions, a type of security access that permits the user to edit and update data. See also <i>inquiry access</i> .
user interaction object	In PeopleSoft Enterprise Sales Incentive Management, used to define the reporting components and reports that a participant can access in his or her context. All PeopleSoft Enterprise Sales Incentive Management user interface objects and reports are registered as user interaction objects. User interaction objects can be linked to a compensation structure node through a compensation relationship object (individually or as groups).
variable	In PeopleSoft Enterprise Sales Incentive Management, the intermediate results of calculations. Variables hold the calculation results and are then inputs to other calculations. Variables can be plan variables that persist beyond the run of an engine or local variables that exist only during the processing of a section.
VAT exception	Abbreviation for <i>value-added tax exception</i> . A temporary or permanent exemption from paying VAT that is granted to an organization. This terms refers to both VAT exoneration and VAT suspension.
VAT exempt	Abbreviation for <i>value-added tax exempt</i> . Describes goods and services that are not subject to VAT. Organizations that supply exempt goods or services are unable to recover the related input VAT. This is also referred to as exempt without recovery.

VAT exoneration	Abbreviation for <i>value-added tax exoneration</i> . An organization that has been granted a permanent exemption from paying VAT due to the nature of that organization.
VAT suspension	Abbreviation for <i>value-added tax suspension</i> . An organization that has been granted a temporary exemption from paying VAT.
warehouse	A PeopleSoft Enterprise data warehouse that consists of predefined ETL maps, data warehouse tools, and DataMart definitions.
work order	In PeopleSoft Enterprise Services Procurement, enables an enterprise to create resource-based and deliverable-based transactions that specify the basic terms and conditions for hiring a specific service provider. When a service provider is hired, the service provider logs time or progress against the work order.
worker	A person who is part of the workforce; an employee or a contingent worker.
workset	A group of people and organizations that are linked together as a set. You can use worksets to simultaneously retrieve the data for a group of people and organizations and work with the information on a single page.
worksheet	A way of presenting data through a PeopleSoft Enterprise Business Analysis Modeler interface that enables users to do in-depth analysis using pivoting tables, charts, notes, and history information.
worklist	The automated to-do list that PeopleSoft Workflow creates. From the worklist, you can directly access the pages you need to perform the next action, and then return to the worklist for another item.
XML link	The XML Linking language enables you to insert elements into XML documents to create a links between resources.
XML schema	An XML definition that standardizes the representation of application messages, component interfaces, or business interlinks.
XPI	Abbreviation for <i>eXtended Process Integrator</i> . PeopleSoft XPI is the integration infrastructure that enables both real-time and batch communication with JD Edwards EnterpriseOne applications.
yield by operation	In PeopleSoft Enterprise Manufacturing, the ability to plan the loss of a manufactured item on an operation-by-operation basis.
zero-rated VAT	Abbreviation for <i>zero-rated value-added tax</i> . A VAT transaction with a VAT code that has a tax percent of zero. Used to track taxable VAT activity where no actual VAT amount is charged. Organizations that supply zero-rated goods and services can still recover the related input VAT. This is also referred to as exempt with recovery.
