The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

Preface

Audience

This document is intended for administrators of the Oracle Retail Plan application.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at

<http://www.oracle.com/accessibility/>

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, seven days a week. For TTY support, call 800.446.2398.

Introduction

This chapter contains the following:

- “About the Plan Operations Guide” on page 1
- “What’s in This Book” on page 1

About the Plan Operations Guide

The Plan Operations Guide provides information about the standard interface and the standard load. This information is necessary to understand in order to load business data into the Plan database.

What’s in This Book

The Plan Operations Guide addresses the following topics:

- Chapter 1 - Introduction - an orientation to the Plan Operations Guide.
- Chapter 2 - Standard Interface - Plan standard interface specifications.
- Chapter 3 - Standard Load - standard load procedures, dependencies, and error handling.

Standard Interface

This chapter contains the following:

- “Budget Plan Standard Interface” on page 4
- “Calendar Standard Interface” on page 4
- “Demand Parameters Standard Interface” on page 5
- “Location Hierarchy Standard Interface” on page 6
- “Location Hierarchy Rename Standard Interface” on page 6
- “Location Hierarchy CDAs Standard Interface” on page 6
- “Location Attributes Standard Interface” on page 6
- “Locked Company Planned Receipts Standard Interface” on page 6
- “Locked Store Planned Receipts Standard Interface” on page 6
- “Merchandise Hierarchy Standard Interface” on page 7
- “Merchandise Hierarchy Rename Standard Interface” on page 8

Introduction

An important part of getting Plan up and running in a production environment is the gathering and loading of enterprise data. Plan requires historical and weekly data to be loaded into the Plan database. The data must be provided in a standard format, as specified in the standard interface specification. The data can then be loaded according to the standard load procedure.

This chapter is divided into two sections. The first section describes the details of each standard interface. The second section provides the contains the detailed data specifications in tabular form for each standard interface that is loaded into Plan.

Plan Standard Interface Descriptions

This section details the data interface to the Plan application. Plan requires that customer data be provided in flat files containing pipe-delimited data organized so that the data can be loaded into Plan database tables that follow the formats specified here.

For Oracle, the terminal pipe delimiter is optional, but recommended.

The standard interface includes the following:

Table 2–1 Interface Specifications

Interface Specification	Required/Optional
Budget Plan (STAGE_BUDGET_PLAN_TBL)	Required
Calendar (ASH_CAL_TBL)	Required
Demand Parameters (STAGE_APC_PARAMETER_TBL and STAGE_APC_ESCALATION_TBL)	Required
Location Hierarchy (ASH_LH_TBL)	Required
Location Hierarchy Rename (ASH_LHRENAME_TBL)	Required
Location Hierarchy CDAs (ASH_LH_CDA_TBL)	Required
Location Attributes (Store)	Required
Locked Company Planned Receipts (LOCKED_COMPANY_PLAN)	Required
Locked Store Planned Receipts (LOCKED_STORE_PLAN)	Required
Merchandise Hierarchy (ASH_MH_TBL)	Required
Merchandise Hierarchy Rename (ASH_MHRENAME_RENAME)	Required

Table 2–1 (Cont.) Interface Specifications

Interface Specification	Required/Optional
Merchandise Hierarchy CDAs (ASH_MH_CDA_TBL)	Required
Merchandise Hierarchy Attributes (STAGE_MH_ATTRS_TBL)	Required
Pack Contents (ASH_PACK_CONTENTS_TBL)	Required
Pack Hierarchy (ASH_PH_TBL)	Required
Plan Period Ranks (STAG_PLAN_PERIOD_RANKS_TBL)	Required
Planned Chain Promotions - Traffic (PLANNED_CHAIN_PROMOS_TBL_STAGE)	Required
Planned Promotions (STAGE_PLANNED_PROMOS)	Required
PPO Prepack (STAGE_PPO_PREPACK and STAGE_PPO_ESCALATION)	Required
Promotion Base Lift Escalation (STAGE_BASE_LIFT_ESCALATION_TBL)	Required
Promotion Base Lift (STAGE_BASE_LIFT_TBL)	Required
Promotion Relative Lift Escalation (STAGE_RELATIVE_LIFT_ESCALATION_TBL)	Required
Promotion Relative Lift (STAGE_RELATIVE_LIFT_TBL)	Required
Seasonality Mapping (ASH_SEASONALITY_MAPS)	Required
Seasonality Values (ASH_SEASONALITY_VALUES)	Required
Size Ranges (STAGE_SIZE_RANGE)	Required
SPO Size Profiles (STAGE_SPO_SIZE_PROFILE and STAGE_SPO_ESCALATION)	Required
Store Eligibility (STORE_ELIGIBILITY)	Required
Store Transit Times (STAGE_OUTER_DC_MAPS_TBL)	Required
Store Weights LSD (STAGE_SWO_LSD and STAGE_SWO_ESCALATION)	Required
Weekly Historic Sales and Inventory (WK_HIST_SALES_INV)	Required

Budget Plan Standard Interface

The normalized store budget distribution at the department level is generated from budget plan data at the Chain level, store eligibility information, along with AS-generated store grades.

Calendar Standard Interface

The calendar interface describes a retailer's fiscal calendar. Each record in the file corresponds to a single fiscal week. This is generally a one-time data feed, with data generated by the customer.

Data Fields

Seven fields describe each calendar record, which represents a fiscal week:

- EOP_CALEDAR_DT - the last day of the fiscal week, which is usually Saturday.
- FISCAL_YR - the number of the fiscal year for the record.
- FISCAL_QTR - the number of the fiscal quarter for the record.
- FISCAL_MO - the number of the fiscal month for the record.
- FISCAL_WK - the number of the fiscal week for the record.
- CALEDAR_WK - an alternative number for the calendar week for the record.
- SEASON - the number identifying the season associated with the calendar week.

An Example

The following table shows sample data for five weeks of a fiscal calendar.

Table 2–2 Sample Calendar Data

EOP Calendar Date	Fiscal Year	Fiscal Quarter	Fiscal Month	Fiscal Week	Calendar Week	Season
2004-02-07	2004	1	1	1	1	1
2004-02-14	2004	1	1	2	2	1
2004-02-21	2004	1	1	3	3	1
2004-02-28	2004	1	1	4	4	1
2004-03-06	2004	1	2	5	1	1

Technical Notes

The following list provides details to consider regarding the calendar data.

- The calendar must include all weeks, beginning with the earliest historical sales record and extending at least two years into the future.
- Each year included in the data must contain 52 - 53 weeks.
- The calendar file can be sent weekly or loaded all at once during the initial configuration of the application. If provided all at once, it should contain all the historic data and extend at least three years into the future.
- Retailers can use the SEASON field to designate different seasons within the fiscal year. For example, a retailer might divide the fiscal year into two seasons. The season could then be used in the application metrics.

Demand Parameters Standard Interface

Demand parameters are provided by Analytical Services and includes inventory effect, price elasticity, and Bayesian parameters. Demand parameters are used in forecasting.

The demand parameters standard interface consists of two files from Analytical Services, a data file (STAGE_APC_PARAMETER_TBL) and an escalation file (STAGE_APC_ESCALATION), that the AS Mapper uses to create normalized data that is then loaded as part of the standard load. For more information on the AS Mapper, see the Standard Load chapter.

Location Hierarchy Standard Interface

The location hierarchy interface describes how a retailer categorizes locations. The location hierarchy begins with the highest level, such as company or chain, and typically extends to the lowest level, the store. For example, a three-level location hierarchy might consist of Company, Region, and Store. Each entry (row) in the location hierarchy standard interface describes a specific location.

Data Fields

The location hierarchy can have up to twelve levels. Each level in the location hierarchy, just like the merchandise hierarchy, is described by three fields:

- HIERARCHY_ID - an identifier or value for the hierarchy level that is meaningful to the end-user. It may be displayed in the UI. It does not have to be unique.
- HIERARCHY_KEY - a key used to identify the location level that is unique across the chain for that level. The key may not be displayed in the UI; however, it is used to reference the location in other data files.
- HIERARCHY_DESC - a description for the level that describes that level in the location hierarchy.

These three fields are required for each level of the location hierarchy that is used. For example, if a retailer's location hierarchy contains three levels, then the location hierarchy file will contain nine required fields. Any unused fields in the location hierarchy file should be present in the file as NULL (that is, consecutive delimiters) when the file is sent in delimited file format.

Location Hierarchy Rename Standard Interface

The location hierarchy rename interface facilitates moving locations within the location hierarchy. You can rename any node in the hierarchy by supplying the old node name, the new node name, and the level in the hierarchy. You cannot do this through the Location Hierarchy Standard Interface.

Location Hierarchy CDAs Standard Interface

The Location Hierarchy CDA interface provides 32 additional optional attributes

Location Attributes Standard Interface

The Location Attributes interface provides store-level attributes for stores that have been defined in the Location Hierarchy standard interface. It also provides the definition and attributes for distribution centers. Plan uses the information to create store sets and to view history by store attributes.

Locked Company Planned Receipts Standard Interface

The Locked Company Plan standard interface provides a snapshot of a retailer's financial plan in units and in dollars at the subdivision or class level for a fiscal year or a fiscal period. The company financial plan is an aggregation of the financial budgets of all stores from the Locked Store Plan tables.

Locked Store Planned Receipts Standard Interface

The Locked Store Plan standard interface provides a snapshot of the planned inventory for each store in units and in dollars, based on budgets that have been

defined by the business. Store financial information is provided at the subdivision or class level for a fiscal year or a fiscal period.

Users can either apply the locked plan or use the most current store budget data available in the application.

Plan uses these metrics to provide users with context for their top-down budget constraints.

Merchandise Hierarchy Standard Interface

The merchandise hierarchy interface describes how a retailer categorizes merchandise. The merchandise hierarchy begins with the highest level, such as company or division, and typically extends to the style-color level. For example, a five-level merchandise hierarchy might consist of Division, Department, Class, Style, and Color. Each entry (row) in the merchandise hierarchy standard interface describes the hierarchy for a specific piece of merchandise. In the example of a merchandise hierarchy shown in Table 2–3 on page 7, the merchandise is an item of a specific color, and each row in the file describes the Division, Department, Class, and Style to which the specific color belongs.

Data Fields

The merchandise hierarchy can have up to fifteen levels. Each level in the merchandise hierarchy is described by three fields:

- **HIERARCHY_ID** - an identifier or value for the hierarchy level that is meaningful to the application end user. It may be displayed in the application UI. It does not have to be unique.
- **HIERARCHY_KEY** - a key used to identify the merchandise level that is unique across the chain for that level. The key may not be displayed in the UI; however, it is used to reference the merchandise in other data files.
- **HIERARCHY_DESC** - a description for the level that describes that level in the merchandise hierarchy.

These three fields are required for each level of the merchandise hierarchy that is used. For example, if a retailer's merchandise hierarchy contains five levels, then the merchandise hierarchy file will contain fifteen required fields. Any unused fields in the merchandise hierarchy file should be present in the file as NULL (that is, consecutive delimiters) when the file is sent in delimited file format.

An Example

The following table shows sample data for a five-level hierarchy that consists of Division, Department, Class, Style, and Color. (The hierarchy descriptions are not included here):

Table 2–3 Merchandise Hierarchy Sample Data

Hierarchy 1 (Division)		Hierarchy 2 (Dept.)		Hierarchy 3 (Class)		Hierarchy 4 (Style)		Hierarchy 5 (Color)	
ID	Key	ID	Key	ID	Key	ID	Key	ID	Key
1	1	10	10	20	1020	1234	101234	9	101234509
1	1	10	10	20	1020	1234	101234	12	101234512
6	6	60	60	20	6020	1234	601234	12	601234512

In this example, the class, style, and color levels all have ID values that are not unique across the chain. Because of this, the Key values for these three levels cannot be the same as the ID values. The unique Key values for these three levels were created by combining values from higher levels in the hierarchy. The Key for the Class level was created by appending the Class ID to the Department Key. The Key for the Style level was created by appending the Style ID to the Department Key.

Technical Notes

The following list provides details to consider regarding the merchandise hierarchy data.

- The best way to create a unique Key for each level in the merchandise hierarchy depends on the retailer's hierarchy data. Whenever possible, the hierarchy Keys should not be dependent on higher levels in the hierarchy. In this way, the application can automatically detect and handle hierarchy moves without additional data. For more information on how the application manages merchandise hierarchy changes, see "Merchandise Hierarchy Rename Standard Interface" on page 8.
- The merchandise hierarchy file must contain a record for each product that is referenced in any other of a given week's data files.
- The merchandise hierarchy must be described consistently throughout the data file: each hierarchy node must have the same hierarchy ancestors for all records in the file that describes the hierarchy node. In the example shown in Table 2-3 on page 7, the first two records describe the hierarchy above Style 101234 in an identical way. Note that this consistency requirement applies to all three of the hierarchy fields (Key, ID, and Desc). Inconsistent values for hierarchy descriptions are a common reason why some merchandise hierarchy records fail to load.
- Each node in a hierarchy can only have one parent node.

Merchandise Hierarchy Rename Standard Interface

The merchandise hierarchy rename interface facilitates reclassifying and moving merchandise within the merchandise hierarchy. Any node in the hierarchy can be renamed by supplying the old node name, the new node name, and the level in the hierarchy. This cannot be done through the Merchandise Hierarchy Standard Interface.

Merchandise Hierarchy CDA Standard Interface

The merchandise hierarchy cda interface provides 32 additional optional attributes.

Merchandise Hierarchy Attributes Standard Interface

The MH Attributes standard interface provides information about merchandise attributes at various levels in the MH, principally lot/color/line/sku. This information is used to provide context for merchandise during planning and allocation.

Pack Contents Standard Interface

The Pack Contents standard interface provides information on the ordering hierarchy of merchandise at the SKU level. An individual item can be a member of more than one pack configuration. It includes all sizes associated with the ordering lot/line and all components associated with each ordering lot/line/size. The information is used to optimize selling quantities into prepacks or ordering configurations.

Pack Hierarchy Standard Interface

The pack hierarchy interface describes how a retailer categorizes packs. The pack hierarchy begins with the highest level and typically extends to the lowest level.

Plan Period Ranks Standard Interface

The Plan Period Ranks standard interface is used by the volume groups generator, along with budget information and AS-generated store clusters, to generate volume groups (when a client does not provide volume group information).

Planned Chain Promotions (Traffic) Standard Interface

The Planned Chain Promotions standard interface provides information about promotions that occur at the company level. It includes data on like events from history so that Plan can determine the traffic lift that should be applied to all relevant items. In combination with information from planned promotions, this data provides a holistic promotional plan for each item being forecasted.

Planned Promotions Standard Interface

The Planned Promotions standard interface provides information on planned promotions provided at the item or color level. It is used to derive more accurate forecasts, by adjusting the forecast generated by the CE for expected lift in sales that result from a promotion, and to provide context to users.

PPO Prepack Standard Interface

The Prepack standard interface consists of two files from Analytical Services, a data file (STAGE_PPO_PREPACK) and an escalation file (STAGE_PPO_ESCALATION), that the AS Mapper uses to create normalized data that is then loaded as part of the standard load. For more information on the AS Mapper, see the Standard Load chapter.

Prepacks are configured groups of items that are ordered and shipped under a single item ID. Different prepack configurations may be available, so an individual item may be a member of more than one prepack. The items themselves are sold individually.

Promotion Base Lift Standard Interface

A base promotional lift measures increases in sales as a result of a promotion. The lift value is qualified by the historical promo ID.

The Promotion Base Lift standard interface consists of two files from Analytical Services, a data file (STAGE_BASE_LIFT_TBL) and an escalation file (STAGE_BASE_LIFT_ESCALATION_TBL), that the AS Mapper uses to create normalized data that is then loaded as part of the standard load. For more information on the AS Mapper, see the Standard Load chapter.

Promotion Relative Lift Standard Interface

A relative promotional lift measures increases in sales as a result of the particular promotion for an item. The lift value is qualified by other promotional attributes.

The Promotion Relative Lift standard interface consists of two files from Analytical Services, a data file (STAGE_RELATIVE_LIFT_TBL) and an escalation file (STAGE_RELATIVE_LIFT_ESCALATION_TBL), that the AS Mapper uses to create normalized

data that is then loaded as part of the standard load. For more information on the AS Mapper, see the Standard Load chapter.

Seasonalities Standard Interface

The seasonalities standard interface describes the seasonality values (effects related to the time of year) provided by Analytical Services that are used by the application to calculate markdowns and forecasts.

Data Fields

Eight fields describe a seasonality map record:

- PRIORITY - the search priority for the seasonality.
- SEASONALITY_ID - the ID for the seasonality.
- MERCHANDISE_LEVEL - description of the level of the merchandise hierarchy.
- MERCHANDISE_KEY - key for the merchandise hierarchy level.
- LOCATION_LEVEL - description of the level of the location hierarchy.
- LOCATION_KEY - key for the location hierarchy level.
- ATTRIBUTE_VALUE_MASK - the search mask that specifies the season code and, optionally, the item attributes of the seasonality curves.
- AS_VERSION - the version number for the current run. Set by Analytical Parameter Calculator (APC) and used to track run versions.

Six fields describe a seasonality values record:

- SEASONALITY_ID - the ID for the seasonality.
- CALENDAR_DT - the date for the seasonality.
- SEAS_INDX - the value for the seasonality for the date.
- SEAS_ERR - for future use. Set to 0.
- AS_PARAMETER_ID - a number that uniquely identifies the current record and that is used for tracking.
- AS_VERSION - the version number for the current run. Set by APC and used to track run versions.

Size Ranges Standard Interface

The Size Ranges standard interface describes groupings of sizes for various items. For example, S-XL; S,M,L,XL; 5-13; 5,6,7,9,11,13;5,5.5,6,6.5...13. This information is used during pack generation to compute the proper distribution of sizes within a pack.

SPO Size Profiles Standard Interface

Size profiles specify the optimal size distributions that should be carried across merchandise types, locations, and size ranges. Size profiles can be computed down to the store level and have the ability to incorporate item attributes such as color and fabric. Size profiles are used pre-season to spread the forecast down to size. In addition, size profiles are used in the allocation of prepacks and the creation of purchase order recommendations.

The SPO Size Profiles standard interface consists of two files from Analytical Services, a data file (STAGE_SPO_SIZE_PROFILE) and an escalation file

(STAGE_SPO_ESCALATION), that the AS Mapper uses to create normalized data that is then loaded as part of the standard load. For more information on the AS Mapper, see the Standard Load chapter.

Store Eligibility Standard Interface

Store eligibility indicates whether a particular item (location/class) is carried by a particular store during a particular time period. An eligibility indicator of Y indicates that the store is eligible to receive a particular category of merchandise during a particular time period. The information is used to derive Store Sets. Eligibility is dynamic from one fiscal period to the next.

Store Transit Times Standard Interface

The Store Transit Time refers to the number of days that a given piece of merchandise takes to travel from the distribution center to the store. This standard interface requires DIST_CENTERS_TBL.

Store Weights Standard Interface

The Store Weights standard interface is used to spread chain-level budgets down to stores.

The Store Weights standard interface consists of two files from Analytical Services, a data file (STAGE_SWO_LSD) and an escalation file (STAGE_SWO_ESCALATION), that the AS Mapper uses to create normalized data that is then loaded as part of the standard load. For more information on the AS Mapper, see the Standard Load chapter.

Weekly Historic Sales and Inventory Standard Interface

Metrics are used by Plan to perform forecasting calculations, provide context around like items, analysis of historic data in order to determine future plans. Net metrics describes sales, including returns. Gross metrics describe sales, excluding returns.

Plan Interface Specifications

The following tables provide ordered lists of the contents of each of the Plan interface specifications.

Budget Plan Specification (STAGE_BUDGET_PLAN_TBL)

Table 2–4 Budget Plan Standard Interface Specification

Attribute	Attribute Description	Data Type	Maximum Length	Nullable Y/N
LOCATION_KEY	Unique identifier for location hierarchy	String	50	N
LOCATION_LEVEL	Level within the location hierarchy	String	50	N
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	50	N
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	50	N

Table 2–4 (Cont.) Budget Plan Standard Interface Specification

Attribute	Attribute Description	Data Type	Maximum Length	Nullable Y/N
FISCAL_YEAR	Number of the fiscal year	Integer	4	N
FISCAL_MONTH	Number of the fiscal month	Integer	2	N
BOP_INV_AMT	Beginning inventory \$	Integer	11	Y
BOP_INV_QTY	Beginning inventory units	Integer	11	Y
RCPT_AMT	Receipt \$	Integer	11	Y
RCPT_QTY	Receipt units	Integer	11	Y
SLS_AMT	Planned sales \$	Integer	11	Y
SLS_QTY	Planned sales units	Integer	11	Y
MKDN_AMT	Markdown \$	Integer	11	Y

Calendar Specification (ASH_CAL_TBL)

Table 2–5 Calendar Standard Interface Specification

Attribute	Attribute Description	Data Type	Maximum Length	Nullable Y/N
EOP_CALEDAR_DT	Ending calendar date of the fiscal week (which is usually a Saturday)	Date in format YYYY-MM-DD	10	N
FISCAL_YR	Number of the fiscal year	Integer	4	N
FISCAL_QTR	Number of fiscal quarter	Integer	1	N
FISCAL_MO	Number of the fiscal month	Integer	2	N
FISCAL_WK	Number of the fiscal week (1 - 53)	Integer	2	N
CALENDAR_WK	An alternative number for the calendar week (optional) (1 - 53)	Integer	2	Y
SEASON	Season number associated with the week	Integer	2	N

Demand Parameters Specification (STAGE_APC_PARAMETER_TBL)

Table 2–6 Demand Parameters Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	20	Y
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	Y
LOCATION_LEVEL	Level within the location hierarchy	String	20	Y
LOCATION_KEY	Unique identifier for location hierarchy	String	25	Y
ITEM_ATTRIBUTE	Parameter attribute	String	100	Y
PARAMETER_NAME	The scalar for the demand engine	String	50	Y
PARAMETER_VALUE	The value for the parameter	String	25	Y
AS_PARAMETER_ID	ID for the parameter	Integer	32	Y
AS_VERSION	The version of analytical services data	String	20	Y

Demand Parameters Escalation Specification (STAGE_APC_ESCALATION_TBL)

Table 2–7 Demand Parameters Escalation Standard Interface Specification

Attribute	Attribute Description	Data Type	Maximum Length	Nullable Y/N
ORDER_SQC	The order number to apply matching	Integer	32	Y
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	20	Y
LOCATION_LEVEL	Level within the location hierarchy	String	20	Y
ATTRIBUTE_MASK	The attribute mask used for	String	1,000	Y
AS_VERSION	The version of analytical services data	String	20	Y

Location Hierarchy Specification (ASH_LH_TBL)

Table 2–8 Location Hierarchy Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
HIERARCHY1_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY1_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY1_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY2_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY2_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY2_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY3_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY3_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY3_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY4_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY4_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY4_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY5_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY5_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY5_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY6_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY6_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY6_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY7_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY7_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY7_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY8_ID	ID for this level of the hierarchy	String	25	Y

Table 2–8 (Cont.) Location Hierarchy Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
HIERARCHY8_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY8_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY9_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY9_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY9_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY10_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY10_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY10_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY11_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY11_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY11_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY12_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY12_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY12_DESC	Description of this level of the hierarchy	String	50	Y

LH Rename Specification (ASH_LHRENAME_TBL)

Table 2–9 Location Hierarchy Rename Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
OLD_LOCATION_KEY	Old unique identifier for location hierarchy	String	25	N
NEW_LOCATION_KEY	New unique identifier for location hierarchy	String	25	N
LOCATION_LEVEL	Level within the location hierarchy	String	50	N

LH CDA Specification (ASH_LH_CDA_TBL)

Table 2–10 Location Hierarchy CDA Standard Interface Specification¹

Field Name	Field Description	Data Type	Maximum Length	Nullable Y/N
LOCATION_KEY	Unique identifier for location hierarchy	String	25	N
LOCATION_LEVEL	Level within the location hierarchy	String	50	N
ATTRIBUTE1		String	100	Y
ATTRIBUTE2		String	100	Y
ATTRIBUTE3		String	100	Y
ATTRIBUTE4		String	100	Y
ATTRIBUTE5		String	100	Y
ATTRIBUTE6		String	100	Y
ATTRIBUTE7		String	100	Y
ATTRIBUTE8		String	100	Y
ATTRIBUTE1_DATE		Date in format YYYY-MM-DD	10	Y
ATTRIBUTE2_DATE		Date in format YYYY-MM-DD	10	Y
ATTRIBUTE3_DATE		Date in format YYYY-MM-DD	10	Y
ATTRIBUTE4_DATE		Date in format YYYY-MM-DD	10	Y
ATTRIBUTE5_DATE		Date in format YYYY-MM-DD	10	Y
ATTRIBUTE6_DATE		Date in format YYYY-MM-DD	10	Y
ATTRIBUTE7_DATE		Date in format YYYY-MM-DD	10	Y
ATTRIBUTE8_DATE		Date in format YYYY-MM-DD	10	Y
ATTRIBUTE1_NUMBER		Decimal	31,3	Y
ATTRIBUTE2_NUMBER		Decimal	31,3	Y
ATTRIBUTE3_NUMBER		Decimal	31,3	Y
ATTRIBUTE4_NUMBER		Decimal	31,3	Y
ATTRIBUTE5_NUMBER		Decimal	31,3	Y
ATTRIBUTE6_NUMBER		Decimal	31,3	Y
ATTRIBUTE7_NUMBER		Decimal	31,3	Y
ATTRIBUTE8_NUMBER		Decimal	31,3	Y
ATTRIBUTE9		String	100	Y
ATTRIBUTE10		String	100	Y
ATTRIBUTE11		String	100	Y

Table 2–10 (Cont.) Location Hierarchy CDA Standard Interface Specification¹

Field Name	Field Description	Data Type	Maximum Length	Nullable Y/N
ATTRIBUTE12		String	100	Y
ATTRIBUTE13		String	100	Y
ATTRIBUTE14		String	100	Y
ATTRIBUTE15		String	100	Y
ATTRIBUTE16		String	100	Y

¹ For Decimal, the requirement is a number of a certain defined length and with a certain number of decimal places. For example, (22,2) is a number that can be up to 22 digits long and that can have two digits after the decimal point.

Location Attributes Specification (STORE)

Table 2–11 Location Attributes Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
LOCATION_KEY	Unique identifier for location hierarchy	String	25	N
LOCATION_LEVEL	Level within the location hierarchy	String	50	N
LOCATION_MARKET	Market name	String	10	Y
LOCATION_CITY	City	String	20	Y
LOCATION_STATE	State	String	2	Y
LOCATION_TYPE	Store class	Integer	2	Y
LOCATION_NAME	Store name	String	20	Y
LOCATION_POSTAL_CODE	Zip or other postal code	String	20	Y
NSLS_SQFT	Net square footage	Integer	6	Y
GRSS_SQFT	Gross square footage	Integer	6	Y
OPEN_DT	Open date	Date in format YYYY-MM-DD	10	Y
CLOSE_DT	Close date	Date in format YYYY-MM-DD	10	Y
STORE_CLIMATE	Climate code	String	1	Y
STORE_FASHION_SEGMENT	Fashion segment code	String	1	Y
STORE_AD_GROUP	Ad designation	String	2	Y
STORE_SSC	Store service center (DC) number	Integer	4	Y
STORE_CLSS_IND	Store class size	String	3	Y
SSC_IND	Store service center indicator	String	1	Y
STORE_CHST_1	Store characteristic 1	String	20	Y
STORE_CHST_2	Store characteristic 2	String	20	Y
STORE_CHST_3	Store characteristic 3	String	20	Y

Table 2–11 (Cont.) Location Attributes Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
PRICING_GROUP	Pricing group	String	20	Y
COMBO_STORE	Combo stores	String	20	Y
TAXABILITY	Taxability	String	20	Y

Locked Company Planned Receipts Specification (LOCKED_COMPANY_PLAN)

Table 2–12 Locked Company Planned Receipts Standard Interface Specification¹

Attribute	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	Y
MERCHANDISE_LEVEL	The merchandise level - Subdivision or Class	String	50	Y
FISC_YEAR	Number of fiscal year	Integer	4	Y
FISC_PERIOD	Number of fiscal period	Integer	2	Y
GROSS_PROFIT_AMT	Gross profit dollars	Integer	9	Y
GROSS_PROFIT_PCT	Gross profit percent	Decimal	8,2	Y
INIT_MARKUP_PCT	Initial markup percent	Decimal	8,2	Y
GPROI	Gross profit return on investment	Decimal	8,2	Y
RCPT_AUR	Average unit retail receipt	Decimal	8,2	Y
P2_MKDN_AMT	P2 markdown dollars	Integer	9	Y
P4_MKDN_AMT	P4 markdown dollars	Integer	9	Y
P5_MKDN_AMT	P5 markdown dollars	Integer	9	Y
SHRINK_PCT	Shrink percent	Decimal	8,2	Y
FREIGHT_PCT	Freight percent	Decimal	8,2	Y
CHARGE_PCT	Merchandise charge percent	Decimal	8,2	Y

¹ For Decimal, the requirement is a number of a certain defined length and with a certain number of decimal places. For example, (22,2) is a number that can be up to 22 digits long and that can have two digits after the decimal point.

Locked Store Planned Receipts Specification (LOCKED_STORE_PLAN)

Table 2–13 Locked Store Planned Receipts Standard Interface Specification

Attribute	Attribute Description	Data Type	Maximum Length	Nullable Y/N
LOCATION_KEY	Unique identifier for location hierarchy	String	25	Y
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	Y
MERCHANDISE_LEVEL	The merchandise level - Subdivision or Class	String	50	Y
FISC_YEAR	Number of fiscal year	Integer	4	Y
FISC_PERIOD	Number of fiscal period	Integer	12	Y
BOP_INV_AMT	Beginning inventory \$	Integer	11	Y
BOP_INV_QTY	Beginning inventory units	Integer	11	Y
RCPT_AMT	Receipt \$	Integer	11	Y
RCPT_QTY	Receipt units	Integer	11	Y
SLS_AMT	Planned sales \$	Integer	11	Y
SLS_QTY	Planned sales units	Integer	11	Y
MKDN_AMT	Markdown \$	Integer	11	Y

Merchandise Hierarchy Specification (ASH_MH_TBL)

Table 2–14 Merchandise Hierarchy Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
HIERARCHY1_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY1_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY1_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY2_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY2_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY2_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY3_ID	ID for this level of the hierarchy	String	25	Y

ATTRIBUTE1_NUMBER		Decimal	31,3	Y
ATTRIBUTE2_NUMBER		Decimal	31,3	Y
ATTRIBUTE3_NUMBER		Decimal	31,3	Y
ATTRIBUTE4_NUMBER		Decimal	31,3	Y
ATTRIBUTE5_NUMBER		Decimal	31,3	Y
ATTRIBUTE6_NUMBER		Decimal	31,3	Y
ATTRIBUTE7_NUMBER		Decimal	31,3	Y
ATTRIBUTE8_NUMBER		Decimal	31,3	Y
ATTRIBUTE9		String	100	Y
ATTRIBUTE10		String	100	Y
ATTRIBUTE11		String	100	Y

Table 2–16 (Cont.) Merchandise Hierarchy CDA Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
ATTRIBUTE12		String	100	Y
ATTRIBUTE13		String	100	Y
ATTRIBUTE14		String	100	Y
ATTRIBUTE15		String	100	Y
ATTRIBUTE16		String	100	Y

¹ For Decimal, the requirement is a number of a certain defined length and with a certain number of decimal places. For example, (22,2) is a number that can be up to 22 digits long and that can have two digits after the decimal point.

Merchandise Hierarchy Attributes Specification (STAGE_MH_ATTRS_TBL)

Table 2–17 MH Attributes Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	Y
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	50	Y
BRAND	ID of the brand	String	50	Y
BRAND_DESC	Description of the brand	String	50	Y
VENDOR	Number of the supplier. Contains the manufacturer number when the supplier is set as a warehouse.	String	50	Y
VENDOR_DESC	Description of the supplier	String	50	Y
ITEM_SIZE	Physical size	String	50	Y
CATEGORY	Category	String	50	Y
CATEGORY_DESC	Category description	String	50	Y
REPORT_CLIENT_ID	Client ID associated with report	String	50	Y
START_DT	Beginning of plan	Date in format YYYY-MM-DD	10	Y
FIRST_CREATE_DT	Date Merchandise first introduced	Date in format YYYY-MM-DD	10	Y
LAST_MODIFIED_DT	Time stamp of last modification	Date in format YYYY-MM-DD	10	Y
PROD_LEVEL	Product level	Integer	32	Y
COST	Wholesale cost	Decimal	22,2	Y
RETAIL	Retail price	Decimal	22,2	Y
PACK_SIZE	Pack size (inner)	Integer	22	Y

Table 2–17 (Cont.) MH Attributes Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
SIZE_RANGE_DESC	Description of size range	String	50	Y
DISP_CODE	Disposition code	String	2	Y
PURCH_TYPE	Basic (B); Fashion (F); Key (K)	String	1	Y
GRP_IN	Group indicator	String	1	Y
PROD_TYPE	Product type	String	30	Y
BRAND_NAME	Brand name	String	50	Y
CNTL_RKL	Control RKL	String	2	Y
COLL_ID	ID of collection	Integer	6	Y
COLL_NAME	Name of collection	String	30	Y
MSTR_COLL_IND	Master collection indicator	String	1	Y
ORIG_IND	Origin indicator (Domestic/Import)	String	1	Y
WEIGHT	Weight	Decimal	7,2	Y
COLOR_CNT	Number of colors per style	Integer	2	Y
SIZE_GRP_DESC	Description of size group	String	5	Y
LINE_PCT	Line percent	Integer	3	Y
OOS_DATE	Season out-of-stock date	Date in format YYYY-MM-DD	10	Y
VENDOR_STYLE	Vendor style number	String	30	Y
ALLOC_FLAG	Allocate flag (RAP)	String	1	Y
FIRST_EFF_DT	Not used	Date in format YYYY-MM-DD	10	Y
LAST_EFF_DT	Not used	Date in format YYYY-MM-DD	10	Y
BRAND_TYPE	Not used	String	1	Y
PROMO_EXCLUSION	Not used	String	1	Y
MERCHANDISE_SUBTYPE	Season code	String	20	Y
SIZE_RANGE_KEY	ID of size range	String	25	Y
SIZE_KEY	ID of size	String	25	Y
MERCHANDISE_FLOOR_SET	Subset of a season used to describe when an item is introduced to the floor	String	20	Y
COLOR_FAMILY	Color family	String	50	Y

¹ For Decimal, the requirement is a number of a certain defined length and with a certain number of decimal places. For example, (22,2) is a number that can be up to 22 digits long and that can have two digits after the decimal point.

Pack Contents Specification (ASH_PACKS_CONTENTS_TBL)

Table 2–18 Pack Contents Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
SOURCE_ID	AS or customer, as source of prepack	Integer	1	Y
PACK_KEY	The key from the Pack Hierarchy for the item	String	25	Y
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	Y
INSIDE_UNITS	Units in pack - amount	Integer	22	Y
EACH_FLAG	Bins (1); Packs (0)	Integer	1	Y

Pack Hierarchy Specification (ASH_PH_TBL)

Table 2–19 Pack Hierarchy Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
HIERARCHY1_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY1_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY1_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY2_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY2_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY2_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY3_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY3_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY3_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY4_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY4_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY4_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY5_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY5_KEY	Key for this level of the hierarchy	String	25	Y

Table 2–19 (Cont.) Pack Hierarchy Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
HIERARCHY5_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY6_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY6_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY6_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY7_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY7_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY7_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY8_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY8_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY8_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY9_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY9_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY9_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY10_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY10_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY10_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY11_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY11_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY11_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY12_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY12_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY12_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY13_ID	ID for this level of the hierarchy	String	25	Y

Table 2–19 (Cont.) Pack Hierarchy Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
HIERARCHY13_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY13_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY14_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY14_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY14_DESC	Description of this level of the hierarchy	String	50	Y
HIERARCHY15_ID	ID for this level of the hierarchy	String	25	Y
HIERARCHY15_KEY	Key for this level of the hierarchy	String	25	Y
HIERARCHY15_DESC	Description of this level of the hierarchy	String	50	Y

Plan Period Ranks Specification (STAGE_PLAN_PERIOD_RANKS_TBL)

Table 2–20 Plan Period Ranks Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	N
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	50	N
RANK_NUM	Identifies the grade that the store is assigned to. The grade for the largest volume is 1.	String	50	N
RANK_FLOOR	The lower end of the range	Integer	12	N
RANK_CEILING	The upper end of the range	Integer	12	N
PLAN_PERIOD_FROM_FY	Beginning fiscal year of plan period	Integer	4	N
PLAN_PERIOD_FROM_FM	Beginning fiscal month of plan period	Integer	2	N
PLAN_PERIOD_TO_FY	Ending fiscal year of plan period	Integer	4	N
PLAN_PERIOD_TO_FM	Ending fiscal month of plan period	Integer	2	N
AGGR_PERIOD_FROM_FY	Beginning fiscal year to aggregate budgets to determine rank	Integer	4	N

Table 2–20 (Cont.) Plan Period Ranks Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
AGGR_PERIOD_FROM_FM	Beginning fiscal month to aggregate budgets to determine rank	Integer	2	N
AGGR_PERIOD_TO_FY	Ending fiscal year to aggregate budgets to determine rank	Integer	4	N
AGGR_PERIOD_TO_FM	Ending fiscal month to aggregate budgets to determine rank	Integer	2	N

Planned Chain Promotions (Traffic) Specification (PLANNED_CHAIN_PROMOS_TBL_STAGE)

Table 2–21 Planned Chain Promotions Standard Interface Specification

Attribute	Attribute Description	Data Type	Maximum Length	Nullable Y/N
PLANNED_PROMO_ID	The ID for the promotion	Integer	38	N
PROMO_TYPE	The type of promotion	String	20	Y
PROMO_DESC	A description of the promotion	String	50	Y
PROMO_START_DT	The start date of the promotion	Date in format YYYY-MM-DD	10	Y
PROMO_END_DT	The end date of the promotion	Date in format YYYY-MM-DD	10	Y
AD_START_DT	The start date of the ad	Date in format YYYY-MM-DD	10	Y
AD_END_DT	The end date of the ad	Date in format YYYY-MM-DD	10	Y
PROMO_WEEK	The week number for the promotion	Integer	2	Y
SCALE_FACTOR	Used to adjust the forecast for item being promoted based on history	Integer	38	Y
HISTORIC_PROMO_ID	ID of last year's promotion that is used to link new promotion to historical promotion for forecasting	Integer	38	Y
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	Y
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	50	Y

Planned Promotions Specification (STAGE_PLANNED_PROMOS)

Table 2–22 *Planned Promotions Standard Interface Specification¹*

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	Y
MERCHANDISE_LEVEL	The merchandise level - Lot or Color	String	50	Y
PROMO_START_DT	The start date of the promotion	Date in format YYYY-MM-DD	10	N
PROMO_END_DT	The end date of the promotion	Date in format YYYY-MM-DD	10	N
AD_START_DT	The start date of the ad	Date in format YYYY-MM-DD	10	N
AD_END_DT	The end date of the ad	Date in format YYYY-MM-DD	10	N
STORE_AD_GRP	The store type in terms of advertising strategy	String	5	Y
PROMO_LVL_IND	The promotion level indicator	String	1	Y
PROMO_TYPE	The type of promotion. Closeout (CO), Multiple Incentive (MIP), Price Break (PB).	String	5	Y
PROMO_PCNT_OFF	The percent off the item price with the promotion	Decimal	4,2	Y
PROMO_PRICE	The end retail price for item on promotion during the event	Decimal	8,2	Y
PROMO_WEEK	The week number for the promotion	Integer	2	Y
MEDIA_TYPE	The type of media used for the promotion. Newspaper (NPP); circulars (CI); direct mail (DM); television (TV); magazine (MAG); internet (WEB); run of press (ROP).	String	5	Y
EMPHASIS	Amount of emphasis for item in ad. High, Med, Low, Null.	String	3	Y
PAGE_NUM	Where in circular an ad appears. F, B, I, Null.	String	1	Y
PROMO_NAME	The promotion name	String	50	Y
EFF_DT	The effective date	Date in format YYYY-MM-DD	10	Y
EVENT_TYPE	The type of event	String	1	Y
REG_PCNT_OFF	Not used	Decimal	4,2	Y

Table 2–22 (Cont.) Planned Promotions Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
REG_PRICE	Not used	Decimal	8,2	Y
SALES_PCNT_OFF	Not used	Decimal	4,2	Y
SALES_PRICE	Not used	Decimal	8,2	Y
CLEARANCE_PCNT_OFF	Not used	Decimal	4,2	Y
CLEARANCE_PRICE	Not used	Decimal	8,2	Y
USE_PCNT_OFF	Not used	Decimal	4,2	Y
USE_PRICE	Not used	Decimal	8,2	Y

¹ For Decimal, the requirement is a number of a certain defined length and with a certain number of decimal places. For example, (22,2) is a number that can be up to 22 digits long and that can have two digits after the decimal point.

PPO Prepack Specification (STAGE_PPO_PREPACK)

Table 2–23 PPO Prepack Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	20	N
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	N
BRAND_DESC	Brand description	String	50	Y
PRODUCT_TYPE_DESC	Product type description	String	50	Y
SIZE_RANGE_KEY	Size range identifier	String	25	Y
SIZE_RANGE_DESC	Size range description	String	50	Y
SIZE_RANGE_ID	Size range identifier	String	25	Y
SIZE_RANGE_LENGTH	Number of sizes in size range	Integer	12	Y
SEASON_CODE	Season code	String	50	Y
ATTRIBUTE1		String	100	Y
ATTRIBUTE2		String	100	Y
ATTRIBUTE3		String	100	Y
ATTRIBUTE4		String	100	Y
ATTRIBUTE5		String	100	Y
SALES_LEVEL_RANK	Numbered rank	Integer	2	Y
SALES_LEVEL_MIN_UNITS	Lower bound of the level	Integer	12	Y
SALES_LEVEL_MAX_UNITS	Upper bound of the level	Integer	12	Y
SALES_LEVEL_DESC	Description of the level	String	50	Y
FEASIBLE_PREPACK_NUMBER	Number	Integer	12	N

Table 2–23 (Cont.) PPO Prepack Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
FEASIBLE_PREPACK_DESC	Description	String	50	Y
PREPACK_NUMBER	Pack ID in a pack option	Integer	12	N
PREPACK_DESC	Prepack description	String	50	Y
PACK_OPTION_KEY	Pack option identifier	String	20	Y
PACK_OPTION_NUMBER	Pack ID in a pack option	Integer	32	Y
SIZE_KEY	Size ID	String	25	N
SIZE_DESC	Size description	String	50	Y
SIZE_ID	Size ID	String	25	N
SIZE_RANK	Size rank	Integer	2	Y
SIZE_UNITS	Number of units for a size	Integer	12	N
AS_VERSION	The version of analytical services data	String	20	Y

PPO Escalation Specification (STAGE_PPO_ESCALATION)

Table 2–24 PPO Escalation Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
ORDER_SQC	The order number to apply matching	Integer	32	N
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	20	N
ATTRIBUTE_MASK	The attribute mask to use for constructing attribute values	String	1,000	N
AS_VERSION	The version of analytical services data	String	20	N

Promotion Base Lift Specification (STAGE_BASE_LIFT_TBL)

Table 2–25 Promotion Base Lift Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	20	Y
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	Y
LOCATION_LEVEL	Level within the location hierarchy	String	20	Y
LOCATION_KEY	Unique identifier for location hierarchy	String	25	Y

Table 2–25 (Cont.) Promotion Base Lift Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
HISTORIC_PROMO_KEY	The key that identifies the historic promotion	String	25	Y
DAILY_LIFT_IDX	The calculated lift factor/index. The promotional lift per day.	Decimal	15,5	Y
DAILY_LIFT_ERR	The calculated error factor/index	Decimal	15,5	Y
AS_VERSION	The version of analytical services data	String	20	Y

¹ For Decimal, the requirement is a number of a certain defined length and with a certain number of decimal places. For example, (22,2) is a number that can be up to 22 digits long and that can have two digits after the decimal point.

Promotion Base Lift Escalation Specification (STAGE_BASE_LIFT_ESCALATION_TBL)

Table 2–26 Promotion Base Lift Escalation Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
ORDER_SQC	The order number to apply matching	Integer	32	Y
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	20	Y
LOCATION_LEVEL	Level within the location hierarchy	String	20	Y
ATTRIBUTE_MASK	The attribute mask used for constructing attribute values	String	1,000	Y
AS_VERSION	The version of analytical services data	String	20	Y

Promotion Relative Lift Escalation Specification (STAGE_RELATIVE_LIFT_ESCALATION_TBL)

Table 2–27 Promotion Relative Lift Escalation Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
ORDER_SQC	The order number to apply matching	Integer	32	Y
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	20	Y
LOCATION_LEVEL	Level within the location hierarchy	String	20	Y
ATTRIBUTE_MASK	The attribute mask used for constructing attribute values	String	1,000	Y
AS_VERSION	The version of analytical services data	String	20	Y

Promotion Relative Lift Specification (STAGE_RELATIVE_LIFT_TBL)

Table 2–28 Promotion Relative Lift Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	20	Y
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	Y
LOCATION_LEVEL	Level within the location hierarchy	String	20	Y
LOCATION_KEY	Unique identifier for location hierarchy	String	25	Y
ATTRIBUTE1		String	100	Y
ATTRIBUTE2		String	100	Y
ATTRIBUTE3		String	100	Y
ATTRIBUTE4		String	100	Y
ATTRIBUTE5		String	100	Y
ATTRIBUTE6		String	100	Y
ATTRIBUTE7		String	100	Y
ATTRIBUTE8		String	100	Y
ATTRIBUTE9		String	100	Y
ATTRIBUTE10		String	100	Y
RELATIVE_LIFT_IDX	The relative lift value - a per day value	Decimal	15,5	Y
RELATIVE_LIFT_ERR	The error in the relative lift value	Decimal	15,5	Y
AS_VERSION	The version of analytical services data	String	20	Y

¹ For Decimal, the requirement is a number of a certain defined length and with a certain number of decimal places. For example, (22,2) is a number that can be up to 22 digits long and that can have two digits after the decimal point.

Seasonalities Specification (ASH_SEASONALITY_MAPS_TBL and ASH_SEASONALITY_VALUES_TBL)

The seasonalities interface populates two tables in Plan.

Table 2–29 Seasonalities (Maps) Standard Interface Specification

Field Name	Field Description	Data Type	Maximum Length	Nullable Y/N
PRIORITY	The search priority for the seasonality	Integer	38	N
SEASONALITY_ID	The ID for the seasonality	Integer	38	N
MERCHANDISE_LEVEL	Description of this level of the merchandise hierarchy	String	50	N

Table 2–29 (Cont.) Seasonalities (Maps) Standard Interface Specification

Field Name	Field Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_KEY	Key for this level of the merchandise hierarchy	String	25	N
LOCATION_LEVEL	Description of this level of the location hierarchy	String	50	N
LOCATION_KEY	Key for this level of the location hierarchy	String	25	N
ATTRIBUTE_VALUE_MASK	The search mask that specifies the season code and, optionally, the item attributes of the seasonality curves	String	50	Y
AS_VERSION_NUMBER	The version number for the current run. Set by APC and used to track run versions	String	20	Y

Table 2–30 Seasonalities (Values) Standard Interface Specification¹

Field Name	Field Description	Data Type	Maximum Length	Nullable Y/N
SEASONALITY_ID	The ID for the seasonality	Integer	38	N
CALENDAR_DT	The date for the seasonality	Date in format YYYY-MM-DD	10	N
SEAS_INDX	The value of the seasonality for the date	Decimal	11,4	Y
SEAS_ERR	For future use - set to 0	Decimal	11,4	Y
AS_PARAMETER_ID	A number that uniquely identifies the current record and that is used for tracking	Integer	38	Y
AS_VERSION_NUMBER	The version number for the current run - set by APC and used to track run versions	String	20	Y

¹ For Decimal, the requirement is a number of a certain defined length and with a certain number of decimal places. For example, (22,2) is a number that can be up to 22 digits long and that can have two digits after the decimal point.

Size Ranges Specification (STAGE_SIZE_RANGE)

Table 2–31 Size Ranges Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
SIZE_RANGE_KEY	The key for the size range for the SKU	String	25	Y
SIZE_RANGE_DESC	The size range description (e.g., XS - XL)	String	50	Y
SIZE_RANGE_ID	The client ID for the size range	String	20	Y
SIZE_KEY	The key value for the size	String	25	Y
SIZE_DESC	The size description	String	25	Y
SIZE_ID	The client ID for the size	String	25	Y
SIZE_RANK	The rank order for the size	Integer	9	Y

SPO Escalation Specification (STAGE_SPO_ESCALATION)

Table 2–32 SPO Escalation Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
ORDER_SQC	The order number to apply matching	Integer	32	N
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	20	N
LOCATION_LEVEL	Level within the location hierarchy	String	20	Y
ATTRIBUTE_MASK	The attribute mask used for constructing attribute values	String	1,000	N
AS_VERSION	The version of analytical services data	String	20	Y

SPO Size Profiles Specification (STAGE_SPO_SIZE_PROFILE)

Table 2–33 SPO Size Profile Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	20	N
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	N
BRAND_DESC	Brand description	String	50	Y
PRODUCT_TYPE_DESC	Product type description	String	50	Y

Table 2–33 (Cont.) SPO Size Profile Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
SIZE_RANGE_DESC	Size range description	String	50	Y
SIZE_RANGE_ID	Size range identifier	String	25	Y
SIZE_RANGE_KEY	Size range identifier	String	25	Y
SIZE_RANGE_LENGTH	Number of sizes in size range	Integer	12	Y
LOCATION_KEY	Unique identifier for location hierarchy	String	25	Y
LOCATION_LEVEL	Level within location hierarchy	String	20	Y
SEASON_CODE	Season code	String	50	Y
ATTRIBUTE1		String	100	Y
ATTRIBUTE2		String	100	Y
ATTRIBUTE3		String	100	Y
ATTRIBUTE4		String	100	Y
ATTRIBUTE5		String	100	Y
CLUSTER_NUMBER	Number of cluster	Integer	5	Y
CLUSTER_DESC	Cluster description	String	50	Y
SIZE_KEY	Size identifier	String	25	N
SIZE_DESC	Size description	String	50	N
SIZE_ID	Size identifier	String	25	N
SIZE_RANK	Size rank	Integer	2	N
SIZE_PROFILE_UNITS_PCT	Size profile percent	Decimal	6,3	N
SIZE_PROFILE_UNITS	Size profile units	Integer	12	Y
SIZE_PROFILE_UNIT_REL_ERR	Size profile error	Decimal	22,4	N
AS_VERSION	The version of analytical services data	String	20	Y

¹ For Decimal, the requirement is a number of a certain defined length and with a certain number of decimal places. For example, (22,2) is a number that can be up to 22 digits long and that can have two digits after the decimal point.

Store Eligibility Specification (STORE_ELIGIBILITY)

Table 2–34 Store Eligibility Standard Interface Specification

Attribute	Attribute Description	Data Type	Maximum Length	Nullable Y/N
LOCATION_KEY	The key for the Store level in the location hierarchy	String	25	Y
MERCHANDISE_KEY	The key for the Class level in the merchandise hierarchy	String	25	Y

Table 2–34 (Cont.) Store Eligibility Standard Interface Specification

Attribute	Attribute Description	Data Type	Maximum Length	Nullable Y/N
FISC_YEAR	The year when the store is eligible	Integer	4	Y
FISC_PERIOD	The period during the year when the store is eligible	Integer	2	Y
ELIGIBLE_IND	A value of Y indicates that the indicated Store is eligible to sell the indicated Class of merchandise during the time period specified	String	1	Y

Store Transit Times Specification (STAGE_OUTER_DC_MAPS_TBL)

Table 2–35 Store Transit Times Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	String	25	Y
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	50	Y
LOCATION_KEY	Unique identifier for location hierarchy	String	25	Y
LOCATION_LEVEL	Level within the location hierarchy	String	50	Y
DIST_CENTER_KEY	DC identifier	String	25	Y
TRANSIT_NUM_DAYS	The number of days required for delivery from DC to store	Integer	32	Y

Store Weights Escalation Specification (STAGE_SWO_ESCALATION)

Table 2–36 Store Weights Escalation Standard Interface Specification

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
ORDER_SQC	The order number to apply matching	Integer	32	N
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	String	20	N
LOCATION_LEVEL	Level within the location hierarchy	String	20	N
ATTRIBUTE_MASK	The attribute mask used for constructing attribute values	String	1,000	N
AS_VERSION	The version of analytical services data	String	20	N

Store Weights LSD Specification (STAGE_SWO_LSD)

Table 2–37 Store Weights LSD Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_LEVEL	Level within the merchandise hierarchy	Integer	20	N
MERCHANDISE_KEY	Unique identifier for merchandise hierarchy	Integer	25	N
LOCATION_LEVEL	Level within the location hierarchy	Integer	20	Y
LOCATION_KEY	Unique identifier for merchandise hierarchy	Integer	25	Y
SEASON_CODE	Season code	Integer	50	Y
AS_VERSION	The version of analytical services data	Integer	20	Y
ATTRIBUTE1		Integer	100	Y
ATTRIBUTE2		Integer	100	Y
ATTRIBUTE3		Integer	100	Y
ATTRIBUTE4		Integer	100	Y
ATTRIBUTE5		Integer	100	Y
LSD_WEIGHT	Store weight	Decimal	22,20	N

¹ For Decimal, the requirement is a number of a certain defined length and with a certain number of decimal places. For example, (22,2) is a number that can be up to 22 digits long and that can have two digits after the decimal point.

Weekly Historic Sales and Inventory Specification (WK_HIST_SALES_INV)

Table 2–38 Weekly Historic Sales and Inventory Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
MERCHANDISE_KEY	The key for the SKU level in the merchandise hierarchy	String	25	Y
LOCATION_KEY	The key for the Store level in the location hierarchy	String	25	Y
FISCAL_YR	Number of the fiscal year	Integer	4	Y
FISCAL_WK	Number of the fiscal week	Integer	2	Y
END_OH_QTY	Ending on hand inventory	Integer	16	Y
END_OO_QTY	Ending on order quantity	Integer	16	Y
UNIT_RTL	Current ticket	Decimal	7,2	Y
UNIT_CST	PDB cost	Decimal	7,2	Y
INIT_RTL	PDB initial retail	Decimal	7,2	Y

Table 2–38 (Cont.) Weekly Historic Sales and Inventory Standard Interface Specification¹

Attribute Name	Attribute Description	Data Type	Maximum Length	Nullable Y/N
RECEIPT_QTY	Receipts	Integer	16	Y
GRSS_SLS_QTY	Gross sales quantity	Integer	16	Y
GRSS_SLS_AMT	Gross sales amount	Decimal	16,2	Y
NET_SLS_QTY	Net sales quantity (sales quantity - return quantity)	Integer	16	Y
NET_SLS_AMT	Net sales amount (sales \$ - return \$)	Decimal	16,2	Y
TOT_DSC_AMT	Total discount amount	Decimal	16,2	Y
PROMO_MKDN_DSC_AMT	Promotional markdown discount	Decimal	16,2	Y
SELLIT_MKDN_DSC_AMT	Sell it markdown discount	Decimal	16,2	Y
CLR_DSC_AMT	Clearance discount amount	Decimal	16,2	Y
FREIGHT	Freight cost	Decimal	16,2	Y
GRSS_PROFIT_AMT	Gross profit \$	Decimal	16,2	Y

¹ For Decimal, the requirement is a number of a certain defined length and with a certain number of decimal places. For example, (22,2) is a number that can be up to 22 digits long and that can have two digits after the decimal point.

Standard Load

This chapter contains the following:

- “Introduction” on page 1
- “Standard Load Process” on page 1
- “Environment Customization File” on page 3
- “Staging Script: pl_stage_file.sh” on page 2
- “Load Script: pl_load_data.sh” on page 2
- “Analytical Insights Data” on page 3
- “Load Procedures” on page 4
- “Standard Load Dependencies” on page 8
- “Standard Load Steps” on page 14
- “Standard Load Error Handling” on page 14
- “Standard Dataset” on page 28

Introduction

This chapter describes the process to execute the standard load procedure, which transforms and loads retail data into the target databases. It also includes a list of the standard load error messages and information about setting error thresholds.

Standard Load Process

Plan provides a set of scripts that stage, transform, and load data into the target database tables in the Plan database. The data must be provided in flat files that meet the standard interface specifications. The variable length data in the files should be pipe-delimited. The files should be named to correspond to the names of the matching specification tables. For example, the calendar file should be named in a meaningful way (such as cal.dat) to correspond to ASH_CAL_TBL.

Note: No specific file extension is required for the input files.

Script Name	Function
Java procedures	
pl_stage_file.sh	Stages data from flat files into ASH staging tables.

Script Name	Function
pl_load_data.sh	Loads the data from the ASH staging tables into the database.
pl_stage_lib.sh	Library of functions. Weekly sales procedures with enforced parallelism
pl_elm_load_data.sh	Loads weekly sales into the database.
pl_elm_stage_lib.sh	Library of functions.

Each script contains options that can be customized. You can customize the options in the following ways (which are listed in order of precedence, with the command line having the highest precedence):

- Using the command line options
- Setting the customization values as environment variables in env.sh
- Setting the customization values in the user's environment

Staging Script: pl_stage_file.sh

Usage: `pl_stage_file.sh [OPTION]... [FILE]...`

Loads the files into the database.

Options:

-a DIR	--logdir_archive=DIR	directory to archive old log files
-c DIR	--controldir=DIR	directory with data control files
-e NUM	--errorthreshold=NUM	number of errors to allow in load (for DB2, it is a warning threshold)
-l DIR	--logdir=DIR	directory to store logs
-r DIR	--configroot=DIR	configuration root directory
-h	--help	displays help and exits

Load Script: pl_load_data.sh

Usage: `pl_load_data.sh [OPTION]... [LOADPROCEDURE]...`

Runs the load procedures in the database.

Options:

-a DIR	--logdir_archive=DIR	directory to archive old log files
-e NUM	--errorthreshold=NUM	number of errors to allow in load (overwrites the procedure's default limit)
-l DIR	--logdir=DIR	directory to store logs
-r DIR	--configroot=DIR	configuration root directory
-h	--help	displays help and exits

Environment Customization File

Here is an example of the environment customization file (env.sh):

```
#This is the environment customization file.
#Please define all customization values here.

#The mail client and address to send all messages to:
#MAIL=mailx
#REPORT_ADDRESS=error_mail@your_domain.com

#Number of parallel processes to run load procedures:
PARALLEL=2

#Directory with data control files:
#CONTROLDIR=/ASHschema/controlfiles

#Directory to store logs:
#LOGDIR=/tmp/load_logs

#Directory to move old logs to.
#If this variable is not set, the logs will be overwritten.
This folder is not required to exist and will be created at the time
#of archiving the logs.
#
#If all old logs should be preserved, it is possible to
#archive the files into a new unique folder, such as:
#LOGDIR_ARCHIVE=
#/tmp/load_logs/archived_logs_'date +%Y%m%d_%H%M%S'
#
#If only the archive of the previous run is important, then
#archive the files into the same folder, such as:
#LOGDIR=/tmp/load_logs/archived_logs

#Number of errors to allow during load
ERROR_THRESHOLD=50
```

Analytical Insights Data

Prior to the standard load, data that has been provided by Analytical Services is normalized by an AS Mapper. An AS Mapper is provided for each of the following analytical insights:

- Prepacks (PPO)
- Store Weights/LSDs (SWO)
- Size Profiles (SPO)
- Corporate (Base) Promotion Lifts
- Item (Relative) Promotion Lifts
- Demand Parameters (Inventory Effect, Price Elasticity, and Bayesian Effects)

The Seasonality demand parameters come from the output of the Parameter Export Tool. The files are renamed and loaded as part of the Standard Load. No mapper is used.

Each mapper takes a data file and an escalation mapping information file as inputs. The mapper outputs a file containing normalized data (Config or Maps and Values), which can then be loaded as part of the standard load.

The following table details the inputs and outputs for each AS mapper.

Table 3–1 AS Mapper Inputs and Outputs

AS Mapper Name	AS Mapper Procedure	AS Mapper Data File	AS Mapper Escalation File	AS Mapper Output File(s)	Standard Load Procedure
Prepack (PPO) Mapper	RunPP Mapper	STAGE_PPO_PREPACK	STAGE_PPO_ESCALATION	STAGE_PREPACK_MAPS_TBL STAGEPREPACK_VALUES_TBL	LoadPre Packs
Store Weights (SWO) Mapper	RunLSD Mapper	STAGE_SWO_LSD	STAGE_SWO_ESCALATION	STAGE_LSD_CONFIG	LoadLSDs
Size Profiles (SPO) Mapper	RunSP Mapper	STAGE_SPO_SIZE_PROFILE_TBL	STAGE_SPO_ESCALATION_TBL	STAGE_SIZE_PROF_MAPS_TBL STAGE_SIZE_PROF_CURVES_TBL	LoadSize Profiles

Standard Load Dependencies

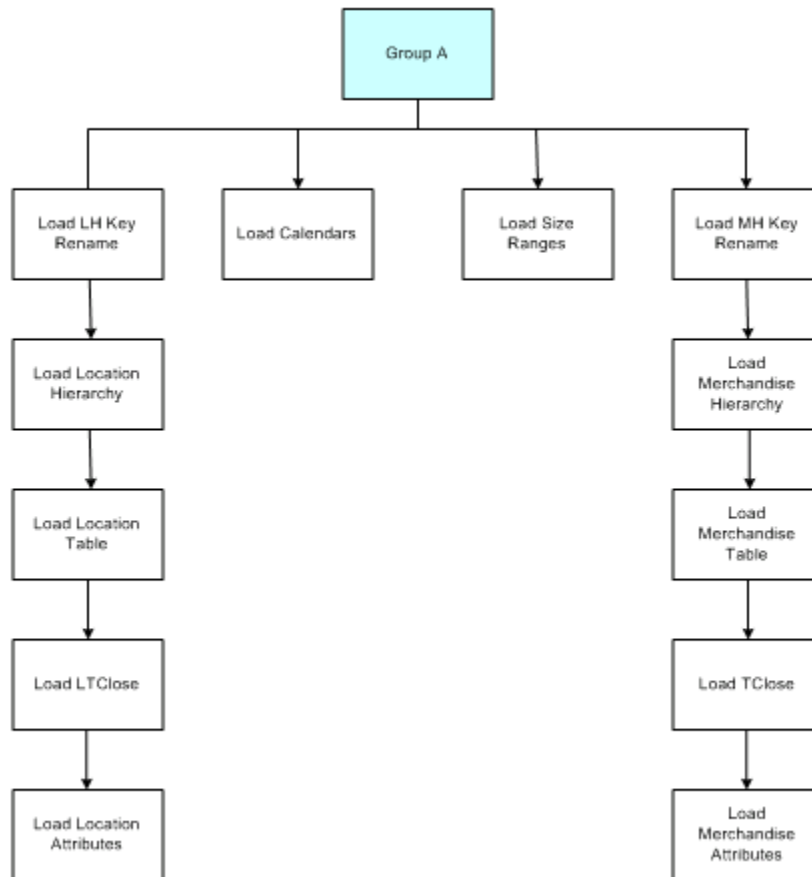

The Standard Load for Plan consists of an ordered series of procedures. The order provided in “Load Procedures” on page 4 is the recommended order. However, you can modify the order as long as you adhere to the dependencies detailed in the following series of diagrams.

These diagrams graphically explain the prerequisites and dependencies among the Plan load procedures. The procedures are organized into six logical groups, as shown in Table 3–2 on page 4. The procedures in Group A must be completed before the procedures in all the other groups. The procedures in each group must be completed in the order specified.

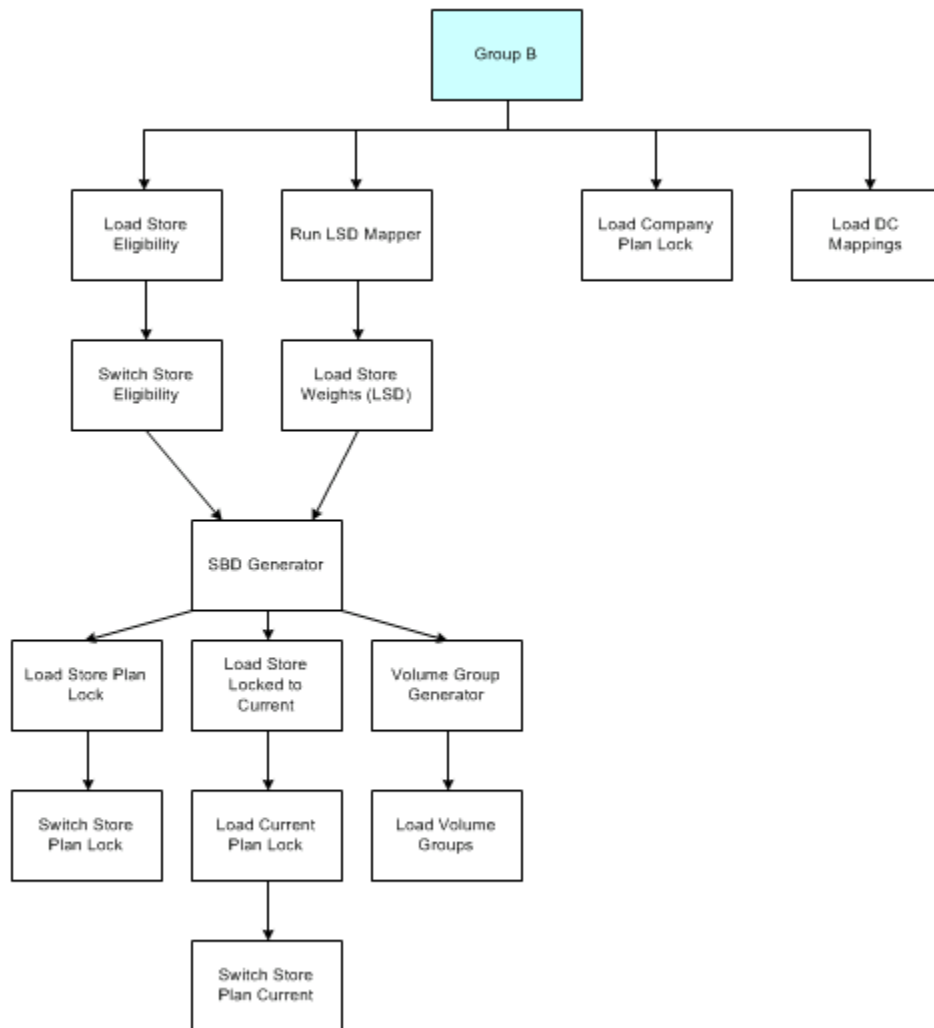

The first diagram shows the relationship between the six groups:

The second diagram shows the procedures in Group A: Calendars, Hierarchies, and Attributes:

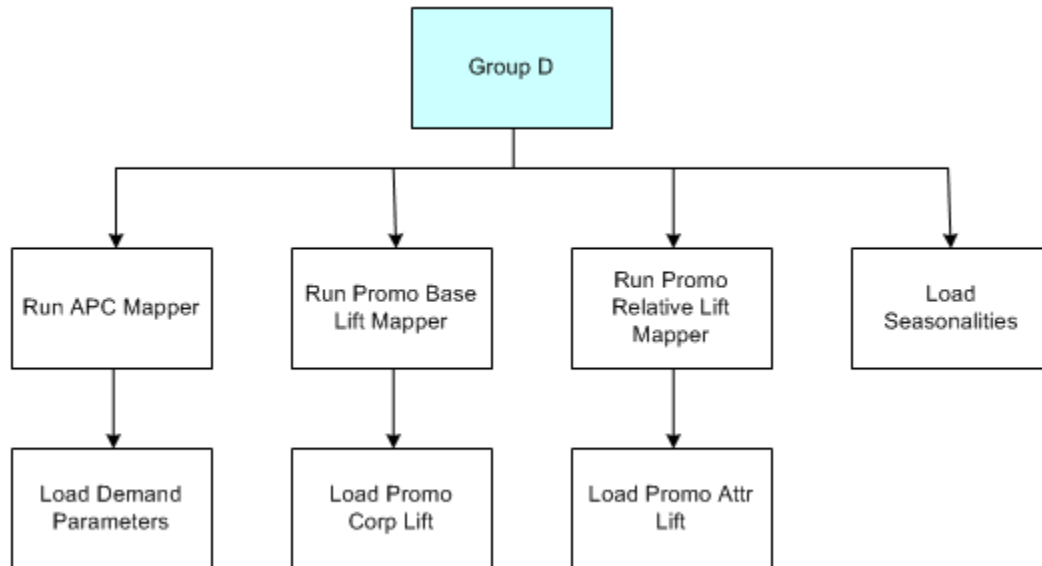

The third diagram shows the procedures in Group B: Plan Data. Note that the procedures in Group B require that the procedures in Group A be completed first.

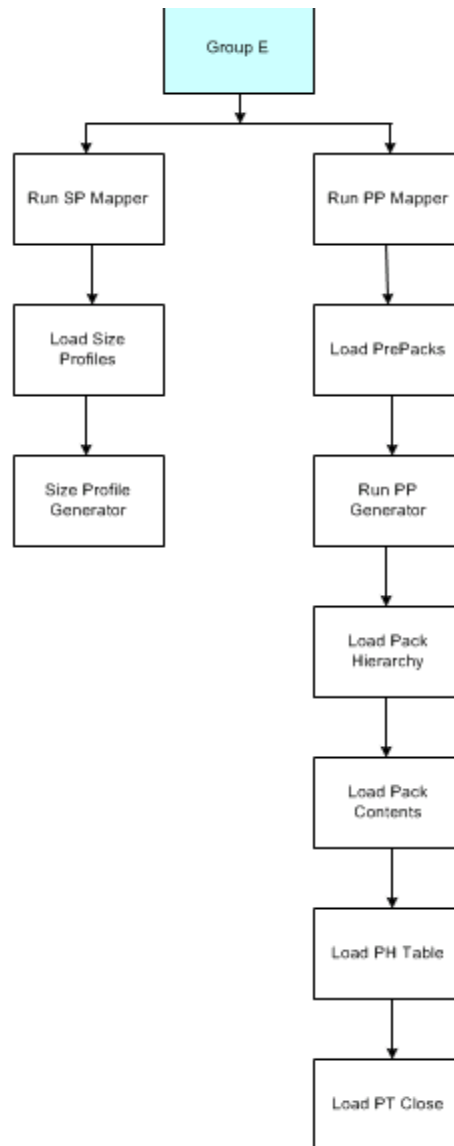

The fourth diagram shows the procedures in Group C: Promotions. Note that the procedures in Group C require that the procedures in Group A be completed first.

The fifth diagram shows the procedures in Group D: Demand Parameters. Note that the procedures in Group D require that the procedures in Group A be completed first.

The sixth diagram shows the procedures in Group E: Sizes and Packs. Note that the procedures in Group E require that the procedures in Group A be completed first.

The seventh diagram shows the procedures in Group F: Sales. Note that the procedures in Group F require that the procedures in Group A be completed first.

Standard Load Steps

Each Java procedure consists of the following sub-procedures:

1. Setup
2. Pre-load Verification. All n processes are run in parallel.
3. Finish Pre-load Verification.
4. Load. All n processes are run in parallel.
5. Post-load Verification. All n processes are run in parallel.
6. Finish Post-load Verification.
7. Tear-down.

Standard Load Error Handling

The Standard Load verifies the records in each staging table. Each record that fails the verification is removed from the staging table and placed in another table so that the load can continue and so that the failed records can be reviewed.

Note: If a load procedure fails and the threshold is exceeded, you will see the message "The specified error threshold has been exceeded for this load procedure." If this occurs, you should correct the existing data problem and re-run the load procedure as well as any child load procedures.

The table containing the failed records is assigned a name that corresponds to the associated staging table. For example:

Table 3–3 Failed Records Table Names

Staging Table	Failed Record Table
ASH_LHRENAME_TBL	ASH_LHRENAME_TBL_BAD
ASH_MH_TBL	ASH_MH_TBL_BAD

The “BAD” table into which the failed records are inserted has the same structure as the corresponding staging table with the addition of the following four columns:

Table 3–4 Table Columns for “BAD” Table

Column Name	Description	Data Type	Maximum Length	Nullable (Y/N)
ERROR_ROWID	The row ID that corresponds to the row ID in the staging table	Row ID		N
ERROR_CODE	The code for the verification	Integer		N
ERROR_DESC	Description of the error	String	1000	
ERROR_TIME	The time the error occurred	Timestamp		N

It is possible to place a threshold on the number of failed records in any staging table that will trigger a termination of the load. The default threshold values are hard-coded into Plan. In order to customize the threshold values, you must create a properties file and load it into Plan.

Error Handling Properties File

You can configure the threshold values for error handling in the properties file, `dbError.properties`. The values you set in this file override the corresponding Plan default values. The default value for the threshold of records failed is 100%. The default value for the total record threshold is 0%. Threshold values are expressed as a percentage. Note that the percentage symbol should not be included. Once you have created this file (which should be stored in `com/profitlogic/db/common/resources/dbError.properties` and called as a argument from there), you need to load it into the database schema using the procedure described on the next page.

Here is a sample `dbError.properties` file:

```
#####
##
#This properties file contains all error customizations
#
#Note:all thresholds should be satisfied in order for the load procedure to
succeed
#
#####
##
#LoadPromotions error customizations
#
#Total error threshold is set to 0% of all records (default is 0%):
LoadPromotions.total.threshold=0
#
#Threshold of records failed with error 1205 should not exceed 100% (default is
```

```
100%):
LoadPromotions.1205.threshold=100
#
#Threshold of records failed with error 1207 should not exceed 100% (default is
100%):
LoadPromotions.1207.threshold=100
#####
#####
```

In the `dbError.properties` file, you can set the total error threshold as well as a separate threshold for specific verifications. When configuring the error threshold for specific verifications, you use the error message number, as shown in Table 3–6, “Standard Load Error Messages,” to indicate which verification you are setting the error threshold for. The sum of all the individual thresholds cannot exceed the total threshold.

Loading the `dbError.properties` File

Once you have created the `dbError.properties` file, you can load it, as follows:

```
dbpropertiesinstaller.sh <config_root>
conf/com/profitlogic/db/common/resources/dbError.properties, where config_root
is the root directory of the Plan configuration files.
```

The format for the file `<db_connections_properties>` is as follows:

For Oracle:

```
db.type=oracle
db.driver=oracle.jdbc.OracleDriver
db.url=jdbc:oracle:thin:@<db_host>:<db_port>:<db_SID>
db.password=<db_password>
```

Custom Errors

As part of the `dbError.properties` file, you can create custom verifications. Custom error codes have a reserved range of 50001 to 50100. You need to provide the text of the error message and a query that defines the verification. The pre-load verification (error messages 50000 and 50001 in the following sample) is run during the pre-load verification step. The post-load verification (error message 50002 in the following sample) is run during the post-load verification step. (For a list of the steps in the load procedure, see “Standard Load Steps” on page 14.)

Once you have modified the `dbError.properties` file to include custom verifications, you must load it into the database schema using the above command.

Here is a sample:

```
#####
#Define custom PRE_LOAD verification errors with code 50000 and 50001
#(list of error codes separated by white spaces)
LoadPromotions.pre-load.custom-errors=50000 50001

#Error message:
LoadPromotions.pre-load.50000=Table ASH_CP_TBL is missing OPTIMIZATION levels
#Threshold (default is 100%):
#Note: the threshold affects only INSERT statements! If the statement is defined as a
#      SELECT, then the error will be triggered only if the query returns at least one row.
#      For any other type of statement amount of rows affected is not checked.
LoadPromotions.pre-load.50000.threshold=0
#INSERT statement should populate the "bad records" table with failed rows
#Note: in cases when the threshold is less than 100%, the INSERT statement should end
```

```

#         with a non-empty WHERE clause because the statement will be appended by an
#         additional condition.
LoadPromotions.pre-load.50000.query=                                \
    SELECT 1 FROM %{YA_DUAL}%                                         \
    WHERE not exists (SELECT 1 FROM ash_cp_tbl                         \
                      WHERE intersect name = 'OPTIMIZATION')
#Error message:
LoadPromotions.pre-load.50000.No promotion is allowed after 01/01/2050
#Threshold (default is 100%):
#Note: the threshold affects only INSERT statements!
#     If the statement is defined as a SELECT, then the error will be
#     triggered only if the query returns at least one row.
#     For any other type of statement the number of rows is not checked.
LoadPromotions.pre-load.50001.threshold=0
#INSERT statement should populate the "bad records" table with failed rows
#Note: in cases when the threshold is less than 100%, the INSERT statement should end
#     with a non-empty WHERE clause because the statement will be appended by an
#     additional condition.
LoadPromotions.pre-load.50001.query=                                \
    INSERT INTO ash_promo_tbl_bad                                     \
    (ERROR_ROWID, ERROR_CODE, ERROR_DESC, ERROR_TIMESTAMP, merchandise_key, \
    merchandise_level, location_key, location_level, promotion_key, \
    promo_start_date, promo_end_date, promo_price, promo_perc_off, \
    promo_desc, promo_type, prono_excl_fg, promo_number, attribute1, \

    SELECT ROWID, 50001, 'Promo after 01/01/2050', %{YA_SYSDATE_AS_TIMESTAMP}%, \
    merchandise_key,merchandise_level, location_key, location_level, promotion_key,\
    promo_start_date, promo_end_date, promo_price, promo_perc_off, \
    promo_desc, promo_type, prono_excl_fg, promo_number, attribute1, \
    attribute2, attribute3, attribute4, attribute5) \
    FROM ash_promo_tbl \
    WHERE promo_end_date >= %{YA_TODATE/'2050-01-01'/'YYYY-MM-DD'}%

#####
# Define a custom POST_LOAD verification error with code 50002
# (list of error codes separated by spaces)
LoadPromotions.post-load.custom-errors=50002
LoadPromotions.post-load.50002.No promotion is allowed after 01/01/2050
#Note: If the statement is defined as a SELECT, then the error will be
#     triggered only if the query returns at least one row.
#     For any other type of statement the number of rows affected is not checked.
LoadPromotions.post-load.50002.query=                                \
    SELECT 1 FROM %{YA_DUAL}%                                         \
    WHERE exists (SELECT 1 FROM planned_promos_tbl \
                  WHERE end_dt >= %{YA_TO_DATE/'2050-01-01'/'YYYY-MM-DD'}%)

```

Error Handling Report

The standard load validates the data prior to loading the data into the target tables.

A customizable view, `pl_load_status_vw`, provides a report on the status of data validations. This view has the following default attributes:

Attribute	Description
LOAD_PROCEDURE	The specific load procedure used
SOURCE	The staging table

Attribute	Description
DATA_VALIDATION_STATUS	Success - The number of failed records is less than the threshold set or Failure - The number of failed records exceeds the threshold set
NUM_BAD_RECORDS	The number of failed records in the failed record table

Here is an excerpt from a sample validation report:

Table 3–5 Sample Standard Load Data Validation Report - Excerpt

LOAD_PROCEDURE	SOURCE	DATA_VALIDATION_STATUS	NUM_BAD_RECORDS
LoadLocationHierarchyTbl	ASH_LH_TBL	Success	0
LoadCalendars	ASH_CAL_TBL	Success	0
LoadLocationHierarchy	ASH_LH_CDA_TBL	Success	0
LoadMerchandiseHierarchy	ASH_MH_CDA_TBL	Success	0
LoadLHKeyRename	ASH_LHRENAME_TBL	Success	0
LoadMHKeyRename	ASH_MHRENAME_TBL	Failure	20

To generate an output file that can be emailed to interested users or integrated into production scripts, use the following script. The script writes to the standard output, which can be redirected to a file. Note that the optional WHERE clause, including the WHERE keyword itself, should be enclosed in quotes.

```
bash pl_load_status.sh -r <configroot> -w <whereclause>
```

where

-r DIR	--configroot=DIR	The configuration root directory
-w WHERE	--whereclause=WHERE	An optional clause used to filter specific information in the report
-h	--help	Displays help and exits

Standard Load Error Messages

The following are the error messages that may be generated during the standard load procedure.

Table 3–6 Standard Load Error Messages

Number	Error Message
<i>System Errors</i>	
0	The program has completed successfully.
10	An unspecified error has occurred.
20	An SQL exception has occurred.
30	A Java exception has occurred.
40	The exception limit has been exceeded.
50	The specified error threshold has been exceeded in this load procedure.
<i>Common Errors</i>	
100	At least one node in the hierarchy has more than one parent.

Table 3–6 (Cont.) Standard Load Error Messages

Number	Error Message
101	The number of levels in the levels table does not match the data from the source table.
102	The CHAIN level does not exist in the target table.
104	The levels table is empty.
105	The sequence for the CHAIN level should be defined as 1 in the levels table.
<i>JDBCHelper Errors</i>	
150	STATOPER password was not registered in the application.
151	Failed to decrypt STATOPER password.
152	At least one table being requested for RUNSTATS does not exist.
153	RUNSTATS failed against at least one table.
<i>Load CH Levels Errors</i>	
200	The cross-products information table (ASH_CP_TBL) does not have all the required records.
201	Mandatory columns in the cross-products information table (ASH_CP_TBL) contain null values.
202	A duplicate INTERSECT_NAME has been found in the cross-products information table (ASH_CP_TBL).
203	Invalid attribute values have been found in the cross-products information table (ASH_CP_TBL).
204	The cross-products information table (ASH_CP_TBL) is empty.
205	In the cross-products information table (ASH_CP_TBL), at least one merchandise level has a value of NULL. A merchandise level cannot have a value of NULL.
206	In the cross-products information table (ASH_CP_TBL), at least one location level has a value of NULL. A location level cannot have a value of NULL.
<i>Load Calendars Errors</i>	
1000	In the calendar table (ASH_CAL_TBL), at least one fiscal year does not have between 52 and 53 weeks.
1001	In the calendar table (ASH_CAL_TBL), at least one fiscal year does not include twelve fiscal months.
1002	In the calendar table (ASH_CAL_TBL), at least one fiscal week has an End of Period (EOP) that is not Saturday.
1003	In the calendar table (ASH_CAL_TBL), at least one fiscal month is not in the range 1 - 12.
1004	In the calendar table (ASH_CAL_TBL), at least one fiscal week is not in the range 1 -53.
1005	In the calendar table (ASH_CAL_TBL), at least one fiscal year has a value of NULL. A fiscal year cannot have a value of NULL.
1006	In the calendar table (ASH_CAL_TBL), at least one fiscal month has a value of NULL. A fiscal month cannot have a value of NULL.
1007	In the calendar table (ASH_CAL_TBL), at least one fiscal week has a value of NULL. A fiscal week cannot have a value of NULL.

Table 3–6 (Cont.) Standard Load Error Messages

Number	Error Message
1008	In the calendar table (ASH_CAL_TBL), at least one fiscal season has a value of NULL. A fiscal season cannot have a value of NULL.
1009	In the calendar table (ASH_CAL_TBL), at least one End of Period (EOP) has a value of NULL. A End of Period (EOP) cannot have a value of NULL.
1010	In the calendar table (ASH_CAL_TBL), at least one fiscal quarter has a value of NULL. A fiscal quarter cannot have a value of NULL.
<i>Load Location Hierarchy Errors</i>	
1500	In the location hierarchy CDA staging table (ASH_LH_CDA_TBL), at least one location key has a value of NULL. A location key cannot have a value of NULL.
1501	In the location hierarchy CDA staging table (ASH_LH_CDA_TBL), at least one location level has a value of NULL. A location level cannot have a value of NULL.
1502	In the location hierarchy levels table (ASH_LHL_TBL), at least one location level has a value of NULL. A location level cannot have a value of NULL.
1503	In the location hierarchy levels table (ASH_LHL_TBL), at least one level sequence level has a value of NULL. A level sequence cannot have a value of NULL.
1504	In the location hierarchy levels table (ASH_LHL_TBL) the entries in LEVEL_SQC are not sequential.
1505	The location hierarchy levels table (ASH_LHL_TBL) should have sequence starting with 1.
1506	In the location hierarchy levels table (ASH_LHL_TBL), CHAIN is not assigned a sequence value (LEVEL_SQC) of 1.
1507	In the merchandise hierarchy table (ASH_MH_TBL), null values were detected in the hierarchy stage key columns.
<i>Load Location Hierarchy Key Rename Errors</i>	
1600	In the location hierarchy rename table (ASH_LHRENAME_TBL), at least one old location key has a value of NULL. A location key cannot have a value of NULL.
1601	In the location hierarchy rename table (ASH_LHRENAME_TBL), at least one new location key has a value of NULL. A location key cannot have a value of NULL.
1602	In the location hierarchy rename table (ASH_LHRENAME_TBL), at least one location level has a value of NULL. A location level cannot have a value of NULL.
1603	The old location key in the location hierarchy rename table (ASH_LHRENAME_TBL) contains duplicate values.
1604	The new location key in the location hierarchy rename table (ASH_LHRENAME_TBL) contains duplicate values.
1605	The new location key in the location hierarchy rename table (ASH_LHRENAME_TBL) is already present in the location hierarchy.
<i>Load Pack Hierarchy Errors</i>	
1700	In the pack hierarchy table (ASH_PH_TBL), null values were detected in the hierarchy stage key columns.

Table 3–6 (Cont.) Standard Load Error Messages

Number	Error Message
1701	While an incremental feed was being processed, a record for an existing pack was found in the pack hierarchy table (ASH_PH_TBL).
<i>Load Pack Hierarchy Levels Errors</i>	
1800	In the pack hierarchy levels table (ASH_PHL_TBL), at least one pack level has a value of NULL. A pack level cannot have a value of NULL.
1801	In the pack hierarchy levels table (ASH_PHL_TBL), at least one level sequence has a value of NULL. A level sequence cannot have a value of NULL.
1802	In the pack hierarchy levels table (ASH_PHL_TBL) the entries in LEVEL_SQC are not sequential.
1804	In the pack hierarchy levels table (ASH_PHL_TBL), CHAIN is not assigned a sequence value (LEVEL_SQC) of 1.
<i>Load Pack Contents Errors</i>	
1900	In the pack contents table (ASH_PACK_CONTENTS_TBL), at least one INSIDE_UNITS has a negative value. An INSIDE_UNITS cannot have a negative value.
1901	In the pack contents table (ASH_PACK_CONTENTS_TBL), at least one merchandise key has a value of NULL. A merchandise key cannot have a value of NULL.
1902	In the pack contents table (ASH_PACK_CONTENTS_TBL), at least one pack key has a value of NULL. A pack key cannot have a value of NULL.
1903	In the pack contents table (ASH_PACK_CONTENTS_TBL), at least one INSIDE_UNITS has a value of NULL. An INSIDE_UNITS cannot have a value of NULL.
1904	In the pack contents table (ASH_PACK_CONTENTS_TBL), at least one EACH_FLAG has a value of NULL. An EACH_FLAG cannot have a value of NULL.
1905	A record in the pack contents table (ASH_PACK_CONTENTS_TBL) contains merchandise that is not found on the lowest level of the merchandise hierarchy.
1906	A record in the pack contents table (ASH_PACK_CONTENTS_TBL) contains a pack that is not found on the lowest level of the pack hierarchy.
1907	After the data was processed, at least one merchandise record does not have a pack assigned to it.
1908	During the processing of an incremental feed, a record for an existing pack was found in the pack contents table (ASH_PACK_CONTENTS_TBL).
<i>Load Merchandise Hierarchy Errors</i>	
2001	NOT NULL has already been set for the merchandise hierarchy table (ASH_MH_TBL) stage key columns.
2002	In the merchandise hierarchy table (ASH_MH_TBL), an error dropping the unique index occurred.
2501	In the merchandise hierarchy table (ASH_MH_TBL), null values were detected in the hierarchy stage key columns.
2502	The merchandise hierarchy levels table (ASH_MHL_TBL) is empty.

Table 3–6 (Cont.) Standard Load Error Messages

Number	Error Message
2503	In the merchandise hierarchy levels table (ASH_MHL_TBL) the entries in LEVEL_SQC are not sequential.
2504	The merchandise hierarchy levels table (ASH_MHL_TBL) contains an entry for LEVEL_SQC with a value < 1.
2505	In the merchandise hierarchy levels table (ASH_MHL_TBL), CHAIN is not assigned a sequence value (LEVEL_SQC) of 1.
2506	The merchandise hierarchy staging table contains duplicate values at the lowest key level.
2507	The merchandise hierarchy table (ASH_MH_TBL) contains a child node with more than one parent node.
2508	The merchandise hierarchy cda staging table (ASH_MH_CDA_TBL) contains at least one combination of MERCHANDISE_KEY and MERCHANDISE_LEVEL that is not unique.
2509	In the merchandise hierarchy CDA staging table (ASH_MH_CDA_TBL), at least one merchandise key has a value of NULL. A merchandise key cannot have a value of NULL.
2510	The merchandise hierarchy rename table (ASH_MHRENAME_TBL) contains duplicate values for OLD_MERCHANDISE_KEY.
2511	In the merchandise hierarchy levels table (ASH_MHL_TBL), at least one merchandise level has a value of NULL. A merchandise level cannot have a value of NULL.
2512	In the merchandise hierarchy levels table (ASH_MHL_TBL), at least one level sequence level has a value of NULL. a level sequence cannot have a value of NULL.
<i>Load Client Hierarchy Actions Errors</i>	
2513	In the client hierarchy actions table (CLIENT_HIERARCHY_ACTIONS_TBL), CHAIN is not present in ACTION_NAME for HIER1_LEVEL_SQC = 1 and HIER1_TYPE = 'MERCHANDISE'.
2514	In the client hierarchy actions table (CLIENT_HIERARCHY_ACTIONS_TBL), CHAIN is not present in ACTION_NAME for HIER2_LEVEL_SQC = 1 and HIER2_TYPE = 'LOCATION'.
2515	In the client hierarchy actions table (CLIENT_HIERARCHY_ACTIONS_TBL), CHAIN is not present in ACTION_NAME for HIER3_LEVEL_SQC = 1 and HIER3_TYPE = 'PERIOD'.
2516	In the client hierarchy actions table (CLIENT_HIERARCHY_ACTIONS_TBL), CHAIN is not present in ACTION_NAME for HIER4_LEVEL_SQC = 1 and HIER4_TYPE = 'PACK'.
<i>Load MH Key Rename Errors</i>	
2600	In the merchandise hierarchy rename table (ASH_MHRENAME_TBL), at least one old merchandise key has a value of NULL. A merchandise key cannot have a value of NULL.
2601	In the merchandise hierarchy rename table (ASH_MHRENAME_TBL), at least one new merchandise key has a value of NULL. A merchandise key cannot have a value of NULL.
2602	In the merchandise hierarchy rename table (ASH_MHRENAME_TBL), at least one merchandise level has a value of NULL. A merchandise level cannot have a value of NULL.
2603	The old merchandise key in the merchandise hierarchy rename table (ASH_MHRENAME_TBL) contains duplicate values.

Table 3–6 (Cont.) Standard Load Error Messages

Number	Error Message
2604	The new merchandise key in the merchandise hierarchy rename table (ASH_MHRENAME_TBL) contains duplicate values.
2605	The new merchandise key in the merchandise hierarchy rename table (ASH_MHRENAME_TBL) is already present in the merchandise hierarchy.
<i>Load Size Profiles Errors</i>	
2700	In the size profiles table (STAGE_SIZE_PROF_MAPS_TBL), at least one merchandise key has a value of NULL. A merchandise key cannot have a value of NULL.
2701	In the size profiles table (STAGE_SIZE_PROF_MAPS_TBL), at least one merchandise level has a value of NULL. A merchandise level cannot have a value of NULL.
2702	In the size profiles table (STAGE_SIZE_PROF_MAPS_TBL), at least one location key has a value of NULL. A location key cannot have a value of NULL.
2703	In the size profiles table (STAGE_SIZE_PROF_MAPS_TBL), at least one location level has a value of NULL. A location level cannot have a value of NULL.
2704	In the size profiles table (STAGE_SIZE_PROF_MAPS_TBL), at least one order sequence has a value of NULL. An order sequence cannot have a value of NULL.
2705	A record in the size profiles table (STAGE_SIZE_PROF_MAPS_TBL) contains merchandise that is not found in the merchandise hierarchy.
2706	A record in the size profiles table (STAGE_SIZE_PROF_MAPS_TBL) contains a location that is not found in the location hierarchy.
2707	A record in the size profiles table (STAGE_SIZE_PROF_MAPS_TBL) contains a curve ID that is not found in the curve definition table (STAGE_SIZE_PROF_CURVES_TBL).
2708	In the size profiles table (STAGE_SIZE_PROF_MAPS_TBL), at least one curve ID has a value of NULL. A curve ID cannot have a value of NULL.
2709	After the data was processed, at least one merchandise/location intersection was found without a Size Profile Curve.
2710	The loading of the locations in the size profiles table (STAGE_SIZE_PROF_MAPS_TBL) was not completed.
<i>Load LSDs Errors</i>	
2800	In the location spread distribution table (STAGE_LSD_CONFIG_TBL), at least one merchandise key has a value of NULL. A merchandise key cannot have a value of NULL.
2801	In the location spread distribution table (STAGE_LSD_CONFIG_TBL), at least one merchandise level has a value of NULL. A merchandise level cannot have a value of NULL.
2802	In the location spread distribution table (STAGE_LSD_CONFIG_TBL), at least one location key has a value of NULL. A location key cannot have a value of NULL.
2803	In the location spread distribution table (STAGE_LSD_CONFIG_TBL), at least one location level has a value of NULL. A location level cannot have a value of NULL.

Table 3–6 (Cont.) Standard Load Error Messages

Number	Error Message
2804	In the location spread distribution table (STAGE_LSD_CONFIG_TBL), at least one order sequence has a value of NULL. An order sequence cannot have a value of NULL.
2805	A record in the location spread distribution table (STAGE_LSD_CONFIG_TBL) contains merchandise that is not found in the merchandise hierarchy.
2806	A record in the location spread distribution table (STAGE_LSD_CONFIG_TBL) contains a location that is not found in the location hierarchy.
2807	After the data was processed, at least one merchandise/location intersection without an LSD weight was found.
2808	The loading of the locations in the location spread distribution table (STAGE_LSD_CONFIG_TBL) was not completed.
<i>Load Prepack Errors</i>	
2900	In the prepack table (STAGE_PREPACK_MAPS_TBL), at least one merchandise key has a value of NULL. A merchandise key cannot have a value of NULL.
2901	In the prepack table (STAGE_PREPACK_MAPS_TBL), at least one merchandise level has a value of NULL. A merchandise level cannot have a value of NULL.
2902	In the prepack table (STAGE_PREPACK_MAPS_TBL), at least one order sequence has a value of NULL. An order sequence cannot have a value of NULL.
2903	A record in the prepack table (STAGE_PREPACK_MAPS_TBL) contains merchandise that is not found in the merchandise hierarchy.
2904	A record in the prepack table (STAGE_PREPACK_MAPS_TBL) contains a configuration ID that is not found in the configuration definition table (STAGE_PREPACK_VALUES_TBL).
2905	In the prepack table (STAGE_PREPACK_MAPS_TBL), at least one configuration ID has a value of NULL. A configuration ID cannot have a value of NULL.
<i>Store Budget Generation Errors</i>	
3450	In STAGE_BUDGET_PLAN_TBL, a least one merchandise key combined with level description is invalid.
3451	In STAGE_BUDGET_PLAN_TBL, at least one location key combined with level description is invalid.
3452	In STAGE_BUDGET_PLAN_TBL, at least one fiscal year and month does not exist in PERIODS_TBL.
3453	There is no matched store ratio.
<i>Load BRM Rules Errors</i>	
3801	The BRM_RULE_DEFINITION_TBL is empty and needs to be populated.
<i>Load MHTbl Errors</i>	
6101	The MERCHANDISE_HIERARCHY_TBL table has no CHAIN record (where PARENT_MERCHANDISE_ID is NULL).
6102	The MERCHANDISE_HIERARCHY_TBL table has more than one record with PARENT_MERCHANDISE_ID = NULL (multiple CHAIN records).

Standard Dataset

The Plan standard dataset is a set of raw data provided in 38 flat files with Plan that

- is shipped with Plan and is copied into the installation directory
- is not loaded by default
- cannot be modified
- contains only valid data, so no validation errors should occur during the standard load
- provides data that is sufficient to verify the installation of the application, to support demonstration and customer training on the application, and to be used as the smoke-test dataset for automation
- provides data that can be loaded using the standard load procedures
- provides data sufficient to permit the launching of the Plan application and invoke the Plan UI without any additional configuration
- does not provide any error conditions
- uses the default error threshold settings for data validation. This permits the dataset to fail on any validation error. All invalidated rows are store in appropriate “BAD” staged table.
- requires that an empty schema be created before the data is loaded (part of the standard installation)
- the loading of the sample dataset requires that Plan.sh be executed after the empty schema is created.
- dataset data is validated using published load validations

Sample Dataset Data

The data in the sample dataset consists of two divisions. Each division contains eight departments. The departments include 300 SKUs in the merchandise hierarchy and 25 stores in the location hierarchy. Full merchandise and location hierarchies are built: CHAIN through SKU for merchandise and CHAIN through STORE for location. The hierarchy structure is not configurable.

The sample dataset includes historical sales data that is loaded by default. It contains 118 weeks of historical data.

Optimized historical data is also included by is not installed by default. The user is prompted to install the optimized history.
