

**Oracle® Retail Advanced Inventory Planning**  
Implementation Guide  
Release 12.1

January 2008

Copyright © 2008, Oracle. All rights reserved.

Primary Author: Gary O'Hara

The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software—Restricted Rights (June 1987). Oracle Corporation, 500 Oracle Parkway, Redwood City, CA 94065

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

Oracle, JD Edwards, PeopleSoft, and Siebel are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

## Value-Added Reseller (VAR) Language

- (i) the software component known as **ACUMATE** developed and licensed by Lucent Technologies Inc. of Murray Hill, New Jersey, to Oracle and imbedded in the Oracle Retail Predictive Application Server – Enterprise Engine, Oracle Retail Category Management, Oracle Retail Item Planning, Oracle Retail Merchandise Financial Planning, Oracle Retail Advanced Inventory Planning and Oracle Retail Demand Forecasting applications.
- (ii) the **MicroStrategy** Components developed and licensed by MicroStrategy Services Corporation (MicroStrategy) of McLean, Virginia to Oracle and imbedded in the MicroStrategy for Oracle Retail Data Warehouse and MicroStrategy for Oracle Retail Planning & Optimization applications.
- (iii) the **SeeBeyond** component developed and licensed by Sun Microsystems, Inc. (Sun) of Santa Clara, California, to Oracle and imbedded in the Oracle Retail Integration Bus application.
- (iv) the **Wavelink** component developed and licensed by Wavelink Corporation (Wavelink) of Kirkland, Washington, to Oracle and imbedded in Oracle Retail Store Inventory Management.
- (v) the software component known as **Crystal Enterprise Professional and/or Crystal Reports Professional** licensed by Business Objects Software Limited (“Business Objects”) and imbedded in Oracle Retail Store Inventory Management.
- (vi) the software component known as **Access Via**<sup>TM</sup> licensed by Access Via of Seattle, Washington, and imbedded in Oracle Retail Signs and Oracle Retail Labels and Tags.
- (vii) the software component known as **Adobe Flex**<sup>TM</sup> licensed by Adobe Systems Incorporated of San Jose, California, and imbedded in Oracle Retail Promotion Planning & Optimization application.
- (viii) the software component known as **Style Report**<sup>TM</sup> developed and licensed by InetSoft Technology Corp. of Piscataway, New Jersey, to Oracle and imbedded in the Oracle Retail Value Chain Collaboration application.
- (ix) the software component known as **WebLogic**<sup>TM</sup> developed and licensed by BEA Systems, Inc. of San Jose, California, to Oracle and imbedded in the Oracle Retail Value Chain Collaboration application.
- (x) the software component known as **DataBeacon**<sup>TM</sup> developed and licensed by Cognos Incorporated of Ottawa, Ontario, Canada, to Oracle and imbedded in the Oracle Retail Value Chain Collaboration application.

| Measures .....   | 53        |

|  |           |
|--|-----------|
| Modifying Measure Base Intersections Using Configuration Tools .....       | 56        |
| Import Configuration Files .....   | 57        |
| Moving Integration Data Source from RMS to a Non-RMS External System ..... | 58        |
| <b>6 RMS Integration and Data Mapping .....</b>                            | <b>61</b> |
| RMS to AIP Data .....  | 61        |
| Hierarchy Data .....   | 61        |
| Measure Data .....   | 65        |
| Overview .....   | 75        |
| RMS-AIP Closed Purchase Orders Mapping .....                               | 76        |
| Transformation Overview .....  | 76        |
| Closed Orders Data Flow .....  | 78        |
| Closed Order – Online Load Process .....                                   | 79        |
| RMS-AIP Item Mapping .....   | 80        |
| Transformation Overview .....  | 80        |
| Item Data Flow .....   | 80        |
| Banded Item Extract .....  | 81        |
| Merchandise Hierarchy Extract .....  | 83        |
| Item Master Extract .....  | 85        |
| Purged Items Extract .....   | 88        |
| Item Retail Extract .....  | 89        |
| Item Supplier Country Extract .....  | 91        |
| Transformation Process – Item .....  | 93        |
| Final item.txt Layout .....  | 96        |
| Final dmx_dscdt_.txt Layout .....  | 99        |
| Item Load Process into AIP RPAS .....                                      | 101       |
| Corporate Discontinued Date – AIP Load Process .....                       | 104       |
| RMS-AIP Item Sale Mapping .....  | 105       |
| Item Sale Data Flow .....  | 105       |
| Item Sales Extract .....   | 106       |
| On Sale/Off Sale Extract Process .....                                     | 108       |
| Final dm0_onseffdt_.txt Layout .....                                       | 109       |
| Final dm0_ofseffdt_.txt layout .....                                       | 111       |
| RMS-AIP Item Supplier Mapping .....  | 113       |
| Item Supplier Data Flow .....  | 113       |
| Formal Packs Extract .....   | 114       |
| Informal Packs Extract .....   | 116       |
| Item Supplier Country Extract Process .....                                | 118       |
| Final Item Supplier Country Layout .....                                   | 120       |
| Final Product Supplier Link Layout .....                                   | 122       |
| Product Supplier Link Load Process .....                                   | 124       |
| RMS-AIP Location Mapping .....   | 125       |
| Location Data Flow .....   | 125       |
| Organization Hierarchy Extract .....                                       | 126       |
| Store Hierarchy Extract .....  | 127       |
| Transformation Process – Location .....                                    | 129       |
| Final loc.txt Layout .....   | 131       |
| Location Load Process into AIP RPAS .....                                  | 133       |
| RMS-AIP Received Quantity Mapping .....                                    | 135       |
| Received Quantity Data Flow .....  | 135       |
| Final received_qty.dat Layout .....  | 136       |
| Received Quantity Online Load Process .....                                | 139       |
| Store Current Inventory Mapping .....                                      | 140       |
| Store Current Inventory Data Flow .....                                    | 140       |
| Final sr0_curinvX.txt Layout .....   | 141       |
| Store Current Inventory – AIP Load Process .....                           | 143       |

|  |            |
|--|------------|
| RMS-AIP Store Product Life.....                                  | 144        |
| Store Product Life Data Flow .....                               | 144        |
| Location Traits Extract .....                                    | 145        |
| Item Master Extract .....  | 147        |
| Store Hierarchy Extract .....                                    | 150        |
| Item Supplier Country Extract.....                               | 152        |
| Transformation Process— Store Product Life.....                  | 154        |
| Final sr0_prdlfe.txt Layout .....                                | 156        |
| Store Product Life – AIP Load Process .....                      | 158        |
| RMS-AIP-Substitute Items Mapping.....                            | 159        |
| Substitute Items Data Flow .....                                 | 159        |
| Item Master Extract .....  | 160        |
| Substitute Item Extract .....                                    | 163        |
| Item Supplier Country Extract.....                               | 165        |
| Final dm0_pmsstasrc.txt Layout.....                              | 169        |
| Final dm0_pmsendsrc.txt Layout.....                              | 171        |
| Final dmx_vadprdesc.txt Layout .....                             | 173        |
| Promotional Start Date – AIP Load Process .....                  | 175        |
| Promotional End Dates – AIP Load Process .....                   | 176        |
| RMS-AIP-Supplier Mapping .....                                   | 177        |
| Supplier Data Flow .....   | 177        |
| Final splr.txt Layout.....                                       | 178        |
| Direct Supplier Extract .....                                    | 179        |
| Supplier Load Process into AIP RPAS .....                        | 180        |
| RMS-AIP-Warehouse Current Inv Mapping .....                      | 182        |
| Warehouse Current Inventory Data Flow .....                      | 182        |
| Formal Packs Extract.....  | 183        |
| Informal Packs Extract .....                                     | 185        |
| Warehouse Current Inventory Extract Process .....                | 188        |
| Final wr1_curinv.txt Layout .....                                | 190        |
| Warehouse Current Inventory – AIP Load Process .....             | 192        |
| RMS-AIP-Warehouse Mapping.....                                   | 193        |
| Warehouse Data Flow.....   | 193        |
| Warehouse Extract.....   | 194        |
| Warehouse Extract Process.....                                   | 196        |
| Final Warehouse File Layout (whse.txt).....                      | 197        |
| Final Warehouse Type File Layout.....                            | 199        |
| Transformation Process – Warehouse .....                         | 200        |
| Warehouse Load Process into AIP .....                            | 201        |
| Warehouse Types – Online Load Process.....                       | 203        |
| <b>7 RDF Integration .....</b>                                   | <b>205</b> |
| iprfdtdaltv.txt .....  | 205        |
| RDF Detail Alert – AIP Load Process .....                        | 207        |
| sr0_rfdtdmsk.txt.....  | 208        |

# Preface

The Oracle Retail Advanced Inventory Planning Implementation Guide describes post-installation tasks that need to be performed in order to bring Advance Inventory Planning online and ready for production use.

The Implementation Guide includes some or all of the following sections, depending upon the release:

- System configuration settings for the UNIX and AIP environments
- Interfaces and data mappings between AIP and other systems

## Audience

The Implementation Guide is intended for the AIP integrators and implementation staff, as well as the retailer's IT personnel.

The reader should have an in-depth understand the following concepts and applications in order to perform the processes describes in this document:

- UNIX system administration, shell scripts, and job scheduling
- Oracle Retail Integration Bus (RIB)
- Oracle Retail Predictive Application Server (RPAS)
- Oracle Retail Demand Forecasting (RDF)
- Oracle databases
- Performance constraints based on the retailer's infrastructure
- Technical architecture for AIP
- Retailer's hierarchical (SKU/Store/Day) data
- AIP batch processes

## Related Documents

For more information, see the following documents in the Oracle Retail Advanced Inventory Planning Release 12.1 documentation set:

- *Oracle Retail Advanced Inventory Planning Release Notes*
- *Oracle Retail Advanced Inventory Planning Installation Guide*
- *Oracle Retail Advanced Inventory Planning Operations Guide*
- *Oracle Retail Advanced Inventory Planning Administration Guide*
- *Oracle Retail Advanced Inventory Planning Online Help*
- *Oracle Retail Advanced Inventory Planning – Data Management Online User Guide*
- *Oracle Retail Advanced Inventory Planning – Order Management User Guide*
- *Oracle Retail Advanced Inventory Planning Data Model Volume 1 Oracle Database Data Model*
- *Oracle Retail Advanced Inventory Planning Data Model Volume 2 Measure Reference Guide*
- *Oracle Retail Advanced Inventory Planning – Store Replenishment Planning User Guide*
- *Oracle Retail Advanced Inventory Planning – Warehouse Replenishment Planning User Guide*

The following documentation may also be needed when implementing AIP:

- Oracle Retail Integration Bus (RIB) 11.1 documentation
- RETL 12.0.1 documentation
- Oracle Retail Predictive Application Server (RPAS) documentation

## Customer Support

- <https://metalink.oracle.com>

When contacting Customer Support, please provide:

- Product version and program/module name.
- Functional and technical description of the problem (include business impact).
- Detailed step-by-step instructions to recreate.
- Exact error message received.
- Screen shots of each step you take.

## Review Patch Documentation

For a base release (".0" release, such as 12.0), Oracle Retail strongly recommends that you read all patch documentation before you begin installation procedures. Patch documentation can contain critical information related to the base release, based on new information and code changes that have been made since the base release.

## Oracle Retail Documentation on the Oracle Technology Network

In addition to being packaged with each product release (on the base or patch level), all Oracle Retail documentation is available on the following Web site:

[http://www.oracle.com/technology/documentation/oracle\\_retail.html](http://www.oracle.com/technology/documentation/oracle_retail.html)

Documentation should be available on this Web site within a month after a product release. Note that documentation is always available with the packaged code on the release date.

## Conventions

**Navigate:** This is a navigate statement. It tells you how to get to the start of the procedure and ends with a screen shot of the starting point and the statement “the Window Name window opens.”

---

---

**Note:** This is a note. It is used to call out information that is important, but not necessarily part of the procedure.

---

---

This is a code sample  
It is used to display examples of code

---

---

## Overview

Once AIP has been installed, you need to configure the system environment variables, create integration files, and configure the system according to the retailer's specifications.

This guide provides information on

- Implementing the AIP solution.
- Customizing AIP for the retailer's environment and needs.
- Integrating AIP with merchandising, forecasting, and other external systems.

For information on compatibility and hardware requirements, refer to the *AIP Installation Guide*.

---

---

**Note:** AIP Java/Oracle, AIP on Oracle, and AIP online are often used interchangeably to refer to those parts of AIP that access the Oracle relational database. This includes the Data Management and Order Management GUI components and a host of UNIX shell scripts and PL/SQL modules.

---

---

---

---

## Pre-Implementation Considerations

When preparing to implement the Advanced Inventory Planning solution, you must closely explore the retailer's infrastructure, hierarchy data, and other factors that may require customizing the AIP environment through the use of configuration files and settings, custom scripts, and the RPAS Configuration Tool. Prepare your environment and analyze your retail and data needs thoroughly before implementing AIP.

The following list provides some of the issues that the implementation team may need to address prior to implementation:

### 1. Hierarchy Setup

- Identify the attributes used by the Product, Location and Time hierarchies, as well as their sources and update frequency.
- Define the dimensions within each of the Hierarchies and determine the default spreading settings.
- Define any Alternate Hierarchies and identify the relationship of the required Attributes that drive those Alternates.
- Define User Defined Hierarchies to be used by planners.

The hierarchy setup mentioned above may vary depending on the extent that the Configuration Tool will be used by the application.

### 2. Measure Settings

The following measure settings need to be addressed during implementation, which can vary depending on the extent that the Configuration Tool will be used by the application.

- Metric/Measure definitions, usage, interaction and calculations.
- Default Label to use when building measure labels
- Default Data Type
- Default NA Value
- Default Base Intersection
- Default Aggregation Method
- Default Spread Method
- Default Base State Read / Write Status at the base level
- Default Agg State Read / Write Status at aggregated levels

### 3. Setting Custom Wizards

Determine if any custom wizards are required that don't exist in the base application. The use or implementation of wizards can vary depending on the extent that the Configuration Tool will be used by the application.

4. Workbook Templates, Worksheets, Tabs, Formats

Workbooks can be created or refreshed through batch processing. By doing the processing in batch at night, the end users are spared from the wait time associated with each action. The Batch Processing section should outline when each of these operations will take place.

For these default auto workbook builds, the layout, formatting, hierarchies, wizard, tabs, worksheets must be defined.

Configuring the timing of data loads, refreshes, and purges/deletions of workbooks must be set.

5. Daily and Weekly Batch Processing and scheduling

Configure the system for the following defaults:

- Batch Processes
- Week-ending Processes
- Day Ending Processes
- Data Updates
- Restructures – Adds, Renames, Deletes
- New Year Setup- 53 weeks
- Data Aging/Purging
- Administrative Processes
- Backups

6. Sizing Estimates/Hardware Requirements

A sizing estimate spreadsheet and hardware requirements should be supplied to the client. These factors are dependant on the number of domains, intersection points, number of workbooks, purge and delete strategy, planning horizon, retention of data, etc.

7. Security Access and Viewing

- User Setup/Security

To define Workbook Template Security, the system administrator will grant individual users, or user groups, access to specific workbook templates. Granting access to workbook templates provides users the ability to create, modify, save, and commit workbooks for the assigned workbook templates. Users will typically be assigned to “groups” based on their user application (or solution) role. Users in the same group can be given access to workbook templates that belong to that group alone. Users can be assigned to more than one “group” and granted workbook template access without belonging to the user group that typically uses a specific workbook template. Workbook access is either denied, read only, or full access. Read only access will allow a user to create a workbook for the template, but the user will not be able to edit any values or commit the workbook. The read only workbook can be refreshed.

---

When users save a workbook, they assign one of three access permissions to the workbook:

- World – Allow any user to open and edit the workbook.
- Group – Allow only those users in their same group to open and edit the workbooks.
- User – Allow no other users to open and edit the workbook.

---

**Note:** A user must have access to the workbook template in order to access the workbook, even if the workbook has world access rights.

---

▪ **Workbook Limits**

Another aspect of workbook security is the ability to set limits for the number of workbooks that a user can have saved at any given time. Limits can be set at the following levels:

- User per template
- User Group per template
- Globally per template for all users

The limits are evaluated in the above order, which means that a limit defined at user-template overrides any values defined at group-template or global-template levels. If the above limits are not defined, the default value is one billion. The limits are checked when a user begins the workbook build process. If the user's limit has been reached, an error message appears that informs the user that the workbook build process cannot be completed because the user has reached their limit. The message also informs the user what that limit is. The wizard process then terminates.

**8. Data Management Automation**

Creation of certain logical constructs in Data Management may be set automatically depending on the setting of certain parameters.

Examine the system parameter configurations and determine which pieces of automation will be turned on. Map out each supplier's "Ship-to" value and each warehouse's "Warehouse Type" that will be needed to effectively automate the supply chain setup for those processes that are enabled.

---

**Note:** Keep in mind that the "Warehouse Type" helps define Order Group destinations, Delivery Group destinations, and the default ordering pack size for a SKU into a store and warehouse.

---

**9. Reconciliation**

The reconciliation period is set to a day if the method is Reconciliation day-on-day and is set to a review period at source if the method is Reconciliation-over-time. Therefore, it has to be determined which reconciliation method will be selected at SKU level.

You must set a flag to have a SKU reconciled in a constrained scenario.

**10. Replenishment Methods**

Define the replenishment methods to be used. Rule out replenishment methods that are not applicable.

**11. Perishables functionality**

Spoilage threshold is calculated using the Acceptable Loss parameter. Acceptable loss is a user-managed parameter in SRP, defined either at the class/store format level or the SKU/store/day level.

Users have the ability to determine when to use expected spoilage via a 'Store use inventory aging flag'. Constraints on the application of inventory aging are as follows

- a. A global limit (in number of days) on or inside which an item with product life can be considered in the expected spoilage calculation.
- b. An expected write-off's user maintained measure.

The first constraint is used as a high limit in number of days for a product life and is called 'Store Inventory Aging Limit'. Product life as entered by a user does not have a limit. The effectiveness of product life needs to be controlled by a User. Therefore a global limit respective to the product life is necessary and configurable. The second constraint refers to the fact that aging is a calculated number, not an actual number. The user may have an actual number of spoilage that is to be used. A measure (expected write-off's) can be entered by the user and if entered will override any spoilage calculation and be used as the amount to spoil on the given day.

To summarize the user input for expected spoilage:

- The product life of the inventory at the point of receipt into the final selling destination. (Sku/Str/Day)
- The "Store use inventory aging flag" (Sku)
- The global limit for using inventory aging (Scalar)
- Expected write-off's (amount to spoil). (Sku/Str/Day)

**12. Shelf capacity**

If the Shelf Capacity flag is set to "True", then shelf capacity will be considered when setting boundaries.

**13. Substitution and value added functionality**

The linked product flag is only used for user review purposes in AIP and indicates whether there is a value added/pre-priced commodity or banded item association with that particular SKU. If there is a value added/pre-priced association, the linked product flag is only True between the promotional start and end dates. This flag will be set within RMS.

Also a Substitution Flag must be set at the SKU level within Data Management, which sets that a SKU is substitutable across Demand Group.

**14. User Specified Allocations**

You must set the number of days of history required for using USA Indexed.

**15. Alerts**

Set the days that an alert will be run.

**16. Store Reconciliation Matrix configuration**

The number of store priorities is configurable; therefore, the Shortage and Stockless Surplus Priority Matrices may grow or shrink. However no screens or workbooks are provided to view and maintain the configuration.

The priority of each boundary, for each store priority, will depend on the number of store priorities defined. The order in which each boundary is met is configurable however no screens or workbooks are provided to view and maintain the configuration.

**17. Network Throughput settings**

The WRP Network Threshold Maintenance workbook is used to maintain network alert parameters. The WRP Network Threshold Maintenance workbook is available at the global and local domain levels. All measures should reflect the value in the domain during load and refresh times, and all editable measures should be committed to the domain unless otherwise stated.

## System Configuration

### Setting Environment Variables

After AIP is installed, you must define the environment variables for the domain paths, integration directory paths, message logging levels, etc. These variables define the environment in which batch scripts are run. These settings do not affect the way in which the business uses AIP to replenish the supply-chain.

The scripts run as part of the nightly batch on both of the AIP platforms, RPAS and Oracle. Both platforms have defined environment variables for configuration.

### Configuring AIP RPAS Environment Variables

The following aspects of the RPAS-side batch must be configured so that the `aip_batch.sh` and each batch step script can be run from the command line or from a job scheduler.

#### Setting RPAS Position Level Security

The position level security for RPAS needs to be modified. Position Level Security allows access control for dimensions on a position-by-position basis. Refer to the RPAS Administration for detail information this feature. To specify the security dimension for a hierarchy, use the RPAS Configuration Tools or `hierarchyMgr` utility. Refer to the *RPAS Configuration Tools User Guide* for more information.

#### `aip_env_rpas.sh`

The variables displayed in the following table need to be defined properly within `aip_env_rpas.sh`.

It is important to note that the values of the environment variables can be variables themselves depending on the business needs. Such variables may add flexibility for environment maintenance, patch testing, etc. and are used at the discretion of the business.

For example:

If `aip_env_rpas.sh` contains

```
RPAS_INTEGRATION_HOME= "${TEST_RPAS_INTEGRATION_HOME}"
```

`TEST_RPAS_INTEGRATION_HOME` is a client specific environment variable whose value is the correct path to the root integration directory. This and all other such variables must also be defined in order to run the batch.

Finally, the variables below corresponding to directory paths must not contain white space. For example, `AIPDOMAIN` may be defined as `"/files1/aip/AIP1"` but may not be defined as `"/files1/aip/AIP RPAS Domain"`.

| Environment Variable   | Description   |
|------------------------|---|
| <code>AIPDOMAIN</code> | Fully qualified path of the AIP RPAS global domain. The default value ( <code>TEST_AIPDOMAIN</code> ) provided at the time of installation is a variable which must also be defined apart of <code>aip_env_rpas.sh</code> if it is to be retained as the value. |

| Environment Variable  | Description   |
|-----------------------|---|
| RPAS_INTEGRATION_HOME | Fully qualified path of a readable/writeable directory that serves mainly as a base for other path definitions later in <code>aip_env_rpas.sh</code> . Commonly set equal to <code>AIPDOMAIN</code> . The default value ( <code>TEST_RPAS_INTEGRATION_HOME</code> ) provided at the time of installation is a variable which must also be defined apart of <code>aip_env_rpas.sh</code> if it is to be retained as the value. |
| BSA_TEMP_DIR          | Fully qualified path of readable/writeable directory where scripts may store temporary files. Valid definition of this variable is required by the BSA common scripts.<br><b>Note:</b> THIS SHOULD NOT BE SET TO <code>/tmp</code> . Failures may occur due to insufficient temporary workspace.  |
| BSA_LOG_LEVEL         | Script logging threshold severity. Only log entries at this or higher severity level will be written to the script logs. Must be one of { <code>PROFILE</code>   <code>DEBUG</code>   <code>INFORMATION</code>   <code>WARNING</code>   <code>ERROR</code> }. Valid definition of this variable is required by the BSA common scripts.  |
| BSA_MAX_PARALLEL      | Script parallel process fan-out maximum. The number of processes that any given process (script instance) may spawn. Valid definition of this variable is required by the BSA common scripts.   |
| BSA_LOG_HOME          | Fully qualified path of readable/writeable directory where script logs will be rooted. Script logs are written into a hierarchy that parallels the script call tree, rooted in a date stamped directory located in this specified directory. Valid definition of this variable is required by the BSA common scripts.   |
| BSA_LOG_TYPE          | Integer parameter that specifies the type of script log files to be written. Must equal one of { <code>0</code>   <code>1</code>   <code>2</code>   <code>3</code> }. These values are defined as follows:<br>0 = No logging<br>1 = Text ".log" files;<br>2 = XML structured ".xml" file;<br>3 = Text and XML log files.<br>Valid definition of this variable is required by the BSA common scripts.                          |
| BSA_CONFIG_DIR        | Fully qualified path to directory that contains the BSA configuration files <code>bsa_cred.config</code> and <code>bsa_fetch_files.config</code> . Valid definition of this variable is required by the BSA common scripts.   |
| BSA_ARCHIVE_DIR       | Fully qualified path to directory to which BSA file transfer operations will archive files. Valid definition of this variable is required by the BSA common scripts.  |
| RPAS_LOG_LEVEL        | RPAS binary logging threshold severity. Only log entries at this or higher severity level will be written to the script logs from binaries that accept a <code>-loglevel</code> argument. Must be one of { <code>PROFILE</code>   <code>DEBUG</code>   <code>INFORMATION</code>   <code>WARNING</code>   <code>ERROR</code> }.  |

| Environment Variable       | Description  |
|----------------------------|--|
| ONL_OUTBOUND_DIR           | The AIP Online data file output directory. This must match the ONL_OUTBOUND_DIR defined in the aip_env_online.sh file, which may reside in a different server. |
| RAW_RMS_DATA_DIR           | Fully qualified path to directory that contains untransformed RMS output data.   |
| RMS_SCHEMA_DIR             | Fully qualified path to directory that contains RETL schema files corresponding to the untransformed RMS output data.  |
| AIP_SCHEMA_DIR             | Fully qualified path to directory that contains RETL schema files depicting the transformed RMS output data.   |
| RPAS_PAGE_SPLIT_PERCENTAGE | This variable is used to optimize AIP performance. Do not alter this setting without consulting AIP Technical Management.                                      |
| ORACLE_AIP_PERISHABLE_ON   | This UNIX variable is set to <b>yes</b> (ORACLE_AIP_PERISHABLE_ON=yes) when AIP is replenishing perishable products. This setting is case sensitive.           |

### RPAS\_TODAY

This value defines 'TODAY' for the AIP RPAS environment. It is used to ensure that the replenishment batch can be run for a single calendar day, independent of the actual server date. During a normal production run of the batch, this value should be set by the VDATE (virtual date) value exported from AIP Online. This variable can be set for ad hoc procedures, but it should be cleared after the procedure has completed as **this may have an adverse affect on the user workbooks.**

## Configuring AIP Online Environment Variables

### aip\_env\_online.sh

The aip\_env\_online.sh variables in the following table need to be configured for your environment. This information can also be found in the README file provided with the online integration files.

It is important to note that the values of the environment variables can be variables themselves depending on the clients needs. Such variables may add flexibility for environment maintenance, patch testing, etc. and are used at the discretion of the business.

| Environment Variable | Description  |
|----------------------|--|
| INTEGRATION_HOME     | Fully qualified path to the interface home directory. The default value references TEST_ONL_INTEGRATION_HOME, an externally defined variable. However, the client may assign a hardcoded path to this value at their discretion. |

| Environment Variable  | Description   |
|-----------------------|---|
| ONL_OUTBOUND_DIR      | The default is \${INTEGRATION_HOME}/outbound. This variable defines the directory location where the cron_export.sh script will put the files containing the data exported from AIP Online. If bypassing the RIB the tsf_po_export.sh script will also write the exported transfers and purchase order files to this directory. This must match the ONL_OUTBOUND_DIR defined in aip_env_rpas.sh script, which may reside on a different server. |
| ONL_INBOUND_DIR       | The default is \${INTEGRATION_HOME}/inbound. This variable defines the directory location where cron_import.sh expects the inbound files from RPAS to be sourced from.  |
| BSA_ARCHIVE_DIRECTORY | The default is \${INTEGRATION_HOME}/archive. This variable defines the directory location where cron_import.sh script will send the input data files for archiving.   |
| BSA_LOG_HOME          | Fully qualified path of readable/writeable directory where script logs will be rooted. Script logs are written into a hierarchy that parallels the script call tree, rooted in a date stamped directory located in this specified directory. Valid definition of this variable is required by the BSA common scripts. This variable is initially set to \${INTEGRATION_HOME}/logs.  |
| BSA_CONFIG_DIR        | Fully qualified path to directory that contains the BSA configuration files bsa_cred.config and bsa_fetch_files.config. Valid definition of this variable is required by the BSA common scripts. This variable is initially set to \${INTEGRATION_HOME}/config.   |
| BSA_TEMP_DIR          | Fully qualified path of readable/writeable directory where scripts may store temporary files. Valid definition of this variable is required by the BSA common scripts.  |
| BSA_LOG_LEVEL         | Logging severity threshold for batch scripts. Only log entries at this or higher severity level will be written to the script logs from procedures that accept the -loglevel argument. Listed in increasing order of severity, one of the following levels must be selected { PROFILE   DEBUG   INFORMATION   WARNING   ERROR }.  |
| BSA_LOG_TYPE          | Integer parameter that specifies the type of script log files to be written. Must equal one of { 0   1   2   3 }. These values are defined as follows:<br>0 = No logging<br>1 = Text ".log" files<br>2 = XML structured ".xml" file<br>3 = Text and XML log files<br>Valid definition of this variable is required by the BSA common scripts.   |
| BSA_MAX_PARALLEL      | Script parallel process fan-out maximum. The number of processes that any given process (script instance) may spawn. Valid definition of this variable is required by the BSA common scripts.   |

| Environment Variable     | Description  |
|--------------------------|--|
| DEFAULT_BSA_SQL_CRED_APP | The default is DATABASE. It is used by bsa_sql.sh script to perform a lookup from the bsa_cred.config file to connect to AIP Online database.  |
| RETL_MAX_HEAP_SIZE       | The default value is 500M. Raise this limit to improve performance on production systems.  |
| RETL_CONFIG_FILE         | File name containing database connection information. This variable is used by RETL scripts. The default value references TEST_RETL_CONFIG_FILE, an externally defined variable. However, the client may assign a hardcoded value at their discretion. In either case, the variable should ultimately point to the fully-qualified path of a RETL configuration file. An example config.xml file is included with AIP. |
| AIPDOMAIN                | Fully qualified path of the AIP RPAS global domain. The default value references TEST_AIPDOMAIN, an externally defined variable. However, the client may assign a hardcoded path to this value at their discretion.  |
| HAVE_WIP                 | Indicates if WIP is enabled to export and import data. The default value is set to false. WIP will not be implemented for AIP 12.1.  |
| ONL_SCHEMA_OWNER         | This variable sets the database schema owner. It is used by the store_source extract. For example, if you are running AIP online extracts as "aipdev121user" but the schema owner is "aipdev121", then regardless of the running database user, ONL_SCHEMA_OWNER should be set to "aipdev121".   |
| NLS_LANG                 | This variable defines the character encoding of the RETL import files.   |
| ONL_VDATE_DIR            | The directory location of the vdate.int file.  |

---

**Note:** RETL runs within a Java Virtual Machine (JVM). Errors concerning the JVM stack size may be encountered when executing AIP Oracle batch processes. This value represents the amount of memory allocated to a single JVM thread and is defaulted by the JVM. The user may override it by setting the RETL\_THREAD\_STACK\_SIZE variable in aip\_env\_online.sh or in their user profile.

**Example:**

```
export RETL_THREAD_STACK_SIZE=200000
```

It can also be set in rfx.conf, the configuration file for RETL itself. However, modifying rfx.conf will affect all users accessing the RETL installation, not just those using AIP. When manipulating the JVM stack size, extreme care should be taken to prevent RETL from using an inordinate amount of the available physical memory.

---

## RETL

Once RETL is installed, the environment variables displayed in the table below should be defined. Verify that these environment variables are properly defined.

| Variable    | Description                   |
|-------------|-------------------------------|
| RFX_HOME    | The RETL home directory.      |
| RFX_TMP     | The RETL temp directory.      |
| ORACLE_HOME | Oracle installation directory |

## User Path

When invoking online shell scripts, the user's PATH must include the following directories:

- \$INTEGRATION\_HOME
- \$INTEGRATION\_HOME/bsa
- \$INTEGRATION\_HOME/config
- \$INTEGRATION\_HOME/scripts
- \$RFX\_HOME
- \$RFX\_TMP
- \$ORACLE\_HOME

For some variables defined in `aip_env_online.sh`, the value is defaulted to another externally-defined variable. This approach provides flexibility in that multiple users can use a single `aip_env_online.sh` but point to different test directories, domains, or RETL configuration files. It is important to note that the test directories listed in the externally defined variables must also be in the user's PATH. Please refer to the *AIP Installation Guide* for further details on defining variables in the `.profile` file.

### Example:

If `aip_env_online.sh` contains

```
INTEGRATION_HOME= "${TEST_ONL_INTEGRATION_HOME}"
```

`TEST_ONL_INTEGRATION_HOME` is an environment variable whose value is the correct path to the root integration directory. The path that is defined for `TEST_ONL_INTEGRATION_HOME` must be in the user's PATH.

## Configuring bsa\_cred.config Server Access Credentials

The bsa\_cred.config file contains single-line records that specify computer and database server access credentials and related connection information, in a generic form that is used by batch scripts that require machine and database access. This information is located in bsa\_cred.config file with the intention that the file can be access-controlled so that only the process(es) which runs the RPAS and ONLINE AIP batch can read its contents.

---

**Note:** This file is used by both the RPAS and ONLINE batch scripts. If this file is not available in the ONLINE environment because it resides on a separate server than RPAS, it should be copied to the ONLINE database server. Instructions are provided in the AIP Online Configurations section below.

---

The following table provides a description of the bsa\_cred.config fields, which are space-delimited.

| Field       | Description   |
|-------------|---|
| Application | Unique key indicating the application for which the record exists. This name is used as a key by dependent batch scripts.   |
| Server      | Computer or database server name or "NA" if not applicable for the given application.   |
| User        | User name credential or "NA" if not required for the given application.   |
| Password    | Password credential or "NA" if not required for the given application. Because passwords may contain spaces, passwords must be encoded with enclosing quotes (" "). |

Records for the following keys must be present in the bsa\_cred.config file:

- BATCH
- AIP-ONLINE
- AIP-RPAS
- DATABASE

An example of a complete bsa\_cred.config file appears below.

```
BATCH      mspdev03      NA      "NA"
AIP-ONLINE mspdev03      onlineusr  "onlinepw"
AIP-RPAS   mspdev03      rpassusr  "rpasspw"
DATABASE   devrkt11      dbuser    "dbpw"
```

## Using the Scheduler to Run AIP Batch Processes

This topic provides information about using the Scheduler to run the AIP on RPAS and AIP on Oracle batch processes. The batch processes span both platforms and depend on inputs from the merchandising and forecasting systems.

There are 7 control scripts that can be used to execute AIP batch:

- vdate.sh
- aip\_t\_master.ksh
- cron\_export.sh
- aip\_batch.sh
- cron\_import.sh
- cron\_release\_store\_order.sh
- cron\_release\_non\_contents\_order.sh

If the Oracle Retail Integration Bus (RIB) will not be used to communicate the purchase orders and transfers released by the overnight batch, the following script should also be used:

- tsf\_po\_export.sh

Many of these control scripts accept or require parameters to indicate the specific logic to execute. Therefore you will notice that the control script may be called multiple times with different parameters. Where restart/recovery at the control script level is not sufficiently granular the sub-scripts, called by the top level control script, can be scheduled instead. However the scheduled tasks must carefully consider all tasks executed by the control script, including common environment control.

The following diagram outlines the AIP script/step execution and dependencies. Note that the shaded boxes represent the executable steps of aip\_batch.sh. The aip\_batch.sh step name, in bold, can be passed into the script as a parameter or the subscript, listed below the step name, can be scheduled.

---

---

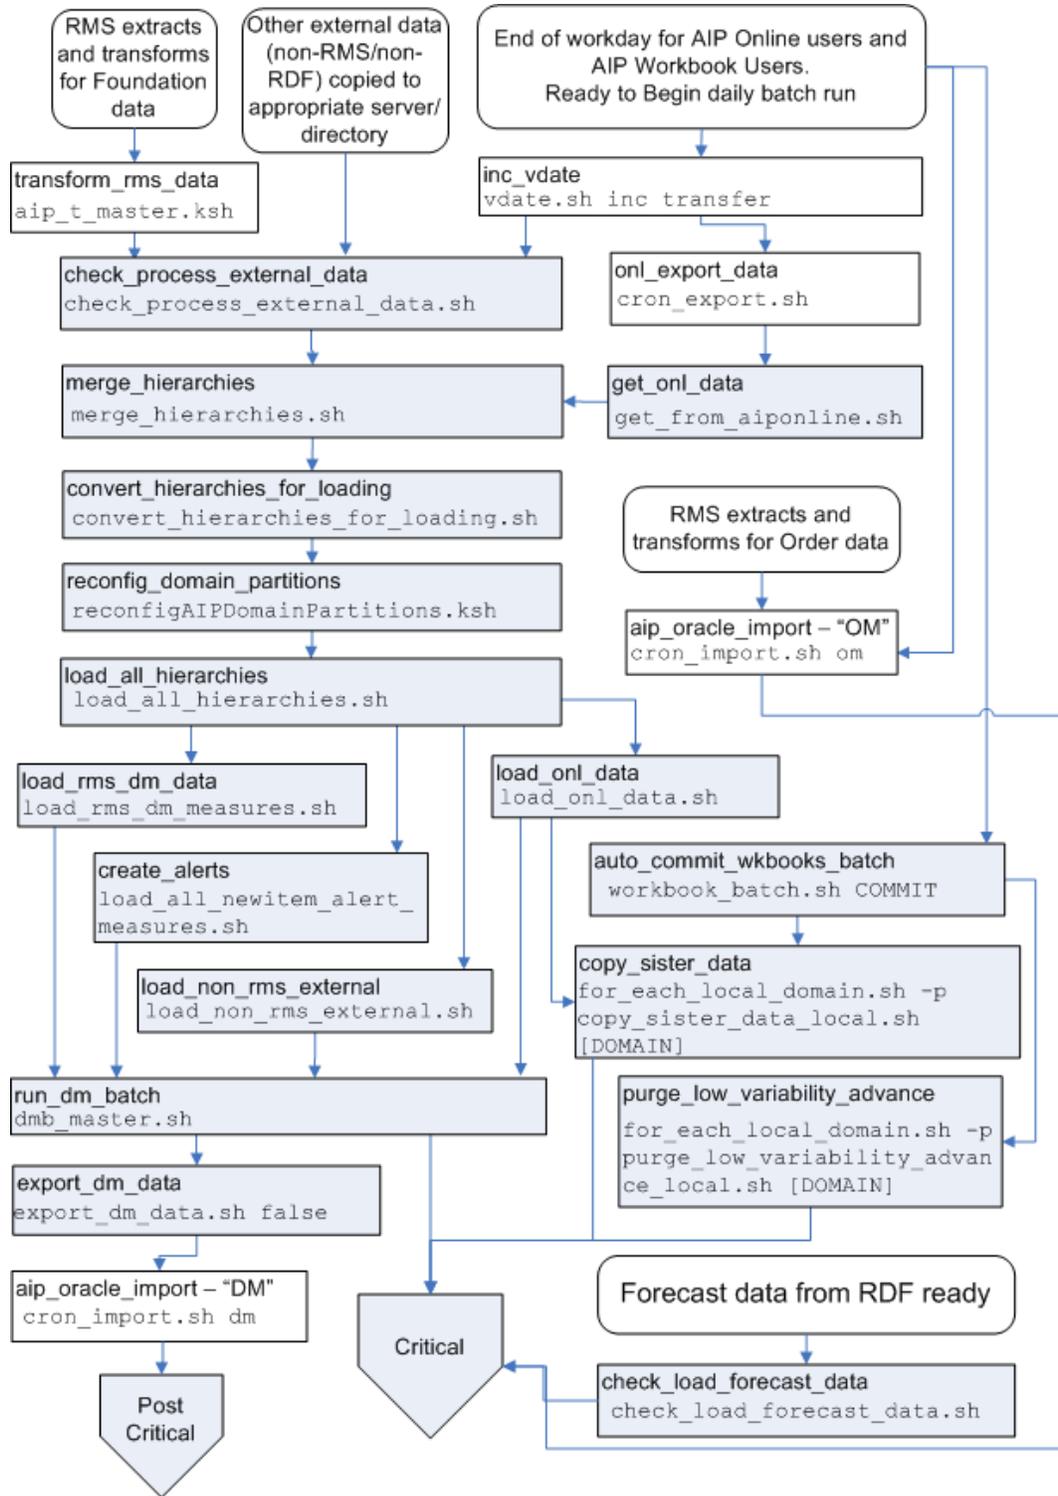

**Note:** AIP only moves data between platforms internally. It does not retrieve files which were generated external to AIP. All data that is input to AIP must be transferred via FTP or copied to the appropriate inbound directory on the AIP server.

---

---

### Pre-Critical Path Tasks

The diagram and table below provide information about the pre-critical path steps that need to be performed.

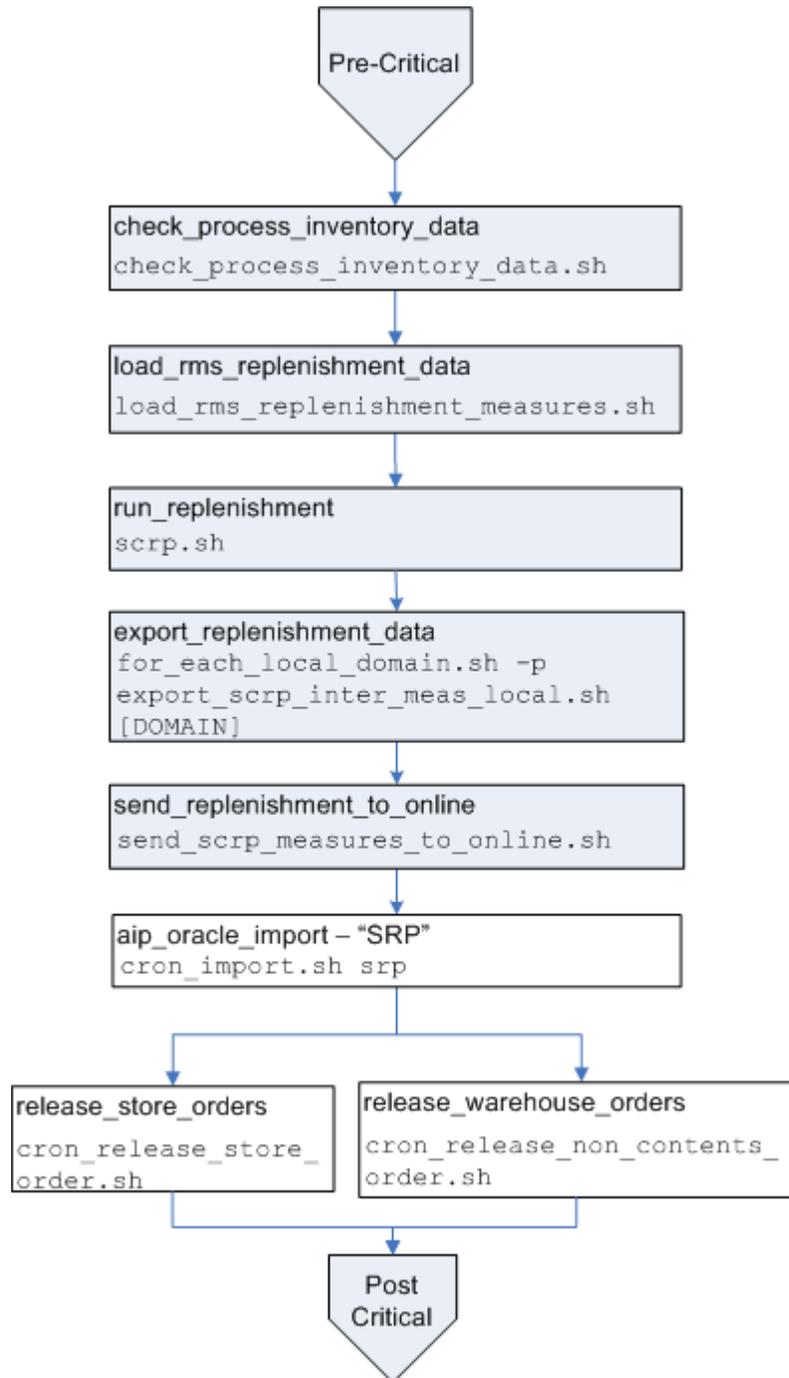

**Pre-Critical Tasks Process Flow Diagram**

The table below provides information about the script or action performed in the Pre-Critical Tasks process flow diagram.

| Script or Action  | Parameter(s)                    | Platform Location |
|---|---------------------------------|-------------------|
| Bring down the online application server and domain daemon to lockout users                                 |                                 | Oracle, RPAS      |
| vdate.sh  | inc transfer                    | Oracle            |
| cron_export.sh  |                                 | Oracle            |
| Copy/FTP RMS data files to \${RAW_RMS_DATA_DIR}. Perform uncompress and un-tar operations.                  |                                 | RPAS              |
| aip_t_master.ksh  |                                 | RPAS              |
| Copy/FTP all external/custom data files to \${AIPRMS}. Perform uncompress and un-tar operations.            |                                 | RPAS              |
| aip_batch.sh  | check_process_external_data     | RPAS              |
| aip_batch.sh  | get_onl_data                    | RPAS              |
| aip_batch.sh  | merge_hierarchies               | RPAS              |
| aip_batch.sh  | convert_hierarchies_for_loading | RPAS              |
| aip_batch.sh  | reconfig_domain_partitions      | RPAS              |
| aip_batch.sh  | load_all_hierarchies            | RPAS              |
| aip_batch.sh  | load_onl_data                   | RPAS              |
| aip_batch.sh  | load_rms_dm_data                | RPAS              |
| aip_batch.sh  | create_alerts                   | RPAS              |
| aip_batch.sh  | load_non_rms_external           | RPAS              |
| aip_batch.sh  | auto_commit_wkbooks_batch       | RPAS              |
| aip_batch.sh  | run_dm_batch                    | RPAS              |
| aip_batch.sh  | export_dm_data                  | RPAS              |
| cron_import.sh  | dm                              | Oracle            |
| Copy or FTP the RDF forecast files to \${INTERFACE_FORECAST_DIR}. Perform uncompress and un-tar operations. |                                 | RPAS              |
| aip_batch.sh  | check_load_forecast_data        | RPAS              |
| aip_batch.sh  | purge_low_variability_advance   | RPAS              |
| aip_batch.sh  | copy_sister_data                | RPAS              |
| Copy/FTP RMS and custom OM data files to \${ONL_INBOUND_DIR}. Perform uncompress and un-tar operations.     |                                 | Oracle            |
| cron_import.sh  | om                              | Oracle            |

## Critical Path Tasks

The diagram below displays the Critical Path Tasks process flow diagram.

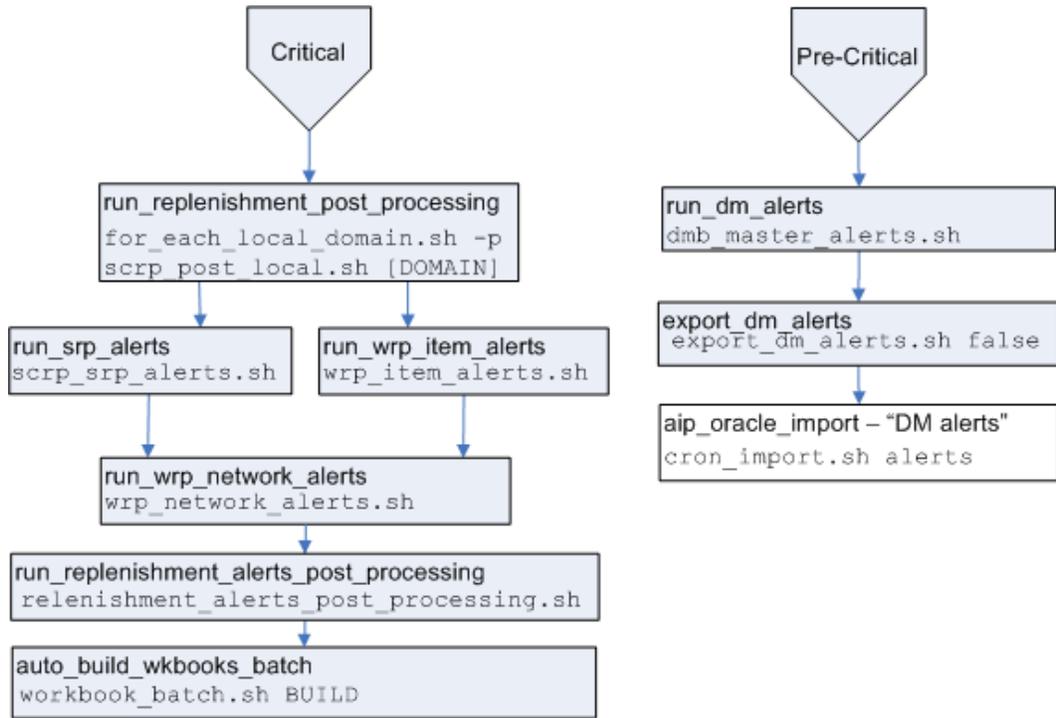

**Critical Path Tasks Process Flow Diagram**

The table below provides information about the critical path steps that need to be performed.

| <b>Script or Action</b>  | <b>Parameter(s)</b>          | <b>Platform Location</b> |
|--|------------------------------|--------------------------|
| Copy/FTP the RMS inventory position files to \${AIPRMS}. Perform uncompress and un-tar operations.           |                              | RPAS                     |
| aip_batch.sh   | check_process_inventory_data | RPAS                     |
| aip_batch.sh   | load_rms_replenishment_data  | RPAS                     |
| aip_batch.sh   | run_replenishment            | RPAS                     |
| aip_batch.sh   | export_replenishment_data    | RPAS                     |
| aip_batch.sh   | send_replenishment_to_online | RPAS                     |
| cron_import.sh   | srp                          | Oracle                   |
| cron_import.sh   | wip                          | Oracle                   |
| cron_release_store_order.sh  |                              | Oracle                   |
| cron_release_non_contents_orders.sh  |                              | Oracle                   |
| tsf_po_export.sh (for RIB bypass)  |                              | Oracle                   |
| When bypassing the RIB, copy/FTP the AIP purchase order and transfer files from \${ONL_OUTBOUND_DIR} to RMS. |                              | Oracle                   |

## Post Critical Path Tasks

The diagram below displays the Post Critical Path Tasks process flow diagram.

**Post Critical Path Tasks Process Flow Diagram**

The table below provides information about the post-critical path steps that need to be performed.

| Script or Action                           | Parameter(s)                            | Platform Location |
|--|---|-------------------|
| aip_batch.sh                               | run_replenishment_post_processing       | RPAS              |
| aip_batch.sh                               | run_dm_alerts                           | RPAS              |
| aip_batch.sh                               | export_dm_alerts                        | RPAS              |
| cron_import.sh                             | alerts                                  | Oracle            |
| Restart the AIP Online application server. |   | Oracle            |
| aip_batch.sh                               | run_srp_alerts                          | RPAS              |
| aip_batch.sh                               | run_wrp_item_alerts                     | RPAS              |
| aip_batch.sh                               | run_wrp_network_alerts                  | RPAS              |
| aip_batch.sh                               | run_replenishment_alert_post_processing | RPAS              |
| aip_batch.sh                               | auto_build_wkbooks_batch                | RPAS              |
| Start the AIP RPAS domain daemon.          |   | RPAS              |

---

---

## AIP Online Configurations

AIP Online consists of three different but equally important environments: a UNIX-based platform for executing RETL scripts and batch shell scripts; an Oracle database; and an application server for hosting the web-based Java graphical user interface (GUI). Each environment requires specific values, properties, and files to be configured in order to fully implement the AIP Online portion of the solution.

### AIP Online UNIX Environment

The batch scripts which execute on the data stored in the Oracle database run on a UNIX-based platform. RETL must be installed and it must be able to access the AIP Oracle database. In order to execute the batch scripts `config.xml`, the integration directories, and any files shared by the Online and RPAS must be setup and operational.

#### `config.xml`

The RETL interface process, run from a UNIX-based platform, is designed to be fully automated once configured. In addition to the environment variables described above `config.xml` is required when invoking the RETL scripts. This file should be located in the root integration directory on the UNIX server in which the AIP Online application is installed.

This configuration file contains the database connection information required by RETL for performing import and export operations. Refer to the RETL documentation for detailed descriptions of element definitions. There are two operator sections that need to be completed, one for 'oraread' and one for 'orawrite'. The 'oraread' section defines the properties required for all export operations on the database and the 'orawrite' section defines these for all import operations. Though both contain similar attributes, it's imperative that each section is defined as needed for the specific Oracle database installation. This information is also dependent on the requirement that all databases can be connected to via a properly defined `tnsnames` file and reachable by SQLPlus.

#### Example `config.xml` file:

```
<CONFIG>
  <DEFAULTS operator="oraread">
    <PROPERTY name="arraysize" value="5000" />

## Integration Directories

The following directories must be created by the system administrator. They are required and will cause errors if absent:

- \$INTEGRATION\_HOME/inbound
- \$INTEGRATION\_HOME/archive

## Shared Files

When the AIP RPAS module is not installed on the same server as the AIP ONLINE module, the shared credential and verification files must be present in both locations.

The following table lists the files and the appropriate location on the UNIX server. Copy the files from the AIP RPAS server location to the AIP ONLINE server. Where the destination directory does not exist, one should be made. All server locations are written in reference to the `aip_env_online.sh` environment variables.

| File Name                                    | Location                                 |
|--|--|
| <code>aip_common.sh</code>                   | <code>\$INTEGRATION_HOME</code>          |
| <code>fetch_files.sh</code>                  | <code>\$INTEGRATION_HOME/scripts/</code> |
| <code>bsa_cred.config</code>                 | <code>\$INTEGRATION_HOME/config</code>   |
| <code>bsa_fetch_files.config</code>          | <code>\$INTEGRATION_HOME/config</code>   |
| <code>bsa_archive.sh</code>                  | <code>\$INTEGRATION_HOME/bsa</code>      |
| <code>bsa_check_for_required_files.sh</code> | <code>\$INTEGRATION_HOME/bsa</code>      |
| <code>bsa_common.sh</code>                   | <code>\$INTEGRATION_HOME/bsa</code>      |
| <code>bsa_cred.sh</code>                     | <code>\$INTEGRATION_HOME/bsa</code>      |
| <code>bsa_env.sh</code>                      | <code>\$INTEGRATION_HOME/bsa</code>      |
| <code>bsa_fetch_files.sh</code>              | <code>\$INTEGRATION_HOME/bsa</code>      |
| <code>bsa_file_transfer.sh</code>            | <code>\$INTEGRATION_HOME/bsa</code>      |
| <code>bsa_logger.sh</code>                   | <code>\$INTEGRATION_HOME/bsa</code>      |
| <code>bsa_para.sh</code>                     | <code>\$INTEGRATION_HOME/bsa</code>      |
| <code>bsa_sort.sh</code>                     | <code>\$INTEGRATION_HOME/bsa</code>      |
| <code>bsa_sql.sh</code>                      | <code>\$INTEGRATION_HOME/bsa</code>      |
| <code>bsa_verify.sh</code>                   | <code>\$INTEGRATION_HOME/bsa</code>      |

## Importing Configuration Files

The files imported into AIP Online are bundled (in a \*.tar file) together into logical groupings based on dependencies and availability within the batch window. Each RETL import file has one, and only one, corresponding script that executes the loading of the file into the database. The execution of all RETL import scripts is controlled by a set of configuration files that list the load scripts to be run, and the order in which they will run. Each configuration file corresponds to one \*.tar file.

- The configuration files can be modified to prevent execution of load scripts for files which will never be present (e.g. they are optional files for functionality that will not be used by the business). For example 'Sister Stores' may not be available in the merchandising system to provide to AIP, or purged order numbers may not be available for po number recycling. The line containing the path to the 'in.sh' load script should be deleted or commented out.
- The configuration files are a command line argument passed to the parent script, process\_aiponline\_data.sh. A modified configuration file or a specially constructed configuration file can be passed to the parent script to aid the initial, first day import, restart/recovery, or special ad hoc processing.
- The parent script will execute all load files listed in the configuration file passed to it. A warning message will be logged when the load script is executed but the corresponding data file is not present.

The import configuration files are listed in the following table along with any potentially optional load scripts. Optional load scripts are those which are not critical to replenishment processing. They are related to functionality outside of replenishment or provide special information that can be used as an alternative to the standard processing. Settings in both AIP RPAS import/export configuration files and AIP Online import configuration files should reflect the file requirements consistently.

| Configuration File         | Optional Load Scripts   |
|----------------------------|---|
| import_hierarchy.config    |   |
| import_dm.config           | dm/banded_commodity/in.sh<br>dm/is_prepriced/in.sh<br>dm/direct_store_format_pack_size/in.sh<br>dm/direct_store_pack_size/in.sh<br>dm/sister_store/in.sh<br>dm/sister_wh/in.sh<br>dm/store_format_pack_size/in.sh<br>dm/store_pack_size/in.sh<br>dm/value_added_commodity/in.sh<br>dm/warehouse_promotional_dates/in.sh |
| import_dm_alerts.config    |   |
| import_store_source.config |   |
| import_wip.config          |   |
| import_om.config           | om/po_recycling/in.sh   |

## Export Configuration Files

The files exported from AIP Online are bundled (.tar) together into logical groupings based on dependency. Each RETL export file has one, and only one, corresponding script that executes the extraction of the file data from the database. The execution of all RETL extract scripts is controlled by a set of configuration files that list the export scripts to be run, and the order in which they will run.

- The configuration files can be modified to prevent execution of export scripts for files which will never be present (e.g. they are optional files for functionality that will not be used by the current client). For example, if “Sister Stores” are never imported then the copy date never needs to be extracted for AIP on RPAS.

---

**Note:** Files that are optional for import may not be optional for export. Some import files are optional because the data *can* be loaded. Alternatively the data can be entered in the DM online application. Regardless of how the data gets into the Oracle database, this data is required by AIP RPAS to run replenishment batch.

---

- The configuration files are a command line argument passed to the parent script, `process_aiponline_data.sh`. A modified configuration file or a specially constructed configuration file can be passed to the parent script to aid restart/recovery or special ad hoc processing.

The export configuration files are listed below.

- `export_hierarchy.config`
- `export_dm.config`
- `export_wip.config`
- `export_tsf_po.config`

## Oracle Database

The configurations performed in the Oracle database affect how the business uses AIP. Each setting will be used when performing some action of supply-chain setup—either automatically or manually—or order execution and maintenance.

## SYSTEM\_PARAMETERS

The following table contains the configuration parameters contained in the SYSTEM\_PARAMETERS database table, the default value assigned to the parameter, and a description about what the parameters controls. The default parameter values in the table need to be set according to your individual business needs.

| Configuration Parameter         | Default Value | Description   |
|---------------------------------|---------------|---|
| ON_SUPPLY_OFFSET                | 3             | The corporate on supply offset value is used to calculate on-supply dates based on on-sale dates imported from the merchandising system. On-supply dates will be set to: [on-sale date] - ON_SUPPLY_OFFSET.   |
| OFF_SUPPLY_OFFSET               | 3             | The corporate off supply offset value is used to calculate off-supply dates based on off-sale dates imported from the merchandising system. Off-supply dates will be set to: [off-sale date] - OFF_SUPPLY_OFFSET.   |
| SYSTEM_HIGH_DATE                | 99991231      | The default end date used for default batch assignments where no end date is specified. Date format is yyymmdd.   |
| ON_OFF_SUPPLY_OVERWRITE_IND     | N             | This value indicates whether to overwrite the on supply and off supply dates with on sale and off sale dates respectively. The parameter is applied anytime a SKU/Store in the imported file matches a SKU/Store record in the on_supply_off_supply table. When set to Y, the overwrite will occur anytime a match is found. If the value is set to N, the on supply and off supply date will only be overwritten when the previous on/off supply dates are in the past and future on sale/off sale dates are found in the import file, or when the on or off supply date is equal to the SYSTEM_HIGH_DATE. |
| VALID_SOURCE_VALIDATION_IND     | Y             | This value indicates whether to execute the validation to determine if a source is valid. A valid source is one that is currently acting as a destination with a split % against it or where all the SKU pack sizes for the SKU or demand group are pending de-ranged at the source warehouse. A supplier is always considered a valid source if the supplier supplies one or more pack sizes of the SKU.   |
| DLG_OG_VALIDATION_IND           | Y             | This parameter indicates whether the validation which checks if there is a delivery group and order group assigned for the given source, demand group, destination and effective date should be executed. This validation is performed when creating or changing a Time-balanced Order Source Split.  |
| AUTO_CREATION_OF_DELIVERY_GROUP | Y             | Indicates whether to automatically create delivery groups for a new supplier.   |

| Configuration Parameter         | Default Value | Description  |
|---------------------------------|---------------|--|
| AUTO_CREATION_OF_ORDER_GROUP    | Y             | Indicates whether to automatically create order groups for a new supplier.   |
| AUTO_RANGE_DEMAND_GROUP         | Y             | Indicates whether to automatically range new SKU pack sizes.   |
| COPY_SISTER_STORE               | Y             | Indicates whether to copy the sister store's supply chain parameters to the associated new store.  |
| COPY_SISTER_WAREHOUSE           | Y             | Indicates whether to copy the sister warehouses supply chain parameters to the associated new warehouse.   |
| AUTO_ASSIGN_ORDER_CYCLES        | Y             | Indicates whether to calculate a walking store lead time prior to the store opening. If no calculation is performed, the profile order cycle and any applicable exceptions will be used for producing a replenishment plan.  |
| AUTO_CREATION_OF_PROFILE        | Y             | Indicates whether to automatically create Direct Profiles for new suppliers.   |
| AUTO_ASSIGN_OF_SKUS_TO_PROFILES | Y             | Indicates whether to automatically assign the SKU of new SKU/supplier combos to profiles.  |
| SISTER_STORE_OFFSET_WEEKS       | 12            | Indicates the maximum number of weeks before store open that a sister store copy will take place.  |
| SISTER_WAREHOUSE_OFFSET_WEEKS   | 12            | Indicates the maximum number of weeks before warehouse open that a sister warehouse copy will take place.  |
| WALKING_LEAD_TIME_OFFSET        | 45            | Indicates the number of days before a store open date to begin calculating a walking lead time for that store.   |
| MAX_WALKING_LEAD_TIME           | 22            | Indicates the maximum lead time to use in calculating a walking lead time.   |
| SCHEDULE_EXCEPTION_OFFSET       | 9             | Indicates the number of days - 1 after store open that the normal store ordering schedule will take effect.<br><br>For example, if store open (SO) is a Friday and the default profile order cycle should take effect two Mondays after (10 days later), the value should be 9. This value is used when setting up the "Walking lead time" and when copying exceptions from the sister store. Sister store exceptions will be copied from SO + SCHEDULE_EXCEPTION_OFFSET + 1 onward when AUTO_ASSIGN_ORDER_CYCLES = 'Y'. |

| Configuration Parameter                  | Default Value | Description  |
|--|---------------|--|
| AUTO_RANGE_BY_SHIP_TO_ONLY               | N             | Indicates whether to automatically range new SKU packs only to those warehouses that match the supplier Ship To value. Otherwise, the SKU pack size will be ranged to all valid warehouse combinations.                  |
| DEFAULT_PALLET_SETTING_USE_PALLET_HEIGHT | Y             | Indicates whether to use pallet height in pallet settings for system generated delivery groups. This value is not used in the 12.1 release.  |
| DEFAULT_PALLET_SETTING_USE_PALLET_WEIGHT | Y             | Indicates whether to use pallet weight in pallet settings for system generated delivery groups. This value is not used in the 12.1 release. The value should be "N" until case weight is defined for the SKU-pack sizes. |
| DEFAULT_VEHICLE_FOOTPRINT                | 22            | Indicates the default vehicle footprint for system generated delivery groups.  |
| DEFAULT_VEHICLE_HEIGHT                   | 1             | Indicates the default vehicle height for system generated delivery groups.   |
| DEFAULT_VEHICLE_WEIGHT_LIMIT             | 99999         | Indicates the default vehicle weight limit for system generated delivery groups.   |
| DEFAULT_VEHICLE_MINIMUM_DROP             | 0             | Indicates the default vehicle minimum drop for system generated delivery groups.   |
| AUTO_ASSIGN_ORDER_MULTIPLES              | Y             | Indicates whether order multiples should be automatically assigned for new SKU/pack size combinations.   |
| AUTO_ASSIGN_PALLET_MULT                  | Y             | Indicates whether pallet multiples should be automatically assigned for new SKU/pack size combinations.  |
| AUTO_ASSIGN_CASE_WT                      | Y             | Indicates whether case weights should be automatically assigned for new SKU/pack size combinations. This should be set to "N" since Case Weight is not used in the 12.1 release.   |
| DEFAULT_CASE_WT                          | 1             | The default case weight used by the case weight automatic assignment process. This value must be between .1 and 9999.99, inclusive.  |
| AUTO_ASSIGN_STACKING_FLAG                | Y             | Indicates whether stacking flag should be automatically assigned for new SKU/pack size combinations. This value should be set to "N" since Case Weight is not used in the 12.1 release.                                  |

| Configuration Parameter            | Default Value | Description  |
|------------------------------------|---------------|--|
| DEFAULT_STACKING_FLAG              | 0             | The default stacking flag used by the stacking flag automatic assignment process. Valid values are as follows: <ul style="list-style-type: none"> <li>▪ 0 = Yes</li> <li>▪ 1 = Same</li> <li>▪ 2 = No</li> </ul> <b>Note:</b> Same implies that only item A can be stacked on top of item A.   |
| AUTO_ASSIGN_STORE_FORMAT_PACK_SIZE | Y             | Indicates whether to automatically assign a store format pack size for warehouse and supplier sources  |
| MIN_PLANNING_HORIZON               | 35            | This is the minimum number of planning days for all SKUs. The user may also specify a planning horizon per Class and/or SKU. When defined, the SKU horizon takes precedence over a Class horizon and a Class horizon takes precedence over the system parameter. However, if either value is less than the system parameter, then the minimum planning horizon system parameter is used. The maximum value of all planning horizons is calculated each batch cycle and used to determine the amount of data that is exported to AIP on RPAS.   |
| EXTENDED_PLANNING_HORIZON          | 7             | The order quantity planned for each receipt day (plan day) addresses need (demand) which will occur in the period between the receipt day and the next receipt day. For the last receipt day in the planning horizon the calculation period may be partially or entirely outside of the planning horizon (with the exception of the receipt day itself). In this case it is desirable to look beyond the planning horizon to find the next receipt day in order to calculate need for the last receipt day within the planning horizon. To accurately calculate the 'next' receipt day the supply chain information in AIP on the RPAS platform must complete and accurate. This parameter defines the number of additional days beyond the planning horizon (DEFAULT_PLANNING_HORIZON) for which data will be exported to AIP on the RPAS platform. <b>Note:</b> This parameter MUST match the value set in the "Days Beyond Planning Horizon" measure in the SRP Administration Implementation Parameters worksheet. |
| WIP_IND                            | N             | Indicates if the WIP subsystem is being used. WIP-related extracts will only be performed if this value is Y.  |

| Configuration Parameter  | Default Value | Description   |
|--------------------------|---------------|---|
| VDATE                    | 19991231      | Used to maintain the same date throughout the batch run. The vdate.sh parameters <code>get</code> , <code>set</code> , and <code>inc</code> are used to retrieve, set and increment the value. The date format is YYYYMMDD.   |
| DMG_ASSIGNMENT_METHOD    | 1             | The value 1 indicates that new pack sizes associated with an existing SKU will be assigned to the existing SKUs demand group. The value 2 indicates that each new SKU/pack size will be assigned to a unique demand group.<br><br>If the INVENTORY_TRACKING_LEVEL system parameter is equal to EACHES this parameter should be set to 1. Otherwise, it can be set to either 1 or 2.   |
| DEFAULT_DMG_TYPE         | 0             | The demand group type inserted for all automatically created demand groups. Valid values are 0 (cases), 1 (merchandising unit).   |
| DEFAULT_DMG_SIZE         | 1             | The demand group size inserted for all automatically created demand groups. Valid values are as follows: <ul style="list-style-type: none"> <li>▪ 1 (small)</li> <li>▪ 2 (medium)</li> <li>▪ 3 (large)</li> <li>▪ 4 (x-large)</li> </ul>  |
| ONL_SCHEMA_OWNER         | USER          | The username of the AIP Online database schema owner.   |
| INVENTORY_TRACKING_LEVEL | PACKS         | The level at which inventory is tracked. Valid values are PACKS and EACHES. If the value is EACHES, then the DMG_ASSIGNMENT_METHOD parameter will be overridden and all pack sizes of a SKU will be assigned to the same demand group.<br><br><b>Note:</b> This setting must be kept synchronized with the RPAS setting. Changing this setting post implementation is not supported. An Oracle Services effort is required to change the value. |
| AIP_VERSION              | 12.1          | The currently installed version of AIP Online.  |
| TSF_INTERFACE_METHOD     | M             | Determines whether system created Transfers are interfaced to external systems via XML messages on the RIB (M) or text files (F).<br><br>If the value is M, the queue tables will be queried by the OrderSenderBean, which is deployed on the application server and communicates Transfers to RMS via the RIB. If the value is F, the tsf_po_export.sh script should be run to export Transfers to a text file.                                |

| Configuration Parameter            | Default Value | Description  |
|------------------------------------|---------------|--|
| PO_INTERFACE_METHOD                | M             | Determines whether system created Purchase Orders are interfaced to external systems via XML messages on the RIB (M) or text files (F).<br>If the value is M, the queue tables will be queried by the OrderSenderBean, which is deployed on the application server and communicates Transfers to RMS via the RIB. If the value is F, the tsf_po_export.sh script should be run to export Purchase Orders to a text file. |
| CONTINUE_ORDER_SENDER_BEAN_FOR_TSF | Y             | This parameter should not be manipulated by the system administrator except in the event of a batch failure to reset the flag.<br>The parameter is set by the order release processing scripts: cron_release_store_order.sh and cron_release_non_contents_order.sh. It is a switch to start/stop polling for Transfers by OrderSenderBean. Possible values are Y (start) and N (stop).                                   |
| CONTINUE_ORDER_SENDER_BEAN_FOR_PO  | Y             | This parameter should not be manipulated by the system administrator except in the event of a batch failure to reset the flag.<br>The parameter is set by the order release processing scripts: cron_release_store_order.sh and cron_release_non_contents_order.sh. It is a switch to start/stop polling for Purchase Orders by OrderSenderBean. Possible values are Y (start) and N (stop).                             |

In addition to the parameters listed above there a number of parameters that might be tweaked for performance reasons. These parameters begin with the "BFL" prefix and serve to limit the number of records retrieved at one time when executing a Bulk Fetch. The parameters are specific to a procedure or function.

## ORDER\_NUMBER

The Oracle ORDER\_NUMBER table defines the valid range of order numbers for purchase orders and transfers. The range of values should not overlap the range of values allocated to any other system capable of generating orders. Update the ORDER\_NUMBER table to reflect the range of purchase order and transfer numbers that are appropriate for AIP.

## ORDER\_PURGE\_PERIOD

The Oracle ORDER\_PURGE\_PERIOD table defines the number of day an order remains in the system after it has been set to a Closed status. Review the default purge periods inserted in the table at installation time, and update the values for purchase order purging and transfer purging when needed.

## ORDER\_DEFINITION

In AIP Online orders are held at order detail level (i.e. order line time level). When an order number is generated, it is generated at order header level. The Oracle ORDER\_DEFINITION table holds information that specifies how order line items are grouped into to order headers.

The following options are available for defining the level of grouping:

- Source - Indicates if order sources are used in order header roundup.
- SKU - Indicates if SKUs are used in order header roundup.
- Pack Size - Indicates if pack sizes used in order header roundup.
- Destination - Indicates if the order destinations are used in order header roundup.
- Delivery Date - Indicates if delivery dates are used in order header roundup.

In the example below SKU (commodity) and pack size are not used in the order definition. This means that for each order type an order number will be assigned to each unique combination of source, destination, and delivery date. This will result in one to many SKU pack sizes being grouped under a single order number for an order type.

| Destination | Order Type     | USE SOURCE | USE COMMODITY | USE PACK_SIZE | USEDEST | USE DELIVERY_DATE |
|-------------|----------------|------------|---------------|---------------|---------|-------------------|
| Warehouse   | Purchase Order | Y          | N             | N             | Y       | Y                 |
| Store       | Purchase Order | Y          | N             | N             | Y       | Y                 |
| Warehouse   | Transfer       | Y          | N             | N             | Y       | Y                 |
| Store       | Transfer       | Y          | N             | N             | Y       | Y                 |

Review the ORDER\_DEFINITION table and change the settings if needed.

**Note:** The only supported configurations for AIP 12.1 are the defaults provided in the table above and “Y” for all columns. These two configurations can be applied per destination/order type. They do not need to be applied uniformly across destination or order type.

## Order Cycles

The default order cycles created at implementation time are used by the batch processes that automatically create Profiles and Order Groups. These order cycles can be modified to match your business needs however **they must remain in sync with the same “special default order cycles” created in the RPAS platform.**

### Store Order Cycles

Store order cycles are assigned to a profile when it is automatically generated by the batch processes. The following Store Order Cycles exist for these procedures

- Warehouse profiles (PRFWS)
- Direct Profiles (PRFVS).

The following store order cycles are created during installation.

| Order Cycle | Sun | Mon | Tues | Wed | Thurs | Fri | Sat |
|-------------|-----|-----|------|-----|-------|-----|-----|
| PRFVS       |     | 15  |      |     |       |     |     |
| PRFWS       | 1   | 1   | 1    | 1   | 1     | 1   | 1   |

Store Order cycles are maintained in two tables, STORE\_ORDER\_CYCLE and STORE\_ORDER\_CYCLE\_LEAD\_TIME.

#### STORE\_ORDER\_CYCLE

| STORE_ORDER_CYCLE_ID | STORE_ORDER_CYCLE_CODE | STORE_ORDER_CYCLE_NAME        | STORE_ORDER_CYCLE_LENGTH |
|----------------------|------------------------|-------------------------------|--------------------------|
| 2                    | PRFVS                  | New Sup To Store Default OC   | 7                        |
| 3                    | PRFWS                  | New Sup Warehouse to Store OC | 7                        |

#### STORE\_ORDER\_CYCLE\_LEAD\_TIME

| STORE_ORDER_CYCLE_ID | STORE_ORDER_CYCLE_SEQ | RELEASE_LEAD_TIME | PLACEMENT_LEAD_TIME |
|----------------------|-----------------------|-------------------|---------------------|
| 2                    | 1                     | -1                | -1                  |
| 2                    | 2                     | 15                | 15                  |
| 2                    | 3                     | -1                | -1                  |
| 2                    | 4                     | -1                | -1                  |
| 2                    | 5                     | -1                | -1                  |
| 2                    | 6                     | -1                | -1                  |
| 2                    | 7                     | -1                | -1                  |
| 3                    | 1                     | 1                 | 1                   |
| 3                    | 2                     | 1                 | 1                   |
| 3                    | 3                     | 1                 | 1                   |
| 3                    | 4                     | 1                 | 1                   |
| 3                    | 5                     | 1                 | 1                   |
| 3                    | 6                     | 1                 | 1                   |
| 3                    | 7                     | 1                 | 1                   |

- The STORE\_ORDER\_CYCLE\_LENGTH is 7; therefore there is one row in the STORE\_ORDER\_CYCLE\_LEAD\_TIME table for each of the 7 days in the order cycle. Changing the length of the Store order cycle would require additional rows to be added to the STORE\_ORDER\_CYCLE\_LEAD\_TIME table such that the STORE\_ORDER\_CYCLE\_SEQ runs from 1 to n where n is the order cycle length. The ONLY supported lengths are 7, 14, or 28. DO NOT choose a length other than those values.

- A RELEASE\_LEAD\_TIME or PLACEMENT\_LEAD\_TIME value of -1 indicates “blank” on the screen or no lead time.
- The PLACEMENT\_LEAD\_TIME value MUST be equal to or greater than the RELEASE\_LEAD\_TIME. Therefore you cannot change one and not the other. The PLACEMENT\_LEAD\_TIME must NOT contain a value other than -1 when the RELEASE\_LEAD\_TIME is -1.

### Warehouse Order Cycles

Warehouse order cycles are assigned to an Order Group when it is automatically generated by the batch procedures. The following Warehouse Order Cycles exist for these procedures:

- Warehouse sourced Order Groups (OGWW)
- Supplier sourced Order Groups (OGVW)

The following store order cycles are created during installation.

| Order Cycle | Sun | Mon | Tues | Wed | Thurs | Fri | Sat |
|-------------|-----|-----|------|-----|-------|-----|-----|
| OGVW        |     | 15  |      |     |       |     |     |
| OGWW        | 1   | 1   | 1    | 1   | 1     | 1   | 1   |

Warehouse order cycles are maintained in two tables, ORDER\_CYCLE and ORDER\_CYCLE\_LEAD\_TIME.

### ORDER\_CYCLE

| ORDER_CYCLE_ID | ORDER_CYCLE_CODE | ORDER_CYCLE_NAME                    | ORDER_CYCLE_LENGTH | COLLECTION_LEAD_TIME |
|----------------|------------------|-------------------------------------|--------------------|----------------------|
| 1              | OGVW             | New Supplier Default Order Cycle    | 7                  | -1                   |
| 2              | OGWW             | New Supplier Whs to Whs Order Cycle | 7                  | -1                   |

**ORDER\_CYCLE\_LEAD\_TIME**

| ORDER_CYCLE_ID | ORDER_CYCLE_SEQ | ORDER_LEAD_TIME |
|----------------|-----------------|-----------------|
| 1              | 1               | -1              |
| 1              | 2               | 15              |
| 1              | 3               | -1              |
| 1              | 4               | -1              |
| 1              | 5               | -1              |
| 1              | 6               | -1              |
| 1              | 7               | -1              |
| 2              | 1               | 1               |
| 2              | 2               | 1               |
| 2              | 3               | 1               |
| 2              | 4               | 1               |
| 2              | 5               | 1               |
| 2              | 6               | 1               |
| 2              | 7               | 1               |

- The warehouse order cycle length (ORDER\_CYCLE\_LENGTH) is 7; therefore there is one row in the ORDER\_CYCLE\_LEAD\_TIME table for each of the 7 days in the order cycle. Changing the length of the warehouse order cycle would require additional rows to be added to the ORDER\_CYCLE\_LEAD\_TIME table such that the ORDER\_CYCLE\_SEQ runs from 1 to n where n is the order cycle length. The ONLY supported lengths are 7, 14, or 28. DO NOT choose a length other than those values.
- An ORDER\_LEAD\_TIME value of -1 indicates 'blank' on the screen or no lead time.
- The COLLECTION\_LEAD\_TIME must be equal to or less than the smallest ORDER\_LEAD time for the order cycle. For the existing, unmodified, order cycle OGVW, the COLLECTION\_LEAD\_TIME can be at most 15. For the existing, unmodified, order cycle OGWW, the COLLECTION\_LEAD\_TIME can be at most 1.

## WH\_TYPE\_INITIAL\_PACK\_TYPE

The Oracle WH\_TYPE\_INITIAL\_PACK\_TYPE table contains the warehouse type and pack type associations that are used for defaulting warehouse orderable units and order multiples. When the AIP Automated Data Maintenance batch processes run the pack type value defined for the respective process will define which pack size should be used for assignment first. If the pack size associated with the pack type is not valid for a given warehouse of the assigned warehouse type, additional logic in the batch will determine the next valid pack size to use.

The constraints on the table will need to be modified if additional warehouse types are added to the system via the STOCKING\_POINT table. The warehouse type describes the destination warehouse type.

The process type identifies the process to which the warehouse type/pack type setting applies – either warehouse orderable units or order multiples.

## SUPPLIER

Prior to importing any supplier data, the column constraint on the SHIP\_TO column should be modified to match the SHIP\_TO values that will be imported from the merchandising system. If additional values are being added, the Ship-to source and destination mappings must also be added to the SHIP\_TO\_WH\_TYPE\_SOURCE and SHIP\_TO\_WH\_TYPE\_DEST tables.

## STOCKING\_POINT

Prior to importing any warehouse data, the column constraint on the WH\_TYPE column should be modified to match the WH\_TYPE values that will be imported from the merchandising system.

## SHIP\_TO\_WH\_TYPE\_SOURCE

This Oracle table contains the mappings between Supplier SHIP\_TO values and the appropriate sources. These values are used when automatically generating Delivery Groups and Order Groups. When the WH\_TYPE column is null, the supplier will be used as the source. A non-null WH\_TYPE value indicates the warehouse the supplier ships to is an intermediate warehouse that does not ship directly to the store. When the WH\_TYPE is populated, the source of the Delivery Groups and Order Groups created will be Warehouses that match the WH\_TYPE.

## SHIP\_TO\_WH\_TYPE\_DEST

This Oracle table contains the mappings between Supplier sources (SHIP\_TO\_WH\_TYPE\_SOURCE) and the destinations. The destinations are used to determine the valid warehouse chambers to assign to the delivery groups and order groups. One SHIP\_TO value can map to many sources and destination WH\_TYPES.

## ALERT\_DEFINITION

Every alert is assigned a priority based on the type of the alert. The priority assigned to each alert type can be set in the ALERT\_DEFINITION table. The priority setting currently has no bearing on the rest of the system. It is simply a visual indicator of importance and search mechanism for the user.

---

---

**Note:** Updating the alert type priority in the ALERT\_DEFINITION table changes the priority of any previously existing alerts corresponding to the alert type being modified

---

---

## ALERT\_DEFINITION\_DESC

The Oracle ALERT\_DEFINITION\_DESC table contains the text of each alert, and the corresponding SHORT\_DESC or alert type description. The SHORT\_DESC value is displayed to the user as search criteria. You may modify the text of the SHORT\_DESC, however, the screen is optimized to display the values provided in the installation. It is not recommended that you modify the LONG\_DESC as the correct placement of the data displayed to the user depends on the structure of the LONG\_DESC text.

The LONG\_DESC and SHORT\_DESC can be translated for another LANG and COUNTRY if desired.

## ALERT\_STATUS\_DESC

Each alert that is imported or generated by AIP Automated Data Maintenance batch will be assigned a status. The status is displayed to the user in the DM online screen. The user can then modify the status of the alert by selecting a status option from a drop-down list. The status options displayed in the list and their descriptions are contained in the ALERT\_STATUS\_DESC table.

### Adding a Status

The ALERT\_STATUS\_CODE indicates the chronological order of the statuses displayed on the screen as well as the code that is saved indicating the alert's current status.

When adding a status:

- The smallest value will be automatically assigned to every new alert.
- The largest value will be considered the final status indicating no more work needs to be completed related to the alert.
- It must be added to every set of LANG/COUNTRY combinations. Therefore, the same set of ALERT\_STATUS\_CODE values must exist for every LANG and COUNTRY on the table.

## AIP Application Server

The following properties files are used to configure the application during implementation. All files are located in <aip app server install location>/config. Review the values in the files for completeness and accuracy. There are additional properties outlined below which must be manipulated when using the RIB with AIP.

### db.properties

File Location: <aip app server install location>/config

This file contains configuration values that are related to the system's database. This file tells the DM Online and OM Online application how to connect to the database. After installation, this file should contain the correct information because it is set in the initial run of the AIP Online application. However, it is a good idea to review the values in the files for completeness and accuracy. The following table provides a description of the values contained in the db.properties file.

| Configuration Value       | Description   |
|---------------------------|---|
| common.prop.db            | This value defines the database that the system is utilizing. This value is set to Oracle.  |
| common.prop.oracle.sid    | This value is an Oracle parameter that defines the database name that the system is utilizing. SID stands for system identifier.  |
| common.prop.oracle.host   | This value is an Oracle parameter that refers to the database listener. This value defines the "host:port" that the database listener is using.   |
| common.prop.user          | This value is an Oracle parameter that defines the "username/password" of the database. This can be a schema owner or a standard user.  |
| common.prop.oracle.schema | This value is an Oracle parameter that defines the schema owner username. If the username/password defined in common.prop.user is not the schema owner, then this field must also be added and defined in order for the AIP Online Administration screens to function properly. |

## main.properties

File Location: <aip app server install location>/config

The following table provides a description of the properties contained in the main.properties file. This file is used by the Java enabled applications: DM online, OM, and RIB publication via the OrderSenderBean.

| Property                      | Description  |
|-------------------------------|--|
| base                          | This must match the context root of the ear or war file. This is "/" for a production system, or "/test1" for the 1st of several test systems on a single physical computer.   |
| securemode                    | This is set to "1" to force connections to switch from http (non-secure) to https (secure) upon logon. This value can also be set to "0" to prevent the connection from being switched from non-secure to secure mode. |
| setfileattr.rcapps.properties | This defines a file to contain color attributes. The default setting is rcapps.properties.   |

### Publishing Purchase Orders and Transfer Data to RMS

You can configure AIP Online to publish Purchase Order and Transfer Data to the Oracle Retail Merchandising System (RMS) via the Oracle Retail Integration Bus (RIB). Perform the following procedure to enable RIB publication.

1. Uncomment the following parameters and change the OFF status of keys to ON status where applicable in the main.properties file to activate the OrderSenderBean, which calls the RIB publication routines:

```
#aip.prop.order.po.export=OFF
#aip.prop.order.tsf.export=OFF

#aip.prop.order.period.count=1
#aip.prop.order.period.start.1=08:00:00
#aip.prop.order.period.end.1=20:00:00
#aip.prop.order.time.interval=00:01:00

#aip.prop.order.po.message.family=XOrder
#aip.prop.order.po.message.type.name=msg_type
#aip.prop.order.po.queue.table.name=PO_MFQUEUE
#aip.prop.order.po.table.id.name=order_no

#aip.prop.order.tsf.message.family=XTsf
#aip.prop.order.tsf.message.type.name=msg_type
#aip.prop.order.tsf.queue.table.name=TSF_MFQUEUE
#aip.prop.order.tsf.table.id.name=tsf_no

#aip.prop.order.max.message.bundle.size=10
#aip.prop.order.max.publishing.count=20
```

2. Save the main.properties file.

3. Have the WebSphere administrator restart the WebSphere instance where the OrderSenderBean and AIP Online application are deployed.

### main.properties Publication Properties

File Location: <aip app server install location>/config

The following table provides a description of the publication properties referenced in the previous topic.

| Property                            | Description  |
|-------------------------------------|--|
| aip.prop.order.po.export            | This property must be set to 'ON' to do RIB-based publications Purchase Orders. (PO_MFQUEUE)   |
| aip.prop.order.tsf.export           | This property must be set to 'ON' to do RIB-based publications of Transfers (TSF_MFQUEUE)  |
| aip.prop.order.period.count         | The number of periods in the day during which the OrderSenderBean will invoke RIB publication. This value must be greater than zero if RIB-based publication is to be used. In addition, at least one of the above two properties must in set to 'ON'. |
| aip.prop.order.period.start.x       | The start time in HH:MM:SS format of period x where x is 1 ... aip.prop.order.period.count.  |
| aip.prop.order.period.end.x         | The end time in HH:MM:SS format of period x where x is 1 ... aip.prop.order.period.count.  |
| aip.prop.order.time.interval        | The amount of time in HH:MM:SS format between calls to OrderSenderBean.checkAndPublish() function.   |
| aip.prop.order.po.message.family    | The purchase order message family name. This value is required by the RIB to ensure proper validation of message payloads. This value should be set to 'XOrder'.   |
| aip.prop.order.po.message.type.name | This value can be used to indicate if the message is a header-create, header-update, detail-create, or detail-update message. Although message types are used to order the OrderSenderBean query, this parameter value is not currently used.          |
| aip.prop.order.po.queue.table.name  | The AIP Online table which OrderSenderBean queries to check for Purchase Order related messages awaiting publication. This value should be 'PO_MFQUEUE'.   |
| aip.prop.order.po.table.id.name     | This value is used to group functionally related message content. For example, all message content related to purchase order number 123 would be grouped. This value should be 'order_no'.   |

| Property                               | Description   |
|--|---|
| aip.prop.order.tsf.message.family      | The transfer message family name. This value is required by the RIB to ensure proper validation of message payloads. This value should be set to 'XTsf'.  |
| aip.prop.order.tsf.message.type.name   | This value can be used to indicate if the message is a header-create, header-update, detail-create, or detail-update message. Although message types are used to order the OrderSenderBean query, this parameter value is not currently used.   |
| aip.prop.order.tsf.queue.table.name    | The AIP Online table which OrderSenderBean queries to check for Transfer related messages awaiting publication. This value should be 'TSF_MFQUEUE'.   |
| aip.prop.order.tsf.table.id.name       | This value is used to group functionally related message content. For example, all message content related to transfer number 456 would be grouped. This value should be 'tsf_no'.  |
| aip.prop.order.max.message.bundle.size | The maximum number of message bundles to publish per call to OrderSenderBean.checkAndPublish(). The default is 10, but this number should be recalculated by the client based upon on-site performance testing.   |
| aip.prop.order.max.publishing.count    | The maximum number of messages per message bundle. For example, multiple Purchase Order header create message can be grouped in one message bundle to improve performance. The default value is 20, but this value should be recalculated by the client based upon on-site performance testing. |

## rcapps.properties

File Location: <aip app server install location>/config

These properties are applied to the main application login and navigation pages. These property settings do not apply to the pop-up applet screens.

The color properties can be set to any 6 character hexadecimal value and are preceded with the # symbol.

Hexadecimal color property examples:

#0000FF = blue

#FF0000 = red

The files defined for various properties are located off of the following base directory:

< rfp appserver location >/installedApps/<node> /AIPOnlineApp.ear/AIPOnlineWAR.war

Property settings that contain path assignments are appended to the base directory provided above. Use the complete path, base directory plus property path to locate specific files as needed.

For example:

```
apptop.page=/fragments/apptop.jsp
```

apptop.jsp can be found in the following path:

```
< rfp appserver location >/installedApps/<node>/AIPOnlineApp.ear/AIPOnlineWAR.war/fragments
```

The following table provides a description of the properties contained in the rcapps.properties file.

| Property          | Description  |
|-------------------|--|
| about.width       | Width of 'about' windows. Currently, no 'about' windows are supported.   |
| apps.width        | Width of application windows.  |
| appbanner.bg      | Defines the main background color. This appears as the horizontal banner.  |
| appmenu.bg        | Menu banner background color. This appears as the vertical strip on the left side of the page. It is the background for any 'Applications', 'User Console', and 'Administration' menu items.                       |
| text.fg           | Main text color. This is the text color for the main welcome on the login pages.   |
| applet.codebase   | Applet default codebase. The default value is appclasses. This is not expected to ever change.   |
| apppage_top.page  | Contains the code content for the upper fragment of the page including the top and left banners. The default value is /fragments/apppage_top.jsp   |
| apptop.page       | Defines the standard top banner (normal and compact versions). The default value is /fragments/apptop.jsp.   |
| apptop_about.page | Defines the content of the 'about' page. 'About' pages typically contain version numbers and company information. 'About' pages are not supported by Oracle AIP. The default value is /fragments/apptop_about.jsp. |
| head.page         | Contains the code content getting the configurations and saving them in variables used throughout the page. The default value is /fragments/head.jsp.  |
| appbot.page       | Defines the standard bottom banner. The default value is /fragments/appbot.jsp.  |
| apppage_bot.page  | Contains the code content for the lower page fragment. The default value is /fragments/apppage_bot.jsp.  |
| securemode.allow  | Used to enable securemode.<br>Set to "*" to enable securemode on all clients, or set to "*,!Mac" to enable securemode on all clients except those that are using a Macintosh.                                      |

| Property       | Description   |
|----------------|---|
| webmeter.allow | Used to display webmeter.<br>Set to "*" to display webmeter for all clients, or "!Mac" to display webmeter for all clients except those that are using a Macintosh. |
| webmeter.page  | Defines the file containing code for the WebMeter page. The default is /fragments/webmeter.jsp.   |

### security.properties

File Location: <aip app server install location>/config

This file defines security administration settings for the application.

The following table provides a description of the properties contained in the security.properties file.

| Property                     | Description   |
|------------------------------|---|
| trackeradmin.prop.adminhosts | This is a comma delimited list of "host/mask" values that are allowed to access phantasm (the primary administration page). |

### strings\_en.properties

This file provides the displayed text for the screens. Error text originating in the database is not provided in this file and is not accessible for customization. Customizing this file can have an affect on the visual presentation of the screen or popup message. The new text should be of equal or similar character lengths as the modified text.

The file is located in the following server path:

```
<rfp appserver location >/installedApps/<node>
/AIPOnlineApp.ear/rfp.war/appclasses/res/com/rettek/applet/strings_en.properties
```

## Config.properties

This file contains configurable settings for Data Management and Order Management that determine how certain screens appear immediately when opened. It also contains settings which allow or prevent certain user activities on the screens.

This file is located in < WAS\_HOME >/installedApps/<node>/AIPOnlineApp.ear/AIPOnlineWAR.war/appclasses/res/com/retek/applet.

### Data Management Online Settings

The following table provides a description of properties found in the Config.properties file that are used to define Data Management online (DMo) settings.

| Property                                 | Description   |
|--|---|
| datamanagement.suppress.pre.save.message | Indicates whether or not to suppress the pre-save message saying that all applicable rows will be updated. This setting currently only applies to the On Supply/Off Supply screen when performing mass updates of SKUs and Stores. The valid values for this property are 0 to display the pre-save message and 1 for do not display the pre-save message.  |
| datamanagement.unit.of.measure.default   | Defines the unit of measure (UOM) radio button that is initially selected when displaying DM Online screens containing UOM. Valid values are 0 for cases, or 1 for eaches.  |
| datamanagement.warehouse.type.available  | This setting determines whether the warehouse type field is displayed in the DM online application. This should be set to 0 when warehouse types are not defined for warehouses, or set to 1 if warehouse types are assigned to warehouses.   |
| export.launch                            | When the user exports the Alerts from the DM online application to a savable file, this setting will determine whether the file is opened immediately or not. If set to launch immediately, the user must have a default program for the particular file extension being saved. Two file formats are available, spreadsheet (.xls) or comma delimited (.csv). The default program associated with the file extension is specific per PC and is not an AIP controlled setting. If no program is associated to the file extension, the user may receive an error and the file will not be opened. If an error occurs, the user must manually open the file in the appropriate program. The valid values for this property are 0 for don't launch, and 1 for launch immediately. |

| Property                           | Description   |
|------------------------------------|---|
| export.type.default                | When exporting the Alerts from the DM online application to a savable file, the user has the option of saving the data in spreadsheet or comma delimited file format. This property setting is applied to the initial radio button selection that defines the format. This property defines the value selected by default. The user has the option of choosing the other format by selecting the other radio button option. The valid values for this property are 0 for comma-separated file (CSV) or 1 for spreadsheet (XLS).   |
| paginggrid.page.size               | This is the default 'pagesize' setting applied to all screens with paging. Pages contain a certain number of rows and only the content for one page is displayed at a time. This property defines the number of rows that are displayed in a single page. When setting this value you should consider that the setting is system wide setting, not user specific. The resolution of each user's screen will affect how many rows are visible without scrolling. Assign a large number to this property may result in the need for some users to scroll down the page to see all of the rows. Setting this property to an arbitrarily large number also negates the benefits of paging, which is used to improve screen rendering time performance and display information in a more usable fashion. This property can be set to any value greater than 0 and less than or equal to 9999999. |
| paginggrid.<screen name>.page.size | Each screen that uses paging has its own pagesize setting. This setting, when greater than 0, will override the default 'pagesize' setting. The same considerations for the default should be applied to the individual screen settings. A value of -1 indicates that the default should be used. The valid values for this property are -1 or any number greater than 0 and less than or equal to 9999999.   |

## Order Management Settings

The following table provides a description of properties found in the config.properties file that are used to define Order Management (OM) settings.

| Property                                | Description   |
|---|---|
| ordermanagement.order.type.default      | <p>This setting defines which order type radio button is selected by default. The available options are All, Transfers, or Purchase Orders. This setting applies to all Order Management screens which allow the user to search or select an order type. Valid values for this property are as follows:</p> <ul style="list-style-type: none"> <li>▪ 0 for All</li> <li>▪ 1 for Purchase Orders</li> <li>▪ 2 for Transfers</li> </ul> <p><b>Note:</b> The ordermanagement.viewable.order.type setting takes precedence over this setting. If this setting conflicts with it, the ordermanagement.viewable.order.type will be used instead.</p>  |
| ordermanagement.viewable.order.type     | <p>This setting defines which order types users are able to view and possibly manipulate. Users cannot perform any operations on orders types that do not match this setting, nor can they view order types that do not match this setting. This setting applies to all Order Management screens. The valid values for this property are as follows:</p> <ul style="list-style-type: none"> <li>▪ 0 for All</li> <li>▪ 1 for Purchase Orders</li> <li>▪ 2 for Transfers</li> </ul> <p><b>Note:</b> Users may have privileges to the Order Create screen but they will be unable to perform any operations if the ordermanagement.viewable.order.type is not set to All or Purchase Order.</p> |
| ordermanagement.unit.of.measure.default | <p>Defines the unit of measure (UOM) radio button that is initially selected when displaying OM Online screens containing UOM. Valid values are 0 for cases, or 1 for eaches.</p>   |
| ordermaintenance.order.display.format   | <p>This setting defines the display format that is selected by default in the Order Maintenance search criteria pop up. The valid options for this property are 0 for the tree format and 1 for the grid format.</p>  |
| ordermaintenance.expand.all.default     | <p>When the search results in the Order Maintenance screen are displayed in a tree format, this setting is used to determine whether the tree should be initially displayed in a collapsed or expanded state. When collapsed, only the header level order information appears. When expanded, all of the SKU-pack sizes and order quantities associated with the order display. Valid values for this property are 0 for collapsed or 1 for expanded.</p>   |

| Property                                   | Description   |
|--|---|
| ordermaintenance.update.quantity.default   | <p>In the Order Maintenance screen, the user has the option of viewing the quantity on the order as the total ordered quantity or as the outstanding, un-received order quantity. This setting is used to determine which radio button option will be initially selected on the screen. The valid values for this property are 0 to view the total order quantity, or 1 to view the unreceived order quantity.</p>  |
| ordermaintenance.supplier.tracking.default | <p>When moving the un-received purchase order quantity to a new delivery date and/or destination, the user must specify whether the supplier was the cause of the change or their business. The value that is specified affects the supplier performance tracking. This property defines which drop-down list option should be selected by default. The valid values are as follows:</p> <ul style="list-style-type: none"> <li>▪ 0 – Always Ask</li> <li>▪ 1 – Supplier Initiated</li> <li>▪ 2 – Business Initiated</li> </ul> <p>The Always Ask option is recommended if the business will be viewing and using the supplier performance tracking information. This option forces the user to consciously select the appropriate value.</p> <p>If the business will not be using the supplier performance tracking information, then either the Supplier Initiated or Business Initiated option should be selected so that a value is always selected by default. This prevents the user from having to randomly pick one of the two options, as well as prevents the unnecessary popup which appears when the Always Ask option is selected in the drop-down list.</p> |
| ordermaintenance.view.default              | <p>This setting defines which view should be displayed initially in the Order Maintenance Screen—the Standard View or the Extended View. The extended view includes the Supplier Tracking value and the Release Date. The additional columns displayed in the extended view results in each column having a smaller display size. Valid values for this property are 0 for the standard view and 1 for the extended view.</p>   |
| ordermaintenance.allow.move.unreceived     | <p>This setting allows the business to prevent users from changing the destination and delivery date of a purchase order. The valid values for this property are 0 to allow changing delivery dates and destinations, or 1 to prohibit changing delivery dates and destinations.</p>  |

| Property                                       | Description   |
|--|---|
| ordermaintenance.move.unreceived.criteria      | <p>This setting allows the business to define when it is acceptable to move un-received order quantities to a new delivery date and/or destination.</p> <p>The first option is anytime the order quantity is less than the received quantity. This means that the user can change the order delivery date and/or destination any time the order is released and not fully received.</p> <p>The second option is anytime the order is totally un-received. This means that the user can change the order delivery date and/or destination anytime the order has been released but not yet received against.</p> <p>The valid values for this property are 0 for not fully received or 1 for 0 received quantity.</p> |
| ordermaintenance.move.allow.destination.change | <p>This setting allows the business to restrict users from changing delivery destinations of their orders. This setting is used in the Order Maintenance Move Unreceived Order Quantity popup. When users are not allowed to change order destinations, they are left with the sole option of changing the delivery date. Valid values for this property are 0 to allow destination changes, or 1 to prevent destination changes.</p>   |
| ordermaintenance.move.require.new.order.number | <p>This setting determines whether or not a new order number is required when moving an order. If a new order number is not required, users are allowed to choose whether to retain the existing order number or generate a new one when moving un-received quantities. Valid values for this property are 0 – Do not require a new order number or 1 – Require a new order number.</p>   |
| ordermaintenance.allow.cancel.unreceived       | <p>This setting allows the business to restrict users from fully canceling a Purchase Order. The user can still modify the Purchase Order quantity but they cannot fully cancel the un-received quantity. The valid values for this property are 0 to allow the un-received order quantity to be canceled or 1 to prohibit the cancelling of all un-received order quantity.</p>  |
| ordermaintenance.allow.release.orders          | <p>This setting allows the business to prevent users from manually releasing purchase orders in the Order Maintenance screen. Orders that have not been released cannot be modified. Only purchase orders released on their lead time by the batch order release process would be available for modification. The valid values for this property are 0 to allow manual release of orders, or 1 to prevent manual release of orders.</p>   |

| Property                                | Description  |
|---|--|
| ordermaintenance.allow.edit.quantities  | The setting allows the business to prevent users from modifying purchase order quantities. The user will still have the ability to cancel the outstanding unreceived order quantity unless the ordermaintenance.allow.cancel.unreceived property is also set to disallow cancelling unreceived order quantities. Valid values for this property are 0 to allow modification of order quantities, or 1 to prevent modification of order quantities.   |
| ordermaintenance.release.status.default | This setting determines which Release Status radio button is initially selected in the Order Maintenance search criteria popup. The valid values for this property are 0 for all statuses, 1 for Released, or 2 for unreleased.  |
| orderreview.display.quantity.default    | This determines which Display Quantity value is initially selected in the Order Review search criteria popup.<br>The first option is total quantity. This displays the summed order quantity in the search results.<br>The second option is unreceived quantity. This will display the total order quantity that is still outstanding or yet to be received. This quantity is calculated as the total order quantity minus the total received quantity.<br>The third option is received quantity. This will display the summed received quantity in the search results.<br>The valid values for this property are 0 for total quantity, 1 for unreceived quantity, and 2 for received quantity.  |
| orderreview.display.zero.values.default | This determines whether the Display Zero Values checkbox is initially checked or unchecked in the Order Review search criteria popup. Choosing to display zero values will result in zeros being displayed in the columns where no quantity is found. Note, however that at least one order must be found for the search criteria and date range in order to have a row displayed in the search results. When choosing to view received or unreceived quantities instead of the order quantity it will be impossible to distinguish a displayed zero that means no orders were found for the date range versus 0 quantity was received or 0 quantity is yet to be received.<br>The valid values for this property are 0 to not initially select the checkbox (do not display zeros) or 1 to initially select the checkbox (display zeros). |

## AIP RPAS Configurations

The AIP RPAS configurations listed in this section allow the business to manipulate AIP to meet their business needs. The XML files, configuration files, measures, etc. are applied to the replenishment processing to affect the plan that is produced.

### shortfallPriorityMatrix.xml

The shortfall reconciliation priority matrix describes the order in which available inventory is allocated when an inventory shortfall occurs. The matrix is organized around two concepts, group and boundary. The group concept segregates stores into multiple mutually exclusive sets. For reconciliation purposes, all members of a given set are treated equally. Conversely, the inventory needs of one set may be considerably more important than those of another. For example, it may be more important to satisfy the minimum needs of one group before addressing the maximum need of another group. This is achieved by associating a group-boundary combination with a rank which allows combinations of group and boundary to be ordered. The following table illustrates the idea.

| Store<br>Priority | Boundary → |      |     |    |
|-------------------|------------|------|-----|----|
|                   | Group      | CORT | MSS | RP |
| 1                 | 1          | 4    | 5   | 6  |
| 2                 | 2          | 7    | 9   | 11 |
| 3                 | 3          | 8    | 10  | 12 |

The number of groups is not fixed however the base product's user interface currently limits the assignment of store priority to one of three values. Moreover, the priority matrix ranking is configurable. The configuration is specified using an XML file, `shortfallPriorityMatrix.xml`, which is formatted as shown below.

```
<reconciliation-priority-matrix>
  <boundary componentName="CustomerOrderOverReviewTime">
    <group id="1" priority="1"/>
    <group id="2" priority="2"/>
    <group id="3" priority="3"/>
  </boundary>
  <boundary componentName="MinimumSalesStock">
    <group id="0" priority="13"/>
    <group id="1" priority="4"/>
    <group id="2" priority="7"/>
    <group id="3" priority="8"/>
  </boundary>
  <boundary componentName="ReceiptPoint">
    <group id="0" priority="14"/>
    <group id="1" priority="5"/>
    <group id="2" priority="9"/>
  </boundary>
</reconciliation-priority-matrix>
```

```

    <group id="3" priority="10"/>
  </boundary>
  <boundary componentName="ReceiptUptoLevel">
    <group id="0" priority="15"/>
    <group id="1" priority="6"/>
    <group id="2" priority="11"/>
    <group id="3" priority="12"/>
  </boundary>
</reconciliation-priority-matrix>

```

Within the XML file, the "id" is expected to match a store priority. Store priorities are 1-Super High, 2-High, 3-Normal, and 0-Not Defined. "componentName" is the name of a numeric DataContainer which will contain the calculated allocation boundary data.

For each group the allocation boundaries should only be prioritized in the following ascending order: CORT < MSS < RP < RUTL. Since the allocation boundaries are cumulative, undesirable results may be generated if this order is not followed.

It should also be noted that same priority numbers across multiple cells will not be supported in the current release. Each cell within the matrix should be assigned a unique priority number. Not doing so will result in erroneous results.

## stocklessPriorityMatrix.xml

The stockless priority matrix describes the order in which available inventory is allocated when a Stockless inventory surplus occurs or a surplus of singles occurs for a 'Push Singles' warehouse/SKU. The matrix is organized similar to the shortfall reconciliation priority matrix. The matrix gives the priority order for allocating excess inventory to destinations associated to each store priority/allocation boundary cell.

| Group | Up To Upper Boundary | Fair Share Over Upper Boundary |
|-------|----------------------|--------------------------------|
| 1     | 1                    | 6                              |
| 2     | 2                    | 5                              |
| 3     | 3                    | 4                              |

The Upper Boundary is defined as:

- RUTL, if spoilage is not a consideration for the given sku-pack
- MSQ, if spoilage is considered

The priority matrix is defined in stocklessPriorityMatrix.xml, which is shown below.

```

<reconciliation-priority-matrix>
  <boundary componentName="FairshareUpperBoundary">
    <group id="0" priority="7" method="fair-share"/>
    <group id="1" priority="6" method="fair-share"/>
    <group id="2" priority="5" method="fair-share"/>
    <group id="3" priority="4" method="fair-share"/>
  </boundary>
  <boundary componentName="ReceiptUptoLevel">
    <group id="1" priority="1"/>
    <group id="2" priority="2"/>
    <group id="3" priority="3"/>
  </boundary>
</reconciliation-priority-matrix>

```

Within the XML file the "id" is expected to match a store priority. Store priorities are 1-Super High, 2-High, 3-Normal, and 0-Not Defined. "componentName" is the name of a numeric DataContainer which will contain the calculated allocation boundary data.

For each group the allocation boundaries should only be prioritized in the following ascending order: 'Up To Upper Boundary' < 'Fair Share Over Upper Boundary'. Since the allocation boundaries are cumulative, undesirable results may be generated if this order is not followed.

## Measures

| Measure       | Default Value | Description  |
|---------------|---------------|--|
| dmx_plnhznmin | 35            | <p>The Global Minimum Planning Horizon defines the minimum number of days that will be planned at the stores and warehouses. This value can be overridden with a larger value in the DM Online application by setting a Class level default value. Additionally a SKU exception can be defined for replenishment at stores and a Demand Group exception can be defined for replenishment at warehouses. The most specific value will be used (SKU or Demand Group, or Class) unless it is less than the global minimum planning horizon, in which case the global minimum value will be used.</p> <p>The DM online application does not allow planning horizons less than 35 days or greater than 366 days. The overrides set in the DM online application will not be used if they are less than the global minimum planning horizon.</p> <p>This value should be equal to the shortest planning horizon desired. This value should not be set greater than 366 days.</p> |
| dmx_pstpmsflg | FALSE         | The Post Promotion Substitution Flag determines whether promotional items should be substituted after their promotional date.  |
| dmx_daywk_    | 7             | This defines the number of days per week. This setting should never be changed.  |

| Measure    | Default Value   | Description   |
|------------|---|---|
| dmx_somalg | 1   | <p>This flag determines whether the user will manually enter ordering parameters for the entire supply chain, or whether the supplier's value for Pallet Multiple, Order Multiple, Case Weight, and Stack-ability indicator will be spread through the supply chain.</p> <p>If the value is 1, the four parameters listed above must be defined for both supplier to warehouse and warehouse to warehouse combinations of the supply chain.</p> <p>If the value is 0, the four parameters listed above need only be defined for the top tier of the supply chain--supplier to warehouse combinations. An algorithm will run as part of DM Batch to set the values for the inner tiers of the supply chain equal to the value of the top tier. Note that any warehouse to warehouse combinations that are either system generated by DM Automated Maintenance, or user generated will be overwritten in the RPAS measure!</p>  |
| dmx_speocy | 0 = "PFOCPRFVS"<br>1 = "PFOCOGVW"<br>2 = "PFOCPRFWS"<br>3 = "PFOCFULLC"<br>4 = "PFOCOGWW" | <p>This measure contains 5 values unique Order Cycle identifiers. These order cycles are used by default when automatically generating profiles and order groups. These should not be changed unless the AIP Oracle PL/SQL is customized to use the new Order Cycle codes and the order cycle exists in the AIP Oracle database.</p> <p>The order cycle lengths and lead times are not defined in AIP RPAS at implementation time. The order cycle lengths and lead times are defined in AIP Oracle at implementation time and will be loaded into AIP RPAS before the first full run of DM Batch.</p> <ul style="list-style-type: none"> <li>▪ PFOCPRFVS - Used when automatically creating a new Supplier Profiles.</li> <li>▪ PFOCPRFWS - Used when automatically creating new Warehouse Profiles.</li> <li>▪ PFOCOGVW - Used when the system creates Automated Supplier sourced Order Groups.</li> <li>▪ PFOCOGWW - Used when the system creates Automated Warehouse sourced Order Groups.</li> <li>▪ PFOCFULLC - This is an empty order cycle which is used to wipe out all receipt points and lead times. It is used for new Stores which will have a walking lead time calculated prior to the store opening. It can also be assigned as a profile order cycle.</li> </ul> |

| Measure       | Default Value | Description   |
|---------------|---------------|---|
| dmx_storeonly | STR           | <p>This measure contains the Supplier Ship-to code that represents 'Stores Only'. This code is used when attempting to automatically set the store source value for a new SKU. Because the Supplier Ship-to values are also sent to AIP on Oracle, the codes and table constraints in both systems must remain consistent.</p>  |
| dmx_cscstrfmt | SFMT1002      | <p>This measure contains the store format of the stores which receive their SKUs from the warehouse when the supplier of the SKU can supply both the stores and the warehouses.</p> <p>This setting is used when the batch tries to automatically set the Store Source value for a new SKU. When the selected supplier of the SKU has a Supplier Ship-to value of equal to the value in dmx_cscdir, this indicates that the supplier can ship to either CSC warehouses or directly to stores. To determine which store source to select (the supplier or warehouse) the store format of each store that the SKU is on-supply at is compared to the store format listed in this measure. If the store's format matches, then the store's default CSC warehouse is saved as the source for the SKU/store. This means that the supplier will provide the SKU to the warehouse and the warehouse will provide the SKU to the store.</p> <p>The selected store format to be saved in this measure must have the prefix 'SFMT' added to it.</p> |
| dmx_cscdir    | CS_ST         | <p>This is the supplier ship to value that indicates the supplier ships to both CSC warehouses and stores. Because the Supplier Ship-to values are also sent to AIP on Oracle, the codes and table constraints in both systems must remain consistent.</p>  |

| Measure      | Default Value | Description   |
|--------------|---------------|---|
| IpBydPlnHznG | 7             | <p>The Days Beyond Planning Horizon Parameter represents the number of days the replenishment batch process will look forward to find the next Available To Plan (ATP) day after the end of the planning horizon. Replenishment will use the data between the end of the planning horizon and the next ATP day to calculate the receipt plan for the last ATP day. No plan is calculated on the ATP day beyond the planning horizon. If replenishment does not find an ATP day in the period from the end of the planning horizon through the days beyond the planning horizon, the receipt plan calculations will use data through the days beyond planning horizon to plan the last receipt.</p> <p>Any positive integer, including zero, is valid.</p> <p>This can also be set in the SRP Administration Implementation Parameters worksheet.</p> <p><b>This measures value must stay in sync with the AIP on Oracle system parameter value.</b></p> |

## Modifying Measure Base Intersections Using Configuration Tools

Using the RPAS Configuration Tools, the base intersection of the following measures can be modified.

**Note:** The data file containing the data must match the configured measure intersection.

| Measure         | Description                                     | Valid Configuration  |
|-----------------|---|--|
| IpFctWkPrfD     | Week to Day Demand Forecast Percentage Default  | All Products/Chain/Day-Of-Week<br>Company/Chain/Day-Of-Week<br>Division/Chain/Day-Of-Week<br>Department/Chain/Day-Of-Week<br>Class/Chain/Day-Of-Week<br>Subclass/Chain/Day-Of-Week |
| IpFctWkPrfE     | Week to Day Demand Forecast Percentage Override | Subclass/Chain/Day-of-Week   |
| sr0_prmprsstk_* | Promotional Presentation Stock                  | Use Configuration Tools to show /hide this measure   |
| sr0_prmspasc_*  | Promotional Shelf Capacity                      | Use Configuration Tools to show /hide this measure   |
| sr0_prmfillvl_* | Promotional Fill Level                          | Use Configuration Tools to show /hide this measure   |

## Import Configuration Files

Missing data files can corrupt downstream data and cause errors which are difficult to interpret and trace to the root. Therefore, validation of the received import files must be performed prior to running any batch calculations or loading any files with dependencies. A set of configuration files are used to validate that all required files are present before proceeding to load them.

- The configuration files provide a complete list of hierarchy and measure data that can be loaded. If a client chooses to load additional data rather than have the user enter it they may add the file to the appropriate configuration file so that its presence in the AIP RPAS import directory is validated.
- The configuration files can be modified to specify whether a file is required or optional. A file can only be deemed optional if it provides data that is not required by the replenishment batch modules, is not required by AIP Online, and there are no required files that are dependant on it. Additionally, if the same data can be entered in a workbook *before* the batch run the loaded data may also be considered optional.

The configuration files for validation are listed below:

- earlyfiles.config
- latefiles.config
- forecastdata\_from\_external.config

After the presence of all required files has been validated a number of files are run through a stocking point prefix-adding script as well as a binary executable called interutil. These processes perform a myriad of formatting tasks including splitting files, adding S, V or W prefixes to Stores, Suppliers, and Warehouses respectively, and transforming RMS-sourced files from RMS SKU to AIP SKU or SKU-pack size. The list of files containing measure data that are reformatted by interutil is determined by a second set of configuration files.

- The configuration files can be modified to prevent interutil from being run for files that are in AIP RPAS loadable format.
- Only files containing measure data are listed in the configuration files. Hierarchy files must be provided in the predetermined format.

---

---

**Note:** The *AIP Operations Guide* and “RMS Integration and Mapping” information provided within this document should be carefully reviewed for file format and file output from interutil before modifying the contents of the configuration files.

---

---

The interutil configuration files are listed below:

- dm\_rms\_measures.config
- srp\_rms\_measures.config
- wrp\_rms\_measures.config

## Moving Integration Data Source from RMS to a Non-RMS External System

AIP is configurable to allow some files, whose default source is RMS, to be sourced instead from a Non-RMS External System. The following instructions are the procedure for adjusting the configuration files to support this change of source.

### Pre-requisites for Moving the Source Application of an RMS Data Feed

1. The data feed must be one of the *inventory* data feeds that arrives *late* from RMS, as listed in `wrp_rms_measures.config` or `srp_rms_measures.config` file, as well as the `latefiles.config` file. These files are located in the following directory of the domain:  
`$AIPDOMAIN/interface/config/external/latefiles.config`  
`$AIPDOMAIN/interface/config/rms/srp_rms_measures.config`  
`$AIPDOMAIN/interface/config/rms/wrp_rms_measures.config`
2. The data feed must now be formatted in RPAS-loadable format. No processing will be performed to translate RMS SKU to AIP SKU, or to add stocking-point prefixes. However, the data can still be split into multiple pieces (for Store and Warehouse Current Inventory, namely `sr0_curinv` and `wr0_curinv`).
3. The data feed is still considered to be a "late" arrival.

### Setup

1. Add the data feed to the `measdata_from_external.config` configuration file. It is located in the following directory of the domain:  
`$AIPDOMAIN/interface/config/measdata_from_external.config`
2. Remove the data feed from `srp_rms_measures.config` or `wrp_rms_measures.config`. Also remove the data feed from `inv_meas_ntier_prefix.config`. These configuration files are located in the following directories of the domain:  
`$AIPDOMAIN/interface/config/rms/srp_rms_measures.config`  
`$AIPDOMAIN/interface/config/rms/wrp_rms_measures.config`  
`$AIPDOMAIN/interface/config/rms/meas/inv_meas_ntier_prefix.config`

### Process

1. After the "early files" (as listed in `earlyfiles.config`) are placed into the domain, run the appropriate `aip_batch` processes, as normal, to process external data.

---

**Note:** `process_external_data.sh` will not process any file that has been moved from RMS to External source, as the feed is still considered "late."

Additionally, `load_non_rms_external.sh` *will not* load the moved feed, as it is not in the `$AIPEXTERNAL` directory yet.

---

2. After the "late files" (as listed in `latefiles.config`) are placed into the domain (in the `$AIPRMS` directory), run the appropriate `aip_batch` steps, as normal, to process inventory data.

---

---

**Note:** `process_inventory_data.sh` *will* consolidate the current inventory data feeds as prescribed in the script regardless of whether they are RMS-sourced or non-RMS-sourced. However, `process_inventory_data.sh` *will not* process any moved feed by adding stocking point prefixes, or conversion from RMS SKU to AIP SKU/SKU-pack size, as the feed is no longer listed in the appropriate configuration files as in Step 2 of the setup above.

Finally, `load_rms_replenishment_measures.sh` *will not* load the moved feed, for the same reason.

---

---

3. Manually copy the moved data feed into the `$AIPEXTERNAL` directory, with the correct extension (“`rpl`”, meaning replacement load).
4. Run `load_non_rms_external.sh` a second time (step 12 of `aip_batch.sh`). Now that the data files exist in the `$AIPEXTERNAL` directory, and are listed in the `measdata_from_external.config` file, the non-RMS load script will load the files.

---

---

## RMS Integration and Data Mapping

### RMS to AIP Data

There are two types of data which RMS is required to provide to AIP:

- Hierarchy data
- Measure data

### Hierarchy Data

#### Overview

The table below displays the hierarchy files that AIP receives from RMS.

|   | File Name | Description                        | Source          |
|---|-----------|------------------------------------|-----------------|
| 1 | loc.txt   | Location Hierarchy                 | RMS-partial (+) |
| 2 | item.txt  | Item Hierarchy (Product Hierarchy) | RMS-partial (*) |
| 3 | splr.txt  | Supplier Hierarchy                 | RMS             |
| 4 | whse.txt  | Warehouses                         | RMS-partial (*) |

(+) RMS delivers only some fields in the location hierarchy. See below for details.

(\*) These hierarchies go through a merge process with AIP Online data prior to being fully loaded into AIP RPAS.

## File Format

The Retail Extraction, Transformation, and Loading (RETL) tool provides AIP with the file format displayed in the following table.

**Note:** Customers who do not have RETL are required to provide files with this same format.

Location Hierarchy      File Name: loc.txt

| Data Entry                 | Start | Width | Source   |
|----------------------------|-------|-------|----------|
| Store                      | 1     | 20    | RMS      |
| Store Description          | 21    | 60    | RMS      |
| Site                       | 81    | 20    | RMS      |
| Site Description           | 101   | 40    | RMS      |
| Region                     | 141   | 20    | RMS      |
| Region Description         | 161   | 40    | RMS      |
| Zone                       | 201   | 20    | RMS      |
| Zone Description           | 221   | 40    | RMS      |
| Chain                      | 261   | 20    | RMS      |
| Chain Description          | 281   | 40    | RMS      |
| Company                    | 321   | 20    | RMS      |
| Company Description        | 341   | 40    | RMS      |
| TV Region                  | 381   | 4     | External |
| TV Region Description      | 385   | 24    | External |
| Weather Region             | 409   | 4     | External |
| Weather Region Description | 413   | 24    | External |
| Market Region              | 437   | 4     | External |
| Market Region Description  | 441   | 24    | External |
| Store Format               | 465   | 20    | RMS      |
| Store Format Description   | 485   | 40    | RMS      |

**Note:** In the location hierarchy file, if RMS does not provide a field value, the AIP transformation script creates a "0" for the field. RMS can provide a store format; however, it is an optional value in RMS. Store Format is **not** optional in AIP and should be set appropriately in RMS to prevent errors in AIP.

Item Hierarchy (Product Hierarchy) \* File Name: item.txt

| Data Entry                 | Start | Width | Source/Comments                |
|----------------------------|-------|-------|--------------------------------|
| AIP SKU                    | 1     | 20    | RMS                            |
| Order Multiple             | 21    | 4     | RMS                            |
| Pack Quantity              | 25    | 4     | RMS                            |
| RMS SKU                    | 29    | 20    | RMS                            |
| RMS SKU Description        | 49    | 60    | RMS                            |
| Banded Item Indicator      | 109   | 1     | RMS/banded = 1<br>Not banded=0 |
| Segment                    | 110   | 20    | RMS                            |
| Segment Description        | 130   | 60    | RMS                            |
| Sub-Category               | 190   | 20    | RMS                            |
| Sub-Category Description   | 210   | 60    | RMS                            |
| Category                   | 270   | 20    | RMS                            |
| Category Description       | 290   | 60    | RMS                            |
| Super-Category             | 350   | 20    | RMS                            |
| Super-Category Description | 370   | 60    | RMS                            |
| Business Unit              | 430   | 20    | RMS                            |
| Business Unit Description  | 450   | 60    | RMS                            |
| Company                    | 510   | 20    | RMS                            |
| Company Description        | 530   | 60    | RMS                            |
| SKU Type                   | 590   | 20    | RMS                            |
| SKU Type Description       | 610   | 100   | RMS                            |

The item.txt file maps as follows:

1. The RMS SKU to the AIP SKU.
2. The Pack Quantity and Order Multiple to the AIP SKU-pack size. AIP processing code creates a mapping table (measure) to tie the RMS SKU to the AIP SKU pack size, and uses this mapping method to send data back to RMS using the RMS SKU.

The following logic is applied:

- If the Pack Quantity is Null, then the AIP SKU-pack size equals the AIP SKU Order Multiple.
- If the Pack Quantity is not null, then the AIP SKU pack size equals the AIP SKU Pack Quantity.
- If the item is banded, the RMS SKU equals the AIP SKU.

## Mapping Table

The following table is used for mapping the RMS SKU to the AIP SKU pack size. This information is sent in the item.txt file. (See comments above):

Mapping table: (examples)

| RMS SKU | Order Multiple | Pack Quantity | AIP SKU Pack Size |
|---------|----------------|---------------|-------------------|
| 300     | 1              | (null)        | 300_1             |
| 302     | 1              | 12            | 300_12            |
| 303     | 6              | (null)        | 300_6             |

**Note:** RMS truncates fractional pack sizes before sending the data to AIP as AIP cannot handle fractional pack sizes.

Banded items mapping table: (examples)

| RMS SKU | Order Multiple | Pack Quantity | AIP SKU-Pack Size |
|---------|----------------|---------------|-------------------|
| 300     | 1              | (null)        | 300_1             |
| 302     | 1              | 12            | 302_12            |
| 303     | 6              | (null)        | 303_6             |

**Note:** RMS handles the setting of banded items in item.txt file.

Supplier hierarchy      File name: splr.txt

| Data Entry           | Start | Width | Source |
|----------------------|-------|-------|--------|
| Supplier             | 1     | 20    | RMS    |
| Supplier Description | 21    | 40    | RMS    |

Warehouse hierarchy      File name: whse.txt

| Data Entry                    | Start | Width | Source    |
|-------------------------------|-------|-------|-----------|
| Warehouse Chamber             | 1     | 20    | DM-Online |
| Warehouse Chamber Description | 21    | 40    | DM-Online |
| Warehouse                     | 61    | 20    | RMS       |
| Warehouse Description         | 81    | 40    | RMS       |

**Note:** RMS sends warehouse chamber values equal to warehouse values.

## Measure Data

### Overview

AIP receives the following measure files from RMS:

|    | File Name          | Description   | Source |
|----|--------------------|---|--------|
| 1  | dm0_pmsstasrc.txt  | Store Promotional Substitution Start Date for Warehouse | RMS    |
| 2  | dm0_pmsendsrc.txt  | Store Promotional Substitution End Date for Warehouse   | RMS    |
| 3  | dmx_dscdt_.txt     | Corporate Discontinuation Date                          | RMS    |
| 4  | dmx_vadprdasc.txt  | Value Added Commodity Association                       | RMS    |
| 5  | dmx_prdspellks.txt | Commodity-Supplier Links                                | RMS    |
| 6  | dmx_bndprdasc.txt  | Banded Item Association                                 | RMS    |
| 7  | dmx_dirspl.txt     | Direct Suppliers  | RMS    |
| 8  | sr0_curinv.txt     | Store on hand inventory (used to be historical inv)     | RMS    |
| 9  | sr0_it_.txt        | Store In transits                                       | RMS    |
| 10 | sr0_oo_.txt        | Store On Orders   | RMS    |
| 11 | sr0_prdlfe.txt     | Store Product Life                                      | RMS    |
| 12 | wr1_curinv.txt     | Current WH Inventory (on hand)                          | RMS    |
| 13 | wr1_oo_.txt        | Warehouse On Orders                                     | RMS    |
| 14 | wr1_it_.txt        | Warehouse In Transits                                   | RMS    |
| 15 | wr1_ow_.txt        | Warehouse Orders in the well                            | RMS    |
| 16 | wh_type.txt        | Warehouse Type  | RMS    |
| 17 | received_qty.txt   | RMS received quantity                                   | RMS*   |
| 18 | closed_order.txt   | RMS closed orders                                       | RMS*   |

**Note:** The last files, with \*, are files coming from RMS to AIP Online and are NOT loaded into AIP RPAS.

## File Format

The Retail Extraction, Transformation, and Loading (RETL) tool provides AIP with the file format displayed in the table below.

**Note:** Customers who do not have RETL are required to provide files with this same format.

Store Promotional Substitution Start Date for Warehouse Data

File Name: dm0\_pmsstasrc.txt

| Field Name                                | Type     | Start | Width | Source/Comments                                   |
|---|----------|-------|-------|---|
| Warehouse                                 | String   | 1     | 20    | RMS   |
| RMS SKU (Promotional)                     | String   | 21    | 20    | AIP will get the Store from store source measure. |
| Order Multiple                            | String   | 41    | 4     |   |
| Store Promotional Substitution Start Date | YYYYMMDD | 45    | 8     |   |

Store Promotional Substitution End Date for Warehouse Data

File Name: dm0\_pmsendsrc.txt

| Field Name                              | Type     | Start | Width | Source/Comments   |
|---|----------|-------|-------|---|
| Warehouse                               | String   | 1     | 20    | RMS   |
| RMS sku (Promotional)                   | String   | 21    | 20    | AIP will get the store value from the store source measure. |
| Order Multiple                          | String   | 41    | 4     |   |
| Store Promotional Substitution End Date | YYYYMMDD | 45    | 8     |   |

Corporate Discontinuation Date Data

File Name: dmx\_dscdt\_.txt

| Field Name                     | Type     | Start | Width | Source/Comments  |
|--------------------------------|----------|-------|-------|--|
| RMS sku                        | String   | 1     | 20    | RMS  |
| Order Multiple                 | String   | 21    | 4     | RMS will send today's date.  |
| Corporate Discontinuation Date | YYYYMMDD | 25    | 8     | AIP will set the ranging status at all supply locations to pending-deranged as well as initialize the stop-receiving-dates at all warehouses |

## Value Added Commodity Association

File Name: dmx\_vadprdasc.txt

| Field Name       | Type   | Start | Width | Source/Comments |
|------------------|--------|-------|-------|-----------------|
| RMS sku (child)  | String | 1     | 20    | RMS             |
| Order Multiple   | String | 21    | 4     |                 |
| RMS sku (parent) | String | 25    | 20    |                 |
| Order Multiple   | String | 45    | 4     |                 |

## Commodity-Supplier Links

File Name: dmx\_prdsplks.txt

| Field Name         | Type    | Start | Width | Source/Comments |
|--------------------|---------|-------|-------|-----------------|
| Supplier           | String  | 1     | 20    | RMS             |
| RMS sku            | String  | 21    | 20    |                 |
| Order Multiple     | String  | 41    | 4     |                 |
| SKU Supplier Links | Boolean | 45    | 1     |                 |

## Banded Item Association

File Name: dmx\_bndprdasc.txt

| Field Name        | Type   | Start | Width | Source/Comments |
|-------------------|--------|-------|-------|-----------------|
| RMS SKU (child)   | String | 1     | 20    | RMS             |
| Order Multiple    | String | 21    | 4     |                 |
| RMS SKU (parent ) | String | 25    | 20    |                 |
| Order Multiple    | String | 45    | 4     |                 |

## Direct Suppliers

File Name: dmx\_dirspl.txt

| Field Name      | Type    | Start | Width | Source/Comments |
|-----------------|---------|-------|-------|-----------------|
| Supplier        | String  | 1     | 20    | RMS             |
| Direct Supplier | Boolean | 21    | 1     |                 |

## Store Current Inventory Data

File Name: sr0\_curinv\_\*.txt

| Field Name              | Type   | Start | Width | Source/Comments                         |
|-------------------------|--------|-------|-------|---|
| Store                   | String | 1     | 20    | RMS                                     |
| RMS SKU                 | String | 21    | 20    | Order Multiple value is always one (1). |
| Store current inventory | Float  | 41    | 8     |   |

**Note:** RMS can also send the Store Current Inventory file in partitions. For example, AIP interface code can handle sr0\_curinv\_n.txt where n is the partition number.

## Store In Transits Data

File Name: sr0\_it\_.txt

| Field Name        | Type      | Start | Width | Source/Comments |
|-------------------|-----------|-------|-------|-----------------|
| Day               | DYYYYMMDD | 1     | 9     | RMS             |
| Store             | String    | 10    | 20    |                 |
| RMS sku           | String    | 30    | 20    |                 |
| Order Multiple    | String    | 50    | 4     |                 |
| Store In Transits | Float     | 54    | 8     |                 |

## Store On Orders Data

File Name: sr0\_oo\_.txt

| Field Name      | Type      | Start | Width | Source/Comments   |
|-----------------|-----------|-------|-------|---|
| Day             | DYYYYMMDD | 1     | 9     | RMS   |
| Store           | String    | 10    | 20    | RMS will send today's date with sum of all previous # of days values. |
| RMS sku         | String    | 30    | 20    |   |
| Order Multiple  | String    | 50    | 4     |   |
| Store On Orders | Float     | 54    | 8     |   |

## Store Product Life Data

File Name: sr0\_prdlfe.txt

| Field Name         | Type      | Start | Width | Source/Comments |
|--------------------|-----------|-------|-------|-----------------|
| Day                | DYYYYMMDD | 1     | 9     | RMS             |
| RMS sku            | String    | 10    | 20    |                 |
| Order Multiple     | String    | 30    | 4     |                 |
| Store Product Life | Float     | 34    | 8     |                 |

## Current Warehouse Inventory Data

File Name: wr1\_curinv.txt

| Field Name                  | Type   | Start | Width | Source/Comments |
|-----------------------------|--------|-------|-------|-----------------|
| Warehouse                   | String | 1     | 20    | RMS             |
| RMS SKU                     | String | 21    | 20    |                 |
| Order Multiple              | String | 41    | 4     |                 |
| Current Warehouse Inventory | Float  | 45    | 8     |                 |

**Note:** RMS can also send the Warehouse Current Inventory file in partitions. For example, AIP interface code can handle wr1\_curinv\_n.txt where n is the partition number.

## On Orders Data

File Name: wr1\_oo\_.txt

| Field Name     | Type      | Start | Width | Source/Comments   |
|----------------|-----------|-------|-------|---|
| Day            | DYYYYMMDD | 1     | 9     | RMS   |
| Supplier       | String    | 10    | 20    | RMS will send today's date with sum of all previous # of days values. |
| Warehouse      | String    | 30    | 20    |   |
| RMS SKU        | String    | 50    | 20    |   |
| Order Multiple | String    | 70    | 4     |   |
| On Orders      | Float     | 74    | 8     |   |

## In Transit Data

File Name: wr1\_it\_.txt

| Field Name     | Type      | Start | Width | Source/Comments |
|----------------|-----------|-------|-------|-----------------|
| Day            | DYYYYMMDD | 1     | 9     | RMS             |
| Supplier       | String    | 10    | 20    |                 |
| Warehouse      | String    | 30    | 20    |                 |
| RMS SKU        | String    | 50    | 20    |                 |
| Order Multiple | String    | 70    | 4     |                 |
| In Transit     | Float     | 74    | 8     |                 |

## Orders in the Well Data

File Name: wr1\_ow\_.txt

| Field Name         | Type      | Start | Width | Source/Comments   |
|--------------------|-----------|-------|-------|---|
| Day                | DYYYYMMDD | 1     | 9     | RMS   |
| Warehouse          | String    | 10    | 20    | RMS will send today's date with sum of all pervious # of days values. |
| RMS SKU            | String    | 30    | 20    |   |

## Overview

AIP requires the following text files that need to be processed from an external system.

The list of text files that needs to be processed by the merchandising system are:

- Closed POs
- Item Sale
- Item Supplier
- Location Mapping
- Received Qty
- Store Current Inv
- Store Product Life
- Substitute Items
- Supplier
- Warehouse Current Inv
- Warehouse
- Item

In this guide we explain about how to extract the text files from RMS into AIP.

We use shell scripts, RETL scripts and merging and transformation of data from various tables in RMS to get the desired text files.

---

---

**Note:** Implementers can use these below mentioned mapping information steps to extract data from any other Merchandizing system with minimal customization.

---

---

## RMS-AIP Closed Purchase Orders Mapping

### Transformation Overview

No transformation is required for Closed Purchase Orders and Transfers feed. Extract program directly produces file closed\_order.dat required by AIP.

#### Data Element Details

| Data Type   | Data Element Name      | Data Description                                       |
|---|------------------------|--|
| N/A<br>This data is not loaded into RPAS. It is loaded directly into an Oracle table. | Closed Purchase Orders | Contains Closed Purchase Orders and Transfers numbers. |

#### Extracting Program Details

|                          |                                  |
|--------------------------|----------------------------------|
| <b>Program Type</b>      | Shell script wrapper around RETL |
| <b>Program Name</b>      | rmse_aip_cl_po.ksh               |
| <b>Schema File</b>       | rmse_aip_cl_po.shcema            |
| <b>Program Frequency</b> | Daily                            |

#### Data Source and Target Details

| Data Source Details     |                     | Target Data Details |                        |
|-------------------------|---------------------|---------------------|------------------------|
| Data Origin System      | RMS                 | Target Object Type  | Fixed length Text File |
| Source Table(s)/File(s) | ORDHEAD and TSFHEAD | Target Object Name  | closed_order.dat       |
|                         |                     | Target Load Type    | Full                   |

#### Field Level Mapping – Source

| # | Source Table | Source Table Column | Source Field Description | Source Data Type | Field Length |
|---|--------------|---------------------|--------------------------|------------------|--------------|
| 1 | ORDHEAD      | SUPPLIER            | Supplier                 | Number           | (8,0)        |
|   | TSFHEAD      | FROM_LOC            | Warehouse                |                  |              |
| 2 | N/A          | N/A                 | N/A                      | N/A              | N/A          |

---

**Field Level Mapping – Target**

---

| # | Target Data Field Name | Target Field Description | Target Field Data Type | Target Field Length | Condition/Format   |
|---|------------------------|--------------------------|------------------------|---------------------|--|
| 1 | ORDER_NUMBER           | Order Number             | int                    | 10                  | N/A  |
| 2 | ORDER_TYPE             | Order Type               | string                 | 1                   | Hard coded as 'P' for the records from ORDHEAD for POs and 'T' for the records from TSFHEAD for Transfers. |

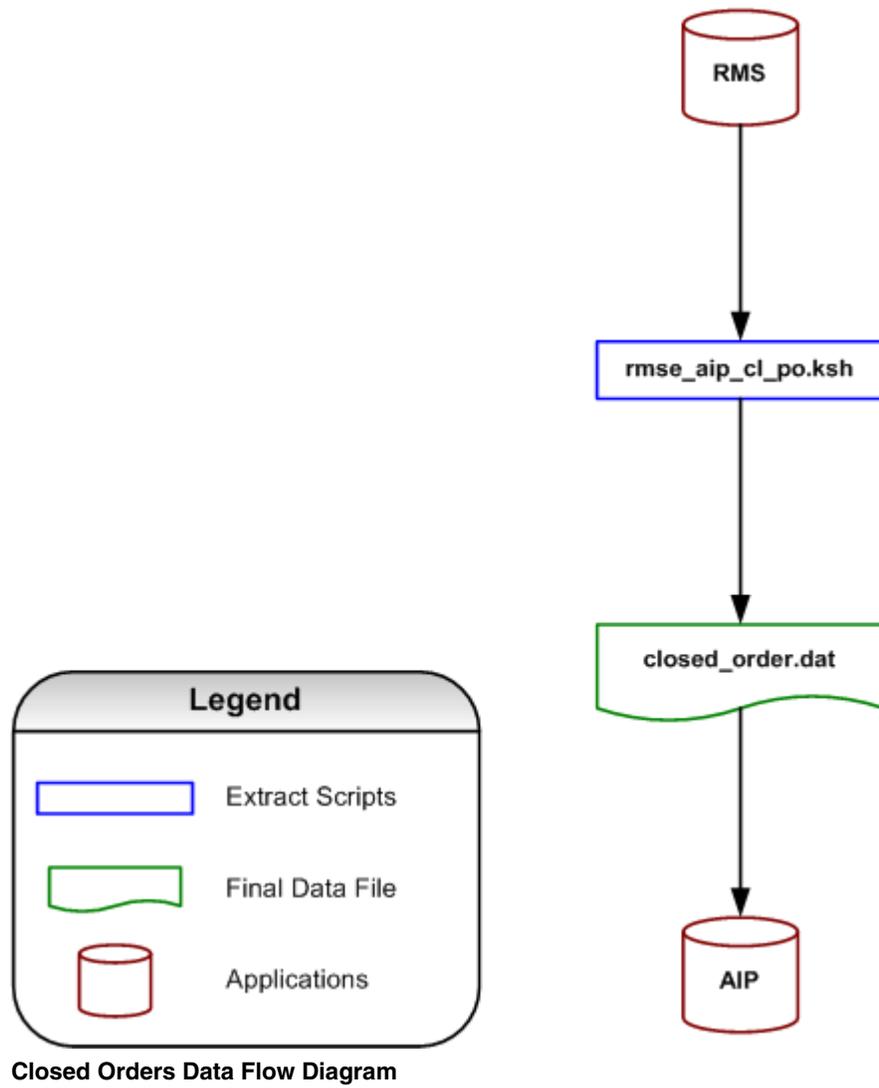

---

**Filtering Conditions**

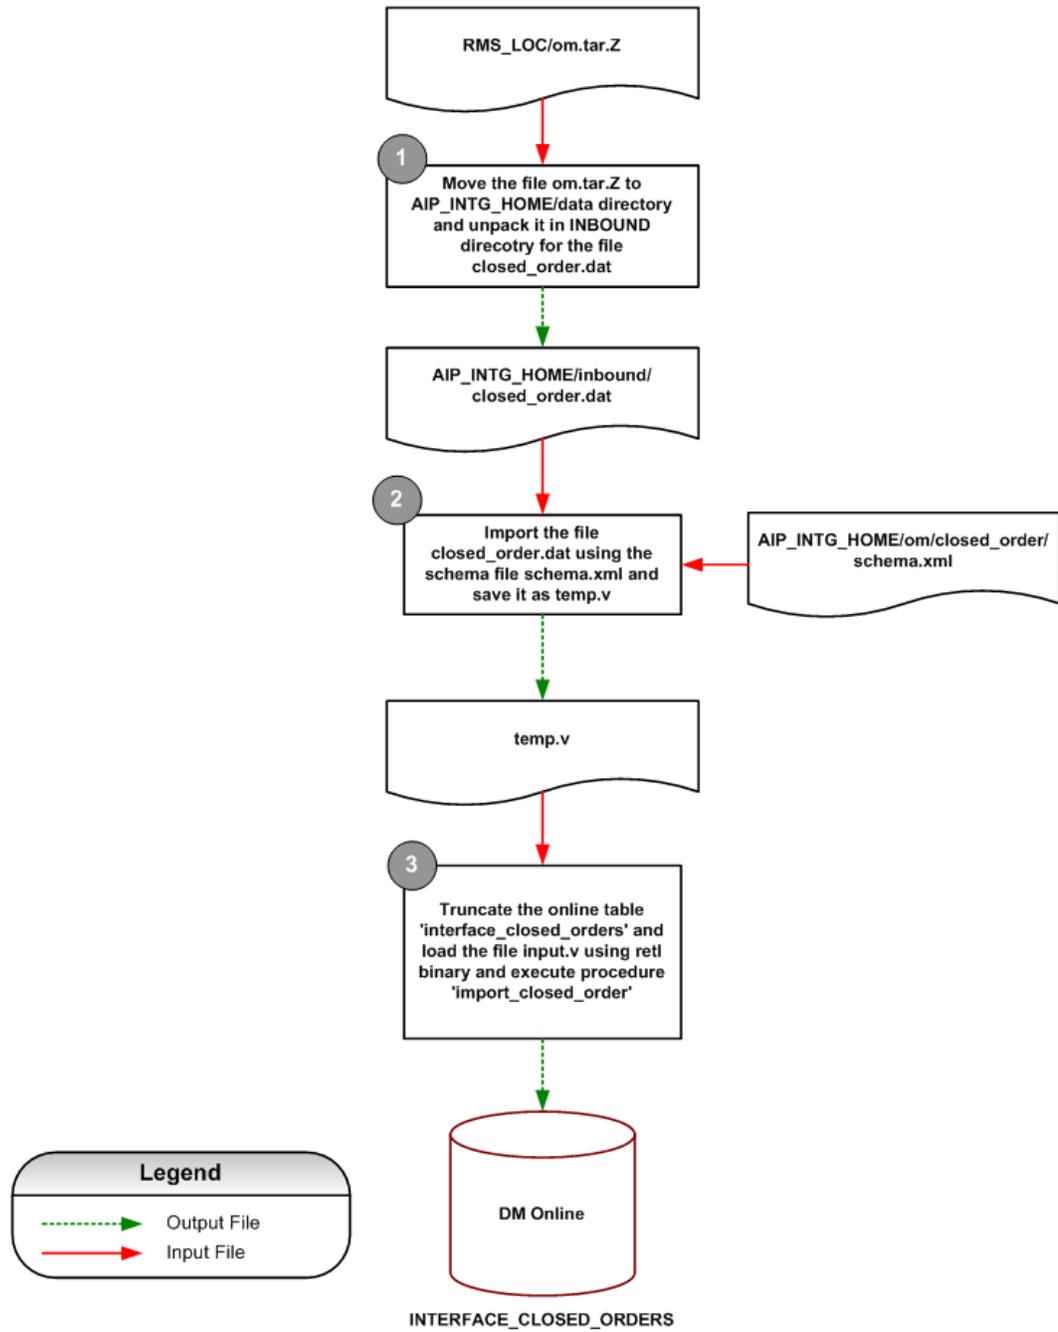

```
(oh.CLOSE_DATE IS NOT NULL) AND (oh.ORIG_IND='6') AND (oh.CLOSE_DATE >
to_date('${LAST_EXTR_CLOSED_POT_DATE}', 'yyyymmdd'))
```

```
(tsf.CLOSE_DATE IS NOT NULL) AND (tsf.TSF_TYPE = 'AIP') AND (tsf.CLOSE_DATE >
to_date('${LAST_EXTR_CLOSED_POT_DATE}', 'yyyymmdd'))
```

## Closed Orders Data Flow

### Closed Order – Online Load Process

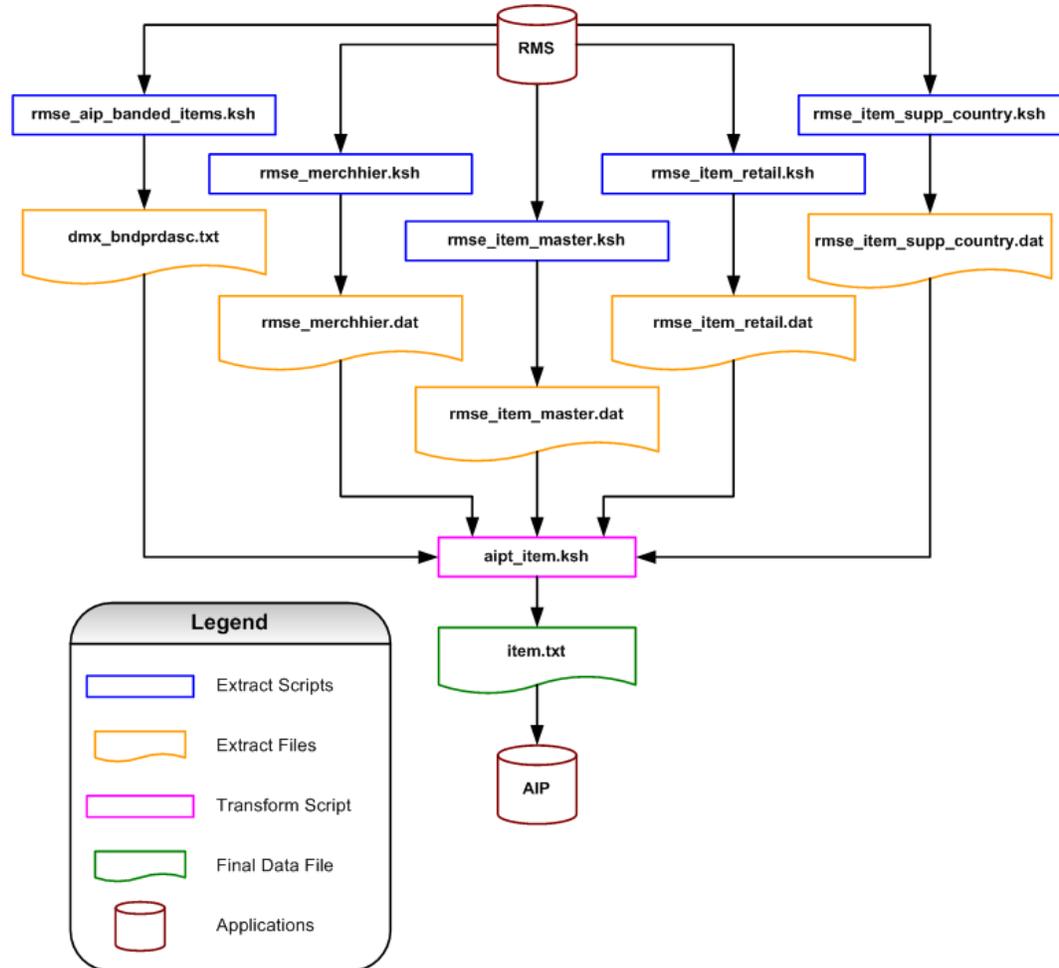

Closed Order – Online Load Process Diagram

# RMS-AIP Item Mapping

## Transformation Overview

A new AIP transformation program, aipt\_item.ksh, will first join the item master and item supplier country extracts, followed by merging the result with the item retail extracts, and then join the result to merchandise hierarchy extract and then join the result to banded item extract to produce final item file item.txt.

## Item Data Flow

Item Data Flow Diagram

## Banded Item Extract

### Data Element Details

| Data Type  | Data Element Name    | Data Description  |
|------------|----------------------|---|
| Foundation | RMS banded item data | Contains banded items information like promotional items. |

### Extracting Program Details

|                          |                                  |
|--------------------------|----------------------------------|
| <b>Program Type</b>      | Shell script wrapper around RETL |
| <b>Program Name</b>      | rmse_aip_banded_items.ksh        |
| <b>Schema File</b>       | rmse_aip_dmx_bndprdasc.schema    |
| <b>Program Frequency</b> | Daily                            |

### Data Source and Target Details

| Data Source Details     |   | Target Data Details |                        |
|-------------------------|---|---------------------|------------------------|
| Data Origin System      | RMS   | Target Object Type  | Fixed Length Text File |
| Source Table(s)/File(s) | ITEM_MASTER<br>V_PACKSKU_QTY<br>ITEM_SUPP_COUNTRY | Target Object Name  | dmx_bndprdasc.txt      |
|                         |   | Target Load Type    | Full                   |

### Field Level Mapping – Source

| # | Source Table      | Source Table Column | Source Field Description | Source Data Type | Field Length |
|---|-------------------|---------------------|--------------------------|------------------|--------------|
| 1 | V_PACKSKU_QTY     | PACK_NO             | Item                     | Varchar2         | 25           |
| 2 | ITEM_SUPP_COUNTRY | SUPP_PACK_SIZE      | Supplier Pack Size       | Number           | (12,4)       |
| 3 | ITEM_MASTER       | ITEM                | Item                     | Varchar2         | 25           |
| 4 | ITEM_SUPP_COUNTRY | SUPP_PACK_SIZE      | Supplier Pack Size       | Number           | (12,4)       |

### Field Level Mapping – Target

| # | Target Data Field Name     | Target Field Description    | Target Field Data Type | Target Field Length | Condition/Format |

## Corporate Discontinued Date – AIP Load Process

Corporate Discontinued Date AIP Load Process Diagram

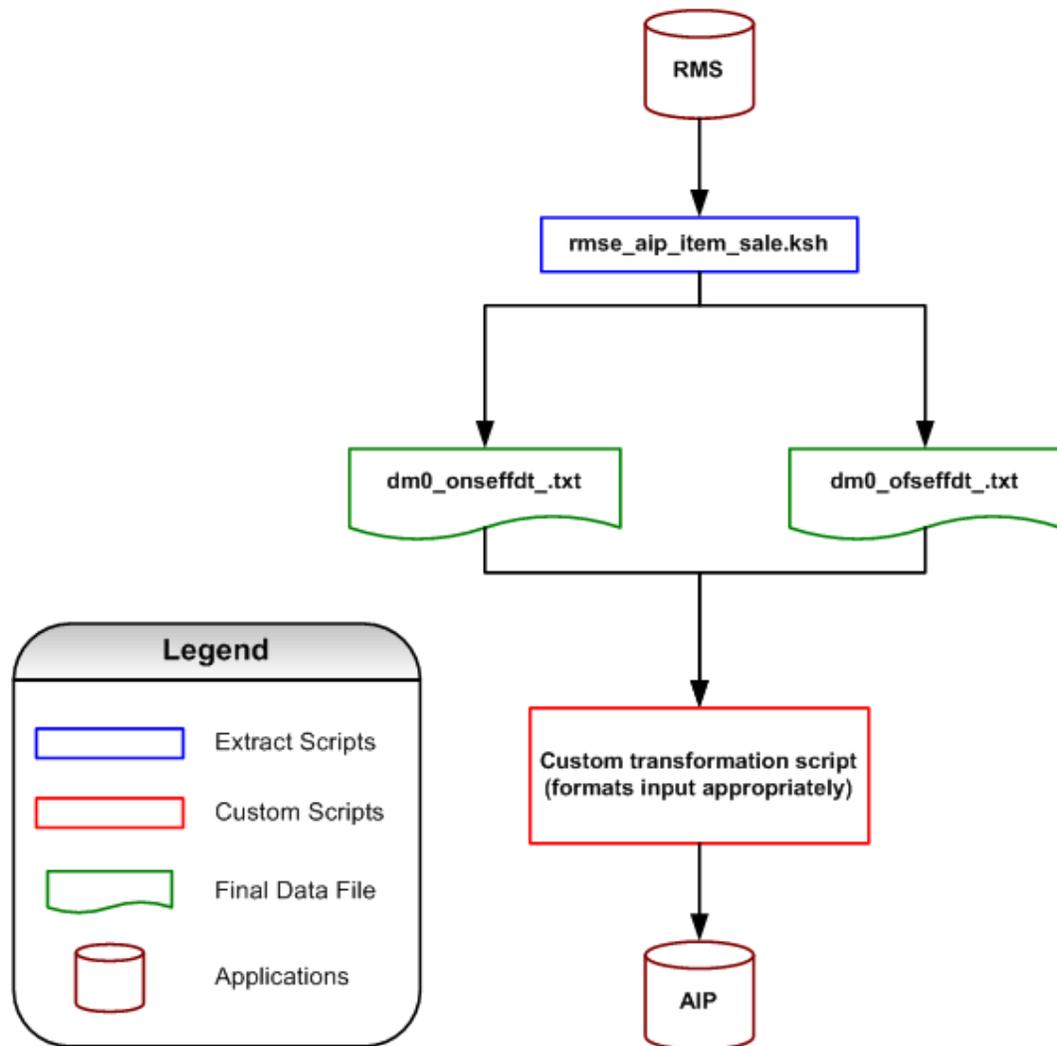

## RMS-AIP Item Sale Mapping

AIP cannot load the on sale/off sale files that RMS produces. The file is considered to be coming from an external system. The client can simply create a transformation on the RMS files. This custom transformation is needed before these files can be loaded into AIP.

### Item Sale Data Flow

#### Transformation Overview

A custom transformation is required in order for AIP to load dm0\_onseffdt.txt and dm0\_ofseffdt.txt. The transformation should drop the Order multiple and only retain the single unique on sale date and off sale date for the SKU/Store. This script needs to place the file in the external files inbound directory.

# RMS-AIP Item Supplier Mapping

## Item Supplier Data Flow

A new RMS extract, `rmse_item_supp_country.ksh`, will produce a data file, `dmx_prdspllks.txt`, containing item, supplier, order multiple and commodity supplier link indicator information. The `rmse_aip_item_supp_country.dat` is also to be used as input file for AIP item transformation, `aip_item.ksh`, to produce `item.txt` file.

Product Supplier Link Load Process Diagram

## RMS-AIP Location Mapping

### Location Data Flow

Transformation Overview: Combines Organization hierarchy data with store data and then the result will be added with 6 new fields and then exported as loc.txt file.

### Received Quantity Online Load Process

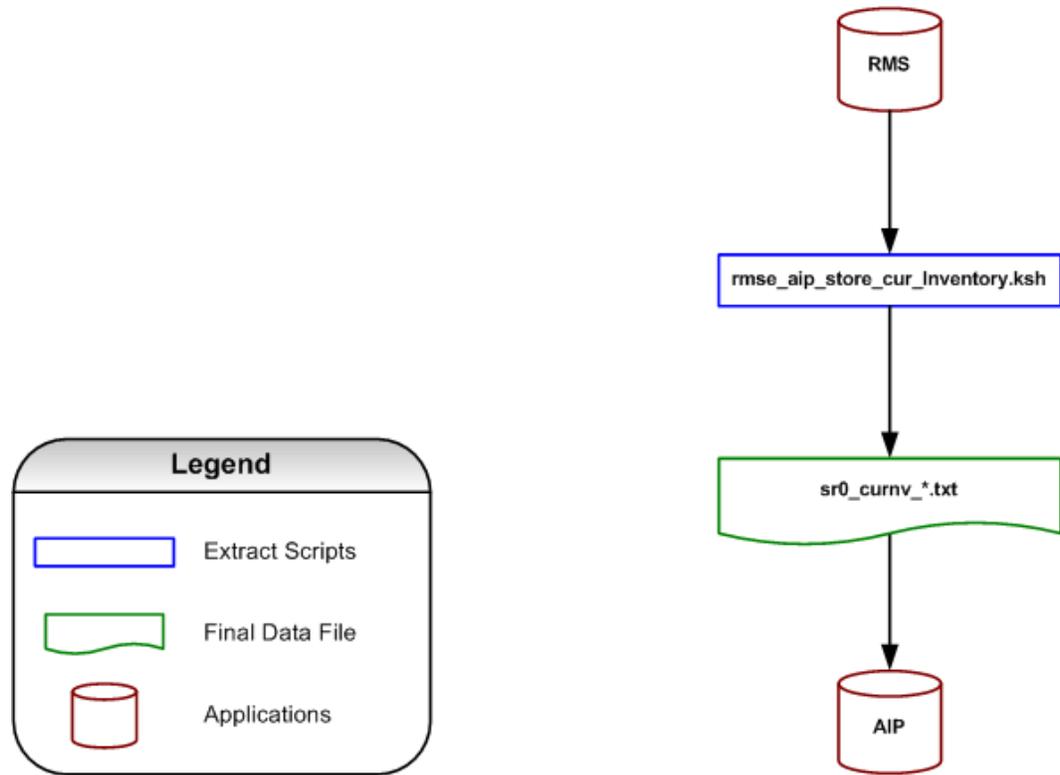

Received Quantity Online Load Process Diagram

## Store Current Inventory Mapping

The final output files required by AIP will be created directly by these extracts with all necessary data transformations performed in the extract modules. No separate data transformation modules will be created. The reason that all transformations will be done in the extract modules directly is because some of the mathematical operations needed (such as the MOD function) do not exist in RETL and therefore these must be done during the Oracle SQL SELECT process.

## Store Current Inventory Data Flow

### Store Current Inventory – AIP Load Process

Store Current Inventory AIP Load Process Diagram

## RMS-AIP Store Product Life

### Store Product Life Data Flow

#### Transformation Overview

A new AIP transformation program, `aip_item.ksh`, will first join the item location traits and item master extracts, followed by merging the result with the store extracts, and then join the result to item supplier country extract and then export the result as `sr0_prdlfe.txt`.

## Store Product Life – AIP Load Process

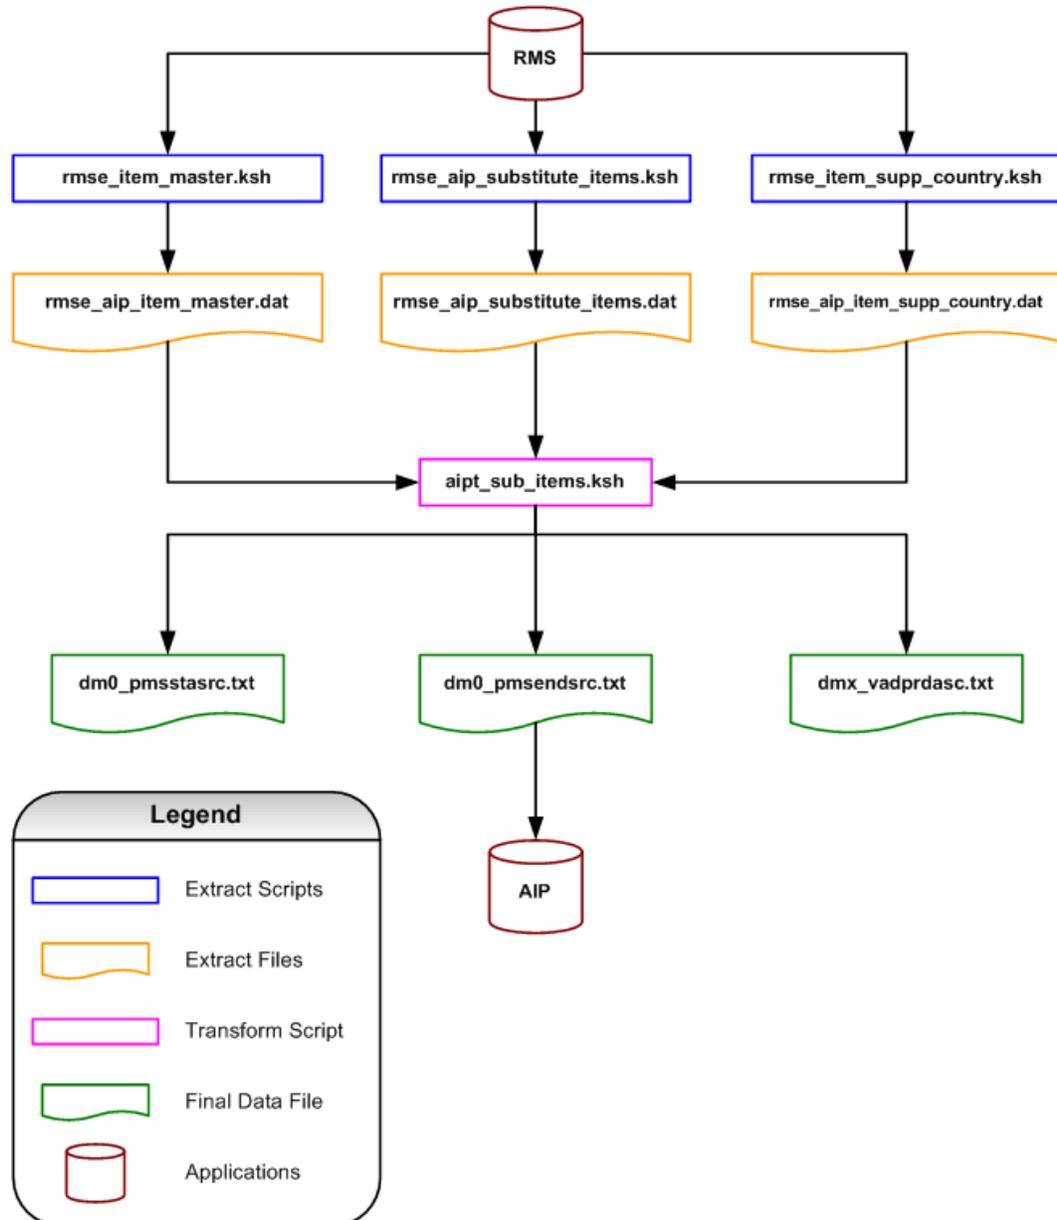

Store Product Life – AIP Load Process Diagram

## RMS-AIP-Substitute Items Mapping

### Substitute Items Data Flow

#### Transformation Overview

A new AIP transformation program, `aipt_sub_items.ksh`, will first join the item master and item substitutes extracts, followed by merging the result with the item supplier country extracts, and the result will be exported as promotional start dates file, promotional end dates file and Valued added commodities file.

Supplier Load Process into AIP RPAS Diagram (2 of 2)

## RMS-AIP-Warehouse Current Inv Mapping

### Warehouse Current Inventory Data Flow

The final output files required by AIP will be created directly by these extracts with all necessary data transformations performed in the extract modules. No separate data transformation modules will be created. The reason that all transformations will be done in the extract modules directly is because some of the mathematical operations needed (such as the MOD function) do not exist in RETL and therefore these must be done during the Oracle SQL SELECT process.

# AIP to RMS Interfaces and Data Mapping

## RIB Publications

The Oracle Retail Integration Bus (RIB) is a near real-time data synchronization solution used by AIP for publishing orders to RMS. Order publication begins with the order release batch adding the affected order to the appropriate message family queue staging table and marking each message with a sequence number. AIP publishes two sets of order messages to the RIB, Purchase Orders, and Transfers. RMS subscribes to the RIB messages and inserts the orders into the appropriate RMS Purchase Order and Transfer tables.

## AIP Message Flow

A polling operation on the database triggers the message creation. The polling is performed by two threads:

- One for the PO\_MFQUEUE staging table
- One for the TSF\_MFQUEUE staging table

The polling is controlled by the configuration settings in the main.properties file.

- The order period count defines the number of time intervals that are to be used. An order period count of 0 indicates that no orders will be released. If the order period count is 0, no threads are started.
- The time interval defines the amount of time the threads sleep. A thread will not go to sleep until less than the maximum number of allowable messages is processed in a given call to the publisher (`OrderSenderBean`). Publishing less than the maximum allowable messages indicates that all orders on the staging table (at the time it was queried) have been processed. Any orders added to the staging table afterward will be processed the next time the thread wakes up and the publisher is invoked.
- For each order period count greater than zero, an order period start and order period end must be added to the properties file. When the thread wakes up and the current time falls between the start and end of any of the intervals (up to X intervals where X is the order period count), the thread will call the publication procedure. If desired, various time intervals can be created to manage the publication of orders by forcing the threads to only poll the staging tables between certain time periods.
- The publisher is an Enterprise Java Session Bean named `OrderSenderBean`. The `checkAndPublish` method will query the staging table and the base order table to get the message detail. The publisher will also ensure that messages are published to the RIB in the correct order.
- Once the message payload is built by the `OrderSenderBean`, the RIB message publisher takes the payload and wraps it with an envelope used by the RIB infrastructure.

## Purchase Order Messages

The purchase order publication messages are in the XOrder message family. In AIP, this message family processes the staged orders on the PO\_MFQUEUE table.

There are four purchase order message types used by AIP:

- XORDERCRE
- XORDERDTLCRE
- XORDERMOD
- XORDERDTLMOD.

All four message types use the XOrderDesc.xsd.

### XORDERCRE

This message type indicates that a brand new purchase order is being sent to RMS. The orders are sent to RMS in an 'A'pproved status. This message type is inserted into PO\_MFQUEUE in three different circumstances:

1. The purchase order was released by the batch, or you have chosen to release the purchase order in the OM Order Maintenance screen.
2. You have created a new purchase order in the OM Order Create screen.
3. In the OM Order Maintenance screen, you have chosen to move a purchase order delivery date and/or destination and generated a new order number.

### XORDERDTLCRE

This message type indicates a new line item is being added to the purchase order after the order was externally communicated. This message type is inserted into PO\_MFQUEUE when you have moved the purchase order destination and chosen to retain the existing order number, and the destination does not already exist on the order for that item.

### XORDERMOD

This message type indicates that a modification was made to the overall purchase order details (header level information). This message type is inserted into PO\_MFQUEUE in the following circumstances:

1. You have moved the purchase order delivery date and chosen to retain the existing order number.
2. You have canceled all ordered quantity of all items on the purchase order. The total order quantity for the entire purchase order is zero. The purchase order is sent to RMS with a 'C'anceled status.

## XORDERDTLMOD

This message type indicates that a modification was made to the purchase order line items after the order was externally communicated. This message type is inserted into PO\_MFQUEUE when you perform various actions in the OM Order Maintenance screen.

1. You have modified the order quantity of a purchase order that is not “Closed.”
2. You have chosen to move a purchase order line item to a new destination and retain the order number. If the “move to” destination already exists on the order, a message will be written to the staging table to increase the quantity at the “move to” location.

---

**Note:** Only one message can be inserted for the “move to” destination. This will either be an XORDERDTLCRE if the destination is new or XORDERDTLMOD if the SKU is already being delivered to the “move to” destination.

---

The order quantity of the “move from” destination must be decremented to equal the received quantity. A message will be staged for the “move from” destination.

## Transfer Messages

The transfer publication messages are in the XTsf message family. In AIP, this message family processes the staged orders on the TSF\_MFQUEUE table.

There is one transfer message type used by AIP, XTSFCRE, and it uses the XTsfDesc.xsd.

## XTSFCRE

This message type indicates that a brand new transfer is being sent to RMS. The transfers are sent to RMS in an ‘A’pproved status. This message type is inserted into TSF\_MFQUEUE when the transfer is released by the batch.

## AIP to RMS Data

The Order Management application within AIP releases the necessary data to be sent to RMS into staging tables.

## Messages Layout

### Purchase Order Header Message Layout

| Column Name                  | Data Type | RIB XML Message Tag               | Description/Comments   |
|------------------------------|-----------|-----------------------------------|--|
| Order Number                 | string    | order_no                          | Pre-defined unique number  |
| Supplier ID                  | string    | supplier                          | Supplier unique identifier   |
| Currency Code                | string    | currency_code                     |  |
| Terms                        | string    | Terms                             |  |
| Delivery Date                | RIBDate   | not_before_date<br>not_after_date | Earliest expected delivery date.<br>Latest expected delivery date.   |
| Open-to-buy End-of-Week Date | RIBDate   | otb_eow_date                      |  |
| Department                   | number    | dept                              |  |
| Status                       | string    | Status                            | A status value of "W"orksheet or "A"pproved is required for purchase order creation. A purchase order may not be created in approved status without detail line items attached to it. Attempting to do so will result in message rejection |
| Exchange Rate                | number    | exchange_rate                     |  |
| Include on Order indicator   | string    | include_on_ord_ind                |  |
| Written Date                 | RIBDate   | written_date                      |  |
| Order Line Item Detail       | Pointer   | XOrderDtl                         | This is a pointer to the line item details. Depending on the message type, this tag is repeated for each line item. See below for the Order Detail Message layout.   |
| Origin Indicator             | String    | orig_ind                          | Indicates the System of Origination.   |
| EDI                          | string    | edi_po_ind                        |  |
| Pre-Mark Indicator           | String    | pre_mark_ind                      |  |
| User ID                      | String    | user_id                           |  |
| Comments                     | String    | Comment_desc                      |  |

### Purchase Order – Detail Message Layout

| Column Name              | Data Type | RIB XML Message Tag         | Description/Comments  |
|--------------------------|-----------|-----------------------------|---|
| RMS SKU                  | string    | XOrderDtl.item              | Uses the RMS SKU mapping table to convert AIP commodity pack size into RMS SKU. |
| Location                 | integer   | XOrderDtl.location          | Globally unique scheduling location identifier                                  |
| Unit Cost                | decimal   | xOrderDtl.unit_cost         | Not Available   |
| Reference item           | string    | xOrderDtl.ref_item          |   |
| Origin Country Indicator | string    | xOrderDtl.origin_conunty_id |   |
| Supplier Pack Size       | decimal   | XOrderDtl.suppack_size      |   |
| Order Quantity           | decimal   | XOrderDtl.qty_ordered       |   |
| Location Type            | string    | XorderDtl.location_type     | Order Destination Type: Store or Warehouse                                      |
| Cancel Indicator         | string    | xOrderDtl.cancel_ind        |   |
| Reinstate Indicator      | string    | xOrderDtl.reinstate_ind     |   |

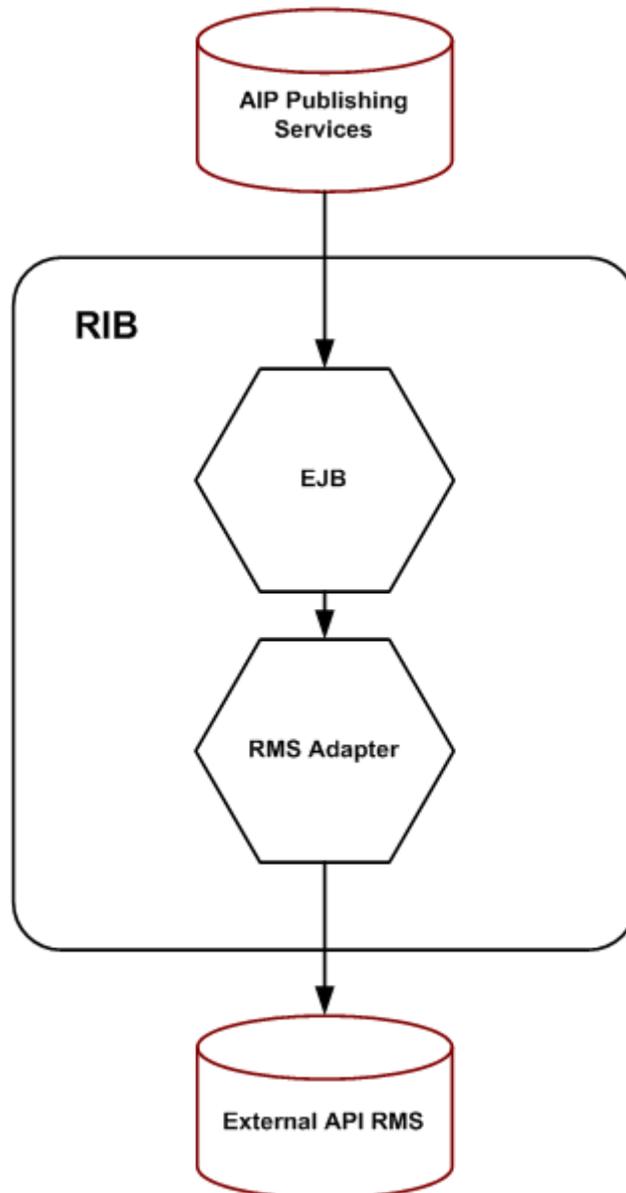

### Transfers – Header Message Layout

| Column Name        | Data Type | RIB XML Message Tag | Description/Comments         |
|--------------------|-----------|---------------------|------------------------------|
| Transfer Number    | Integer   | tsf_no              | Pre-defined unique number    |

### Field Level Mapping – Target

| #  | Target Data Field Name | Target Field Description   | Field Data Type | Field Length | Condition/Format   |
|----|------------------------|--|-----------------|--------------|--|
| 1  | order_no               | The unique identifier for the order  | Varchar2        | 10           | N/A  |
| 2  | supplier               | The identifier of the supplier from which the order will be sourced. This cannot be modified if details exist for the PO.                                      | Varchar2        | 10           | A substring is used to drop the "V" prefix that is appended to all RMS supplier numbers.   |
| 3  | currency_code          | The code of the order's currency.  | Varchar2        | 3            | Hardcoded as NULL  |
| 4  | terms                  | The sales terms of the order.  | Varchar2        | 15           | Hardcoded as NULL  |
| 5  | not_before_date        | The first date that delivery will be accepted.   | Date            |              | Select the minimum delivery date from the order line items which are not closed. All order line items which are not closed will have the same delivery date. |
| 6  | not_after_date         | The last date that delivery will be accepted.  | Date            |              | Select the maximum delivery date from the order line items which are not closed. All order line items which are not closed will have the same delivery date. |
| 7  | otb_eow_date           | The end of week date of the OTB bucket used.   | Date            |              | Hardcoded as NULL  |
| 8  | dept                   | The department in which are all the items on the order.  | Number          | 4            | Hardcoded as NULL  |
| 9  | status                 | The code for the status of the order. Valid values are "W" worksheet and 'A' approved for PO creation. It is also possible to modify the status to 'C' closed. | Varchar2        | 1            | The table column has a default of 'A'  |
| 10 | exchange_rate          | The rate of exchange for the PO used between the order and primary currencies.   | Number          | 20           | Hardcoded as NULL  |
| 11 | include_on_ord_ind     | Indicates if the order should be included in on-order calculations.  | Varchar2        | 1            | Hardcoded as NULL  |
| 12 | written_date           | The date the order was created.  | Date            |              | Hardcoded as NULL  |

| #  | Target Data Field Name       | Target Field Description   | Field Data Type | Field Length | Condition/Format  |
|----|------------------------------|--|-----------------|--------------|---|
| 13 | <b>XORDER Detail Records</b> |  |                 |              |   |
|    | item                         | An approved, transaction level item  | Varchar2        | 25           | N/A   |
|    | location                     | An active store or warehouse   | Number          | (10,0)       | A substring is used to drop the "S" prefix that is appended to all RMS store numbers and to drop the "W" prefix that is appended to all RMS warehouse numbers.  |
|    | unit_cost                    | The cost of the item from the supplier in the order's currency                   | Number          | (20,4)       | Hardcoded as NULL   |
|    | ref_item                     | The id of a reference item which can be used instead of using the item field     | Varchar2        | 25           | Hardcoded as NULL   |
|    | origin_country_id            | The identifier of the country from which the item is being sourced               | Varchar2        | 3            | Hardcoded as NULL   |
|    | supp_pack_size               | The supplier pack size for the item on the order                                 | Number          | (12,3)       | The AIP SKU-pack size is mapped to the RMS Item and Order Multiple.   |
|    | qty_ordered                  | The quantity ordered of item   | Number          | (12,4)       | Non-pack SKUs:<br>store_order.case_volume x commodity_mapping.pack_size·non_contents_order.quantity x commodity_mapping.pack_size<br>Formal Pack SKUs:<br>store_order.case_volume·non_contents_order.quantity |
|    | location_type                | The location type of the location  | Varchar2        | 1            | S indicates the destination location is a store.<br>W indicates the destination location is a warehouse.  |
|    | cancel_ind                   | Indicates if the detail record's quantity should be cancelled                    | Varchar2        | 1            | Hardcoded as NULL   |
|    | reinstate_ind                | Indicates if a detail record which was previously cancelled should be reinstated | Varchar2        | 1            | Hardcoded as NULL   |

| #  | Target Data Field Name | Target Field Description  | Field Data Type | Field Length | Condition/Format   |
|----|------------------------|---|-----------------|--------------|--|
| 14 | origin_ind             | Indicates where the order originated. Valid values include: 2 - Manual, 6 - AIP generated order, 7, 8.  | Varchar2        | 1            | 6 is a unique RMS identifier that indicates the PO was created in AIP and is hardcoded |
| 15 | edi_po_ind             | Indicates whether or not the order will be transmitted to the supplier via an Electronic Data Exchange transaction. Valid values are: Y = Submit via EDI, N = Do not use EDI. | Varchar2        | 1            | Hardcoded as NULL  |
| 16 | pre_mark_ind           | This field indicated whether or not a supplier has agreed to break an order into separate boxes so that the boxes can be sent directly to stores.                             | Varchar2        | 1            | Hardcoded as NULL  |
| 17 | user_id                | Indicates where the order was approved. It will be the user ID of the person approving the order.   | Varchar2        | 30           | Hardcoded as NULL  |
| 18 | comment_desc           | Any comments pertaining to the order.   | Varchar2        | 2000         | Hardcoded as NULL  |

## Create Order Layout – XORDERDTLCRE

The Order Detail create message is the same format and basic content as the Order Create message; however, the message will only contain any **new** order line items. Any line items which have already been communicated to RMS will not be included in a Order Detail Create message.

| 6  | not_after_date         | The last date that delivery will be accepted.  | Date                   |              | Select the maximum delivery date from the order line items which are not closed. All order line items which are not closed will have the same delivery date. |
| 7  | otb_eow_date           | The end of week date of the OTB bucket used.   | Date                   |              | Hardcoded as NULL  |
| 8  | dept                   | The department in which are all the items on the order.  | Number                 | 4            | Hardcoded as NULL  |
| 9  | status                 | The code for the status of the order. Valid values are "W" worksheet and 'A' approved for PO creation. It is also possible to modify the status to 'C' closed. | Varchar2               | 1            | The table column has a default of 'A'. If all order quantities are 0 the status of 'C'ancel must be sent to RMS.   |
| 10 | exchange_rate          | The rate of exchange for the PO used between the order and primary currencies.   | Number                 | 20           | Hardcoded as NULL  |
| 11 | include_on_ord_ind     | Indicates if the order should be included in on-order calculations.  | Varchar2               | 1            | Hardcoded as NULL  |
| 12 | written_date           | The date the order was created.  | Date                   |              | Hardcoded as NULL  |

| #  | Target Data Field Name | Target Field Description  | Target Field Data Type | Field Length | Condition/Format   |
|----|------------------------|---|------------------------|--------------|--|
| 13 | origin_ind             | Indicates where the order originated. Valid values include: 2 - Manual, 6 - AIP generated order, 7 , 8.   | Varchar2               | 1            | 6 is a unique RMS identifier that indicates the PO was created in AIP and is hardcoded |
| 14 | edi_po_ind             | Indicates whether or not the order will be transmitted to the supplier via an Electronic Data Exchange transaction. Valid values are: Y = Submit via EDI, N = Do not use EDI. | Varchar2               | 1            | Hardcoded as NULL  |
| 15 | pre_mark_ind           | This field indicated whether or not a supplier has agreed to break an order into separate boxes so that the boxes can be sent directly to stores.                             | Varchar2               | 1            | Hardcoded as NULL  |
| 16 | user_id                | Indicates where the order was approved. It will be the user ID of the person approving the order.   | Varchar2               | 30           | Hardcoded as NULL  |
| 17 | comment_desc           | Any comments pertaining to the order.   | Varchar2               | 2000         | Hardcoded as NULL  |

## Modify Order Layout – XORDERDTLMOD

The Order Detail Modification message is the same format and similar content as the Order Create message; however, the message will only contain any **modified** order line items. Any line items which have already been communicated to RMS but have not been modified will not be included in an Order Detail Modification message.

**Field Level Mapping – Target**

The target table for all data is ORDHEAD.

| #  | Target Data Field Name | Target Field Description  | Field Data Type | Field Length | Condition/Format  |
|----|------------------------|---|-----------------|--------------|---|
| 1  | ORDER_NO               | The unique identifier for the order   | NUMBER          | (8,0)        | N/A   |
| 2  | ORDER_TYPE             | Order Type  | VARCHAR2        | 3            | Hardcode as 'N/B' at destination  |
| 3  | DEPT                   |   | NUMBER          | (4,0)        | Hardcoded as NULL at Source   |
| 4  | BUYER                  |   | NUMBER          | (4,0)        | NULL  |
| 5  | SUPPLIER               | The identifier of the supplier from which the order will be sourced. This cannot be modified if details exist for the PO. | NUMBER          | (10,0)       | A substring is used to drop the "V" prefix that is appended to all RMS supplier numbers.  |
| 6  | SUPP_ADD_SEQ_NO        | Supplier Address Sequence Number  | NUMBER          | (4,0)        | Populated with primary address sequence number for the primary supplier                   |
| 7  | LOC_TYPE               | Location Type   | VARCHAR2        | 1            | NULL  |
| 8  | LOCATION               | Location Type   | NUMBER          | (10,0)       | NULL  |
| 9  | PROMOTION              | Promotion Number  | NUMBER          | (10,0)       | NULL  |
| 10 | QC_IND                 | QC Indicator  | VARCHAR2        | 1            | Hardcoded as 'N' at destination   |
| 11 | WRITTEN_DATE           | The date order was created  | DATE            |              | Hardcoded as today's Vdate  |
| 12 | NOT_BEFORE_DATE        | The first date that delivery will be accepted.  | DATE            |              | If Source value is NULL, then Vdate<br>Else Source Value.                                 |
| 13 | NOT_AFTER_DATE         | The last date that delivery will be accepted.   | DATE            |              | If Source value is NULL, then Vdate<br>Else Source Value.                                 |
| 14 | OTB_EOW_DATE           | The end of week date of the OTB bucket used.  | DATE            |              | Populated with EOW date for the date NOT_AFTER_DATE at destination                        |
| 15 | EARLIEST_SHIP_DATE     | Earliest Shipment Date  | DATE            |              | Populated as NOT_BEFORE_DATE at destination   |
| 16 | LATEST_SHIP_DATE       | Latest Shipment Date  | DATE            |              | Calculated at destination as NOT_BEFORE_DATE + LATEST_SHIP_DAYS from SYSTEM_OPTIONS table |

| #  | Target Data Field Name | Target Field Description   | Field Data Type | Field Length | Condition/Format   |
|----|------------------------|--|-----------------|--------------|--|
| 17 | CLOSE_DATE             | Order Close Date   | DATE            |              | Hardcoded as NULL  |
| 18 | TERMS                  | The sales terms of the order.  | VARCHAR2        | 15           | Populated as TERMS of primary supplier from SUPS table   |
| 19 | FREIGHT_TERMS          | The freight terms of the order.  | VARCHAR2        | 30           | Populated as FREIGHT_TERMS of primary supplier from SUPS table                                   |
| 20 | ORIG_IND               | Indicates where the order originated. Valid values include: 2 - Manual, 6 - AIP generated order, 7, 8. | NUMBER          | (1,0)        | 6 is a unique RMS identifier that indicates the PO was created in AIP and is hardcoded at source |
| 21 | CUST_ORDER             | Customer Order Indicator   | VARCHAR2        | 1            | Hardcoded as 'N' at destination  |
| 22 | PAYMENT_METHOD         | Payment Method for the Order   | VARCHAR2        | 6            | Populated as PAYMENT_METHOD of primary supplier from SUPS table                                  |
| 23 | BACKHAUL_TYPE          | Backhaul Type  | VARCHAR2        | 6            | NULL   |
| 24 | BACKHAUL_ALLOWANCE     | Backhaul Allowance   | NUMBER          | (20,4)       | NULL   |
| 25 | SHIP_METHOD            | Shipping Method  | VARCHAR2        | 6            | Populated as SHIP_METHOD of primary supplier from SUPS table                                     |
| 26 | PURCHASE_TYPE          | Purchase Type  | VARCHAR2        | 6            | NULLLabel column   |
| 27 | STATUS                 | The code for the status of the order.  | VARCHAR2        | 1            | Source has the status as 'A'   |
| 28 | ORIG_APPROVAL_DATE     | Original Approval Date of the Order  | DATE            |              | If Status is Approved, hardcoded as VDATE at destination Else NULL                               |
| 29 | ORIG_APPROVAL_ID       | Original Approval User ID  | VARCHAR2        | 30           | User ID used to run the batch/adapter  |
| 30 | SHIP_PAY_METHOD        | Shipment Pay Method  | VARCHAR2        | 2            | NULL   |
| 31 | FOB_TRANS_RES          | Trans Reserve  | VARCHAR2        | 2            | NULL   |
| 32 | FOB_TRANS_RES_DESC     | Trans Reserve Description  | VARCHAR2        | 45           | NULL   |
| 33 | FOB_TITLE_PASS         | Title Pass   | VARCHAR2        | 2            | Populated as FOB_TITLE_PASS from SYSTEM_OPTIONS table  |
| 34 | FOB_TITLE_PASS_DESC    | Title Pass Description   | VARCHAR2        | 45           | NULL   |
| 35 | EDI_SENT_IND           | EDI Sent Indicator   | VARCHAR2        | 1            | Hardcoded as 'N' at destination  |

**Filtering Conditions**

None.

## XORDER Detail – ORDSKU & ORDLOC Mapping

This section addresses the RMS Subscriber mappings from the XORDER detail message, which contains Purchase Order line item detail. The detail information contained in the message is mapped to two RMS database tables, the Order SKU (ORDSKU) and Order Location (ORDLOC) tables.

### Data Element Details

| Data Type              | Data Element Name          | Data Description                          |
|------------------------|----------------------------|---|
| RMS Subscriber Mapping | Create/Modify Order Detail | Contains Purchase Order Line Item details |

### Extracting Program Details

|                          |                        |
|--------------------------|------------------------|
| <b>Program Type</b>      | RIB Subscriber Adapter |
| <b>Program Name</b>      | RMS Subscriber Adapter |
| <b>Schema File</b>       | N/A                    |
| <b>Program Frequency</b> | Near Real Time         |

### Data Source and Target Details

| Data Source Details     |   | Target Data Details |                        |
|-------------------------|---|---------------------|------------------------|
| Data Origin System      | AIP Online  | Target Object Type  | RMS Database           |
| Source Table(s)/File(s) | STORE_ORDER, STORE, SUPPLIER, PO_MFQUEUE, COMMODITY_MAPPING, NON_CONTENTS_ORDER, STOCKING_POINT | Target Object Name  | ORDSKU & ORDLOC tables |
|                         |   | Target Load Type    | N/A                    |

**Field Level Mapping – Source for Order SKU (ORDSKU) Table**

The following table shows source data mapped to the Order SKU (ORDSKU) table.

| #  | Source Table      | Source Table Column | Source Field Description | Data Type | Field Length |
|----|-------------------|---------------------|--------------------------|-----------|--------------|
| 1  | PO_MFQUEUE        | ORDER_NUMBER        | Order Number             | Number    | (10,0)       |
| 2  | COMMODITY_MAPPING | RMS_SKU_NUMBER      | RMS SKU                  | Varchar2  | 25           |
| 3  | N/A               | N/A                 | N/A                      | N/A       | N/A          |
| 4  | N/A               | N/A                 | N/A                      | N/A       | N/A          |
| 5  | SUPPLIER          | SUPPLIER_CODE       | Supplier Code            | Varchar2  | 20           |
| 6  | N/A               | N/A                 | N/A                      | N/A       | N/A          |
| 7  | COMMODITY_MAPPING | RMS_ORDER_MULTIPLE  | RMS Order Multiple       | Number    | 8            |
| 8  | N/A               | N/A                 | N/A                      | N/A       | N/A          |
| 9  | N/A               | N/A                 | N/A                      | N/A       | N/A          |
| 10 | N/A               | N/A                 | N/A                      | N/A       | N/A          |

**Field Level Mapping – Target Order SKU (ORDSKU) Table**

The following table displays target attributes for the source data being mapped to the Order SKU table (ORDSKU).

| #  | Target Data Field Name | Target Field Description  | Field Data Type | Field Length | Condition/Format   |
|----|------------------------|---|-----------------|--------------|--|
| 1  | ORDER_NO               | The unique identifier for the order   | NUMBER          | (8,0)        | N/A  |
| 2  | ITEM                   | An approved, transaction level item   | VARCHAR2        | 25           |  |
| 3  | REF_ITEM               | The id of a reference item which can be used instead of using the item field. | VARCHAR2        | 25           | Hardcoded as NULL at Source  |
| 4  | ORIGIN_COUNTRY_ID      | The identifier of the country from which the item is being sourced            | VARCHAR2        | 3            | Populated as ORIGIN_COUNTRY_ID of the primary supplier & item combination from ITEM_SUPP_COUNTRY table |
| 5  | EARLISET_SHIP_DATE     | Earliest Shipment Date  | DATE            |              | Populated as EARLISET_SHIP_DATE of the header row from ORDHEAD table                                   |
| 6  | LATEST_SHIP_DATE       | Latest Shipment Date  | DATE            |              | Populated as LATEST_SHIP_DATE of the header row from ORDHEAD table                                     |
| 7  | SUPP_PACK_SIZE         | The supplier pack size for the item on the order                              | NUMBER          | (12,4)       | NULL   |
| 8  | NON_SCALE_IND          | Non Scale Indicator   | VARCHAR2        | 1            | Hardcoded as 'Y' at destination  |
| 9  | PICKUP_LOC             | Pickup Location   | VARCHAR2        | 45           | NULL   |
| 10 | PICKUP_NO              | Pickup Number   | VARCHAR2        | 25           | NULL   |

**Field Level Mapping – Source for Order Location (ORDLOC) Table**

The following table shows source data mapped to the Order Location (ORDLOC) table.

| #  | Source Table   | Source Table Column                  | Source Field Description             | Data Type | Field Length |
|----|--|--------------------------------------|--------------------------------------|-----------|--------------|
| 1  | PO_MFQUEUE   | ORDER_NUMBER                         | Order Number                         | Number    | (10,0)       |
| 2  | COMMODITY_MAPPING                                      | RMS_SKU_NUMBER                       | RMS SKU                              | Varchar2  | 25           |
| 3  | STORE<br>STOCKING_POINT                                | STORE_CODE<br>STOCKING_POINT_NUMBER  | Store Code<br>Stocking Point Number  | Varchar2  | 20           |
| 4  | N/A  | N/A                                  | N/A                                  | N/A       | N/A          |
| 5  | N/A  | N/A                                  | N/A                                  | N/A       | N/A          |
| 6  | STORE_ORDER<br>NON_CONTENTS_ORDER<br>COMMODITY_MAPPING | CASE_VOLUME<br>QUANTITY<br>PACK_SIZE | Case Volume<br>Quantity<br>Pack Size | Number    | 8            |
| 7  | N/A  | N/A                                  | N/A                                  | N/A       | N/A          |
| 8  | N/A  | N/A                                  | N/A                                  | N/A       | N/A          |
| 9  | N/A  | N/A                                  | N/A                                  | N/A       | N/A          |
| 10 | N/A  | N/A                                  | N/A                                  | N/A       | N/A          |
| 11 | N/A  | N/A                                  | N/A                                  | N/A       | N/A          |

**Field Level Mapping – Target Order Location (ORDLOC) Table**

The following table displays source data that is mapped to Order Location table (ORDLOC).

| Target Data Field Name  | Target Field Description  | Field Data Type | Field Length | Condition/Format  |
|-------------------------|---|-----------------|--------------|---|
| 1 ORDER_NO              | The unique identifier for the order   | NUMBER          | (8,0)        | N/A   |
| 2 ITEM                  | An approved, transaction level item   | VARCHAR2        | 25           |   |
| 3 LOCATION              | An active store or warehouse. If multichannel is on, and a warehouse is being order to, a virtual warehouse is expected | NUMBER          | (10,0)       | A substring is used to drop the "S" prefix that is appended to all RMS store numbers and to drop the "W" prefix that is appended to all RMS warehouse numbers at Source                                       |
| 4 LOC_TYPE              | The location type of the location.  | VARCHAR2        | 1            | S indicates the destination location is a store at Source<br>W indicates the destination location is a warehouse at Source  |
| 5 UNIT_RETAIL           | Unit Retail price for item & location combination   | NUMBER          | (20,4)       | Calculated at destination as for non-sellable pack item, build the unit_retail based on component items unit_retail and for non-pack item or sellable pack item, get the unit_retail from item_zone_price     |
| 6 QTY_ORDERED           | The quantity ordered of item  | NUMBER          | (12,4)       | Non-pack SKUs:<br>store_order.case_volume x commodity_mapping.pack_size·non_contents_order.quantity x commodity_mapping.pack_size<br>Formal Pack SKUs:<br>store_order.case_volume·non_contents_order.quantity |
| 7 QTY_PRESCALED         | Quantity Prescaled  | NUMBER          | (12,4)       | Populated same as QTY_ORDERED at destination  |
| 8 QTY_RECEIVED          | Received Quantity   | NUMBER          | (12,4)       | NULL  |
| 9 LAST_RECEIVED         | Last Received Quantity  | NUMBER          | (12,4)       | NULL  |
| 10 LAST_ROUNDED_QTY     | Last Rounded Quantity   | NUMBER          | (12,4)       | NULL  |
| 11 LAST_GRP_ROUNDED_QTY | Last GRP Rounded Quantity   | NUMBER          | (12,4)       | NULL  |
| 12 QTY_CANCELLED        | Quantity Cancelled  | NUMBER          | (12,4)       | NULL  |
| 13 CANCEL_CODE          | Cancellation Code   | VARCHAR2        | 1            | NULL  |
| 14 CANCEL_DATE          | Cancellation Date   | DATE            |              | NULL  |
| 15 CANCEL_ID            | User ID Cancelled   | VARCHAR2        | 30           | NULL  |

| Target Data Field Name | Target Field Description                                       | Field Data Type | Field Length | Condition/Format   |
|------------------------|--|-----------------|--------------|--|
| 16 ORIGINAL_REPL_QTY   | Original Replenishment Quantity                                | NUMBER          | (12,4)       | NULL   |
| 17 UNIT_COST           | The cost of the item from the supplier in the order's currency | NUMBER          | (20,4)       | Populated from ITEM_SUPP_COUNTRY_LOC or ITEM_SUPP_COUNTRY for the combination item/supplier/country/loc. |
| 18 UNIT_COST_INIT      | Initial Unit Cost  | NUMBER          | (20,4)       | NULL   |
| 19 COST_SOURCE         |  | VARCHAR2        | 4            | Hardcoded as 'NORM' at destination   |
| 20 NON_SCALE_IND       |  | VARCHAR2        | 1            | Hardcoded as 'Y' at destination  |
| 21 TSF_PO_LINK_NO      |  | NUMBER          | (10,0)       | NULL   |

## Field Level Mapping – Target

| Target Data Field Name | Target Field Description   | Field Data Type | Field Length | Condition/Format   |
|------------------------|--|-----------------|--------------|--|
| 1 TSF_NO               | Number that uniquely identifies the transfer.  | NUMBER          | (10,0)       | N/A  |
| 2 FROM_LOC_TYPE        | The location type of the from location.  | VARCHAR2        | 1            | Hardcoded as "W" at Source   |
| 3 FROM_LOC             | The location number of the from location.  | NUMBER          | (10,0)       | A substring is used to drop the "W" prefix that is appended to all RMS warehouse numbers.  |
| 4 TO_LOC_TYPE          | The location type of the to location.  | VARCHAR2        | 1            | Hardcoded as "S" which indicates the destination location is a store<br>"W" indicates the destination location is a warehouse.                                 |
| 5 TO_LOC               | The location number of the to location.  | NUMBER          | (10,0)       | A substring is used to drop the "S" prefix that is appended to all RMS store numbers and to drop the "W" prefix that is appended to all RMS warehouse numbers. |
| 6 DEPT                 | The department number associated with the transfer.                                      | NUMBER          | (4,0)        | Hardcoded as NULL at Source  |
| 7 TSF_TYPE             | A code indicating the type of transfer (e.g. store requisition, book transfer, etc.).    | VARCHAR2        | 6            | Hardcoded as 'AIP' at Source   |
| 8 STATUS               | A code indicating the status of the transfer (e.g. approved, closed, etc.).              | VARCHAR2        | 1            | The transfer will be created in 'Approved' status so hardcoded as 'A' at Source  |
| 9 FREIGHT_CODE         | A code indicating the freight status of the transfer (e.g. normal, expedite, etc.).      | VARCHAR2        | 1            | Hardcoded as 'N' at destination  |
| 10 ROUTING_CODE        | If the freight status is expedite, this is a code indicating more detailed freight info. | VARCHAR2        | 1            | Hardcoded as 'NULL'  |
| 11 CREATE_DATE         | Transfer Creation Date   | DATE            |              | Hardcoded as today's Vdate   |
| 12 CREATE_ID           | User who created the transfer  | VARCHAR2        | 30           | Hardcoded as current logged in User  |
| 13 APPROVAL_DATE       | Transfer Approval Date   | DATE            |              | Hardcoded as today's Vdate   |
| 14 APPROVAL_ID         | User who approved the transfer   | VARCHAR2        | 30           | Hardcoded as current logged in User  |

| Target Data Field Name  | Target Field Description                         | Field Data Type | Field Length | Condition/Format                |
|-------------------------|--|-----------------|--------------|---------------------------------|
| 15 DELIVERY_DATE        | The earliest date the transfer can be delivered. | DATE            |              | N/A                             |
| 16 CLOSE_DATE           |  | DATE            |              | NULL                            |
| 17 EXT_REF_NO           |  | VARCHAR2        | 14           | NULL                            |
| 18 REPL_TSF_APPROVE_IND |  | VARCHAR2        | 1            | Hardcoded as 'N' at destination |
| 19 COMMENT_DESC         | Comments associated with the transfer.           | VARCHAR2        | 300          | NULL                            |

### Field Level Mapping – Target

| Target Data Field Name | Target Field Description  | Field Data Type | Field Length | Condition/Format  |
|------------------------|---|-----------------|--------------|---|
| 1 TSF_NO               | Number that uniquely identifies the transfer  | Varchar2        | (10,0)       | The transfer number from header row   |
| 2 TSF_SEQ_NO           | Transfer Line Item Number   | Number          | (8,0)        | Transfer line item number under the current header row  |
| 3 ITEM                 | The unique identifier of the item being transferred.  | Number          | 25           | N/A   |
| 4 INV_STATUS           | A code indicating the inventory status for this transfer detail; valid values are found on the inv_status_types table | Number          | (2,0)        | Hardcoded as NULL   |
| 5 TSF_QTY              | The total quantity of the item reserved for this transfer at the from location.                                       | Number          | (12,4)       | Non-pack SKUs:<br>store_order.case_volume x commodity_mapping.pack_size·<br>non_contents_order.quantity x commodity_mapping.pack_size<br>Formal Pack SKUs:<br>store_order.case_volume·<br>non_contents_order.quantity |
| 6 FILL_QTY             | Fill Quantity   | Varchar2        | (12,4)       | NULL  |
| 7 SHIP_QTY             | Shipped Quantity  | Number          | (12,4)       | NULL  |
| 8 RECEIVED_QTY         | Received Quantity   | Number          | (12,4)       | NULL  |
| 9 DISTRO_QTY           | Distributed Quantity  | Number          | (12,4)       | NULL  |
| 10 SELECTED_QTY        | Selected Quantity   | Number          | (12,4)       | NULL  |
| 11 CANCELLED_QTY       | Cancelled Quantity  | Varchar2        | (12,4)       | NULL  |
| 12 SUPP_PACK_SIZE      | Supplier Pack Size  | Number          | (12,4)       | The AIP SKU-pack size is mapped to the RMS Item and Order Multiple.   |
| 13 TSF_PO_LINK_NO      | Transfer to PO Link number  | Number          | (10,0)       | NULL  |
| 14 MBR_PROCESSED_IND   | Member Processed Indicator  | Number          | 1            | NULL  |
| 15 PUBLISH_IND         | Publishing Indicator  | Number          | 1            | Hardcoded as 'N'  |

### Filtering Conditions

None.

---

## AIP to External System Interfaces

### Overview

In addition to the RIB--explained in the previous chapter--AIP provides a second method of communicating Purchase Order and Transfer information to an order procurement system. It is text file based and can be used in place of the RIB for communicating Purchase Orders and Transfers **created and released** in the overnight batch.

---

**Note:** This process does not currently support any action take by the User in the Order Management application.

---

This is the recommended method of integration when large volumes of Purchase Orders and Transfers are expected to be executed each night.

# First Day of AIP

## Introduction

The phrase “First Day of AIP” encompasses the steps required to initially load the Enterprise and Merchandise data into AIP for setup of the supply-chain, and replenishment parameter definition. The term ‘day’ in this phrase does not necessarily correspond to a single calendar day. The ‘First Day’ process, as defined by this document, and required for the use of AIP, executes the minimal set of steps required to populate an empty database while leveraging the automated supply-chain set up logic.

While this process populates an empty database it is not a ‘conversion’ process that so often occurs when transitioning off of legacy systems. AIP works in tandem with the merchandising system and the execution of this process will build out the database with the initial Enterprise and Merchandise data. This specific process is only executed for the very initial load of the database however maintenance of the Enterprise and Merchandise hierarchy is a constant, ongoing task.

The goal of this process is to ready the database for automated supply-chain setup as well as manual supply-chain setup and replenishment parameter definition. Its success is pertinent to the ability to complete setup and therefore the system’s overall ability to begin replenishment of items.

The following information and procedures are written with the assumption that all AIP components have been properly installed and configured to interact appropriately. See the *Oracle Retail AIP Installation Guide* for details. The necessary environments must exist and be setup as indicated in the *Oracle Retail AIP Implementation Guide*. Also, for more specific instructions and details around the batch process, please reference the *Oracle Retail AIP Operations Guide*.

## Overview

The First Day of AIP is little more than the first iteration of the daily AIP batch cycle. It virtually mirrors the cycle but executes only a subset of the daily processes. This document will not only outline the actions to execute the First Day of AIP but will also explain what the process is accomplishing and why. Understanding the goal of the First Day, the reason it is different and how it executes will provide a deeper understanding of the flow of data between AIP and external systems as well as between the two AIP platforms—RPAS and Oracle.

Keeping in mind the goal and purpose of the First Day of AIP will provide the needed insight to clearly understand how the required actions accomplish the goal.

## The First Day of AIP Explained

The First Day of AIP has two very clear goals:

- Load the database with Enterprise and Merchandise hierarchy data.
- Enable automated data maintenance to run for the new data being loaded.

## Load Data

On a day-to-day basis AIP is synchronized with both the external data coming from the merchandising and forecasting systems and the internal data created on each platform. This must occur on both AIP platforms—RPAS and Oracle. This occurs first in RPAS prior to the replenishment planning calculations. All data required for the replenishment planning calculations are loaded into AIP on the RPAS platform. This means that the data is first extracted out of AIP on Oracle, the merchandising system, forecasting system, etc. for loading into AIP on RPAS. In a daily batch run the RPAS database would be synchronized with

- Enterprise Hierarchy
- Merchandise Hierarchy
- Supply-chain Parameters
- Inventory Positions
- Forecasts
- AIP Supply-chain

Following the data manipulation and replenishment planning on RPAS the plan, hierarchies, and other modified supply chain data is extracted and/or passed from RPAS to the Oracle database. The Oracle database is then synchronized with the latest data passed to, or created by, AIP on RPAS. In a daily batch run the Oracle database would be synchronized with

- Enterprise Hierarchy
- Merchandise Hierarchy
- Supply Chain Parameters
- AIP Supply-chain
- Supply-chain Alerts
- Replenishment Plan
- Order Information (received quantities, closed orders, etc.)

The First Day attempts to follow the same process as the daily batch however only some of the physical supply-chain elements exist, not the complete supply-chain representation. Therefore the first day batch processes must be limited to merely loading the data and setting up the logical connections and replenishment parameters without doing any replenishment planning.

### Impact to AIP on RPAS

Since AIP on RPAS is the first part of the AIP application to be synchronized, up to the point of loading the data both the RPAS and Oracle databases are empty with the exception of a minor amount of seed data.

- Where normally there would be data to load from the Oracle database there is none. All logic related to retrieving and loading data from AIP on Oracle will be skipped since there is virtually no data.
- Since the supply-chain is not yet defined in Data Management Online (AIP on Oracle) replenishment will not be run. No replenishment plan is produced.
- Consequently, because replenishment will not be run, all logic related to retrieving and loading the inventory positions and forecasts will not be executed.
- A portion of the automated data maintenance is executed on RPAS. The processes that are triggered by—or identify—new hierarchy elements are executed. The processes that operate on the premise of maintaining existing supply chain data are not executed.

### **Impact to AIP on Oracle**

AIP on Oracle is loaded after AIP on RPAS. The first day load process is quite similar to the daily load process but should account for the fact that the replenishment plan does not exist nor do any past AIP Orders.

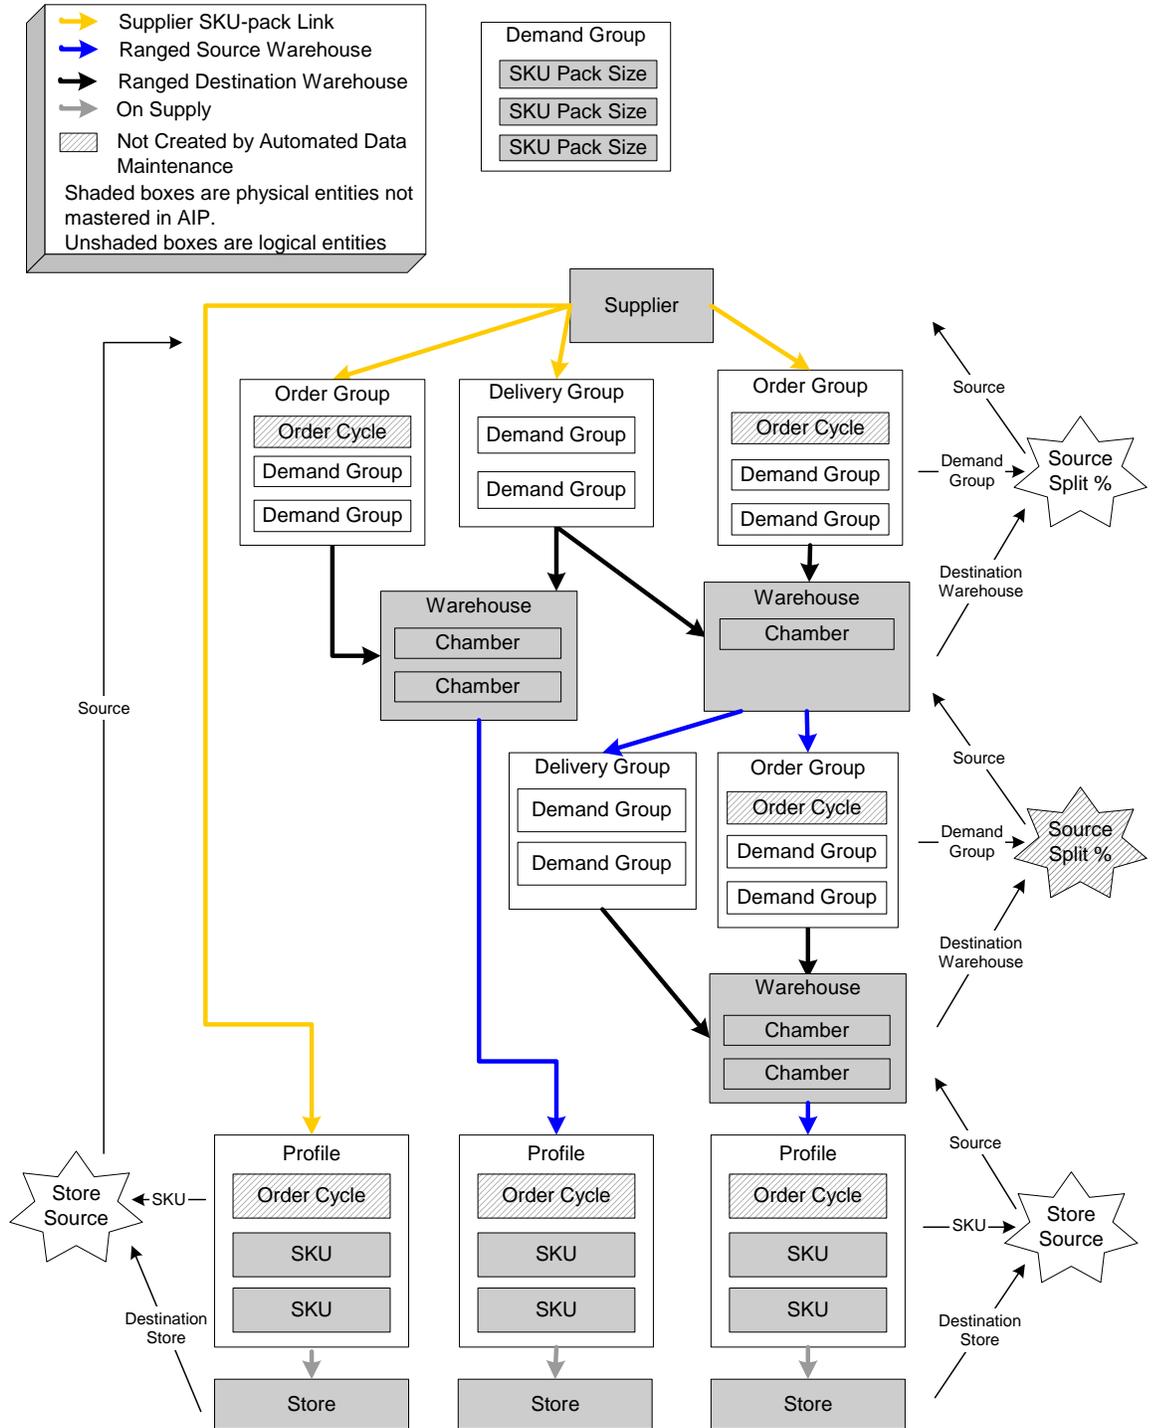

- No received quantities, closed orders, or recycled order numbers are available because no purchase orders or transfers have been executed from AIP.
- No replenishment plan exists to import from AIP on RPAS. Therefore all logic related to retrieving and loading data from AIP on RPAS will be skipped.
- A subset of data setup alerts will be loaded. These alerts pertain to data that is available or created on the first day of AIP.

Note that the export logic is not executed to extract data out of the Oracle database before the first AIP on RPAS load.

### **Enable Automated Data Maintenance**

Automated Data Maintenance constitutes a significant portion of the AIP batch processes that occur on the Oracle platform. It is comprised of a number of processes that not only select default values but also setup a significant portion of the supply chain for new entities—such as suppliers, locations, or items.

The magnitude of these operations—both in terms of saved user effort and the importance of automation—is evident in the diagram below, which provides a detailed outline of the AIP supply chain structure.

**AIP Supply Chain Structure Diagram**

The AIP supply chain structure diagram lists the physical as well as logical entities of the supply chain which must be defined within AIP. If configured correctly, all logical entities can be created by the Automated Data Maintenance processes with the exception of those noted in the diagram, and the Supplier SKU pack size links.

The diagram provides an easy-to-discern list of needed supply chain elements. For example, by examining this diagram from top to bottom, it can be seen that:

- A source must be connected to a Delivery Group and Order Group for delivery into warehouses and a Profile for delivery into the store.
- The Order Group must be associated with an Order Cycle.
- Demand Groups must be associated with an Order Group and Delivery Group for deliveries from a source to a warehouse-chamber destination.
- Demand Groups must be created for SKU-pack sizes.
- etc.

The diagram illustrates what the First Day of AIP needs to accomplish on the Oracle platform. By fully comprehending each element of the diagram it becomes clear why the first day process should be different for AIP on Oracle and how to maximize the effect of automation while minimizing the amount of extra effort required to enable it.

The full analysis of each element of the diagram is out of the scope of this document however the elements that impact the first day will be examined.

- Order Cycles are required to create Order Groups and Profiles. Order Cycles are not created by Automated Data Maintenance however default Order Cycles are provided as seed data loaded before the First Day.
- Warehouse chambers are required to create Order Groups, Delivery Groups, and ranged warehouse/SKU-pack sizes. Chambers are not created by Automated Data Maintenance since there is not a single rule-set that will work for all businesses. It is maintained as a manual process. Automated Data Maintenance could do very little setup the first day if the First Day process was not altered to accommodate for this fact.

## The First Day of AIP Execution

Prior to executing the steps listed below ensure that all installations and configurations are set according to the *AIP Installation Guide*, *RPAS Installation Guide*, and *AIP Implementation Guide*.

The detailed First Day processes that will be executed for AIP on RPAS can be found in the *AIP Operations Guide*.

The First Day execution steps are quite similar to the daily steps however because it is typically when the most new data is introduced the execution time will likely extend beyond a normal batch window.

The First Day of AIP consists of the following main steps:

1. Virtual Date (Vdate)
  - Sets and synchronizes the virtual/notional date across AIP on Oracle and AIP on RPAS.
2. First Day of AIP on RPAS Batch
  - Loads RMS hierarchies into AIP RPAS domain
  - Calculates new hierarchy element alerts
  - Creates specific hierarchy attributes
  - Calculates certain supply chain logical concepts for Online
3. First Day of AIP on Oracle Import
  - Imports hierarchies into AIP on Oracle
  - Full import of all AIP on RPAS exports
  - Automation creates a significant portion of the logical supply chain structure

4. First Day of AIP on Oracle Manual Setup
  - Creation of Warehouse Chambers and assignment of SKU types
5. First Day of AIP on Oracle Automation
  - Executes the entire set of Automated Data Maintenance processes to automatically setup the supply chain.
6. Complete all manual setup of AIP
  - Set AIP on RPAS replenishment defaults and exceptions
  - Set or modify Data Management Online supply chain parameters, defaults, and exceptions.

## Step 1: Virtual Date (Vdate)

### Step Details

As this is the first time AIP Batch will be run, the Vdate must be set so both AIP on Oracle and AIP on RPAS are in sync. The intention of Vdate is to ensure that the nightly batch processing occurs for a single calendar day and does not need to account for the system date changing calendar days as the clock reaches midnight. Under normal circumstances the Vdate will match SYSDATE when the batch is complete. For the purposes of exporting the data generated by the Automated Data Maintenance processes it is important to set the Vdate to a date that is equal to or greater than the date when all the First Day activities will be completed.

For example, if it is expected that the automation and manual setup will take 2 days to complete for the First Day setup and today is April 1<sup>st</sup>, 2007, then Vdate should be set to 20070403. This will then allow the Vdate to be set to 20070404 when the first full end-to-end AIP Batch is run.

### Step Execution

Run vdate.sh script to set the Vdate in the AIP Oracle database and transfer the value to the AIP RPAS domain.

```
/aip/oracle> vdate.sh set transfer 20070101
```

## Step 2: First Day of AIP on RPAS Batch

### Step Details

The goal of the First Day of AIP RPAS batch processing is to load all hierarchy elements into the AIP RPAS domain and perform various supply chain setup activities. This step consists of a subset of the daily AIP RPAS batch script steps. Refer to the *AIP Operations Guide* for a detailed list of the steps. The output of these processes is put into flat files to pass to AIP on Oracle. The flat files are loaded into the Oracle database in the next step. Below are the details of this output.

**Hierarchy Files**

|                     |          |
|---------------------|----------|
| Product hierarchy   | prod.dat |
| Profile hierarchy   | prof.dat |
| Store hierarchy     | loc.dat  |
| Supplier hierarchy  | hspl.dat |
| Warehouse hierarchy | whse.dat |

**Hierarchy Alerts**

|                        |                |
|------------------------|----------------|
| New SKU Alert          | dmx_newprd.dat |
| New SKU Packsize Alert | dmx_newpsz.dat |
| New Store Alert        | dm0_new.dat    |
| New Supplier Alert     | dm0_newspl.dat |
| New Warehouse Alert    | dm1_new.dat    |

**Attributes**

|                                   |                         |
|-----------------------------------|-------------------------|
| Default Warehouse info for Stores | default_wh.dat          |
| Direct-supply flag                | dmx_dirspl.dat          |
| SKU Packsize Pack-type            | dmx_pcktyp.dat          |
| SKU Packsize Attribute            | item_attribute_type.dat |
| SKU Packsize Attribute Value      | item_attribute.dat      |
| Supplier Ship-to info             | dmx_shpto_.dat          |
| Warehouse Type info               | wh_type.dat             |
| Warehouse Promotional Start Date  | dm0_pmsstasrc.dat       |
| Warehouse Promotional End Date    | dm0_pmsendsrc.dat       |
| RMS to AIP SKU Map                | dmx_rmsskumap.dat       |

**Supply Chain Logical Links**

|                             |                   |
|-----------------------------|-------------------|
| Home Warehouse              | dm1_prfhme.dat    |
| Product-Profile Links       | dmx_prdprflks.dat |
| Product-Supplier Links      | dmx_prdsplls.dat  |
| Profile Default Order Cycle | dmx_prfdefocy.dat |
| Profile Links               | dm1_prflks.dat    |
| Off-sale                    | dm0_ofseffdt_.dat |
| On-sale                     | dm0_onseffdt_.dat |
| Store Source                | dm0_src_i.dat     |

## Step Execution

The `aip_batch.sh` control script has a `-f` flag that automatically runs all necessary steps (or the start and end flags can be used as well):

```
/aip/rpas> aip_batch.sh -f
```

**- or -**

```
/aip/rpas> aip_batch.sh -f -s check_process_external_data \  
-e auto_build_wkbooks_batch
```

## Step 3: First Day of AIP on Oracle Import

### Step Details

The First Day of AIP on Oracle import is merely a subset of the complete import that is executed on a daily basis. In addition, there is a pause between the execution of the import and the automation tasks that occur afterward. The pause is required to allow the next step, Step 4, to occur.

Below is a list of the files imported in the First Day import.

#### Hierarchy Import

| Description                  | File name                | Import Directory |
|------------------------------|--------------------------|------------------|
| Product hierarchy            | prod.dat                 | sku_pack         |
| SKU Packsize Pack-type       | dmx_pcktyp.dat           | sku_pack         |
| SKU Packsize Attribute       | item_attribute_value.dat | sku_pack         |
| SKU Packsize Attribute Value | item_attribute.dat       | sku_pack         |
| Profile hierarchy            | prof.dat                 | profile          |
| Store hierarchy              | loc.dat                  | store            |
| Default Warehouse for Stores | default_wh.dat           | store            |
| Supplier hierarchy           | hspl.dat                 | supplier         |
| Supplier Ship-to info        | dmx_shpto_.dat           | supplier         |
| Warehouse hierarchy          | whse.dat                 | warehouse        |
| Warehouse Type info          | wh_type.dat              | warehouse        |

#### Data Management Import

|   |                                   |                               |
|---|-----------------------------------|-------------------------------|
| New Product Alert                         | dmx_newprd.dat                    | alerts                        |
| New Packsize Alert                        | dmx_newpsz.dat                    | alerts                        |
| New Store Alert                           | dm0_new.dat                       | alerts                        |
| New Supplier Alert                        | dm0_newspl.dat                    | alerts                        |
| New Warehouse Alert                       | dm1_new.dat                       | alerts                        |
| Direct-supply flag                        | dmx_dirspl.dat                    | direct_suppliers              |
| Direct-to-Store Format Ordering Pack Size | direct_store_format_pack_size.dat | direct_store_format_pack_size |

|                                       |                            |                             |
|---------------------------------------|----------------------------|-----------------------------|
| New Product Alert                     | dmx_newprd.dat             | alerts                      |
| Direct-to-Store Ordering Pack Size    | direct_store_pack_size.dat | direct_store_pack_size      |
| Off-sale                              | dm0_ofseffdt_.dat          | on_supply_off_supply        |
| On-sale                               | dm0_onseffdt_.dat          | on_supply_off_supply        |
| WH-to-Store Format Ordering Pack Size | store_format_pack_size.dat | store_format_pack_size      |
| WH-to-Store Ordering Pack Size        | store_pack_size.dat        | store_pack_size             |
| Store Source                          | dm0_src_i.dat              | store_source                |
| Home Warehouse                        | dm1_prfhme.dat             | home_warehouse              |
| Product-Profile Links                 | dmx_prdprflks.dat          | assigned_commodity          |
| Product-Supplier Links                | dmx_prdspllks.dat          | commodity_supplier_links    |
| Profile Order Cycle                   | dmx_prfdefocy.dat          | profile_order_cycle         |
| Profile Links                         | dm1_prflks.dat             | valid_warehouse             |
| RMS to AIP SKU Map                    | dmx_rmsskumap.dat          | sku_map                     |
| Warehouse Promotional Start Date      | dm0_pmsstasrc.dat          | warehouse_promotional_dates |
| Warehouse Promotional End Date        | dm0_pmsendsrc.dat          | warehouse_promotional_dates |

## Step Execution

Perform the following procedure.

1. Set the environment variables for the session.  

```
/aip/oracle> . aip_common_online.sh
```
2. Retrieve the flat files from the RPAS export directory.  

```
/aip/oracle> ${INTEGRATION_HOME}/scripts/fetch_files.sh DM_data AIP-ONLINE
```
3. Verify the success of the operation by checking the log files for errors and checking the return value of the last operation.  

```
/aip/oracle> echo $?
```
4. Import the hierarchy values and attributes.  

```
/aip/oracle> ${INTEGRATION_HOME}/scripts/process_aionline_data.sh -l  
"${INTEGRATION_HOME}/config/import_hierarchy.config"
```
5. Verify the success of the operation by checking the log files for errors and checking the return value of the last operation.  

```
/aip/oracle> echo $?
```
6. Import the measure data.  

```
/aip/oracle> ${INTEGRATION_HOME}/scripts/process_aionline_data.sh -l  
"${INTEGRATION_HOME}/config/import_dm.config"
```
7. Verify the success of the operation by checking the log files for errors and checking the return value of the last operation.  

```
/aip/oracle> echo $?
```

## Step 4: First Day of AIP on Oracle Manual Setup

### Step Details

In order to achieve the maximum benefit from Automated Data Maintenance the user is required to create warehouse chambers and assign SKU-types to them. These actions occur in the Data Management Online application. Refer to the *Oracle Retail Data Management Online User Guide* or the online Help for details on creating chambers and assigning one or more SKU types.

### Step Execution

Log in to Data Management Online. Follow the steps to create one or more chambers for each warehouse. Follow the steps to assign one or more SKU types to each chamber.

## Step 5: First Day of AIP on Oracle Automation

### Step Details

When configured and executed, Automated Data Maintenance will setup the supply-chain for new Suppliers, new SKU-pack sizes, sister warehouses, and sister stores. The first day this pertains to all suppliers and SKU-pack sizes because all data is new to AIP. None of the 'maintenance' activities will have an effect because all data is new and therefore no invalid relationships exist. Refer to the *Oracle Retail AIP Operations Guide* for a detailed explanation of the processes executed to setup and maintain the supply-chain. Note that sister store and sister warehouse automation do nothing the first day.

### Step Execution

Perform the following procedure to execute the process.

1. Execute the automation control script.  

```
/aip/oracle> ${INTEGRATION_HOME}/scripts/post_import_wrapper.sh
```
2. Verify the success of the operation by checking the log files and the return value of the last operation.  

```
/aip/oracle> echo $?
```

## Step 6: First Day of AIP on Oracle Import of Non-critical Alerts

### Step Details

The non-critical alerts are informative alerts that identify potential holes in the supply chain. During batch runs subsequent to the First Day these alerts may trigger automated maintenance of certain data in addition to an informative alert visible to the user in Data Management Online.

### Step Execution

Perform the following procedure to execute the process.

1. Retrieve the flat files from the RPAS export directory.  

```
/aip/oracle> ${INTEGRATION_HOME}/scripts/fetch_files.sh DM_alerts AIP-ONLINE
```
2. Verify the success of the operation by checking the log files for errors and checking the return value of the last operation.

```
/aip/oracle> echo $?
```

3. Import the hierarchy values and attributes.

```
/aip/oracle> ${INTEGRATION_HOME}/scripts/process_aiponline_data.sh -l  
"${INTEGRATION_HOME}/config/import_dm_alerts.config"
```

4. Verify the success of the operation by checking the log files for errors and checking the return value of the last operation. Note that you will likely see warning messages indicating that some files do not exist. This is expected on the first day.

```
/aip/oracle> echo $?
```

## Step 7: Manual Setup of AIP

### Step Details

Although the Automated Data Maintenance logic creates the majority of the supply chain representation AIP has various other attributes and exceptions that, if they are to be leveraged, must be manually created. The user can also choose to modify the supply chain created by automation.

The Data Management Online attributes and exceptions that are not created by automation include:

- Planning Groups
- Network Groups
- Planning Horizons (Global default is set at implementation time)
- Singles Enabled SKU
- Store Order Cycle Exceptions
- Non-release Dates and Exceptions
- Non-receipt Dates
- Store Receiving Calendar\*
- Direct/Warehouse to Store Pack Size Exceptions (can be loaded)
- Warehouse Coupled Flag
- Warehouse Reconciliation Exceptions
- Push Singles From Warehouse Default and Exceptions
- Stockless Indicator Exceptions
- Receipt to Availability Lead Time
- Shifts and Slots\*
- Receiving Windows
- Time Balanced Order Source Splits (partially created by automation)\*
- Supplier Locks
- Non Order Dates and Exceptions
- Non Delivery Dates and Exceptions

\*Required for replenishment

AIP on RPAS replenishment parameters must be set prior to executing the first full AIP batch run in order for a plan to be generated. The parameters define replenishment methods, tolerances, and other attributes required for generating planned orders.

Note that this setup can occur at any point after Step 2, but must be completed prior to executing a full batch cycle which includes replenishment planning.

## Step Execution

Log in to the Data Management Online application. Refer to the *Oracle Retail AIP Data Management User Guide* for a detailed description of how to perform each action.

Log in to the SRP and WRP workbooks. Refer to the *Oracle Retail AIP SRP User Guide* and *Oracle Retail AIP WRP User Guide* for details on building workbooks and modifying the Administration Workbooks.
